Companies can seldom predict the outcome of pending litigation, however, with any assurance. And, even if evidence available at the statement of financial position date does not favor the company, it is hardly reasonable to expect the company to publish in its financial statements a dollar estimate of the probable negative outcome. Such specific disclosures might weaken the company's position in the dispute and encourage the plaintiff to intensify its efforts. As a result, many companies provide a general provision for the costs expected to be incurred without relating the disclosure to any specific lawsuit or set of lawsuits. Illustration 13-8 provides the disclosure by Nestlé Group (CHE) related to its litigation claims.

ILLUSTRATION 13-8 Litigation Disclosure

Nestlé Group

Notes to the financial statements (partial)

Litigation

Litigation provisions have been set up to cover tax, legal and administrative proceedings that arise in the ordinary course of business. These provisions concern numerous cases whose detailed disclosure could seriously prejudice the interests of the Group. Reversal of such provisions refer to cases resolved in favor of the Group. The timing of cash outflows of litigation provisions is uncertain as it depends upon the outcome of the proceedings. These provisions are therefore not discounted because their present value would not represent meaningful information. Group Management does not believe it is possible to make assumptions on the evolution of the cases beyond the balance sheet date.

Warranty Provisions

A warranty (product guarantee) is a promise made by a seller to a buyer to make good on a deficiency of quantity, quality, or performance in a product. Manufacturers commonly use it as a sales promotion technique. Automakers, for instance, "hyped" their sales by extending their new-car warranty to seven years or 100,000 miles. For a specified period of time following the date of sale to the consumer, the manufacturer may promise to bear all or part of the cost of replacing defective parts, to perform any necessary repairs or servicing without charge, to refund the purchase price, or even to "double your money back."

Warranties and guarantees entail future costs. These additional costs, sometimes called "after costs" or "post-sale costs," frequently are significant. Although the future cost is indefinite as to amount, due date, and even customer, a liability is probable in

most cases. Companies should recognize this liability in the accounts if they can reasonably estimate it. The estimated amount of the liability includes all the costs that the company will incur after sale and delivery and that are incident to the correction of defects or deficiencies required under the warranty provisions. Thus, warranty costs are a classic example of a provision.

Companies often provide one of two types of warranties to customers:

- **1.** Warranty that the product meets agreed-upon specifications in the contract at the time the product is sold. This type of warranty is included in the sales price of a company's product and is often referred to as an assurance-type warranty.
- **2.** Warranty that provides an additional service beyond the assurance-type warranty. This warranty is not included in the sales price of the product and is referred to as a service-type warranty. As a result, it is recorded as a separate performance obligation.

Assurance-Type Warranty. Companies do not record a separate performance obligation for assurance-type warranties. This type of warranty is nothing more than a quality guarantee that the good or service is free from defects at the point of sale. These types of obligations should be expensed in the period the goods are provided or services performed (in other words, at the point of sale). In addition, the company should record a warranty liability. The estimated amount of the liability includes all the costs that the company will incur after sale due to the correction of defects or deficiencies required under the warranty provisions. Illustration 13-9 provides an example of an assurance-type warranty.

ASSURANCE-TYPE WARRANTY

Facts: Denson Machinery Company begins production of a new machine in July 2015 and sells 100 of these machines for \$5,000 cash by year-end. Each machine is under warranty for one year. Denson estimates, based on past experience with similar machines, that the warranty cost will average \$200 per unit. Further, as a result of parts replacements and services performed in compliance with machinery warranties, it incurs \$4,000 in warranty costs in 2015 and \$16,000 in 2016.

Question: What are the journal entries for the sale and the related warranty costs for 2015 and 2016?

Solution: For the sale of the machines and related warranty costs in 2015 the entry is as follows.

1. To recognize sales of machines and accrual of warranty liability:

July-December 2015

 Cash
 500,000

 Warranty Expense
 20,000

Warranty Liability 20,000 Sales Revenue 500,000

2. To record payment for warranties incurred:

July-December 2015

Warranty Liability 4,000

Cash, Inventory, Accrued Payroll 4,000

The December 31, 2015, statement of financial position reports Warranty Liability as a current liability of \$16,000. The income statement for 2015 reports Warranty Expense of \$20,000.

3. To record payment for warranty costs incurred in 2016 related to 2015 machinery sales:

January 1-December 31, 2016

Warranty Liability 16,000

Cash, Inventory, Accrued Payroll 16,000

At the end of 2016, no warranty liability is reported for the machinery sold in 2015.

ILLUSTRATION 13-9

Accounting for an Assurance-Type Warranty

Service-Type Warranty. A warranty is sometimes sold separately from the product. For example, when you purchase a television, you are entitled to an assurance-type warranty. You also will undoubtedly be offered an extended warranty on the product at an additional cost, referred to as a service-type warranty. In most cases, service-type warranties provide the customer a service beyond fixing defects that existed at the time of sale.

Companies record a service-type warranty as a separate performance obligation. For example, in the case of the television, the seller recognizes the sale of the television with the assurance-type warranty separately from the sale of the service-type warranty. The sale of the service-type warranty is usually recorded in an Unearned Warranty Revenue account.

Companies then recognize revenue on a straight-line basis over the period the service-type warranty is in effect. Companies only defer and amortize costs that vary with and are directly related to the sale of the contracts (mainly commissions). Companies expense employees' salaries and wages, advertising, and general and administrative expenses because these costs occur even if the company did not sell the service-type warranty. Illustration 13-10 presents an example of both an assurance-type and service-type warranty.

ILLUSTRATION 13-10

Assurance-Type and Service-Type Warranties

WARRANTIES

Facts: You purchase an automobile from Hamlin Auto for €30,000 on January 2, 2014. Hamlin estimates the assurance-type warranty costs on the automobile to be €700 (Hamlin will pay for repairs for the first 36,000 miles or three years, whichever comes first). You also purchase for €900 a service-type warranty for an additional three years or 36,000 miles. Hamlin incurs warranty costs related to the assurance-type warranty of €500 in 2014 and €200 in 2015. Hamlin records revenue on the service-type warranty on a straight-line basis.

Question: What entries should Hamlin make in 2014 and 2017?

Solution:				
1. To record the sale of the automobile and related warranties	:			
January 2, 2014				
Cash (€30,000 + €900)	30,900			
Warranty Expense	700			
Warranty Liability	700			
Unearned Warranty Revenue	900			
Sales Revenue	30,000			
2. To record warranty costs incurred in 2014:				
January 2-December 31,	2014			
Warranty Liability	500			
Cash, Inventory, Accrued Payroll	500			
3. To record revenue recognized in 2017 on the service-type warranty:				
January 1-December 31, 2017				
Unearned Warranty Revenue (€900 ÷ 3)	300			
Warranty Revenue	300			

Consideration Payable

Companies often make payments (provide consideration) to their customers as part of a revenue arrangement. Consideration paid or payable may indicate discounts, volume rebates, free products, or services. For example, numerous companies offer premiums (either on a limited or continuing basis) to customers in return for box tops, certificates,

coupons, labels, or wrappers. The **premium** may be silverware, dishes, a small appliance, a toy, or free transportation. Also, **printed coupons** that can be redeemed for a cash discount on items purchased are extremely popular. Another popular marketing innovation is the **cash rebate**, which the buyer can obtain by returning the store receipt, a rebate coupon, and Universal Product Code (UPC label) or "bar code" to the manufacturer.

Companies offer premiums, coupon offers, and rebates to stimulate sales. Thus, companies should charge the **costs of premiums and coupons to expense in the period of the sale** that benefits from the plan. The period that benefits is not necessarily the period in which the company pays the premium. At the end of the accounting period, many premium offers may be outstanding and must be redeemed when presented in subsequent periods. In order to reflect the existing current liability and to match costs with revenues, the company estimates the number of outstanding premium offers that customers will present for redemption. The company then charges the cost of premium offers to Premium Expense. It credits the outstanding obligations to an account titled Premium Liability. Illustration 13-11 provides an example of the accounting for consideration payable using premiums.

CONSIDERATION PAYABLE

Facts: Fluffy Cake Mix Company sells boxes of cake mix for £3 per box. In addition, Fluffy Cake Mix offers its customers a large durable mixing bowl in exchange for £1 and 10 box tops. The mixing bowl costs Fluffy Cake Mix £2, and the company estimates that customers will redeem 60 percent of the box tops. The premium offer began in June 2015. During 2015, Fluffy Cake Mix purchased 20,000 mixing bowls at £2, sold 300,000 boxes of cake mix for £3 per box, and redeemed 60,000 box tops.

Question: What entries should Fluffy Cake Mix record in 2015?

Solution:

1. To record purchase of 20,000 mixing bowls at £2 per bowl:

Premium Inventory (20,000 mixing bowls × £2) 40,000

Cash 40,000

Before Fluffy Cake Mix makes the entry to record the sale of the cake mix boxes, it determines its premium expense and related premium liability. This computation is as follows.

Total box tops sold in 2015300,000Estimated redemptions (in percent)60%Total estimated redemptions180,000

Cost of estimated redemptions

[(180,000 box tops \div 10) \times (£2 - £1)] £18,000

The entry to record the sale of the cake mix boxes and premium expense and premium liability is as follows.

Cash (300,000 boxes of cake mix \times £3) 900,000 Premium Expense 18,000

Sales Revenue 900,000
Premium Liability 18,000

3. To record the actual redemption of 60,000 box tops, the receipt of £1 per 10 box tops, and the delivery of the mixing bowls:

Cash [(60,000 \div 10) \times £1] 6,000 Premium Liability 6,000

Premium Inventory [$(60,000 \div 10) \times £2$] 12,000

The December 31, 2015, statement of financial position of Fluffy Cake Mix Company reports Premium Inventory of £28,000 (£40,000 - £12,000) as a current asset and Premium Liability of £12,000 (£18,000 - £6,000) as a current liability. The 2015 income statement reports £18,000 premium expense as a selling expense.

ILLUSTRATION 13-11

Accounting for Consideration Payable

What do the numbers mean?

FREQUENT FLYERS

Numerous companies offer premiums to customers in the form of a promise of future goods or services as an incentive for purchases today. Premium plans that have widespread adoption are the frequent-flyer programs used by all major airlines. On the basis of mileage accumulated, frequent-flyer members receive discounted or free airline tickets. Airline customers can earn miles toward free travel by making long-distance phone calls, staying in hotels, and charging gasoline and groceries on a credit card. Those free tickets represent an enormous potential liability because people using them may displace paying passengers.

When airlines first started offering frequent-flyer bonuses, everyone assumed that they could accommodate the free-ticket holders with otherwise empty seats. That made the additional cost of the program so minimal that airlines didn't accrue it or report the small liability. But, as more and more paying passengers have been crowded off flights by frequent-flyer awardees, the loss of revenues has grown enormously. For example, Qantas Airways Limited (AUS) recently reported a liability of \$4,508 million for advance ticket sales, including frequent-flyer obligations.

Environmental Provisions

Estimates to clean up existing toxic waste sites are substantial. In addition, cost estimates of cleaning up our air and preventing future deterioration of the environment run even higher.

In many industries, the construction and operation of long-lived assets involves obligations for the retirement of those assets. When a mining company opens up a strip mine, it may also commit to restore the land once it completes mining. Similarly, when an oil company erects an offshore drilling platform, it may be legally obligated to dismantle and remove the platform at the end of its useful life.

Accounting Recognition of Environmental Liabilities. As with other provisions, a company must recognize an environmental liability when it has an existing legal obligation associated with the retirement of a long-lived asset and when it can reasonably estimate the amount of the liability.

Obligating events. Examples of existing legal obligations that require recognition of a liability include but are not limited to:

- Decommissioning nuclear facilities.
- Dismantling, restoring, and reclamation of oil and gas properties.
- Certain closure, reclamation, and removal costs of mining facilities.
- Closure and postclosure costs of landfills.

In order to capture the benefits of these long-lived assets, the company is generally legally obligated for the costs associated with retirement of the asset, whether the company hires another party to perform the retirement activities or performs the activities with its own workforce and equipment. Environmental liabilities give rise to various recognition patterns. For example, the obligation may arise at the outset of the asset's use (e.g., erection of an oil rig), or it may build over time (e.g., a landfill that expands over time).

Measurement. A company initially measures an environmental liability at the best estimate of its future costs. The estimate should reflect the amount a company would pay in an active market to settle its obligation (essentially fair value). While active markets do not exist for many environmental liabilities, companies should estimate fair value based on the best information available. Such information could include market prices of similar liabilities, if available. Alternatively, companies may use present value techniques to estimate fair value.

Recognition and allocation. To record an environmental liability in the financial statements, a company includes the cost associated with the environmental liability in the carrying amount of the related long-lived asset, and records a liability for the same amount. It records the environmental costs as part of the related asset because these costs are tied to operating the asset and are necessary to prepare the asset for its intended use. Therefore, the specific asset (e.g., mine, drilling platform, nuclear power plant) should be increased because the future economic benefit comes from the use of this productive asset. Companies should not record the capitalized environmental costs in a separate account because there is no future economic benefit that can be associated with these costs alone.

In subsequent periods, companies allocate the cost of the asset to expense over the period of the related asset's useful life. Companies may use the straight-line method for this allocation, as well as other systematic and rational allocations.

Example of accounting provisions. To illustrate the accounting for these types of environmental liabilities, assume that on January 1, 2015, Wildcat Oil Company erected an oil platform in the Gulf of Mexico. Wildcat is legally required to dismantle and remove the platform at the end of its useful life, estimated to be five years. Wildcat estimates that dismantling and removal will cost \$1,000,000. Based on a 10 percent discount rate, the fair value of the environmental liability is estimated to be \$620,920 (\$1,000,000 \times .62092). Wildcat records this liability as follows.

January 1, 2015

Drilling Platform 620,920
Environmental Liability

During the life of the asset, Wildcat allocates the asset cost to expense. Using the straight-line method, Wildcat makes the following entries to record this expense.

620.920

December 31, 2015, 2016, 2017, 2018

Depreciation Expense (\$620,920 ÷ 5) 124,184

Accumulated Depreciation—Plant Assets 124,184

In addition, Wildcat must accrue interest expense each period. Wildcat records interest expense and the related increase in the environmental liability on December 31, 2015, as follows.

December 31, 2015

Interest Expense (\$620,920 × 10%) 62,092
Environmental Liability 62,092

On January 10, 2020, Wildcat contracts with Rig Reclaimers, Inc. to dismantle the platform at a contract price of \$995,000. Wildcat makes the following journal entry to record settlement of the liability.

January 10, 2020

Environmental Liability 1,000,000

Gain on Settlement of Environmental Liability 5,000

Cash 995,000

As indicated, as a result of the discounting, Wildcat incurs two types of costs: (1) an operating cost related to depreciation expense, and (2) a finance cost related to interest expense. The recording of the interest expense is often referred to as "unwinding the discount," which refers to the fact that the obligation was discounted as a result of present value computations. This discount can be substantial. For example, when **BP plc** (GBR) changed its policy and started discounting its environmental provision, it decreased its initial obligation by £350 million.

A company like Wildcat can consider future events when considering the measurement of the liability. For example, a technological development that will make restoration less expensive and is virtually certain to happen should be considered. Generally, future events are limited to those that are virtually certain to happen, as well as technology advances or proposed legislation that will impact future costs.

Onerous Contract Provisions

Sometimes, companies have what are referred to as **onerous contracts**. These contracts are ones in which "the unavoidable costs of meeting the obligations exceed the economic benefits expected to be received." [9] An example of an onerous contract is a loss recognized on unfavorable non-cancelable purchase commitments related to inventory items (discussed in Chapter 9).

To illustrate another situation, assume that Sumart Sports operates profitably in a factory that it has leased and on which it pays monthly rentals. Sumart decides to relocate its operations to another facility. However, the lease on the old facility continues for the next three years. Unfortunately, Sumart cannot cancel the lease nor will it be able to sublet the factory to another party. The expected costs to satisfy this onerous contract are €200,000. In this case, Sumart makes the following entry.

Loss on Lease Contract Lease Contract Liability 200,000

200,000

The expected costs should reflect the least net cost of exiting from the contract, which is the lower of (1) the cost of fulfilling the contract, or (2) the compensation or penalties arising from failure to fulfill the contract.

To illustrate, assume the same facts as above for the Sumart example and the expected costs to fulfill the contract are €200,000. However, Sumart can cancel the lease by paying a penalty of €175,000. In this case, Sumart should record the liability at €175,000.

Illustration 13-12 indicates how Nestlé Group (CHE) discloses onerous contracts.

ILLUSTRATION 13-12 Onerous Contract

Disclosure

Nestlé Group

Notes to the financial statements (partial)

Other Provisions

Other provisions are mainly constituted by onerous contracts, liabilities for partial refund of selling prices of divested businesses and various damage claims having occurred during the period but not covered by insurance companies. Onerous contracts result from unfavorable leases or supply agreements above market prices in which the unavoidable costs of meeting the obligations under the contracts exceed the economic benefits expected to be received or for which no benefits are expected to be received. These agreements have been entered into as a result of selling and closing inefficient facilities.

Restructuring Provisions

The accounting for **restructuring** provisions is controversial. Once companies make a decision to restructure part of their operations, they have the temptation to charge as many costs as possible to this provision. The rationale: Many believe analysts often dismiss these costs as not part of continuing operations and therefore somewhat irrelevant in assessing the overall performance of the company. Burying as many costs as possible in a restructuring provision therefore permits companies to provide a more optimistic presentation of current operating results.

On the other hand, companies are continually in a state of flux, and what constitutes a restructuring is often difficult to assess. One thing is certain—companies should not be

permitted to provide for future operating losses in the current period when accounting for restructuring costs. Nor should they be permitted to bury operating costs in the restructuring cost classification. [10]

As a consequence, IFRS is very restrictive regarding when a restructuring provision can be recorded and what types of costs may be included in a restructuring provision. Restructurings are defined as a "program that is planned and controlled by management and materially changes either (1) the scope of a business undertaken by the company; or (2) the manner in which that business is conducted." Examples of restructurings are the sale of a line of business, changes in management structures such as eliminating a layer of management, or closure of operations in a country.

For a company to record restructuring costs and a related liability, it must meet the general requirements for recording provisions discussed earlier. In addition, to assure that the restructuring is valid, companies are required to have a detailed formal plan for the restructuring and to have raised a valid expectation to those affected by implementation or announcement of the plan.

Only direct incremental costs associated with the restructuring may be included in the restructuring provision. At the same time, IFRS provides specific guidance related to certain costs and losses that should be excluded from the restructuring provision. Illustration 13-13 provides a summary of costs that may and may not be included in a restructuring provision.

Costs Included (direct, incremental)

- Employee termination costs related directly to the restructuring.
- Contract termination costs, such as lease termination penalties.
- · Onerous contract provisions.

Costs Excluded

- Investment in new systems.
- · Lower utilization of facilities.
- · Costs of training or relocating staff.
- · Costs of moving assets or operations.
- · Administration or marketing costs.
- Allocations of corporate overhead.
- Expected future operating costs or expected operating losses unless they relate to an onerous contract.

ILLUSTRATION 13-13

Costs Included/Excluded from Restructuring Provision

In general, the costs-excluded list is comprised of expenditures that relate to the future operations of the business and are not liabilities associated with the restructuring as of the end of the reporting period. Therefore, such expenditures are recognized on the same basis as if they arose independently of a restructuring. [11]

The case of Rodea Group's solar panel division, presented in Illustration 13-14, provides an example of a restructuring.

CLOSURE OF DIVISION

Facts: On December 12, 2015, the board of Rodea decided to close down a division making solar panels. On December 20, 2015, a detailed plan for closing down the division was agreed to by the board; letters were sent to customers warning them to seek an alternative source of supply and termination notices were sent to the staff of the division. Rodea estimates that it is probable that it will have €500,000 in restructuring costs.

Question: Should Rodea report a restructuring liability if it has costs related to the restructuring?

Solution: (1) The past obligating event for Rodea is the communication of the decision to the customers and employees, which gives rise to a constructive obligation on December 31, 2015, because it creates a valid expectation that the division will be closed. (2) An outflow of resources in settlement is probable and reliably estimated. A provision is recognized at December 31, 2015, for the best estimate of closing the division, in this case, €500,000.

ILLUSTRATION 13-14

Accounting for Restructuring

Self-Insurance

As discussed earlier, liabilities are not recorded for general risks (e.g., losses that might arise due to poor expected economic conditions). Similarly, companies do not record liabilities for more specific future risks such as allowances for repairs. These items do not meet the definition of a liability because they do not arise from a past transaction but instead relate to future events.

Some companies take out insurance policies against the potential losses from fire, flood, storm, and accident. Other companies do not. The reasons: Some risks are not insurable, the insurance rates are prohibitive (e.g., earthquakes and riots), or the companies make a business decision to self-insure. Self-insurance is another item that is not recognized as a provision.

D

Underlying Concepts

Even if companies can estimate the amount of losses with a high degree of certainty, the losses are not liabilities because they result from a future event and not from a past event. Despite its name, **self-insurance** is **not insurance but risk assumption**. Any company that assumes its own risks puts itself in the position of incurring expenses or losses as they occur. There is little theoretical justification for the establishment of a liability based on a hypothetical charge to insurance expense. This is "as if" accounting. The conditions for accrual stated in IFRS are not satisfied prior to the occurrence of the event. Until that time, there is no diminution in the value of the property. And unlike an insurance company, which has contractual obligations to reimburse policyholders for losses, a company can have no such obligation to itself and, hence, no liability either before or after the occurrence of damage.⁹

Exposure to **risks of loss resulting from uninsured past injury to others**, however, is an existing condition involving uncertainty about the amount and timing of losses that may develop. A company with a fleet of vehicles for example, would have to accrue uninsured losses resulting from injury to others or damage to the property of others that took place prior to the date of the financial statements (if the experience of the company or other information enables it to make a reasonable estimate of the liability). However, it should not establish a liability for **expected future injury** to others or damage to the property of others, even if it can reasonably estimate the amount of losses.

Disclosures Related to Provisions

The disclosures related to provisions are extensive. A company must provide a reconciliation of its beginning to ending balance for each major class of provisions, identifying what caused the change during the period. In addition, the provision must be described and the expected timing of any outflows disclosed. Also, disclosure about uncertainties related to expected outflows as well as expected reimbursements should be provided. [12] Illustration 13-15 provides an example, based on the provisions note in Nokia's (FIN) annual report.

⁹A commentary in the financial magazine *Forbes* (June 15, 1974), p. 42, stated its position on this matter quite succinctly: "The simple and unquestionable fact of life is this: Business is cyclical and full of unexpected surprises. Is it the role of accounting to disguise this unpleasant fact and create a fairyland of smoothly rising earnings? Or, should accounting reflect reality, warts and all—floods, expropriations and all manner of rude shocks?"

¹⁰This type of situation is often referred to as "an incurred but not recorded" (IBNR) provision. A company may not be able to identify the claims giving rise to the obligation, but it knows a past obligating event has occurred.

Non-current	971	1,175
Current	1,648	1,452

Outflows for the warranty provision are generally expected to occur within the next 18 months. Timing of outflows related to tax provisions is inherently uncertain.

The restructuring provision is mainly related to restructuring activities in Devices & Services and Nokia Siemens Networks businesses. The majority of outflows related to the restructuring is expected to occur during 2013.

In February 2012, Nokia announced planned changes at its factories in Komarom, Hungary, Reynosa, Mexico and Salo, Finland to increase efficiency in smartphone manufacturing. In June 2012, Nokia announced additional actions to align its workforce and operations. The planned actions was expected to lead to a total reduction of up to 10,000 positions globally by the end of 2013. As part of this Nokia planned to make significant reductions in certain R&D projects, which resulted in the closure of

Ulm in Germany and Burnaby, Canada; reduce factory operations, including the closure of the factory in Salo; prioritize sales efforts around certain markets resulting in reducing headcount in certain other markets; align support functions around Nokia's focused strategy resulting in a significant reduction in the number of employees in corporate functions. As a result, Devices & Services recognized restructuring charges of €550 million in total.

The IPR provision is based on estimated potential future settlements for asserted past IPR infringements. Final resolution of IPR claims generally occurs over several periods.

Material liability provision relates to non-cancellable purchase commitments with suppliers. The outflows are expected to occur over the next 12 months.

Provisions for losses on projects in progress are related to Nokia Siemens Networks' onerous contracts. Utilization of provisions for project losses is generally expected to occur in the next 12 months.

Other provisions include provisions for various contractual obligations and provisions for pension and other social security costs on share-based awards.

ILLUSTRATION 13-15

Provisions Disclosure

CONTINGENCIES

In a general sense, all provisions are contingent because they are uncertain in timing or amount. However, IFRS uses the term "contingent" for liabilities and assets that are not recognized in the financial statements. [13]

6 LEARNING OBJECTIVE

Identify the criteria used to account for and disclose contingent liabilities and assets.

Contingent Liabilities

Contingent liabilities are not recognized in the financial statements because they are (1) a possible obligation (not yet confirmed as a present obligation), (2) a present obligation for which it is not probable that payment will be made, or (3) a present obligation for

which a reliable estimate of the obligation cannot be made. Examples of contingent liabilities are:

- A lawsuit in which it is only possible that the company might lose.
- A guarantee related to collectibility of a receivable.

Illustration 13-16 presents the general guidelines for the accounting and reporting of contingent liabilities.

ILLUSTRATION 13-16

Contingent Liability
Guidelines

Outcome Virtually certain Probable (more likely than not)	Probability* At least 90% 51–89% probable 5–50%	Accounting Treatment Report as liability (provision). Report as liability (provision).
Possible but not probable Remote	Less than 5%	Disclosure required. No disclosure required. ages for virtually certain and remote may ented here.

Unless the possibility of any outflow in settlement is remote, companies should disclose the contingent liability at the end of the reporting period, providing a brief description of the nature of the contingent liability and, where practicable:

- **1.** An estimate of its financial effect;
- **2.** An indication of the uncertainties relating to the amount or timing of any outflow; and
- **3.** The possibility of any reimbursement.

(R in millions)		2012	2011
Contingent lia	abilities (in part)		
1	d hire-purchase agreements discounted with recourse,		
	ntees and claims	1,440	1,316
1	repurchase commitments not reflected on		
the balance	sheet	131	161

The related assets are estimated to have a value at least equal to the repurchase commitment.

The group has given guarantees to the purchaser of the coatings Australian business relating to environmental claims. The guarantees are for a maximum period of eight years and are limited to the sales price received for the business. Freeworld Coatings Limited is responsible for the first AUD5 million of any claim in terms of the unbundling arrangement.

Warranties and guarantees have been given as a consequence of the various disposals completed during the year and prior years. None are expected to have a material impact on the financial results of the group.

There are no material contingent liabilities in joint venture companies. Litigation, current or pending, is not considered likely to have a material adverse effect on the group.

Contingent Assets

A **contingent asset** is a possible asset that arises from past events and whose existence will be confirmed by the occurrence or non-occurrence of uncertain future events not wholly within the control of the company. **[14]** Typical contingent assets are:

- **1.** Possible receipts of monies from gifts, donations, and bonuses.
- **2.** Possible refunds from the government in tax disputes.
- **3.** Pending court cases with a probable favorable outcome.

Contingent assets are not recognized on the statement of financial position. If realization of the contingent asset is virtually certain, it is no longer considered a contingent asset and is recognized as an asset. **Virtually certain** is generally interpreted to be at least a probability of 90 percent or more.

The general rules related to contingent assets are presented in Illustration 13-18.

Outcome Virtually certain Probable (more likely than not) Possible but not probable Remote	Probability* At least 90% probable 51–90% probable 5–50% Less than 5%	Accounting Treatment Report as asset (no longer contingent). Disclose. No disclosure required. No disclosure required.
Remote		No disclosure required. for virtually certain and remote may deviate

ILLUSTRATION 13-18 Contingent Asset Guidelines

Contingent assets are disclosed when an inflow of economic benefits is considered more likely than not to occur (greater than 50 percent). However, it is important that disclosures for contingent assets avoid giving misleading indications of the likelihood of income arising. As a result, it is not surprising that the thresholds for allowing recognition of contingent assets are more stringent relative to those for liabilities.

What might be an example of a contingent asset that becomes an asset to be recorded? To illustrate, assume that Marcus Realty leases a property to Marks and Spencer plc (M&S) (GBR). The contract is non-cancelable for five years. On December 1, 2015, before the end of the contract, M&S withdraws from the contract and is required to pay £245,000 as a penalty. At the time M&S cancels the contract, a receivable and related income should be reported by Marcus. The disclosure includes the nature and, where practicable, the estimated financial effects of the asset.

PRESENTATION AND ANALYSIS

Presentation of Current Liabilities

In practice, current liabilities are usually recorded and reported in financial statements at their full maturity value. Because of the short time periods involved, frequently less than one year, the difference between the present value of a current liability and the maturity value is usually not large. The profession accepts as immaterial any slight overstatement of liabilities that results from carrying current liabilities at maturity value.

The current liabilities accounts are commonly presented after non-current liabilities in the statement of financial position. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. Illustration 13-19 presents an adapted excerpt of Wilmar International Limited's (SGP) financial statements that is representative of the reports of large corporations.

6 LEARNING OBJECTIVE

Indicate how to present and analyze liability-related information.

ILLUSTRATION 13-19

Detail and supplemental information concerning current liabilities should be sufficient to meet the requirement of full disclosure. Companies should clearly identify secured liabilities, as well as indicate the related assets pledged as collateral. If the due date of any liability can be extended, a company should disclose the details. Companies should not offset current liabilities against assets that it will apply to their liquidation. Finally, current maturities of long-term debt are classified as current liabilities.

Analysis of Current Liabilities

The distinction between current and non-current liabilities is important. It provides information about the liquidity of the company. Liquidity regarding a liability is the expected time to elapse before its payment. In other words, a liability soon to be paid is a current liability. A liquid company is better able to withstand a financial downturn. Also, it has a better chance of taking advantage of investment opportunities that develop.

Analysts use certain basic ratios such as net cash flow provided by operating activities to current liabilities, and the turnover ratios for receivables and inventory, to assess liquidity. Two other ratios used to examine liquidity are the current ratio and the acid-test ratio.

Current Ratio

The **current ratio** is the ratio of total current assets to total current liabilities. Illustration 13-20 shows its formula.

ILLUSTRATION 13-20

Formula for Current Ratio

The ratio is frequently expressed as a coverage of so many times. Sometimes it is called the **working capital ratio** because working capital is the excess of current assets over current liabilities.

A satisfactory current ratio does not provide information on the portion of the current assets that may be tied up in slow-moving inventories. With inventories, especially raw materials and work in process, there is a question of how long it will take to transform them into the finished product and what ultimately will be realized in the sale of the merchandise. Eliminating the inventories, along with any prepaid expenses, from the amount of current assets might provide better information for short-term creditors. Therefore, some analysts use the acid-test ratio in place of the current ratio.

Acid-Test Ratio

Many analysts favor an **acid-test** or **quick ratio** that relates total current liabilities to cash, short-term investments, and receivables. Illustration 13-21 shows the formula for this ratio. As you can see, the acid-test ratio does not include inventories and prepaid expenses.

```
Acid-Test Ratio = \frac{\text{Cash} + \frac{\text{Short-Term}}{\text{Investments}} + \frac{\text{Net}}{\text{Receivables}}}{\text{Current Liabilities}}
```

ILLUSTRATION 13-21Formula for Acid-Test

Ratio

To illustrate the computation of these two ratios, we use the information for **Wilmar International Limited** (SGP) in Illustration 13-19 (on page 626). Illustration 13-22 shows the computation of the current and acid-test ratios for Wilmar.

```
 \text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$23,819,479}{\$21,413,283} = 1.11 \, \text{times} 
 \text{Acid-Test Ratio} = \frac{\text{Cash} + \frac{\text{Short-Term}}{\text{Investments}} + \frac{\text{Net}}{\text{Receivables}}}{\text{Current Liabilities}} = \frac{\$16,682,252}{\$21,413,283} = 0.78 \, \text{times}
```

GREENHOUSE GASES: LET'S BE STANDARD-SETTERS

Ok, here is your chance to determine what to do about a very fundamental issue—how to account for greenhouse gases (GHG), often referred to as carbon emissions. Many governments are trying a market-based system, in which companies pay for an excessive amount of carbon emissions put into the atmosphere. In this market-based system, companies are granted carbon allowance permits. Each permit allows them to discharge, as an example, one metric ton of carbon dioxide (CO₂). In some cases, companies may receive a number of these permits free—in other situations, they must pay for them. Other approaches require companies only to pay when they exceed a certain amount.

The question is, how to account for these permits and related liabilities? For example, what happens when the permits issued by the government are free? Should an asset and revenue be reported? And if an asset is recorded, should the debit be to an intangible asset or inventory? Also, should the company recognize a liability related to its pollution? And how do we account for companies that have to purchase permits because they have exceeded their allowance? Two views seem to have emerged. The first is referred to as the **net liability approach**. In this approach, a company does not recognize an asset or liability. A company only recognizes a liability once GHG exceed the permits granted.

To illustrate, Holton Refinery receives permits on January 1, 2015, representing the right to emit 10,000 tons of GHG for the year 2015. Other data:

• The market price of each permit at date of issuance is €10 per ton.

- During the year, Holton emits 12,000 tons.
- The market price for a permit is €16 per ton at December 31, 2015.

Under the net liability approach, Holton records only a liability of \leq 32,000 for the additional amount that it must pay for the 2,000 permits it must purchase at \leq 16 per ton.

Another approach is referred to as the **government grant approach**. In this approach, permits granted by the govern-

ment are recorded at their fair value based on the initial price of \leq 10 per ton. The asset recorded is an intangible asset. At the same time, an unearned revenue account is credited, which is subsequently recognized in income over the 2015 year. During 2015, a liability and a related emission expense of \leq 132,000 is recognized (10,000 tons \times \leq 10 + 2,000 tons \times \leq 16). The chart below compares the results of each approach on the financial statements.

Net Liability Ap	proach	Government Grant Approach
	Income Statement	
Revenues Emission expenses	€ 0 _32,000 _G00,000	€100,000 132,000
Net loss	€32,000 Statement of Financial Position	<u>€ 32,000</u>
Assets Liabilities	€ 0 32,000	€100,000 132,000

So what do you think—net liability or government grant approach? As indicated, companies presently can report this information either way, plus some other variants which were not mentioned here. Please feel free to contact the IASB regarding your views.

SUMMARY OF LEARNING OBJECTIVES

KEY TERMS

accumulated rights, 609 acid-test (quick) ratio, 627 assessments, 613 bonus, 610 cash dividend payable, 603 claims, 613 compensated absences, 608 constructive obligation, 612 contingent assets, 625 contingent liabilities, 623 current liabilities, 598 current maturity of long-term debt, 601 current ratio, 626 environmental liabilities, 618 liability, 598

Describe the nature, type, and valuation of current liabilities. A current liability is generally reported if one of two conditions exists: (1) the liability is expected to be settled within its normal operating cycle, or (2) the liability is expected to be settled within 12 months after the reporting date. This definition has gained wide acceptance because it recognizes operating cycles of varying lengths in different industries. Theoretically, liabilities should be measured by the present value of the future outlay of cash required to liquidate them. In practice, companies usually record and report current liabilities at their full maturity value.

There are several types of current liabilities, such as (1) accounts payable, (2) notes payable, (3) current maturities of long-term debt, (4) dividends payable, (5) customer advances and deposits, (6) unearned revenues, (7) taxes payable, and (8) employee-related liabilities.

- **Explain the classification issues of short-term debt expected to be refinanced.** A short-term obligation is excluded from current liabilities if both of the following conditions are met: (1) the company must intend to refinance the obligation on a long-term basis, *and* (2) it must have an unconditional right to defer settlement of the liability for at least 12 months after the reporting date.
- **3 Identify types of employee-related liabilities.** The employee-related liabilities are (1) payroll deductions, (2) compensated absences, and (3) bonus agreements.

- Explain the accounting for different types of provisions. A provision is a liability of uncertain timing or amount (sometimes referred to as an estimated liability). Provisions are very common and may be reported either as current or non-current depending on the date of expected payment. Common types of provisions are (1) litigation obligations, (2) warranty obligations, (3) consideration payable, (4) environmental obligations, (5) onerous obligations, and (6) restructuring obligations. Companies accrue an expense and related liability for a provision only if the following three conditions are met: (1) a company has a present obligation (legal or constructive) as a result of a past event, (2) it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation, and (3) a reliable estimate can be made of the amount of the obligation. If any of these three conditions is not met, no provision is recognized.
- Identify the criteria used to account for and disclose contingent liabilities and assets. Contingent liabilities are not recognized in the financial statements because they are a possible obligation (not yet confirmed as a present obligation) or they are present obligations but it is not probable that payment will be necessary or a reliable estimate of the obligations cannot be made.

Contingent assets are not recognized on the statement of financial position. If realization of the contingent asset is virtually certain, it is no longer considered a contingent asset and is recognized as an asset. Virtually certain is generally interpreted to be at least a probability of 90 percent or more.

Indicate how to present and analyze liability-related information. Current liabilities are usually recorded and reported in financial statements at full maturity value. Current liabilities are commonly presented after non-current liabilities in the statement of financial position. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. Two ratios used to analyze liquidity are the current and acidtest ratio.

litigation, claims, and assessments, 613 non-accumulating rights, notes payable (trade notes payable), 599 onerous contracts, 620 operating cycle, 598 preference dividends in arrears, 603 premiums, 617 probable, 611 provision, 610 restructurings, 620 returnable cash deposits, 603 self-insurance, 622 short-term obligations expected to be refinanced, 601 Social Security taxes, 607 trade accounts payable, 599 trade notes payable, 599 unearned revenues, 604 value-added tax, 605 vested rights, 609 virtually certain, 625 warranty, 614

QUESTIONS

- **1.** Distinguish between a current liability and a non-current liability.
- 2. Assume that your friend Hans Jensen, who is a music major, asks you to define and discuss the nature of a liability. Assist him by preparing a definition of a liability and by explaining to him what you believe are the elements or factors inherent in the concept of a liability.
- **3.** Why is the liabilities section of the statement of financial position of primary significance to bankers?
- **4.** How are current liabilities related to a company's operating cycle?
- 5. Leong Hock, a newly hired loan analyst, is examining the current liabilities of a corporate loan applicant. He observes that unearned revenues have declined in the current year compared to the prior year. Is this a positive indicator about the client's liquidity? Explain.
- **6.** How is present value related to the concept of a liability?
- Explain how to account for a zero-interest-bearing note payable.
- **8.** How should a debt callable by the creditor be reported in the debtor's financial statements?
- 9. Under what conditions should a short-term obligation be excluded from current liabilities?
- **10.** What evidence is necessary to demonstrate the ability to defer settlement of short-term debt?
- 11. Discuss the accounting treatment or disclosure that should be accorded a declared but unpaid cash dividend; an accumulated but undeclared dividend on cumulative preference shares; and a share dividend distributable.
- **12.** How does unearned revenue arise? Why can it be classified properly as a current liability? Give several examples of business activities that result in unearned revenues.
- 13. What are compensated absences?
- **14.** Under what conditions must an employer accrue a liability for the cost of compensated absences?
- **15.** What do the terms vested rights, accumulated rights, and non-accumulated rights mean in relation to compensated absences? Explain their accounting significance.
- **16.** Faith Battle operates a health food store, and she has been the only employee. Her business is growing, and she

- is considering hiring some additional staff to help her in the store. Explain to her the various payroll deductions that she will have to account for, including their potential impact on her financial statements, if she hires additional staff.
- **17.** Explain the difference between a value-added tax and a sales tax.
- **18.** Define a provision, and give three examples of a provision.
- 19. Under what conditions should a provision be recorded?
- **20.** Distinguish between a current liability, such as accounts payable, and a provision.
- **21.** How are the terms "probable" and "virtually certain" related to provisions and contingencies?
- **22.** Explain the difference between a legal obligation and a constructive obligation.
- **23.** Explain the accounting for an assurance-type warranty.
- 24. Grant Company has had a record-breaking year in terms of growth in sales and profitability. However, market research indicates that it will experience operating losses in two of its major businesses next year. The controller has proposed that the company record a provision for these future losses this year since it can afford to take the charge and still show good results. Advise the controller on the appropriateness of this charge.
- **25.** How does an assurance-type warranty differ from a service-type warranty?
- **26.** What is an onerous contract? Give two examples of an onerous contract.
- **27.** Define a restructuring. What costs should not be accrued in a restructuring?
- 28. When must a company recognize an environmental provision?
- **29.** Should a liability be recorded for risk of loss due to lack of insurance coverage? Discuss.
- **30.** What factors must be considered in determining whether or not to record a liability for pending litigation? For threatened litigation?
- **31.** Within the current liabilities section, how do you believe the accounts should be listed? Defend your position.
- **32.** How does the acid-test ratio differ from the current ratio? How are they similar?

- **33.** When should liabilities for each of the following items be recorded on the books of an ordinary business corporation?
 - (a) Acquisition of goods by purchase on credit.
 - (b) Onerous contract.

- (c) Special bonus to employees.
- (d) Warranty.
- (e) Profit-sharing payment.

BRIEF EXERCISES

- **BE13-1** Roley Corporation uses a periodic inventory system and the gross method of accounting for purchase discounts. On July 1, Roley purchased €60,000 of inventory, terms 2/10, n/30, FOB shipping point. Roley paid freight costs of €1,200. On July 3, Roley returned damaged goods and received credit of €6,000. On July 10, Roley paid for the goods. Prepare all necessary journal entries for Roley.
- **BE13-2** Upland Company borrowed \$40,000 on November 1, 2014, by signing a \$40,000, 9%, 3-month note. Prepare Upland's November 1, 2014, entry; the December 31, 2014, annual adjusting entry; and the February 1, 2015, entry.
- **BE13-3** Takemoto Corporation borrowed ¥60,000,000 on November 1, 2014, by signing a ¥61,350,000 3-month, zero-interest-bearing note. Prepare Takemoto's November 1, 2014, entry; the December 31, 2014, annual adjusting entry; and the February 1, 2015, entry.
- BE13-4 At December 31, 2014, Burr Corporation owes €500,000 on a note payable due February 15, 2015. (a) If Burr intends to refinance the obligation by issuing a long-term note on February 14 and using the proceeds to pay off the note due February 15, how much (if any) of the €500,000 should be reported as a current liability at December 31, 2014? (b) If Burr pays off the note on February 15, 2015, and then borrows €1,000,000 on a long-term basis on March 1, how much (if any) of the €500,000 should be reported as a current liability at December 31, 2014, the end of the fiscal year?
 - **BE13-5** Herzog Company has a long-term debt with a maturity date of November 2, 2016. On October 10, 2014, it breaches a covenant related to this debt and the loan becomes due on demand. Herzog reaches an agreement with the lender on January 5, 2015, to provide a waiver of the breach. The financial statement reporting date is December 31, 2014, and the financial statements are authorized for issue on March 16, 2015. Explain whether the debt obligation should be classified as current or non-current.
 - **BE13-6** Sport Pro Magazine sold 12,000 annual subscriptions on August 1, 2015, for €18 each. Prepare Sport Pro's August 1, 2015, journal entry and the December 31, 2015, annual adjusting entry.
 - **1 BE13-7** Dillons Corporation made credit sales of €30,000 which are subject to 6% VAT. The corporation also made cash sales which totaled €20,670 including the 6% VAT. (a) Prepare the entry to record Dillons' credit sales. (b) Prepare the entry to record Dillons' cash sales.
 - **1 BE13-8** Henning Company sells its products to Len Taylor, a private individual, for €5,000. The sale is subject to a VAT of 15%. Prepare the journal entry to record the sale by Henning Company.
 - **BE13-9** Lexington Corporation's weekly payroll of €24,000 included Social Security taxes withheld of €1,920, income taxes withheld of €2,990, and insurance premiums withheld of €250. Prepare the journal entry to record Lexington's payroll.
 - **3 BE13-10** Kasten Inc. provides paid vacations to its employees. At December 31, 2015, 30 employees have each earned 2 weeks of vacation time. The employees' average salary is €700 per week. Prepare Kasten's December 31, 2015, adjusting entry.
 - **BE13-11** Mayaguez Corporation provides its officers with bonuses based on net income. For 2014, the bonuses total £350,000 and are paid on February 15, 2015. Prepare Mayaguez's December 31, 2014, adjusting entry and the February 15, 2015, entry.
- **BE13-12** Scorcese Inc. is involved in a lawsuit at December 31, 2015. (a) Prepare the December 31 entry assuming it is probable that Scorcese will be liable for \$\psi 900,000\$ as a result of this suit. (b) Prepare the December 31 entry, if any, assuming it is *not* probable that Scorcese will be liable for any payment as a result of this suit.
- **BE13-13** Buchanan Company recently was sued by a competitor for patent infringement. Attorneys have determined that it is probable that Buchanan will lose the case and that a reasonable estimate of

damages to be paid by Buchanan is \$300,000. In light of this case, Buchanan is considering establishing a \$100,000 self-insurance allowance. What entry(ies), if any, should Buchanan record to recognize this provision.

- **BE13-14** Calaf's Drillers erects and places into service an off-shore oil platform on January 1, 2015, at a cost of £10,000,000. Calaf estimates it will cost £1,000,000 to dismantle and remove the platform at the end of its useful life in 10 years, which it is legally obligated to do. (The fair value at January 1, 2015, of the dismantle and removal costs is £450,000.) Prepare the entry to record the environmental liability.
- **BE13-15** Streep Factory provides a 2-year warranty with one of its products which was first sold in 2015 for ¥4,000,000. Streep estimates that ¥450,000 will be spent in the future to service warranty claims related to the 2015 sales. In 2015, Streep spent ¥130,000 servicing warranty claims. Prepare the journal entries to record the sale, warranty costs, and related warranty expenditures in 2015.
- **BE13-16** Main Company sells 100 televisions on June 1, 2015, at a total price of €35,000 with a warranty guarantee that the product was free of any defects. The assurance warranties extend for a 2-year period and are estimated to cost €1,000. Main also sold extended warranties for €800 related to the televisions covering 2 additional years beyond the assurance warranty period. Prepare the journal entries that Main should make in 2015 related to the sale of the televisions and related warranties. Warranty costs incurred in 2015 were €150.
- **BE13-17** Wynn Company offers a set of building blocks to customers who send in 3 UPC codes from Wynn cereal, along with 50¢. The blocks sets cost Wynn \$1.10 each to purchase and 60¢ each to mail to customers. During 2015, Wynn sold 1,200,000 boxes of cereal at \$3 per box. The company expects 30% of the UPC codes to be sent in. During 2015, 120,000 UPC codes were redeemed. Prepare the journal entries that Wynn should make to record the sale of the cereal in 2015 and the related cost of the premiums associated with the sale.
- **BE13-18** Cargo Company purchased land from Hazard Company for €20,000,000 on September 13, 2015. On October 31, 2015, it learned that the site was contaminated. As a result, Cargo Company sued Hazard Company for €4,000,000. Cargo's attorneys believe that their odds of winning the case are 75%. Indicate how Cargo should account for this lawsuit at December 31, 2015.
- **BE13-19** Management at Eli Company has decided to close one of its plants. It will continue to operate the plant for approximately one year. It anticipates the following costs will be incurred as a result of this closing: (1) termination compensation costs, (2) marketing costs to rebrand the company image, (3) future losses for keeping the plant open for another year, and (4) lease termination costs related to the closing. Indicate which, if any, of these costs should not be considered restructuring costs for purposes of establishing a provision.
- **BE13-20** Luckert Company decided to cancel an existing property lease in one of its divisions, as its operations in this area were no longer profitable. Unfortunately, Luckert has a non-cancelable lease and cannot sublease the property. The present value of future lease payments under the lease is €2,000,000. The penalty to break the lease is €1,450,000. Prepare the journal entry to record this cancelation.

EXERCISES

- **E13-1** (**Statement of Financial Position Classification**) Consider the following items.
 - (a) Accrued vacation pay.
 - **(b)** Income taxes payable.
 - **(c)** Service-type warranties on appliance sales.
 - (d) Social Security taxes payable.
 - (e) Personal injury claim pending.
 - (f) Unpaid bonus to officers.
 - **(g)** Deposit received from customer to guarantee performance of a contract.
 - (h) Value-added tax payable.
 - (i) Gift certificates sold to customers but not yet redeemed.

- (j) Premium offers outstanding.
- **(k)** Accounts payable.
- (1) Employee payroll deductions unremitted.
- (m) Current maturities of long-term debts to be paid from current assets.
- (n) Cash dividends declared but unpaid.
- **(o)** Dividends in arrears on preference shares.
- (p) Loans from officers.

Instructions

How would each of the preceding items be reported on the statement of financial position?

- **E13-2** (Accounts and Notes Payable) The following are selected 2015 transactions of Darby Corporation.
 - Sept. 1 Purchased inventory from Orion Company on account for \$50,000. Darby records purchases gross and uses a periodic inventory system.
 - Oct. 1 Issued a \$50,000, 12-month, 8% note to Orion in payment of account.
 - Oct. 1 Borrowed \$75,000 from the Shore Bank by signing a 12-month, zero-interest-bearing \$81,000 note.

Instructions

- (a) Prepare journal entries for the selected transactions above.
- **(b)** Prepare adjusting entries at December 31.
- (c) Compute the total net liability to be reported on the December 31 statement of financial position for:
 - (1) The interest-bearing note.
 - (2) The zero-interest-bearing note.
- **E13-3** (Refinancing of Short-Term Debt) On December 31, 2014, Alexander Company had €1,200,000 of short-term debt in the form of notes payable due February 2, 2015. On January 21, 2015, the company issued 25,000 ordinary shares for €36 per share, receiving €900,000 proceeds after brokerage fees and other costs of issuance. On February 2, 2015, the proceeds from the share sale, supplemented by an additional €300,000 cash, are used to liquidate the €1,200,000 debt. The December 31, 2014, statement of financial position is authorized for issue on February 23, 2015.

Instructions

Show how the €1,200,000 of short-term debt should be presented on the December 31, 2014, statement of financial position.

E13-4 (**Refinancing of Short-Term Debt**) The CFO for Yong Corporation is discussing with the company's chief executive officer issues related to the company's short-term obligations. Presently, both the current ratio and the acid-test ratio for the company are quite low, and the chief executive officer is wondering if any of these short-term obligations could be reclassified as long-term. The financial reporting date is December 31, 2014. Two short-term obligations were discussed, and the following action was taken by the CFO.

Short-Term Obligation A: Yong has a \$50,000 short-term obligation due on March 1, 2015. The CFO discussed with its lender whether the payment could be extended to March 1, 2017, provided Yong agrees to provide additional collateral. An agreement is reached on February 1, 2015, to change the loan terms to extend the obligation's maturity to March 1, 2017. The financial statements are authorized for issuance on April 1, 2015.

Short-Term Obligation B: Yong also has another short-term obligation of \$120,000 due on February 15, 2015. In its discussion with the lender, the lender agrees to extend the maturity date to February 1, 2016. The agreement is signed on December 18, 2014. The financial statements are authorized for issuance on March 31, 2015.

Instructions

Indicate how these transactions should be reported at December 31, 2014, on Yong's statement of financial position.

- **E13-5** (**Debt Classifications**) Presented below are four different situations related to Mckee Corporation debt obligations. Mckee's next financial reporting date is December 31, 2014. The financial statements are authorized for issuance on March 1, 2015.
 - 1. Mckee has a debt obligation maturing on December 31, 2017. The debt is callable on demand by the lender at any time.
 - 2. Mckee also has a long-term obligation due on December 1, 2016. On November 10, 2014, it breaches a covenant on its debt obligation and the loan becomes due on demand. An agreement is reached to provide a waiver of the breach on December 8, 2014.
 - **3.** Mckee has a long-term obligation of £400,000, which is maturing over 4 years in the amount of £100,000 per year. The obligation is dated November 1, 2014, and the first maturity date is November 1, 2015.
 - **4.** Mckee has a short-term obligation due February 15, 2015. Its lender agrees to extend the maturity date of this loan to February 15, 2017. The agreement for extension is signed on January 15, 2015.

Instructions

Indicate how each of these debt obligations is reported on Mckee's statement of financial position on December 31, 2014.

E13-6 (Compensated Absences) Matthewson Company began operations on January 2, 2014. It employs 9 individuals who work 8-hour days and are paid hourly. Each employee earns 10 paid vacation days and 6 paid sick days annually. Vacation days may be taken after January 15 of the year following the year in which they are earned. Sick days may be taken as soon as they are earned; unused sick days accumulate. Additional information is as follows.

	,		,		Sick Day by Each B	,
2014	2015	2014	2015	2014	2015	
€12	€13	0	9	4	5	

Matthewson Company has chosen to accrue the cost of compensated absences at rates of pay in effect during the period when earned and to accrue sick pay when earned.

Instructions

- (a) Prepare journal entries to record transactions related to compensated absences during 2014 and 2015.
- **(b)** Compute the amounts of any liability for compensated absences that should be reported on the statement of financial position at December 31, 2014 and 2015.
- **E13-7 (Compensated Absences)** Assume the facts as in E13-6 except that Matthewson Company has chosen (1) not to accrue paid sick leave until used and (2) to accrue vacation time at expected future rates of pay without discounting. The company used the following projected rates to accrue vacation time.

Year in Which Vacation Time Was Earned	Projected Future Pay Rates Used to Accrue Vacation Pay
2014	 €12.90
2015	13.70

Instructions

- (a) Prepare journal entries to record transactions related to compensated absences during 2014 and 2015.
- **(b)** Compute the amounts of any liability for compensated absences that should be reported on the statement of financial position at December 31, 2014, and 2015.
- **E13-8** (Adjusting Entry for Sales Tax and VAT) During the month of June, Danielle's Boutique had cash sales of R\$265,000 and credit sales of R\$153,700, both of which include the 6% sales tax that must be remitted to the government by July 15.

Instructions

- (a) Prepare the adjusting entry that should be recorded to fairly present the June 30 financial statements
- **(b)** How would the adjusting entry change if the 6% tax was a VAT rather than a sales tax?
- 1 E13-9 (Adjusting Entry for Sales Tax and VAT) Eastwood Ranchers sells a herd of cattle to Rozo Meat Packers for €30,000 and the related VAT. Rozo Meat Packers sells the beef to Wrangler Supermarkets for €40,000 and the related VAT. Wrangler Supermarkets sells this beef to customers for €50,000 plus related VAT.

Instructions

- (a) Assuming the VAT is 15% on all sales, prepare the journal entry to record the sale by Rozo Meat Packers to Wrangler Supermarkets.
- **(b)** What is the net cash outlay that Eastwood Ranchers incurs related to the VAT?
- 3 E13-10 (Payroll Tax Entries) The payroll of Kee Company for September 2015 is as follows (amounts in thousands): total payroll was ¥340,000; income taxes in the amount of ¥80,000 were withheld, as was ¥9,000 in union dues; and the current Social Security tax is 8% of an employee's wages. The employer must also remit 8% for employees' wages.

Instructions

Prepare the necessary journal entries if the salaries and wages paid and the employer payroll taxes are recorded separately.

E13-11 (Payroll Tax Entries) Allison Hardware Company's payroll for November 2015 is as follows: factory, €140,000; sales, €32,000; and administrative, €36,000. The Social Security rate is 8% on an employee's wages. Income tax withheld amounts to €16,000 for factory, €7,000 for sales, and €6,000 for administrative.

Instructions

- (a) Prepare a schedule showing the employer's total cost of salaries and wages for November by function.
- **(b)** Prepare the journal entries to record the factory, sales, and administrative payrolls including the employer's payroll taxes.
- **E13-12 (Warranties)** Winslow Company sold 150 color laser copiers in 2015 for £4,000 apiece, together with a one-year assurance-type warranty. Maintenance on each copier during the warranty period averages £300.

Instructions

Prepare entries to record the sale of the copiers and the related warranty costs. Actual warranty costs incurred in 2015 were £17,000.

4 E13-13 (Warranties) Selzer Equipment Company sold 500 Rollomatics during 2015 at \$6,000 each. During 2015, Selzer spent \$30,000 servicing the 2-year assurance-type warranties that accompany the Rollomatic.

Instructions

- (a) Prepare 2015 entries for Selzer assuming that Selzer estimates the total cost of servicing the warranties will be \$120,000 for 2 years.
- **(b)** Prepare 2015 entries for Selzer assuming that the warranties are service-type warranties and are not considered part of the sale of the Rollomatics. Assume that of the sales total of the Rollomatics, \$160,000 relates to sales of warranty contracts. Selzer estimates the total cost of servicing the warranties will be \$120,000 for 2 years. Estimate revenue related to the service-type warranties.
- **E13-14** (Premium Entries) Moleski Company includes 1 coupon in each box of soap powder that it packs, and 10 coupons are redeemable for a premium (a kitchen utensil). In 2015, Moleski Company purchased 8,800 premiums at €.90 each and sold 120,000 boxes of soap powder at €3.30 per box; 44,000 coupons were presented for redemption in 2015. It is estimated that 60% of the coupons will eventually be presented for redemption.

Instructions

Prepare all the entries that would be made relative to sales of soap powder and to the premium plan in 2015.

- **E13-15** (**Restructuring Issues**) EADS Company is involved in a restructuring related to its energy division. The company controller and CFO are considering the following costs to accrue as part of the restructuring. The costs are as follows (amounts in thousands).
 - **1.** The company has a long-term lease on one of the facilities related to the division. It is estimated that it will have to pay a penalty cost of \(\frac{\pmathbf{4}00,000}{4}\) to break the lease. The company estimates that the present value related to payments on the lease contract is \(\frac{\pmathbf{6}50,000}{6}\).
 - **2.** The company's allocation of overhead costs to other divisions will increase by ¥1,500,000 as a result of restructuring these facilities.
 - **3.** Due to the restructuring, some employees will be shifted to some of the other divisions. The cost of retraining these individuals is estimated to be \(\xi_2,000,000\).
 - **4.** The company has hired an outplacement firm to help it in dealing with the number of terminations related to the restructuring. It is estimated the cost for this outplacement firm will be ¥600,000.
 - **5.** It is estimated that employee termination costs will be ¥3,000,000.
 - **6.** The company believes that it will cost ¥320,000 to move useable assets from the energy division to other divisions in the company.

Instructions

Indicate whether each of these costs should be included in the restructuring provision in the financial statements.

E13-16 (**Restructuring**) On December 31, 2015, the board of Dolman Group decided to close one of its divisions. On December 31, 2015, a detailed plan for closing the division was agreed to by the board, and letters were sent to customers and employees affected by this closure.

Instructions

- (a) What is a restructuring? Provide two examples.
- **(b)** To ensure that the restructuring is valid, what two conditions must take place?
- (c) Possible costs that may be incurred during the restructuring are as follows: (1) investment in new software as a result of closing the division, (2) cost of moving some assets of the closed division to other parts of the company, (3) employee termination costs related to closing the division, (4) expected future operating losses in closing the division, and (5) onerous contract provisions related to the closing. Indicate which (if any) of these costs may be part of a restructuring provision.
- 4 5 E13-17 (Provisions and Contingencies) Presented below are three independent situations.
 - 1. During 2015, Maverick Inc. became involved in a tax dispute with the government. Maverick's attorneys have indicated that they believe it is probable that Maverick will lose this dispute. They also believe that Maverick will have to pay the government between €800,000 and €1,400,000. After the 2015 financial statements were issued, the case was settled with the government for €1,200,000. What amount, if any, should be reported as a liability for this tax dispute as of December 31, 2015?
 - 2. On October 1, 2015, Holmgren Chemical was identified as a potentially responsible party by its Environmental Regulatory Agency. Holmgren's management along with its counsel have concluded that it is probable that Holmgren will be responsible for damages, and a reasonable estimate of these damages is €6,000,000. Holmgren's insurance policy of €9,000,000 has a deductible clause of €500,000. How should Holmgren Chemical report this information in its financial statements at December 31, 2015?
 - **3.** Shinobi Inc. had a manufacturing plant in Darfur, which was destroyed in the civil war. It is not certain who will compensate Shinobi for this destruction, but Shinobi has been assured by governmental officials that it will receive a definite amount for this plant. The amount of the compensation will be less than the fair value of the plant but more than its book value. How should the compensation be reported in the financial statements of Shinobi Inc.?

Instructions

Answer the question at the end of each situation.

E13-18 (Environmental Liability) Bassinger Company purchases an oil tanker depot on January 1, 2015, at a cost of \$600,000. Bassinger expects to operate the depot for 10 years, at which time it is legally required to dismantle the depot and remove the underground storage tanks. It is estimated that it will cost \$70,000 to dismantle the depot and remove the tanks at the end of the depot's useful life.

Instructions

- (a) Prepare the journal entries to record the depot and the environmental liability for the depot on January 1, 2015. Based on an effective-interest rate of 6%, the fair value of the environmental liability on January 1, 2015, is \$39,087.
- (b) Prepare any journal entries required for the depot and the environmental liability at December 31, 2015. Bassinger uses straight-line depreciation; the estimated residual value for the depot is zero.
- (c) On December 31, 2024, Bassinger pays a demolition firm to dismantle the depot and remove the tanks at a price of \$80,000. Prepare the journal entry for the settlement of the environmental liability.
- **E13-19 (Premiums)** Presented below and on page 637 are three independent situations.

1. Martin Stamp Company records stamp service revenue and provides for the cost of redemptions in the year stamps are sold to licensees. Martin's past experience indicates that only 80% of the stamps sold to licensees will be redeemed. Martin's liability for stamp redemptions was \$13,000,000 at December 31, 2014. Additional information for 2015 is as follows.

Stamp service revenue from stamps sold to licensees
Cost of redemptions (stamps sold prior to 1/1/15)

\$9,500,000

6,000,000

If all the stamps sold in 2015 were presented for redemption in 2016, the redemption cost would be \$5,200,000. What amount should Martin report as a liability for stamp redemptions at December 31, 2015?

2. In packages of its products, Wiseman Inc. includes coupons that may be presented at retail stores to obtain discounts on other Wiseman products. Retailers are reimbursed for the face amount of coupons redeemed plus 10% of that amount for handling costs. Wiseman honors requests for coupon redemption by retailers up to 3 months after the consumer expiration date. Wiseman estimates that 60% of all coupons issued will ultimately be redeemed. Information relating to coupons issued by Wiseman during 2015 is as follows.

Consumer expiration date 12/31/15
Total face amount of coupons issued \$850,000
Total payments to retailers as of 12/31/15 330,000

What amount should Wiseman report as a liability for unredeemed coupons at December 31, 2015?

3. Newell Company sold 600,000 boxes of pie mix for \$6,000,000 under a new sales promotional program. Each box contains one coupon, which when submitted with \$4.00, entitles the customer to a baking pan. Newell pays \$6.00 per pan and \$0.50 for handling and shipping. Newell estimates that 70% of the coupons will be redeemed even though only 250,000 coupons had been processed during 2015. What amount should Newell report as a liability for unredeemed coupons at December 31, 2015?

Instructions

Answer the question at the end of each situation.

- 4 E13-20 (Provisions) Presented below are three independent situations.
 - 1. Bruegger Transportation purchased a ship on January 1, 2015, for £20,000,000. The useful life of the ship is 40 years, but it is subject to a government-mandated major overhaul every 4 years with a total projected cost of £4,000,000. The present value related to these payments is £3,200,000. Explain how this transaction should be accounted for at January 1, 2015, and at December 31, 2015. Prepare the journal entries to record all appropriate entries related to the ship in 2015. Bruegger uses the straight-line method of depreciation and assumes no residual value for the ship.
 - **2.** Marquardt Company signs a 5-year lease related to office space at an annual rental of £30,000. At the end of the second year, the company decides to close its operation in this part of country. Its lease is non-cancelable, and the penalty for non-payment is £62,000. The present value of future payments on the lease is estimated to be £81,000. The company does not believe that it can sublet these facilities. Explain how this transaction should be accounted for at December 31, 2015. Prepare the journal entry to record this entry on December 31, 2015.
 - **3.** Powersurge Group operates a nuclear power plant. The plant cost £40,000,000 on January 2, 2016. It is estimated that the present value of dismantling the plant and the ensuing clean-up will be £1,000,000. Explain how this transaction should be accounted for on January 2, 2016. Prepare the journal entry to record this transaction on January 2, 2016.

Instructions

Prepare the explanation and journal entry required for each situation.

- 4 E13-21 (Provisions) The following situations relate to Bolivia Company.
 - 1. Bolivia provides a warranty with all products sold. It estimates that it will sell 1,000,000 units of its product for the year ended December 31, 2015, and that its total revenue for the product will be \$100,000,000. It also estimates that 60% of the product will have no defects, 30% will have major defects, and 10% will have minor defects. The cost of a minor defect is estimated to be \$5 for each product sold, and the cost for a major defect is \$15. The company also estimates that the minimum amount of warranty expense will be \$2,000,000 and the maximum will be \$10,000,000.
 - 2. Bolivia is involved in a tax dispute with the tax authorities. The most likely outcome of this dispute is that Bolivia will lose and have to pay \$400,000. The minimum it will lose is \$20,000 and the maximum is \$2,500,000.

Instructions

Determine the amount to record as provisions, if any, for Bolivia at December 31, 2015.

- **E13-22 (Financial Statement Impact of Liability Transactions)** Presented below is a list of possible transactions.
 - 1. Purchased inventory for €80,000 on account (assume perpetual system is used).
 - **2.** Issued an €80,000 note payable in payment on account (see item 1 above).
 - 3. Recorded accrued interest on the note from item 2 above.
 - **4.** Borrowed €100,000 from the bank by signing a 6-month, €112,000, zero-interest-bearing note.
 - **5.** Recognized 4 months' interest expense on the note from item 4 above.
 - **6.** Recorded cash sales of €75,260, which includes 10% VAT.
 - 7. Recorded wage expense of €35,000. The cash paid was €25,000; the difference was due to various amounts withheld.
 - **8.** Recorded employer's payroll taxes.
 - 9. Accrued accumulated vacation pay.
 - 10. Recorded an environmental liability and related asset.
 - 11. Recorded bonuses due to employees.
 - **12.** Recorded sales of product and related warranties (assume both assurance-type warranty and service-type warranty).
 - 13. Paid warranty costs that were accrued in item 12 above related to assurance-type warranty.
 - **14.** Recorded a liability on a lawsuit that the company will probably lose.
 - **15.** Paid service-type warranty costs under contracts from item 12.
 - 16. Recognized warranty revenue (see item 12).

Instructions

Set up a table using the format shown below and analyze the effect of the 16 transactions on the financial statement categories indicated.

#	Assets	Liabilities	Equity	Net Income
1				

Use the following code:

I: Increase D: Decrease NE: No net effect

E13-23 (Ratio Computations and Discussion) Chen Company has been operating for several years, and on December 31, 2015, presented the following statement of financial position (amounts in thousands).

CHEN COMPANY STATEMENT OF FINANCIAL POSITION DECEMBER 31, 2015			
Plant assets (net)	¥220,000	Share capital—ordinary	¥160,000
Inventory	95,000	Retained earnings	60,000
Receivables	75,000	Mortgage payable	140,000
Cash	40,000	Accounts payable	70,000
	¥430,000		¥430,000

The net income for 2015 was ¥25,000. Assume that total assets are the same in 2014 and 2015.

Instructions

Compute each of the following ratios. For each of the four, indicate the manner in which it is computed and its significance as a tool in the analysis of the financial soundness of the company.

(a) Current ratio.

(c) Debt to assets.

(b) Acid-test ratio.

(d) Return on assets.

E13-24 (Ratio Computations and Analysis) EAN Company's condensed financial statements provide the following information (amounts in thousands).

St	EAN COM ATEMENT OF FINA	MPANY ANCIAL POSITION		
	Dec. 3	1, 2015	Dec. 3	1, 2014
Property, plant, and equipment		¥ 897,000		¥ 853,000
Current assets				
Inventory	¥440,000		¥360,000	
Prepaid expenses	3,000		7,000	
Accounts receivable	158,000		80,000	
Short-term investments	80,000		40,000	
Cash	52,000	733,000	60,000	547,000
Total assets		¥1,630,000		¥1,400,000
Equity		¥ 990,000		¥ 840,000
Bonds payable		400,000		400,000
Current liabilities		240,000		160,000
		¥1,630,000		¥1,400,000

INCOME STATEMENT FOR THE YEAR ENDED 2015			
Sales revenue	¥1,640,000		
Cost of goods sold	(800,000)		
Gross profit	840,000		
Selling and administrative expenses	(480,000)		
Interest expense	(40,000)		
Net income	¥ 320,000		

Instructions

- (a) Determine the following for 2015.
 - (1) Current ratio at December 31.
 - (2) Acid-test ratio at December 31.
 - (3) Accounts receivable turnover.
 - (4) Inventory turnover.
 - **(5)** Return on assets.
 - **(6)** Profit margin on sales.
- **(b)** Prepare a brief evaluation of the financial condition of EAN Company and of the adequacy of its profits.
- **6 E13-25** (**Ratio Computations and Effect of Transactions**) Presented below and on page 640 is information related to Leland Inc.

LELAND INC. STATEMENT OF FINANCIAL POSITION DECEMBER 31, 2015				
Equipment (net)		€150,000	Share capital – ordinary (par €5)	€260,000
Land		20,000	Retained earnings	141,000
Prepaid insurance		8,000	Notes payable (short-term)	50,000

Less: Allowance	15,000	95,000		
Cash		45,000		
				€488.000

LELAND INC.			
INCOME STATEMENT			
FOR THE YEAR ENDED DECEMBER 31, 2015			

Sales revenue Cost of goods sold		€1,400,000
Inventory, Jan. 1, 2015 Purchases	€200,000 790,000	
Cost of goods available for sale Inventory, Dec. 31, 2015 Cost of goods sold	990,000 (170,000)	820,000
Gross profit on sales Operating expenses		580,000 370,000
Net income		€ 210,000

Instructions

- (a) Compute the following ratios or relationships of Leland Inc. Assume that the ending account balances are representative unless the information provided indicates differently.
 - (1) Current ratio.
 - **(2)** Inventory turnover.
 - (3) Accounts receivable turnover.
 - **(4)** Earnings per share.
 - **(5)** Profit margin on sales.
 - **(6)** Return on assets on December 31, 2015.
- **(b)** Indicate for each of the following transactions whether the transaction would improve, weaken, or have no effect on the current ratio of Leland Inc. at December 31, 2015.
 - (1) Write off an uncollectible account receivable, €2,200.
 - (2) Repurchase ordinary shares for cash.
 - (3) Pay €40,000 on notes payable (short-term).
 - (4) Collect €23,000 on accounts receivable.
 - (5) Buy equipment on account.
 - **(6)** Give an existing creditor a short-term note in settlement of account.

PROBLEMS

P13-1 (Current Liability Entries and Adjustments) Described below are certain transactions of Edwardson Corporation. The company uses the periodic inventory system.

- **2.** On April 1, the corporation bought a truck for €50,000, paying €4,000 in cash and signing a one-year, 12% note for the balance of the purchase price.
- **3.** On August 1, the board of directors declared a €300,000 cash dividend that was payable on September 10 to shareholders of record on August 31.

Instructions

- (a) Make all the journal entries necessary to record the transactions above using appropriate dates.
- **(b)** Edwardson Corporation's year-end is December 31. Assuming that no adjusting entries relative to the transactions above have been recorded, prepare any adjusting journal entries concerning interest that are necessary to present fair financial statements at December 31.
- 1 4 P13-2 (Liability Entries and Adjustments) Listed below are selected transactions of Schultz Department Store for the current year ending December 31.
 - **1.** On December 5, the store received €500 from the Jackson Players as a deposit to be returned after certain furniture to be used in stage production was returned on January 15.

- 2. During December, cash sales totaled €798,000, which includes the 5% VAT that must be remitted to the tax authority by the fifteenth day of the following month.
- **3.** On December 10, the store purchased for cash three delivery trucks for €120,000. The trucks were purchased in a jurisdiction that applies a 5% VAT.
- **4.** The store determined it will cost €100,000 to restore the area surrounding one of its store parking lots, when the store is closed in 2 years. Schultz estimates the fair value of the obligation at December 31 is €84,000.

Instructions

Prepare all the journal entries necessary to record the transactions noted above as they occurred and any adjusting journal entries relative to the transactions that would be required to present fair financial statements at December 31. Date each entry. For simplicity, assume that adjusting entries are recorded only once a year on December 31.

3 P13-3 (Payroll Tax Entries) Cedarville Company pays its office employee payroll weekly. Below is a partial list of employees and their payroll data for August. Because August is their vacation period, vacation pay is also listed.

	Earnings to	Weekly	Vacation Pay to Be
Employee	July 31	Pay	Received in August
Mark Hamill	\$4,200	\$200	
Karen Robbins	3,500	150	\$300
Brent Kirk	2,700	110	220
Alec Guinness	7,400	250	_
Ken Sprouse	8,000	330	660

Assume that the income tax withheld is 10% of wages. Union dues withheld are 2% of wages. Vacations are taken the second and third weeks of August by Robbins, Kirk, and Sprouse. The Social Security rate is 8% on employee and employer.

Instructions

Make the journal entries necessary for each of the four August payrolls. The entries for the payroll and for the company's liability are made separately. Also make the entry to record the monthly payment of payroll liabilities.

3 P13-4 (Payroll Tax Entries) Below is a payroll sheet for Otis Import Company for the month of September 2015. Assume a 10% income tax rate for all employees and an 8% Social Security tax on employee and employer.

			Income	
	Earnings	September	Tax	Social
Name	to Aug. 31	Earnings	Withholding	Security
B.D. Williams	£ 6,800	£ 800		
D. Raye	6,500	700		
K. Baker	7,600	1,100		
F. Lopez	13,600	1,900		
A. Daniels	105,000	13,000		
B. Kingston	112,000	16,000		

Instructions

- (a) Complete the payroll sheet and make the necessary entry to record the payment of the payroll.
- **(b)** Make the entry to record the payroll tax expenses of Otis Import Company.
- (c) Make the entry to record the payment of the payroll liabilities created. Assume that the company pays all payroll liabilities at the end of each month.

4) P13-5 (Warranties) Brooks Corporation sells computers under a 2-year warranty contract that requires the corporation to replace defective parts and to provide the necessary repair labor. During 2015, the corporation sells for cash 400 computers at a unit price of £2,500. On the basis of past experience, the 2-year warranty costs are estimated to be £155 for parts and £185 for labor per unit. (For simplicity, assume that all sales occurred on December 31, 2015.) The warranty is not sold separately from the computer.

Instructions

- (a) Record any necessary journal entries in 2015.
- **(b)** What liability relative to these transactions would appear on the December 31, 2015, statement of financial position and how would it be classified?

In 2016, the actual warranty costs to Brooks Corporation were £21,400 for parts and £39,900 for labor.

- (c) Record any necessary journal entries in 2016.
- P13-6 (Warranties) Dos Passos Company sells televisions at an average price of R\$900 and also offers to each customer a separate 3-year service-type warranty contract for R\$90 that requires the company to perform periodic services and to replace defective parts. During 2014, the company sold 300 televisions and 270 warranty contracts for cash. It estimates the 3-year warranty costs as R\$20 for parts and R\$40 for labor and accounts for warranties separately. Assume sales occurred on December 31, 2014, and straight-line recognition of warranty revenues occurs.

Instructions

- (a) Record any necessary journal entries in 2014.
- **(b)** What liability relative to these transactions would appear on the December 31, 2014, statement of financial position and how would it be classified?

In 2015, Dos Passos Company incurred actual costs relative to 2014 television warranty sales of R\$2,000 for parts and R\$4,000 for labor.

- (c) Record any necessary journal entries in 2015 relative to 2014 television warranties.
- (d) What amounts relative to the 2014 television warranties would appear on the December 31, 2015, statement of financial position and how would they be classified?
- 4 P13-7 (Warranties) Alvarado Company sells a machine for \$7,400 under a 12-month warranty agreement that requires the company to replace all defective parts and to provide the repair labor at no cost to the customers. With sales being made evenly throughout the year, the company sells 600 machines in 2014 (warranty costs are incurred half in 2014 and half in 2015). As a result of product testing, the company estimates that the warranty cost is \$390 per machine (\$170 parts and \$220 labor).

Instructions

- (a) Assuming that actual warranty costs are incurred exactly as estimated, what journal entries would be made in 2014 and 2015?
- **(b)** What amount, if any, is disclosed in the statement of financial position as a liability for warranty costs as of December 31, 2014?
- P13-8 (Premium Entries) To stimulate the sales of its Alladin breakfast cereal, Loptien Company places 1 coupon in each box. Five coupons are redeemable for a premium consisting of a child's hand puppet. In 2015, the company purchases 40,000 puppets at €1.50 each and sells 480,000 boxes of Alladin at €3.75 a box. From its experience with other similar premium offers, the company estimates that 40% of the coupons issued will be mailed back for redemption. During 2015, 115,000 coupons are presented for redemption.

Instructions

Prepare the journal entries that should be recorded in 2015 relative to the premium plan.

4 6 P13-9 (Premium Entries and Financial Statement Presentation) Sycamore Candy Company offers an MP3 download (seven-single medley) as a premium for every five candy bar wrappers presented by customers together with \$2.50. The candy bars are sold by the company to distributors for 30 cents each. The purchase price of each download code to the company is \$2.25; in addition it costs 50 cents to distribute each code. The results of the premium plan for the years 2014 and 2015 are as follows. (All purchases and sales are for cash.)

	2014	2015
MP3 codes purchased	250,000	330,000
Candy bars sold	2,895,400	2,743,600
Wrappers redeemed	1,200,000	1,500,000
2014 wrappers expected to be redeemed in 2015	290,000	
2015 wrappers expected to be redeemed in 2016		350,000

Instructions

(a) Prepare the journal entries that should be made in 2014 and 2015 to record the transactions related to the premium plan of the Sycamore Candy Company.

(b) Indicate the account names, amounts, and classifications of the items related to the premium plan that would appear on the statement of financial position and the income statement at the end of 2014 and 2015.

4 5 P13-10 (Litigation Claim: Entries and Essay) On November 24, 2014, 26 passengers on Wong Airlines Flight No. 901 were injured upon landing when the plane skidded off the runway. Personal injury suits for damages totaling NT\$9,000,000 were filed on January 11, 2015, against the airline by 18 injured passengers. The airline carries no insurance. Legal counsel has studied each suit and advised Wong that it can reasonably expect to pay 60% of the damages claimed. The financial statements for the year ended December 31, 2014, were authorized for issuance on February 27, 2015.

Instructions

- (a) Prepare any disclosures and journal entries required by the airline in preparation of the December 31, 2014, financial statements.
- (b) Ignoring the November 24, 2014, accident, what liability due to the risk of loss from lack of insurance coverage should Wong Airlines record or disclose? During the past decade the company has experienced at least one accident per year and incurred average damages of NT\$3,200,000. Discuss fully.

4) 5) P13-11 (Contingencies: Entries and Essays) Polska Corporation, in preparation of its December 31, 2015, financial statements, is attempting to determine the proper accounting treatment for each of the following situations.

- 1. As a result of uninsured accidents during the year, personal injury suits for €350,000 and €60,000 have been filed against the company. It is the judgment of Polska's legal counsel that an unfavorable outcome is unlikely in the €60,000 case but that an unfavorable verdict approximating €250,000 will probably result in the €350,000 case.
- 2. Polska Corporation owns a subsidiary in a foreign country that has a book value of €5,725,000 and an estimated fair value of €9,500,000. The foreign government has communicated to Polska its intention to expropriate the assets and business of all foreign investors. On the basis of settlements other firms have received from this same country, it is virtually certain that Polska will receive 40% of the fair value of its properties as final settlement.
- 3. Polska's chemical product division consisting of five plants is uninsurable because of the special risk of injury to employees and losses due to fire and explosion. The year 2015 is considered one of the safest (luckiest) in the division's history because no loss due to injury or casualty was suffered. Having suffered an average of three casualties a year during the rest of the past decade (ranging from €60,000 to €700,000), management is certain that next year the company will probably not be so fortunate.
- 4. Polska operates profitably from a factory it has leased. During 2015, Polska decides to relocate these operations to a new factory. The lease of the old factory continues for the next 5 years. The lease cannot be cancelled and the factory cannot be subleased. Polska determines that the cost to settle the old lease is €950,000.
- 5. Litigation is being pursued for the recovery of €1,300,000 consulting fees on a failed project. The directors believe it is more likely than not that their claim will be successful.

Instructions

- (a) Prepare the journal entries that should be recorded as of December 31, 2015, to recognize each of the situations above.
- (b) Indicate what should be reported relative to each situation in the financial statements and accompanying notes. Explain why.
- 4) P13-12 (Warranties and Premiums) Garison Music Emporium carries a wide variety of musical instruments, sound reproduction equipment, recorded music, and sheet music. Garison uses two sales promotion techniques—warranties and premiums—to attract customers.

Musical instruments and sound equipment are sold with a one-year assurance-type warranty for replacement of parts and labor. The estimated warranty cost, based on past experience, is 2% of sales.

The premium is offered on the recorded and sheet music. Customers receive a coupon for each dollar spent on recorded music or sheet music. Customers may exchange 200 coupons and \$20 for an MP3 player. Garison pays \$32 for each MP3 player and estimates that 60% of the coupons given to customers will be redeemed.

Garison's total sales for 2015 were \$7,200,000—\$5,700,000 from musical instruments and sound reproduction equipment and \$1,500,000 from recorded music and sheet music. Replacement parts and labor for warranty work totaled \$164,000 during 2015. A total of 6,500 MP3 players used in the premium program were purchased during the year and there were 1,200,000 coupons redeemed in 2015.

The balances in the accounts related to warranties and premiums on January 1, 2015, were as shown below.

Inventory of Premium MP3 Players	\$ 37,600
Estimated Premium Claims Outstanding	44,800
Warranty Liability	136,000

Instructions

Garison Music Emporium is preparing its financial statements for the year ended December 31, 2015. Determine the amounts that will be shown on the 2015 financial statements for the following.

- (a) Warranty Expense.
- (d) Inventory of Premium MP3 Players.
- **(b)** Warranty Liability.

(e) Estimated Premium Claims Outstanding.

(c) Premium Expense.

4 5 P13-13 (Liability Errors) You are the independent auditor engaged to audit Millay Corporation's December 31, 2015, financial statements. Millay manufactures household appliances. During the course of your audit, you discovered the following situations.

- 1. Millay began production of a new dishwasher in June 2015 and, by December 31, 2015, sold 120,000 to various retailers for £500 each. Each dishwasher is under a one-year warranty. The company estimates that its warranty expense per dishwasher will amount to £25. At year-end, the company had already paid out £1,000,000 in warranty expenses. Millay's income statement shows warranty expenses of £1,000,000 for 2015.
- 2. In response to your attorney's letter, Morgan Chye, Esq., has informed you that Millay has been cited for dumping toxic waste into the Loden River. Clean-up costs and fines amount to £2,750,000. Although the case is still being contested, Chye is certain that Millay will most probably have to pay the fine and clean-up costs. No disclosure of this situation was found in the financial statements.
- 3. Millay is the defendant in a patent infringement lawsuit by Megan Drabek over Millay's use of a hydraulic compressor in several of its products. Chye claims that, if the suit goes against Millay, the loss may be as much as £5,000,000. However, Chye believes the loss of this suit to be only possible. Again, no mention of this suit is made in the financial statements.

As presented, these situations are not reported in accordance with IFRS, which may create problems in issuing a favorable audit report. You feel the need to note these problems in the work papers.

Heading each page with the name of the company, statement of financial position date, and a brief description of the problem, write a brief narrative for each of the above issues in the form of a memorandum to be incorporated in the audit work papers. Explain what led to the discovery of each problem, what the problem really is, and what you advised your client to do (along with any appropriate journal entries) in order to bring these situations in accordance with IFRS.

1. Its line of amplifiers carries a 3-year assurance-type warranty against defects. On the basis of past experience, the estimated warranty costs related to dollar sales are first year after sale—2% of sales; second year after sale—3% of sales; and third year after sale—5% of sales. Sales and actual warranty expenditures for the first 3 years of business were:

		Warranty
	Sales	Expenditures
2013	\$ 800,000	\$ 6,500
2014	1,100,000	17,200
2015	1,200,000	62,000

Instructions

Compute the amount that Schmitt Company should report as a liability in its December 31, 2015, statement of financial position. Assume that all sales are made evenly throughout each year with warranty expenses also evenly spaced relative to the rates above.

2. With some of its products, Schmitt Company includes coupons that are redeemable in merchandise. The coupons have no expiration date and, in the company's experience, 40% of them are redeemed. The liability for unredeemed coupons at December 31, 2014, was \$9,000. During 2015, coupons worth \$30,000 were issued, and merchandise worth \$8,000 was distributed in exchange for coupons redeemed.

Instructions

Compute the amount of the liability that should appear on the December 31, 2015, statement of financial position.

CONCEPTS FOR ANALYSIS

CA13-1 (Nature of Liabilities) Presented below is the current liabilities section of Micro Corporation (amounts in thousands).

	2015	2014
Current liabilities		
Notes payable	€ 68,713	€ 7,700
Accounts payable	179,496	101,379
Compensation to employees	60,312	31,649
Accrued liabilities	158,198	77,621
Income taxes payable	10,486	26,491
Current maturities of long-term debt	16,592	6,649
Total current liabilities	€493,797	€251,489

Instructions

Answer the following questions.

- (a) What are the essential characteristics that make an item a liability?
- **(b)** What distinguishes a current liability from a non-current liability?
- (c) What are accrued liabilities? Give three examples of accrued liabilities that Micro might have.
- (d) What is the theoretically correct way to value liabilities? How are current liabilities usually valued?
- (e) Why are notes payable reported first in the current liabilities section?
- (f) What might be the items that comprise Micro's liability for "Compensation to employees"?

CA13-2 (Current versus Non-Current Classification) Rodriguez Corporation includes the following items in its liabilities at December 31, 2014.

- 1. Notes payable, \$25,000,000, due June 30, 2015.
- 2. Deposits from customers on equipment ordered by them from Rodriguez, \$6,250,000.
- 3. Salaries payable, \$3,750,000, due January 14, 2015.

Instructions

Indicate in what circumstances, if any, each of the three liabilities above would be excluded from current liabilities.

Instructions

- (a) Is management's intent enough to support long-term classification of the obligation in this situation?
- (b) Assume that Kobayashi Corporation issues \(\frac{\text{\frac{\text{\frac{\text{\tilitet{\tex
- (c) Assume that Kobayashi Corporation issues ordinary shares to the public in January and that management intends to entirely liquidate the ¥10,000,000 debt maturing in March 2015 with the proceeds of this equity securities issue. In light of these events, should the ¥10,000,000 debt maturing in March 2015 be included in current liabilities at December 31, 2014?
- (d) Assume that Kobayashi Corporation, on February 15, 2015, entered into a financing agreement with a commercial bank that permits Kobayashi Corporation to borrow at any time through 2016 up to ¥15,000,000 at the bank's prime rate of interest. Borrowings under the financing agreement mature three years after the date of the loan. The agreement is not cancelable except for violation

of a provision with which compliance is objectively determinable. No violation of any provision exists at the date of issuance of the financial statements. Assume further that the current portion of long-term debt does not mature until August 2015. In addition, management may refinance the ¥10,000,000 obligation under the terms of the financial agreement with the bank, which is expected to be financially capable of honoring the agreement. Given these facts, should the ¥10,000,000 be classified as current on the statement of financial position at December 31, 2014?

CA13-4 (Contingencies) On February 1, 2015, one of the huge storage tanks of Viking Manufacturing Company exploded. Windows in houses and other buildings within a one-mile radius of the explosion were severely damaged, and a number of people were injured. As of February 15, 2015 (when the December 31, 2014, financial statements were completed and sent to the publisher for printing and public distribution), no suits had been filed or claims asserted against the company as a consequence of the explosion. The company fully anticipates that suits will be filed and claims asserted for injuries and damages. Because the casualty was uninsured and the company considered at fault, Viking Manufacturing will have to cover the damages from its own resources.

Instructions

Discuss fully the accounting treatment and disclosures that should be accorded the casualty and related contingent losses in the financial statements dated December 31, 2014.

CA13-5 (Possible Environmental Liability) Presented below is a note disclosure for Matsui Corporation.

Litigation and Environmental: The Company has been notified, or is a named or a potentially responsible party in a number of governmental and private actions associated with environmental matters. These actions seek clean-up costs, penalties and/or damages for personal injury or to property or natural resources.

In 2015, the Company recorded a pretax charge of \(\frac{\frac{456,229,000}}{56,229,000}\), included in the "Other expense (income)—net" caption of the Company's consolidated income statements, as an additional provision for environmental matters. These expenditures are expected to take place over the next several years and are indicative of the Company's commitment to improve and maintain the environment in which it operates. At December 31, 2015, environmental accruals amounted to \(\frac{469,931,000}{69,931,000}\), of which \(\frac{461,535,000}{60,000}\) are considered non-current and are included in the "Non-current liability" caption of the Company's consolidated statements of financial position.

While it is impossible at this time to determine with certainty the ultimate outcome of environmental matters, it is management's opinion, based in part on the advice of independent counsel (after taking into account accruals and insurance coverage applicable to such actions) that when the costs are finally determined they will not have a material adverse effect on the financial position of the Company.

Instructions

Answer the following questions.

- (a) What conditions must exist before a provision can be recorded in the accounts?
- (b) Suppose that Matsui Corporation could not reasonably estimate the amount of the loss, although it could establish with a high degree of probability the minimum and maximum loss possible. How should this information be reported in the financial statements?
- (c) If the amount of the loss is uncertain, how would the potential liability be reported in the financial statements?

CA13-6 (Warranties and Litigation Provisions) The following two independent situations involve litigation provisions.

Part 1: Benson Company sells two products, Grey and Yellow. Each carries a one-year warranty.

- 1. Product Grey—Product warranty costs, based on past experience, will normally be 1% of sales.
- 2. Product Yellow—Product warranty costs cannot be reasonably estimated because this is a new product line. However, the chief engineer believes that product warranty costs are likely to be incurred.

Instructions

How should Benson report the estimated product warranty costs for each of the two types of merchandise above? Discuss the rationale for your answer. Do not discuss disclosures that should be made in Benson's financial statements or notes.

Part 2: Constantine Company is being sued for £4,000,000 for an injury caused to a child as a result of alleged negligence while the child was visiting the Constantine Company plant in March 2015. The suit was filed in July 2015. Constantine's lawyer states that it is probable that Constantine will lose the suit and

be found liable for a judgment costing anywhere from £400,000 to £2,000,000. However, the lawyer states that the most probable judgment is £1,000,000.

Instructions

How should Constantine report the suit in its 2015 financial statements? Discuss the rationale for your answer. Include in your answer disclosures, if any, that should be made in Constantine's financial statements or notes.

CA13-7 (Ethics of Warranties) The Dotson Company, owner of Bleacher Mall, charges Rich Clothing Store a rental fee of \$600 per month plus 5% of yearly profits over \$500,000. Matt Rich, the owner of the store, directs his accountant, Ron Hamilton, to increase the estimate of bad debt expense and warranty costs in order to keep profits at \$475,000.

Instructions

Answer the following questions.

- (a) Should Hamilton follow his boss's directive?
- **(b)** Who is harmed if the estimates are increased?
- (c) Is Matt Rich's directive ethical?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What was the composition of M&S's borrowings and other financial liabilities shown in its current liability section at year-end 2013?
- (b) What was M&S's year-end 2013 working capital and current ratio? Comment on M&S's liquidity.
- (c) What types of commitments and contingencies has M&S reported in its financial statements? What is management's reaction to these contingencies?

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- (a) How much working capital do each of these companies have at the end of 2012?
- (b) Compute both companies' (a) current cash debt coverage, (b) cash debt coverage, (c) current ratio, (d) acid-test ratio, (e) accounts receivable turnover, and (f) inventory turnover for 2012. Comment on each company's overall liquidity.
- (c) What types of loss or gain contingencies do these two companies have at the end of 2012?

Financial Statement Analysis Cases

Case 1 Northland Cranberries

Despite being a publicly traded company only since 1987, Northland Cranberries (USA) of Wisconsin Rapids, Wisconsin, is one of the world's largest cranberry growers. Despite its short life as a publicly traded corporation, it has engaged in an aggressive growth strategy. As a consequence, the company has taken on

significant amounts of both short-term and long-term debt. The following information is taken from recent annual reports of the company.

Northland Cranberries				
	Current Year	Prior Year		
Current assets	\$ 6,745,759	\$ 5,598,054		
Total assets	107,744,751	83,074,339		
Current liabilities	10,168,685	4,484,687		
Total liabilities	73,118,204	49,948,787		
Shareholders' equity	34,626,547	33,125,552		
Net sales	21,783,966	18,051,355		
Cost of goods sold	13,057,275	8,751,220		
Interest expense	3,654,006	2,393,792		
Income tax expense	1,051,000	1,917,000		
Net income	1,581,707	2,942,954		

Instructions

- (a) Evaluate the company's liquidity by calculating and analyzing working capital and the current ratio.
- **(b)** The following discussion of the company's liquidity was provided by the company in the Management Discussion and Analysis section of the company's annual report. Comment on whether you agree with management's statements, and what might be done to remedy the situation.

The lower comparative current ratio in the current year was due to \$3 million of short-term borrowing then outstanding which was incurred to fund the Yellow River Marsh acquisitions last year. As a result of the extreme seasonality of its business, the company does not believe that its current ratio or its underlying stated working capital at the current, fiscal year-end is a meaningful indication of the Company's liquidity. As of March 31 of each fiscal year, the Company has historically carried no significant amounts of inventories and by such date all of the Company's accounts receivable from its crop sold for processing under the supply agreements have been paid in cash, with the resulting cash received from such payments used to reduce indebtedness. The Company utilizes its revolving bank credit facility, together with cash generated from operations, to fund its working capital requirements throughout its growing season.

Case 2 Suzuki Company

Presented below is the current liabilities section and related note of Suzuki Company.

	(yen in millions)	
	Current Year	Prior Year
Current liabilities		
Current portion of long-term debt	¥ 15,000	¥ 10,000
Short-term debt	2,668	405
Accounts payable	29,495	42,427
Accrued warranty	16,843	16,741
Accrued marketing programs	17,512	16,585
Other accrued liabilities	35,653	33,290
Accrued and deferred income taxes	16,206	17,348
Total current liabilities	¥133,377	¥136,796

Notes to Consolidated Financial Statements

Note 1 (in part): Summary of Significant Accounting Policies and Related Data

Accrued Warranty The company provides an accrual for future warranty costs based upon the relationship of prior years' sales to actual warranty costs.

Instructions

Answer the following questions.

- (a) What type of warranty is Suzuki Company providing to customers?
- **(b)** Under what circumstance, if any, would it be appropriate for Suzuki Company to recognize unearned revenue on warranty contracts?
- (c) If Suzuki Company recognized unearned revenue on warranty contracts, how would it recognize this revenue in subsequent periods?

Case 3 BOP Clothing Co.

As discussed in the chapter, an important consideration in evaluating current liabilities is a company's operating cycle. The operating cycle is the average time required to go from cash to cash in generating revenue. To determine the length of the operating cycle, analysts use two measures: the average days to sell inventory (*inventory days*) and the average days to collect receivables (*receivable days*). The inventory-days computation measures the average number of days it takes to move an item from raw materials or purchase to final sale (from the day it comes in the company's door to the point it is converted to cash or an account receivable). The receivable-days computation measures the average number of days it takes to collect an account.

Most businesses must then determine how to finance the period of time when the liquid assets are tied up in inventory and accounts receivable. To determine how much to finance, companies first determine accounts payable days—how long it takes to pay creditors. Accounts payable days measures the number of days it takes to pay a supplier invoice. Consider the following operating cycle worksheet for BOP Clothing Co.

	2014	2015
Cash	\$ 45,000	\$ 30,000
Accounts receivable	250,000	325,000
Inventory	830,000	800,000
Accounts payable	720,000	775,000
Purchases	1,100,000	1,425,000
Cost of goods sold	1,145,000	1,455,000
Sales	1,750,000	1,950,000
Operating Cycle		
Inventory days ¹	264.6	200.7
Receivable days ²	52.1	60.8
Operating cycle	316.7	261.5
Less: Accounts payable days ³	238.9	198.5
Days to be financed	77.8	63.0
Working capital	\$ 405,000	\$ 380,000
Current ratio	1.56	1.49
Acid-test ratio	0.41	0.46
¹ Inventory days = (Inventory × 365) ÷ C ² Receivable days = (Accounts receivable ³ Accounts payable days = (Accounts pa	e × 365) ÷ Sales	

These data indicate that BOP has reduced its overall operating cycle (to 261.5 days) as well as the number of days to be financed with sources of funds other than accounts payable (from 78 to 63 days). Most businesses cannot finance the operating cycle with accounts payable financing alone, so working capital financing, usually short-term interest-bearing loans, is needed to cover the shortfall. In this case, BOP would need to borrow less money to finance its operating cycle in 2015 than in 2014.

Purchases = Cost of goods sold + Ending inventory - Beginning inventory. The ratios above assume that other current assets and liabilities are negligible.

Instructions

- (a) Use the BOP analysis to briefly discuss how the operating cycle data relate to the amount of working capital and the current and acid-test ratios.
- (b) Select two other real companies that are in the same industry and complete the operating cycle worksheet (similar to that prepared for BOP), along with the working capital and ratio analysis. Briefly summarize and interpret the results. To simplify the analysis, you may use ending balances to compute turnover ratios.

(Adapted from Operating Cycle Worksheet at www.entrepreneur.com)

Accounting, Analysis, and Principles

YellowCard Company manufactures accessories for iPods. It had the following selected transactions during 2015. (For any part of this problem requiring an interest or discount rate, use 10%.)

- 1. YellowCard provides a 2-year warranty on its docking stations, which it began selling in 2015. YellowCard estimates that €45,000 will be spent in the future to service warranties related to 2015 sales. During 2015, YellowCard spent €6,000 servicing warranty claims.
- 2. YellowCard has a one year €200,000 loan outstanding from UBS. The loan is set to mature on February 28, 2016. For several years, UBS has agreed to extend the loan, as long as YellowCard makes all of its quarterly interest payments (interest is due on the last days of each February, May, August, and November) and maintains an acid-test ratio (also called quick ratio) of at least 1.25. On December 10, 2015, UBS provided YellowCard a commitment letter indicating that UBS will extend the loan another 12 months, provided that YellowCard makes the interest payment due on May 31.
- 3. During 2014, YellowCard constructed a small manufacturing facility specifically to manufacture one particular accessory. YellowCard paid the construction contractor €5,000,000 cash (which was the total contract price) and placed the facility into service on January 1, 2015. Because of technological change, YellowCard anticipates that the manufacturing facility will be useful for no more than 10 years. The local government where the facility is located required that, at the end of the 10-year period, YellowCard remediate the facility so that it can be used as a community center. YellowCard estimates the cost of remediation in the future to be €500,000.

Accounting

Prepare all 2015 journal entries relating to (a) YellowCard's warranties, (b) YellowCard's loan from UBS, and (c) the new manufacturing facility that YellowCard opened on January 1, 2015.

Analysis

Describe how the transactions above affect ratios that might be used to assess YellowCard's liquidity. How important is the commitment letter that YellowCard has from UBS to these ratios?

Principles

YellowCard is contemplating offering an extended warranty. If customers pay an additional €50 at the time of product purchase, YellowCard would extend the warranty an additional 2 years. Would the extended warranty meet the definition of a liability under IFRS? Briefly explain.

BRIDGE TO THE PROFESSION

Professional Research

Hincapie Co. manufactures specialty bike accessories. The company is most well known for its product quality, and it has offered one of the best warranties in the industry on its higher-priced products—a lifetime guarantee. The warranty on these products is included in the sales price. Hincapie has a contract with a service company, which performs all warranty work on Hincapie products. Under the contract, Hincapie guarantees the service company at least €200,000 of warranty work for each year of the 3-year contract.

The recent economic recession has been hard on Hincapie's business, and sales for its higher-end products have been especially adversely impacted. As a result, Hincapie is planning to restructure its high-quality lines by moving manufacturing for those products into one of its other factories, shutting down assembly lines, and terminating workers. In order to keep some workers on-board, Hincapie plans to bring all warranty work in-house. It can terminate the current warranty contract by making a one-time termination payment of ϵ 75,000.

The restructuring plans have been discussed by management during November 2014; they plan to get approval from the board of directors at the December board meeting and execute the restructuring in early 2015. Given the company's past success, the accounting for restructuring activities has never come up. Hincapie would like you to do some research on how it should account for this restructuring according to IFRS.

Instructions

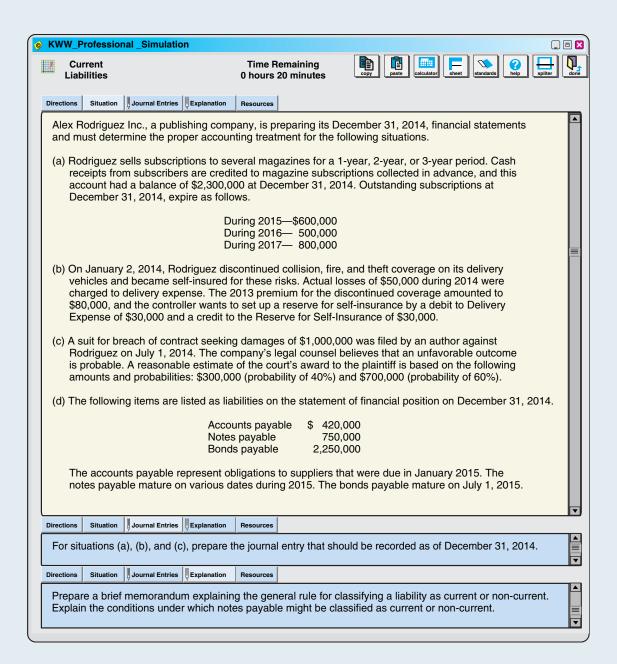

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free eIFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

(a) Identify the accounting literature that addresses the accounting for the various restructuring costs that will be incurred in the restructuring.

- **(b)** Advise Hincapie on the restructuring costs. When should Hincapie recognize liabilities arising from the restructuring? What costs can be included? What costs are excluded?
- (c) Does Hincapie have a liability related to the service contract? Explain. If Hincapie has a liability, at what amount should it be recorded?

Professional Simulation

In this simulation, you are asked to address questions related to the accounting for current liabilities. Prepare responses to all parts.

Remember to check the book's companion website, at www.wiley.com/college/kieso, to find additional resources for this chapter.

Non-Current Liabilities

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **1** Describe the formal procedures associated with issuing long-term debt.
- 2 Identify various types of bond issues.
- 3 Describe the accounting valuation for bonds at date of issuance.
- **4** Apply the methods of bond discount and premium amortization.
- **5** Explain the accounting for long-term notes payable.

- **6** Describe the accounting for the extinguishment of non-current liabilities.
- **7** Describe the accounting for the fair value option.
- **8** Explain the reporting of off-balance-sheet financing arrangements.
- 9 Indicate how to present and analyze non-current liabilities.

Going Long

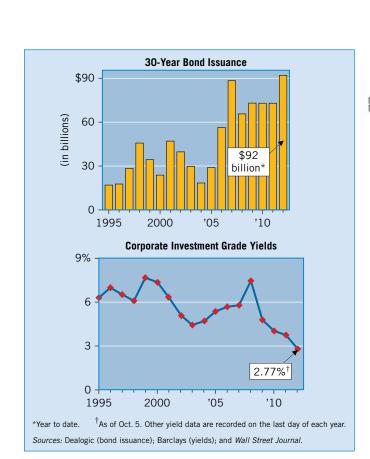

The clock is ticking. Every second, it seems, someone in the world takes on more debt. The idea of a debt clock for an individual nation is familiar to anyone who has been to Times Square in New York, where the American public shortfall is revealed. The world debt clock shown below (accessed in January 2014 at www.nationaldebtclocks.org) indicates the global figure for almost all government debts in dollar terms.

Current Global Public Debt \$ 52,521,833,443,124,156

Does it matter? After all, world governments owe the money to their own citizens, not to the Martians. But the rising total is important for two reasons. First, when government debt rises faster than economic output (as it has been doing in recent years), this implies more state interference in the economy and higher taxes in the future. Second, debt must be rolled over at regular intervals. This creates a recurring popularity test for individual governments, much like reality-TV contestants facing a public phone vote every week. Fail that vote, as various euro-zone governments have done, and the country (and its neighbors) can be plunged into crisis.

In addition to government debt, companies are issuing corporate debt at a record pace. Why this trend? For one thing, low interest rates and rising inflows into fixed-income funds have triggered record bond issuances as banks cut back lending. In addition, for some high-rated companies, it can be riskier to borrow from a bank than the bond markets. The reason: High-rated companies tend to rely on short-term commercial paper, backed up by undrawn loans, to fund working capital but are left stranded when these markets freeze up. Some are now financing themselves with longer-term bonds instead. In fact, non-financial companies are issuing 30-year bonds at a record pace as they look to increase long-term borrowings, lock in low interest rates, and take advantage of investor demand. The charts on the next page show the substantial increase in bond issues as interest rates have fallen.

Companies, like **Phillip Morris** (USA), **Sinopec** (CHN), and **Apple** (USA), have all sold 30-year bonds recently. Increases in the issuance of these bonds suggest confidence in the economy as investors appear comfortable holding such long-term investments. In addition, companies have a strong appetite

for issuing these bonds because they provide a substantial cash infusion at a relatively low interest rate. Hopefully, it will work out for both the investor and the company in the long run.

PREVIEW OF CHAPTER

14

As our opening story indicates, companies may rely on different forms of long-term borrowing, depending on market conditions and the features of various non-current liabilities. In this chapter,

we explain the accounting issues related to non-current liabilities. The content and organization of the chapter are as follows.

Non-Current Liabilities

Bonds Payable Long-Term Notes Payable Special Issues Notes issued at face value Notes not issued at face value Special situations Special situations Mortgage notes payable Presentation and analysis

BONDS PAYABLE

LEARNING OBJECTIVE 1

Describe the formal procedures associated with issuing long-term debt.

Non-current liabilities (sometimes referred to as **long-term debt**) consist of an expected outflow of resources arising from present obligations that are not payable within a year or the operating cycle of the company, whichever is longer. Bonds payable, long-term notes payable, mortgages payable, pension liabilities, and lease liabilities are examples of non-current liabilities.

A corporation, per its bylaws, usually requires approval by the board of directors and the shareholders before bonds or notes can be issued. The same holds true for other types of long-term debt arrangements.

Generally, long-term debt has various **covenants** or **restrictions** that protect both lenders and borrowers. The indenture or agreement often includes the amounts authorized to be issued, interest rate, due date(s), call provisions, property pledged as security, sinking fund requirements, working capital and dividend restrictions, and limitations concerning the assumption of additional debt. Companies should describe these features in the body of the financial statements or the notes if important for a complete understanding of the financial position and the results of operations.

Although it would seem that these covenants provide adequate protection to the long-term debtholder, many bondholders suffer considerable losses when companies add more debt to the capital structure. Consider what can happen to bondholders in leveraged buyouts (LBOs), which are usually led by management. In an LBO of **RJR Nabisco** (USA), for example, solidly rated 9% percent bonds due in 2016 plunged 20 percent in value when management announced the leveraged buyout. Such a loss in value occurs because the additional debt added to the capital structure increases the likelihood of default. Although covenants protect bondholders, they can still suffer losses when debt levels get too high.

Issuing Bonds

A bond arises from a contract known as a **bond indenture**. A bond represents a promise to pay (1) a sum of money at a designated maturity date, plus (2) periodic interest at a specified rate on the maturity amount (face value). Individual bonds are evidenced by a paper certificate and typically have a epsilon1,000 face value. Companies usually make bond interest payments semiannually although the interest rate is generally expressed as an annual rate. As discussed in the opening story, the main purpose of bonds is to borrow for the long term when the amount of capital needed is too large for one lender to supply. By issuing bonds in epsilon1,000, or epsilon1,000 denominations, a company can divide a large amount of long-term indebtedness into many small investing units, thus enabling more than one lender to participate in the loan.

A company may sell an entire bond issue to an investment bank, which acts as a selling agent in the process of marketing the bonds. In such arrangements, investment banks may either underwrite the entire issue by guaranteeing a certain sum to the company, thus taking the risk of selling the bonds for whatever price they can get (firm underwriting). Or, they may sell the bond issue for a commission on the proceeds of the sale (best-efforts underwriting). Alternatively, the issuing company may sell the bonds directly to a large institution, financial or otherwise, without the aid of an underwriter (private placement).

LEARNING OBJECTIVE [2]

Types and Ratings of Bonds

Presented on the next page, we define some of the more common types of bonds found in practice.

TYPES OF BONDS

SECURED AND UNSECURED BONDS. Secured bonds are backed by a pledge of some sort of collateral. Mortgage bonds are secured by a claim on real estate. Collateral trust bonds are secured by shares and bonds of other corporations. Bonds not backed by collateral are **unsecured**. A **debenture bond** is unsecured. A "junk bond" is unsecured and also very risky, and therefore pays a high interest rate. Companies often use these bonds to finance leveraged buyouts.

TERM, SERIAL BONDS, AND CALLABLE BONDS. Bond issues that mature on a single date are called **term bonds**; issues that mature in installments are called **serial bonds**. Serially maturing bonds are frequently used by school or sanitary districts, municipalities, or other local taxing bodies that receive money through a special levy. **Callable bonds** give the issuer the right to call and retire the bonds prior to maturity.

CONVERTIBLE, **COMMODITY-BACKED**, **AND DEEP-DISCOUNT BONDS**. If bonds are convertible into other securities of the corporation for a specified time after issuance, they are **convertible bonds**.

Two types of bonds have been developed in an attempt to attract capital in a tight money market—commodity-backed bonds and deep-discount bonds. Commodity-backed bonds (also called asset-linked bonds) are redeemable in measures of a commodity, such as barrels of oil, tons of coal, or ounces of rare metal. To illustrate, Sunshine Mining (USA), a silver-mining company, sold two issues of bonds redeemable with either \$1,000 in cash or 50 ounces of silver, whichever is greater at maturity, and that have a stated interest rate of 8½ percent. The accounting problem is one of projecting the maturity value, especially since silver has fluctuated between \$4 and \$40 an ounce since issuance.

Deep-discount bonds, also referred to as **zero-interest debenture bonds**, are sold at a discount that provides the buyer's total interest payoff at maturity.

REGISTERED AND BEARER (COUPON) BONDS. Bonds issued in the name of the owner are **registered bonds** and require surrender of the certificate and issuance of a new certificate to complete a sale. A **bearer** or **coupon bond**, however, is not recorded in the name of the owner and may be transferred from one owner to another by mere delivery.

INCOME AND REVENUE BONDS. Income bonds pay no interest unless the issuing company is profitable. **Revenue bonds**, so called because the interest on them is paid from specified revenue sources, are most frequently issued by airports, school districts, counties, toll-road authorities, and governmental bodies.

What do the numbers mean?

ALL ABOUT BONDS

How do investors monitor their bond investments? One way is to review the bond listings found in the newspaper or online. Corporate bond listings show the coupon (interest) rate, maturity date, and last price. However, because corporate

bonds are more actively traded by large institutional investors, the listings also indicate the current yield. Corporate bond listings would look like this below.

Issuer	Coupon	_Maturity_	Price	Yield	Rating
Vodafone Group	5.00	2018/06/04	106.66	4.05	AA
Telecom Italia S.p.A.	5.25	2022/10/02	100.00	5.25	BB^+

The companies issuing the bonds are listed in the first column, in this case, two telecommunications companies, **Vodafone Group** (GBR) and **Telecom Italia S.p.A** (ITA). In

the second column is the interest rate paid by the bond as a percentage of its par value, followed by its maturity date. The Vodafone bonds, for example, pay 5 percent and mature

656 Chapter 14 Non-Current Liabilities

on June 4, 2018. The Telecom Italia bonds pay 5.25 percent, a bit higher. The Vodafone bonds have a current yield of 4.05 percent, based on the price of 106.66 per £1,000. In contrast, the Telecom Italia bonds at 100.00 yield 5.25 percent. The final column gives the bond rating. Vodafone, with a rating of AA, is viewed as more creditworthy than Telecom Italia, which explains why Vodafone's bonds sell at a higher price and lower yield.

Also, as indicated in the chapter, interest rates and the bond's term to maturity have a real effect on bond prices. For example, an increase in interest rates will lead to a decline in bond values. Similarly, a decrease in interest rates will lead to a rise in bond values. The following data, based on three different bond funds, demonstrate these relationships between interest rate changes and bond values.

Bond Price Changes in	1% Interest	1% Interest
Response to Interest	Rate	Rate
Rate Changes	Increase	Decrease
Short-term fund (2-5 years)	-2.5%	+2.5%
Intermediate-term fund (5 years)	-5%	+5%
Long-term fund (10 years)	-10%	+10%
Source: The Vanguard Group.		

Another factor that affects bond prices is the call feature, which decreases the value of the bond. Investors must be rewarded for the risk that the issuer will call the bond if interest rates decline, which would force the investor to reinvest at lower rates.

Valuation of Bonds Payable

LEARNING OBJECTIVE 3

Describe the accounting valuation for bonds at date of issuance.

The issuance and marketing of bonds to the public does not happen overnight. It usually takes weeks or even months. First, the issuing company must arrange for underwriters that will help market and sell the bonds. Then, it must obtain regulatory approval of the bond issue, undergo audits, and issue a prospectus (a document that describes the features of the bond and related financial informa-

tion). Finally, the company must generally have the bond certificates printed. Frequently, the issuing company establishes the terms of a bond indenture well in advance of the sale of the bonds. Between the time the company sets these terms and the time it issues the bonds, the market conditions and the financial position of the issuing corporation may change significantly. Such changes affect the marketability of the bonds and thus their selling price.

The selling price of a bond issue is set by the supply and demand of buyers and sellers, relative risk, market conditions, and the state of the economy. The investment community values a bond at the present value of its expected future cash flows, which consist of (1) interest and (2) principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the issuer's risk characteristics.

The interest rate written in the terms of the bond indenture (and often printed on the bond certificate) is known as the stated, coupon, or nominal rate. The issuer of the bonds sets this rate. The stated rate is expressed as a percentage of the face value of the bonds (also called the par value, principal amount, or maturity value).

Bonds Issued at Par

If the rate employed by the investment community (buyers) is the same as the stated rate, the bond sells at par. That is, the par value equals the present value of the bonds computed by the buyers (and the current purchase price). To illustrate the computation of the present value of a bond issue, assume that Santos Company issues R\$100,000 in bonds dated January 1, 2015, due in five years with 9 percent interest payable annually on January 1. At the time of issue, the market rate for such bonds is 9 percent. The time diagram in Illustration 14-1 depicts both the interest and the principal cash flows.

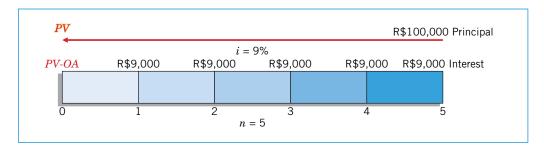

ILLUSTRATION 14-1

Time Diagram for Bonds Issued at Par

The actual principal and interest cash flows are discounted at a 9 percent rate for five periods, as shown in Illustration 14-2.

Present value of the principal:

R\$100,000 \times .64993 (Table 6-2)

Present value of the interest payments:

R\$9,000 \times 3.88965 (Table 6-4)

Present value (selling price) of the bonds

R\$100,000

ILLUSTRATION 14-2

Present Value Computation of Bond Selling at Par

By paying R\$100,000 (the par value) at the date of issue, investors realize an effective rate or yield of 9 percent over the five-year term of the bonds. Santos makes the following entry when it issues the bonds.

January 1, 2015

Cash 100,000

Bonds Payable 100,000

Santos records accrued interest expense of R\$9,000 (R\$100,000 \times .09) at December 31, 2015 (year-end), as follows.

December 31, 2015

Interest Expense 9,000

Interest Payable 9,000

It records the first interest payment as follows.

 January 1, 2016

 Interest Payable
 9,000

 Cash
 9,000

Bonds Issued at Discount or Premium

If the rate employed by the investment community (buyers) differs from the stated rate, the present value of the bonds computed by the buyers (and the current purchase price) will differ from the face value of the bonds. The difference between the face value and the present value of the bonds determines the actual price that buyers pay for the bonds. This difference is either a discount or premium.¹

- If the bonds sell for less than face value, they sell at a **discount**.
- If the bonds sell for more than face value, they sell at a **premium**.

The rate of interest actually earned by the bondholders is called the **effective yield** or **market rate**. If bonds sell at a discount, the effective yield exceeds the stated rate.

¹It is generally the case that the stated rate of interest on bonds is set in rather precise decimals (such as 10.875 percent). Companies usually attempt to align the stated rate as closely as possible with the market or effective rate at the time of issue.

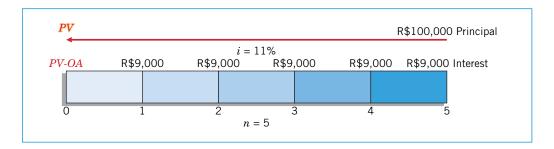

658 Chapter 14 Non-Current Liabilities

Conversely, if bonds sell at a premium, the effective yield is lower than the stated rate. Several variables affect the bond's price while it is outstanding, most notably the market rate of interest. There is an inverse relationship between the market interest rate and the price of the bond.

To illustrate, assume now that Santos issues R\$100,000 in bonds, due in five years with 9 percent interest payable annually at year-end. At the time of issue, the market rate for such bonds is 11 percent. The time diagram in Illustration 14-3 depicts both the interest and the principal cash flows.

ILLUSTRATION 14-3

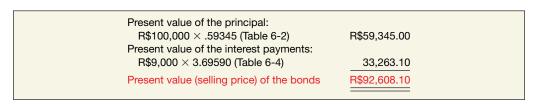

Time Diagram for Bonds Issued at a Discount

The actual principal and interest cash flows are discounted at an 11 percent rate for five periods, as shown in Illustration 14-4.

ILLUSTRATION 14-4

Present Value Computation of Bond Selling at a Discount

By paying R\$92,608.10 at the date of issue, investors realize an effective rate or yield of 11 percent over the five-year term of the bonds. These bonds would sell at a discount of R\$7,391.90 (R\$100,000 - R\$92,608.10). The price at which the bonds sell is typically stated as a percentage of the face or par value of the bonds. For example, the Santos bonds sold for 92.6 (92.6% of par). If Santos had received R\$102,000, then the bonds sold for 102 (102% of par).

When bonds sell at less than face value, it means that investors demand a rate of interest **higher** than the stated rate. Usually, this occurs because the investors can earn a higher rate on alternative investments of equal risk. They cannot change the stated rate, so they refuse to pay face value for the bonds. Thus, by changing the amount invested, they alter the effective rate of return. The investors receive interest at the stated rate computed on the face value, but they actually earn at **an effective rate that exceeds the stated rate because they paid less than face value for the bonds**. (Later in the chapter, in Illustrations 14-8 and 14-9 on page 661, we show an illustration for a bond that sells at a premium.)

What do the numbers mean?

HOW ABOUT A 100-YEAR BOND?

Yes, some companies issue bonds with maturities that exceed a person's lifetime. For example, **Électricité de France S.A.** (FRA) in early 2014 sold 100-year bonds in Europe. The world's biggest operator of nuclear reactors priced £1.35 billion of notes to yield 6.125 percent. The Paris-based utility is the second company to sell century bonds in Europe, following **GDF Suez S.A.** (FRA) in March 2011.

Why do companies issue 100-year bonds? A number of investors, such as pension funds and insurance companies, have non-current liabilities. They need long-duration assets to reduce an asset-liability mismatch. While investing in a 100-year bond carries interest-rate risk, long-term debt has an offsetting effect against long-duration assets. Thus, this group of investors has a strong demand for these bonds.

Other multibillion-dollar companies, such as **Walt Disney Company** (USA) and **The Coca-Cola Company** (USA), have issued 100-year bonds in the past. Many of these bonds and debentures contain an option that lets the debt issuer partially or fully repay the debt long before the scheduled maturity. For example, the 100-year bond that Disney issued in 1993 is supposed to mature in 2093, but the company can start repaying the bonds any time after 30 years (2023).

You may be surprised to learn that 1,000-year bonds also exist. A few issuers, such as the Canadian Pacific Corporation (CAN), have issued such bonds in the past. And, there have also been instances of bonds issued with no maturity date at all, meaning that the debt issuers continue fulfilling the coupon payments forever. These types of financial instruments are commonly referred to as perpetuities.

Sources: Albert Phung, "Why Do Companies Issue 100-Year Bonds?" Investopedia (February 2009); and K. Linsell, "EDF's Borrowing Exceeds \$12 Billion This Week with 100-Year Bond," Bloomberg (January 17, 2014).

Effective-Interest Method

As discussed earlier, by paying more or less at issuance, investors earn a rate different than the coupon rate on the bond. Recall that the issuing company pays the contractual interest rate over the term of the bonds but also must pay the face value at maturity. If the bond is issued at a discount, the amount paid at maturity is more than the issue amount. If issued at a premium, the company pays less at maturity relative to the issue price.

LEARNING OBJECTIVE

Apply the methods of bond discount and premium amortization.

The company records this adjustment to the cost as **bond interest expense** over the life of the bonds through a process called **amortization**. **Amortization of a discount increases bond interest expense**. **Amortization of a premium decreases bond interest expense**.

The required procedure for amortization of a discount or premium is the **effective-interest method** (also called **present value amortization**). Under the effective-interest method, companies: [1]

See the Authoritative Literature section (page 684).

- **1.** Compute bond interest expense first by multiplying the **carrying value** (book value) of the bonds at the beginning of the period by the effective-interest rate.²
- **2.** Determine the bond discount or premium amortization next by comparing the bond interest expense with the interest (cash) to be paid.

Illustration 14-5 depicts graphically the computation of the amortization.

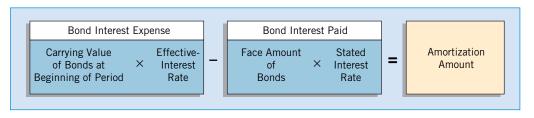

ILLUSTRATION 14-5
Bond Discount and
Premium Amortization

Computation

The effective-interest method produces a periodic interest expense equal to a constant percentage of the carrying value of the bonds.³

²The **carrying value** is the face amount minus any unamortized discount or plus any unamortized premium. The term *carrying value* is synonymous with *book value*.

 3 The issuance of bonds involves engraving and printing costs, legal and accounting fees, commissions, promotion costs, and other similar charges. These costs should be recorded as a reduction to the issue amount of the bond payable and then amortized into expense over the life of the bond, through an adjustment to the effective-interest rate. [2] For example, if the face value of the bond is €100,000 and issue costs are €1,000, then the bond payable (net of the bond issue costs) is recorded at €99,000. Thus, the effective-interest rate will be higher, based on the reduced carrying value.

660 Chapter 14 Non-Current Liabilities

P

Underlying Concepts

Because bond issue costs do not meet the definition of an asset, some argue they should be expensed at issuance.

Bonds Issued at a Discount

To illustrate amortization of a discount under the effective-interest method, Evermaster Corporation issued €100,000 of 8 percent term bonds on January 1, 2015, due on January 1, 2020, with interest payable each July 1 and January 1. Because the investors required an effective-interest rate of 10 percent, they paid €92,278 for the €100,000 of bonds, creating a €7,722 discount. Evermaster computes the €7,722 discount as follows.⁴

ILLUSTRATION 14-6

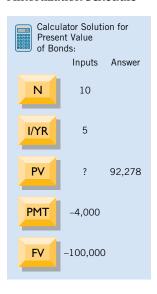

Computation of Discount on Bonds Payable

1/1/18	4,000	4,783	783	96,454
7/1/18	4,000	4,823	823	97,277
1/1/19	4,000	4,864	864	98,141
7/1/19	4,000	4,907	907	99,048
1/1/20	4,000	4,952	952	100,000
	€40,000	€47,722	 €7,722	

Evermaster records the issuance of its bonds at a discount on January 1, 2015, as follows.

Cash 92,278
Bonds Payable 92,278

It records the first interest payment on July 1, 2015, and amortization of the discount as follows.

Interest Expense 4,614
Bonds Payable 614
Cash 4,000

⁴Because companies pay interest semiannually, the interest rate used is 5% ($10\% \times {}^6/_{12}$). The number of periods is 10 (5 years \times 2).

Evermaster records the interest expense accrued at December 31, 2015 (year-end), and amortization of the discount as follows.

Interest Expense	4,645
Interest Payable	4,000
Bonds Payable	645

Bonds Issued at a Premium

Now assume that for the bond issue described above, investors are willing to accept an effective-interest rate of 6 percent. In that case, they would pay €108,530 or a premium of €8,530, computed as follows.

Maturity value of bonds payable		€100,000
Present value of €100,000 due in 5 years at 6%, interest payable semiannually (Table 6-2); FV(PVF _{10,3%}); (€100,000 × .74409)	€74,409	
Present value of €4,000 interest payable semiannually for 5 years at 6% annually (Table 6-4); <i>R(PVF-OA</i> _{10,3%}); (€4,000 × 8.53020)	34,121	
Proceeds from sale of bonds		(108,530)
Premium on bonds payable		€ 8,530

ILLUSTRATION 14-8

Computation of Premium on Bonds Payable

The five-year amortization schedule appears in Illustration 14-9.

Date	Cash Paid	Interest Expense	Premium Amortized	Carrying Amount of Bonds
1/1/15				€108,530
7/1/15	€ 4,000 ^a	€ 3,256 ^b	€ 744 ^c	107,786 ^d

Evermaster records the issuance of its bonds at a premium on January 1, 2015, as follows.

 Cash
 108,530

 Bonds Payable
 108,530

Evermaster records the first interest payment on July 1, 2015, and amortization of the premium as follows.

Interest Expense3,256Bonds Payable744

Cash 4,000

662 Chapter 14 Non-Current Liabilities

Evermaster should amortize the discount or premium as an adjustment to interest expense over the life of the bond in such a way as to result in a constant rate of interest when applied to the carrying amount of debt outstanding at the beginning of any given period.5

Accruing Interest

In our previous examples, the interest payment dates and the date the financial statements were issued were essentially the same. For example, when Evermaster sold bonds at a premium (page 661), the two interest payment dates coincided with the financial reporting dates. However, what happens if Evermaster prepares financial statements at the end of February 2015? In this case, the company prorates the premium by the appropriate number of months to arrive at the proper interest expense, as follows.

ILLUSTRATION 14-10

Computation of Interest Expense

€1,333.33 Interest accrual (€4,000 × 2/6) Premium amortized (€744 × 2/6) (248.00)Interest expense (Jan.-Feb.) €1.085.33

1,333.33

Evermaster records this accrual as follows.

Interest Expense 1,085.33 Bonds Payable 248.00 Interest Payable

If the company prepares financial statements six months later, it follows the same

procedure. That is, the premium amortized would be as follows.

ILLUSTRATION 14-11

Computation of Premium Amortization Premium amortized (March-June) (€744 × 4/6) €496.00 Premium amortized (July–August) (€766 × 2/6) 255.33 €751.33 Premium amortized (March-August 2015)

Bonds Issued Between Interest Dates

Companies usually make bond interest payments semiannually, on dates specified in the bond indenture. When companies issue bonds on other than the interest payment dates, bond investors will pay the issuer the interest accrued from the last interest payment date to the date of issue. The bond investors, in effect, pay the bond issuer in advance for that portion of the full six-months' interest payment to which they are not entitled because they have not held the bonds for that period. Then, on the next semiannual interest payment date, the bond investors will receive the full six-months' interest payment.

Bonds Issued at Par. To illustrate, assume that instead of issuing its bonds on January 1, 2015, Evermaster issued its five-year bonds, dated January 1, 2015, on May 1, 2015, at

⁵The issuer may call some bonds at a stated price after a certain date. This call feature gives the issuing corporation the opportunity to reduce its bonded indebtedness or take advantage of lower interest rates. Whether callable or not, a company must amortize any premium or discount over the bond's life to maturity because early redemption (call of the bond) is not a certainty.

par (€100,000). Evermaster records the issuance of the bonds between interest dates as follows.

May 1, 2015

Cash	100,000	
Bonds Payable		100,000
(To record issuance of bonds at par)		
Cash	2,667	
Interest Expense (€100,000 × .08 × 4/12)		2,667
(To record accrued interest; Interest Payable might be credited instead)		

Because Evermaster issues the bonds between interest dates, it records the bond issuance at par (\leq 100,000) plus accrued interest (\leq 2,667). That is, the total amount paid by the bond investor includes four months of accrued interest.

On July 1, 2015, two months after the date of purchase, Evermaster pays the investors six months' interest, by making the following entry.

July 1, 2015		
Interest Expense (€100,000 × .08 × 1/2)	4,000	
Cash		4,000
(To record first interest payment)		

The Interest Expense account now contains a debit balance of \le 1,333 (\le 4,000 $- \le$ 2,667), which represents the proper amount of interest expense—two months at 8 percent on \le 100,000.

Interest	Expense
	5/1/15 2,667ª
7/1/15 4,000 ^b	
Balance 1.333	

^aAccrued interest received. ^bCash paid.

Bonds Issued at Discount or Premium

The illustration above was simplified by having the January 1, 2015, bonds issued on May 1, 2015, at par. However, if the bonds are issued at a discount or premium between interest dates, Evermaster must not only account for the partial cash interest payment but also the amount of effective amortization for the partial period.

To illustrate, assume that the Evermaster 8-percent bonds were issued on May 1, 2015, to yield 6 percent. Thus, the bonds are issued at a premium; in this case, the price is €108,039.⁶ Evermaster records the issuance of the bonds between interest dates as follows.

May 1, 2015

Cash	108,039	
Bonds Payable		108,039
(To record the present value of the cash flows)		
Cash	2,667	
Interest Expense (€100,000 × .08 × 4/12)		2,667
(To record accrued interest; Interest Payable might be credited instead)		

In this case, Evermaster receives a total of $\le 110,706$ at issuance, comprised of the bond price of $\le 108,039$ plus the accrued interest of $\le 2,667$. Following the effective-interest procedures, Evermaster then determines interest expense from the date of sale (May 1, 2015), not from the date of the bonds (January 1, 2015).

⁶Determination of the price of a bond between interest payment dates generally requires use of a financial calculator because the time value of money tables shown in this textbook do not have factors for all compounding periods. For homework purposes, the price of a bond sold between interest dates will be provided.

Illustration 14-12 provides the computation, using the effective-interest rate of 6 percent.

ILLUSTRATION 14-12

Partial Period Interest Amortization

The bond interest expense therefore for the two months (May and June) is €1,080.

The premium amortization of the bonds is also for only two months. It is computed by taking the difference between the net cash paid related to bond interest and the effective-interest expense of €1,080. Illustration 14-13 shows the computation of the partial amortization, using the effective-interest rate of 6 percent.

ILLUSTRATION 14-13

Partial Period Interest Amortization

Cash interest paid on July 1, 2015 (€100,000 × 8% × 6/12) Less: Cash interest received on May 2, 2015	€4,000 2,667
Net cash paid Bond interest expense (at the effective rate) for two months	€1,333 (1,080)
Premium amortization	€ 253

As indicated, both the bond interest expense and amortization reflect the shorter two-month period between the issue date and the first interest payment. Evermaster therefore makes the following entries on July 1, 2015, to record the interest payment and the premium amortization.

Interest Expense

	5/1/15	2,667 ^a
7/1/15 4,000 ^b	7/1/15	253°
Balance 1,080		

^aAccrued interest received.

July 1, 2015

Interest Expense	4,000	
Cash		4,000
(To record first interest payment)		
Bonds Payable	253	
Interest Expense		253
(To record two-months' premium amortization)		

The Interest Expense account now contains a debit balance of €1,080 (€4,000 - €2,667 - €253), which represents the proper amount of interest expense—two months at an effective annual interest rate of 6 percent on €108,039.

What do the numbers mean?

YOUR DEBT IS KILLING MY EQUITY

Traditionally, investors in the equity and bond markets operate in their own separate worlds. However, in recent volatile markets, even quiet murmurs in the bond market have been amplified into movements (usually negative) in share prices. At one extreme, these gyrations heralded the demise of a company well before the investors could sniff out the problem.

The swift decline of Enron (USA) in late 2001 provided the ultimate lesson: A company with no credit is no company at all. As one analyst remarked, "You can no longer have an opinion on a company's shares without having an appreciation for its credit rating." Indeed, other energy companies also felt the effect of Enron's troubles as lenders tightened or closed down the credit supply and raised interest rates on already-high levels of debt. The result? Share prices took a hit.

Other industries are not immune from the negative shareholder effects of credit problems. For example, analysts at **TheStreet.com** compiled a list of companies with a focus on debt levels. Companies like **Copel CIA** (BRA) (an energy distribution company) were rewarded with improved share ratings, based on their manageable debt levels. In contrast, other companies with high debt levels and low ability to cover interest costs were not viewed very favorably. Among them is **Goodyear Tire and Rubber** (USA), which reported debt six times greater than its equity. Goodyear is a classic example of how swift and crippling a heavy debt-load can

bCash paid.

^c2 months' amortization.

LEARNING OBJECTIVE

Explain the accounting for long-term

notes payable.

be. Not too long ago, Goodyear had a good credit rating and was paying a good dividend. But, with mounting operating losses, Goodyear's debt became a huge burden, its debt rating fell to junk status, the company cut its dividend, and its

share price dropped 80 percent. This was yet another example of share prices taking a hit due to concerns about credit quality. Thus, even if your investment tastes are in equity, keep an eye on the liabilities.

R4; Herb Greenberg, "The Hidden Dangers of Debt," Fortune (July 21, 2003), p. 153; and Christine Richard, "Holders of Corporate Bonds Seek Protection from Risk," Wall Street Journal (December 17–18, 2005), p. B4.

LONG-TERM NOTES PAYABLE

The difference between current notes payable and **long-term notes payable** is the maturity date. As discussed in Chapter 13, short-term notes payable are those that companies expect to pay within a year or the operating cycle—whichever is longer. Long-term notes are similar in substance to bonds in that both have fixed maturity dates and carry either a stated or implicit interest rate. However, notes

maturity dates and carry either a stated or implicit interest rate. However, notes do not trade as readily as bonds in the organized public securities markets. Non-corporate and small corporate enterprises issue notes as their long-term instruments. Larger corporations issue both long-term notes and bonds.

Accounting for notes and bonds is quite similar. Like a bond, a note is valued at the present value of its future interest and principal cash flows. The company amortizes any discount or premium over the life of the note, just as it would the discount or premium on a bond. Companies compute the present value of an interest-bearing note, record its issuance, and amortize any discount or premium and accrual of interest in the same way that they do for bonds (as shown on pages 657–664 of this chapter).

As you might expect, accounting for long-term notes payable parallels accounting for long-term notes receivable, as was presented in Chapter 7.

Notes Issued at Face Value

In Chapter 7, we discussed the recognition of a €10,000, three-year note Scandinavian Imports issued at face value to Bigelow Corp. In this transaction, the stated rate and the effective rate were both 10 percent. The time diagram and present value computation on page 309 of Chapter 7 (see Illustration 7-12) for Bigelow Corp. would be the same for the issuer of the note, Scandinavian Imports, in recognizing a note payable. Because the present value of the note and its face value are the same, €10,000, Scandinavian would recognize no premium or discount. It records the issuance of the note as follows.

 Cash
 10,000

 Notes Payable
 10,000

Scandinavian Imports would recognize the interest incurred each year as follows.

Interest Expense (€10,000 × .10) 1,000 Cash 1,000

Notes Not Issued at Face Value

Zero-Interest-Bearing Notes

If a company issues a zero-interest-bearing (non-interest-bearing) note⁷ solely for cash, it measures the note's present value by the cash received. The implicit interest rate is the rate that equates the cash received with the amounts to be paid in the future. The issuing

⁷Although we use the term "note" throughout this discussion, the basic principles and methodology apply equally to other long-term debt instruments.

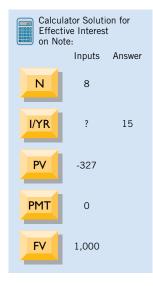

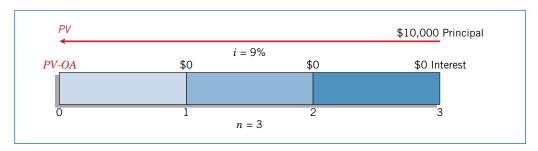

ILLUSTRATION 14-14

Time Diagram for Zero-Interest Note

company records the difference between the face amount and the present value (cash received) as a discount and amortizes that amount to interest expense over the life of the note.

An example of such a transaction is **Beneficial Corporation**'s (USA) offering of \$150 million of zero-coupon notes (deep-discount bonds) having an eight-year life. With a face value of \$1,000 each, these notes sold for \$327—a deep discount of \$673 each. The present value of each note is the cash proceeds of \$327. We can calculate the interest rate by determining the rate that equates the amount the investor currently pays with the amount to be received in the future. Thus, Beneficial amortizes the discount over the eight-year life of the notes using an effective-interest rate of 15 percent.⁸

To illustrate the entries and the amortization schedule, assume that Turtle Cove Company issued the three-year, \$10,000, zero-interest-bearing note to Jeremiah Company illustrated on page 309 of Chapter 7 (notes receivable). The implicit rate that equated the total cash to be paid (\$10,000 at maturity) to the present value of the future cash flows (\$7,721.80 cash proceeds at date of issuance) was 9 percent. (The present value of \$1 for three periods at 9 percent is \$0.77218.) Illustration 14-14 shows the time diagram for the single cash flow.

Turtle Cove records issuance of the note as follows.

Turtle Cove amortizes the discount and recognizes interest expense annually using the **effective-interest method**. Illustration 14-15 shows the three-year discount amortization and interest expense schedule. (This schedule is similar to the note receivable schedule of Jeremiah Company in Illustration 7-14.)

ILLUSTRATION 14-15 Schedule of Note Discount Amortization

^a \$7,721.80 × .09 = ^b \$694.96 - 0 = \$69			+ \$694.96 = \$8,416. ent to compensate fo	

8
\$327 = \$1,000(*PVF*_{8,i})
$$PVF_{8,i} = \frac{$327}{$1,000} = .327$$

$$.327 = 15\% \text{ (in Table 6-2 locate .32690)}.$$

Turtle Cove records interest expense at the end of the first year using the effective-interest method as follows.

Interest Expense (\$7,721.80 \times 9%) 694.96 Notes Payable 694.96

The total amount of the discount, \$2,278.20 in this case, represents the expense that Turtle Cove Company will incur on the note over the three years.

Interest-Bearing Notes

The zero-interest-bearing note above is an example of the extreme difference between the stated rate and the effective rate. In many cases, the difference between these rates is not so great.

Consider the example from Chapter 7 where Marie Co. issued for cash a €10,000, three-year note bearing interest at 10 percent to Morgan Corp. The market rate of interest for a note of similar risk is 12 percent. Illustration 7-15 (page 311) shows the time diagram depicting the cash flows and the computation of the present value of this note. In this case, because the effective rate of interest (12%) is greater than the stated rate (10%), the present value of the note is less than the face value. That is, the note is exchanged at a **discount**. Marie Co. records the issuance of the note as follows.

Cash 9,520
Notes Payable 9,520

Marie Co. then amortizes the discount and recognizes interest expense annually using the **effective-interest method**. Illustration 14-16 shows the three-year discount amortization and interest expense schedule.

sc	Effec	IOTE DISCOUN TIVE-INTEREST M OTE DISCOUNTED		N
	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Note
Date of issue End of year 1	€1,000 ^a	€1,142 ^b	€142 ^c	€ 9,520 9,662 ^d
End of year 2 End of year 3	1,000 1,000	1,159 1,179	159 179	9,821 10,000
	€3,000	<u>€3,480</u>	<u>€480</u>	
^a €10,000 × 10% = ^b €9,520 × 12% = €	,	,	1,000 = €142 142 = €9,662	

ILLUSTRATION 14-16Schedule of Note
Discount Amortization

Marie Co. records payment of the annual interest and amortization of the discount for the first year as follows (amounts per amortization schedule).

Interest Expense 1,142
Notes Payable 142
Cash 1,000

When the present value exceeds the face value, Marie Co. exchanges the note at a premium. It does so by recording the premium as a credit and amortizing it using the effective-interest method over the life of the note as annual reductions in the amount of interest expense recognized.

Special Notes Payable Situations

Notes Issued for Property, Goods, or Services

Sometimes, companies may receive property, goods, or services in exchange for a note payable. When exchanging the debt instrument for property, goods, or services in a bargained transaction entered into at arm's length, the stated interest rate is presumed to be fair unless:

- **1.** No interest rate is stated, or
- **2.** The stated interest rate is unreasonable, or
- **3.** The stated face amount of the debt instrument is materially different from the current cash sales price for the same or similar items or from the current fair value of the debt instrument.

In these circumstances, the company measures the present value of the debt instrument by the fair value of the property, goods, or services or by an amount that reasonably approximates the fair value of the note. [3] If there is no stated rate of interest, the amount of interest is the difference between the face amount of the note and the fair value of the property.

For example, assume that Scenic Development Company sells land having a cash sale price of $\leq 200,000$ to Health Spa, Inc. In exchange for the land, Health Spa gives a five-year, $\leq 293,866$, zero-interest-bearing note. The $\leq 200,000$ cash sale price represents the present value of the $\leq 293,866$ note discounted at 8 percent for five years. Should both parties record the transaction on the sale date at the face amount of the note, which is $\leq 293,866$? No—if they did, Health Spa's Land account and Scenic's sales would be overstated by $\leq 93,866$ (the interest for five years at an effective rate of 8 percent). Similarly, interest revenue to Scenic and interest expense to Health Spa for the five-year period would be understated by $\leq 93,866$.

Because the difference between the cash sale price of €200,000 and the €293,866 face amount of the note represents interest at an effective rate of 8 percent, the companies' transaction is recorded at the exchange date as follows.

ILLUSTRATION 14-17

Entries for Non-Cash Note Transaction

Н	lealth Spa, Inc. (Buy	er)	Scenic Develop	ment Company	/ (Seller)
Land	200,000		Notes Receivable	200,000	
Notes Payal	ble	200,000	Sales Revenue		200,000

During the five-year life of the note, Health Spa amortizes annually a portion of the discount of €93,866 as a charge to interest expense. Scenic Development records interest revenue totaling €93,866 over the five-year period by also amortizing the discount. The effective-interest method is required, unless the results obtained from using another method are not materially different from those that result from the effective-interest method.

Choice of Interest Rate

In note transactions, the effective or market interest rate is either evident or determinable by other factors involved in the exchange, such as the fair value of what is given or received. But, if a company cannot determine the fair value of the property, goods, services, or other rights, and if the note has no ready market, the problem of determining the present value of the note is more difficult. To estimate the present value of a

note under such circumstances, a company must approximate an applicable interest rate that may differ from the stated interest rate. This process of interest-rate approximation is called **imputation**, and the resulting interest rate is called an **imputed interest rate**.

The prevailing rates for similar instruments of issuers with similar credit ratings affect the choice of a rate. Other factors such as restrictive covenants, collateral, payment schedule, and the existing prime interest rate also play a part. Companies determine the imputed interest rate when they issue a note; any subsequent changes in prevailing interest rates are ignored.

To illustrate, assume that on December 31, 2015, Wunderlich Company issued a promissory note to Brown Interiors Company for architectural services. The note has a face value of £550,000, a due date of December 31, 2020, and bears a stated interest rate of 2 percent, payable at the end of each year. Wunderlich cannot readily determine the fair value of the architectural services, nor is the note readily marketable. On the basis of Wunderlich's credit rating, the absence of collateral, the prime interest rate at that date, and the prevailing interest on Wunderlich's other outstanding debt, the company imputes an 8 percent interest rate as appropriate in this circumstance. Illustration 14-18 shows the time diagram depicting both cash flows.

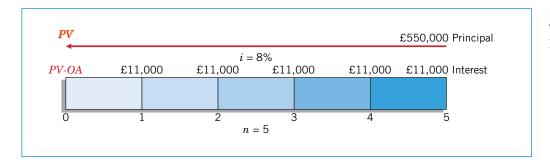

ILLUSTRATION 14-18

Time Diagram for Interest-Bearing Note

The present value of the note and the imputed fair value of the architectural services are determined as follows.

Face value of the note		£ 550,000
Present value of £550,000 due in 5 years at 8% interest payable		
annually (Table 6-2); $FV(PVF_{5,8\%})$; (£550,000 \times .68058)	£374,319	
Present value of £11,000 interest payable annually for 5 years at 8%;		
$R(PVF-OA_{5,8\%}); (£11,000 \times 3.99271)$	43,920	
Present value of the note		(418,239)
Discount on notes payable		£131,761

Interest Expense	33,459
Notes Payable	22,459
Cash	11.000

Mortgage Notes Payable

A common form of long-term notes payable is a mortgage note payable. A **mortgage note payable** is a promissory note secured by a document called a mortgage that pledges title to property as security for the loan. Individuals, proprietorships, and partnerships use mortgage notes payable more frequently than do corporations. (Corporations usually find that bond issues offer advantages in obtaining large loans.)

The borrower usually receives cash for the face amount of the mortgage note. In that case, the face amount of the note is the true liability, and no discount or premium is involved. When the lender assesses "points," however, the total amount received by the borrower is less than the face amount of the note. ⁹ Points raise the effective-interest rate above the rate specified in the note. A **point** is 1 percent of the face of the note.

For example, assume that Harrick Co. borrows \$1,000,000, signing a 20-year mortgage note with a stated interest rate of 10.75 percent as part of the financing for a new plant. If Associated Savings demands 4 points to close the financing, Harrick will receive 4 percent less than \$1,000,000—or \$960,000—but it will be obligated to repay the entire \$1,000,000 at the rate of \$10,150 per month. Because Harrick received only \$960,000 and must repay \$1,000,000, its effective-interest rate is increased to approximately 11.3 percent on the money actually borrowed.

On the statement of financial position, Harrick should report the mortgage note payable as a liability using a title such as "Mortgage Notes Payable" or "Notes Payable—Secured," with a brief disclosure of the property pledged in notes to the financial statements.

Mortgages may be payable in full at maturity or in installments over the life of the loan. If payable at maturity, Harrick classifies its mortgage payable as a non-current liability

⁹Points, in mortgage financing, are analogous to the original issue discount of bonds.

on the statement of financial position until such time as the approaching maturity date warrants showing it as a current liability. If it is payable in installments, Harrick shows the current installments due as current liabilities, with the remainder as a non-current liability.

Lenders have partially replaced the traditional **fixed-rate mortgage** with alternative mortgage arrangements. Most lenders offer **variable-rate mortgages** (also called floating-rate or adjustable-rate mortgages) featuring interest rates tied to changes in the fluctuating market rate. Generally, the variable-rate lenders adjust the interest rate at either one- or three-year intervals, pegging the adjustments to changes in the prime rate or the London Interbank Offering (LIBOR) rate.

SPECIAL ISSUES RELATED TO NON-CURRENT LIABILITIES

Reporting of non-current liabilities is one of the most controversial areas in financial reporting. Because non-current liabilities have a significant impact on the cash flows of the company, reporting requirements must be substantive and informative. Four additional reporting issues related to non-current liabilities are addressed in this section:

6 LEARNING OBJECTIVE
Describe the accounting for

extinguishment of non-current liabilities.

- 1. Extinguishment of non-current liabilities.
- 2. Fair value option.
- 3. Off-balance-sheet financing.
- 4. Presentation and analysis.

Extinguishment of Non-Current Liabilities

How do companies record the payment of non-current liabilities—often referred to as **extinguishment of debt?** If a company holds the bonds (or any other form of debt security) to maturity, the answer is straightforward: The company does not compute any gains or losses. It will have fully amortized any premium or discount and any issue costs at the date the bonds mature. As a result, the carrying amount, the maturity (face) value, and the fair value of the bond are the same. Therefore, no gain or loss exists.

In this section, we discuss extinguishment of debt under three common additional situations:

- 1. Extinguishment with cash before maturity,
- 2. Extinguishment by transferring assets or securities, and
- **3.** Extinguishment with modification of terms.

Extinguishment with Cash before Maturity

In some cases, a company extinguishes debt before its maturity date. ¹⁰ The amount paid on extinguishment or redemption before maturity, including any call premium and expense of reacquisition, is called the **reacquisition price**. On any specified date, the **carrying**

¹⁰Some companies have attempted to extinguish debt through an in-substance defeasance. **In-substance defeasance** is an arrangement whereby a company provides for the future repayment of a long-term debt issue by placing purchased securities in an irrevocable trust. The company pledges the principal and interest of the securities in the trust to pay off the principal and interest of its own debt securities as they mature. However, it is not legally released from its primary obligation for the debt that is still outstanding. In some cases, debtholders are not even aware of the transaction and continue to look to the company for repayment. This practice is not considered an extinguishment of debt, and therefore the company does not record a gain or loss. **[4]**

amount of the bonds is the amount payable at maturity, adjusted for unamortized premium or discount. Any excess of the net carrying amount over the reacquisition price is a **gain from extinguishment**. The excess of the reacquisition price over the carrying amount is a **loss from extinguishment**. At the time of reacquisition, **the unamortized premium or discount must be amortized up to the reacquisition date**.

To illustrate, we use the Evermaster bonds issued at a discount on January 1, 2015. These bonds are due in five years. The bonds have a par value of €100,000, a coupon rate of 8 percent paid semiannually, and were sold to yield 10 percent. The amortization schedule for the Evermaster bonds is presented in Illustration 14-21.

ILLUSTRATION 14-21

Bond Premium Amortization Schedule, Bond Extinguishment

				Carrying
	Cash	Interest	Discount	Amount
Date	Paid	Expense	Amortized	of Bonds
1/1/15				€ 92,278
7/1/15	€ 4,000 ^a	€ 4,614 ^b	€ 614 ^c	92,892 ^d
1/1/16	4,000	4,645	645	93,537
7/1/16	4,000	4,677	677	94,214
1/1/17	4,000	4,711	711	94,925
7/1/17	4,000	4,746	746	95,671
1/1/18	4,000	4,783	783	96,454
7/1/18	4,000	4,823	823	97,277
1/1/19	4,000	4,864	864	98,141
7/1/19	4,000	4,907	907	99,048
1/1/20	4,000	4,952	952	100,000
	=			

Two years after the issue date on January 1, 2017, Evermaster calls the entire issue at 101 and cancels it. ¹¹ As indicated in the amortization schedule, the carrying value of the bonds on January 1, 2017, is €94,925. Illustration 14-22 indicates how Evermaster computes the loss on redemption (extinguishment).

ILLUSTRATION 14-22

Computation of Loss on Redemption of Bonds

Reacquisition price (€100,000 × 1.01) €101,000 Carrying amount of bonds redeemed (94,925) Loss on extinguishment € 6,075
--

Evermaster records the reacquisition and cancellation of the bonds as follows.

Bonds Payable 94,925
Loss on Extinguishment of Debt 6,075
Cash 101.000

¹¹The issuer of callable bonds must generally exercise the call on an interest date. Therefore, the amortization of any discount or premium will be up to date, and there will be no accrued interest. However, early extinguishments through purchases of bonds in the open market are more likely to be on other than an interest date. If the purchase is not made on an interest date, the discount or premium must be amortized, and the interest payable must be accrued from the last interest date to the date of purchase.

Note that it is often advantageous for the issuer to acquire the **entire** outstanding bond issue and replace it with a new bond issue bearing a lower rate of interest. The replacement of an existing issuance with a new one is called **refunding**. Whether the early redemption or other extinguishment of outstanding bonds is a non-refunding or a refunding situation, a company should recognize the difference (gain or loss) between the reacquisition price and the carrying amount of the redeemed bonds in income of the period of redemption.

Extinguishment by Exchanging Assets or Securities

In addition to using cash, settling a debt obligation can involve either a transfer of non-cash assets (real estate, receivables, or other assets) or the issuance of the debtor's shares. In these situations, the creditor should account for the non-cash assets or equity interest received at their fair value.

The debtor must determine the excess of the carrying amount of the payable over the fair value of the assets or equity transferred (gain). The debtor recognizes a gain equal to the amount of the excess. In addition, the debtor recognizes a gain or loss on disposition of assets to the extent that the fair value of those assets differs from their carrying amount (book value).

Transfer of Assets. Assume that Hamburg Bank loaned €20,000,000 to Bonn Mortgage Company. Bonn, in turn, invested these monies in residential apartment buildings. However, because of low occupancy rates, it cannot meet its loan obligations. Hamburg Bank agrees to accept from Bonn Mortgage real estate with a fair value of €16,000,000 in full settlement of the €20,000,000 loan obligation. The real estate has a carrying value of €21,000,000 on the books of Bonn Mortgage. Bonn (debtor) records this transaction as follows.

Notes Payable (to Hamburg Bank)	20,000,000	
Loss on Disposal of Real Estate (€21,000,000 - €16,000,000)	5,000,000	
Real Estate		21,000,000
Gain on Extinguishment of Debt (€20,000,000 - €16,000,000)		4,000,000

Bonn Mortgage has a loss on the disposition of real estate in the amount of €5,000,000 (the difference between the €21,000,000 book value and the €16,000,000 fair value). In addition, it has a gain on settlement of debt of €4,000,000 (the difference between the €20,000,000 carrying amount of the note payable and the €16,000,000 fair value of the real estate).

Granting of Equity Interest. Now assume that Hamburg Bank agrees to accept from Bonn Mortgage 320,000 ordinary shares (€10 par) that have a fair value of €16,000,000, in full settlement of the €20,000,000 loan obligation. Bonn Mortgage (debtor) records this transaction as follows.

Notes Payable (to Hamburg Bank)	20,000,000
Share Capital—Ordinary	3,200,000
Share Premium—Ordinary	12,800,000
Gain on Extinguishment of Debt	4,000,000

It records the ordinary shares issued in the normal manner. It records the difference between the par value and the fair value of the shares as share premium.

¹²Likewise, the creditor must determine the excess of the receivable over the fair value of those same assets or equity interests transferred. The creditor normally charges the excess (loss) against Allowance for Doubtful Accounts. Creditor accounting for these transactions is addressed in Chapter 7.

Extinguishment with Modification of Terms

Practically every day, the *Wall Street Journal* or the *Financial Times* runs a story about some company in financial difficulty, such as **Nakheel** (ARE) or **Parmalat** (ITA). In many of these situations, the creditor may grant a borrower concessions with respect to settlement. The creditor offers these concessions to ensure the highest possible collection on the loan. For example, a creditor may offer one or a combination of the following modifications:

- **1.** Reduction of the stated interest rate.
- **2.** Extension of the maturity date of the face amount of the debt.
- **3.** Reduction of the face amount of the debt.
- **4.** Reduction or deferral of any accrued interest.

As with other extinguishments, when a creditor grants favorable concessions on the terms of a loan, the debtor has an economic gain. Thus, the accounting for modifications is similar to that for other extinguishments. That is, the original obligation is extinguished, the new payable is recorded at fair value, and a gain is recognized for the difference in the fair value of the new obligation and the carrying value of the old obligation.¹³

To illustrate, assume that on December 31, 2015, Morgan National Bank enters into a debt modification agreement with Resorts Development Company, which is experiencing financial difficulties. The bank restructures a ¥10,500,000 loan receivable issued at par (interest paid to date) by:

- Reducing the principal obligation from ¥10,500,000 to ¥9,000,000;
- Extending the maturity date from December 31, 2015, to December 31, 2019; and
- Reducing the interest rate from the historical effective rate of 12 percent to 8 percent. Given Resorts Development's financial distress, its market-based borrowing rate is 15 percent.

IFRS requires the modification to be accounted for as an extinguishment of the old note and issuance of the new note, measured at fair value. [6] Illustration 14-23 shows the calculation of the fair value of the modified note, using Resorts Development's market discount rate of 15 percent.

ILLUSTRATION 14-23

Fair Value of Restructured Note Present value of restructured cash flows: Present value of ¥9,000,000 due in 4 years at 15%, interest payable annually (Table 6-2); $FV(PVF_{4,15\%})$; (¥9,000,000 \times .57175) Present value of ¥720,000 interest payable annually for 4 years at 15% (Table 6-4); $R(PVF-OA_{4,15\%})$; (¥720,000 \times 2.85498)

Fair value of note

¥5,145,750

2,055,586

¥7,201,336

¹³An exception to the general rule is when the modification of terms is not substantial. A **substantial modification** is defined as one in which the discounted cash flows under the terms of the new debt (using the historical effective-interest rate) differ by at least 10 percent of the carrying value of the original debt. If a modification is not substantial, the difference (gain) is deferred and amortized over the remaining life of the debt at the (historical) effective-interest rate. **[5]** In the case of a non-substantial modification, in essence, the new loan is a continuation of the old loan. Therefore, the debtor should record interest at the historical effective-interest rate.

Special Issues Related to Non-Current Liabilities 675

The gain on the modification is ¥3,298,664, which is the difference between the prior carrying value (¥10,500,000) and the fair value of the restructured note, as computed in Illustration 14-23 (¥7,201,336). Given this information, Resorts Development makes the following entry to record the modification.

Notes Payable (old) 10,500,000

Gain on Extinguishment of Debt 3,298,664
Notes Payable (new) 7,201,336

Illustration 14-24 shows the amortization schedule for the new note, following the modification.

Date	Cash Paid	Interest Expense	Amortization	Carrying Value
12/31/2015				¥7,201,336
12/31/2016	¥720,000 ^a	¥1,080,200 ^b	¥360,200 ^c	7,561,536 ^d
12/31/2017	720000	1,134,230	414,230	7,975,767
12/31/2018	720000	1,196,365	476,365	8,452,132
12/31/2019	720000	1,267,820	547,868	9,000,000
	9,000,000 × 8%		,080,200 — ¥720,000	
b¥	$7,201,336 \times 15\%$	d¥7	7,201,336 + ¥360,200	

ILLUSTRATION 14-24 Schedule of Interest and Amortization after Debt Modification

Resorts Development recognizes interest expense on this note using the effective rate of 15 percent. Thus, on December 31, 2016 (date of first interest payment after restructure), Resorts Development makes the following entry.

December 31, 2016

Interest Expense 1,080,200

 Notes Payable
 360,200

 Cash
 720,000

Resorts Development makes a similar entry (except for different amounts for credits to Notes Payable and debits to Interest Expense) each year until maturity. At maturity, Resorts Development makes the following entry.

December 31, 2019

Notes Payable 9,000,000

Cash 9,000,000

In summary, following the modification, Resorts Development has extinguished the old note with an effective rate of 12 percent and now has a new loan with a much higher effective rate of 15 percent.

Fair Value Option

As indicated earlier, non-current liabilities such as bonds and notes payable are generally measured at amortized cost (face value of the payable, adjusted for any payments and amortization of any premium or discount). However, companies have the option to record fair value in their accounts for most financial assets and liabilities, including bonds and notes payable. [7] As discussed in Chapter 7 (pages 314–315), the IASB believes that fair value measurement for financial

TEARNING OBJECTIVEDescribe the accounting for the fair value option.

(pages 314–315), the IASB believes that fair value measurement for financial instruments, including financial liabilities, provides more relevant and understandable information than amortized cost. It considers fair value to be more relevant because it reflects the current cash equivalent value of financial instruments.

Fair Value Measurement

If companies choose the **fair value option**, non-current liabilities such as bonds and notes payable are recorded at fair value, with unrealized holding gains or losses reported as part of net income. An **unrealized holding gain or loss** is the net change in the fair value of the liability from one period to another, exclusive of interest expense recognized but not recorded. As a result, the company reports the liability at fair value each reporting date. In addition, it reports the change in value as part of net income.

To illustrate, Edmonds Company has issued €500,000 of 6 percent bonds at face value on May 1, 2015. Edmonds chooses the fair value option for these bonds. At December 31, 2015, the value of the bonds is now €480,000 because interest rates in the market have increased to 8 percent. The value of the debt securities falls because the bond is paying less than market rate for similar securities. Under the fair value option, Edmonds makes the following entry.

Bonds Payable (€500,000 − €480,000) 20,000 Unrealized Holding Gain or Loss−Income 20,000

As the journal entry indicates, the value of the bonds declined. This decline leads to a reduction in the bond liability and a resulting unrealized holding gain, which is reported as part of net income. The value of Edmonds' debt declined because interest rates increased. It should be emphasized that Edmonds must continue to value the bonds payable at fair value in all subsequent periods.

Fair Value Controversy

Underlying Concepts

The fair value controversy represents a classic trade-off between relevance and faithful representation.

With the Edmonds bonds, we assumed that the decline in value of the bonds was due to an interest rate increase. In other situations, the decline may occur because the bonds become more likely to default. That is, **if the creditworthiness of Edmonds Company declines**, the value of its debt also declines. If its creditworthiness declines, its bond investors are receiving a lower rate relative to investors with similar-risk investments. If Edmonds is using the fair value option, changes in the fair value of the bonds payable for a decline in creditwor-

thiness are included as part of income. Some question how Edmonds can record a gain when its creditworthiness is becoming worse. As one writer observed, "It seems counterintuitive." However, the IASB notes that the debtholders' loss is the shareholders' gain. That is, the shareholders' claims on the assets of the company increase when the value of the debtholders' claims declines. In addition, the worsening credit position may indicate that the assets of the company are declining in value as well. Thus, the company may be reporting losses on the asset side, which will be offsetting gains on the liability side.

The IASB apparently agrees with this statement and requires that the effects of changes in a company's credit risk should not affect profit and loss unless the liability is held for trading. [8] Therefore, any change in the value of the liability due to credit risk changes should be reported in other comprehensive income. To illustrate, assume the change in the interest rate related to the Edmonds Company bonds described in the previous section changed from 6 percent to 8 percent due to a decrease in the credit quality of these bonds. Under the fair value option, Edmonds makes the following entry.

Bonds Payable 20,000
Unrealized Holding Gain or Loss—Equity 20,000

This entry recognizes the decline in the fair value of the liability and a resulting unrealized holding gain, which is reported as part of other comprehensive income. The value

www.downloadslide.com

Special Issues Related to Non-Current Liabilities 677

of the Edmonds bonds declined because of the change in its credit risk, not because of general market conditions. Edmonds then continues to value the bonds payable at fair value in all subsequent periods.

Off-Balance-Sheet Financing

What do Air Berlin (DEU), HSBC (GBR), China Construction Bank Corp. (CHN), and Enron (USA) have in common? They all have been accused of using off-balance-sheet financing to minimize the reporting of debt on their statements of financial position. ¹⁴ Off-balance-sheet financing is an attempt to borrow monies in such a way to prevent recording the obligations. It has become an issue of extreme importance. Many allege that Enron, in one of the largest corporate failures on record, hid a considerable amount of its debt off the statement of financial position. As a result, any company that uses off-balance-sheet financing today risks investors dumping their shares. Consequently (as discussed in the "What Do the Numbers"

Mean?" box on page 664), their share price will suffer. Nevertheless, a considerable amount of off-balance-sheet financing continues to exist. As one writer noted, "The basic drives of humans are few: to get enough food, to find shelter, and to keep debt off

8 LEARNING OBJECTIVE Explain the reporting of off-balance-sheet financing arrangements.

Different Forms

the balance sheet."

Off-balance-sheet financing can take many different forms:

- **1.** Non-consolidated subsidiary. Under IFRS, a parent company does not have to consolidate a subsidiary company that is less than 50 percent owned. In such cases, the parent therefore does not report the assets and liabilities of the subsidiary. All the parent reports on its statement of financial position is the investment in the subsidiary. As a result, users of the financial statements may not understand that the subsidiary has considerable debt for which the parent may ultimately be liable if the subsidiary runs into financial difficulty.
- 2. Special purpose entity (SPE). A company creates a special purpose entity (SPE) to perform a special project. To illustrate, assume that Clarke Company decides to build a new factory. However, management does not want to report the plant or the borrowing used to fund the construction on its statement of financial position. It therefore creates an SPE, the purpose of which is to build the plant. (This arrangement is called a project financing arrangement.) The SPE finances and builds the plant. In return, Clarke guarantees that it or some outside party will purchase all the products produced by the plant (sometimes referred to as a take-or-pay contract). As a result, Clarke might not report the asset or liability on its books.
- **3.** *Operating leases.* Another way that companies keep debt off the statement of financial position is by leasing. Instead of owning the assets, companies lease them. Again, by meeting certain conditions, the company has to report only rent expense each period and to provide note disclosure of the transaction. Note that SPEs often use leases to accomplish off-balance-sheet treatment. We discuss accounting for lease transactions extensively in Chapter 21.

¹⁴Throughout the textbook, we use the label "statement of financial position" rather than "balance sheet" in referring to the financial statement that reports assets, liabilities, and equity. We use off-balance-sheet in the present context because of its common usage in financial markets.

Rationale

Why do companies engage in off-balance-sheet financing? A major reason is that many believe that **removing debt enhances the quality of the statement of financial position** and permits credit to be obtained more readily and at less cost.

Second, loan covenants often limit the amount of debt a company may have. As a result, the company uses off-balance-sheet financing because **these types of commitments might not be considered in computing debt limits**.

Third, some argue that the asset side of the statement of financial position is severely understated. For example, companies that depreciate assets on an accelerated basis will often have carrying amounts for property, plant, and equipment that are much lower than their fair values. As an offset to these lower values, some believe that part of the debt does not have to be reported. In other words, **if companies report assets at fair values**, less pressure would undoubtedly exist for off-balance-sheet financing arrangements.

Whether the arguments above have merit is debatable. The general idea of "out of sight, out of mind" may not be true in accounting. Many users of financial statements indicate that they attempt to factor these off-balance-sheet financing arrangements into their computations when assessing debt to equity relationships. Similarly, many loan covenants also attempt to account for these complex arrangements. Nevertheless, many companies still believe that benefits will accrue if they omit certain obligations from the statement of financial position.

As a response to off-balance-sheet financing arrangements, the IASB has increased disclosure (note) requirements. This response is consistent with an "efficient markets" philosophy: The important question is not whether the presentation is off-balance-sheet or not but whether the items are disclosed at all. In addition, the U.S. SEC now requires companies that it regulates to disclose (1) all contractual obligations in a tabular format and (2) contingent liabilities and commitments in either a textual or tabular format. An example of this disclosure appears in the "Evolving Issue" box on page 679. ¹⁵

We believe that recording more obligations on the statement of financial position will enhance financial reporting. Given the problems with companies such as Enron, Tiger Air (AUS), Petra Perdana (MYS), and Washington Mutual (USA) and on-going efforts by the IASB and market regulators, we expect that less off-balance-sheet financing will occur in the future.¹⁶

¹⁵The IASB has issued consolidation guidance that looks beyond equity ownership as the primary criterion for determining whether an off-balance-sheet entity (and its assets and liabilities) should be on-balance-sheet (i.e., consolidated). Specifically, an investor controls an investee when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee. Thus, the principle of control sets out the following three elements of control: (1) power over the investee; (2) exposure, or rights, to variable returns from involvement with the investee; and (3) the ability to use power over the investee to affect the amount of the investor's returns. In general, the control principle is applied in circumstances when voting rights are not the dominant factor in deciding who controls the investee, such as when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. [9] The details of consolidation accounting procedures are beyond the scope of this textbook and are usually addressed in an advanced accounting course.

¹⁶It is unlikely that the IASB will be able to stop all types of off-balance-sheet transactions. Financial engineering is the Holy Grail of securities markets. Developing new financial instruments and arrangements to sell and market to customers is not only profitable but also adds to the prestige of the investment firms that create them. Thus, new financial products will continue to appear that will test the ability of the IASB to develop appropriate accounting standards for them.

OFF-AND-ON REPORTING

The off-balance-sheet world is slowly but surely becoming more on-balance-sheet. New rules on guarantees and consolidation of SPEs are doing their part to increase the amount of debt reported on corporate statements of financial position. See footnote 15 (page 678) for a discussion of the IASB's consolidation guidance.

In addition, companies must disclose off-balance-sheet arrangements and contractual obligations that currently have, or are reasonably likely to have, a material future effect on the companies' financial condition. Presented below is **Novartis Group**'s (CHE) tabular disclosure of its contractual obligations. Because Novartis lists its securities in the United States, it is subject to U.S. SEC rules.

Novartis Group Contractual Obligations

The following table summarizes the Group's contractual obligations and other commercial commitments as well as the effect these obligations and commitments are expected to have on the Group's liquidity and cash flow in future periods:

Payments		1	
Payments	aue	nv	perioa

	Total USD millions	Less than 1 year USD millions	2–3 years USD millions	4–5 years USD millions	After 5 years USD millions
Non-current financial debt	15,790	2,009	5,823	2,006	5,952
Operating leases	3,145	372	467	293	2,013
Unfunded pensions and other post-retirement obligations Research & Development	2,144	97	195	207	1,645
-Unconditional commitments	219	48	79	59	33
-Potential milestone commitments	2,014	456	526	766	266
Purchase commitments					
-Property, plant & equipment	755	508	236	11	
Total contractual cash obligations	24,067	3,490	7,326	3,342	9,909

The Group expects to fund the R&D and purchase commitments with internally generated resources.

Enron's (USA) abuse of off-balance-sheet financing to hide debt was shocking and inappropriate. One silver lining in the Enron debacle, however, is that the standard-setting bodies are now providing increased guidance on companies' reporting of contractual obligations. We believe the new U.S. SEC rule, which requires companies to report their obligations over a period of time, will be extremely useful to the investment community.

Presentation and Analysis

Presentation of Non-Current Liabilities

Companies that have large amounts and numerous issues of non-current liabilities frequently report only one amount in the statement of financial position, supported with comments and schedules in the accompanying notes. Long-term debt that **matures within one year** should be reported as a current liability, unless using non-current assets to accomplish retirement. If the company plans to refinance debt, con-

vert it into shares, or retire it from a bond retirement fund, it should continue to report the debt as non-current if the refinancing agreement is completed by the end of the period. [10]

Note disclosures generally indicate the nature of the liabilities, maturity dates, interest rates, call provisions, conversion privileges, restrictions imposed by the creditors, and assets designated or pledged as security. Companies should show any assets pledged as security for the debt in the assets section of the statement of financial position. The fair value of the long-term debt should also be disclosed. Finally, companies must disclose future payments for sinking fund requirements and maturity amounts of long-term debt

LEARNING OBJECTIVE

Indicate how to present and analyze non-current liabilities.

during each of the next five years. These disclosures aid financial statement users in evaluating the amounts and timing of future cash flows. Illustration 14-25 shows an example of the type of information provided for Novartis Group.

Long-Term Debt Disclosure

Analysis of Non-Current Liabilities

Long-term creditors and shareholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the face value of the debt at maturity. Debt to assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

Debt to Assets Ratio. The **debt to assets ratio** measures the percentage of the total assets provided by creditors. To compute it, divide total debt (both current and non-current liabilities) by total assets, as Illustration 14-26 shows.

ILLUSTRATION 14-26

Computation of Debt to Assets Ratio

The higher the percentage of total liabilities to total assets, the greater the risk that the company may be unable to meet its maturing obligations.

Times Interest Earned. The times interest earned ratio indicates the company's ability to meet interest payments as they come due. As shown in Illustration 14-27, it is computed by dividing income before interest expense and income taxes by interest expense.

ILLUSTRATION 14-27

Computation of Times Interest Earned

To illustrate these ratios, we use data from **Novartis**'s 2012 annual report. Novartis has total liabilities of \$54,997 million, total assets of \$124,216 million, interest expense of \$724 million, income taxes of \$1,625 million, and net income of \$9,618 million. We compute Novartis's debt to assets and times interest earned ratios as shown in Illustration 14-28.

Debt to assets =
$$\frac{\$54,997}{\$124,216} = 44\%$$

Times interest earned = $\frac{(\$9,618 + \$1,625 + \$724)}{\$724} = 16.5 \text{ times}$

ILLUSTRATION 14-28

Computation of Long-Term Debt Ratios for Novartis

Even though Novartis has a relatively high debt to assets ratio of 44 percent, its interest coverage of 16.5 times indicates it can meet its interest payments as they come due.

GLOBAL ACCOUNTING INSIGHTS

LIABILITIES

U.S. GAAP and IFRS have similar definitions for liabilities. In addition, the accounting for current liabilities is essentially the same under both IFRS and U.S. GAAP. However, there

are substantial differences in terminology related to noncurrent liabilities as well as some differences in the accounting for various types of long-term debt transactions.

Relevant Facts

Similarities

- As indicated above, U.S. GAAP and IFRS have similar liability definitions. Both also classify liabilities as current and non-current.
- Much of the accounting for bonds and long-term notes is the same under U.S. GAAP and IFRS.
- Both U.S. GAAP and IFRS require the best estimate of a probable loss. In U.S. GAAP, the minimum amount in a range is used. Under IFRS, if a range of estimates is predicted and no amount in the range is more likely than any other amount in the range, the midpoint of the range is used to measure the liability.
- Both U.S. GAAP and IFRS prohibit the recognition of liabilities for future losses.

Differences

- Under U.S. GAAP, companies must classify a refinancing as current only if it is completed before the financial statements are issued. IFRS requires that the current portion of long-term debt be classified as current unless an agreement to refinance on a long-term basis is completed before the reporting date.
- U.S. GAAP uses the term contingency in a different way than IFRS. A contingency under U.S. GAAP may be reported as a liability under certain situations. IFRS does not permit a contingency to be recorded as a liability.
- U.S. GAAP uses the term estimated liabilities to discuss various liability items that have some uncertainty related to timing or amount. IFRS generally uses the term provisions.

- U.S. GAAP and IFRS are similar in the treatment of environmental liabilities. However, the recognition criteria for environmental liabilities are more stringent under U.S. GAAP: Environmental liabilities are not recognized unless there is a present legal obligation and the fair value of the obligation can be reasonably estimated.
- U.S. GAAP uses the term troubled debt restructurings and develops recognition rules related to this category. IFRS generally assumes that all restructurings should be considered extinguishments of debt.
- Under U.S. GAAP, companies are permitted to use the straight-line method of amortization for bond discount or premium, provided that the amount recorded is not materially different than that resulting from effective-interest amortization. However, the effective-interest method is preferred and is generally used. Under IFRS, companies must use the effective-interest method.
- Under U.S. GAAP, companies record discounts and premiums in separate accounts (see the About the Numbers section). Under IFRS, companies do not use premium or discount accounts but instead show the bond at its net amount.
- Under U.S. GAAP, bond issue costs are recorded as an asset. Under IFRS, bond issue costs are netted against the carrying amount of the bonds.
- Under U.S. GAAP, losses on onerous contract are generally not recognized unless addressed by industry- or transactionspecific requirements. IFRS requires a liability and related expense or cost be recognized when a contract is onerous.

About the Numbers

Under IFRS, premiums and discounts are netted against the face value of the bonds for recording purposes. Under U.S. GAAP, discounts and premiums are recorded in separate accounts. To illustrate, consider the €100,000 of bonds dated January 1, 2015 (8 percent coupon, paid semiannually), issued by Evermaster to yield 6 percent on January 1, 2015. Recall from the discussion on page 661 that the price of these bonds was €108,530. Using U.S. GAAP procedures, Evermaster makes the following entry to record issuance of the bonds.

January 1, 2015

Cash	108,530	
Bonds Payable		100,000
Premium on Bonds Payable		8,530
(€108.530 − €100.000)		

As indicated, the bond premium is recorded in a separate account (the account, "Discount on Bonds Payable," has a debit

balance and is used for bonds issued at a discount). Evermaster makes the following entry on the first interest payment date.

July 1, 2015

Interest Expense (€108,530 × 6% × ½) 3,256
Premium on Bonds Payable (€4,000
$$-$$
 €3,256) 744
Cash (€100,000 × 8% × ½) 4,000

Following this entry, the net carrying value of the bonds is as follows.

Bonds payable	€100,000
Premium on bonds payable (€8,530 - €744)	7,786
Carrying value of bonds payable	€107,786

Thus, with a separate account for the premium, entries to record amortization are made to the premium account, which reduces the carrying value of the bonds to face value over the life of the bonds.

On the Horizon

As indicated in Chapter 2, the IASB and FASB are working on a conceptual framework project, part of which will examine the definition of a liability. In addition, the two Boards are attempting to clarify the accounting related to provisions and related contingencies.

SUMMARY OF LEARNING OBJECTIVES

- Describe the formal procedures associated with issuing long-term debt. Incurring long-term debt is often a formal procedure. The bylaws of corporations usually require approval by the board of directors and the shareholders before corporations can issue bonds or can make other long-term debt arrangements. Generally, long-term debt has various covenants or restrictions. The covenants and other terms of the agreement between the borrower and the lender are stated in the bond indenture or note agreement.
- **Identify various types of bond issues.** Various types of bond issues are (1) secured and unsecured bonds; (2) term, serial, and callable bonds; (3) convertible, commodity-backed, and deep-discount bonds; (4) registered and bearer (coupon) bonds; and (5) income and revenue bonds. The variety in the types of bonds results from attempts to attract capital from different investors and risk-takers and to satisfy the cash flow needs of the issuers.
- Describe the accounting valuation for bonds at date of issuance. The investment community values a bond at the present value of its future cash flows, which consist of interest and principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the issuer's risk characteristics. The interest rate written in the terms of the bond indenture and ordinarily appearing on the bond certificate is the stated, coupon, or nominal rate. The issuer of the bonds sets the rate and expresses it as a percentage of the face value (also called the par value, principal amount, or maturity value) of the bonds. If the rate employed by the buyers differs from the stated rate, the present value of the bonds computed by the buyers will differ from the face value of the bonds. The difference between the face value and the present value of the bonds is either a discount or premium.
- Apply the methods of bond discount and premium amortization. The discount (premium) is amortized and charged (credited) to interest expense over the life of the bonds. Amortization of a discount increases bond interest expense, and amortization of a premium decreases bond interest expense. The procedure for amortization of a discount or premium is the effective-interest method. Under the effective-interest method, (1) bond interest expense is computed by multiplying the carrying value of the bonds at the beginning of the period by the effective-interest rate; then, (2) the bond discount or premium amortization is determined by comparing the bond interest expense with the interest to be paid.
- Explain the accounting for long-term notes payable. Accounting procedures for notes and bonds are similar. Like a bond, a note is valued at the present value of its expected future interest and principal cash flows, with any discount or premium being similarly amortized over the life of the note. Whenever the face amount of the note does not reasonably represent the present value of the consideration in the exchange, a company must evaluate the entire arrangement in order to properly record the exchange and the subsequent interest.
- Describe the accounting for the extinguishment of non-current liabilities. Non-current liabilities. Non-current liabilities, such as bonds and notes payable, may be extinguished by (1) paying cash, (2) transferring non-cash assets and/or granting of an equity interest, and (3) modification of terms. At the time of extinguishment, any unamortized premium or discount must be amortized up to the reacquisition date. The reacquisition price is the amount paid on extinguishment or redemption before maturity, including

KEY TERMS

amortization, 659 bearer (coupon) bonds, 655 bond discount, 657 bond indenture, 654 bond premium, 657 callable bonds, 655 carrying value, 659 commodity-backed bonds, 655 convertible bonds, 655 debenture bonds, 655 debt to assets ratio, 681 deep-discount (zerointerest debenture) bonds, 655 effective-interest method, 659 effective yield or market rate, 657 extinguishment of debt, 671 face, par, principal, or maturity value, 656 fair value option, 676 imputation, 669 imputed interest rate, 669 income bonds, 655 long-term debt, 654 long-term notes payable, 665 mortgage notes payable, 670 off-balance-sheet financing, 677 refunding, 673 registered bonds, 655 revenue bonds, 655 secured bonds, 655 serial bonds, 655 special purpose entity (SPE), 677 stated, coupon, or nominal rate, 656 substantial modification, 674 (n) term bonds, 655 times interest earned, 681 zero-interest debenture bonds, 655

any call premium and expense of reacquisition. On any specified date, the carrying amount of the debt is the amount payable at maturity, adjusted for unamortized premium or discount. Any excess of the carrying amount over the reacquisition price is a gain from extinguishment. The excess of the reacquisition price over the carrying amount is a loss from extinguishment. Gains and losses on extinguishments are recognized currently in income. When debt is extinguished by transfer of non-cash assets or granting of equity interest, debtors record losses and gains on settlements based on fair values. The accounting for debt extinguished with modification is similar to that for other extinguishments. That is, the original obligation is extinguished, the new payable is recorded at fair value, and a gain or loss is recognized for the difference in the fair value of the new obligation and the carrying value of the old obligation.

- **Describe the accounting for the fair value option.** Companies have the option to record fair value in their accounts for most financial assets and liabilities, including non-current liabilities. Fair value measurement for financial instruments, including financial liabilities, provides more relevant and understandable information than amortized cost. If companies choose the fair value option, non-current liabilities such as bonds and notes payable are recorded at fair value, with unrealized holding gains or losses reported as part of net income. An unrealized holding gain or loss is the net change in the fair value of the liability from one period to another, exclusive of interest expense recognized but not recorded.
- **Explain the reporting of off-balance-sheet financing arrangements.** Off-balance-sheet financing is an attempt to borrow funds in such a way as to prevent recording obligations. Examples of off-balance-sheet arrangements are (1) non-consolidated subsidiaries, (2) special purpose entities, and (3) operating leases.
- Indicate how to present and analyze non-current liabilities. Companies that have large amounts and numerous issues of non-current liabilities frequently report only one amount in the statement of financial position and support this with comments and schedules in the accompanying notes. Any assets pledged as security for the debt should be shown in the assets section of the statement of financial position. Long-term debt that matures within one year should be reported as a current liability, unless retirement is to be accomplished with other than current assets. If a company plans to refinance the debt, convert it into shares, or retire it from a bond retirement fund, it should continue to report it as non-current, as long as the refinancing is completed by the end of the period. Disclosure is required of future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. Debt to assets and times interest earned are two ratios that provide information about a company's debt-paying ability and long-run solvency.

QUESTIONS

- **1.** (a) From what sources might a corporation obtain funds through long-term debt? (b) What is a bond indenture? What does it contain? (c) What is a mortgage?
- 2. Novartis Group (CHE) has issued various types of bonds such as term bonds, income bonds, and debentures. Differentiate between term bonds, mortgage bonds, collateral trust bonds, debenture bonds, income bonds, callable bonds, registered bonds, bearer or coupon bonds, convertible bonds, commodity-backed bonds, and deep-discount bonds.
- **3.** Distinguish between the following interest rates for bonds payable:

(a) Yield rate.

(d) Market rate.

(b) Nominal rate.

(e) Effective rate.

(c) Stated rate.

4. Distinguish between the following values relative to bonds payable:

(a) Maturity value.

(c) Market (fair) value.

(b) Face value.

- (d) Par value.
- **5.** Under what conditions of bond issuance does a discount on bonds payable arise? Under what conditions of bond issuance does a premium on bonds payable arise?
- **6.** Briefly explain how bond premium or discount affects interest expense over the life of a bond.
- 7. What is the required method of amortizing discount and premium on bonds payable? Explain the procedures.
- **8.** Zopf Company sells its bonds at a premium and applies the effective-interest method in amortizing the premium. Will the annual interest expense increase or decrease over the life of the bonds? Explain.
- **9. Vodafone** (GBR) recently issued debt. How should the costs of issuing these bonds be accounted for?
- **10.** Will the amortization of a bond discount increase or decrease bond interest expense? Explain.
- **11.** What is done to record properly a transaction involving the issuance of a non-interest-bearing long-term note in exchange for property?

- **12.** How is the present value of a non-interest-bearing note computed?
- 13. When is the stated interest rate of a debt instrument presumed to be fair?
- **14.** What are the considerations in imputing an appropriate interest rate?
- **15.** Differentiate between a fixed-rate mortgage and a variable-rate mortgage.
- **16.** Identify the situations under which debt is extinguished.
- 17. What is the "call" feature of a bond issue? How does the call feature affect the amortization of bond premium or discount?
- **18.** Why would a company wish to reduce its bond indebtedness before its bonds reach maturity? Indicate how this can be done and the correct accounting treatment for such a transaction.
- **19.** What are the general rules for measuring a gain or a loss by a debtor in a debt extinguishment?
- 20. (a) In a debt modification situation, why might the creditor grant concessions to the debtor?
 - **(b)** What type of concessions might a creditor grant the debtor in a debt modification situation?
- **21.** What are the general rules for measuring and recognizing gain or loss by a debt extinguishment with modification?
- **22.** What is the fair value option? Briefly describe the controversy of applying the fair value option to financial liabilities.
- 23. Pierre Company has a 12% note payable with a carrying value of €20,000. Pierre applies the fair value option to this note; given an increase in market interest rates, the fair value of the note is €22,600. Prepare the entry to record the fair value option for this note.
- **24.** What disclosures are required relative to long-term debt and sinking fund requirements?
- **25.** What is off-balance-sheet financing? Why might a company be interested in using off-balance-sheet financing?
- **26.** What are some forms of off-balance-sheet financing?

- **27.** Explain how a non-consolidated subsidiary can be a form of off-balance-sheet financing.
- 28. Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for liabilities.

- **29.** Diaz Company issued \$100,000 face value, 9% coupon bonds on January 1, 2014, for \$92,608 to yield 11%. The bonds mature in 5 years and pay interest annually on
- December 31. Prepare the entries under U.S. GAAP for Diaz for (a) date of issue, (b) first interest payment date, and (c) January 1, 2016, when Diaz calls and extinguishes the bonds at 101.
- **30.** Briefly discuss how accounting convergence efforts addressing liabilities are related to the IASB/FASB conceptual framework project.

BRIEF EXERCISES

(All calculations are to be rounded to nearest whole currency unit, unless otherwise stated.)

- **3 BE14-1** Whiteside Corporation issues ¥500,000 of 9% bonds, due in 10 years, with interest payable semi-annually. At the time of issue, the market rate for such bonds is 10%. Compute the issue price of the bonds.
- BE14-2 The Colson Company issued €300,000 of 10% bonds on January 1, 2015. The bonds are due January 1, 2020, with interest payable each July 1 and January 1. The bonds are issued at face value. Prepare Colson's journal entries for (a) the January issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- **BE14-3** Assume the bonds in BE14-2 were issued at 108.11 to yield 8%. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31.
- **BE14-4** Assume the bonds in BE14-2 were issued at 92.6393 to yield 12%. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31.
- **BE14-5** Devers Corporation issued £400,000 of 6% bonds on May 1, 2015. The bonds were dated January 1, 2015, and mature January 1, 2017, with interest payable July 1 and January 1. The bonds were issued at face value plus accrued interest. Prepare Devers' journal entries for (a) the May 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- **BE14-6** On January 1, 2015, JWS Corporation issued \$600,000 of 7% bonds, due in 10 years. The bonds were issued for \$559,224, and pay interest each July 1 and January 1. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry. Assume an effective-interest rate of 8%.
- **BE14-7** Assume the bonds in BE14-6 were issued for \$644,636 with the effective-interest rate of 6%. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- **BE14-8** Tan Corporation issued HK\$600,000,000 of 7% bonds on November 1, 2015, for HK\$644,636,000. The bonds were dated November 1, 2015, and mature in 10 years, with interest payable each May 1 and November 1. The effective-interest rate is 6%. Prepare Tan's December 31, 2015, adjusting entry.
 - **BE14-9** Coldwell, Inc. issued a €100,000, 4-year, 10% note at face value to Flint Hills Bank on January 1, 2015, and received €100,000 cash. The note requires annual interest payments each December 31. Prepare Coldwell's journal entries to record (a) the issuance of the note and (b) the December 31 interest payment.
 - **BE14-10** Samson Corporation issued a 4-year, £75,000, zero-interest-bearing note to Brown Company on January 1, 2015, and received cash of £47,664. The implicit interest rate is 12%. Prepare Samson's journal entries for (a) the January 1 issuance and (b) the December 31 recognition of interest.
 - **BE14-11** McCormick Corporation issued a 4-year, \$40,000, 5% note to Greenbush Company on January 1, 2015, and received a computer that normally sells for \$31,495. The note requires annual interest payments each December 31. The market rate of interest for a note of similar risk is 12%. Prepare McCormick's journal entries for (a) the January 1 issuance and (b) the December 31 interest.
 - **BE14-12** Shlee Corporation issued a 4-year, €60,000, zero-interest-bearing note to Garcia Company on January 1, 2015, and received cash of €60,000. In addition, Shlee agreed to sell merchandise to Garcia at an amount less than regular selling price over the 4-year period. The market rate of interest for similar notes is 12%. Prepare Shlee Corporation's January 1 journal entry.
 - **6 BE14-13** On January 1, 2015, Henderson Corporation retired \$500,000 of bonds at 99. At the time of retirement, the unamortized premium was \$15,000. Prepare Henderson's journal entry to record the reacquisition of the bonds.

- **BE14-14** Refer to the note issued by Coldwell, Inc. in BE14-9. During 2015, Coldwell experiences financial difficulties. On January 1, 2016, Coldwell negotiates a settlement of the note by issuing to Flint Hills Bank 20,000 €1 par Coldwell ordinary shares. The ordinary shares have a market price of €4.75 per share on the date of the settlement. Prepare Coldwell's entries to settle this note.
- BE14-15 Refer to the note issued by Coldwell, Inc. in BE14-9. During 2015, Coldwell experiences financial difficulties. On January 1, 2016, Coldwell negotiates a modification of the terms of the note. Under the modification, Flint Hills Bank agrees to reduce the face value of the note to €90,000 and to extend the maturity date to January 1, 2020. Annual interest payments on December 31 will be made at a rate of 8%. Coldwell's market interest rate at the time of the modification is 12%. Prepare Coldwell's entries for (a)the modification on January 1, 2016, and (b) the first interest payment date on December 31, 2016.
- **BE14-16** Shonen Knife Corporation has elected to use the fair value option for one of its notes payable. The note was issued at an effective rate of 11% and has a carrying value of HK\$16,000. At year-end, Shonen Knife's borrowing rate has declined; the fair value of the note payable is now HK\$17,500. (a) Determine the unrealized gain or loss on the note. (b) Prepare the entry to record any unrealized gain or loss, assuming that the change in value was due to general market conditions.
- **9 BE14-17** At December 31, 2015, Hyasaki Corporation has the following account balances:

Bonds payable, due January 1, 2023 \$1,912,000 Interest payable 80,000

Show how the above accounts should be presented on the December 31, 2015, statement of financial position, including the proper classifications.

EXERCISES

(All calculations are to be rounded to nearest whole currency unit, unless otherwise stated.)

- **E14-1** (Classification of Liabilities) Presented below are various account balances.
 - (a) Bank loans payable of a winery, due March 10, 2018. (The product requires aging for 5 years before sale.)
 - **(b)** Serial bonds payable, €1,000,000, of which €250,000 are due each July 31.
 - (c) Amounts withheld from employees' wages for income taxes.
 - (d) Notes payable due January 15, 2017.
 - (e) Credit balances in customers' accounts arising from returns and allowances after collection in full of account.
 - (f) Bonds payable of €2,000,000 maturing June 30, 2016.
 - (g) Overdraft of €1,000 in a bank account. (No other balances are carried at this bank.)
 - (h) Deposits made by customers who have ordered goods.

Instructions

Indicate whether each of the items above should be classified on December 31, 2015, as a current liability, a non-current liability, or under some other classification. Consider each one independently from all others; that is, do not assume that all of them relate to one particular business. If the classification of some of the items is doubtful, explain why in each case.

- **E14-2** (Classification) The following items are found in the financial statements.
 - (a) Interest expense (credit balance).
 - (b) Bond issue costs.
 - (c) Gain on repurchase of debt.
 - (d) Mortgage payable (payable in equal amounts over next 3 years).
 - **(e)** Debenture bonds payable (maturing in 5 years).
 - **(f)** Notes payable (due in 4 years).
 - (g) Income bonds payable (due in 3 years).

Instructions

Indicate how each of these items should be classified in the financial statements.

- **3 4 E14-3** (Entries for Bond Transactions) Presented below are two independent situations.
 - 1. On January 1, 2015, Divac Company issued €300,000 of 9%, 10-year bonds at par. Interest is payable quarterly on April 1, July 1, October 1, and January 1.
 - 2. On June 1, 2015, Verbitsky Company issued €200,000 of 12%, 10-year bonds dated January 1 at par plus accrued interest. Interest is payable semiannually on July 1 and January 1.

Instructions

For each of these two independent situations, prepare journal entries to record the following.

- (a) The issuance of the bonds.
- **(b)** The payment of interest on July 1.
- (c) The accrual of interest on December 31.
- **3** 4 E14-4 (Entries for Bond Transactions) Foreman Company issued €800,000 of 10%, 20-year bonds on January 1, 2015, at 119.792 to yield 8%. Interest is payable semiannually on July 1 and January 1.

Instructions

Prepare the journal entries to record the following.

- (a) The issuance of the bonds.
- **(b)** The payment of interest and the related amortization on July 1, 2015.
- (c) The accrual of interest and the related amortization on December 31, 2015.
- 3 4 E14-5 (Entries for Bond Transactions) Assume the same information as in E14-4, except that the bonds were issued at 84.95 to yield 12%.

Instructions

Prepare the journal entries to record the following. (Round to the nearest euro.)

- (a) The issuance of the bonds.
- **(b)** The payment of interest and related amortization on July 1, 2015.
- (c) The accrual of interest and the related amortization on December 31, 2015.
- **3 4 E14-6** (Amortization Schedule) Spencer Company sells 10% bonds having a maturity value of £3,000,000 for £2,783,724. The bonds are dated January 1, 2015, and mature January 1, 2020. Interest is payable annually on January 1.

Instructions

Set up a schedule of interest expense and discount amortization. (Hint: The effective-interest rate must be

3 4 E14-7 (Determine Proper Amounts in Account Balances) Presented below are three independent situations.

Instructions

- (a) McEntire Co. sold \$2,500,000 of 11%, 10-year bonds at 106.231 to yield 10% on January 1, 2015. The bonds were dated January 1, 2015, and pay interest on July 1 and January 1. Determine the amount of interest expense to be reported on July 1, 2015, and December 31, 2015.
- (b) Cheriel Inc. issued \$600,000 of 9%, 10-year bonds on June 30, 2015, for \$562,500. This price provided a yield of 10% on the bonds. Interest is payable semiannually on December 31 and June 30. Determine the amount of interest expense to record if financial statements are issued on October 31, 2015.
- (c) On October 1, 2015, Chinook Company sold 12% bonds having a maturity value of \$800,000 for \$853,382 plus accrued interest, which provides the bondholders with a 10% yield. The bonds are dated January 1, 2015, and mature January 1, 2020, with interest payable December 31 of each year. Prepare the journal entries at the date of the bond issuance and for the first interest payment.

3 4 E14-8 (Entries and Questions for Bond Transactions) On June 30, 2014, Macias Company issued R\$5,000,000 face value of 13%, 20-year bonds at R\$5,376,150 to yield 12%. The bonds pay semiannual interest on June 30 and December 31.

Instructions

- (a) Prepare the journal entries to record the following transactions.
 - (1) The issuance of the bonds on June 30, 2014.
 - (2) The payment of interest and the amortization of the premium on December 31, 2014.
 - (3) The payment of interest and the amortization of the premium on June 30, 2015.
 - (4) The payment of interest and the amortization of the premium on December 31, 2015.

- **(b)** Show the proper statement of financial position presentation for the liability for bonds payable on the December 31, 2015, statement of financial position.
- **(c)** Provide the answers to the following questions.
 - (1) What amount of interest expense is reported for 2015?
 - **(2)** Determine the total cost of borrowing over the life of the bond.
- **E14-9 (Entries for Bond Transactions)** On January 1, 2015, Osborn Company sold 12% bonds having a maturity value of £800,000 for £860,651.79, which provides the bondholders with a 10% yield. The bonds are dated January 1, 2015, and mature January 1, 2020, with interest payable December 31 of each year.

Instructions

- (a) Prepare the journal entry at the date of the bond issuance.
- (b) Prepare a schedule of interest expense and bond amortization for 2015–2017.
- (c) Prepare the journal entry to record the interest payment and the amortization for 2015.
- (d) Prepare the journal entry to record the interest payment and the amortization for 2017.
- **E14-10** (**Information Related to Various Bond Issues**) Pawnee Inc. has issued three types of debt on January 1, 2015, the start of the company's fiscal year.
 - (a) \$10 million, 10-year, 13% unsecured bonds, interest payable quarterly. Bonds were priced to yield 12%.
 - **(b)** \$25 million par of 10-year, zero-coupon bonds at a price to yield 12% per year.
 - (c) \$15 million, 10-year, 10% mortgage bonds, interest payable annually to yield 12%.

Instructions

Prepare a schedule that identifies the following items for each bond: (1) maturity value, (2) number of interest periods over life of bond, (3) stated rate per each interest period, (4) effective-interest rate per each interest period, (5) payment amount per period, and (6) present value of bonds at date of issue.

- **E14-11 (Entries for Zero-Interest-Bearing Notes)** On January 1, 2015, McLean Company makes the two following acquisitions.
 - 1. Purchases land having a fair value of €300,000 by issuing a 5-year, zero-interest-bearing promissory note in the face amount of €505,518.
 - **2.** Purchases equipment by issuing a 6%, 8-year promissory note having a maturity value of €400,000 (interest payable annually).

The company has to pay 11% interest for funds from its bank.

Instructions

- (a) Record the two journal entries that should be recorded by McLean Company for the two purchases on January 1, 2015.
- **(b)** Record the interest at the end of the first year on both notes.
- **5 E14-12** (**Imputation of Interest**) Presented below are two independent situations.

Instructions

- (a) On January 1, 2015, Spartan Inc. purchased land that had an assessed value of \$390,000 at the time of purchase. A \$600,000, zero-interest-bearing note due January 1, 2018, was given in exchange. There was no established exchange price for the land, nor a ready market price for the note. The interest rate charged on a note of this type is 12%. Determine at what amount the land should be recorded at January 1, 2015, and the interest expense to be reported in 2015 related to this transaction.
- **(b)** On January 1, 2015, Geimer Furniture Co. borrowed \$4,000,000 (face value) from Aurora Co., a major customer, through a zero-interest-bearing note due in 4 years. Because the note was zero-interest-bearing, Geimer Furniture agreed to sell furniture to this customer at lower than market price. A 10% rate of interest is normally charged on this type of loan. Prepare the journal entry to record this transaction and determine the amount of interest expense to report for 2015.
- **E14-13** (Imputation of Interest with Right) On January 1, 2015, Durdil Co. borrowed and received \$500,000 from a major customer evidenced by a zero-interest-bearing note due in 3 years. As consideration for the zero-interest-bearing feature, Durdil agrees to supply the customer's inventory needs for the loan period at lower than the market price. The appropriate rate at which to impute interest is 8%.

Instructions

- (a) Prepare the journal entry to record the initial transaction on January 1, 2015.
- **(b)** Prepare the journal entry to record any adjusting entries needed at December 31, 2015. Assume that the sales of Durdil's product to this customer occur evenly over the 3-year period.
- **E14-14** (Entry for Retirement of Bond; Bond Issue Costs) On January 2, 2012, Prebish Corporation issued \$1,500,000 of 10% bonds to yield 11% due December 31, 2021. Interest on the bonds is payable annually each December 31. The bonds are callable at 101 (i.e., at 101% of face amount), and on January 2, 2015, Prebish called \$1,000,000 face amount of the bonds and retired them.

Instructions

- (a) Determine the price of the Prebish bonds when issued on January 2, 2012.
- **(b)** Prepare an amortization schedule for 2012–2016 for the bonds.
- (c) Ignoring income taxes, compute the amount of loss, if any, to be recognized by Prebish as a result of retiring the \$1,000,000 of bonds in 2015 and prepare the journal entry to record the retirement.
- **3 4 E14-15** (Entries for Retirement and Issuance of Bonds) On June 30, 2007, Mendenhal Company issued 8% bonds with a par value of £600,000 due in 20 years. They were issued at 82.8414 to yield 10% and were callable at 104 at any date after June 30, 2015. Because of lower interest rates and a significant change in the company's credit rating, it was decided to call the entire issue on June 30, 2016, and to issue new bonds. New 6% bonds were sold in the amount of £800,000 at 112.5513 to yield 5%; they mature in 20 years. Interest payment dates are December 31 and June 30 for both old and new bonds.

Instructions

- (a) Prepare journal entries to record the retirement of the old issue and the sale of the new issue on June 30, 2016. Unamortized discount is £78,979.
- **(b)** Prepare the entry required on December 31, 2016, to record the payment of the first 6 months' interest and the amortization of premium on the bonds.
- 4 E14-16 (Entries for Retirement and Issuance of Bonds) Kobiachi Company had bonds outstanding with a maturity value of ¥5,000,000. On April 30, 2016, when these bonds had an unamortized discount of ¥100,000, they were called in at 104. To pay for these bonds, Kobiachi had issued other bonds a month earlier bearing a lower interest rate. The newly issued bonds had a life of 10 years. The new bonds were issued at 103 (face value ¥5,000,000).

Instructions

Ignoring interest, compute the gain or loss and record this refunding transaction.

E14-17 (Settlement of Debt) Strickland Company owes \$200,000 plus \$18,000 of accrued interest to Moran State Bank. The debt is a 10-year, 10% note. During 2015, Strickland's business deteriorated due to a faltering regional economy. On December 31, 2015, Moran State Bank agrees to accept an old machine and cancel the entire debt. The machine has a cost of \$390,000, accumulated depreciation of \$221,000, and a fair value of \$180,000.

Instructions

- (a) Prepare journal entries for Strickland Company to record this debt settlement.
- **(b)** How should Strickland report the gain or loss on the disposition of machine and on restructuring of debt in its 2015 income statement?
- (c) Assume that, instead of transferring the machine, Strickland decides to grant 15,000 of its ordinary shares (\$10 par), which have a fair value of \$180,000 in full settlement of the loan obligation. Prepare the entries to record the transaction.
- **E14-18 (Loan Modification)** On December 31, 2015, Sterling Bank enters into a debt restructuring agreement with Barkley Company, which is now experiencing financial trouble. The bank agrees to restructure a 12%, issued at par, £3,000,000 note receivable by the following modifications:
 - **1.** Reducing the principal obligation from £3,000,000 to £2,400,000.
 - **2.** Extending the maturity date from December 31, 2015, to January 1, 2019.
 - **3.** Reducing the interest rate from 12% to 10%. Barkley's market rate of interest is 15%.

Barkley pays interest at the end of each year. On January 1, 2019, Barkley Company pays £2,400,000 in cash to Sterling Bank.

Instructions

- (a) Can Barkley Company record a gain under the term modification mentioned above? Explain.
- **(b)** Prepare the amortization schedule of the note for Barkley Company after the debt modification.
- (c) Prepare the interest payment entry for Barkley Company on December 31, 2017.
- (d) What entry should Barkley make on January 1, 2019?
- **6** E14-19 (Loan Modification) Use the same information as in E14-18 except that Sterling Bank reduced the principal to £1,900,000 rather than £2,400,000. On January 1, 2019, Barkley pays £1,900,000 in cash to Sterling Bank for the principal.

Instructions

- (a) Prepare the journal entries to record the loan modification for Barkley.
- (b) Prepare the amortization schedule of the note for Barkley Company after the debt modification.
- (c) Prepare the interest payment entries for Barkley Company on December 31 of 2016, 2017, and 2018.
- (d) What entry should Barkley make on January 1, 2019?
- **6 E14-20** (Entries for Settlement of Debt) Consider the following independent situations.

Instructions

- (a) Gottlieb Co. owes €199,800 to Ceballos Inc. The debt is a 10-year, 11% note. Because Gottlieb Co. is in financial trouble, Ceballos Inc. agrees to accept some land and cancel the entire debt. The land has a book value of €90,000 and a fair value of €140,000. Prepare the journal entry on Gottlieb's books for debt settlement.
- (b) Vargo Corp. owes \$270,000 to First Trust. The debt is a 10-year, 12% note due December 31, 2015. Because Vargo Corp. is in financial trouble, First Trust agrees to extend the maturity date to December 31, 2017, reduce the principal to \$220,000, and reduce the interest rate to 5%, payable annually on December 31. Vargo's market rate of interest is 8%. Prepare the journal entries on Vargo's books on December 31, 2015, 2016, and 2017.
- 7 E14-21 (Fair Value Option) Fallen Company commonly issues long-term notes payable to its various lenders. Fallen has had a pretty good credit rating such that its effective borrowing rate is quite low (less than 8% on an annual basis). Fallen has elected to use the fair value option for the long-term notes issued to Barclay's Bank and has the following data related to the carrying and fair value for these notes. (Assume that changes in fair value are due to general market interest rate changes).

	Carrying Value	Fair Value
December 31, 2015	€54,000	€54,000
December 31, 2016	44,000	42,500
December 31, 2017	36,000	38,000

Instructions

- (a) Prepare the journal entry at December 31 (Fallen's year-end) for 2015, 2016, and 2017, to record the fair value option for these notes.
- **(b)** At what amount will the note be reported on Fallen's 2016 statement of financial position?
- (c) What is the effect of recording the fair value option on these notes on Fallen's 2017 income?
- (d) Assuming that general market interest rates have been stable over the period, does the fair value data for the notes indicate that Fallen's creditworthiness has improved or declined in 2017? Explain.
- (e) Assuming the conditions that exist in (d), what is the effect of recording the fair value option on these notes in Fallen's income statement in 2015, 2016, and 2017?
- 9 E14-22 (Long-Term Debt Disclosure) At December 31, 2015, Redmond Company has outstanding three long-term debt issues. The first is a \$2,000,000 note payable which matures June 30, 2018. The second is a \$6,000,000 bond issue which matures September 30, 2019. The third is a \$12,500,000 sinking fund debenture with annual sinking fund payments of \$2,500,000 in each of the years 2017 through 2021.

Instructions

Prepare the required note disclosure for the long-term debt at December 31, 2015.

PROBLEMS

(All calculations are to be rounded to nearest whole currency unit, unless otherwise stated.)

3 4 P14-1 (Analysis of Amortization Schedule and Interest Entries) The amortization and interest schedule on page 692 reflects the issuance of 10-year bonds by Capulet Corporation on January 1, 2009, and the subsequent interest payments and charges. The company's year-end is December 31, and financial statements are prepared once yearly.

Amortization	Cahadula
AMORTIZATION	Schedule

			Amount	
Year	Cash	Interest	Unamortized	Book Value
1/1/2009			€5,651	€ 94,349
2009	€11,000	€11,322	5,329	94,671
2010	11,000	11,361	4,968	95,032
2011	11,000	11,404	4,564	95,436
2012	11,000	11,452	4,112	95,888
2013	11,000	11,507	3,605	96,395
2014	11,000	11,567	3,038	96,962
2015	11,000	11,635	2,403	97,597
2016	11,000	11,712	1,691	98,309
2017	11,000	11,797	894	99,106
2018	11,000	11,894		100,000

Instructions

- (a) Indicate whether the bonds were issued at a premium or a discount and how you can determine this fact from the schedule.
- **(b)** Determine the stated interest rate and the effective-interest rate.
- (c) On the basis of the schedule, prepare the journal entry to record the issuance of the bonds on January 1, 2009.
- (d) On the basis of the schedule, prepare the journal entry or entries to reflect the bond transactions and accruals for 2009. (Interest is paid January 1.)
- **(e)** On the basis of the schedule, prepare the journal entry or entries to reflect the bond transactions and accruals for 2016. Capulet Corporation does not use reversing entries.
- P14-2 (Issuance and Retirement of Bonds) Venzuela Co. is building a new hockey arena at a cost of \$2,500,000. It received a down payment of \$500,000 from local businesses to support the project and now needs to borrow \$2,000,000 to complete the project. It therefore decides to issue \$2,000,000 of 10.5%, 10-year bonds. These bonds were issued on January 1, 2014, and pay interest annually on each January 1. The bonds yield 10%.

Instructions

- (a) Prepare the journal entry to record the issuance of the bonds on January 1, 2014.
- **(b)** Prepare a bond amortization schedule up to and including January 1, 2018.
- (c) Assume that on July 1, 2017, Venzuela Co. retires half of the bonds at a cost of \$1,065,000 plus accrued interest. Prepare the journal entry to record this retirement.
- P14-3 (Negative Amortization) Good-Deal Inc. developed a new sales gimmick to help sell its inventory of new automobiles. Because many new car buyers need financing, Good-Deal offered a low down payment and low car payments for the first year after purchase. It believes that this promotion will bring in some new buyers.

On January 1, 2015, a customer purchased a new €33,000 automobile, making a down payment of €1,000. The customer signed a note indicating that the annual rate of interest would be 8% and that quarterly payments would be made over 3 years. For the first year, Good-Deal required a €400 quarterly payment to be made on April 1, July 1, October 1, and January 1, 2016. After this one-year period, the customer was required to make regular quarterly payments that would pay off the loan as of January 1, 2018.

Instructions

- (a) Prepare a note amortization schedule for the first year.
- **(b)** Indicate the amount the customer owes on the contract at the end of the first year.
- (c) Compute the amount of the new quarterly payments.
- (d) Prepare a note amortization schedule for these new payments for the next 2 years.
- (e) What do you think of the new sales promotion used by Good-Deal?
- P14-4 (Effective-Interest Method) Samantha Cordelia, an intermediate accounting student, is having difficulty amortizing bond premiums and discounts using the effective-interest method. Furthermore, she cannot understand why IFRS requires that this method be used. She has come to you with the following problem, looking for help.

On June 30, 2015, Hobart Company issued R\$2,000,000 face value of 11%, 20-year bonds at R\$2,171,600, a yield of 10%. Hobart Company uses the effective-interest method to amortize bond premiums or discounts. The bonds pay semiannual interest on June 30 and December 31. Compute the amortization schedule for four periods.

Using the data above for illustrative purposes, write a short memo (1–1.5 pages double-spaced) to Samantha, explaining what the effective-interest method is, why it is preferable, and how it is computed. (Do not forget to include an amortization schedule, referring to it whenever necessary.)

5 P14-5 (Entries for Zero-Interest-Bearing Note) On December 31, 2015, Faital Company acquired a computer from Plato Corporation by issuing a £600,000 zero-interest-bearing note, payable in full on December 31, 2019. Faital Company's credit rating permits it to borrow funds from its several lines of credit at 10%. The computer is expected to have a 5-year life and a £70,000 residual value.

Instructions

- (a) Prepare the journal entry for the purchase on December 31, 2015.
- (b) Prepare any necessary adjusting entries relative to depreciation (use straight-line) and amortization on December 31, 2016.
- (c) Prepare any necessary adjusting entries relative to depreciation and amortization on December 31, 2017.
- 5 P14-6 (Entries for Zero-Interest-Bearing Note; Payable in Installments) Sabonis Cosmetics Co. purchased machinery on December 31, 2014, paying \$50,000 down and agreeing to pay the balance in four equal installments of \$40,000 payable each December 31. An assumed interest of 8% is implicit in the purchase price.

Instructions

Prepare the journal entries that would be recorded for the purchase and for the payments and interest on the following dates.

(a) December 31, 2014.

(d) December 31, 2017.

(b) December 31, 2015.

(e) December 31, 2018.

(c) December 31, 2016.

3 4 P14-7 (Issuance and Retirement of Bonds; Income Statement Presentation) Chen Company issued its 6 9 9%, 25-year mortgage bonds in the principal amount of ¥30,000,000 on January 2, 2001, at a discount of ¥2,722,992 (effective rate of 10%). The indenture securing the issue provided that the bonds could be called for redemption in total but not in part at any time before maturity at 104% of the principal amount, but it did not provide for any sinking fund.

On December 18, 2015, the company issued its 11%, 20-year debenture bonds in the principal amount of ¥40,000,000 at 102, and the proceeds were used to redeem the 9%, 25-year mortgage bonds on January 2, 2016. The indenture securing the new issue did not provide for any sinking fund or for retirement before maturity. The unamortized discount at retirement was ¥1,842,888.

- (a) Prepare journal entries to record the issuance of the 11% bonds and the retirement of the 9%
- (b) Indicate the income statement treatment of the gain or loss from retirement and the note disclosure required.
- 3 4 P14-8 (Comprehensive Bond Problem) In each of the following independent cases, the company closes its books on December 31.
 - 1. Sanford Co. sells \$500,000 of 10% bonds on March 1, 2015. The bonds pay interest on September 1 and March 1. The due date of the bonds is September 1, 2018. The bonds yield 12%. Give entries through December 31, 2016.
 - 2. Titania Co. sells \$400,000 of 12% bonds on June 1, 2015. The bonds pay interest on December 1 and June 1. The due date of the bonds is June 1, 2019. The bonds yield 10%. On October 1, 2016, Titania buys back \$120,000 worth of bonds for \$126,000 (includes accrued interest). Give entries through December 1, 2017.

Instructions

For the two cases, prepare all of the relevant journal entries from the time of sale until the date indicated. (Construct amortization tables where applicable.) Amortize premium or discount on interest dates and at year-end. (Assume that no reversing entries were made; round to the nearest dollar.)

P14-9 (Issuance of Bonds Between Interest Dates, Retirement) Presented below are selected transactions
 on the books of Simonson Corporation.

July 1, 2015 Bonds payable with a par value of €900,000, which are dated January 1, 2015, are sold at 119.219 plus accrued interest to yield 10%. They are coupon bonds, bear interest at 12% (payable annually at January 1), and mature January 1, 2025. (Use interest expense account for accrued interest.)

Dec. 31 Adjusting entries are made to record the accrued interest on the bonds, and the amortization of the proper amount of premium.

Jan. 1, 2016 Interest on the bonds is paid.

Jan. 2 Bonds of par value of €360,000 are called at 102 and extinguished.

Dec. 31 Adjusting entries are made to record the accrued interest on the bonds, and the proper

amount of premium amortized.

Instructions

Prepare journal entries for the transactions above.

P14-10 (Entries for Life Cycle of Bonds) On April 1, 2015, Sarkar Company sold 15,000 of its 11%, 15-year, R\$1,000 face value bonds to yield 12%. Interest payment dates are April 1 and October 1. On April 2, 2016, Sarkar took advantage of favorable prices of its shares to extinguish 6,000 of the bonds by issuing 200,000 of its R\$10 par value ordinary shares. At this time, the accrued interest was paid in cash. The company's shares were selling for R\$31 per share on April 2, 2016.

Instructions

Prepare the journal entries needed on the books of Sarkar Company to record the following.

- (a) April 1, 2015: issuance of the bonds.
- **(b)** October 1, 2015: payment of semiannual interest.
- (c) December 31, 2015: accrual of interest expense.
- (d) April 2, 2016: extinguishment of 6,000 bonds. (No reversing entries made.)
- P14-11 (Modification of Debt) Daniel Perkins is the sole shareholder of Perkins Inc., which is currently under protection of the U.S. bankruptcy court. As a "debtor in possession," he has negotiated the following revised loan agreement with United Bank. Perkins Inc.'s \$600,000, 12%, 10-year note was refinanced with a \$600,000, 5%, 10-year note. Perkins has a market rate of interest of 15%.

Instructions

- (a) What is the accounting nature of this transaction?
- (b) Prepare the journal entry to record this refinancing on the books of Perkins Inc.
- P14-12 (Modification of Note under Different Circumstances) Halvor Corporation is having financial difficulty and therefore has asked Frontenac National Bank to restructure its \$5 million note outstanding. The present note has 3 years remaining and pays a current rate of interest of 10%. The present market rate for a loan of this nature is 12%. The note was issued at its face value.

Instructions

Presented below are three independent situations. Prepare the journal entry that Halvor would make for each of these restructurings.

- (a) Frontenac National Bank agrees to take an equity interest in Halvor by accepting ordinary shares valued at \$3,700,000 in exchange for relinquishing its claim on this note. The ordinary shares have a par value of \$1,700,000.
- **(b)** Frontenac National Bank agrees to accept land in exchange for relinquishing its claim on this note. The land has a book value of \$3,250,000 and a fair value of \$4,000,000.
- **(c)** Frontenac National Bank agrees to modify the terms of the note, indicating that Halvor does not have to pay any interest on the note over the 3-year period.
- **P14-13** (**Debtor/Creditor Entries for Continuation of Debt with New Effective Interest**) Crocker Corp. owes D. Yaeger Corp. a 10-year, 10% note in the amount of £330,000 plus £33,000 of accrued interest. The note is due today, December 31, 2015. Because Crocker Corp. is in financial trouble, D. Yaeger Corp. agrees to forgive the accrued interest, £30,000 of the principal and to extend the maturity date to December 31, 2018. Interest at 10% of revised principal will continue to be due on 12/31 each year. Given Crocker's financial difficulties, the market rate for its loans is 12%.

Instructions

- (a) Prepare the amortization schedule for the years 2015 through 2018.
- **(b)** Prepare all the necessary journal entries on the books of Crocker Corp. for the years 2015, 2016, and 2017.

3 4 P14-14 (Comprehensive Problem: Issuance, Classification, Reporting) Presented below are three independent situations.

Instructions

- (a) On January 1, 2015, Langley Co. issued 9% bonds with a face value of \$700,000 for \$656,992 to yield 10%. The bonds are dated January 1, 2015, and pay interest annually. What amount is reported for interest expense in 2015 related to these bonds?
- (b) Tweedie Building Co. has a number of long-term bonds outstanding at December 31, 2015. These long-term bonds have the following sinking fund requirements and maturities for the next 6 years.

	Sinking Fund	Maturities
2016	\$300,000	\$100,000
2017	100,000	250,000
2018	100,000	100,000
2019	200,000	_
2020	200,000	150,000
2021	200,000	100,000

Indicate how this information should be reported in the financial statements at December 31, 2015.

(c) In the long-term debt structure of Beckford Inc., the following three bonds were reported: mortgage bonds payable \$10,000,000; collateral trust bonds \$5,000,000; bonds maturing in installments, secured by plant equipment \$4,000,000. Determine the total amount, if any, of debenture bonds outstanding.

CONCEPTS FOR ANALYSIS

CA14-1 (Bond Theory: Statement of Financial Position Presentations, Interest Rate, Premium) On January 1, 2016, Nichols Company issued for \$1,085,800 its 20-year, 11% bonds that have a maturity value of \$1,000,000 and pay interest semiannually on January 1 and July 1. Bond issue costs were not material in amount. Below are three presentations of the non-current liability section of the statement of financial position that might be used for these bonds at the issue date.

1. Bonds payable (maturing January 1, 2036)	\$1,085,800
 Bonds payable—principal (face value \$1,000,000 maturing January 1, 2036) Bonds payable—interest (semiannual payment \$55,000) 	\$ 142,050 ^a 943,750 ^b
Total bond liability	\$1,085,800
 Bonds payable—principal (maturing January 1, 2036) Bonds payable—interest (\$55,000 per period for 40 periods) Total bond liability 	\$1,000,000 2,200,000 \$3,200,000

^aThe present value of \$1,000,000 due at the end of 40 (6-month) periods at the yield rate of 5% per period.

Instructions

- (a) Discuss the conceptual merit(s) of each of the date-of-issue statement of financial position presentations shown above for these bonds.
- (b) Explain why investors would pay \$1,085,800 for bonds that have a maturity value of only \$1,000,000.
- (c) Assuming that a discount rate is needed to compute the carrying value of the obligations arising from a bond issue at any date during the life of the bonds, discuss the conceptual merit(s) of using for this purpose:
 - (1) The coupon or nominal rate.
 - (2) The effective or yield rate at date of issue.
- (d) If the obligations arising from these bonds are to be carried at their present value computed by means of the current market rate of interest, how would the bond valuation at dates subsequent to the date of issue be affected by an increase or a decrease in the market rate of interest?

CA14-2 (Various Non-Current Liability Conceptual Issues) Schrempf Company has completed a number of transactions during 2015. In January, the company purchased under contract a machine at a total price of €1,200,000, payable over 5 years with installments of €240,000 per year. The seller has considered the transaction as an installment sale with the title transferring to Schrempf at the time of the final payment.

^bThe present value of \$55,000 per period for 40 (6-month) periods at the yield rate of 5% per period.

On March 1, 2015, Schrempf issued €10 million of general revenue bonds priced at 99 with a coupon of 10% payable July 1 and January 1 of each of the next 10 years. The July 1 interest was paid and on December 30, the company transferred €1,000,000 to the trustee, Flagstad Company, for payment of the January 1, 2016, interest.

As the accountant for Schrempf Company, you have prepared the statement of financial position as of December 31, 2015, and have presented it to the president of the company. You are asked the following questions about it.

- 1. Why has depreciation been charged on equipment being purchased under contract? Title has not passed to the company as yet and, therefore, it is not our asset. Why should the company not show on the left side of the statement of financial position only the amount paid to date instead of showing the full contract price on the left side and the unpaid portion on the right side? After all, the seller considers the transaction an installment sale.
- 2. Bond interest is shown as a current liability. Did we not pay our trustee, Flagstad Company, the full amount of interest due this period?

Instructions

Outline your answers to these questions by writing a brief paragraph that will justify your treatment.

CA14-3 (Bond Theory: Price, Presentation, and Retirement) On March 1, 2016, Sealy Company sold its 5-year, £1,000 face value, 9% bonds dated March 1, 2016, at an effective annual interest rate (yield) of 11%. Interest is payable semiannually, and the first interest payment date is September 1, 2016. Sealy uses the effective-interest method of amortization. The bonds can be called by Sealy at 101 at any time on or after March 1, 2017.

Instructions

- (a) (1) How would the selling price of the bond be determined?
 - (2) Specify how all items related to the bonds would be presented in a statement of financial position prepared immediately after the bond issue was sold.
- **(b)** What items related to the bond issue would be included in Sealy's 2016 income statement, and how would each be determined?
- (c) Would the amount of bond discount amortization using the effective-interest method of amortization be lower in the second or third year of the life of the bond issue? Why?
- (d) Assuming that the bonds were called in and extinguished on March 1, 2017, how should Sealy report the retirement of the bonds on the 2017 income statement?

CA14-4 (Bond Theory: Amortization and Gain or Loss Recognition)

Part I: The required method of amortizing a premium or discount on issuance of bonds is the effective-interest method.

Instructions

How is amortization computed using the effective-interest method, and why and how do amounts obtained using the effective-interest method provide financial statement readers useful information about the cost of borrowing?

Part II: Gains or losses from the early extinguishment of debt that is refunded can theoretically be accounted for in three ways:

- 1. Amortized over remaining life of old debt.
- 2. Amortized over the life of the new debt issue.
- **3.** Recognized in the period of extinguishment.

Instructions

- (a) Develop supporting arguments for each of the three theoretical methods of accounting for gains and losses from the early extinguishment of debt.
- **(b)** Which of the methods above is generally accepted under IFRS and how should the appropriate amount of gain or loss be shown in a company's financial statements?

CA14-5 (**Off-Balance-Sheet Financing**) Matt Ryan Corporation is interested in building its own soda can manufacturing plant adjacent to its existing plant in Partyville, Kansas. The objective would be to ensure a steady supply of cans at a stable price and to minimize transportation costs. However, the company has been experiencing some financial problems and has been reluctant to borrow any additional cash to fund the project. The company is not concerned with the cash flow problems of making payments but rather with the impact of adding additional long-term debt to its statement of financial position.

The president of Ryan, Andy Newlin, approached the president of the Aluminum Can Company (ACC), its major supplier, to see if some agreement could be reached. ACC was anxious to work out an arrangement since it seemed inevitable that Ryan would begin its own can production. Aluminum Can Company could not afford to lose the account.

After some discussion, a two-part plan was worked out. First, ACC was to construct the plant on Ryan's land adjacent to the existing plant. Second, Ryan would sign a 20-year purchase agreement. Under the purchase agreement, Ryan would express its intention to buy all of its cans from ACC, paying a unit price which at normal capacity would cover labor and material, an operating management fee, and the debt service requirements on the plant. The expected unit price, if transportation costs are taken into consideration, is lower than current market. If Ryan did not take enough production in any one year and if the excess cans could not be sold at a high enough price on the open market, Ryan agrees to make up any cash shortfall so that ACC could make the payments on its debt. The bank will be willing to make a 20-year loan for the plant, taking the plant and the purchase agreement as collateral. At the end of 20 years, the plant is to become the property of Ryan.

Instructions

- (a) What are project financing arrangements using special purpose entities?
- **(b)** What are take-or-pay contracts?
- (c) Should Ryan record the plant as an asset together with the related obligation? If not, should Ryan record an asset relating to the future commitment?
- **(d)** What is meant by off-balance-sheet financing?

CA14-6 (Bond Issue) Donald Lennon is the president, founder, and majority owner of Wichita Medical Corporation, an emerging medical technology products company. Wichita is in dire need of additional capital to keep operating and to bring several promising products to final development, testing, and production. Donald, as owner of 51% of the outstanding shares, manages the company's operations. He places heavy emphasis on research and development and long-term growth. The other principal shareholder is Nina Friendly who, as a non-employee investor, owns 40% of the shares. Nina would like to deemphasize the R & D functions and emphasize the marketing function to maximize short-run sales and profits from existing products. She believes this strategy would raise the market price of Wichita's shares.

All of Donald's personal capital and borrowing power is tied up in his 51% share ownership. He knows that any offering of additional shares will dilute his controlling interest because he won't be able to participate in such an issuance. But, Nina has money and would likely buy enough shares to gain control of Wichita. She then would dictate the company's future direction, even if it meant replacing Donald as president and CEO.

The company already has considerable debt. Raising additional debt will be costly, will adversely affect Wichita's credit rating, and will increase the company's reported losses due to the growth in interest expense. Nina and the other minority shareholders express opposition to the assumption of additional debt, fearing the company will be pushed to the brink of bankruptcy. Wanting to maintain his control and to preserve the direction of "his" company, Donald is doing everything to avoid a share issuance and is contemplating a large issuance of bonds, even if it means the bonds are issued with a high effective-interest rate.

Instructions

- (a) Who are the stakeholders in this situation?
- **(b)** What are the ethical issues in this case?
- (c) What would you do if you were Donald?

USING YOUR JUDGMENT

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What cash outflow obligations related to the repayment of long-term debt does M&S have over the next 5 years?
- **(b)** M&S indicates that it believes that it has the ability to meet business requirements in the foreseeable future. Prepare an assessment of its liquidity, solvency, and financial flexibility using ratio analysis.

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- (a) Compute the debt to assets ratio and the times interest earned for these two companies. Comment on the quality of these two ratios for both adidas and Puma.
- **(b)** What is the difference between the fair value and the historical cost (carrying amount) of each company's borrowings at year-end 2012? Why might a difference exist in these two amounts?
- **(c)** Do these companies have debt issued in foreign countries? Speculate as to why these companies may use foreign debt to finance their operations. What risks are involved in this strategy, and how might they adjust for this risk?

Financial Statement Analysis Cases

Case 1 Commonwealth Edison Co.

The following article about Commonwealth Edison Co. (USA) appeared in the Wall Street Journal.

Bond Markets

Giant Commonwealth Edison Issue Hits Resale Market With \$70 Million Left Over

NEW YORK—Commonwealth Edison Co.'s slow-selling new 9¼% bonds were tossed onto the resale market at a reduced price with about \$70 million still available from the \$200 million offered Thursday, dealers said.

The Chicago utility's bonds, rated double-A by Moody's and double-A-minus by Standard & Poor's, originally had been priced at 99.803, to yield 9.3% in 5 years. They were marked down yesterday the equivalent of about \$5.50 for each \$1,000 face amount, to about 99.25, where their yield jumped to 9.45%.

Instructions

- (a) How will the development above affect the accounting for Commonwealth Edison's bond issue?
- **(b)** Provide several possible explanations for the markdown and the slow sale of Commonwealth Edison's bonds.

Case 2 Eurotec

Consider the following events relating to Eurotec's long-term debt in a recent year.

- 1. The company decided on February 1 to refinance €500 million in short-term 7.4% debt to make it long-term 6%.
- 2. €780 million of long-term zero-coupon bonds with an effective-interest rate of 10.1% matured July 1 and were paid.
- 3. On October 1, the company issued €250 million in Australian dollars 6.3% bonds at 102 and €95 million in Italian lira 11.4% bonds at 99.
- 4. The company holds €100 million in perpetual foreign interest payment bonds that were issued in 1989 and presently have a rate of interest of 5.3%. These bonds are called perpetual because they have no stated due date. Instead, at the end of every 10-year period after the bond's issuance, the bondholders and Eurotec have the option of redeeming the bonds. If either party desires to redeem the bonds, the bonds must be redeemed. If the bonds are not redeemed, a new interest rate is set, based on the

then-prevailing interest rate for 10-year bonds. The company does not intend to cause redemption of the bonds but will reclassify this debt to current next year since the bondholders could decide to redeem the bonds.

Instructions

- (a) Consider event 1. What are some of the reasons the company may have decided to refinance this short-term debt, besides lowering the interest rate?
- **(b)** What do you think are the benefits to the investor in purchasing zero-coupon bonds, such as those described in event 2? What journal entry would be required to record the payment of these bonds? If financial statements are prepared each December 31, in which year would the bonds have been included in current liabilities?
- **(c)** Make the journal entry to record the bond issue described in event 3. Note that the bonds were issued on the same day, yet one was issued at a premium and the other at a discount. What are some of the reasons that this may have happened?
- (d) What are the benefits to Eurotec in having perpetual bonds as described in event 4? Suppose that in the current year, the bonds are not redeemed and the interest rate is adjusted to 6% from 7.5%. Make all necessary journal entries to record the renewal of the bonds and the change in rate.

Accounting, Analysis, and Principles

The following information is taken from the 2015 annual report of Bugant, Inc. Bugant's fiscal year ends December 31 of each year.

Bugant, Inc. Statement of Financial Position December 31, 2015		
Assets		
Plant and equipment (net of accumulated depreciation of €160) Inventory Cash	€1,800 450	€1,840
Total current assets		2,250
Total assets		€4,090
Equity		
Share capital		€1,500
Retained earnings		1,164
Liabilities		
Bonds payable (net of discount)		1,426
Total equity and liabilities		€4,090
Note X: Long-Term Debt On January 1, 2014, Bugant issued bonds with face valued to 10%. The bonds were issued to yield 12% and		•

Additional information concerning 2016 is as follows.

- 1. Sales were €2,922, all for cash.
- **2.** Purchases were €2,000, all paid in cash.
- **3.** Salaries were €700, all paid in cash.
- **4.** Plant and equipment was originally purchased for €2,000 and is depreciated on a straight-line basis over a 25-year life with no residual value.
- 5. Ending inventory was €1,900.

700 Chapter 14 Non-Current Liabilities

- **6.** Cash dividends of €100 were declared and paid by Bugant.
- 7. Ignore taxes.
- 8. The market rate of interest on bonds of similar risk was 16% during all of 2016.
- 9. Interest on the bonds is paid semiannually each June 30 and December 31.

Accounting

Prepare an income statement for Bugant, Inc. for the year ending December 31, 2016, and a statement of financial position at December 31, 2016. Assume semiannual compounding.

Analysis

Use common ratios for analysis of long-term debt to assess Bugant's long-run solvency. Has Bugant's solvency changed much from 2015 to 2016? Bugant's net income in 2015 was €550 and interest expense was €169.39.

Principles

Recently, the FASB and the IASB allowed companies the option of recognizing in their financial statements the fair values of their long-term debt. That is, companies have the option to change the statement of financial position value of their long-term debt to the debt's fair (or market) value and report the change in statement of financial position value as a gain or loss in income. In terms of the qualitative characteristics of accounting information (Chapter 2), briefly describe the potential trade-off(s) involved in reporting long-term debt at its fair value.

Professional Research

Wie Company has been operating for just 2 years, producing specialty golf equipment for women golfers. To date, the company has been able to finance its successful operations with investments from its principal owner, Michelle Wie, and cash flows from operations. However, current expansion plans will require some borrowing to expand the company's production line.

As part of the expansion plan, Wie is contemplating a borrowing on a note payable or issuance of bonds. In the past, the company has had little need for external borrowing so the management team has a number of questions concerning the accounting for these new non-current liabilities. They have asked you to conduct some research on this topic.

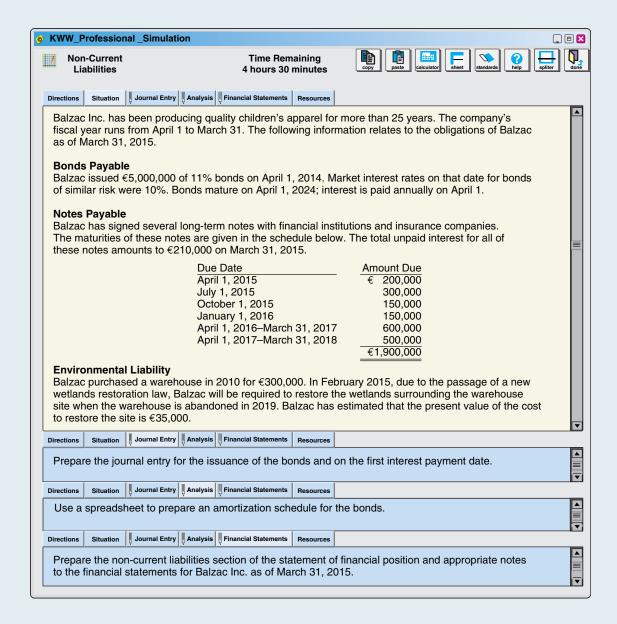

Instructions

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free eIFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) With respect to a decision of issuing notes or bonds, management is aware of certain costs (e.g., printing, marketing, and selling) associated with a bond issue. How will these costs affect Wie's reported earnings in the year of issue and while the bonds are outstanding?
- **(b)** If all goes well with the plant expansion, the financial performance of Wie Company could dramatically improve. As a result, Wie's market rate of interest (which is currently around 12%) could decline. This raises the possibility of retiring or exchanging the debt, in order to get a lower borrowing rate. How would such a debt extinguishment be accounted for?

Professional Simulation

In this simulation, you are asked to address questions related to the accounting for non-current liabilities. Prepare responses to all parts.

Remember to check the book's companion website, at www.wiley.com/college/kieso, to find additional resources for this chapter.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **1** Discuss the characteristics of the corporate form of organization.
- 2 Identify the key components of equity.
- **3** Explain the accounting procedures for issuing shares.
- 4 Describe the accounting for treasury shares.
- **5** Explain the accounting for and reporting of preference shares.

- **6** Describe the policies used in distributing dividends.
- 7 Identify the various forms of dividend distributions.
- 8 Explain the accounting for share dividends and share splits.
- 9 Indicate how to present and analyze equity.

It's a Global Market

As discussed in earlier chapters, we are moving toward one set of global financial reporting standards and one "common language" for financial information. This change will probably lead to more consolidation of our capital markets. To understand how quickly the global financial world is changing, let's examine a few trends occurring on securities exchanges around the world.

In 2007, the New York Stock Exchange (NYSE) merged with Paris-based Euronext, creating the world's first transatlantic securities exchange. Since the merger, NYSE Euronext has grown to be the world's largest exchange group, with over 8,000 listed issuers representing over 30 percent of the world's trading volume. Similarly, NASDAQ, the world's largest electronic securities market, merged with OMX, the Nordic market operator. This electronic exchange has 3,300 listed issuers, with a market value of approximately \$5.9 trillion.

Another reason behind the strong impetus for international financial reporting standards can be found in recent initial public offerings (IPOs). The emerging markets are driving the global IPO market, as shown in the following table.

Top 10 IPOs by Amount of Capital Raised, 2012					
Ranking	Issue Month	Issuer Name	Industry	Capital Raised (US\$b)	Exchange(s)
1	May	Glencore International plc (CHE)	Materials	10.0	London, Hong Kong
2	March	Hutchison Port Holdings Trust (CHN)	Industrials	5.5	Singapore
3	July	Bankia (ESP)	Financials	4.4	Madrid
4	March	HCA Holdings Inc. (USA)	Healthcare	4.4	NYSE
5	February	Kinder Morgan Inc. (USA)	Energy	3.3	NYSE
6	June	Prada SpA (ITA)	Retail	2.5	NYSE
7	October	Sinohydro Group Ltd. (CHN)	Energy	2.1	Shanghai
8	Мау	Shanghai Pharmaceuticals Holding Co. Ltd. (CHN)	Healthcare	2.1	Hong Kong
9	December	Chow Tai Fook Jewellery Co. Ltd. (HKG)	Consumer products	2.0	Hong Kong
10	July	JSW SA (POL)	Materials	1.9	Warsaw

As another example, Brazil, Russia, India, and China-often referred to as the *BRIC countries*-generated 48 percent of total IPO proceeds in 2011, compared to 41 percent for the BRIC countries in 2007.

Finally, consider the international sales of some large corporations: **Bombardier** (CAN) now has 96 percent of its sales overseas, **Boeing** (USA) in a recent year sold more planes overseas than in the United States, and **Hyundai**'s (KOR) vehicle revenues are over 88 percent in overseas markets.

Source: Ernst and Young, Global IPO Trends Report (2012).

INTERNATIONAL FOCUS

Read the Global Accounting Insights on pages 729–730 for a discussion of non-IFRS financial reporting for equity.

PREVIEW OF CHAPTER

15

As our opening story indicates, the growth of global equity capital markets indicates that investors around the world need useful information. In this chapter, we explain the accounting issues related

to the equity of a corporation. The content and organization of the chapter are as follows.

Equity Presentation and Equity The Corporate Form Preference Shares Dividend Policy Analysis Features · Corporate law · Issuance of shares • Financial condition Presentation and dividend Share system Reacquisition of Accounting for Analysis distributions and reporting of shares Variety of ownership Types of dividends preference shares interests Share dividends and share splits Disclosure of restrictions

THE CORPORATE FORM OF ORGANIZATION

LEARNING OBJECTIVE [1]

Discuss the characteristics of the corporate form of organization.

Of the three **primary forms of business organization**—the proprietorship, the partnership, and the corporation—the corporate form dominates. The corporation is by far the leader in terms of the aggregate amount of resources controlled, goods and services produced, and people employed. Although the corporate form has a number of advantages (as well as disadvantages) over the other two

forms, its principal benefit is its facility for attracting and accumulating large amounts of capital.

The special characteristics of the corporate form that affect accounting include:

- **1.** Influence of corporate law.
- **2.** Use of the share system.
- **3.** Development of a variety of ownership interests.

Corporate Law

Anyone who wishes to establish a corporation must generally submit **articles of incorporation** to the appropriate governmental agency for the country in which incorporation is desired. After fulfilling requirements, the governmental agency issues a corporation charter, thereby recognizing the company as a legal entity. Regardless of the number of countries in which a corporation has operating divisions, it is incorporated in only one country. It is to the company's advantage to incorporate where laws favor the corporate form of business organization.

Many governments have their own business incorporation act. The accounting for equity follows the provisions of these acts. In many cases, the laws are complex and vary both in their provisions and in their definitions of certain terms. Some laws fail to define technical terms. As a result, terms often have one meaning in one country and another meaning in a different country. These problems may be further compounded because legal authorities often interpret the effects and restrictions of the laws differently.

Share System

Equity in a corporation generally consists of a large number of units or shares. Within a given class of shares, each share exactly equals every other share. The number of shares possessed determines each owner's interest. If a company has ordinary shares divided into 1,000 shares, a person who owns 500 shares controls one-half of the ownership interest. One holding 10 shares has a one-hundredth interest.

Each share has certain rights and privileges. Only by special contract can a company restrict these rights and privileges at the time it issues the shares. Owners must examine the articles of incorporation, share certificates, and the provisions of applicable laws to ascertain such restrictions on or variations from the standard rights and privileges. In the absence of restrictive provisions, each share carries the following rights:

- **1.** To share proportionately in profits and losses.
- **2.** To share proportionately in management (the right to vote for directors).
- **3.** To share proportionately in corporate assets upon liquidation.
- **4.** To share proportionately in any new issues of shares of the same class—called the **preemptive right**.¹

¹This privilege is referred to as a **share right** or **warrant**. The warrants issued in these situations are of short duration, unlike the warrants issued with other securities.

The first three rights are self-explanatory. The last right is used to protect each shareholder's proportional interest in the company. The preemptive right protects an existing shareholder from involuntary dilution of ownership interest. Without this right, shareholders might find their interest reduced by the issuance of additional shares without their knowledge and at prices unfavorable to them. However, many corporations have eliminated the preemptive right. Why? Because this right makes it inconvenient for corporations to issue large amounts of additional shares, as they frequently do in acquiring other companies.

The share system easily allows one individual to transfer an interest in a company to another investor. For example, individuals owning shares in **Páo de Acucar** (BRA) may sell them to others at any time and at any price without obtaining the consent of the company or other shareholders. Each share is personal property of the owner, who may dispose of it at will. Páo de Acucar simply maintains a list or subsidiary ledger of shareholders as a guide to dividend payments, issuance of share rights, voting proxies, and the like. Because owners freely and frequently transfer shares, Páo de Acucar must revise the subsidiary ledger of shareholders periodically, generally in advance of every dividend payment or shareholders' meeting.

In addition, the major securities exchanges require ownership controls that the typical corporation finds uneconomic to provide. Thus, corporations often use **registrars and transfer agents** who specialize in performing services for recording and transferring shares.

Variety of Ownership Interests

In every corporation, one class of shares must represent the basic ownership interest. That class of shares is called ordinary. **Ordinary shares** represent the residual corporate interest that bears the ultimate risks of loss and receives the benefits of success. They are guaranteed neither dividends nor assets upon dissolution. But ordinary shareholders generally control the management of the corporation and tend to profit most if the company is successful. In the event that a corporation has only one authorized issue of shares, that issue is by definition ordinary shares, whether so designated in the charter or not.

In an effort to broaden investor appeal, corporations may offer two or more classes of shares, each with different rights or privileges. In the preceding section, we pointed out that each share of a given issue has the same four inherent rights as other shares of the same issue. By special contracts between the corporation and its shareholders, however, the shareholder may sacrifice certain of these rights in return for other special rights or privileges. Thus special classes of shares, usually called **preference shares**, are created. In return for any special preference, the preference shareholder always sacrifices some of the inherent rights of ordinary shareholders.

A common type of preference is to give preference shareholders a prior claim on earnings. The corporation thus assures them a dividend, usually at a stated rate, before it distributes any amount to the ordinary shareholders. In return for this preference, the preference shareholders may sacrifice their right to a voice in management or their right to share in profits beyond the stated rate.

What do the numbers mean? A CLASS (B) ACT

Some companies grant preferences to different shareholders by issuing different classes of ordinary shares. For a familycontrolled company, issuing newer classes of lower or nonvoting shares (referred to as B shares) effectively creates currency for acquisitions, increases liquidity, or puts a public

value on the company without diluting the family's powers. For example, the B shareholders at **Vodafone** (GBR) only get a vote if the company is to be dissolved. The following are some notable companies with two-tiered shares.

0	Votes Controlled by			
Company	Class B Shareholders			
Vodafone (GBR)	0%			
Google (USA)	78%			
Air Canada (CAN)	(Only Canadian citizens can vote)			
Ford (USA)	40%			
Facebook (USA)	43%			
Bombardier (CAN)	0%			

Some trading exchanges impose rules to protect minority investors. For example, the FTSE requires family owners to

hold no more than 50 percent of voting shares. The Hong Kong exchange prohibits dual-share structures. As a result of these rules, companies like Alibaba Group (CHN) and Manchester United (GBR) that wanted to trade on the Hong Kong exchange are looking to other markets on which to list their shares. For most retail investors, voting rights are not that important. But, investors must carefully compare the apparent bargain prices for some classes of shares—they may end up as second-class citizens with no voting rights.

EQUITY

LEARNING OBJECTIVE 2

Identify the key components

of equity.

See the Authoritative Literature section (page 735).

- **1.** Share capital.
- **2.** Share premium.
- 3. Retained earnings.
- **4.** Accumulated other comprehensive income.
- **5.** Treasury shares.
- **6.** Non-controlling interest (minority interest).

Such classifications help financial statement users to better understand the legal or other restrictions related to the ability of the company to pay dividends or otherwise use its equity for certain defined purposes.

Underlying Concepts

According to the Conceptual Framework, equity is defined as a residual, based on the net of assets minus liabilities.

Companies often make a distinction between contributed capital (paid-in capital) and earned capital. Contributed (paid-in) capital is the total amount paid in on capital shares—the amount provided by shareholders to the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding shares and premiums less discounts on issuance. Earned capital is the capital that develops from profitable operations. It consists of all undistributed income that remains invested in the company. Retained earnings represents the earned capital of the company.

Equity is the residual interest in the assets of the company after deducting all

liabilities. [1] Equity is often referred to as shareholders' equity, stockholders'

equity, or corporate capital. Equity is often subclassified on the statement of

financial position into the following categories (as discussed in Chapter 5).

As indicated above, equity is a residual interest and therefore its value is derived from the amount of the corporations' assets and liabilities. Only in unusual cases will a company's equity equal the total fair value of its shares. For example, BMW (DEU) recently had total equity of €30,295 million and a market capitalization of €45,000 million. BMW's equity represents the net contributions from shareholders (from both majority and minority shareholders) plus retained earnings and accumulated other comprehensive income. As a residual interest, its equity has no existence apart from the assets and liabilities of BMW—equity equals net assets. Equity is not a claim to specific assets but a claim against a portion of the total assets. Its amount is not specified or fixed; it depends on BMW's profitability. Equity grows if the company is profitable. It shrinks, or may disappear entirely, if BMW loses money.

LEARNING OBJECTIVE

Explain the accounting procedures for

issuing shares.

Issuance of Shares

In issuing shares, companies follow these procedures. First, the applicable governmental agency must authorize the shares, generally in a certificate of incorporation or charter. Next, the corporation offers shares for sale, entering into contracts to sell these shares. Then, after receiving amounts for the shares, the corporation issues the shares. The corporation generally makes no entry in the general ledger accounts when it receives its share authorization from the jurisdiction of incorporation.

We discuss the accounting problems involved in the issuance of shares under the following topics.

- **1.** Accounting for par value shares.
- 2. Accounting for no-par shares.
- **3.** Accounting for shares issued in combination with other securities (lump-sum sales).
- **4.** Accounting for shares issued in non-cash transactions.
- **5.** Accounting for costs of issuing shares.

Par Value Shares

The par value of a share has no relationship to its fair value. At present, the par value associated with most ordinary share issuances is very low. For example, par value for **China Railway Construction Corporation** (CHN) is ¥1.00, and for **Nestlé S.A.** (CHE) is CHF1. Low par values help companies avoid the contingent liability associated with shares sold below par.²

To show the required information for issuance of par value shares, corporations maintain accounts for each class of shares as follows.

- **1.** *Preference Shares or Ordinary Shares.* Together, these two share accounts reflect the par value of the corporation's issued shares. The company credits these accounts when it originally issues the shares. It makes no additional entries in these accounts unless it issues additional shares or retires them.
- **2.** Share Premium. The Share Premium account indicates any excess over par value paid in by shareholders in return for the shares issued to them. Once paid in, the excess over par becomes a part of the corporation's share premium. The individual shareholder has no greater claim on the excess paid in than all other holders of the same class of shares.

No-Par Shares

Many countries permit the issuance of shares without par value, called **no-par shares**. The reasons for issuance of no-par shares are twofold. First, issuance of no-par shares **avoids the contingent liability** (see footnote 2) that might occur if the corporation issued par value shares at a discount. Second, some confusion exists over the relationship (or rather the absence of a relationship) between the par value and fair value. If shares have no par value, **the questionable treatment of using par value as a basis for fair value never arises**. This is particularly advantageous whenever issuing shares for property items such as tangible or intangible fixed assets.

²Companies rarely, if ever, issue shares at a value below par value. The reason: The corporation may call on the original purchaser or the current holder of the shares issued below par to pay in the amount of the discount to prevent creditors from sustaining a loss upon liquidation of the corporation.

A major disadvantage of no-par shares is that some countries levy a high tax on these issues. In addition, in some countries the total issue price for no-par shares may be considered legal capital, which could reduce the flexibility in paying dividends.

Corporations sell no-par shares, like par value shares, for whatever price they will bring. However, unlike par value shares, corporations issue them without a premium or a discount. The exact amount received represents the credit to ordinary or preference shares. For example, Video Electronics Corporation is organized with 10,000 ordinary shares authorized without par value. Video Electronics makes only a memorandum entry for the authorization, inasmuch as no amount is involved. If Video Electronics then issues 500 shares for cash at €10 per share, it makes the following entry:

Cash 5,000
Share Capital—Ordinary 5,000

If it issues another 500 shares for €11 per share, Video Electronics makes this entry:

Cash 5,500
Share Capital—Ordinary 5,500

True no-par shares should be carried in the accounts at issue price without any share premium reported. But some countries require that no-par shares have a stated value. The stated value is a minimum value below which a company cannot issue it. Thus, instead of being no-par shares, such stated-value shares become, in effect, shares with a very low par value. Therefore, such shares with very low stated values are open to all the criticism and abuses that first encouraged the development of no-par shares.

If no-par shares have a stated value of \in 5 per share but sell for \in 11, all such amounts in excess of \in 5 are recorded as share premium, which in many jurisdictions is fully or partially available for dividends. Thus, no-par value shares, with a low stated value, permit a new corporation to commence its operations with share premium that may exceed its stated capital. For example, if a company issued 1,000 of the shares with a \in 5 stated value at \in 15 per share for cash, it makes the following entry.

Cash 15,000
Share Capital—Ordinary 5,000
Share Premium—Ordinary 10,000

Most corporations account for no-par shares with a stated value as if they were par value shares with par equal to the stated value.

Shares Issued with Other Securities (Lump-Sum Sales)

Generally, corporations sell classes of shares separately from one another. The reason to do so is to track the proceeds relative to each class as well as relative to each lot. Occasionally, a corporation issues two or more classes of securities for a single payment or lump sum, in the acquisition of another company. The accounting problem in such lump-sum sales is how to allocate the proceeds among the several classes of securities. Companies use one of two methods of allocation: (1) the proportional method and (2) the incremental method.

Proportional Method. If the fair value or other sound basis for determining relative value is available for each class of security, **the company allocates the lump sum received among the classes of securities on a proportional basis**. For instance, assume a company issues 1,000 shares of \$10 stated value ordinary shares having a fair value of \$20 a share and 1,000 shares of \$10 par value preference shares having a fair value of \$12 a share for a lump sum of \$30,000. Illustration 15-1 shows how the company allocates the \$30,000 to the two classes of shares.

Fair value of ordinary $(1,000 \times \$20) = \$20,000$ Fair value of preference $(1,000 \times \$12) = 12,000$ Aggregate fair value $\frac{\$32,000}{\$32,000}$ Allocated to ordinary: $\frac{\$20,000}{\$32,000} \times \$30,000 = \$18,750$ Allocated to preference: $\frac{\$12,000}{\$32,000} \times \$30,000 = \frac{\$11,250}{\$30,000}$ Total allocation $\frac{\$30,000}{\$30,000}$

ILLUSTRATION 15-1

Allocation in Lump-Sum Securities Issuance— Proportional Method

Incremental Method. In instances where a company cannot determine the fair value of all classes of securities, it may use the incremental method. It uses the fair value of the securities as a basis for those classes that it knows, and allocates the remainder of the lump sum to the class for which it does not know the fair value. For instance, if a company issues 1,000 shares of \$10 stated value ordinary shares having a fair value of \$20 and 1,000 shares of \$10 par value preference shares having no established fair value for a lump sum of \$30,000, it allocates the \$30,000 to the two classes as shown in Illustration 15-2.

Lump-sum receipt \$30,000
Allocated to ordinary (1,000 × \$20) (20,000)

Balance allocated to preference \$10,000

ILLUSTRATION 15-2

Allocation in Lump-Sum Securities Issuance— Incremental Method

If a company cannot determine the fair value for any of the classes of shares involved in a lump-sum exchange, it may need to use other approaches. It may rely on an expert's appraisal. Or, if the company knows that one or more of the classes of securities issued will have a determinable fair value in the near future, it may use a best-estimate basis with the intent to adjust later upon establishment of the future fair value.

Shares Issued in Non-Cash Transactions

Accounting for the issuance of shares for property or services involves an issue of valuation. The general rule is companies should record shares issued for services or property other than cash at the fair value of the goods or services received, unless that fair value cannot be measured reliably. If the fair value of the goods or services cannot be measured reliably, use the fair value of the shares issued. [2]

If a company can readily determine both and the transaction results from an arm's-length exchange, there will probably be little difference in their fair values. In such cases, the basis for valuing the exchange should not matter.

If a company cannot readily determine either the fair value of the shares it issues or the property or services it receives, it should employ an appropriate valuation technique. Depending on available data, the valuation may be based on market transactions involving comparable assets or the use of discounted expected future cash flows. Companies should avoid the use of book, par, or stated values as a basis of valuation for these transactions.

A company may exchange unissued shares or treasury shares (issued shares that it has reacquired but not retired) for property or services. If it uses treasury shares and the fair value of the property or services cannot be reliably estimated, the cost of the treasury shares should not be considered the decisive factor in establishing the fair value of the property or services. Instead, it should use the fair value of the treasury shares to value the property or services.

The series of transactions shown in Illustration 15-3 indicate the procedure for recording the issuance of 10,000 shares of €10 par value ordinary shares for a patent for Marlowe Company, in various circumstances.

ILLUSTRATION 15-3

Treasury Share Transactions Marlowe cannot readily determine the fair value of the patent, but it knows the fair value of the shares is €140,000. **Patents** 140,000 Share Capital-Ordinary (10,000 shares × €10 per share) 100.000 Share Premium-Ordinary 40,000 Marlowe cannot readily determine the fair value of the shares, but it determines the fair value of the patent is €150,000. **Patents** 150,000 Share Capital – Ordinary (10,000 shares \times 100,000 €10 per share) Share Premium—Ordinary 50,000 Marlowe cannot readily determine the fair value of the shares nor the fair value of the patent. An independent consultant values the patent at €125,000 based on discounted expected cash flows. 125,000 **Patents** Share Capital-Ordinary (10,000 shares × 100,000 €10 per share) Share Premium-Ordinary 25.000

Generally, the board of directors has the power to set the value of non-cash transactions. However, boards sometimes abuse this power. The issuance of shares for property or services has resulted in cases of overstated corporate capital through intentional overvaluation of the property or services received. The overvaluation of equity resulting from inflated asset values creates **watered shares**. The corporation should eliminate the "water" by simply writing down the overvalued assets.

If, as a result of the issuance of shares for property or services, a corporation undervalues the recorded assets, it creates **secret reserves**. An understated corporate structure (secret reserve) may also result from other methods: excessive depreciation or amortization charges, expensing capital expenditures, excessive write-downs of inventories or receivables, or any other understatement of assets or overstatement of liabilities. An example of a liability overstatement is an excessive provision for estimated product warranties that ultimately results in an understatement of equity, thereby creating a secret reserve.

Costs of Issuing Shares

When a company like **Wesfarmers** (AUS) issues shares, it should report direct costs incurred to sell shares, such as underwriting costs, accounting and legal fees, printing costs, and taxes, as a reduction of the amounts paid in. Wesfarmers therefore debits issue costs to Share Premium because they are unrelated to corporate operations. In effect, **issue costs are a cost of financing**. As such, issue costs should reduce the proceeds received from the sale of the shares.

Wesfarmers should expense management salaries and other indirect costs related to the share issue because it is difficult to establish a relationship between these costs and the sale proceeds. In addition, Wesfarmers expenses recurring costs, primarily registrar and transfer agents' fees, as incurred.

Reacquisition of Shares

Companies often buy back their own shares. Corporations purchase their outstanding shares for several reasons:

4 LEARNING OBJECTIVE Describe the accounting for treasury

shares.

- **1.** *To provide tax-efficient distributions of excess cash to shareholders.* Tax rates on sales of shares to the company by the shareholders are often much lower than the ordinary tax rate for many investors.
- **2.** To increase earnings per share and return on equity. Reducing both shares outstanding and equity often enhances certain performance ratios. For example, Siemens (DEU) announced its €4 billion buyback as part of its efforts to improve profitability. However, strategies to hype performance measures might increase performance in the short-run, but these tactics add no real long-term value.
- **3.** To provide shares for employee compensation contracts or to meet potential merger needs. Honeywell Inc. (USA) reported that it would use part of its purchase of one million ordinary shares for employee share option contracts. Other companies acquire shares to have them available for business acquisitions.
- **4.** To thwart takeover attempts or to reduce the number of shareholders. By reducing the number of shares held by the public, existing owners and managements bar "outsiders" from gaining control or significant influence.
- **5.** To make a market in the shares. As one company executive noted, "Our company is trying to establish a floor for its shares." Purchasing shares in the marketplace creates a demand. This may stabilize the share price or, in fact, increase it. For example, **HTC** (TWN) indicated its recent treasury share transaction was one of the options for boosting its sagging share price.

Some publicly held corporations have chosen to "go private," that is, to eliminate public (outside) ownership entirely by purchasing all of their outstanding shares. Companies often accomplish such a procedure through a **leveraged buyout (LBO)**, in which the company borrows money to finance the share repurchases.

After reacquiring shares, a company may either retire them or hold them in the treasury for reissue. If not retired, such shares are referred to as **treasury shares**. Technically, treasury shares are a corporation's own shares, reacquired after having been issued and fully paid.

Treasury shares are not an asset. When a company purchases treasury shares, a reduction occurs in both assets and equity. It is inappropriate to imply that a corporation can own a part of itself. A corporation may sell treasury shares to obtain funds, but that does not make treasury shares a statement of financial position asset.

When a corporation buys back some of its own outstanding shares, it has not acquired an asset; the buyback reduces net assets.

The possession of treasury shares does not give the corporation the right to vote, to exercise preemptive rights as a shareholder, to receive cash dividends, or to receive assets upon corporate liquidation. **Treasury shares are essentially the same as unissued ordinary shares.** No one advocates classifying unissued ordinary shares as an asset in the statement of financial position.³

Underlying Concepts

As we indicated in Chapter 2, an asset should have probable future economic benefits. Treasury shares simply reduce ordinary shares outstanding.

³The possible justification for classifying these shares as assets is that the company will use them to liquidate a specific liability that appears on the statement of financial position.

What do the numbers mean?

SIGNALS TO BUY?

Few company announcements are more beloved by investors than those that indicate a share buyback is in the offing. Following a lull in buybacks during the financial crisis, companies recently are increasing their buyback programs. For example, buybacks by the companies in the FTSE 100 increased 40 percent in 2007 before the crisis (spending £764.3 million to buy 4.7 percent of their own shares in a single week), with major companies such as **BP** (GBR), **Royal Dutch Shell** (NLD and GBR), and **Burberry** (GBR) making some of the bigger repurchases. In 2009, just £593 million was returned to shareholders through buyback schemes. But in 2012, U.K.-listed companies spent £12.4 billion on buying back shares, compared to the £5.9 billion they raised from the securities market through IPOs and rights issues.

Increases in buybacks are music to investors' ears because it indicates that executives at some of the companies have confidence that better times are ahead. The buys also show that cash reserves are healthy enough for companies to believe they not only have enough cash to cover their day-today functions but also enough to spare to allow for generous buybacks.

In fact, market experts often look to share buybacks as a buy signal. That strategy is not that surprising if you look at the performance of the companies that did buybacks. For example, in one study, buyback companies outperformed similar companies without buybacks by an average of 23 percent. In a recent three-year period, companies followed by <code>BuybackLetter.com</code> (USA) were up 16.4 percent, while the broader market index was up just 7.1 percent. Why the premium? Well, the conventional wisdom is that companies that buy back shares believe their shares are undervalued. Thus, analysts view the buyback announcement as an important piece of inside information about future company prospects.

Sources: "FTSE 100 Buy-Backs Leap 40%," www.marketwatch.com (August 22, 2007); and G. Howes, "FTSE 100 Share Buy-Backs on the Increase: Is This a Good Sign?" Director of Finance Online (05 February 2013).

Purchase of Treasury Shares

Companies use two general methods of handling treasury shares in the accounts: the cost method and the par value method. Both methods are generally acceptable.

- The cost method results in debiting the Treasury Shares account for the reacquisition cost and in reporting this account as a deduction from equity on the statement of financial position.
- The par (stated) value method records all transactions in treasury shares at their par value and reports the treasury shares as a deduction from share capital only.

No matter which method a company uses, most jurisdictions consider the cost of the treasury shares acquired as a restriction on retained earnings.

Because just about all companies use the cost method to account for treasury shares, we illustrate its use here. This method derives its name from the fact that a company maintains the Treasury Shares account at the cost of the shares purchased. Under the cost method, the company debits the Treasury Shares account for the cost of the shares acquired. Upon reissuance of the shares, it credits the account for this same cost. The original price received for the shares does not affect the entries to record the acquisition and reissuance of the treasury shares.

To illustrate, assume that Pacific Company issued 100,000 shares of \$1 par value ordinary shares at a price of \$10 per share. In addition, it has retained earnings of \$300,000. Illustration 15-4 shows the equity section on December 31, 2014, before purchase of treasury shares.

⁴If making numerous acquisitions of blocks of treasury shares at different prices, a company may use inventory costing methods—such as specific identification, average-cost, or FIFO—to identify the cost at date of reissuance.

900,000

300,000

Equity Share capital-ordinary, \$1 par, 100,000 shares issued and outstanding \$ 100,000 Share premium—ordinary Retained earnings Total equity \$1,300,000 **ILLUSTRATION 15-4**

Equity with No Treasury Shares

On January 20, 2015, Pacific acquires 10,000 of its shares at \$11 per share. Pacific records the reacquisition as follows.

January 20, 2015

Treasury Shares 110,000 Cash 110,000

Note that Pacific debits Treasury Shares for the cost of the shares purchased. The original account, Share Capital-Ordinary, is not affected because the number of issued shares does not change. The same is true for the Share Premium—Ordinary account. Pacific then deducts treasury shares to determine total equity.

Illustration 15-5 shows the equity section for Pacific after purchase of the treasury shares.

Equity Share capital-ordinary, \$1 par value, 100,000 shares issued and 90,000 outstanding \$ 100,000 900,000 Share premium—ordinary 300,000 Retained earnings 110,000 Less: Cost of treasury shares (10,000 shares) \$1.190.000 Total equity

ILLUSTRATION 15-5

Equity with Treasury Shares

Pacific subtracts the cost of the treasury shares from the total of share capital ordinary, share premium—ordinary, and retained earnings. It therefore reduces equity. Many jurisdictions require a corporation to restrict retained earnings for the cost of treasury shares purchased. The restriction keeps intact the corporation's capital. When the corporation sells the treasury shares, it lifts the restriction.

Pacific discloses both the number of shares issued (100,000) and the number in the treasury (10,000). The difference is the number of shares outstanding (90,000). The term outstanding shares means the number of issued shares that shareholders own.

Sale of Treasury Shares

Companies usually reissue or retire treasury shares. When selling treasury shares, the accounting for the sale depends on the price. If the selling price of the treasury shares equals its cost, the company records the sale of the shares by debiting Cash and crediting Treasury Shares. In cases where the selling price of the treasury shares is not equal to cost, then accounting for treasury shares sold **above cost** differs from the accounting for treasury shares sold below cost. However, the sale of treasury shares either above or below cost increases both total assets and equity.

Sale of Treasury Shares above Cost. When the selling price of the treasury shares exceeds its cost, a company credits the difference to Share Premium—Treasury. To

illustrate, assume that Pacific acquired 10,000 treasury shares at \$11 per share. It now sells 1,000 shares at \$15 per share on March 10. Pacific records the entry as follows.

March 10, 2015

Cash	15,000
Treasury Shares	11,000
Share Premium-Treasury	4,000

There are two reasons why Pacific does not credit \$4,000 to Gain on Sale of Treasury Shares. (1) Gains on sales occur when selling **assets**; treasury shares are not an asset. (2) A gain or loss should not be recognized from share transactions with its own shareholders. Thus, Pacific should not include share premium arising from the sale of treasury shares in the measurement of net income. Instead, it lists share premium from treasury shares separately on the statement of financial position.

Sale of Treasury Shares below Cost. When a corporation sells treasury shares below its cost, it usually debits the excess of the cost over selling price to Share Premium—Treasury. Thus, if Pacific sells an additional 1,000 treasury shares on March 21 at \$8 per share, it records the sale as follows.

March 21, 2015

Cash	8,000
Share Premium—Treasury	3,000
Treasury Shares	11,000

We can make several observations based on the two sale entries (sale above cost and sale below cost). (1) Pacific credits Treasury Shares at cost in each entry. (2) Pacific uses Share Premium—Treasury for the difference between the cost and the resale price of the shares. (3) Neither entry affects Share Capital—Ordinary.

After eliminating the credit balance in Share Premium—Treasury, the corporation debits any additional excess of cost over selling price to Retained Earnings. To illustrate, assume that Pacific sells an additional 1,000 shares at \$8 per share on April 10. Illustration 15-6 shows the balance in the Share Premium—Treasury account (before the April 10 purchase).

ILLUSTRATION 15-6

Treasury Share
Transactions in Share
Premium—Treasury
Account

_	Share Premium—Treasury				
N	/lar. 21	3,000	Mar. 10	4,000	
			Balance	1,000	

In this case, Pacific debits \$1,000 of the excess to Share Premium—Treasury. It debits the remainder to Retained Earnings. The entry is:

April 10, 2015

Cash	8,000	
Share Premium—Treasury	1,000	
Retained Earnings	2,000	
Treasury Shares	11,	,000

Retiring Treasury Shares

The board of directors may approve the retirement of treasury shares. This decision results in cancellation of the treasury shares and a reduction in the number of issued shares. Retired treasury shares have the status of authorized and unissued shares. The accounting effects are similar to the sale of treasury shares except that corporations debit applicable equity accounts related to the retired shares instead of cash. For

example, if a corporation originally sells the shares at par, it debits Share Capital—Ordinary for the par value per share. If it originally sells the shares at \$3 above par value, it also debits Share Premium—Ordinary for \$3 per share at retirement.

What do the numbers mean?

BUYBACK VOLATILITY

As indicated in the "What do the numbers mean?" box on page 712, we have seen wide swings in share repurchase activity. That is, following a long run of high buyback activity, share repurchases tumbled in 2008–2009 and since then have bounced back. Why the ups and downs? When times are good, companies are optimistic and can spare the cash needed for the buybacks. What about in bad times? One experienced analyst reasoned that many companies cut back on buybacks in a bid to boost liquidity and preserve cash in

the face of tight credit markets. Indeed, while cash levels can rise to record levels as companies cut spending in a host of areas, the reluctance of many companies to spend money on share repurchases reflects what another analyst called a "storm-center mentality." Financial officers, watching companies teeter because of arid credit conditions and slowing business, have prioritized cash preservation above all else. And, from a corporate perspective, share repurchases are considered more "discretionary" than quarterly dividends.

Light, "Leading Indicators for Investors: Corporate Spinoffs, Share Buybacks, Insider Buying and Stock Splits Can All Signal What Insiders Think Lies Ahead for Their Company's Share Price," Wall Street Journal (September 6, 2013).

PREFERENCE SHARES

As noted earlier, **preference shares** are a special class of shares that possess certain preferences or features not possessed by ordinary shares. The following features are those most often associated with preference share issues.

65 LEARNING OBJECTIVE

Explain the accounting for and reporting of preference shares.

- **1.** Preference as to dividends.
- **2.** Preference as to assets in the event of liquidation.
- 3. Convertible into ordinary shares.
- **4.** Callable at the option of the corporation.
- Non-voting.

The features that distinguish preference from ordinary shares may be of a more restrictive and negative nature than preferences. For example, the preference shares may be non-voting, non-cumulative, and non-participating.

Companies usually issue preference shares with a par value, expressing the dividend preference as a **percentage of the par value**. Thus, holders of 8 percent preference shares with a \$100 par value are entitled to an annual dividend of \$8 per share ($$100 \times 8\%$). This share is commonly referred to as an 8 percent preference share. In the case of no-par preference shares, a corporation expresses a dividend preference as a **specific dollar amount** per share, for example, \$7 per share. This share is commonly referred to as a \$7 preference share.

A preference as to dividends does not assure the payment of dividends. It merely assures that the corporation must pay the stated dividend rate or amount applicable to the preference shares before paying any dividends on the ordinary shares.

A company often issues preference shares (instead of debt) because of a high debt to equity ratio. In other instances, it issues preference shares through private placements with other corporations at a lower-than-market dividend rate because the acquiring corporation often receives largely tax-free dividends in certain countries.

Features of Preference Shares

A corporation may attach whatever preferences or restrictions, in whatever combination it desires, to a preference share issue, as long as it does not specifically violate its country's incorporation law. Also, it may issue more than one class of preference shares. We discuss the most common features attributed to preference shares below.

Cumulative Preference Shares

Cumulative preference shares require that if a corporation fails to pay a dividend in any year, it must make it up in a later year before paying any dividends to ordinary shareholders. If the directors fail to declare a dividend at the normal date for dividend action, the dividend is said to have been "passed." Any passed dividend on cumulative preference shares constitutes a dividend in arrears. Because no liability exists until the board of directors declares a dividend, a corporation does not record a dividend in arrears as a liability but discloses it in a note to the financial statements. A corporation seldom issues non-cumulative preference shares because a passed dividend is lost forever to the preference shareholder. As a result, this type of share issue would be less marketable.

Participating Preference Shares

Holders of participating preference shares share ratably with the ordinary shareholders in any profit distributions beyond the prescribed rate. That is, 5 percent preference shares, if fully participating, will receive not only its 5 percent return, but also dividends at the same rates as those paid to ordinary shareholders if paying amounts in excess of 5 percent of par or stated value to ordinary shareholders. Note that participating preference shares may be only partially participating.

Convertible Preference Shares

Convertible preference shares allow shareholders, at their option, to exchange preference shares for ordinary shares at a predetermined ratio. The convertible preference shareholder not only enjoys a preference claim on dividends but also has the option of converting into an ordinary shareholder with unlimited participation in earnings.

Callable Preference Shares

Callable preference shares permit the corporation at its option to call or redeem the outstanding preference shares at specified future dates and at stipulated prices. Many preference issues are callable. The corporation usually sets the call or redemption price slightly above the original issuance price and commonly states it in terms related to the par value. The callable feature permits the corporation to use the capital obtained through the issuance of such shares until the need has passed or it is no longer advantageous.

The existence of a call price or prices tends to set a ceiling on the market price of the preference shares unless they are convertible into ordinary shares. When a corporation redeems preference shares, it must pay any dividends in arrears.

Redeemable Preference Shares

Recently, more and more issuances of preference shares have features that make the securities more like debt (legal obligation to pay) than an equity instrument. For example, redeemable preference shares have a mandatory redemption period or a redemption feature that the issuer cannot control.

Previously, public companies were not permitted to report these debt-like preference share issues in equity, but they were not required to report them as a liability either.

There were concerns about classification of these debt-like securities, which may have been reported as equity or in the "mezzanine" section of statements of financial position between equity and debt. There also was diversity in practice as to how dividends on these securities were reported. IFRS requires debt-like securities, like redeemable preference shares, to be classified as liabilities and be measured and accounted for similar to liabilities. [3]

Accounting for and Reporting of Preference Shares

The accounting for preference shares at issuance is similar to that for ordinary shares. A corporation allocates proceeds between the par value of the preference shares and share premium. To illustrate, assume that Bishop Co. issues 10,000 shares of £10 par value preference shares for £12 cash per share. Bishop records the issuance as follows.

Cash 120,000
Share Capital—Preference 100,000
Share Premium—Preference 20,000

Thus, Bishop maintains separate accounts for these different classes of shares.

Corporations consider convertible preference shares as a part of equity. In addition, when exercising convertible preference shares, there is no theoretical justification for recognition of a gain or loss. A company recognizes no gain or loss when dealing with shareholders in their capacity as business owners. Instead, the company **employs the book value method**: debit Share Capital—Preference, along with any related Share Premium—Preference; credit Share Capital—Ordinary and Share Premium— Ordinary (if an excess exists).

Preference shares generally have no maturity date. Therefore, no legal obligation exists to pay the preference shareholder. As a result, companies classify preference shares as part of equity. Companies generally report preference shares at par value as the first item in the equity section. They report any excess over par value as part of share premium. They also consider dividends on preference shares as a distribution of income and not an expense. Companies must disclose the pertinent rights of the preference shares outstanding. [4]

DIVIDEND POLICY

Determining the proper amount of dividends to pay is a difficult financial management decision. Companies that are paying dividends are extremely reluctant to reduce or eliminate their dividend. They fear that the securities market might view this action negatively. As a consequence, companies that have been paying cash dividends will make every effort to continue to do so. In addition, the type of shareholder the company has (taxable or non-taxable, retail investor or institutional investor) plays a large role in determining dividend policy.⁵

Very few companies pay dividends in amounts equal to their legally available retained earnings. The major reasons are as follows.

To maintain agreements (bond covenants) with specific creditors, to retain all or a
portion of the earnings, in the form of assets, to build up additional protection
against possible loss.

⁵One recent study of large international companies showed that in the decade ending in March 2013, companies with the highest dividend payouts showed the highest share price increases. See "Rising Corporate Cash: What It Means for Investors," *T. Rowe Price Report* (Summer 2013).

6 LEARNING OBJECTIVE

Describe the policies used in distributing dividends.

- **2.** To meet corporation requirements, that earnings equivalent to the cost of treasury shares purchased be restricted against dividend declarations.
- **3.** To retain assets that would otherwise be paid out as dividends, to finance growth or expansion. This is sometimes called internal financing, reinvesting earnings, or "plowing" the profits back into the business.
- **4.** To smooth out dividend payments from year to year by accumulating earnings in good years and using such accumulated earnings as a basis for dividends in bad years.
- **5.** To build up a cushion or buffer against possible losses or errors in the calculation of profits.

The reasons above are self-explanatory except for the second. The laws of some jurisdictions require that the corporation restrict its contributed capital from distribution to shareholders, to protect against loss for creditors. The applicable law determines the legality of a dividend.

Financial Condition and Dividend Distributions

Effective management of a company requires attention to more than the legality of dividend distributions. Management must also consider economic conditions, most importantly, liquidity. Assume an extreme situation as shown in Illustration 15-7.

ILLUSTRATION 15-7

Statement of Financial Position, Showing a Lack of Liquidity

STATEMENT OF FINANCIAL POSITION				
Plant assets	€500,000 €500,000	Share capital Retained earnings	€400,000 100,000 €500,000	

The depicted company has a retained earnings credit balance. Unless restricted, it can declare a dividend of €100,000. But because all its assets are plant assets used in operations, payment of a cash dividend of €100,000 would require the sale of plant assets or borrowing.

Even if a statement of financial position shows current assets, as in Illustration 15-8, the question remains as to whether the company needs those cash assets for other purposes.

ILLUSTRATION 15-8

Statement of Financial Position, Showing Cash but Minimal Working Capital

	STATEMENT OF FINANCIAL POSITION					
Plant assets Cash	€460,000 100,000 €560,000	Share capital Retained earnings Current liabilities	€400,000 100,000	€500,000 60,000 €560,000		

The existence of current liabilities strongly implies that the company needs some of the cash to meet current debts as they mature. In addition, day-to-day cash requirements for payrolls and other expenditures not included in current liabilities also require cash.

Thus, before declaring a dividend, management must consider **availability of funds to pay the dividend**. A company should not pay a dividend unless both the present and future financial position warrant the distribution.

⁶If the corporation buys its own outstanding shares, it reduces its contributed capital and distributes assets to shareholders. If permitted, the corporation could, by purchasing treasury shares at any price desired, return to the shareholders their investments and leave creditors with little or no protection against loss.

Types of Dividends

Companies generally base dividend distributions either on accumulated profits (that is, retained earnings) or on some other equity item such as share premium. Dividends are of the following types.

T LEARNING OBJECTIVE Identify the various forms of dividend distributions.

- 1. Cash dividends.
- 2. Property dividends.
- **3.** Liquidating dividends.
- 4. Share dividends.

Although commonly paid in cash, companies occasionally pay dividends in shares or some other asset. All dividends, except for share dividends, reduce the total equity in the corporation. When declaring a share dividend, the corporation does not pay out assets or incur a liability. It issues additional shares to each shareholder and nothing more.

The natural expectation of any shareholder who receives a dividend is that the corporation has operated successfully. As a result, he or she is receiving a share of its profits. A company should disclose a **liquidating dividend**—that is, a dividend not based on retained earnings—to the shareholders so that they will not misunderstand its source.

Cash Dividends

The board of directors votes on the declaration of **cash dividends**. Upon approval of the resolution, the board declares a dividend. Before paying it, however, the company must prepare a current list of shareholders. For this reason, there is usually a time lag between declaration and payment. For example, the board of directors might approve a resolution at the January 10 (**date of declaration**) meeting and declare it payable February 5 (**date of payment**) to all shareholders of record January 25 (**date of record**). In this example, the period from January 10 to January 25 gives time for the company to complete and register any transfers in process. The time from January 25 to February 5 provides an opportunity for the transfer agent or accounting department, depending on who does this work, to prepare a list of shareholders as of January 25 and to prepare and mail dividend checks.

A declared cash dividend is a liability. Because payment is generally required very soon, it is usually a current liability. Companies use the following entries to record the declaration and payment of an ordinary dividend payable in cash. For example, Roadway Freight Corp. on June 10 declared a cash dividend of 50 cents a share on 1.8 million shares payable July 16 to all shareholders of record June 24. The entries for this dividend are shown in Illustration 15-9.

ILLUSTRATION 15-9 Cash Dividend Entries

⁷Theoretically, the ex-dividend date is the day after the date of record. However, to allow time for transfer of the shares, the securities exchanges generally advance the ex-dividend date two to four days. Therefore, the party who owns the shares on the day prior to the expressed ex-dividend date receives the dividends. The party who buys the shares on and after the ex-dividend date does not receive the dividend. Between the declaration date and the ex-dividend date, the market price of the shares includes the dividend.

To set up a ledger account that shows the amount of dividends declared during the year, Roadway Freight might debit Cash Dividends Declared instead of Retained Earnings at the time of declaration. It then closes this account to Retained Earnings at year-end.

A company may declare dividends either as a certain percentage of par, such as a 6 percent dividend on preference shares, or as an amount per share, such as 60 cents per share on no-par ordinary shares. In the first case, the rate multiplied by the par value of outstanding shares equals the total dividend. In the second, the dividend equals the amount per share multiplied by the number of shares outstanding. **Companies do not declare or pay cash dividends on treasury shares.**

Dividend policies vary among corporations. Some companies take pride in a long, unbroken string of quarterly dividend payments. They would lower or pass the dividend only if forced to do so by a sustained decline in earnings or a critical shortage of cash.

"Growth" companies, on the other hand, pay little or no cash dividends because their policy is to expand as rapidly as internal and external financing permit. For example, Salamander Energy plc (GBR) does not pay cash dividends to its ordinary shareholders so that the cash can be used in exploration and production. Investors in these growth companies hope that the price of their shares will appreciate in value. The investors will then realize a profit when they sell their shares. Many companies focus more on increasing share price, share repurchase programs, and corporate earnings than on dividend payout.

Property Dividends

Dividends payable in assets of the corporation other than cash are called **property dividends** or **dividends in kind**. Property dividends may be merchandise, real estate, or investments, or whatever form the board of directors designates. **Gold Bullion Development Corporation** (CAN) has a long-standing practice of paying dividends in gold instead of cash. Because of the obvious difficulties of divisibility of units and delivery to shareholders, the usual property dividend is in the form of securities of other companies that the distributing corporation holds as an investment.

When declaring a property dividend, the corporation should **restate at fair value the property it will distribute**, **recognizing any gain or loss** as the difference between the property's fair value and carrying value at date of declaration. The corporation may then record the declared dividend as a debit to Retained Earnings (or Property Dividends Declared) and a credit to Property Dividends Payable, at an amount equal to the fair value of the distributed property. Upon distribution of the dividend, the corporation debits Property Dividends Payable and credits the account containing the distributed asset (restated at fair value).

For example, Tsen, Inc. transferred to shareholders some of its investments (held-for-trading) in securities costing HK\$1,250,000 by declaring a property dividend on December 28, 2014, to be distributed on January 30, 2015, to shareholders of record on January 15, 2015. At the date of declaration, the securities have a fair value of HK\$2,000,000. Tsen makes the entries shown in Illustration 15-10.

Liquidating Dividends

Some corporations use amounts paid in by shareholders as a basis for dividends. Without proper disclosure of this fact, shareholders may erroneously believe the corporation has been operating at a profit. To avoid this type of deception, intentional or unintentional, a clear statement of the source of every dividend should accompany the dividend check.

Equity Inves	stments	750,000	
Unrealize	d Holding Gain or Loss—Income		750,000
Retained Ea	rnings (Property Dividends Declared)	2,000,000	
Property	2,000,000		
	At date of distribution (January 3	0, 2015)	
Property Div	vidends Payable	2,000,000	
Equity Inv	vestments		2,000,000

ILLUSTRATION 15-10

Property Dividend Entries

Dividends based on other than retained earnings are sometimes described as **liquidating dividends**. This term implies that such dividends are a return of the shareholder's investment rather than of profits. In other words, **any dividend not based on earnings reduces amounts paid-in by shareholders and to that extent, it is a liquidating dividend**. Companies in the extractive industries may pay dividends equal to the total of accumulated income and depletion. The portion of these dividends in excess of accumulated income represents a return of part of the shareholder's investment.

For example, McChesney Mines Inc. issued a "dividend" to its ordinary shareholders of £1,200,000. The cash dividend announcement noted that shareholders should consider £900,000 as income and the remainder a return of capital. McChesney Mines records the dividend as shown in Illustration 15-11.

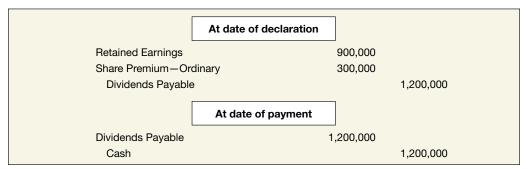

ILLUSTRATION 15-11

Liquidating Dividend Entries

In some cases, management simply decides to cease business and declares a liquidating dividend. In these cases, liquidation may take place over a number of years to ensure an orderly and fair sale of assets. For example, when Overseas National Airways (USA) dissolved, it agreed to pay a liquidating dividend to its shareholders over a period of years equivalent to \$8.60 per share. Each liquidating dividend payment in such cases reduces the amount paid-in by shareholders.

Share Dividends and Share Splits

Share Dividends

Companies sometimes issue a share dividend. In this case, **the company distributes no assets**. Each shareholder maintains exactly the same proportionate interest in the corporation and the same total book value after the company issues the share dividend. Of course, the book value per share is lower because each shareholder holds more shares.

Explain the accounting for share dividends and share splits.

A **share dividend** therefore is the issuance by a corporation of its own shares to its shareholders on a pro rata basis, without receiving any consideration. In recording a share dividend, some believe that the company should transfer the **par value of the shares issued** as a dividend from retained earnings to share capital.⁸

To illustrate a share dividend, assume that Vine Corporation has outstanding 100,000 shares of £1 par value ordinary shares and retained earnings of £50,000. If Vine declares a 10 percent share dividend, it issues 10,000 additional shares to current shareholders. The fair value of the shares at the time of the share dividend is £8. Given this information, the entry is:

At date of declaration

Retained Earnings (Share Dividend Declared) 10,000
Ordinary Share Dividend Distributable

10,000

Two important points should be noted about this entry. First, the par value, not the fair value, is used to record the share dividend. Second, the share dividend does not affect any asset or liability. The entry merely reflects a reclassification of equity. If Vine prepares a statement of financial position between the dates of declaration and distribution, it should show the ordinary share dividend distributable in the equity section as an addition to share capital—ordinary (whereas it shows cash or property dividends payable as current liabilities).

When issuing the shares, the entry is:

At date of distribution

Ordinary Share Dividend Distributable 10,000
Share Capital—Ordinary 10,000

No matter what the fair value is at the time of the share dividend, each shareholder retains the same proportionate interest in the corporation.

Some applicable laws and exchange rules specifically prohibit the issuance of share dividends on treasury shares. In those jurisdictions that permit treasury shares to participate in the distribution accompanying a share dividend or share split, the planned use of the treasury shares influences corporate practice. For example, if a corporation issues treasury shares in connection with employee share options, the treasury shares may participate in the distribution because the corporation usually adjusts the number of shares under option for any share dividends or splits. But no useful purpose is served by issuing additional shares to the treasury shares without a specific purpose, since they are essentially equivalent to authorized but unissued shares.

To continue with our example of the effect of the share dividend, note in Illustration 15-12 that the share dividend does not change the total equity. Also note that it does not change the proportion of the total shares outstanding held by each shareholder.

⁸ An alternative approach (required in the United States) is the fair value approach. Under this approach, for small share dividends (defined as those less than 20–25%) companies transfer the fair value of the shares issued from retained earnings. This approach was adopted, at least in part, to influence the share dividend policies of corporations—some of which were possibly misleading investors as to the real impact of the share dividend. That is, some argued that "many recipients of share dividends look upon them as distributions of corporate earnings and usually in an amount equivalent to the fair value of the additional shares received." (See Stephen A. Zeff, "The Rise of 'Economic Consequences,'" *The Journal of Accountancy* (December 1978), pp. 53–66 for a complete discussion of the evolution of this issue.) IFRS is silent on the accounting for share dividends under either the par value or fair value method. We show the par value method because it is more conceptually sound, as it is generally accepted that share dividends are not income for investors.

Before dividend Share capital-ordinary, 100,000 shares of £1 par £100,000 Retained earnings 50,000 Total equity £150.000 Shareholders' interests: A. 40,000 shares, 40% interest, book value £ 60,000 B. 50,000 shares, 50% interest, book value 75,000 C. 10,000 shares, 10% interest, book value 15,000 £150,000 After declaration but before distribution of 10% share dividend Share capital-ordinary, 100,000 shares at £1 par £100,000 Ordinary share dividend distributable, 10,000 shares at £1 par 10,000 Retained earnings (£50,000 - £10,000) 40,000 £150.000 Total equity After declaration and distribution of 10% share dividend Share capital-ordinary, 110,000 shares at £1 par £110,000 Retained earnings (£50,000 - £10,000) 40,000 Total equity £150,000 Shareholders' interest: A. 44,000 shares, 40% interest, book value £ 60,000 B. 55,000 shares, 50% interest, book value 75,000 C. 11,000 shares, 10% interest, book value 15,000 £150,000

ILLUSTRATION 15-12

Effects of Share Dividends

Share Splits

If a company has undistributed earnings over several years, and accumulates a sizable balance in retained earnings, the market value of its outstanding shares likely increases. Shares issued at prices less than £50 a share can easily attain a market price in excess of £200 a share. The higher the market price of a share, however, the less readily some investors can purchase it.

The managements of many corporations believe that better public relations depend on wider ownership of the corporation shares. They therefore target a market price sufficiently low to be within range of the majority of potential investors. To reduce the market price of each share, they use the common device of a **share split**. For example, after its share price increased significantly, **Arcam AB** (SWE) announced a split of its shares 4-for-1. The split should reduce the share price, leading to wider distribution of shares at lower trading prices.

From an accounting standpoint, **Arcam records no entry for a share split**. However, it enters a memorandum note to indicate the changed par value of the shares and the increased number of shares. Illustration 15-13 shows the lack of change in equity for a 2-for-1 share split on 100,000 shares of €1 par value, with the par being halved upon issuance of the additional shares.

Equity before 2-for-1 Split		Equity after 2-for-1 Split	
Share capital —ordinary,	€100,000	Share capital — ordinary, 200,000 shares at €.50 par Retained earnings	€100,000
100,000 shares at €1 par	50,000		50,000
Retained earnings	€150,000		€150,000

ILLUSTRATION 15-13 Effects of a Share Split

Share Split and Share Dividend Differentiated

From a legal standpoint, a share split differs from a share dividend. How? A share split increases the number of shares outstanding and decreases the par or stated value per share. A share dividend, although it increases the number of shares outstanding, does not decrease the par value; thus, it increases the total par value of outstanding shares.

The reasons for issuing a share dividend are numerous and varied. Share dividends can be primarily a publicity gesture **because many consider share dividends as dividends**. Another reason is that the corporation may simply wish to retain profits in the business by capitalizing a part of retained earnings. In such a situation, it makes a transfer on declaration of a share dividend from earned capital to contributed capital.

A corporation may also use a share dividend, like a share split, to increase the marketability of the shares, although marketability is often a secondary consideration. That is, a share dividend has the same effect on market price as a share split. However, as discussed earlier, a share dividend does not alter the par value per share.

Illustration 15-14 summarizes and compares the effects in the statement of financial position and related items of various types of dividends and share splits.

What do the numbers mean?

DIVIDENDS UP, DIVIDENDS DOWN

As the economy continues to recover from the financial crisis of 2009, a number of companies are increasing their dividend payouts in a sign of growing confidence and rising cash balances. For example, Nestlé (CHE), L'Oréal (FRA), and Novo Nordisk (DEN) all increased their dividends in 2013. In fact, the overall number of dividend increases has been on the rise, even as some have concerns that dividend payouts would level off if economic growth stalls.

A focus on dividends makes sense. Consider that in a slow-growth environment, with interest rates persistently low and the tax treatment of dividends still favorable, an investment strategy focusing on equity shares (rather than bonds) with the potential of *increasing* dividends may be particularly timely. Said one market watcher, "Investors too often overlook the importance of dividends, particularly the contribution to total return from reinvested dividends. . . . Dividends also can provide a good hedge against inflation in the form of a growing stream of income." A look at the returns for "dividend growers" compared to "dividend cutters" in the following chart supports the advice to keep an eye on dividend growth.

As indicated, from 1979 through the end of 2011, shares in the Russell 1000 Index that were growing their dividends outperformed dividend-paying shares, the index itself, non-dividend-paying shares, and shares that cut their dividends. During that time, an investment of \$100 in dividend growers would have risen to \$4,018 compared with \$3,134 based on the index return. Dividend payers outperformed non-dividend payers during down and flat markets, and offered lower volatility of returns in all market environments.

Furthermore, the best performers are shares with the combination of a relatively high yield—though not always

the very highest—and a high dividend growth rate. This is because high yields sometimes are a function of beaten down share prices due to poor corporate earnings prospects or other issues. Indeed, in such cases, dividend cuts could be in the offing. By contrast, shares that have performed best historically have been those in which the company's true growth potential has been undervalued by investors. Thus, companies with growing dividends are signaling confidence about their future earnings and are most likely to perform well throughout market cycles, which make them good candidates for long-term growth.

Sources: "Dividend Growth Stocks May Be Timely as the Economy Sputters," T. Rowe Price Report (Fall 2011); and R. Evans, "Here Are the American and European Companies with Incredible Track Records of Raising Their Dividends," The Telegraph (November 4, 2013).

Disclosure of Restrictions on Retained Earnings

Many corporations restrict retained earnings or dividends, without any formal journal entries. Such restrictions are **best disclosed by note**. Parenthetical notations are sometimes used, but restrictions imposed by bond indentures and loan agreements commonly require an extended explanation. Notes provide a medium for more complete explanations and free the financial statements from abbreviated notations. The note disclosure should reveal the source of the restriction, pertinent provisions, and the amount of retained earnings subject to restriction or the amount not restricted.

Restrictions may be based on the retention of a certain retained earnings balance, the ability to maintain certain working capital requirements, additional borrowing, and other considerations. The example from the annual report of Samsung (KOR) in Illustration 15-15 (on page 726) shows a note disclosing potential restrictions on retained earnings and dividends.

ILLUSTRATION 15-15

Disclosure of Restrictions on Retained Earnings and Dividends

Samsung

21. RETAINED EARNINGS

Retained earnings as of December 31 consist of the following:

(in millions of Korean won)	Current Year	Prior Year
Appropriated		
Legal reserve:		
Earned surplus reserve ¹	₩ 450,789	₩ 450,789
Discretionary reserve:		
Reserve for improvement of financial structure	204,815	204,815
Reserve for business rationalization	9,512,101	8,512,101
Reserve for overseas market development	510,750	510,750
Reserve for overseas investment losses	164,962	164,982
Reserve for research and human resource development	26,936,458	22,936,458
Reserve for export losses	167,749	167,749
Reserve for loss on disposal of treasury stock	3,100,000	2,550,000
Reserve for capital expenditure	8,816,905	8,216,439
	49,864,549	43,714,083
Unappropriated	5,555,022	7,351,091
Total	₩55,419,571	₩51,065,174

¹The Commercial Code of the Republic of Korea requires the Company to appropriate as a legal reserve, an amount equal to a minimum of 10% of annual cash dividends declared, until the reserve equals 50% of its issued capital stock. The reserve is not available for the payment of cash dividends, but may be transferred to capital stock through a resolution of the Board of Directors or used to reduce accumulated deficit, if any, with the ratification of the shareholders.

Treasury shares (2,000 ordinary shares)		(190,000)
Accumulated other comprehensive loss		(360,000)
Total equity		€12,000,000

⁹Looking at Illustration 15-16, note that companies may include a number of items in "Accumulated other comprehensive loss" or "Accumulated other comprehensive income." Among these items are "Foreign currency translation adjustments" (covered in advanced accounting), "Unrealized holding gains and losses for non-trading equity investments" (covered in Chapter 17), and "Unrealized holding gains or losses on property, plant, and equipment" (covered in Chapter 11), often referred to as revaluation surplus.

Frost should disclose the pertinent rights and privileges of the various securities outstanding. For example, companies must disclose all of the following: dividend and liquidation preferences, participation rights, call prices and dates, conversion or exercise prices and pertinent dates, sinking fund requirements, unusual voting rights, and significant terms of contracts to issue additional shares. Liquidation preferences should be disclosed in the equity section of the statement of financial position, rather than in the notes to the financial statements, to emphasize the possible effect of this restriction on future cash flows.

Presentation of Statement of Changes in Equity

Companies are also required to present a **statement of changes in equity**. The statement of changes in equity includes the following.

- **1.** Total comprehensive income for the period, showing separately the total amounts attributable to owners of the parent and to non-controlling interests.
- **2.** For each component of equity, the effects of retrospective application or retrospective restatement.
- **3.** For each component of equity, a reconciliation between the carrying amount at the beginning and the end of the period, separately disclosing changes resulting from:
 - (a) Profit or loss;
 - **(b)** Each item of other comprehensive income; and
 - **(c)** Transactions with owners in their capacity as owners, showing separately contributions by and distributions to owners and changes in ownership interests in subsidiaries that do not result in a loss of control.

A statement of changes in equity for **BASF Group** (DEU) is presented in Illustration 15-17.

CON CON CON

In addition, BASF is required to present, either in the statement of changes in equity or in the notes, the amount of dividends recognized as distributions to owners during the period and the related amount per share. [5]

ILLUSTRATION 15-17Statement of Changes in Equity

Analysis

Analysts use equity ratios to evaluate a company's profitability and long-term solvency. We discuss and illustrate the following three ratios below.

1. Return on ordinary share equity.

- **2.** Payout ratio.
- **3.** Book value per share.

Return on Ordinary Share Equity

The return on ordinary share equity (or return on equity) measures profitability from the ordinary shareholders' viewpoint. This ratio shows how many dollars of net income the company earned for each dollar invested by the owners. Return on equity (ROE) also helps investors judge the worthiness of a share when the overall market is not doing well.

Return on equity equals net income less preference dividends, divided by average ordinary shareholders' equity. For example, assume that Gerber's Inc. had net income of \$360,000, declared and paid preference dividends of \$54,000, and average ordinary shareholders' equity of \$2,550,000. Illustration 15-18 shows how to compute Gerber's ratio.

ILLUSTRATION 15-18

Computation of Return on Ordinary Share Equity

```
Return on Ordinary Share Equity = Net Income - Preference Dividends
Average Ordinary Shareholders' Equity
= \frac{\$360,000 - \$54,000}{\$2,550,000}
= 12\%
```

As shown in Illustration 15-18, when preference shares are present, income available to ordinary shareholders equals net income less preference dividends.

A company can improve its return on ordinary share equity through the prudent use of debt or preference share financing. **Trading on the equity** describes the practice of using borrowed money or issuing preference shares in hopes of obtaining a higher rate of return on the money used. Ordinary shareholders win if return on the assets is higher than the cost of financing these assets. When this happens, the return on ordinary share equity will exceed the return on total assets. In short, the company is "trading on the equity at a gain." In this situation, the money obtained from bondholders or preference shareholders earns enough to pay the interest or preference dividends and leaves a profit for the ordinary shareholders. On the other hand, if the cost of the financing is higher than the rate earned on the assets, the company is trading on equity at a loss and shareholders lose.

Payout Ratio

Another ratio of interest to investors, the **payout ratio**, is the ratio of cash dividends to net income. If preference shares are outstanding, this ratio equals cash dividends paid to ordinary shareholders, divided by net income available to ordinary shareholders. For example, assume that Troy Co. has cash dividends of €100,000 and net income of €500,000, and no preference shares outstanding. Illustration 15-19 shows the payout ratio computation.

ILLUSTRATION 15-19

Computation of Payout Ratio

```
Payout Ratio = Cash Dividends
Net income − Preference Dividends
= \frac{€100,000}{€500,000}
= 20%
```

Recently, the payout ratio has plummeted. In 2000, more than half of earnings were converted to dividends. In 2011, just 37 percent of the earnings of global public companies was distributed via dividends. ¹⁰

¹⁰Andrew Blackman, "How Well Do You Know . . . Dividends?" *Wall Street Journal* (September 10, 2007), p. R5. Also, see payout data at http://pages.stern.nyu.edu/~%20adamodar/New_Home_Page/data.html.

Book Value per Share

Another basis for evaluating net worth is found in the book value or equity value per share. Book value per share is the amount each share would receive if the company were liquidated on the basis of amounts reported on the statement of financial position. However, the figure loses much of its relevance if the valuations on the statement of financial position fail to approximate fair value of the assets. Book value per share equals ordinary shareholders' equity divided by outstanding ordinary shares. Assume that Chen Corporation's ordinary shareholders' equity is HK\$1,000,000 and it has 100,000 shares of ordinary shares outstanding. Illustration 15-20 shows its book value per share computation.

Book Value per Share = Ordinary Shareholders' Equity
Outstanding Shares $= \frac{HK\$1,000,000}{100,000}$ = HK\$10 per share

ILLUSTRATION 15-20 Computation of Book Value per Share

GLOBAL ACCOUNTING INSIGHTS

EQUITY

The accounting for transactions related to equity, such as issuance of shares, purchase of treasury shares, and declaration and payment of dividends, are similar under both IFRS

and U.S. GAAP. Major differences relate to terminology used and presentation of equity information.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to equity.

Similarities

- The accounting for the issuance of shares and purchase of treasury shares are similar under both U.S. GAAP and IFRS.
- The accounting for declaration and payment of dividends and the accounting for share splits are similar under both U.S. GAAP and IFRS.

Differences

• U.S. GAAP requires that small share dividends (referred to as stock dividends) should be recorded by transferring an amount equal to the fair value of the shares issued from retained earnings to share capital accounts. IFRS is silent on the accounting for share dividends.

- Major differences relate to terminology used, introduction of concepts such as revaluation surplus, and presentation of equity information.
- In the United States and the United Kingdom, many companies rely on substantial investments from private investors. Other countries have different investor groups. For example, in Germany, financial institutions such as banks are not only the major creditors but often are the largest shareholders as well.
- The accounting for treasury share retirements differs between U.S. GAAP and IFRS. Under U.S. GAAP, a company has three options: (1) charge the excess of the cost of treasury shares over par value to retained earnings, (2) allocate the difference between paid-in capital and retained earnings, or (3) charge the entire amount to paid-in

- capital. Under IFRS, the excess may have to be charged to paid-in capital, depending on the original transaction related to the issuance of the shares.
- The statement of changes in equity is usually referred to as the statement of stockholders' equity (or shareholders' equity) under U.S. GAAP.
- Both U.S. GAAP and IFRS use the term retained earnings. However, U.S. GAAP uses the account Accumulated Other Comprehensive Income (Loss). Use of this account is gaining prominence within the IFRS literature, which
- traditionally has relied on the term "reserve" as a dumping ground for other types of equity transactions, such as other comprehensive income items as well as various types of unusual transactions related to convertible debt and share option contracts.
- The term surplus is generally not used in U.S. GAAP, as
 the standards do not allow revaluation accounting. Under
 IFRS, it is common to report "revaluation surplus" related
 to increases or decreases in items such as property, plant,
 and equipment; mineral resources; and intangible assets.

About the Numbers

As indicated, numerous differences in terminology exist in comparing equity under U.S. GAAP and IFRS. The following excerpt from a U.S. statement of financial position (balance sheet) illustrates these distinctions (you might compare the presentation here to that in Illustration 15-16 on page 726 under IFRS).

FROST COMPANY STOCKHOLDERS' EQUITY DECEMBER 31, 2015		
Capital stock		
Preferred stock, \$100 par value, 7% cumulative, 100,000 shares authorized, 30,000 shares issued and outstanding Common stock, no par, stated value \$10 per share,		\$ 3,000,000

Total capital stock		7,200,000
Additional paid-in capital		
Excess over par—preferred Excess over stated value—common Total paid-in capital	\$150,000 840,000	990,000 8,190,000
Retained earnings		4,360,000
Total paid-in capital and retained earnings Less: Cost of treasury stock		12,550,000
(2,000 shares, common) Accumulated other comprehensive		190,000
loss		360,000
Total stockholders' equity		\$12,000,000

On the Horizon

As indicated in earlier discussions, the IASB and the FASB have completed some work on a project related to financial statement presentation. An important part of this study is to determine whether certain line items, subtotals, and totals should be clearly defined and required to be displayed in the

financial statements. For example, it is likely that the statement of changes in equity and its presentation will be examined closely. In addition, the options of how to present other comprehensive income under U.S. GAAP will change in any converged standard.

SUMMARY OF LEARNING OBJECTIVES

- Discuss the characteristics of the corporate form of organization. Among the specific characteristics of the corporate form that affect accounting are the (1) influence of corporate law, (2) use of the share system, and (3) development of a variety of ownership interests. In the absence of restrictive provisions, each ordinary share carries the right to share proportionately in (1) profits and losses, (2) management (the right to vote for directors), (3) corporate assets upon liquidation, and (4) any new issues of shares of the same class (called the preemptive right).
- **Identify the key components of equity.** Equity is classified into two categories: contributed capital and earned capital. Contributed capital (paid-in capital) describes the total amount paid in as share capital. Put another way, it is the amount that shareholders advance to the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding shares and premiums less any discounts on issuance. Earned capital is the capital that develops if the business operates profitably; it consists of all undistributed income that remains invested in the company.
- **Explain the accounting procedures for issuing shares.** Accounts are kept for the following different types of shares. *Par value shares:* (a) Share Capital—Preference or Share Capital—Ordinary, (b) Share Premium—Preference and Share Premium—Ordinary. *No-par shares:* Share Capital—Ordinary or Share Capital—Ordinary and Share Premium—Ordinary if stated value used. For shares issued in combination with other securities (lump-sum sales), the two methods of allocation available are (a) the proportional method and (b) the incremental method. When issuing shares for services or property other than cash, the company should record the exchange at the fair value of the property or services received unless that fair value cannot be reliably measured. Otherwise, use the fair value of the shares issued.
- **Describe the accounting for treasury shares.** The cost method is generally used in accounting for treasury shares. This method derives its name from the fact that a company maintains the Treasury Shares account at the cost of the shares purchased. Under the cost method, a company debits the Treasury Shares account for the cost of the shares acquired and credits it for this same cost upon reissuance. The price received for the shares when originally issued does not affect the entries to record the acquisition and reissuance of the treasury shares.
- Explain the accounting for and reporting of preference shares. Preference shares are a special class of shares that possess certain preferences or features not possessed by the ordinary shares. The features that are most often associated with preference share issues are (1) preference as to dividends, (2) preference as to assets in the event of liquidation, (3) convertible into ordinary shares, (4) callable at the option of the corporation, and (5) non-voting. At issuance, the accounting for preference shares is similar to that for ordinary shares. When convertible preference shares are converted, a company uses the book value method. It debits Share Capital—Preference, along with any related Share Premium—Preference, and credits Share Capital—Ordinary and Share Premium—Ordinary (if an excess exists).
- **Describe the policies used in distributing dividends.** The incorporation laws normally provide information concerning the legal restrictions related to the payment of

KEY TERMS

book value per share, 729 callable preference shares, 716 cash dividends, 719 contributed (paid-in) capital, 706 convertible preference shares, 716 cost method, 712 cumulative preference shares, 716 dividend in arrears, 716 earned capital, 706 equity, 706 leveraged buyout (LBO), 711 liquidating dividends, 719, 721 lump-sum sales, 708 no-par shares, 707 ordinary shares, 705 par (stated) value method, 712 participating preference shares, 716 payout ratio, 728 preemptive right, 704 preference shares, 705, 715 property dividends, 720 redeemable preference shares, 716 residual interest, 706 retained earnings, 706 return on ordinary share equity, 728 share dividends, 722 Share Premium, 707 share split, 723 stated value, 708 statement of changes in equity, 727 trading on the equity, 728 treasury shares, 711

dividends. Corporations rarely pay dividends in an amount equal to the legal limit. This is due, in part, to the fact that companies use assets represented by undistributed earnings to finance future operations of the business. If a company is considering declaring a dividend, it must ask two preliminary questions. (1) Is the condition of the corporation such that the dividend is legally permissible? (2) Is the condition of the corporation such that a dividend is **economically sound**?

- **Identify the various forms of dividend distributions.** Dividends are of the following types: (1) cash dividends, (2) property dividends, (3) liquidating dividends (dividends based on other than retained earnings), and (4) share dividends (the issuance by a corporation of its own shares to its shareholders on a pro rata basis but without receiving consideration).
- Explain the accounting for share dividends and share splits. When declaring a share dividend, a company debits Retained Earnings at the par value of the shares it distributes. The entry includes a credit to Ordinary Share Dividend Distributable at par value times the number of shares. A share dividend is a capitalization of retained earnings that reduces retained earnings. The par value per share and total equity remain unchanged with a share dividend, and all shareholders retain their same proportionate share of ownership. A share split results in an increase or decrease in the number of shares outstanding, with a corresponding decrease or increase in the par or stated value per share. No accounting entry is required for a share split.
- **Indicate how to present and analyze equity.** The equity section of a statement of financial position includes share capital, share premium, and retained earnings. A company may also have additional items such as treasury shares, accumulated other comprehensive income (loss), and minority interest. Companies are required to present a statement of changes in equity. Ratios that use equity amounts are return on ordinary share equity, payout ratio, and book value per share.

APPENDIX **15A**

DIVIDEND PREFERENCES AND BOOK VALUE PER SHARE

DIVIDEND PREFERENCES

LEARNING OBJECTIVE 110

Explain the different types of preference share dividends and their effect on book value per share.

Illustrations 15A-1 to 15A-4 indicate the effects of various dividend preferences on dividend distributions to ordinary and preference shareholders. Assume that in 2015, Mason Company is to distribute €50,000 as cash dividends, its outstanding ordinary shares have a par value of €400,000, and its 6 percent preference shares have a par value of €100,000. Mason would distribute dividends to each class, employing the assumptions given, as follows.

1. If the preference shares are non-cumulative and non-participating:

ILLUSTRATION 15A-1

Dividend Distribution, Non-Cumulative and Non-Participating Preference

	Preference	Ordinary	Total
6% of €100,000	€6,000		€ 6,000
The remainder to ordinary		€44,000	44,000
Totals	€6,000	€44,000	€50,000

2. If the preference shares are cumulative and non-participating, and Mason Company did not pay dividends on the preference shares in the preceding two years:

Dividends in arrears, 6% of €100,000 for 2 years Current year's dividend, 6% of €100,000	Preference €12,000 6,000	Ordinary	Total €12,000 6,000
The remainder to ordinary Totals	€18,000	€32,000 €32,000	32,000 €50,000

ILLUSTRATION 15A-2

Dividend Distribution, Cumulative and Non-Participating Preference Shares, with Dividends in Arrears

3. If the preference shares are non-cumulative and are fully participating:¹¹

	Preference	Ordinary	Total
Current year's dividend, 6%	€ 6,000	€24,000	€30,000
Participating dividend of 4%	4,000	16,000	20,000
Totals	€10,000	€40,000	€50,000
The participating dividend was determined as follows:			
Current year's dividend:			
Preference, 6% of €100,000 = € 6,000			
Ordinary, 6% of €400,000 = <u>24,000</u>	€3	0,000	
Amount available for participation (€50,000 - €30,000)	€2	0,000	
Par value of shares that are to participate (€100,000 +	€400,000) €50	0,000	
Rate of participation (€20,000 ÷ €500,000)	4	1%	
Participating dividend:			
Preference, 4% of €100,000	€ -	4,000	
Ordinary, 4% of €400,000	1	6,000	
	€2	0,000	
	<u> </u>	<u>-</u>	

ILLUSTRATION 15A-3

Dividend Distribution, Non-Cumulative and Fully Participating Preference Shares

4. If the preference shares are cumulative and are fully participating, and Mason Company did not pay dividends on the preference shares in the preceding two years:

	Preference	Ordinary	Total
Dividends in arrears, 6% of €100,000 for 2 years	€12,000		€12,000
Current year's dividend, 6%	6,000	€24,000	30,000
Participating dividend, 1.6% (€8,000 ÷ €500,000)	1,600	6,400	8,000
Totals	<u>€19,600</u>	€30,400	€50,000

ILLUSTRATION 15A-4

Dividend Distribution, Cumulative and Fully Participating Preference Shares, with Dividends in Arrears

BOOK VALUE PER SHARE

Book value per share in its simplest form is computed as net assets divided by outstanding shares at the end of the year. The computation of book value per share becomes more complicated if a company has preference shares in its capital structure. For

- **a.** After the preference shares are assigned the current year's dividend, the ordinary shares will receive a "like" percentage of par value outstanding. In example (3), this amounts to 6 percent of €400,000.
- b. In example (3), shown in Illustration 15A-3, the remainder of the declared dividend is €20,000. We divide this amount by total par value (€500,000) to find the rate of participation to be applied to each class of shares. In this case, the rate of participation is 4% (€20,000 ÷ €500,000), which we then multiply by the par value of each class of shares to determine the amount of participation.

¹¹When preference shares are participating, there may be different agreements as to how the participation feature is to be executed. However, in the absence of any specific agreement the following procedure is recommended:

example, if preference dividends are in arrears, if the preference shares are participating, or if preference shares have a redemption or liquidating value higher than its carrying amount, the company must allocate retained earnings between the preference and ordinary shareholders in computing book value.

To illustrate, assume that the following situation exists.

ILLUSTRATION 15A-5

Computation of Book Value per Share—No Dividends in Arrears

Equity Preference shares, 5% Ordinary shares Share premium—ordinary Retained earnings Totals	Preference
Shares outstanding Book value per share	4,000 €150.02

The situation in Illustration 15A-5 assumes that no preference dividends are in arrears and that the preference shares are not participating. Now assume that the same facts exist except that the 5 percent preference shares are cumulative, participating up to 8 percent, and that dividends for three years before the current year are in arrears. Illustration 15A-6 shows how to compute the book value of the ordinary shares, assuming that no action has yet been taken concerning dividends for the current year.

ILLUSTRATION 15A-6

Computation of Book Value per Share—with Dividends in Arrears, Participating

Equity	Preference	Ordinary
Preference shares, 5%	€300,000	
Ordinary shares		€400,000
Share premium—ordinary		37,500
Retained earnings:		
Dividends in arrears (3 years at 5% a year)	45,000	
Current year requirement at 5%	15,000	20,000
Participating—additional 3%	9,000	12,000
Remainder to ordinary		61,582
Totals	€369,000	€531,082
Shares outstanding		4,000
Book value per share		€132.77

As indicated, retained earnings is allocated between preference and ordinary share-holders in computing book value per share.

In connection with the book value computation, the analyst must know how to handle the following items: the number of authorized and unissued shares, the number of treasury shares on hand, any commitments with respect to the issuance of unissued shares or the reissuance of treasury shares, and the relative rights and privileges of the various types of shares authorized. As an example, if the liquidating value of the preference shares is higher than its carrying amount, the liquidating amount should be used in the book value computation.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 15A

Explain the different types of preference share dividends and their effect on book value per share. The dividend preferences of preference shares affect the dividends paid to shareholders. Preference shares can be (1) cumulative or non-cumulative, and (2) fully participating, partially participating, or non-participating. If preference dividends

are in arrears, if the preference shares are participating, or if preference shares have a redemption or liquidation value higher than its carrying amount, allocate retained earnings between preference and ordinary shareholders in computing book value per share.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

- **1.** In the absence of restrictive provisions, what are the basic rights of shareholders of a corporation?
- 2. Why is a preemptive right important?
- 3. Distinguish between ordinary and preference shares.
- **4.** Why is the distinction between contributed capital (paid-in capital) and retained earnings important?
- 5. Explain each of the following terms: authorized ordinary shares, unissued ordinary shares, issued ordinary shares, outstanding ordinary shares, and treasury shares.
- **6.** What is meant by par value, and what is its significance to shareholders?
- 7. Describe the accounting for the issuance for cash of no-par value ordinary shares at a price in excess of the stated value of the ordinary shares.
- **8.** Explain the difference between the proportional method and the incremental method of allocating the proceeds of lump-sum sales of share capital.
- **9.** What are the different bases for share valuation when assets other than cash are received for issued shares?
- Explain how underwriting costs and accounting and legal fees associated with the issuance of shares should be recorded.
- 11. For what reasons might a corporation purchase its own shares?
- **12.** Discuss the propriety of showing:
 - (a) Treasury shares as an asset.
 - (b) "Gain" or "loss" on sale of treasury shares as additions to or deductions from income.
 - (c) Dividends received on treasury shares as income.
- **13.** What features or rights may alter the character of preference shares?

- 14. Kim Inc. recently noted that its 4% preference shares and 4% participating preference shares are both cumulative and have priority as to dividends up to 4% of their par value. Its participating preference shares participate equally with the ordinary shares in any dividends in excess of 4%. What is meant by the term participating? Cumulative?
- **15.** Where in the financial statements are preference shares normally reported?
- **16.** List five elements included in equity.
- 17. BMG Inc. purchases 10,000 shares of its own previously issued €10 par ordinary shares for €290,000. Assuming the shares are held in the treasury with intent to reissue, what effect does this transaction have on (a) net income, (b) total assets, (c) retained earnings, and (d) total equity?
- **18.** Indicate how each of the following accounts should be classified in the equity section.
 - (a) Share Capital—Ordinary
 - (b) Retained Earnings
 - (c) Share Premium—Ordinary
 - (d) Treasury Shares
 - (e) Share Premium—Treasury
 - (f) Accumulated Other Comprehensive Income
 - (g) Share Capital—Preference
- 19. What factors influence the dividend policy of a company?
- 20. What are the principal considerations of a board of directors in making decisions involving dividend declarations? Discuss briefly.
- **21.** Dividends are sometimes said to have been paid "out of retained earnings." What is the error, if any, in that statement?

- **22.** Distinguish among cash dividends, property dividends, liquidating dividends, and share dividends.
- **23.** Describe the accounting entry for a share dividend, if any. Describe the accounting entry for a share split, if any.
- **24.** Share splits and share dividends may be used by a corporation to change the number of its shares outstanding.
 - (a) From an accounting viewpoint, explain how the share split differs from an ordinary share dividend.
 - (b) How should a share dividend that has been declared but not yet issued be classified in a statement of financial position? Why?
- 25. The following comment appeared in the notes of Mona Corporation's annual report: "Such distributions, representing proceeds from the sale of Sarazan, Inc. were paid in the form of partial liquidating dividends and were in lieu of a portion of the Company's ordinary cash dividends." How would a partial liquidating dividend be accounted for in the financial records?
- 26. This comment appeared in the annual report of Christensen Inc.: "The Company could pay cash or property dividends on the Class A ordinary shares without paying cash or property dividends on the Class B ordinary shares. But if the Company pays any cash or property dividends on the Class B ordinary shares, it would be required to pay at least the same dividend on the Class A ordinary shares." How is a property dividend accounted for in the financial records?
- 27. For what reasons might a company restrict a portion of its retained earnings?
- 28. How are restrictions of retained earnings reported?
- **29.** Mary Tokar is comparing a U.S. GAAP-based company to a company that uses IFRS. Both companies report non-

- trading equity investments. The IFRS company reports unrealized losses on these investments under the heading "Reserves" in its equity section. However, Mary can find no similar heading in the U.S. GAAP company financial statements. Can Mary conclude that the U.S. GAAP company has no unrealized gains or losses on its non-trading equity investments? Explain.
- **30.** Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for equity.

31. Briefly discuss the implications of the financial statement presentation project for the reporting of equity.

- *32. Wang Corp. had \$100,000 of 7%, \$20 par value preference shares and 12,000 shares of \$25 par value ordinary shares outstanding throughout 2015.
 - (a) Assuming that total dividends declared in 2015 were \$64,000 and that the preference shares are not cumulative but are fully participating, ordinary shareholders should receive 2015 dividends totaling what amount?
 - (b) Assuming that total dividends declared in 2015 were \$64,000 and that the preference shares are fully participating and cumulative with preference dividends in arrears for 2014, preference shareholders should receive 2015 dividends totaling what amount?
 - (c) Assuming that total dividends declared in 2015 were \$30,000; that the preference shares are cumulative, non-participating, and were issued on January 1, 2014; and that \$5,000 of preference dividends were declared and paid in 2014, the ordinary shareholders should receive 2015 dividends totaling what amount?

BRIEF EXERCISES

- **BE15-1** Kaymer Corporation issued 300 shares of €10 par value ordinary shares for €4,500. Prepare Kaymer's journal entry.
- **BE15-2** Swarten Corporation issued 600 shares of no-par ordinary shares for €8,200. Prepare Swarten's journal entry if (a) the shares have no stated value, and (b) the shares have a stated value of €2 per share.
- **9 BE15-3** Wilco Corporation has the following equity balances at December 31, 2015.

Prepare Wilco's December 31, 2015, equity section in the statement of financial position.

- **BE15-4** Ravonette Corporation issued 300 shares of \$10 par value ordinary shares and 100 shares of \$50 par value preference shares for a lump sum of \$13,500. The ordinary shares have a market price of \$20 per share, and the preference shares have a market price of \$90 per share. Prepare the journal entry to record the issuance.
- **BE15-5** On February 1, 2015, Gruber Corporation issued 3,000 shares of its £5 par value ordinary shares for land worth £31,000. Prepare the February 1, 2015, journal entry.
- **BE15-6** Moonwalker Corporation issued 2,000 shares of its \$10 par value ordinary shares for \$60,000. Moonwalker also incurred \$1,500 of costs associated with issuing the shares. Prepare Moonwalker's journal entry to record the issuance of the company's shares.
- **BE15-7** Sprinkle Inc. has outstanding 10,000 shares of €10 par value ordinary shares. On July 1, 2015, Sprinkle reacquired 100 shares at €87 per share. On September 1, Sprinkle reissued 60 shares at €90 per share. On November 1, Sprinkle reissued 40 shares at €83 per share. Prepare Sprinkle's journal entries to record these transactions using the cost method.

- **BE15-8** Arantxa Corporation has outstanding 20,000 shares of R\$5 par value ordinary shares. On August 1, 2015, Arantxa reacquired 200 shares at R\$80 per share. On November 1, Arantxa reissued the 200 shares at R\$70 per share. Arantxa had no previous treasury share transactions. Prepare Arantxa's journal entries to record these transactions using the cost method.
- **BE15-9** Hinges Corporation issued 500 shares of €100 par value preference shares for €61,500. Prepare Hinges's journal entry.
- **BE15-10** Woolford Inc. declared a cash dividend of \$1 per share on its 2 million outstanding shares. The dividend was declared on August 1, payable on September 9 to all shareholders of record on August 15. Prepare all journal entries necessary on those three dates.
- **BE15-11** Silva Inc. owns shares of Costa Corporation classified as a trading equity investment. At December 31, 2015, the trading equity investment was carried in Silva's accounting records at its cost of R\$875,000, which equals its fair value. On September 21, 2016, when the fair value of the investment was R\$1,200,000, Silva declared a property dividend whereby the Costa securities are to be distributed on October 23, 2016, to shareholders of record on October 8, 2016. Prepare all journal entries necessary on those three dates.
- **BE15-12** Zhang Mining Company declared, on April 20, a dividend of ¥500,000,000 payable on June 1. Of this amount, ¥125,000,000 is a return of capital. Prepare the April 20 and June 1 entries for Zhang.
 - **BE15-13** Green Day Corporation has outstanding 400,000 shares of \$10 par value ordinary shares. The corporation declares a 5% share dividend when the fair value is \$65 per share. Prepare the journal entries for Green Day Corporation for both the date of declaration and the date of distribution.
 - **BE15-14** Use the information from BE15-13 but assume Green Day Corporation declared a 100% share dividend rather than a 5% share dividend. Prepare the journal entries for both the date of declaration and the date of distribution.
 - *BE15-15 Nottebart Corporation has outstanding 10,000 shares of €100 par value, 6% preference shares and 60,000 shares of €10 par value ordinary shares. The preference shares were issued in January 2015, and no dividends were declared in 2015 or 2016. In 2017, Nottebart declares a cash dividend of €300,000. How will the dividend be shared by ordinary and preference shareholders if the preference is (a) non-cumulative and (b) cumulative?

EXERCISES

- **3 E15-1** (**Recording the Issuances of Ordinary Shares**) During its first year of operations, Sitwell Corporation had the following transactions pertaining to its ordinary shares.
 - Jan. 10 Issued 80,000 shares for cash at €6 per share.
 - Mar. 1 Issued 5,000 shares to attorneys in payment of a bill for €35,000 for services rendered in helping the company to incorporate.
 - July 1 Issued 30,000 shares for cash at €8 per share.
 - Sept. 1 Issued 60,000 shares for cash at €10 per share.

Instructions

- (a) Prepare the journal entries for these transactions, assuming that the ordinary shares have a par value of €3 per share.
- (b) Briefly discuss how the entries in part (a) will change if the shares are no-par with a stated value of €2 per share.
- 3 E15-2 (Recording the Issuance of Ordinary and Preference Shares) Abernathy Corporation was organized on January 1, 2015. It is authorized to issue 10,000 shares of 8%, \$50 par value preference shares, and 500,000 shares of no-par ordinary shares with a stated value of \$2 per share. The following share transactions were completed during the first year.
 - Jan. 10 Issued 80,000 ordinary shares for cash at \$5 per share.
 - Mar. 1 Issued 5,000 preference shares for cash at \$108 per share.
 - Apr. 1 Issued 24,000 ordinary shares for land. The asking price of the land was \$90,000; the fair value of the land was \$80,000.
 - May 1 Issued 80,000 ordinary shares for cash at \$7 per share.
 - Aug. 1 Issued 10,000 ordinary shares to attorneys in payment of their bill of \$50,000 for services rendered in helping the company organize.
 - Sept. 1 Issued 10,000 ordinary shares for cash at \$9 per share.
 - Nov. 1 Issued 1,000 preference shares for cash at \$112 per share.

Instructions

Prepare the journal entries to record the above transactions.

E15-3 (Shares Issued for Land) Twenty-five thousand shares reacquired by Pierce Corporation for £48 per share were exchanged for undeveloped land that has an appraised value of £1,700,000. At the time of the exchange, the ordinary shares were trading at £60 per share on an organized exchange.

Instructions

- (a) Prepare the journal entry to record the acquisition of land, assuming that the purchase of the shares was originally recorded using the cost method.
- **(b)** Briefly identify the possible alternatives (including those that are totally unacceptable) for quantifying the cost of the land and briefly support your choice.
- E15-4 (Lump-Sum Sale of Shares with Bonds) Fogelberg Corporation is a regional company, whose securities are thinly traded. Fogelberg has issued 10,000 units. Each unit consists of a CHF500 par, 12% subordinated debenture and 10 shares of CHF5 par ordinary shares. The investment banker has retained 400 units as the underwriting fee. The other 9,600 units were sold to outside investors for cash at CHF850 per unit. Prior to this sale, the 2-week ask price of ordinary shares was CHF40 per share. Twelve percent is a reasonable market yield for the debentures, and therefore the par value of the bonds is equal to the fair value.

Instructions

- (a) Prepare the journal entry to record Fogelberg's transaction, under the following conditions. (Round to the nearest CHF.)
 - (1) Employing the incremental method.
 - **(2)** Employing the proportional method, assuming the recent price quote on the ordinary shares reflects fair value.
- **(b)** Briefly explain which method is, in your opinion, the better method.
- **3 5 E15-5** (Lump-Sum Sales of Ordinary and Preference Shares) Hartman Inc. issues 500 shares of €10 par value ordinary shares and 100 shares of €100 par value preference shares for a lump sum of €100,000.

Instructions

- (a) Prepare the journal entry for the issuance when the fair value of the ordinary shares is €168 each and fair value of the preference shares is €210 each. (Round to the nearest euro.)
- (b) Prepare the journal entry for the issuance when only the fair value of the ordinary shares (€170 per share) is known.
- **E15-6 (Share Issuances and Repurchase)** Loxley Corporation is authorized to issue 50,000 shares of \$10 par value ordinary shares. During 2015, Loxley took part in the following selected transactions.
 - 1. Issued 5,000 shares at \$45 per share, less costs related to the issuance of the shares totaling \$7,000.
 - **2.** Issued 1,000 shares for land appraised at \$50,000. The shares were actively traded on a national securities exchange at approximately \$46 per share on the date of issuance.
 - **3.** Purchased 500 treasury shares at \$44 per share. The treasury shares purchased were issued in 2014 at \$40 per share.

Instructions

- (a) Prepare the journal entry to record item 1.
- **(b)** Prepare the journal entry to record item 2.
- (c) Prepare the journal entry to record item 3 using the cost method.
- **E15-7** (Effect of Treasury Share Transactions on Financials) Goosen Company has outstanding 40,000 shares of €5 par ordinary shares which had been issued at €30 per share. Goosen then entered into the following transactions.
 - **1.** Purchased 5,000 treasury shares at €45 per share.
 - **2.** Resold 500 of the treasury shares at €40 per share.
 - **3.** Resold 2,000 of the treasury shares at €49 per share.

Instructions

Use the following code to indicate the effect each of the three transactions has on the financial statement categories listed in the table below, assuming Goosen Company uses the cost method: I = Increase; D = Decrease; and NE = No effect.

#	Assets	Liabilities	Equity	Share Premium	Retained Earnings	Net Income
1						
2						
3						

Instructions

Answer the questions in each of the following independent situations.

- (a) If the preference shares are cumulative and dividends were last paid on the preference shares on December 31, 2012, what are the dividends in arrears that should be reported on the December 31, 2015, statement of financial position? How should these dividends be reported?
- **(b)** If the preference shares are convertible into seven shares of \$10 par value ordinary shares and 3,000 shares are converted, what entry is required for the conversion, assuming the preference shares were issued at par value?
- **(c)** If the preference shares were issued at \$107 per share, how should the preference shares be reported in the equity section?
- E15-9 (Correcting Entries for Equity Transactions) Davison plc recently hired a new accountant with extensive experience in accounting for partnerships. Because of the pressure of the new job, the accountant was unable to review what he had learned earlier about corporation accounting. During the first month, he made the following entries for the corporation's ordinary shares.

May 2	Cash	192,000	
	Share Capital—Ordinary (Issued 12,000 shares of £10 par value ordinary shares at £16 per share)		192,000
10	Cash	600,000	
	Share Capital—Ordinary (Issued 10,000 shares of £30 par value preference shares at £60 per share)		600,000
15	Share Capital - Ordinary	14,000	
	Cash (Purchased 1,000 ordinary shares for the treasury at £14 per share)		14,000
31	Cash	8,500	
	Share Capital—Ordinary		5,000
	Gain on Sale of Shares (Sold 500 treasury shares at £17 per share)		3,500

Instructions

On the basis of the explanation for each entry, prepare the entries that should have been made for the ordinary share transactions.

E15-10 (Analysis of Equity Data and Equity Section Preparation) For a recent 2-year period, the statement of financial position of Jiang Group showed the following equity data at December 31 (amounts in millions).

	2016	2015
Share premium—ordinary	HK\$ 891	HK\$ 817
Share capital—ordinary	545	540
Retained earnings	7,167	5,226
Treasury shares	(1,428)	(918)
Total equity	HK\$7,175	HK\$5,665
Ordinary shares issued	218	216
Ordinary shares authorized	500	500
Treasury shares	34	27

Instructions

- (a) Answer the following questions.
 - (1) What is the par value of the ordinary shares?
 - (2) What is the cost per treasury share at December 31, 2016, and at December 31, 2015?
- (b) Prepare the equity section of the statement of financial position at December 31, 2016.
- **E15-11 (Equity Items on the Statement of Financial Position)** The following are selected transactions that may affect equity.
 - 1. Recorded accrued interest earned on a note receivable.
 - **2.** Declared and distributed a share split.
 - **3.** Declared a cash dividend.
 - 4. Recorded a retained earnings restriction.

- 5. Recorded the expiration of insurance coverage that was previously recorded as prepaid insurance.
- **6.** Paid the cash dividend declared in item 3 above.
- **7.** Recorded accrued interest expense on a note payable.
- 8. Declared a share dividend.
- 9. Distributed the share dividend declared in item 8.

Instructions

In the following table, indicate the effect each of the nine transactions has on the financial statement elements listed. Use the following code:

		I = Increase	D = Decrease	NE = No effect		
Item	Assets	Liabilities	Equity	Share Premium	Retained Earnings	Net Income
					·	

E15-12 (Cash Dividend and Liquidating Dividend) Addison Corporation has 10 million shares of ordinary shares issued and outstanding. On June 1, the board of directors voted a 60 cents per share cash dividend to shareholders of record as of June 14, payable June 30.

Instructions

- (a) Prepare the journal entry for each of the dates above, assuming the dividend represents a distribution of earnings.
- **(b)** How would the entry differ if the dividend were a liquidating dividend?
- **E15-13** (Share Split and Share Dividend) The ordinary shares of Otuk Inc. are currently selling at \$110 per share. The directors wish to reduce the share price and increase share volume prior to a new issue. The per share par value is \$10; book value is \$70 per share. Five million shares are issued and outstanding.

Instructions

Prepare the necessary journal entries assuming the following.

- (a) The board votes a 2-for-1 share split.
- **(b)** The board votes a 100% share dividend.
- **(c)** Briefly discuss the accounting and securities market differences between these two methods of increasing the number of shares outstanding.
- **E15-14** (Entries for Share Dividends and Share Splits) The equity accounts of Lawrence Company have the following balances on December 31, 2015.

Share Capital—Ordinary, €10 par, 200,000 shares issued and outstanding	€2,000,000
Share Premium—Ordinary	1,200,000
Retained Earnings	5,600,000

Shares of Lawrence Company are currently selling at €37.

Instructions

Prepare the appropriate journal entries for each of the following cases.

- (a) A share dividend of 5% is declared and issued.
- **(b)** A share dividend of 100% is declared and issued.
- (c) A 2-for-1 share split is declared and issued.
- **8** E15-15 (Dividend Entries) The following data were taken from the statement of financial position accounts of Murless Corporation on December 31, 2015.

Current Assets	R\$540,000
Investments	624,000
Share Capital—Ordinary (par value R\$10)	600,000
Share Premium—Ordinary	150,000
Retained Earnings	840,000

Instructions

Prepare the required journal entries for the following unrelated items.

- (a) A 5% share dividend is declared and distributed at a time when the market price of the shares is R\$39 per share.
- **(b)** The par value of the ordinary shares is reduced to R\$2 with a 5-for-1 share split.
- (c) A dividend is declared January 5, 2016, and paid January 25, 2016, in bonds held as an investment. The bonds have a book value of R\$90,000 and a fair value of R\$125,000.
- 7 E15-16 (Computation of Retained Earnings) The following information has been taken from the ledger
 accounts of Choi Corporation (all amounts in thousands).

Total Income since Incorporation	₩287,000
Total Cash Dividends Paid	60,000
Total Value of Share Dividends Distributed	40,000
Gains on Treasury Share Transactions	18,000
Accumulated Other Comprehensive Income	32,000

Instructions

Determine the current balance of retained earnings.

9 E15-17 (**Equity Section**) Teller Corporation's post-closing trial balance at December 31, 2015, was as follows.

TELLER CORPORATION POST-CLOSING TRIAL BALANCE DECEMBER 31, 2015

,		
	Dr.	Cr.
Accounts payable		€ 310,000
Accounts receivable	€ 480,000	
Accumulated depreciation—buildings		185,000
Allowance for doubtful accounts		30,000
Bonds payable		700,000
Buildings	1,450,000	
Cash	190,000	
Dividends payable (preference shares—cash)		4,000
Inventory	560,000	
Land	400,000	
Prepaid expenses	40,000	
Retained earnings		201,000
Share capital—ordinary (€1 par value)		200,000
Share capital-preference (€50 par value)		500,000
Share premium—ordinary		1,000,000
Share premium—treasury		160,000
Treasury shares (ordinary at cost)	170,000	
Total	€3,290,000	€3,290,000

At December 31, 2015, Teller had the following number of ordinary and preference shares.

	Ordinary	Preference
Authorized	600,000	60,000
Issued	200,000	10,000
Outstanding	190.000	10.000

The dividends on preference shares are €4 cumulative. In addition, the preference shares have a preference in liquidation of €50 per share.

Instructions

Prepare the equity section of Teller's statement of financial position at December 31, 2015.

E15-18 (Dividends and Equity Section) Elizabeth Company reported the following amounts in the equity section of its December 31, 2015, statement of financial position.

Share capital-preference, 8%, \$100 par (10,000 shares	
authorized, 2,000 shares issued)	\$200,000
Share capital - ordinary, \$5 par (100,000 shares authorized,	
20,000 shares issued)	100,000
Share premium—preference	125,000
Retained earnings	450,000
Total	\$875,000

During 2016, Elizabeth took part in the following transactions concerning equity.

- **1.** Paid the annual 2015 \$8 per share dividend on preference shares and a \$2 per share dividend on ordinary shares. These dividends had been declared on December 31, 2015.
- **2.** Purchased 2,700 shares of its own outstanding ordinary shares for \$40 per share. Elizabeth uses the cost method.
- **3.** Reissued 700 treasury shares for land valued at \$30,000.
- **4.** Issued 500 preference shares at \$105 per share.
- **5.** Declared a 10% share dividend on the outstanding ordinary shares when the shares are selling for \$45 per share.
- 6. Issued the share dividend.
- **7.** Declared the annual 2016 \$8 per share dividend on preference shares and the \$2 per share dividend on ordinary shares. These dividends are payable in 2017.

Instructions

- (a) Prepare journal entries to record the transactions described above.
- **(b)** Prepare the December 31, 2016, equity section of the statement of financial position. Assume 2016 net income was \$330,000.
- **E15-19 (Comparison of Alternative Forms of Financing)** Shown below is the equity and liabilities section of the statement of financial position for Ingalls Company and Wilder Company. Each has assets totaling £4,200,000.

Ingalls Co.		Wilder Co.	
Share capital – ordinary (£20 par)	£2,000,000	Share capital - ordinary (£20 par)	£2,900,000
Retained earnings (Cash		Retained earnings (Cash	
dividends, £220,000)	700,000	dividends, £328,000)	700,000
Non-current liabilities, 10%	1,200,000	Current liabilities	600,000
Current liabilities	300,000		
	£4,200,000		£4,200,000

For the year, each company has earned the same income before interest and taxes.

	Ingalls Co.	Wilder Co.
Income from operations Interest expense	£1,200,000 120,000	£1,200,000 -0-
Income before income tax	1,080,000	1,200,000
Income tax (40%)	432,000	480,000
Net income	£ 648,000	£ 720,000

At year-end, the market price of an Ingalls' share was £101, and Wilder's was £63.50. Assume statement of financial position amounts are representative for the entire year.

Instructions

- (a) Which company is more profitable in terms of return on total assets?
- **(b)** Which company is more profitable in terms of return on ordinary share equity?
- **(c)** Which company has the greater net income per share? Neither company issued or reacquired shares during the year.
- (d) From the point of view of net income, is it advantageous to the shareholders of Ingalls Co. to have the non-current liabilities outstanding? Why?
- **(e)** What is the book value per share for each company?
- **9 E15-20 (Trading on the Equity Analysis)** Presented below is information from the annual report of DeVries Plastics, Inc.

Operating income	€ 532,150
Bond interest expense	135,000
Income before income tax	397,150
Income tax	183,432
Net income	€ 213,718
Bonds payable	€1,500,000
Share capital—ordinary	875,000
Retained earnings	575,000

Instructions

- (a) Compute the return on ordinary share equity and the rate of interest paid on bonds. (Assume balances for debt and equity accounts approximate averages for the year.)
- **(b)** Is DeVries Plastics, Inc. trading on the equity successfully? Explain.
- *E15-21 (Preference Dividends) The outstanding share capital of Pennington Corporation consists of 2,000 shares of \$100 par value, 6% preference, and 5,000 shares of \$50 par value ordinary.

Instructions

Assuming that the company has retained earnings of \$70,000, all of which is to be paid out in dividends, and that preference dividends were not paid during the 2 years preceding the current year, determine how much each class of shares should receive under each of the following conditions.

- (a) The preference shares are non-cumulative and non-participating.
- **(b)** The preference shares are cumulative and non-participating.
- (c) The preference shares are cumulative and participating. (Round dividend rate percentages to four decimal places.)
- *E15-22 (Preference Dividends) Martinez Company's ledger shows the following balances on December 31, 2015.

Share Capital – Preference, 5% – €10 par value, outstanding 20,000 shares	€ 200,000
Share Capital – Ordinary – €100 par value, outstanding 30,000 shares	3,000,000
Retained Earnings	630,000

Instructions

Assuming that the directors decide to declare total dividends in the amount of €266,000, determine how much each class of shares should receive under each of the conditions stated below. One year's dividends are in arrears on the preference shares.

- (a) The preference shares are cumulative and fully participating.
- **(b)** The preference shares are non-cumulative and non-participating.
- (c) The preference shares are non-cumulative and are participating in distributions in excess of a 7% dividend rate on the ordinary shares.
- *E15-23 (Preference Share Dividends) Hagar Company has outstanding 2,500 shares of £100 par, 6% preference shares and 15,000 shares of £10 par value ordinary. The schedule below shows the amount of dividends paid out over the last 4 years.

Instructions

Allocate the dividends to each type of shares under assumptions (a) and (b). Express your answers in per share amounts using the format shown below.

	Assumptions				
	(a) Preference, non-cumulative, and non-participating		(b) Preference, cumulative, and fully participating		
Year	Paid-out	Preference	Ordinary	Preference	Ordinary
2014	£12,000				
2015	£26,000				_
2016	£52,000				
2017	£76,000				

*E15-24 (Computation of Book Value per Share) Johnstone Inc. began operations in January 2014 and reported the following results for each of its 3 years of operations.

2014 \$260,000 net loss 2015 \$40,000 net loss 2016 \$700,000 net income

At December 31, 2016, Johnstone Inc. share capital accounts were as follows.

Share Capital—Preference, 6% cumulative, par value \$100; authorized, issued, and outstanding 5,000 shares \$500,000 Share Capital—Ordinary, par value \$1.00; authorized 1,000,000 shares; issued and outstanding 750,000 shares \$750,000

Johnstone Inc. has never paid a cash or share dividend. There has been no change in the share capital accounts since Johnstone began operations. The country law permits dividends only from retained earnings.

Instructions

- (a) Compute the book value of the ordinary shares at December 31, 2016.
- (b) Compute the book value of the ordinary shares at December 31, 2016, assuming that the preference shares have a liquidating value of \$106 per share.

PROBLEMS

P15-1 (Equity Transactions and Statement Preparation) On January 5, 2015, Phelps Corporation received a charter granting the right to issue 5,000 shares of \$100 par value, 8% cumulative and non-participating preference shares, and 50,000 shares of \$10 par value ordinary shares. It then completed these transactions.

- Issued 20,000 ordinary shares at \$16 per share.
- Feb. 1 Issued to Sanchez Corp. 4,000 preference shares for the following assets: machinery with a fair value of \$50,000; a factory building with a fair value of \$160,000; and land with an appraised value of \$270,000.
- July 29 Purchased 1,800 ordinary shares at \$17 per share. (Use cost method.)
- Aug. 10 Sold the 1,800 treasury shares at \$14 per share.
- Declared a \$0.25 per share cash dividend on the ordinary shares and declared the preference dividend.
- Dec. 31 Closed the Income Summary account. There was \$175,700 net income.

Instructions

- (a) Record the journal entries for the transactions listed above.
- (b) Prepare the equity section of Phelps Corporation's statement of financial position as of December 31, 2015.

P15-2 (Treasury Share Transactions and Presentation) Clemson Company had the following equity as of January 1, 2015.

Share capital – ordinary, €5 par value, 20,000 shares issued	€100,000
Share premium—ordinary	300,000
Retained earnings	320,000
Total equity	€720,000

During 2015, the following transactions occurred.

- Clemson repurchased 2,000 treasury shares at a price of €19 per share.
- Mar. 1 800 shares of treasury shares repurchased above were reissued at €17 per share.
- 500 shares of treasury shares repurchased above were reissued at €14 per share. Mar. 18
- Apr. 22 600 shares of treasury shares repurchased above were reissued at €20 per share.

Instructions

- (a) Prepare the journal entries to record the treasury share transactions in 2015, assuming Clemson uses the cost method.
- (b) Prepare the equity section of the statement of financial position as of April 30, 2015. Net income for the first 4 months of 2015 was €130,000.

3 4 P15-3 (Equity Transactions and Statement Preparation) Hatch Company has two classes of share capital outstanding: 8%, £20 par preference and £5 par ordinary. At December 31, 2014, the following accounts were included in equity.

Share Capital - Preference, 150,000 shares	£ 3,000,000
Share Capital - Ordinary, 2,000,000 shares	10,000,000
Share Premium—Preference	200,000
Share Premium—Ordinary	27,000,000
Retained Earnings	4,500,000

The following transactions affected equity during 2015.

- Jan. 30,000 preference shares issued at £22 per share.
- Feb. 1 50.000 ordinary shares issued at £20 per share.
- June 1 2-for-1 share split (par value reduced to £2.50).
- 30,000 ordinary treasury shares purchased at £10 per share. Hatch uses the cost method. July 1
- Sept. 15 10,000 treasury shares reissued at £11 per share.
- Dec. 31 The preference dividend is declared, and an ordinary dividend of 50 pence per share is declared.
- Dec. 31 Net income is £2,100,000.

Instructions

Prepare the equity section of the statement of financial position for Hatch Company at December 31, 2015. Show all supporting computations.

- 3 5 P15-4 (Share Transactions—Lump Sum) Seles Corporation's charter authorized issuance of 100,000 ordinary shares of €10 par value and 50,000 shares of €50 preference shares. The following transactions involving the issuance of shares were completed. Each transaction is independent of the others.
 - 1. Issued a €10,000, 9% bond payable at par and gave as a bonus one preference share, which at that time was selling for €106 a share.
 - 2. Issued 500 ordinary shares for machinery. The machinery had been appraised at €7,100; the seller's book value was €6,200. The most recent market price of the ordinary shares is €16 a share.
 - 3. Issued 375 ordinary shares and 100 preference shares for a lump sum amounting to €10,800. The ordinary had been selling at €14 and the preference at €65.
 - **4.** Issued 200 shares of ordinary and 50 shares of preference for furniture and fixtures. The ordinary shares had a fair value of €16 per share; the furniture and fixtures have a fair value of €6,500.

Instructions

Record the transactions listed above in journal entry form.

P15-5 (Treasury Shares—Cost Method) Before Smith Corporation engages in the treasury share transactions listed below, its general ledger reflects, among others, the following account balances (par value is £30 per share).

Share Premium - Ordinary	Share Capital—Ordinary	Retained Earnings
000.003	£270.000	£80.000

Instructions

Record the treasury share transactions (given below) under the cost method of handling treasury shares; use the FIFO method for purchase-sale purposes.

- (a) Bought 380 treasury shares at £40 per share.
- **(b)** Bought 300 treasury shares at £45 per share.
- (c) Sold 350 treasury shares at £42 per share.
- (d) Sold 110 treasury shares at £38 per share.

P15-6 (Treasury Shares—Cost Method—Equity Section Preparation) Washington Company has the following equity accounts at December 31, 2015.

Share Capital-Ordinary-\$100 par value, authorized 8,000 shares \$480,000 294,000 Retained Earnings

Instructions

- (a) Prepare entries in journal form to record the following transactions, which took place during 2016.
 - (1) 280 ordinary shares were purchased at \$97 per share. (These are to be accounted for using the cost method.)
 - (2) A \$20 per share cash dividend was declared.
 - (3) The dividend declared in No. 2 above was paid.
 - **(4)** The treasury shares purchased in No. 1 above were resold at \$102 per share.
 - (5) 500 shares were purchased at \$105 per share.
 - **(6)** 350 of the shares purchased in No. 5 above were resold at \$96 per share.
- (b) Prepare the equity section of Washington Company's statement of financial position after giving effect to these transactions, assuming that the net income for 2016 was \$94,000. Country law requires restriction of retained earnings for the amount of treasury shares.

P15-7 (Cash Dividend Entries) The books of Conchita Corporation carried the following account balances as of December 31, 2015.

Cash	R\$ 195,000
Share Capital - Preference (6% cumulative, non-participating, R\$50 par)	300,000
Share Capital - Ordinary (no-par value, 300,000 shares issued)	1,500,000
Share Premium—Preference	150,000
Treasury Shares (ordinary 2,800 shares at cost)	33,600
Retained Earnings	105,000

The company decided not to pay any dividends in 2015.

The board of directors, at their annual meeting on December 21, 2016, declared the following: "The current year dividends shall be 6% on the preference and R\$0.30 per share on the ordinary. The dividends in arrears shall be paid by issuing 1,500 treasury shares." At the date of declaration, the preference is selling at R\$80 per share, and the ordinary at R\$12 per share. Net income for 2016 is estimated at R\$77,000.

Instructions

- (a) Prepare the journal entries required for the dividend declaration and payment, assuming that they occur simultaneously.
- (b) Could Conchita Corporation give the preference shareholders 2 years' dividends and ordinary shareholders a 30 cents per share dividend, all in cash?

P15-8 (Dividends and Splits) Myers Company provides you with the following condensed statement of financial position information.

Assets		Equity and Liab	ilities	
Equipment (net)	€250,000	Equity		
Intangibles	60,000	Share capital – ordinary (€5 par)	€ 20,000	
Investments in ABC shares		Share premium—ordinary	110,000	
(10,000 shares at cost)	70,000	Retained earnings	180,000	€310,000
Current assets	40,000	Non-current and current liabilities		110,000
Total assets	€420,000	Total equity and liabilities		€420,000

Instructions

For each transaction below, indicate the euro impact (if any) on the following five items: (1) total assets, (2) share capital—ordinary, (3) share premium—ordinary, (4) retained earnings, and (5) equity. (Each situation is independent.)

- (a) Myers declares and pays a €1 per share cash dividend.
- (b) Myers declares and issues a 10% share dividend when the market price is €14 per share.
- (c) Myers declares and issues a 100% share dividend when the market price is €15 per share.
- (d) Myers declares and distributes a property dividend. Myers gives one ABC share for every two shares held of Myers Company. ABC is selling for €10 per share on the date the property dividend is declared.
- (e) Myers declares a 2-for-1 share split and issues new shares.

3 4 P15-9 (Equity Section of Statement of Financial Position) The following is a summary of all relevant transactions of Vicario Corporation since it was organized in 2015.

In 2015, 15,000 shares were authorized and 7,000 ordinary shares (\$50 par value) were issued at a price of \$57. In 2016, 1,000 shares were issued as a share dividend when a share was selling for \$60. Three hundred ordinary shares were bought in 2017 at a cost of \$64 per share. These 300 shares are still in the company treasury.

In 2016, 10,000 preference shares were authorized and the company issued 5,000 of them (\$100 par value) at \$113. Some of the preference shares were reacquired by the company and later reissued for \$4,700 more than it cost the company.

The corporation has earned a total of \$610,000 in net income and paid out a total of \$312,600 in cash dividends since incorporation.

Instructions

Prepare the equity section of the statement of financial position in proper form for Vicario Corporation as of December 31, 2017. Account for treasury shares using the cost method.

B P15-10 (Share Dividends and Share Split) Ortago S.A.'s €10 par ordinary shares are selling for €110 per share. Four million shares are currently issued and outstanding. The board of directors wishes to stimulate interest in Ortago S.A. ordinary shares before a forthcoming share issue but does not wish to distribute cash at this time. The board also believes that too many adjustments to the equity section, especially retained earnings, might discourage potential investors.

The board has considered three options for stimulating interest in the shares:

- 1. A 20% share dividend.
- 2. A 100% share dividend.
- **3.** A 2-for-1 share split.

Instructions

Acting as financial advisor to the board, you have been asked to report briefly on each option and, considering the board's wishes, make a recommendation. Discuss the effects of each of the foregoing options.

7 8 P15-11 (Share and Cash Dividends) Earnhart Corporation has outstanding 3,000,000 ordinary shares with a par value of \$10 each. The balance in its retained earnings account at January 1, 2015, was \$24,000,000, and it then had Share Premium of \$5,000,000. During 2015, the company's net income was \$4,700,000. A cash dividend of \$0.60 per share was declared on May 5, 2015, and was paid June 30, 2015, and a 6% share dividend was declared on November 30, 2015, and distributed to shareholders of record at the close of business on December 31, 2015. You have been asked to advise on the proper accounting treatment of the share dividend.

The existing shares of the company are quoted on a national securities exchange. The market price of the shares has been as follows.

October 31, 2015	\$31
November 30, 2015	\$34
December 31, 2015	\$38

Instructions

- (a) Prepare the journal entry to record the declaration and payment of the cash dividend.
- **(b)** Prepare the journal entry to record the declaration and distribution of the share dividend.
- (c) Prepare the equity section (including schedules of retained earnings and share premium) of the statement of financial position of Earnhart Corporation for the year 2015 on the basis of the foregoing information. Draft a note to the financial statements setting forth the basis of the accounting for the share dividend, and add separately appropriate comments or explanations regarding the basis chosen.

3 4 P15-12 (Analysis and Classification of Equity Transactions) Penzi Company was formed on July 1, 2013. 7 B It was authorized to issue 300,000 shares of £10 par value ordinary shares and 100,000 shares of 8% £25 par value, cumulative and non-participating preference shares. Penzi Company has a July 1-June 30 fiscal year. The following information relates to the equity accounts of Penzi Company.

Ordinary Shares

Prior to the 2015-2016 fiscal year, Penzi Company had 110,000 ordinary shares outstanding issued as follows.

- **1.** 85,000 shares were issued for cash on July 1, 2013, at £31 per share.
- 2. On July 24, 2013, 5,000 shares were exchanged for a plot of land which cost the seller £70,000 in 2007 and had an estimated fair value of £220,000 on July 24, 2013.
- **3.** 20,000 shares were issued on March 1, 2014, for £42 per share.

During the 2015–2016 fiscal year, the following transactions regarding ordinary shares took place.

November 30, 2015	Penzi purchased 2,000 of its own shares on the open market at £39 per share. Penzi uses the cost method for treasury shares.
December 15, 2015	Penzi declared a 5% share dividend for shareholders of record on January 15, 2016, to be issued on January 31, 2016. Penzi was having a liquidity problem and could not afford a cash dividend at the time. Penzi's ordinary shares were selling at £52 per share on December 15, 2015.
June 20, 2016	Penzi sold 500 of its own ordinary shares that it had purchased on November 30, 2015, for £21,000.

Preference Shares

Penzi issued 40,000 preference shares at £44 per share on July 1, 2014.

Cash Dividends

Penzi has followed a schedule of declaring cash dividends in December and June, with payment being made to shareholders of record in the following month. The cash dividends which have been declared since inception of the company through June 30, 2016, are shown below.

Declaration	Ordinary	Preference
Date	Shares	Shares
12/15/14	£0.30 per share	£1.00 per share
6/15/15	£0.30 per share	£1.00 per share
12/15/15	_	£1.00 per share

No cash dividends were declared during June 2016 due to the company's liquidity problems.

Retained Earnings

As of June 30, 2015, Penzi's retained earnings account had a balance of £690,000. For the fiscal year ending June 30, 2016, Penzi reported net income of £40,000.

Instructions

Prepare the equity section of the statement of financial position, including appropriate notes, for Penzi Company as of June 30, 2016, as it should appear in its annual report to the shareholders.

CONCEPTS FOR ANALYSIS

CA15-1 (Preemptive Rights and Dilution of Ownership) Wallace Computer Company is a small, closely held corporation. Eighty percent of the shares are held by Derek Wallace, president. Of the remainder, 10% are held by members of his family and 10% by Kathy Baker, a former officer who is now retired. The statement of financial position of the company at June 30, 2015, was substantially as shown on page 748.

As	ssets	Equity and Liabili	ties
Cash Other	£ 22,000 450,000 £472,000	Share capital—ordinary Retained earnings Current liabilities	£250,000 172,000 50,000 £472,000

Additional authorized ordinary shares of £300,000 par value have never been issued. To strengthen the cash position of the company, Wallace issued ordinary shares with a par value of £100,000 to himself at par for cash. At the next shareholders' meeting, Baker objected and claimed that her interests had been injured.

Instructions

- (a) Which shareholder's right was ignored in the issue of shares to Derek Wallace?
- **(b)** How may the damage to Baker's interests be repaired most simply?
- **(c)** If Derek Wallace offered Baker a personal cash settlement and they agreed to employ you as an impartial arbitrator to determine the amount, what settlement would you propose? Present your calculations with sufficient explanation to satisfy both parties.

CA15-2 (Issuance of Shares for Land) Martin Corporation is planning to issue 3,000 shares of its own \$10 par value ordinary shares for two acres of land to be used as a building site.

Instructions

- (a) What general rule should be applied to determine the amount at which the land should be recorded?
- (b) Under what circumstances should this transaction be recorded at the fair value of the land?
- (c) Under what circumstances should this transaction be recorded at the fair value of the shares issued?
- (d) Assume Martin intentionally records this transaction at an amount greater than the fair value of the land and the shares. Discuss this situation.

CA15-3 (Conceptual Issues—Equity) The IASB has set forth the Conceptual Framework that it will use in developing standards. As part of this Conceptual Framework, the IASB defines various elements of financial statements.

Instructions

Answer the following questions based on the Conceptual Framework.

- (a) Define and discuss the term "equity."
- **(b)** What transactions or events change equity?
- (c) What financial statement element other than equity is typically affected by owner investments?
- (d) What financial statement element other than equity is typically affected by distributions to owners?
- (e) What are examples of changes within equity that do not change the total amount of equity?

CA15-4 (Share Dividends and Splits) The directors of Merchant Corporation are considering the issuance of a share dividend. They have asked you to discuss the proposed action by answering the following questions.

Instructions

- (a) What is a share dividend? How is a share dividend distinguished from a share split (1) from a legal standpoint, and (2) from an accounting standpoint?
- (b) For what reasons does a corporation usually declare a share dividend? A share split?
- (c) Discuss the amount, if any, of retained earnings to be capitalized in connection with a share dividend.

CA15-5 (Share Dividends) Yamada Inc., a client, is considering the authorization of a 10% ordinary share dividend to ordinary shareholders. The financial vice president of Yamada wishes to discuss the accounting implications of such an authorization with you before the next meeting of the board of directors.

Instructions

- (a) The first topic the vice president wishes to discuss is the nature of the share dividend to the recipient. Discuss the case against considering the share dividend as income to the recipient.
- **(b)** The other topic for discussion is the propriety of issuing the share dividend to all "shareholders of record" or to "shareholders of record exclusive of shares held in the name of the corporation as treasury shares." Discuss the case against issuing share dividends on treasury shares.

CA15-6 (Share Dividend, Cash Dividend, and Treasury Shares) Mask Company has 30,000 shares of €10 par value ordinary shares authorized and 20,000 shares issued and outstanding. On August 15, 2015, Mask purchased 1,000 shares of treasury shares for €18 per share. Mask uses the cost method to account for treasury shares. On September 14, 2015, Mask sold 500 shares of the treasury shares for €20 per share.

In October 2015, Mask declared and distributed 1,950 shares as a share dividend from unissued shares when the market price of the ordinary shares was €21 per share.

On December 20, 2015, Mask declared a €1 per share cash dividend, payable on January 10, 2016, to shareholders of record on December 31, 2015.

Instructions

- (a) How should Mask account for the purchase and sale of the treasury shares, and how should the treasury shares be presented in the statement of financial position at December 31, 2015?
- **(b)** How should Mask account for the share dividend, and how would it affect equity at December 31, 2015? Why?
- (c) How should Mask account for the cash dividend, and how would it affect the statement of financial position at December 31, 2015? Why?

CA15-7 (Treasury Shares) Lois Kenseth, president of Sycamore Corporation, is concerned about several large shareholders who have been very vocal lately in their criticisms of her leadership. She thinks they might mount a campaign to have her removed as the corporation's CEO. She decides that buying them out by purchasing their shares could eliminate them as opponents, and she is confident they would accept a "good" offer. Kenseth knows the corporation's cash position is decent, so it has the cash to complete the transaction. She also knows the purchase of these shares will increase earnings per share, which should make other investors quite happy. (Earnings per share is calculated by dividing net income available for the ordinary shareholders by the weighted-average number of shares outstanding. Therefore, if the number of shares outstanding is decreased by purchasing treasury shares, earnings per share increases.)

Instructions

Answer the following questions.

- (a) Who are the stakeholders in this situation?
- **(b)** What are the ethical issues involved?
- (c) Should Kenseth authorize the transaction?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What is the par or stated value of M&S's preference shares?
- **(b)** What is the par or stated value of M&S's ordinary shares?
- (c) What percentage of M&S's authorized ordinary shares was issued at year-end 2013?
- **(d)** How many ordinary shares were outstanding at year-end 2012 and 2013?
- (e) What was the pound amount effect of the cash dividends on M&S's equity?
- (f) What is M&S's return on ordinary share equity for 2013 and 2012?
- (g) What is M&S's payout ratio for 2013 and 2012?

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial statements to answer the following questions.

- (a) What is the par or stated value of adidas's and Puma's ordinary shares?
- (b) How many shares were issued by adidas and Puma at December 31, 2012?
- (c) How many shares are held as treasury shares by adidas at December 31, 2012, and by Puma at December 31, 2012?
- (d) How many adidas ordinary shares are outstanding at December 31, 2012? How many Puma ordinary shares are outstanding at December 29, 2012?

- **(e)** What amounts of cash dividends per share were declared by adidas and Puma in 2012? What were the monetary amount effects of the cash dividends on each company's equity?
- **(f)** What are adidas's and Puma's return on equity for 2012 and 2011? Which company gets the higher return on the equity of its shareholders?
- (g) What are adidas's and Puma's payout ratios for 2012?

Financial Statement Analysis Case

Case 1: BHP Billiton

BHP Billiton (GBR) is the world's largest diversified natural resources company. The company extracts and processes minerals, oil, and gas from its production operations located primarily in Australia, the Americas, and southern Africa. BHP Billiton sells its products globally, with sales and marketing taking place through its principal hubs of The Hague and Singapore. Presented below are some basic facts for BHP Billiton.

Billiton		
(in thousands)		
	2013	2012
Sales	\$ 65,986	\$ 72,226
Net earnings	11,075	15,532
Total assets	138,109	129,273
Total liabilities	66,074	62,188
Share capital	2,255	2,255
Reserves	1,970	1,912
Retained earnings	66,979	62,236
Treasury shares	(540)	(533)
Number of shares outstanding (millions)	5,322	5,323

Instructions

- (a) What are some of the reasons that management purchases its own shares?
- **(b)** Explain how earnings per share might be affected by treasury share transactions.
- (c) Calculate the ratio of debt to assets for 2012 and 2013, and discuss the implications of the change.

Case 2: Jinpain International Ltd.

The following note related to equity was reported in Jinpain International's (CHN) annual report.

On February 1, the Board of Directors declared a 2-for-1 share split, distributed on February 25 to share-holders of record on February 10. Accordingly, all numbers of common (ordinary) shares, except unissued shares and treasury shares, and all per share data have been restated to reflect this share split.

Instructions

- (a) What is the significance of the date of record and the date of distribution?
- (b) Why might Jinpain have declared a 2-for-1 for share split?
- (c) What impact does Jinpain's share split have on (1) total equity, (2) total par value, (3) outstanding shares, and (4) book value per share?

Accounting, Analysis, and Principles

On January 1, 2015, Nadal Corporation had the following equity accounts.

Share Capital—Ordinary (€10 par value, 60,000 shares issued and outstanding) €600,000 Share Premium—Ordinary 500,000 Retained Earnings 620,000

During 2015, the following transactions occurred.

- Jan. 15 Declared and paid a €1.05 cash dividend per share to shareholders.
- Apr. 15 Declared and issued a 10% share dividend. The market price of the shares was €14 per share.
- May 15 Reacquired 2,000 ordinary shares at a market price of €15 per share.
- Nov. 15 Reissued 1,000 shares held in treasury at a price of €18 per share.
- Dec. 31 Determined that net income for the year was €370,000.

Accounting

Journalize the above transactions. (Include entries to close net income to Retained Earnings.) Determine the ending balances to be reported for Share Capital—Ordinary, Retained Earnings, and Equity.

Analysis

Calculate the payout ratio and the return on equity ratio.

Principles

The Federer Group is examining Nadal's financial statements and wonders whether the "gains" or "losses" on Nadal's treasury share transactions should be included in income for the year. Briefly explain whether, and the conceptual reasons why, gains or losses on treasury share transactions should be recorded in income.

BRIDGE TO THE PROFESSION

Professional Research

Recall from Chapter 13 that Hincapie Co. (a specialty bike-accessory manufacturer) is expecting growth in sales of some products targeted to the low-price market. Hincapie is contemplating a preference share issue to help finance this expansion in operations. The company is leaning toward preference shares because ownership will not be diluted, but the investors will get an extra dividend if the company does well. The company management wants to be certain that its reporting of this transaction is transparent to its current shareholders and wants you to research the disclosure requirements related to its capital structure.

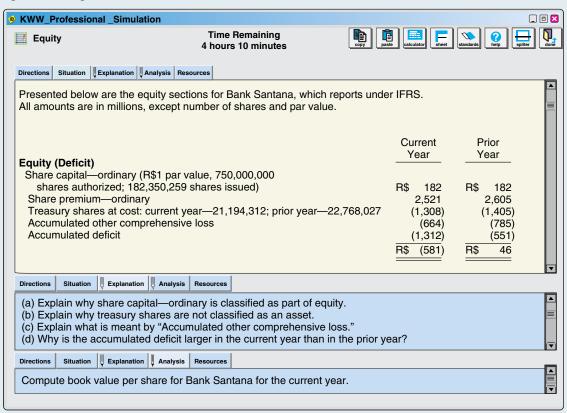

Instructions

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free eIFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) Identify the authoritative literature that addresses disclosure of information about capital structure.
- **(b)** What information about share capital must companies disclose? Discuss how Hincapie should report the proposed preference share issue.

Professional Simulation

In this simulation, you are asked to address equations related to the accounting for equity. Prepare responses to all parts.

Remember to check the book's companion website, at www.wiley.com/college/kieso, to find additional resources for this chapter.

16

Dilutive Securities and Earnings per Share

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **1** Describe the accounting for the issuance, conversion, and retirement of convertible securities.
- 2 Explain the accounting for convertible preference shares.
- **3** Contrast the accounting for share warrants and for share warrants issued with other securities.
- **4** Describe the accounting for share compensation plans.
- **5** Discuss the controversy involving share compensation plans.
- **6** Compute earnings per share in a simple capital structure.
- **7** Compute earnings per share in a complex capital structure.

Kicking the Habit

Some habits die hard. Take share options—called by some "the crack cocaine of incentives." Share options are a form of compensation that gives key employees the choice to purchase shares at a given (usually lower-than-market) price. For many years, companies were hooked on these products. Why? The combination of a hot equity market and favorable accounting treatment made share options the incentive of choice. They were compensation with no expense to the companies that granted them, and the share options were popular with key employees, so companies granted them with abandon. However, the accounting rules that took effect in 2005 required *expensing* the fair value of share options.

This new treatment has made it easier for companies to kick this habit. As shown in the chart on the left, a review of option use for over 250 companies around the world indicates a decline in the use of option-based compensation.

As indicated, a smaller percentage of companies are granting share options, following implementation of share-option expensing, while there is an upward trend for restricted-share plans. As a spokesperson at one company commented, "Once you begin expensing options, the attractiveness significantly drops." Indeed, in the 1990s, executives with huge option stockpiles had an almost irresistible incentive to do whatever it took to increase the share price and cash in their options.

CONCEPTUAL FOCUS

By reining in options, many companies are taking steps toward curbing both out-of-control executive pay and the era of corporate corruption that it spawned. Some of the ways that companies are curbing option grants include replacing options with restricted shares. As indicated in the chart on the right, in addition to the increase in the percentage of companies granting restricted shares, there is also a marked trend in the value of restricted shares granted relative to options in recent years. Some companies in the information technology industry, such as **Microsoft** (USA) and **Yahoo!** (USA), have switched to restricted-share plans completely.

Is this a good trend? Most believe it is. The requirement to expense share-based compensation similar to other forms of compensation has changed the focus of compensation plans to rewarding talent and performance without breaking the bank. The positive impact on corporate behavior, while hard to measure, should benefit investors in years to come.

PREVIEW OF CHAPTER

16

As the opening story indicates, companies are rethinking the use of various forms of share-based compensation. The purpose of this chapter is to discuss the proper accounting for share-based compensation.

In addition, the chapter examines issues related to other types of financial instruments, such as convertible securities, warrants, and contingent shares, including their effects on reporting earnings per share. The content and organization of the chapter are as follows.

Dilutive Securities and Earnings per Share Dilutive Securities and Computing Earnings per Share Debt and equity Convertible debt Convertible preference shares Share warrants Accounting for share compensation Debate over share-option accounting

DILUTIVE SECURITIES AND COMPENSATION PLANS

Debt and Equity

LEARNING OBJECTIVE 1

Describe the accounting for the issuance, conversion, and retirement of convertible securities.

Many of the controversies related to the accounting for financial instruments such as share options, convertible securities, and preference shares relate to whether companies should report these instruments as a liability or as equity. For example, companies should classify non-redeemable ordinary shares as equity because the issuer has no obligation to pay dividends or repurchase

the shares. Declaration of dividends is at the issuer's discretion, as is the decision to repurchase the shares. Similarly, preference shares that are not redeemable do not require the issuer to pay dividends or repurchase the shares. Thus, non-redeemable ordinary or preference shares lack an important characteristic of a liability—an obligation to pay the holder of the ordinary or preference shares at some point in the future.1

In this chapter, we discuss securities that have characteristics of both debt and equity. For example, a convertible bond has both debt and equity characteristics. Should a company classify this security as debt, as equity, or as part debt and part equity? In addition, how should a company compute earnings per share if it has convertible bonds and other convertible securities in its capital structure? Convertible securities, as well as options, warrants, and other securities, are often called dilutive securities because upon exercise they may reduce (dilute) earnings per share.

Convertible Debt

Convertible bonds can be changed into other corporate securities during some specified period of time after issuance. A convertible bond combines the benefits of a bond with the privilege of exchanging it for shares at the holder's option. Investors who purchase it desire the security of a bond holding (guaranteed interest and principal) plus the added option of conversion if the value of the shares appreciates significantly.

Corporations issue convertibles for two main reasons. One is to raise equity capital without giving up more ownership control than necessary. To illustrate, assume a company wants to raise \$1 million; its ordinary shares are selling at \$45 a share. To raise the \$1 million, the company would have to sell 22,222 shares (ignoring issue costs). By selling 1,000 bonds at \$1,000 par, each convertible into 20 ordinary shares, the company could raise \$1 million by committing only 20,000 ordinary shares.

A second reason to issue convertibles is to obtain debt financing at cheaper rates. Many companies could issue debt only at high interest rates unless they attach a conversion option. The conversion privilege entices the investor to accept a lower interest rate than would normally be the case on a straight debt issue. For example,

¹Presently, the IASB is working to develop a standard that will improve the financial reporting requirements for financial instruments with characteristics of debt and equity. It recognizes that the line between debt and equity is sometimes blurred and therefore classification of these instruments is inconsistent. At this point, the Board has identified certain securities that indicate equity classification. For example, a perpetual instrument is one that is not required to be redeemed unless the company decides to, or is forced to, liquidate. Without a specific limit to perpetual instruments' lives, the Board agrees that perpetual instruments should be classified as equity. Similarly, it requires that convertible debt should be split into a debt and an equity component if it is exchanged for a specified number of shares. If not exchangeable for a specified number of shares, the instrument would be classified entirely as debt.

China Minsheng Bank (CHN) recently issued convertible bonds that pay interest at an effective yield of 1.5 percent. This rate was much lower than China Minsheng would have had to pay by issuing straight debt. For this lower interest rate, the investor receives the right to buy China Minsheng's ordinary shares at a fixed price until the bond's maturity.²

Accounting for Convertible Debt

Convertible debt is accounted for as a **compound instrument** because it contains both a liability and an equity component. IFRS requires that compound instruments be separated into their liability and equity components for purposes of accounting. [1] Companies use the "with-and-without" method to value compound instruments.

Illustration 16-1 identifies the components used in the with-and-without method.

F R S

See the Authoritative Literature section (page 794).

Fair value of convertible debt at date of issuance (with both debt and equity components) Fair value of liability component at date of issuance, based on present value of cash flows Equity component at date of issuance (without the debt component)

ILLUSTRATION 16-1 Convertible Debt Components

As indicated, the equity component is the residual amount after subtracting the liability component. IFRS does not permit companies to assign a value to the equity amount first and then determine the liability component. To do so would be inconsistent with the definition of equity, which is considered a residual amount. [2]

To implement the with-and-without approach, a company does the following:

- **1.** First, determine the total fair value of the convertible debt *with both* the liability and equity component. This is straightforward, as this amount is the proceeds received upon issuance.
- **2.** Second, determine the liability component by computing the net present value of all contractual future cash flows discounted at the market rate of interest. This market rate is the rate the company would pay on similar non-convertible debt.
- **3.** Finally, subtract the liability component estimated in the second step from the fair value of the convertible debt (issue proceeds) to arrive at the equity component. That is, the equity component is the fair value of the convertible debt *without* the liability component.

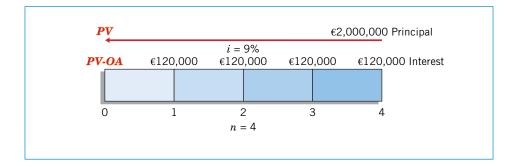

Accounting at Time of Issuance. To illustrate the accounting for convertible debt, assume that Roche Group (CHE) issues 2,000 convertible bonds at the beginning of 2015. The bonds have a four-year term with a stated rate of interest of 6 percent and are issued at par with a face value of €1,000 per bond (the total proceeds received from issuance of the bonds are €2,000,000). Interest is payable annually at December 31. Each bond is convertible into 250 ordinary shares with a par value of €1. The market rate of interest on similar non-convertible debt is 9 percent.

²As with any investment, a buyer has to be careful. For example, **Wherehouse Entertainment Inc.** (USA), which had 6¼ percent convertibles outstanding, was taken private in a leveraged buyout. As a result, the convertible was suddenly as risky as a junk bond of a highly leveraged company with a coupon of only 6¼ percent. As one holder of the convertibles noted, "What's even worse is that the company will be so loaded down with debt that it probably won't have enough cash flow to make its interest payments. And the convertible debt we hold is subordinated to the rest of Wherehouse's debt." These types of situations have made convertibles less attractive and have led to the introduction of takeover protection covenants in some convertible bond offerings. Or, sometimes convertibles are permitted to be called at par, and therefore the conversion premium may be lost.

The time diagram in Illustration 16-2 depicts both the interest and principal cash flows.

ILLUSTRATION 16-2

Time Diagram for Convertible Bond

The liability component of the convertible debt is computed as shown in Illustration 16-3.

ILLUSTRATION 16-3

Fair Value of Liability Component of Convertible Bond Present value of principal: $\[\le 2,000,000 \times .70843 \]$ (Table 6-2; n=4,i=9%) $\[\le 1,416,860 \]$ Present value of the interest payments: $\[\le 120,000 \times 3.23972 \]$ (Table 6-4; n=4,i=9%) $\[\le 1,416,860 \]$ Present value of the liability component $\[\le 1,805,626 \]$

The equity component of Roche's convertible debt is then computed as shown in Illustration 16-4.

ILLUSTRATION 16-4

Equity Component of Convertible Bond

Fair value of convertible debt at date of issuance

Less: Fair value of liability component at date of issuance

Fair value of equity component at date of issuance

1,805,626

€ 194,374

The journal entry to record this transaction is as follows.

Cash 2,000,000

Bonds Payable 1,805,626

Share Premium—Conversion Equity 194,374

The liability component of Roche's convertible debt issue is recorded as Bonds Payable. As shown in Chapter 14, the amount of the discount relative to the face value of the bond is amortized at each reporting period. So at maturity, the Bonds Payable account is reported at €2,000,000 (face value). The equity component of the convertible bond is recorded in the Share Premium—Conversion Equity account and is reported in the equity section of the statement of financial position. Because this amount is considered part of contributed capital, it does not change over the life of the convertible.³

Settlement of Convertible Bonds. We illustrate four settlement situations: (1) repurchase at maturity, (2) conversion at maturity, (3) conversion before maturity, and (4) repurchase before maturity.

Repurchase at maturity. If the bonds are not converted at maturity, Roche makes the following entry to pay off the convertible debtholders.

Bonds Payable 2,000,000

Cash 2,000,000

(To record the redemption of bonds at maturity)

³Transaction costs related to the liability and equity components are allocated in proportion to the proceeds received from the two components. *For purposes of homework, use the Share Premium—Conversion Equity account to record the equity component.* In practice, there may be considerable variance in the accounts used to record this component.

Because the carrying value of the bonds equals the face value, there is no gain or loss on repurchase at maturity. The amount originally allocated to equity of €194,374 either remains in the Share Premium—Conversion Equity account or is transferred to Share Premium—Ordinary.

Conversion of bonds at maturity. If the bonds are converted at maturity, Roche makes the following entry.

Share Premium—Conversion Equity 194,374
Bonds Payable 2,000,000
Share Capital—Ordinary

Share Capital—Ordinary 500,000 Share Premium—Ordinary 1,694,374

(To record the conversion of bonds at maturity)

As indicated, Roche records a credit to Share Capital—Ordinary for €500,000 (2,000 bonds × 250 shares × €1 par) and the remainder to Share Premium—Ordinary for €1,694,374. There is no gain or loss on conversion at maturity. The original amount allocated to equity (€194,374) is transferred to the Share Premium—Ordinary account. As a result, Roche's equity has increased by a total of €2,194,374 through issuance and conversion of the convertible bonds. This accounting approach is often referred to as the **book value method** in that the carrying amount (book value) of the bond and related conversion equity determines the amount in the ordinary equity accounts.

Conversion of bonds before maturity. What happens if bonds are converted before maturity? To understand the accounting, we again use the Roche Group example. A schedule of bond amortization related to Roche's convertible bonds is shown in Illustration 16-5.

	3011	EDULE OF BOND AM EFFECTIVE-INTEREST I 6% BOND DISCOUNTE	METHOD	
	Cash	Interest	Discount	Carrying Amoun
Date	Paid	Expense	Amortized	of Bonds
1/1/15				€1,805,626
12/31/15	€120,000	€162,506	€42,505	1,848,132
12/31/16	120,000	166,332	46,330	1,894,464
12/31/17	120,000	170,502	50,500	1,944,966
12/31/18	120,000	175,034*	55,059	2,000,000

ILLUSTRATION 16-5 Convertible Bond Amortization Schedule

Assuming that Roche converts its bonds into ordinary shares on December 31, 2016, Roche debits the Bonds Payable account for its carrying value of €1,894,464 (see Illustration 16-5). In addition, Roche credits Share Capital—Ordinary for €500,000 (2,000 × 250 × €1) and credits Share Premium—Ordinary for €1,588,838. The entry to record this conversion is as follows.

Share Premium—Conversion Equity 194,374
Bonds Payable 1,894,464

Share Capital—Ordinary 500,000
Share Premium—Ordinary 1,588,838

(To record the conversion of bonds before maturity)

There is no gain or loss on conversion before maturity: The original amount allocated to equity (€194,374) is transferred to the Share Premium—Ordinary account.

Repurchase before maturity. In some cases, companies decide to repurchase the convertible debt before maturity. The approach used for allocating the amount paid upon repurchase

follows the approach used when the convertible bond was originally issued. That is, Roche determines the fair value of the liability component of the convertible bonds at December 31, 2016, and then subtracts this amount from the fair value of the convertible bond issue (including the equity component) to arrive at the value for the equity. After this allocation is completed:

- **1.** The difference between the consideration allocated to the liability component and the carrying amount of the liability is recognized as a gain or loss, and
- **2.** The amount of consideration relating to the equity component is recognized (as a reduction) in equity. [3]

To illustrate, instead of converting the bonds on December 31, 2016, assume that Roche repurchases the convertible bonds from the bondholders. Pertinent information related to this conversion is as follows.

- Fair value of the convertible debt (including both liability and equity components), based on market prices at December 31, 2016, is €1,965,000.
- The fair value of the liability component is €1,904,900. This amount is based on computing the present value of a non-convertible bond with a two-year term (which corresponds to the shortened time to maturity of the repurchased bonds).

Roche first determines the gain or loss on the liability component, as computed in Illustration 16-6.

ILLUSTRATION 16-6

Gain or Loss on Debt Repurchase Present value of liability component at December 31, 2016 (given above)
Carrying value of liability component at December 31, 2016 (per Illustration 16-5)
Loss on repurchase

€ 1,904,900 (1,894,464) € 10,436

Roche has a loss on this repurchase because the fair value of the debt extinguished is greater than its carrying amount. To determine any adjustment to the equity, Roche computes the value of the equity as shown in Illustration 16-7.

ILLUSTRATION 16-7

Equity Adjustment on Repurchase of Convertible Bonds Fair value of convertible debt at December 31, 2016 (with equity component)

Less: Fair value of liability component at December 31, 2016 (similar 2-year non-convertible debt)

Fair value of equity component at December 31, 2016 (without debt component)

€ 1,965,000

1,904,900

€ 60,100

Roche makes the following compound journal entry to record the entire repurchase transaction.

Bonds Payable 1,894,464
Share Premium—Conversion Equity 60,100
Loss on Repurchase 10,436
Cash 1,965,000
(To record the repurchase of convertible bonds)

In summary, the repurchase results in a loss related to the liability component and a reduction in Share Premium—Conversion Equity. The remaining balance in Share

Premium—Conversion Equity of €134,274 (€194,374 - €60,100) is often transferred to Share Premium—Ordinary upon the repurchase.

Induced Conversions

Sometimes, the issuer wishes to encourage prompt conversion of its convertible debt to equity securities in order to reduce interest costs or to improve its debt to equity ratio. In this situation, the issuer may offer some form of additional consideration (such

as cash or ordinary shares), called a "sweetener," to **induce conversion**. The issuing company reports the sweetener as an expense of the current period. Its amount is the fair value of the additional securities or other consideration given.

Assume that Helloid, Inc. has outstanding \$1,000,000 par value convertible debentures convertible into 100,000 ordinary shares (\$1 par value). When issued, Helloid recorded Share Premium—Conversion Equity of \$15,000. Helloid wishes to reduce its annual interest cost. To do so, Helloid agrees to pay the holders of its convertible debentures an additional \$80,000 if they will convert. Assuming conversion occurs, Helloid makes the following entry.

Conversion Expense	80,000	
Share Premium—Conversion Equity	15,000	
Bonds Payable	1,000,000	
Share Capital - Ordinary		100,000
Share Premium—Ordinary	!	915,000
Cash		80,000

Helloid records the additional \$80,000 as **an expense of the current period** and not as a reduction of equity. **[4]**

Some argue that the cost of a conversion inducement is a cost of obtaining equity capital. As a result, they contend that companies should recognize the cost of conversion as a cost of (a reduction of) the equity capital acquired and not as an expense. However, the IASB indicated that when an issuer makes an additional payment to encourage conversion, the payment is for a service (bondholders converting at a given time) and should be reported as an expense.

Convertible Preference Shares

Convertible preference shares include an option for the holder to convert preference shares into a fixed number of ordinary shares. The major difference between accounting for a convertible bond and a convertible preference share is their classification. Convertible bonds are compound instruments because they have both a liability and an equity component. Convertible preference shares

LEARNING OBJECTIVEExplain the accounting for convertible preference shares.

(unless mandatory redemption exists) are not compound instruments because they have only an equity component. As a result, convertible preference shares are reported as part of equity. When preference shares are converted or repurchased, there is no gain or loss recognized. The rationale is that a company does not recognize a gain or loss involving transactions with its existing shareholders.

To illustrate, assume that Morse Company issues 1,000 convertible preference shares that have a par value of ≤ 1 per share. The shares were issued at a price of ≤ 200 per share. The journal entry to record this transaction is as follows.

Cash (1,000 × €200)	200,000
Share Capital-Preference (1,000 × €1)	1,000
Share Premium—Conversion Equity	199,000
(To record the issuance of convertible	
preference shares)	

If each share is subsequently converted into 25 each ordinary shares (€2 par value) that have a fair value of €410,000, the journal entry to record the conversion is as follows.

Share Capital – Preference	1,000	
Share Premium—Conversion Equity	199,000	
Share Capital – Ordinary (1,000 × 25 × €2)		50,000
Share Premium—Ordinary		150,000
(To record the conversion of convertible preference shares)		

As indicated (and similar to the treatment for convertible bonds), Morse uses the book value method and does not recognize a gain or loss on the conversion. The fair value of the ordinary shares is therefore ignored in this computation. If the convertible preference shares are repurchased at their fair value instead of converted, Morse makes the following entry.

> Share Capital - Preference 1.000 Share Premium—Conversion Equity 199,000 **Retained Earnings** 210,000 Cash

(To record the repurchase of convertible preference shares)

Morse does not report a gain or loss on the repurchase. Any excess paid above the book value of the convertible preference shares is often debited to Retained Earnings on the theory that an excess dividend is being paid to the preference shareholders to facilitate the repurchase.

What do the numbers mean?

HOW LOW CAN YOU GO?

Financial engineers are always looking for the next innovation in security design to meet the needs of both issuers and investors. Consider the convertible bonds issued by Sony (JPN). Sony's 5-year bonds have a zero coupon and are convertible into Sony ordinary shares at an exercise price of 957 yen. When issued, the bonds sold at an effective yield of 0 percent. That's right—a yield of zero.

How could this happen? When Sony issued the bonds, investors thought the options to convert were so valuable that they were willing to take zero interest payments. In essence,

the investors are paying interest to Sony, and Sony records interest revenue. Why would investors do this? If the share price rises, as many thought it would for Sony and many other tech companies at this time, these bond investors could convert and get a big gain in the shares.

410.000

Other Asian companies are on the convertible bandwagon, with Qihoo 360 Technology (CHN) and semiconductor maker ASE (TWN) issuing convertible bonds to meet investor demand for the potential gains from share appreciation.

Sources: Mariko Yasu, "Sony Shares Plunge after Convertible Bond Offering: Tokyo Mover," Bloomberg (November 14, 2012); and P. Davies, "Asia Turns Bullish on Convertible Bonds," Financial Times (September 1, 2013).

Share Warrants

LEARNING OBJECTIVE 3

Contrast the accounting for share warrants and for share warrants issued with other securities.

Warrants are certificates entitling the holder to acquire shares at a certain price within a stated period. This option is similar to the conversion privilege: Warrants, if exercised, become ordinary shares and usually have a dilutive effect (reduce earnings per share) similar to that of the conversion of convertible securities. However, a substantial difference between convertible securities

and share warrants is that upon exercise of the warrants, the holder has to pay a certain amount of money to obtain the shares.

The issuance of warrants or options to buy additional shares normally arises under three situations:

- 1. When issuing different types of securities, such as bonds or preference shares, companies often include warrants to make the security more attractive—by providing an "equity kicker."
- **2.** Upon the issuance of additional ordinary shares, existing shareholders have a pre**emptive right to purchase ordinary shares** first. Companies may issue warrants to evidence that right.
- **3.** Companies give warrants, often referred to as share options, to executives and employees as a form of compensation.

The problems in accounting for share warrants are complex and present many difficulties—some of which remain unresolved. The following sections address the accounting for share warrants in the three situations listed on page 760.

Share Warrants Issued with Other Securities

Warrants issued with other securities are basically long-term options to buy ordinary shares at a fixed price. Generally, the life of warrants is five years, occasionally 10 years; very occasionally, a company may offer perpetual warrants.

A share warrant works like this. Assume that Bohai Pharmaceutical Group (CHN) offers a unit comprising one ordinary share and one share warrant. In this case, Bohai's warrants are detachable; that is, they can be detached (separated) from the ordinary shares and traded as a separate security. Companies may also issue non-detachable warrants with debt, which means the warrant cannot be separated from the debt. In either case, debt issued with warrants is considered a compound instrument for accounting purposes. The Bohai warrant in this example is exercisable at ¥24.25 per share and good for five years. The unit (share plus detachable warrant) sells for 22.75 (¥22.75). Since the price of the ordinary share the day before the sale was 19.88 (¥19.88), the difference suggests a price of 2.87 (¥2.87) for the warrant.

The investor pays for the warrant in order to receive the right to buy ordinary shares, at a fixed price of \$24.25, sometime in the future. It would not be profitable at present for the purchaser to exercise the warrant and buy the share because the price of the share is much below the exercise price. But if, for example, the price of the share rises to \$30, the investor gains \$2.88 (\$30 - \$24.25 - \$2.87) on an investment of \$2.87, a 100 percent increase! If the price never rises, the investor loses the full \$2.87 per warrant.

Thus, debt issued with share warrants is a compound instrument that has a debt and an equity component. As a result, the company should use the with-and-without method to allocate the proceeds between the two components.

Illustration. At one time, Siemens AG (DEU) issued bonds with detachable five-year warrants. Assume that the five-year warrants provide the option to buy one ordinary share (par value €5) at €25. At the time, an ordinary share of Siemens was selling for approximately €30. These warrants enabled Siemens to price its bond offering (with a €10,000,000 face value) at par with an $8\frac{3}{4}$ percent yield (quite a bit lower than prevailing rates at that time). In this example, Siemens was able to sell the bonds plus the warrants for €10,200,000.

To account for the proceeds from this sale, Siemens uses the with-and-without method. Using this approach, Siemens determines the present value of the future cash flows related to the bonds, which is €9,707,852. It then subtracts this amount from €10,200,000 to determine the equity component. Determination of the equity component, using the with-and-without method, is shown in Illustration 16-8.

Fair value of bonds with warrants
Less: Fair value of liability component at date of issuance

9,707,852 € 492,148

€10,200,000

Equity component at date of issuance € 4

ILLUSTRATION 16-8 Equity Component of Security Issue

In this situation, the bonds sell at a discount. Siemens records the sale as follows.

Cash 9,707,852

Bonds Payable 9,707,852

In addition, Siemens sells warrants that it credits to Share Premium—Share Warrants. It makes the following entry.

Cash 492,148

Share Premium—Share Warrants 492,148

⁴From the illustration, it is apparent that buying warrants can be an "all or nothing" proposition.

Siemens may combine the entries if desired. Here, we show them separately, to indicate that the purchaser of the bond is buying not only a bond but also a possible future claim on ordinary shares.

Assuming investors exercise all 10,000 warrants (one warrant per one ordinary share), Siemens makes the following entry.

Cash (10,000 \times €25)250,000Share Premium—Share Warrants492,148Share Capital—Ordinary (10,000 \times €5)50,000Share Premium—Ordinary692,148

What if investors fail to exercise the warrants? In that case, Siemens debits Share Premium—Share Warrants for €492,148 and credits Share Premium—Expired Share Warrants for a like amount. The Share Premium—Expired Share Warrants reverts to the former shareholders.

Summary Analysis. The IASB indicates that companies should separate the debt and equity components of securities, such as convertible debt or bonds issued with warrants. We agree with this position. In both situations (convertible debt and debt issued with warrants), the investor has made a payment to the company for an equity feature—the right to acquire an equity instrument in the future. The only real distinction between them is that the additional payment made when the equity instrument is formally acquired takes different forms. The warrant holder pays additional cash to the issuing company; the convertible debtholder pays for shares by forgoing the receipt of interest from the conversion date until maturity and by forgoing the receipt of the maturity value itself. Thus, the difference is one of method or form of payment only, rather than one of substance.

Rights to Subscribe to Additional Shares

If the directors of a corporation decide to issue new ordinary shares, the old shareholders generally have the right (**preemptive privilege**) to purchase newly issued shares in proportion to their holdings. This privilege, referred to as a **share right**, saves existing shareholders from suffering a dilution of voting rights without their consent. Also, it may allow them to purchase shares somewhat below their market price. Unlike the warrants issued with other securities, the warrants issued for share rights are of short duration.

The certificate representing the share right states the number of shares the holder of the right may purchase. Each share owned ordinarily gives the owner one share right. The certificate also states the price at which the new shares may be purchased. The price is normally less than the current market price of such shares, which gives the rights a value in themselves. From the time they are issued until they expire, holders of share rights may purchase and sell them like any other security.

Companies make only a memorandum entry when they issue rights to existing shareholders. This entry indicates the number of rights issued to existing shareholders in order to ensure that the company has additional unissued shares registered for issuance in case the rights are exercised. Companies make no formal entry at this time because they have not yet issued shares nor received cash.

If holders exercise the share rights, a cash payment of some type usually is involved. If the company receives cash equal to the par value, it makes an entry crediting Share Capital—Ordinary at par value. If the company receives cash in excess of par value, it credits Share Premium—Ordinary. If it receives cash less than par value, a debit to Share Premium—Ordinary is appropriate.

Share Compensation Plans

The third form of warrant arises in share compensation plans to pay and motivate employees. This warrant is a **share option**, which gives key employees the option to purchase ordinary shares at a given price over an extended period of time.

A consensus of opinion is that effective compensation programs are ones that do the following:

- **1.** Base compensation on employee and company performance.
- **2.** Motivate employees to high levels of performance.
- **3.** Help retain executives and allow for recruitment of new talent.
- **4.** Maximize the employee's after-tax benefit and minimize the employer's after-tax cost.
- **5.** Use performance criteria over which the employee has control.

Straight cash-compensation plans (salary and perhaps a bonus), though important, are oriented to the short run. Many companies recognize that they need a longer-term compensation plan in addition to the cash component.

Long-term compensation plans attempt to develop company loyalty among key employees by giving them "a piece of the action"—that is, an equity or ownership interest. These plans, generally referred to as **share-based compensation plans**, come in many forms. Essentially, they provide the employee with the opportunity to receive shares if the performance of the company (by whatever measure) is satisfactory. Typical performance measures focus on long-term improvements that are readily measurable and that benefit the company as a whole, such as increases in earnings per share, revenues, share price, or market share.

The data reported in Illustration 16-9 reinforce the point that the fair value of equity grants is significant and increasing. The study documents that compensation increased 7.7 percent for top executives, with equity grants (like restricted shares) being the biggest source of growth.

(\$ in millions)	2011	% Change from 2010
Salary	\$ 1,781.3	0.2%
Bonus	648.8	-2.8
Fair value of equity grants	8,389.1	13.8
Non-equity incentive compensation	2,719.2	-2.9
Pension benefits	1,309.2	11.9
All other	590.6	7.8
Total executive compensation	\$15,438.2	7.7

Source: J. Ciesielski, "S&P 500 Executive Pay: The Bread Keeps Rising," The Analyst's Accounting Observer (June 25, 2012).

ILLUSTRATION 16-9Compensation Elements

Illustration 16-9 shows that cash compensation is less than 20 percent of total compensation. The fair value of equity grants comprised approximately 54 percent of total compensation.

As indicated in our opening story, companies are changing the way they use share-based compensation. That is, recent data indicate that share-option use is on the decline and that another form of share-based compensation, **restricted shares**, is on the rise. The major reasons for this change are two-fold. Critics often cited the indiscriminate use of share options as a reason why company executives manipulated accounting numbers in an attempt to achieve higher share price, thereby increasing the value of their options. As a result, many responsible companies decided to cut back on the issuance of options, both to avoid such accounting manipulations and to head off investor doubts. In addition, IFRS now results in companies recording a higher expense when share options are granted.

The Major Reporting Issue. Suppose that, as an employee for Hurdle Inc., you receive options to purchase 10,000 shares of the firm's ordinary shares as part of your compensation. The date you receive the options is referred to as the **grant date**. The options are

good for 10 years. The market price and the exercise price for the shares are both \$20 at the grant date. **What is the value of the compensation you just received?**

Some believe that what you have received has no value. They reason that because the difference between the market price and the exercise price is zero, no compensation results. Others argue these options do have value. If the share price goes above \$20 any time in the next 10 years and you exercise the options, you may earn substantial compensation. For example, if at the end of the fourth year the share market price is \$30 and you exercise your options, you earn \$100,000 [10,000 options \times (\$30 - \$20)], ignoring income taxes.

The question for Hurdle is how to report the granting of these options. One approach measures compensation cost by the excess of the market price of the shares over their exercise price at the grant date. This approach is referred to as the intrinsic-value method. It measures what the holder would receive today if the option was immediately exercised. The intrinsic value is the difference between the market price of the shares and the exercise price of the options at the grant date. Using the intrinsic-value method, Hurdle would not recognize any compensation expense related to your options because at the grant date the market price equaled the exercise price. (In the preceding paragraph, those who answered that the options had no value were looking at the question from the intrinsic-value approach.)

The second way to look at the question of how to report the granting of these options bases the cost of employee share options on the **fair value** of the share options granted. Under this **fair value method**, companies use acceptable option-pricing models to value the options at the date of grant. These models take into account the many factors that determine an option's underlying value.⁵

The IASB guidelines require that companies recognize compensation cost using the fair value method. [5] The IASB position is that companies should base the accounting for the cost of employee services on the fair value of compensation paid. This amount is presumed to be a measure of the value of the services received. We will discuss more about the politics of IFRS in this area later (see "Debate over Share-Option Accounting," page 770). Let's first describe the procedures involved.

Accounting for Share Compensation

Share-Option Plans

LEARNING OBJECTIVEDescribe the accounting for share

compensation plans.

Share-option plans involve two main accounting issues:

- **1.** How to determine compensation expense.
- **2.** Over what periods to allocate compensation expense.

Determining Expense. Under the fair value method, companies compute total compensation expense based on the fair value of the options expected to vest on the date they grant the options to the employee(s) (i.e., the grant date). Public companies estimate fair value by using an option-pricing model, with some adjustments for the unique factors of employee share options. No adjustments occur after the grant date in response to subsequent changes in the share price—either up or down.

Allocating Compensation Expense. In general, a company recognizes compensation expense in the periods in which its employees perform the service—the service period.

⁶"To vest" means "to earn the rights to." An employee's award becomes vested at the date that the employee's right to receive or retain shares or cash under the award is no longer contingent on remaining in the service of the employer.

⁵These factors include the volatility of the underlying shares, the expected life of the options, the risk-free rate during the option life, and the expected dividends during the option life.

Unless otherwise specified, the service period is the vesting period—the time between the grant date and the vesting date. Thus, the company determines total compensation cost at the grant date and allocates it to the periods benefited by its employees' services.

Share Compensation Example. An example will help show the accounting for a share-option plan. Assume that on November 1, 2014, the shareholders of Chen Company approve a plan that grants the company's five executives options to purchase 2,000 shares each of the company's \$100 par value ordinary shares. The company grants the options on January 1, 2015. The executives may exercise the options at any time within the next 10 years. The option price per share is \$6,000, and the market price of the shares at the date of grant is \$7,000 per share.

Under the fair value method, the company computes total compensation expense by applying an acceptable fair value option-pricing model (such as the Black-Scholes option-pricing model). To keep this illustration simple, we assume that the fair value option-pricing model determines Chen's total compensation expense to be \(\frac{\pma}{22}\),000,000.

Basic entries. Under the fair value method, a company recognizes the value of the options as an expense in the periods in which the employee performs services. In the case of Chen Company, assume that the expected period of benefit is two years, starting with the grant date. Chen would record the transactions related to this option contract as follows.

At date of grant (January 1, 2015)

No entry.

To record compensation expense for 2015 (December 31, 2015)

Compensation Expense 11,000,000

Share Premium—Share Options (¥22,000,000 ÷ 2) 11,000,000

To record compensation expense for 2016 (December 31, 2016)

Compensation Expense 11,000,000

Share Premium—Share Options 11,000,000

As indicated, Chen allocates compensation expense evenly over the two-year service period.

Exercise. If Chen's executives exercise 2,000 of the 10,000 options (20 percent of the options) on June 1, 2018 (three years and five months after date of grant), the company records the following journal entry.

June 1, 2018

Expiration. If Chen's executives fail to exercise the remaining share options before their expiration date, the company transfers the balance in the Share Premium—Share Options account to a more properly titled share premium account, such as Share Premium—Expired Share Options. Chen records this transaction at the date of expiration as follows.

January 1, 2025 (expiration date)

Share Premium—Share Options 17,600,000 Share Premium—Expired Share Options 17,600,000 $(80\% \times $22,000,000)$

Adjustment. An unexercised share option does not nullify the need to record the costs of services received from executives and attributable to the share-option plan. Under IFRS, a company therefore does not adjust compensation expense upon expiration of the options.

Once the total compensation is measured at the date of grant, can it be changed in future periods? The answer is that it depends on whether the adjustment is caused by a service or market condition. A **service condition** requires employees to complete a specified period of service to receive the award. If a service condition exists, the company is permitted to adjust the number of share options expected to the actual number of instruments vested. **Thus, compensation can be adjusted.** The company should adjust the estimate of compensation expense recorded in the current period (as a change in estimate). A company records this change in estimate by debiting Share Premium—Share Options and crediting Compensation Expense for the amount of cumulative compensation expense recorded to date (thus decreasing compensation expense in the period of forfeiture).

A market condition results when vesting or exercisability of the share option depends on a performance condition, such as a rise in the market price of the company's ordinary shares. Because market conditions are reflected in the determination of fair value at the grant date, no adjustment to compensation expense is permitted.

Many question this accounting treatment. The practice of not reversing share-option awards due to market conditions (share price stays below exercise price) means that a company may recognize an expense for an option that is never exercised. However, if the reason the option is not exercised relates to a service condition (failure to stay as an employee and perform services), the compensation expense related to the option is adjusted. In summary, estimates of the number of share options that are expected to vest are adjusted to the actual number that do vest. Cancellations due to market conditions are not adjusted.⁷

Restricted Shares

As indicated earlier, many companies are also using restricted shares (or replacing options altogether) to compensate employees. **Restricted-share plans** transfer shares to employees, subject to an agreement that the shares cannot be sold, transferred, or pledged until vesting occurs. Similar to share options, these shares are subject to forfeiture if the conditions for vesting are not met.⁸

Major advantages of restricted-share plans are:

- **1.** Restricted shares never become completely worthless. In contrast, if the share price does not exceed the exercise price for a share option, the options are worthless. The restricted shares, however, still have value.
- **2.** Restricted shares generally result in less dilution to existing shareholders. Restricted-share awards are usually one-half to one-third the size of share options. For example, if a company issues share options on 1,000 shares, an equivalent restricted-share offering might be 333 to 500 shares. The reason for the difference is that at the end of the vesting period, the restricted shares will have value, whereas the share options may not. As a result, fewer shares are involved in restricted-share plans, and therefore less dilution results if the share price rises.

⁷Companies sometimes modify the terms and conditions on which the share options were granted, to reward outstanding performance or provide a morale boost for some or all employees. Modifications may reduce the exercise period, extend the term of the options, or increase the number of shares issuable upon exercise. Modifications to share-based arrangements that decrease the fair value of the grant are basically ignored. However, if the fair value of the grant increases due to a modification, then the incremental fair value of the modified grant should be accounted for as additional compensation expense over the remaining vesting period.

⁸Most companies base vesting on future service for a period of generally three to five years. Vesting may also be conditioned on some performance target such as revenue, net income, cash flows, or some combination of these three factors. The employee also collects dividends on the restricted shares. These dividends generally must be repaid if forfeiture occurs.

3. Restricted shares better align the employee incentives with the companies' incentives. The holder of restricted shares is essentially a shareholder and should be more interested in the long-term objectives of the company. In contrast, the recipients of share options often have a short-run focus, which leads to taking risks to hype the share price for short-term gain to the detriment of the long-term.

The accounting for restricted shares follows the same general principles as accounting for share options at the date of grant. That is, the company determines the fair value of the restricted shares at the date of grant (usually the fair value of a share) and then expenses that amount over the service period. Subsequent changes in the fair value of the shares are ignored for purposes of computing compensation expense.

Restricted Shares Example. Assume that on January 1, 2015, Ogden Company issues 1,000 restricted shares to its CEO, Christie DeGeorge. Ogden's shares have a fair value of \$20 per share on January 1, 2015. Additional information is as follows.

- The service period related to the restricted shares is five years.
- Vesting occurs if DeGeorge stays with the company for a five-year period.
- The par value is \$1 per share.

Ogden makes the following entry on the grant date (January 1, 2015).

Unearned Compensation	20,000	
Share Capital – Ordinary (1,000 $ imes$ \$1)		1,000
Share Premium—Ordinary (1,000 × \$19)		19.000

The credits to Share Capital—Ordinary and Share Premium—Ordinary indicate that Ogden has issued shares. The debit to Unearned Compensation (often referred to as Deferred Compensation Expense) identifies the total compensation expense the company will recognize over the five-year period. **Unearned Compensation represents the cost of services yet to be performed, which is not an asset.** Consequently, the company reports Unearned Compensation in equity in the statement of financial position, as a contra equity account (similar to the reporting of treasury shares at cost).

At December 31, 2015, Ogden records compensation expense of \$4,000 (1,000 shares \times \$20 \times 20%) as follows.

```
Compensation Expense 4,000
Unearned Compensation 4,000
```

Ogden records compensation expense of \$4,000 for each of the next four years (2016, 2017, 2018, and 2019).

What happens if DeGeorge leaves the company before the five years has elapsed (that is, she does not fulfill a service condition)? In this situation, DeGeorge forfeits her rights to the shares, and Ogden reverses the compensation expense already recorded.

For example, assume that DeGeorge leaves on February 3, 2017 (before any expense has been recorded during 2017). The entry to record this forfeiture is as follows.

Share Capital—Ordinary	1,000	
Share Premium—Ordinary	19,000	
Compensation Expense (\$4,000 $ imes$ 2)		8,000
Unearned Compensation		12,000

In this situation, Ogden reverses the compensation expense of \$8,000 recorded through 2016. In addition, the company debits Share Capital—Ordinary and Share Premium—Ordinary, reflecting DeGeorge's forfeiture. It credits the balance of Unearned Compensation since none remains when DeGeorge leaves Ogden.

This accounting is similar to accounting for share options when employees do not fulfill vesting requirements. Recall that once compensation expense is recorded for

share options, it is not reversed. The only exception is if the employee does not fulfill a service condition by leaving the company early.

In Ogden's restricted-share plan, vesting never occurred because DeGeorge left the company before she met the service requirement. Because DeGeorge was never vested, she had to forfeit her shares. Therefore, the company must reverse compensation expense recorded to date.⁹

Employee Share-Purchase Plans

Employee share-purchase plans (ESPPs) generally permit all employees to purchase shares at a discounted price for a short period of time. The company often uses such plans to secure equity capital or to induce widespread ownership of its ordinary shares among employees. **These plans are considered compensatory and should be recorded as expense over the service period.**

To illustrate, assume that Masthead Company offers all its 1,000 employees the opportunity to participate in an employee share-purchase plan. Under the terms of the plan, the employees are entitled to purchase 100 ordinary shares (par value £1 per share) at a 20 percent discount. The purchase price must be paid immediately upon acceptance of the offer. In total, 800 employees accept the offer, and each employee purchases on average 80 shares. That is, the employees purchase a total of 64,000 shares. The weighted-average market price of the shares at the purchase date is £30 per share, and the weighted-average purchase price is £24 per share. The entry to record this transaction is as follows.

The IASB indicates that there is no reason to treat broad-based employee share plans differently from other employee share plans. Some have argued that because these plans are used to raise capital, they should not be compensatory. However, IFRS requires recording expense for these arrangements. The Board notes that because these arrangements are available only to employees, it is sufficient to conclude that the benefits provided represent employee compensation.¹⁰ [6]

Disclosure of Compensation Plans

Companies must fully disclose the status of their compensation plans at the end of the periods presented. To meet these objectives, companies must make extensive disclosures. Specifically, a company with one or more share-based payment arrangements must disclose information that enables users of the financial statements to understand:

- **1.** The nature and extent of share-based payment arrangements that existed during the period.
- **2.** How the fair value of the goods and services received, or the fair value of the equity instruments granted during the period, was determined.
- **3.** The effect of share-based payment transactions on the company's net income (loss) during the period and on its financial position. [7]

⁹There are numerous variations on restricted-share plans, including restricted-share units (for which the shares are issued at the end of the vesting period) and restricted-share plans with performance targets, such as EPS or share price growth.

¹⁰As indicated, employee share-purchase plans offer company shares to workers through payroll deduction, often at significant discounts. Unfortunately, many employees do not avail themselves of this benefit. Hopefully, if you have the opportunity to purchase your company's shares at a significant discount, you will take advantage of the plan. By not participating, you are "leaving money on the table."

Illustration 16-10 presents the type of information disclosed for compensation plans.

ILLUSTRATION 16-10

Share-Option Plan Disclosure

Share-Option Plan

The Company has a share-based compensation plan. The compensation cost that has been charged against income for the plan was \$29.4 million, and \$28.7 million for 2015 and 2014, respectively.

The Company's 2015 Employee Share-Option Plan (the Plan), which is shareholder-approved, permits the grant of share options and shares to its employees for up to 8 million shares of ordinary shares. The Company believes that such awards better align the interests of its employees with those of its shareholders. Option awards are generally granted with an exercise price equal to the market price of the Company's shares at the date of grant; those option awards generally vest based on 5 years of continuous service and have 10-year contractual terms. Share awards generally vest over five years. Certain option and share awards provide for accelerated vesting if there is a change in control (as defined by the Plan).

The fair value of each option award is estimated on the date of grant using an option valuation model based on the assumptions noted in the following table.

	2015	2014
Expected volatility	25%-40%	24%-38%
Weighted-average volatility	33%	30%
Expected dividends	1.5%	1.5%
Expected term (in years)	5.3-7.8	5.5-8.0
Risk-free rate	6.3%-11.2%	6.0%-10.0%

A summary of option activity under the Plan as of December 31, 2015, and changes during the year then ended are presented below.

			Weighted-	
		Weighted-	Average	Aggregate
		Average	Remaining	Intrinsic
	Shares	Exercise	Contractual	Value
Options	(000)	Price	Term	(\$000)
Outstanding at January 1, 2015	4,660	42		
Granted	950	60		
Exercised	(800)	36		
Forfeited or expired	(80)	59		
Outstanding at December 31, 2015	4,730	47	6.5	85,140
Exercisable at December 31, 2015	3,159	41	4.0	75,816

The weighted-average grant-date fair value of options granted during the years 2015 and 2014 was \$19.57 and \$17.46, respectively. The total intrinsic value of options exercised during the years ended December 31, 2015 and 2014, was \$25.2 million, and \$20.9 million, respectively.

As of December 31, 2015, there was \$25.9 million of total unrecognized compensation cost related to non-vested share-based compensation arrangements granted under the Plan. That cost is expected to be recognized over a weighted-average period of 4.9 years. The total fair value of shares vested during the years ended December 31, 2015 and 2014, was \$22.8 million and \$21 million, respectively.

Restricted-Share Awards

The Company also has a restricted-share plan. The Plan is intended to retain and motivate the Company's Chief Executive Officer over the term of the award and to bring his total compensation package closer to median levels for Chief Executive Officers of comparable companies. The fair value of grants during the year was \$1,889,000, or \$35.68 per share, equivalent to 92% of the market price of a share of the Company's Ordinary Shares on the date the award was granted.

Restricted-share activity for the year ended 2015 is as follows.

	Shares	Price
Outstanding at December 31, 2014	57,990	
Granted	149,000	\$12.68
Vested	(19,330)	_
Forfeited		_
Outstanding at December 31, 2015	187,660

Debate over Share-Option Accounting

LEARNING OBJECTIVE 5

Discuss the controversy involving share compensation plans.

Underlying Concepts

The share-option controversy

consequence issues. The IASB

believes companies should

follow the neutrality concept.

factors other than accounting

theory should be considered.

Others disagree, noting that

involves economic-

The IASB faced considerable opposition when it proposed the fair value method for accounting for share options. This is not surprising, given that the fair value method results in greater compensation costs relative to the intrinsic-value model.

Many small high-technology companies have been especially vocal in their opposition, arguing that only through offering share options can they attract top professional management. They contend that recognizing large amounts of compensation expense under these plans places them at a competitive disadvantage against larger companies that can withstand higher compensation charges. As one high-tech executive

stated, "If your goal is to attack fat-cat executive compensation in multi-billion dollar firms, then please do so! But not at the expense of the people who are 'running lean and mean,' trying to build businesses and creating jobs in the process."

The share-option saga is a classic example of the difficulty the IASB faces in issuing new accounting guidance. Many powerful interests aligned against the Board. Even some who initially appeared to support the Board's actions later reversed themselves. These efforts undermine the authority of the IASB at a time when it is essential that we restore faith in our financial reporting system.

Transparent financial reporting—including recognition of share-based expense—should not be criticized because companies will report lower income. We may not like what the financial statements say, but we are always better off when the statements are representationally faithful to the underlying economic

substance of transactions.

By leaving share-based compensation expense out of income, reported income is biased. Biased reporting not only raises concerns about the credibility of companies' reports but also of financial reporting in general. Even good companies get tainted by the biased reporting of a few "bad apples." If we write standards to achieve some social, economic, or public policy goal, financial reporting loses its credibility.

COMPUTING EARNINGS PER SHARE

LEARNING OBJECTIVE 6

Compute earnings per share in a simple capital structure.

The financial press frequently reports earnings per share data. Further, shareholders and potential investors widely use this data in evaluating the profitability of a company. Earnings per share indicates the income earned by each ordinary share. Thus, companies report earnings per share only for ordinary shares. For example, if Oscar Co. has net income of €300,000 and a weighted average of

100,000 ordinary shares outstanding for the year, earnings per share is €3 (€300,000 ÷ 100,000). Because of the importance of earnings per share information, companies must report this information on the face of the income statement. [8] The exception, due to the cost constraint, is non-public companies.¹¹ Generally, companies report earnings per share information below net income in the income statement. Illustration 16-11 shows Oscar Co.'s income statement presentation of earnings per share.

ILLUSTRATION 16-11

Income Statement Presentation of EPS

Net income	€300,000	
Earnings per share	€3.00	

¹¹In general, a non-public enterprise is an enterprise whose debt or equity securities are not traded in a public market on a foreign or domestic securities exchange or in the over-the-counter market (including securities quoted locally or regionally). An enterprise is not considered a non-public enterprise when its financial statements are issued in preparation for the sale of any class of securities in a public market.

When the income statement contains discontinued operations, companies are required to report earnings per share from continuing operations and net income on the face of the income statement. The presentation in Illustration 16-12 is representative.

	0.60

ILLUSTRATION 16-12 Income Statement Presentation of EPS Components

These disclosures enable the user of the financial statements to compare performance between different companies in the same reporting period and between different reporting periods for the same company. Even though earnings per share data have limitations because of the different accounting policies that may be used for determining "earnings," a consistently determined denominator enhances financial reporting. [9]

Earnings per Share - Simple Capital Structure

A company's capital structure is **simple** if it consists only of ordinary shares or includes no potential ordinary shares that upon conversion or exercise could dilute earnings per ordinary share. In this case, a company reports **basic earnings per share**. A capital structure is **complex** if it includes securities (potential ordinary shares) that could have a dilutive effect on earnings per ordinary share.¹² In this situation, a company reports both basic and **diluted earnings per share**.

The computation of basic earnings per share for a simple capital structure involves two items (other than net income): (1) preference share dividends and (2) weighted-average number of shares outstanding.

Preference Share Dividends

As we indicated earlier, earnings per share relates to earnings per ordinary share. When a company has both ordinary and preference shares outstanding, **it subtracts the current-year preference share dividend from net income to arrive at income available to ordinary shareholders**. Illustration 16-13 shows the formula for computing earnings per share.

Earnings per Share = Net Income - Preference Dividends
Weighted-Average Number of Shares Outstanding

ILLUSTRATION 16-13Formula for Computing Earnings per Share

In reporting earnings per share information, a company must calculate income available to ordinary shareholders. To do so, the company subtracts dividends on preference shares from income from continuing operations and net income. If a company declares dividends on preference shares and a net loss occurs, **the company adds the preference dividend to the loss** for purposes of computing the loss per share.

If the preference shares are cumulative and the company declares no dividend in the current year, it subtracts (or adds) an amount equal to the dividend that it should

¹²A potential ordinary share is a financial instrument or other contract that may entitle its holder to ordinary shares. Examples of potential ordinary shares are (1) convertible debt and convertible preference shares that are convertible into ordinary shares, (2) options and warrants, and (3) shares that would be issued upon the satisfaction of conditions resulting from contractual arrangements, such as the purchase of a business or other assets. These concepts are discussed later in this chapter.

have declared for the current year only from net income (or to the loss). The company should have included dividends in arrears for previous years in the previous years' computations.¹³

Weighted-Average Number of Shares Outstanding

In all computations of earnings per share, the **weighted-average number of shares out-standing** during the period constitutes the basis for the per share amounts reported. Shares issued or purchased during the period affect the amount outstanding. Companies must **weight the shares by the fraction of the period they are outstanding**. The rationale for this approach is to find the equivalent number of whole shares outstanding for the year.

To illustrate, assume that Franks Inc. has changes in its ordinary shares outstanding for the period, as shown in Illustration 16-14.

ILLUSTRATION 16-14

Shares Outstanding, Ending Balance— Franks Inc.

90,000 30,000 120,000

120,000
(39,000)
81,000
60,000
141,000

Franks computes the weighted-average number of shares outstanding as follows.

ILLUSTRATION 16-15

Weighted-Average Number of Shares Outstanding

Dates Outstandi Jan. 1–Apr. Apr. 1–July July 1–Nov Nov. 1–Dec	90,000 1 120,000 .1 81,000	(B) Fraction of Year 3/12 3/12 4/12 2/12	(C) Weighted Shares (A × B) 22,500 30,000 27,000 23,500	
Weighted-a	average number of shares out	tstanding	103,000	

As Illustration 16-15 shows, 90,000 shares were outstanding for three months, which translates to 22,500 whole shares for the entire year. Because Franks issued additional shares on April 1, it must weight these shares for the time outstanding. When the company purchased 39,000 shares on July 1, it reduced the shares outstanding. Therefore, from July 1 to November 1, only 81,000 shares were outstanding, which is equivalent to 27,000 shares. The issuance of 60,000 shares increases shares outstanding for the last two months of the year. Franks then makes a new computation to determine the proper weighted shares outstanding.

Share Dividends and Share Splits. When share dividends or share splits occur, companies need to restate the shares outstanding before the share dividend or split, in order to compute the weighted-average number of shares. For example, assume that Vijay Corporation had 100,000 shares outstanding on January 1 and issued a 25 percent share dividend on June 30. For purposes of computing a weighted-average for the current year, it assumes the additional 25,000 shares outstanding as a result of the share dividend

¹³Recall that an ordinary share is an equity instrument that is subordinate to all other classes of equity instruments. In addition, we assume that ordinary shares relate only to the controlling (majority) interest. As a result, the earnings per share computation does not include earnings related to the non-controlling (minority) interest.

to be **outstanding since the beginning of the year**. Thus, the weighted-average for the year for Vijay is 125,000 shares.

Companies restate the issuance of a share dividend or share split, but not the issuance or repurchase of shares for cash. Why? Because share splits and share dividends do not increase or decrease the net assets of the company. The company merely issues additional shares. Because of the added shares, it must restate the weighted-average shares. Restating allows valid comparisons of earnings per share between periods before and after the share split or share dividend. Conversely, the issuance or purchase of shares for cash **changes the amount of net assets**. As a result, the company either earns more or less in the future as a result of this change in net assets. Stated another way, **a share dividend or split does not change the shareholders' total investment**—it only increases (unless it is a reverse share split) the number of ordinary shares representing this investment.

To illustrate how a share dividend affects the computation of the weighted-average number of shares outstanding, assume that Sabrina Company has the following changes in its ordinary shares during the year.

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	100,000
March 1	Issued 20,000 shares for cash	20,000
		120,000
June 1	60,000 additional shares	
	(50% share dividend)	60,000
		180,000
November 1	Issued 30,000 shares for cash	30,000
December 31	Ending balance	210,000

ILLUSTRATION 16-16

Shares Outstanding, Ending Balance—Sabrina Company

Sabrina computes the weighted-average number of shares outstanding as follows.

	(A)		(C)	Weighted
Dates	Shares	(B)	Fraction	Shares
Outstanding	Outstanding	Restatement	of Year	$(A \times B \times C)$
Jan. 1-Mar. 1	100,000	1.50	2/12	25,000
Mar. 1-June 1	120,000	1.50	3/12	45,000
June 1-Nov. 1	180,000		5/12	75,000
Nov. 1-Dec. 31	210,000		2/12	35,000
Weighted-average	number of shares	outstanding		180,000

ILLUSTRATION 16-17

Weighted-Average Number of Shares Outstanding—Share Issue and Share Dividend

Sabrina must restate the shares outstanding prior to the share dividend. The company adjusts the shares outstanding from January 1 to June 1 for the share dividend, so that it now states these shares on the same basis as shares issued subsequent to the share dividend. Sabrina does not restate shares issued after the share dividend because they are on the new basis. The share dividend simply restates existing shares. **The same type of treatment applies to a share split**.

If a share dividend or share split occurs after the end of the year but before the financial statements are authorized for issuance, a company must restate the weighted-average number of shares outstanding for the year (and any other years presented in comparative form). For example, assume that Hendricks Company computes its weighted-average number of shares as 100,000 for the year ended December 31, 2015. On January 15, 2016, before authorizing the issuance of the financial statements, the company splits its shares 3 for 1. In this case, the weighted-average number of shares used in computing earnings per share for 2015 is now 300,000 shares. If providing earnings per share information for 2014 as comparative information, Hendricks must also adjust it for the share split.

Comprehensive Example

Let's study a comprehensive illustration for a simple capital structure. Diaz Corporation has income from continuing operations of R\$580,000 and a gain on discontinued operations, net of tax, of R\$240,000. In addition, it has declared preference dividends of R\$1 per share on 100,000 shares of preference shares outstanding. Diaz also has the following changes in its ordinary shares outstanding during 2015.

ILLUSTRATION 16-18

Shares Outstanding, Ending Balance— Diaz Corp.

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	180,000
May 1	Purchased 30,000 treasury shares	30,000
		150,000
July 1	300,000 additional shares	
	(3-for-1 share split)	300,000
		450,000
December 31	Issued 50,000 shares for cash	50,000
December 31	Ending balance	500,000

To compute the earnings per share information, Diaz determines the weighted-average number of shares outstanding as follows.

ILLUSTRATION 16-19

Weighted-Average Number of Shares Outstanding

Dates Outstanding Jan. 1-May 1 May 1-July 1 July 1-Dec. 31	(A) Shares Outstanding 180,000 150,000 450,000	(B) Restatement 3 3	(C) Fraction of Year 4/12 2/12 6/12	(D) Weighted Shares (A × B × C) 180,000 75,000 225,000
Weighted-average	number of shares	outstanding		480,000

In computing the weighted-average number of shares, the company ignores the shares sold on December 31, 2015, because they have not been outstanding during the year. Diaz then divides the weighted-average number of shares into income from continuing operations and net income to determine earnings per share. It subtracts its preference dividends of R\$100,000 from income from continuing operations (R\$580,000) to arrive at income from continuing operations available to ordinary shareholders of R\$480,000 (R\$580,000 - R\$100,000).

Deducting the preference dividends from the income from continuing operations also reduces net income without affecting the gain on discontinued operations. The final amount is referred to as **income available to ordinary shareholders**, as shown in Illustration 16-20.

ILLUSTRATION 16-20

Computation of Income Available to Ordinary Shareholders

Earnings per Share—Complex Capital Structure

The EPS discussion to this point applies to **basic EPS** for a simple capital structure. One problem with a **basic EPS** computation is that it fails to recognize the potential impact of a corporation's dilutive securities. As discussed at the beginning of the chapter, **dilutive securities** are securities that can be converted to ordinary shares. ¹⁴ Upon conversion or exercise by the holder, the dilutive securities reduce (dilute) earnings per share. This adverse effect on EPS can be signifi-

cant and, more importantly, *unexpected* unless financial statements call attention to their potential dilutive effect.

As indicated earlier, a complex capital structure exists when a corporation has convertible securities, options, warrants or other rights that upon conversion or exercise.

As indicated earlier, a complex capital structure exists when a corporation has convertible securities, options, warrants, or other rights that upon conversion or exercise could dilute earnings per share. When a company has a complex capital structure, it reports both basic and diluted earnings per share.

Computing diluted EPS is similar to computing basic EPS. The difference is that diluted EPS includes the effect of all potential dilutive ordinary shares that were outstanding during the period. The formula in Illustration 16-22 shows the relationship between basic EPS and diluted EPS.

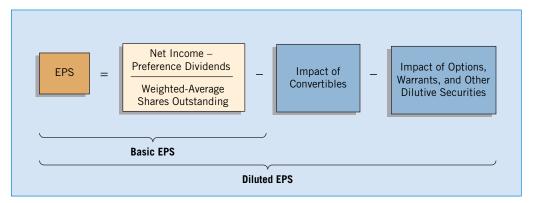

ILLUSTRATION 16-22 Relation between Basic and Diluted EPS

Some securities are antidilutive. **Antidilutive securities** are securities that upon conversion or exercise **increase** earnings per share (or reduce the loss per share). Companies with complex capital structures will not report diluted EPS if the securities in their capital structure are antidilutive. The purpose of presenting both basic and diluted EPS is to inform financial statement users of situations that will likely occur (basic EPS) and also to provide "worst case" dilutive situations (dilutive EPS). If the securities are antidilutive, the likelihood of conversion or exercise is considered remote. Thus, companies that have

 $^{^{14}}$ Issuance of these types of securities is typical in mergers and compensation plans.

only antidilutive securities must report only the basic EPS number. We illustrated the computation of basic EPS in the prior section. In the following sections, we address the effects of convertible and other dilutive securities on EPS calculations.

Diluted EPS—Convertible Securities

At conversion, companies exchange convertible securities for ordinary shares. Companies measure the dilutive effects of potential conversion on EPS using the **if-converted method**. This method for a convertible bond assumes (1) the conversion of the convertible securities at the beginning of the period (or at the time of issuance of the security, if issued during the period), and (2) the elimination of related interest, net of tax. Thus, the additional shares assumed issued increase the **denominator**—the weighted-average number of shares outstanding. The amount of interest expense, net of tax, increases the **numerator**—net income.

Comprehensive Example—If-Converted Method. As an example, Mayfield Corporation has net income of £210,000 for the year and a weighted-average number of ordinary shares outstanding during the period of 100,000 shares. The basic earnings per share is therefore £2.10 (£210,000 \div 100,000). The company has two convertible debenture bond issues outstanding. One is a 6 percent issue sold at 100 (total £1,000,000) in a prior year and convertible into 20,000 ordinary shares. Interest expense for the current year related to the liability component of this convertible bond is £62,000. The other is a 7 percent issue sold at 100 (total £1,000,000) on April 1 of the current year and convertible into 32,000 ordinary shares. Interest expense for the current year related to the liability component of this convertible bond is £80,000. The tax rate is 40 percent.

As Illustration 16-23 shows, to determine the numerator for diluted earnings per share, Mayfield adds back the interest on the if-converted securities, less the related tax effect. Because the if-converted method assumes conversion as of the beginning of the year, Mayfield assumes that it pays no interest on the convertibles during the year. The effective interest on the 6 percent convertibles is £62,000 for the year. The increased tax expense is £24,800 (£62,000 \times 0.40). The interest added back net of taxes is £37,200 (£62,000 - £24,800) or simply £62,000 \times (1 - 0.40).

ILLUSTRATION 16-23

Computation of Adjusted Net Income

Net income for the year	£210,000
Add: Adjustment for interest (net of tax)	
6% debentures (£62,000 \times [140])	37,200
7% debentures (£80,000 \times 9/12 \times [140])	36,000
Adjusted net income	£283,200

Continuing with the information in Illustration 16-23, because Mayfield issues 7 percent convertibles subsequent to the beginning of the year, it weights the shares. In other words, it considers these shares to have been outstanding from April 1 to the end of the year. As a result, the interest adjustment to the numerator for these bonds reflects the interest for only nine months. Thus, the interest added back on the 7 percent convertible is £36,000 [£80,000 \times 9/12 year \times (1 - 0.4)]. The final item in Illustration 16-23 shows the adjusted net income. This amount becomes the numerator for Mayfield's computation of diluted earnings per share.

¹⁵As indicated earlier, a convertible bond is a compound instrument that has both a liability and an equity component. As a result, the interest expense reported on the income statement will not equal the interest paid in cash during the period. The interest adjustment in the numerator is based on interest expense reported on the income statement. That is, interest expense, net of tax, is added back to net income.

Mayfield then calculates the weighted-average number of shares outstanding, as shown in Illustration 16-24. This number of shares becomes the denominator for Mayfield's computation of diluted earnings per share.

Weighted-average number of shares outstanding	100,000	
Add: Shares assumed to be issued:		
6% debentures (as of beginning of year)	20,000	
7% debentures (as of date of issue, April 1; 9/12 \times 32,000)	24,000	
Weighted-average number of shares adjusted for dilutive securities	144,000	
	Add: Shares assumed to be issued: 6% debentures (as of beginning of year) 7% debentures (as of date of issue, April 1; $9/12 \times 32,000$)	Add: Shares assumed to be issued: 6% debentures (as of beginning of year) 7% debentures (as of date of issue, April 1; 9/12 × 32,000) Weighted-average number of shares adjusted for dilutive securities

ILLUSTRATION 16-24

Computation of Weighted-Average Number of Shares

In its income statement, Mayfield reports basic and diluted earnings per share. ¹⁶ Illustration 16-25 shows this dual presentation.

Net income for the year	£210,000
Earnings per Share (Note X)	
Basic earnings per share (£210,000 ÷ 100,000)	£2.10
Diluted earnings per share (£283,200 ÷ 144,000)	£1.97

ILLUSTRATION 16-25Earnings per Share Disclosure

Other Factors. The conversion rate on a dilutive security may change during the period in which the security is outstanding. For the diluted EPS computation in such a situation, the company uses the most dilutive conversion rate available. [10] For example, assume that a company issued a convertible bond on January 1, 2013, with a conversion rate of 10 ordinary shares for each bond starting January 1, 2015. Beginning January 1, 2016, the conversion rate is 12 ordinary shares for each bond. Beginning January 1, 2022, it is 15 ordinary shares for each bond. In computing diluted EPS in 2013, the company uses the conversion rate of 15 shares to one bond.

Another issue relates to preference shares. For example, assume that Mayfield's 6 percent convertible debentures were instead 6 percent convertible *preference shares*. In that case, Mayfield considers the convertible preference shares as potential ordinary shares. Thus, it includes them in its diluted EPS calculations as shares outstanding. The company does not subtract preference dividends from net income in computing the numerator. Why not? Because for purposes of computing EPS, it assumes conversion of the convertible preference shares to outstanding ordinary shares. The company uses net income as the numerator—it computes **no tax effect** because preference dividends generally are not tax-deductible.

Diluted EPS—Options and Warrants

A company includes in diluted earnings per share all share options and warrants outstanding (whether or not presently exercisable), unless they are antidilutive. Companies use the **treasury-share method** to include options and warrants and their equivalents in EPS computations.

The treasury-share method assumes that the options or warrants are exercised at the beginning of the year (or date of issue if later) and that the company uses those proceeds to purchase ordinary shares for the treasury. If the exercise price is lower than the market price of the shares, then the proceeds from exercise are insufficient to buy back all the shares. The company then adds the incremental shares remaining to the

 $^{^{16}}$ Conversion of bonds is dilutive because EPS with conversion (£1.97) is less than basic EPS (£2.10). See Appendix 16B for a comprehensive evaluation of antidilution with multiple securities.

weighted-average number of shares outstanding for purposes of computing diluted earnings per share.

For example, if the exercise price of a warrant is \in 5 and the fair value of the shares is \in 15, the treasury-share method increases the shares outstanding. Exercise of the warrant results in one additional share outstanding, but the \in 5 received for the one share issued is insufficient to purchase one share in the market at \in 15. The company needs to exercise three warrants (and issue three additional shares) to produce enough money (\in 15) to acquire one share in the market. Thus, a net increase of two shares outstanding results.

To see this computation using larger numbers, assume 1,500 options outstanding at an exercise price of \leq 30 for an ordinary share and a market price per ordinary share of \leq 50. Through application of the treasury-share method, the company would have 600 incremental shares outstanding, computed as shown in Illustration 16-26.¹⁷

ILLUSTRATION 16-26 Computation of Incremental Shares

Proceeds from exercise of 1,500 options (1,500 × €30)	€45,000 =====
Shares issued upon exercise of options Treasury shares purchasable with proceeds (€45,000 ÷ €50)	1,500 (900)
Incremental shares outstanding (potential ordinary shares)	<u>600</u>

Thus, if the exercise price of the option or warrant is **lower** than the market price of the shares, dilution occurs. An exercise price of the option or warrant **higher** than the market price of the shares reduces ordinary shares. In this case, the options or warrants are **antidilutive** because their assumed exercise leads to an increase in earnings per share.

For both options and warrants, exercise is assumed only if the average market price of the share exceeds the exercise price during the reported period. ¹⁸ As a practical matter, a simple average of the weekly or monthly prices is adequate, so long as the prices do not fluctuate significantly.

Comprehensive Example—Treasury-Share Method. To illustrate application of the treasury-share method, assume that Kubitz Industries, Inc. has net income for the period of €220,000. The average number of shares outstanding for the period was 100,000 shares. Hence, basic EPS—ignoring all dilutive securities—is €2.20. The average number of shares related to options outstanding (although not exercisable at this time), at an option price of €20 per share, is 5,000 shares. The average market price of the ordinary shares during the year was €28. Illustration 16-27 shows the computation of EPS using the treasury-share method.

Contingently Issuable Shares

Contingently issuable ordinary shares are defined as ordinary shares issuable for little or no cash consideration upon satisfaction of specified conditions in a contingent share agreement. For example, in business combinations, the acquirer may agree to issue additional shares—contingently issuable shares—under certain circumstances. Companies generally issue these contingent shares based on a measure, such as attainment of a

¹⁷The incremental number of shares may be more simply computed:

$$\frac{\text{Market price} - \text{Option price}}{\text{Market price}} \times \text{Number of options} = \text{Number of shares}$$

$$\frac{\cancel{\epsilon}50 - \cancel{\epsilon}30}{\cancel{\epsilon}50} \times 1,500 \text{ options} = 600 \text{ shares}$$

¹⁸Options and warrants have essentially the same assumptions and computational problems although the warrants may allow or require the tendering of some other security, such as debt, in lieu of cash upon exercise. This subject is beyond the scope of this textbook.

	Basic Earnings per Share	Diluted Earnings per Share

Average number of ordinary shares outstanding	100,000	100,000
Total average number of ordinary shares outstanding and potential ordinary shares	100,000 (A)	101,429 (C)
Net income for the year	€220,000 (B)	€220,000 (D)
Earnings per share	€2.20 (B ÷ A)	€2.17 (D ÷ C)

ILLUSTRATION 16-27 Computation of Earnings per Share—Treasury-Share Method

certain earnings or market price level. The basic rule is that the number of contingent shares to be included in diluted earnings per share is based on the number of shares that would be issuable as if the end of the period were the end of the contingency period. ¹⁹ [11]

For example, assume that Watts Corporation purchased Cardoza Company in 2014 and agreed to give Cardoza's shareholders 20,000 additional shares in 2017 if Cardoza's net income in 2016 is R\$90,000. Here is what happened in the next two years:

- **1.** In 2015, Cardoza's net income is R\$100,000. Cardoza therefore has met the net income test in 2015 and **should include** the 20,000 shares in diluted earnings per share for 2015.
- **2.** In 2016, Cardoza's net income is R\$80,000. Cardoza therefore does not meet the earnings test in 2016 and **should not** include the shares in diluted earnings per share in 2016.

Because Cardoza's earnings in 2015 may change in 2016, the calculation of basic EPS does not include contingent shares until the end of the contingency period because not all conditions have been satisfied.

Antidilution Revisited

In computing diluted EPS, a company must consider the aggregate of all dilutive securities. But first it must determine which potentially dilutive securities are in fact individually dilutive and which are antidilutive. A company should exclude any security that is antidilutive, nor can the company use such a security to offset dilutive securities.

Recall that including antidilutive securities in earnings per share computations increases earnings per share (or reduces net loss per share). With options or warrants, whenever the exercise price exceeds the market price, the security is antidilutive. Convertible debt is antidilutive if the addition to income of the interest (net of tax) causes a greater percentage increase in income (numerator) than conversion of the bonds causes a percentage increase in ordinary and potentially dilutive shares (denominator). In other words, convertible debt is antidilutive if conversion of the security causes ordinary share earnings to increase by a greater amount per additional ordinary share than earnings per share was before the conversion.

¹⁹In addition to contingent issuances of shares, other situations that might lead to dilution are the issuance of participating securities and two-class ordinary shares. The reporting of these types of securities in EPS computations is beyond the scope of this textbook.

To illustrate, assume that Martin Corporation has a \$1,000,000 debt issue that is convertible into 10,000 ordinary shares. Interest expense on the liability component of this convertible bond is \$60,000. Net income for the year is \$210,000, the weighted-average number of ordinary shares outstanding is 100,000 shares, and the tax rate is 40 percent. In this case, assumed conversion of the debt into ordinary shares at the beginning of the year requires the following adjustments of net income and the weighted-average number of shares outstanding.

ILLUSTRATION 16-28

Test for Antidilution

Net income for the year Add: Adjustment for interest	\$210,000	Average number of shares outstanding	100,000
(net of tax) on bonds		Add: Shares issued upon assumed	
$$60,000 \times (140)$	36,000	conversion of debt	10,000
Adjusted net income	\$246,000	Average number of ordinary and	
		potential ordinary shares	110,000
		100,000 = \$2.10 110,000 = \$2.24 = Antidilutive	

As a shortcut, Martin can also identify the convertible debt as antidilutive by comparing the EPS resulting from conversion, \$3.60 (\$36,000 additional earnings \div 10,000 additional shares), with EPS before inclusion of the convertible debt, \$2.10.

Companies should ignore antidilutive securities in all calculations and in computing diluted earnings per share. This approach is reasonable. The accounting profession's intent was to inform the investor of the possible dilution that might occur in reported earnings per share and not to be concerned with securities that, if converted or exercised, would result in an increase in earnings per share. Appendix 16B to this chapter provides an extended example of how companies consider antidilution in a complex situation with multiple securities.

EPS Presentation and Disclosure

A company should present both basic and diluted EPS information as follows.

ILLUSTRATION 16-29

EPS Presentation— Complex Capital Structure

When the earnings of a period include discontinued operations, a company should show per share amounts for the following: income from continuing operations, discontinued operations, and net income. Companies that report a discontinued operation should present per share amounts **for those line items** either on the face of the income statement or in the notes to the financial statements. Illustration 16-30 shows a presentation reporting discontinued operations.

ILLUSTRATION 16-30

EPS Presentation, with Discontinued Operations

Basic earnings per share Income from continuing operations Discontinued operations (loss) Net income	\$3.80 (0.80) <u>\$3.00</u>
Diluted earnings per share Income from continuing operations Discontinued operations (loss) Net income	\$3.35 (0.65) \$2.70

The following information should also be disclosed.

- **1.** The amounts used as the numerators in calculating basic and diluted earnings per share, and a reconciliation of those amounts to net income or loss. The reconciliation should include the individual effect of each class of instruments that affects earnings per share.
- **2.** The weighted-average number of ordinary shares used as the denominator in calculating basic and diluted earnings per share, and a reconciliation of these denominators to each other. The reconciliation shall include the individual effect of each class of instruments that affects earnings per share.
- **3.** Instruments (including contingently issuable shares) that could potentially dilute basic earnings per share in the future but were not included in the calculation of diluted earnings per share because they are antidilutive for the period(s) presented.
- **4.** A description of ordinary share transactions or potential ordinary share transactions that occur after the reporting period and that would have significantly changed the number of ordinary shares or potential ordinary shares outstanding at the end of the period if those transactions had occurred before the end of the reporting period.

Underlying Concepts

Providing additional EPS information in addition to the presentation on the face of the income statement is an application of the full disclosure principle.

Note that if the number of ordinary or potential ordinary shares outstanding increases as a result of a share dividend or share split, or decreases as a result of diluted EPS calculations, such changes in the number of shares shall be disclosed.

Illustration 16-31 presents the reconciliation and the related disclosure to meet the requirements of this standard. [12]

Summary of EPS Computation

Computation of earnings per share is a complex issue. It is also a controversial area because many securities, although technically not ordinary shares, have many of their basic characteristics. Indeed, some companies have issued these other securities rather than ordinary shares in order to avoid an adverse dilutive effect on earnings per share. Illustrations 16-32 and 16-33 (on page 782) display the elementary points of calculating earnings per share in a simple capital structure and in a complex capital structure.

ILLUSTRATION 16-32

Calculating EPS, Simple Capital Structure

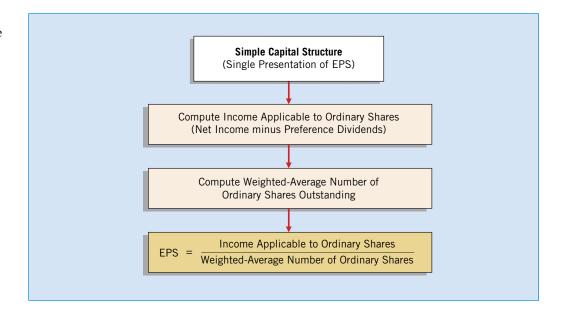

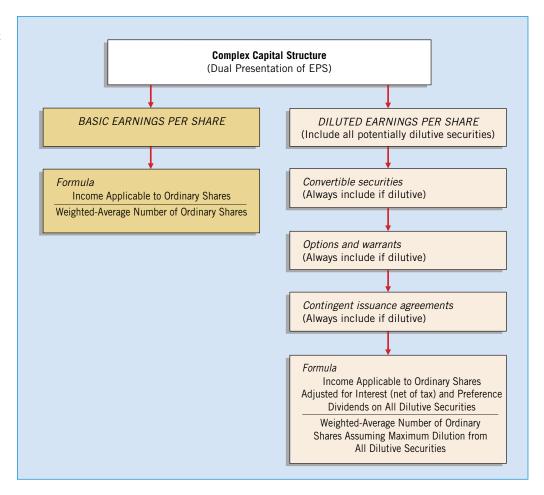

ILLUSTRATION 16-33

Calculating EPS, Complex Capital Structure

GLOBAL ACCOUNTING INSIGHTS

DILUTIVE SECURITIES AND EARNINGS PER SHARE

Both the FASB and the IASB are working on a standard related to the distinction between liabilities and equity. The U.S. GAAP approach to account for certain dilutive securities, such as convertible debt and debt issued with share

warrants, is different than IFRS. The accounting and disclosure requirements for accounting for share options and EPS computations are similar between U.S. GAAP and IFRS.

Relevant Facts

Similarities

- U.S. GAAP and IFRS follow the same model for recognizing share-based compensation: The fair value of shares and options awarded to employees is recognized over the period to which the employees' services relate.
- Although the calculation of basic and diluted earnings per share is similar between U.S. GAAP and IFRS, the Boards are working to resolve the few minor differences in EPS reporting. One proposal in the FASB project concerns contracts that can be settled in either cash or shares. IFRS requires that share settlement must be used, while U.S. GAAP gives companies a choice. The FASB project proposes adopting the IFRS approach, thus converging U.S. GAAP and IFRS in this regard.

Differences

A significant difference between U.S. GAAP and IFRS is the
accounting for securities with characteristics of debt and
equity, such as convertible debt. Under U.S. GAAP, all of
the proceeds of convertible debt are recorded as long-term
debt. Under IFRS, convertible bonds are "bifurcated"—

- separated into the equity component (the value of the conversion option) of the bond issue and the debt component.
- Related to employee share-purchase plans, these plans under U.S. GAAP are often considered non-compensatory and therefore no compensation is recorded. However, certain conditions must exist before a plan can be considered non-compensatory (see the discussion below in the About the Numbers section for U.S. GAAP treatment). Under IFRS, all employee share-purchase plans are deemed to be compensatory; that is, compensation expense is recorded for the amount of the discount.
- Modification of a share option results in the recognition of any incremental fair value under both U.S. GAAP and IFRS. However, if the modification leads to a reduction, U.S. GAAP permits the reduction. IFRS does not.
- Other EPS differences relate to (1) the treasury-share method and how the proceeds from extinguishment of a liability should be accounted for, and (2) how to compute the weighted average of contingently issuable shares.

About the Numbers

Accounting for Convertible Bonds

As indicated, a significant difference in U.S. GAAP and IFRS is the accounting for convertible debt. To illustrate, assume **PepsiCo** (USA) issued, at par, \$10 million of 10-year convertible bonds with a coupon rate of 4.75%. Assuming the conversion is settled in shares, PepsiCo makes the following entry to record the issuance under U.S. GAAP.

Cash 10,000,000 10,000,000 10,000,000

Under IFRS, PepsiCo must split out the liability and equity component—the value of the conversion option—of the bond issue.

Thus, IFRS records separately the bond issue's debt and equity components. Many believe this provides a more faithful representation of the impact of the bond issue. However,

there are concerns about reliability of the method used to estimate the liability component of the bond.

Employee Stock-Purchase Plans Under U.S. GAAP

Employee stock-purchase plans (ESPPs) generally permit all employees to purchase shares at a discounted price for a short period of time. The company often uses such plans to secure equity capital or to induce widespread ownership of its common stock (ordinary shares) among employees. Under U.S. GAAP, these plans are considered compensatory unless they satisfy **all three** conditions presented below.

- **1.** Substantially all full-time employees may participate on an equitable basis.
- **2.** The discount relative to the market price is small. That is, the discount does not exceed the per share amount of costs

avoided by not having to raise cash in a public offering. If the amount of the discount is 5% or less, no compensation needs to be recorded.

3. The plan offers no substantive option feature.

For example, Masthead Company's stock-purchase plan allowed employees who met minimal employment qualifications to purchase its shares at a 5% reduction from market price for a short period of time. The reduction from market price is not considered compensatory. Why? Because the per share amount of the costs avoided by not having to raise the

cash in a public offering equals 5%. Companies that offer their employees a compensatory ESPP should record the compensation expense over the service life of the employees.

It is difficult for some companies to claim that their ESPPs are non-compensatory (and therefore not record compensation expense) unless they change their discount policy, which in the past often was 15%. If they change their discount policy to 5%, participation in these plans will undoubtedly be lower. As a result, it is likely that some U.S. companies will end up dropping these plans.

On the Horizon

The FASB has been working on a standard that will likely converge to IFRS in the accounting for convertible debt. Similar to the IASB, the FASB is examining the classification of hybrid securities; the IASB is seeking comment on a discussion document similar to the FASB Preliminary Views document, "Financial Instruments with Characteristics of Equity."

It is hoped that the Boards will develop a converged standard in this area. While U.S. GAAP and IFRS are similar as to the presentation of EPS, the Boards have been considering a project to resolve remaining differences related to earnings per share computations.

KEY TERMS

antidilutive securities, 775 basic EPS, 771, 775 complex capital structure, 771 compound instrument, 755 contingently issuable ordinary shares, 778 convertible bonds, 754 convertible preference shares, 759 diluted EPS, 771, 775 dilutive securities, 754, 775 earnings per share, 770 fair value method, 764 grant date, 763 if-converted method, 776 income available to ordinary shareholders, 771 induce (induced) conversion, 759 intrinsic-value method, 764 market condition, 766 restricted-share plans, 766

SUMMARY OF LEARNING OBJECTIVES

- Describe the accounting for the issuance, conversion, and retirement of convertible securities. Convertible debt is accounted for as a compound instrument because it contains both a liability and an equity component. IFRS requires that compound instruments be separated into their liability and equity components for purposes of accounting. Companies use the with-and-without method to value compound instruments. If companies convert bonds into other securities, the principal accounting problem is to determine the amount at which to record the securities exchanged for the bonds; the book value method is considered IFRS. The retirement of convertible debt is considered a debt extinguishment, and the difference between the carrying amount of the retired convertible debt and the cash paid should result in a gain or loss.
- **Explain the accounting for convertible preference shares.** When convertible preference shares are converted, a company uses the book value approach. It debits Share Capital—Preference, along with the related Share Premium—Conversion Equity, and credits Share Capital—Ordinary and Share Premium—Ordinary (if any excess exists).
- Contrast the accounting for share warrants and for share warrants issued with other securities. Share warrants: Companies should allocate the proceeds from the sale of debt with warrants between the two securities using the with-and-without method. Share rights: No entry is required when a company issues rights to existing shareholders. The company needs only to make a memorandum entry to indicate the number of rights issued to existing shareholders and to ensure that the company has additional unissued shares registered for issuance in case the shareholders exercise the rights.

- **Describe the accounting for share compensation plans.** Companies must use the fair value approach to account for share-based compensation. Under this approach, a company computes total compensation expense based on the fair value of the options that it expects to vest on the grant date. Companies recognize compensation expense in the periods in which the employee performs the services. Restricted-share plans follow the same general accounting principles as those for share options. Companies estimate total compensation cost at the grant date based on the fair value of the restricted share; they expense that cost over the service period.
- Discuss the controversy involving share compensation plans. When first proposed, there was considerable opposition to the recognition provisions contained in the fair value approach. The reason: That approach could result in substantial, previously unrecognized compensation expense. Many small companies believed that the standard would place them at a competitive disadvantage with larger companies that can withstand higher compensation charges. Offsetting such opposition is the need for greater transparency in financial reporting, on which our capital markets depend.
- **Compute earnings per share in a simple capital structure.** When a company has both ordinary and preference shares outstanding, it subtracts the current-year preference shares dividend from net income to arrive at income available to ordinary shareholders. The formula for computing earnings per share is net income less preference share dividends, divided by the weighted-average number of shares outstanding.
- Compute earnings per share in a complex capital structure. A complex capital structure requires a dual presentation of earnings per share, each with equal prominence on the face of the income statement. These two presentations are referred to as basic earnings per share and diluted earnings per share. Basic earnings per share relies on the number of weighted-average ordinary shares outstanding (i.e., equivalent to EPS for a simple capital structure). Diluted earnings per share indicates the dilution of earnings per share that will occur if all potential issuances of ordinary shares that would reduce earnings per share takes place. Companies with complex capital structures should exclude antidilutive securities when computing earnings per share.

APPENDIX 16A

ACCOUNTING FOR SHARE-APPRECIATION RIGHTS

A major disadvantage of many share-option plans is that an executive must pay income tax on the difference between the market price of the share and the option price at the **date of exercise**. This feature of share-option plans (those referred to as **non-qualified**) can be a financial hardship for an executive who wishes to keep the shares (rather than sell them immediately) because he or she would have to pay not only income tax but the option price as well. In another the

would have to pay not only income tax but the option price as well. In another type of plan (an **incentive plan**), the executive pays no taxes at exercise but may need to borrow to finance the exercise price, which leads to related interest cost.

One solution to this problem was the creation of **share-appreciation rights** (SARs). In this type of plan, the company gives an executive the right to receive compensation equal to the share appreciation. **Share appreciation** is the excess of the market price of the shares at the date of exercise over a pre-established price. The company may pay the share appreciation in cash, shares, or a combination of the two.

LEARNING OBJECTIVE

Explain the accounting for share-appreciation rights plans.

The major advantage of SARs is that the executive often does not have to make a cash outlay at the date of exercise but receives a payment for the share appreciation. Unlike shares acquired under a share-option plan, the company does not issue the shares that constitute the basis for computing the appreciation in a SARs plan. Rather, the company simply awards the executive cash or shares having a fair value equivalent to the appreciation. The accounting for share-appreciation rights depends on whether the company classifies the rights as equity or as a liability.

SARS—SHARE-BASED EQUITY AWARDS

Companies classify SARs as **equity awards** if at the date of exercise the holder receives shares from the company upon exercise. In essence, SARs are essentially equivalent to a share option. The major difference relates to the form of payment. With the share option, the holder pays the exercise price and then receives the shares. In an equity SAR, the holder receives shares in an amount equal to the **share-price appreciation** (the difference between the market price and the pre-established price). The accounting for SARs when they are equity awards follows the accounting used for share options. At the date of grant, the company determines a fair value for the SAR and then allocates this amount to compensation expense over the service period of the employees.

SARS-SHARE-BASED LIABILITY AWARDS

Companies classify SARs as liability awards if at the date of exercise the holder receives a cash payment. In this case, the holder is not receiving additional shares but a cash payment equal to the amount of share-price appreciation. The company's compensation expense therefore changes as the value of the liability changes.

A company uses the following approach to record share-based liability awards:

- **1.** Measure the fair value of the award at the grant date and accrue compensation over the service period.
- **2.** Remeasure the fair value each reporting period until the award is settled; adjust the compensation cost each period for changes in fair value prorated for the portion of the service period completed.
- **3.** Once the service period is completed, determine compensation expense each subsequent period by reporting the full change in market price as an adjustment to compensation expense.

For liability awards, the company estimates the fair value of the SARs using an option-pricing model. The company then allocates this total estimated compensation cost over the service period, recording expense (or a decrease in expense if fair value declines) in each period. At the end of each period, total compensation expense reported to date should equal the percentage of the total service period that has elapsed, multiplied by the total estimated compensation cost.

For example, assume that the service period is 40 percent complete, and total estimated compensation is \$100,000. The company reports cumulative compensation expense to date of \$40,000 ($$100,000 \times .40$).

The method of allocating compensation expense is called the **percentage approach**. In this method, in the first year of, say, a four-year plan, the company charges one-fourth

of the estimated cost to date. In the second year, it charges off two-fourths, or 50 percent, of the estimated cost to date, less the amount already recognized in the first year. In the third year, it charges off three-fourths of the estimated cost to date, less the amount recognized previously. In the fourth year, it charges off the remaining compensation expense.

A special problem arises when the exercise date is past the service period. In the previous example, if the share-appreciation rights were not exercised at the end of four years, in the fifth year the company would have to account for the difference in the market price and the pre-established price. In this case, the company adjusts compensation expense whenever a change in the market price of the shares occurs in subsequent reporting periods until the rights expire or are exercised, whichever comes first.

Increases or decreases in the fair value of the SAR between the date of grant and the exercise date, therefore, result in a change in the measure of compensation. Some periods will have credits to compensation expense if the fair value decreases from one period to the next. The credit to compensation expense, however, cannot exceed previously recognized compensation expense. In other words, **cumulative compensation expense cannot be negative**.

SHARE-APPRECIATION RIGHTS EXAMPLE

Assume that Brazil Hotels, Inc. establishes a share-appreciation rights plan on January 1, 2015. The plan entitles executives to receive cash at the date of exercise for the difference between the share's market price and the pre-established price of R\$10 on 10,000 SARs. The fair value of the SARs on December 31, 2015, is R\$3, and the service period runs for two years (2015–2016). Illustration 16A-1 indicates the amount of compensation expense to be recorded each period, assuming that the executives hold the SARs for three years, at which time they exercise the rights.

SHARE-APPRECIATION RIGHTS SCHEDULE OF COMPENSATION EXPENSE							
(1)	(2)	(3) Cumulative	(4)	(5) Cumulative Compensation			
	Fair	Compensation	Percentage	Accrued	Expense	Expense	Expense
Date	Value	Recognizable	Accrued ^b	to Date	2015	2016	2017
12/31/15	R\$3	R\$30,000	50%	R\$ 15,000	R\$15,000		
				55,000		R\$55,000	
12/31/16	7	70,000	100%	70,000			
				(20,000)			R\$(20,000)
12/31/17	5	50,000	100%	R\$ 50,000			

^aCumulative compensation for unexercised SARs to be allocated to periods of service. ^bThe percentage accrued is based upon a two-year service period (2015–2016).

In 2015, Brazil Hotels records compensation expense of R\$15,000 because 50 percent of the R\$30,000 total compensation cost estimated at December 31, 2015, is allocable to 2015. In 2016, the fair value increased to R\$7 per right (R\$70,000 total). The company recorded additional compensation expense of R\$55,000 (R\$70,000 minus R\$15,000).

ILLUSTRATION 16A-1Compensation Expense,
Share-Appreciation

Rights

The executives held the SARs through 2017, during which time the fair value declined to R\$5 (and the obligation to the executives equals R\$50,000). Brazil Hotels recognizes the decrease by recording a R\$20,000 credit to compensation expense and a debit to Liability under Share-Appreciation Plan. Note that after the service period ends, since the rights are still outstanding, the company adjusts the rights to market at December 31, 2017. Any such credit to compensation expense cannot exceed previous charges to expense attributable to that plan.

As the company records the compensation expense each period, the corresponding credit is to a liability account, because the company will pay the share appreciation in cash. Brazil Hotels records compensation expense in the first year as follows.

Compensation Expense

15,000

Liability under Share-Appreciation Plan

15,000

The company would credit the liability account for R\$55,000 again in 2016. In 2017, when it records negative compensation expense, Brazil would debit the account for R\$20,000. The entry to record the negative compensation expense is as follows.

Liability under Share-Appreciation Plan

20,000

Compensation Expense

20,000

At December 31, 2017, the executives receive R\$50,000 (which equals the market price of the shares less the pre-established price). Brazil would remove the liability with the following entry.

Liability under Share-Appreciation Plan

50,000

Cash

50,000

Compensation expense can increase or decrease substantially from one period to the next. The reason is that compensation expense is remeasured each year, which can lead to large swings in compensation expense.

KEY TERMS

percentage approach, 786 share appreciation, 785 share-appreciation rights (SARs), 785

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 16A

Explain the accounting for share-appreciation rights plans. The accounting for share-appreciation rights depends on whether the rights are classified as equity- or liability-based. If equity-based, the accounting is similar to that used for share options. If liability-based, companies remeasure compensation expense each period and allocate it over the service period using the percentage approach.

APPENDIX 16B

COMPREHENSIVE EARNINGS PER SHARE EXAMPLE

LEARNING OBJECTIVE [9]

Compute earnings per share in a complex situation.

This appendix illustrates the method of computing dilution when many securities are involved. We present the following section of the statement of financial position of Webster Corporation for analysis. Assumptions related to the capital structure follow the statement of financial position.

WEBSTER CORPORATION STATEMENT OF FINANCIAL POSITION (PARTIAL) **AT DECEMBER 31, 2015** Equity 10% cumulative, convertible preference shares, par value \$100; 100,000 shares authorized, 25,000 shares issued and outstanding \$2,500,000 Share capital—ordinary, par value \$1, 5,000,000 shares authorized, 500,000 shares issued and outstanding 500,000 Share premium 2,000,000 Retained earnings 9,000,000 \$14,000,000 Total equity Long-term debt Notes payable, 14% \$1,000,000 Convertible bonds payable (Issue A) 2,500,000 Convertible bonds payable (Issue B) 2,500,000 Total long-term debt \$6,000,000

ILLUSTRATION 16B-1

Statement of Financial Position for Comprehensive Illustration

Notes and Assumptions December 31, 2015

- 1. Options were granted in July 2013 to purchase 50,000 ordinary shares at \$20 per share. The average market price of Webster's ordinary shares during 2016 was \$30 per share. All options are still outstanding at the end of 2015.
- 2. Both convertible bonds were issued in 2014. Each convertible bond is convertible into 40 shares of ordinary shares. (Each bond has a face value of \$1,000.) In 2015, interest expense of \$200,000 on the liability component of convertible bonds (Issue A) is recorded, and interest expense of \$250,000 is recorded on the liability component of convertible bonds (Issue B).
- **3.** The 10 percent cumulative, convertible preference shares were issued at the beginning of 2015 at par. Each preference share is convertible into four ordinary shares.
- 4. The average income tax rate is 40 percent.
- **5.** The 500,000 ordinary shares were outstanding during the entire year.
- 6. Preference dividends were not declared in 2015.
- 7. Net income was \$1,750,000 in 2015.
- 8. No bonds or preference shares were converted during 2015.

The computation of basic earnings per share for 2015 starts with the amount based upon the weighted-average of ordinary shares outstanding, as shown in Illustration 16B-2.

	Net income Less: 10% cumulative, convertible preference share dividend requirements	\$1,750,000 250,000
	Income applicable to ordinary shareholders	\$1,500,000
	Weighted-average number of ordinary shares outstanding	500,000
	Earnings per ordinary share	\$3.00
ı		

ILLUSTRATION 16B-2

Computation of Earnings per Share—Simple Capital Structure

Note the following points concerning this calculation.

- **1.** When preference shares are cumulative, the company subtracts the preference dividend to arrive at income applicable to ordinary shares, whether the dividend is declared or not.
- **2.** The company must compute earnings per share of \$3 as a starting point because it is the per share amount that is subject to reduction due to the existence of convertible securities and options.

DILUTED EARNINGS PER SHARE

The steps for computing diluted earnings per share are:

- **1.** Determine, for each dilutive security, the per share effect assuming exercise/conversion.
- **2.** Rank the results from Step 1 from smallest to largest earnings effect per share. That is, rank the results from most dilutive to least dilutive.
- **3.** Beginning with the earnings per share based upon the weighted-average of ordinary shares outstanding (\$3), recalculate earnings per share by adding the smallest per share effects from Step 2. If the results from this recalculation are less than \$3, proceed to the next smallest per share effect and recalculate earnings per share. Continue this process so long as each recalculated earnings per share is smaller than the previous amount. The process will end either because there are no more securities to test or a particular security maintains or increases earnings per share (is antidilutive).

We'll now apply the three steps to Webster Corporation. (Note that net income and income available to ordinary shareholders are not the same if preference dividends are declared or cumulative.) Webster Corporation has four securities that could reduce EPS: options, convertible bonds (Issue A), convertible bonds (Issue B), and the convertible preference shares.

The first step in the computation of diluted earnings per share is to determine a per share effect for each potentially dilutive security. Illustrations 16B-3 through 16B-6 illustrate these computations.

ILLUSTRATION 16B-3

Per Share Effect of Options (Treasury-Share Method), Diluted Earnings per Share

Number of shares under option Option price per share	50,000 × \$20

Illustration 16B-7 shows the ranking of all four potentially dilutive securities.

	Effect per Share
1. Options	\$ 0
2. Convertible bonds (Issue A)	1.20
3. Convertible bonds (Issue B)	1.50
4. 10% convertible preference	2.50

ILLUSTRATION 16B-7

Ranking of Per Share Effects (Smallest to Largest), Diluted Earnings per Share

The next step is to determine earnings per share giving effect to the ranking in Illustration 16B-7. Starting with the earnings per share of \$3 computed previously, add the incremental effects of the options to the original calculation, as follows.

Options	
Income applicable to ordinary shareholders	\$1,500,000
Add: Incremental numerator effect of options	none
Total	\$1,500,000
Weighted-average number of ordinary shares outstanding	500,000
Add: Incremental denominator effect of options (Illustration 16B-3)	_16,667
Total	516,667
Recomputed earnings per share (\$1,500,000 ÷ 516,667 shares)	\$2.90

ILLUSTRATION 16B-8

Recomputation of EPS Using Incremental Effect of Options

Since the recomputed earnings per share is reduced (from \$3 to \$2.90), the effect of the options is dilutive. Again, we could have anticipated this effect because the average market price (\$30) exceeded the option price (\$20).

Assuming that Webster converts the bonds (Issue A), recomputed earnings per share is as shown below.

Convertible Bonds (Issue A)				
Numerator from previous calculation	\$1,500,000			
Add: Interest expense avoided (net of tax)	120,000			
Total	\$1,620,000			
Denominator from previous calculation (shares) Add: Number of ordinary shares assumed issued upon conversion of bonds	516,667 100,000			
Total	616,667			
Recomputed earnings per share (\$1,620,000 ÷ 616,667 shares)	\$2.63			

ILLUSTRATION 16B-9

Recomputation of EPS Using Incremental Effect of Convertible Bonds (Issue A)

Since the recomputed earnings per share is reduced (from \$2.90 to \$2.63), the effect of the bonds (Issue A) is dilutive.

Next, assuming Webster converts the bonds (Issue B), the company recomputes earnings per share as shown in Illustration 16B-10.

ILLUSTRATION 16B-10

Recomputation of EPS Using Incremental Effect of Convertible Bonds (Issue B)

Convertible Bonds (Issue B)	
` ,	\$1,620,000
Numerator from previous calculation	
Add: Interest expense avoided (net of tax)	150,000
Total	\$1,770,000
Denominator from previous calculation (shares)	616,667
Add: Number of ordinary shares assumed issued upon conversion of bonds	100,000
Total	716,667
Recomputed earnings per share (\$1,770,000 ÷ 716,667 shares)	\$2.47

Since the recomputed earnings per share is reduced (from \$2.63 to \$2.47), the effect of the convertible bonds (Issue B) is dilutive.

The final step is the recomputation that includes the 10 percent preference shares. This is shown in Illustration 16B-11.

ILLUSTRATION 16B-11

Recomputation of EPS Using Incremental Effect of 10% Convertible Preference Shares

10% Convertible Preference				
Numerator from previous calculation	\$1,770,000			
Add: Dividend requirement avoided	250,000			
Total	\$2,020,000			
Denominator from previous calculation (shares)	716,667			
Add: Number of ordinary shares assumed issued upon conversion of preference shares	100,000			
Total	816,667			
Recomputed earnings per share (\$2,020,000 ÷ 816,667 shares)	\$2.47			

Since the recomputed earnings per share is not reduced, the effect of the 10 percent convertible preference shares are not dilutive. Diluted earnings per share is \$2.47. The per share effects of the preference shares are not used in the computation.

Finally, Illustration 16B-12 shows Webster Corporation's disclosure of earnings per share on its income statement.

ILLUSTRATION 16B-12

Income Statement Presentation, EPS

Net income	\$1,750,000
Basic earnings per ordinary share (Note X)	\$3.00
Diluted earnings per ordinary share	\$2.47

A company uses income from continuing operations (adjusted for preference dividends) to determine whether potential ordinary shares are dilutive or antidilutive. Some refer to this measure as the **control number**. To illustrate, assume that Barton Company provides the following information.

www.downloadslide.com

Summary of Learning Objective for Appendix 16B 793

Income from continuing operations Loss from discontinued operations Net loss	\$2,400,000 3,600,000 \$1,200,000
Weighted-average shares of ordinary shares outstanding Potential ordinary shares	1,000,000

ILLUSTRATION 16B-13Barton Company Data

Barton reports basic and dilutive earnings per share as follows.

Basic earnings per share Income from continuing operations Loss from discontinued operations Net loss	\$2.40 <u>3.60</u> \$1.20
Diluted earnings per share Income from continuing operations Loss from discontinued operations Net loss	\$2.00 3.00 \$1.00

ILLUSTRATION 16B-14Basic and Diluted EPS

As Illustration 16B-14 shows, basic earnings per share from continuing operations is higher than the diluted earnings per share from continuing operations. The reason: The diluted earnings per share from continuing operations includes an additional 200,000 shares of potential ordinary shares in its denominator.²⁰

Companies use income from continuing operations as the control number because many of them show income from continuing operations (or a similar line item above net income if it appears on the income statement), but report a final net loss due to a loss on discontinued operations. If a company uses final net loss as the control number, basic and diluted earnings per share would be the same because the potential ordinary shares are antidilutive.²¹

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 16B

KEY TERMS

control number, 792

Compute earnings per share in a complex situation. For diluted EPS, make the following computations. (1) For each potentially dilutive security, determine the per share effect assuming exercise/conversion. (2) Rank the results from most dilutive to least dilutive. (3) Recalculate EPS starting with the most dilutive and continue adding securities until EPS does not change or becomes larger.

²⁰A company that does not report a discontinued operation uses net income as the control number.

²¹If a company reports a loss from continuing operations, basic and diluted earnings per share will be the same because potential ordinary shares will be antidilutive even if the company reports final net income. The IASB believes that comparability of EPS information will be improved by using income from continuing operations as the control number.

QUESTIONS

- 1. What is meant by a dilutive security?
- 2. Briefly explain why corporations issue convertible securities.
- Discuss the similarities between convertible debt and debt issued with share warrants.
- **4.** Bridgewater Corp. offered holders of its 1,000 convertible bonds a premium of €160 per bond to induce conversion into ordinary shares. Upon conversion of all the bonds, Bridgewater Corp. recorded the €160,000 premium as a reduction of Share Premium—Ordinary. Comment on Bridgewater's treatment of the €160,000 "sweetener."
- 5. Explain how the conversion feature of convertible debt has a value (a) to the issuer and (b) to the purchaser.
- **6.** What are the arguments for giving separate accounting recognition to the conversion feature of debentures?
- 7. Four years after issue, debentures with a face value of £1,000,000 and book value of £960,000 are tendered for

conversion into 80,000 ordinary shares immediately after an interest payment date. At that time, the market price of the debentures is 104, and the ordinary shares are selling at £14 per share (par value £10). The company records the conversion as follows.

Bonds Payable	960,000	
Share Premium—Conversion Equity		10,000
Share Capital—Ordinary		800,000
Share Premium—Ordinary		150,000

Discuss the propriety of this accounting treatment.

8. On July 1, 2015, Roberts Corporation issued €3,000,000 of 9% bonds payable in 20 years. The bonds include warrants giving the bondholder the right to purchase for €30 one ordinary share of €1 par value at any time during the next 10 years. The bonds were sold for €3,000,000. The net present value of the debt at the time of issuance was €2,900,000. Prepare the journal entry to record this transaction.

- **9.** What are share rights? How does the issuing company account for them?
- **10.** Briefly explain the accounting requirements for share compensation plans under IFRS.
- 11. Cordero Corporation has an employee share-purchase plan which permits all full-time employees to purchase 10 ordinary shares on the third anniversary of their employment and an additional 15 shares on each subsequent anniversary date. The purchase price is set at the market price on the date purchased less a 10% discount. How is this discount accounted for by Cordero?
- **12.** What date or event does the profession believe should be used in determining the value of a share option? What arguments support this position?
- **13.** Over what period of time should compensation cost for a share-option plan be allocated?
- **14.** How is compensation expense for a share-option plan computed using the fair value approach?
- **15.** What are the advantages of using restricted shares to compensate employees?
- **16.** At December 31, 2015, Ruiz Company had 600,000 ordinary shares issued and outstanding, 400,000 of which had been issued and outstanding throughout the year and 200,000 of which were issued on October 1, 2015. Net income for 2015 was R\$1,750,000, and dividends declared on preference shares were R\$400,000. Compute Ruiz's earnings per ordinary share.
- **17.** What effect do share dividends or share splits have on the computation of the weighted-average number of shares outstanding?
- 18. Define the following terms.
 - (a) Basic earnings per share.
 - **(b)** Potentially dilutive security.
 - (c) Diluted earnings per share.
 - (d) Complex capital structure.
 - (e) Potential ordinary shares.

- **19.** What are the computational guidelines for determining whether a convertible security is to be reported as part of diluted earnings per share?
- **20.** Discuss why options and warrants may be considered potentially dilutive ordinary shares for the computation of diluted earnings per share.
- **21.** Explain how convertible securities are determined to be potentially dilutive ordinary shares and how those convertible securities that are not considered to be potentially dilutive ordinary shares enter into the determination of earnings per share data.
- **22.** Explain the treasury-share method as it applies to options and warrants in computing dilutive earnings per share
- 23. Earnings per share can affect market prices of ordinary shares. Can market prices affect earnings per share? Explain.
- 24. What is meant by the term antidilution? Give an example.
- **25.** What type of earnings per share presentation is required in a complex capital structure?
- **26.** Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for share-based compensation.

- 27. Norman Co., a fast-growing golf equipment company, uses IFRS. It is considering the issuance of convertible bonds. The bonds mature in 10 years, have a face value of €400,000, and pay interest annually at a rate of 4%. The net present value of the liability component is €365,000. Greg Shark is curious as to the difference in accounting for these bonds if the company were to use U.S. GAAP. (a) Prepare the entry to record issuance of the bonds at par under IFRS. (b) Repeat the requirement for part (a), assuming application of U.S. GAAP to the bond issuance. (c) Which approach provides the better accounting? Explain.
- *28. How is antidilution determined when multiple securities are involved?

BRIEF EXERCISES

- **BE16-1** Archer Company issued £4,000,000 par value, 7% convertible bonds at 99 for cash. The net present value of the debt without the conversion feature is £3,800,000. Prepare the journal entry to record the issuance of the convertible bonds.
- **1 BE16-2** Petrenko Corporation has outstanding 2,000 €1,000 bonds, each convertible into 50 shares of €10 par value ordinary shares. The bonds are converted on December 31, 2015. The bonds payable have a carrying value of €1,950,000, and there is conversion equity of €20,000. Record the conversion using the book value method.
- **BE16-3** Pechstein Corporation issued 2,000 shares of \$10 par value ordinary shares upon conversion of 1,000 shares of \$50 par value preference shares. The preference shares were originally issued at \$60 per share. The ordinary shares are trading at \$26 per share at the time of conversion. Record the conversion of the convertible preference shares.
- **BE16-4** Eisler Corporation issued 2,000 \$1,000 bonds at 101. Each bond was issued with one detachable share warrant. At issuance, the net present value of the bonds without the warrants was \$1,970,000. Prepare the journal entry to record the issuance of the bonds and the share warrants.

- **BE16-5** Parsons Corporation issued 3,000 €1,000 bonds at 98. Each bond was issued with one detachable share warrant. At issuance, the net present value of the bonds without the warrants was €2,910,000. Prepare the journal entry to record the issuance of the bonds and the share warrants.
- **BE16-6** On January 1, 2015, Barwood Corporation granted 5,000 options to executives. Each option entitles the holder to purchase one share of Barwood's £5 par value ordinary shares at £50 per share at any time during the next 5 years. The market price of the shares is £65 per share on the date of grant. The fair value of the options at the grant date is £150,000. The period of benefit is 2 years. Prepare Barwood's journal entries for January 1, 2015, and December 31, 2015 and 2016.
- **BE16-7** Refer to the data for Barwood Corporation in BE16-6. Repeat the requirements, assuming that instead of options, Barwood granted 2,000 restricted shares.
- **BE16-8** On January 1, 2015 (the date of grant), Lutz Corporation issues 2,000 restricted shares to its executives. The fair value of these shares is \$75,000, and their par value is \$10,000. The shares are forfeited if the executives do not complete 3 years of employment with the company. Prepare the journal entry (if any) on January 1, 2015, and on December 31, 2015, assuming the service period is 3 years.
- **BE16-9** Kalin Corporation had 2015 net income of €1,000,000. During 2015, Kalin paid a dividend of €2 per share on 100,000 preference shares. During 2015, Kalin had outstanding 250,000 ordinary shares. Compute Kalin's 2015 earnings per share.
- **BE16-10** Douglas Corporation had 120,000 ordinary shares outstanding on January 1, 2015. On May 1, 2015, Douglas issued 60,000 ordinary shares. On July 1, Douglas purchased 10,000 treasury shares, which were reissued on October 1. Compute Douglas's weighted-average number of ordinary shares outstanding for 2015.
- **BE16-11** Tomba Corporation had 300,000 ordinary shares outstanding on January 1, 2015. On May 1, Tomba issued 30,000 ordinary shares. (a) Compute the weighted-average number of shares outstanding if the 30,000 shares were issued for cash. (b) Compute the weighted-average number of shares outstanding if the 30,000 shares were issued in a share dividend.
- **BE16-12** Rockland Corporation earned net income of R\$300,000 in 2015 and had 100,000 ordinary shares outstanding throughout the year. Also outstanding all year was R\$800,000 of 10% bonds, which are convertible into 16,000 ordinary shares. The interest expense on the liability component of the convertible bonds was R\$64,000. Rockland's tax rate is 40%. Compute Rockland's 2015 diluted earnings per share.
- **BE16-13** DiCenta Corporation reported net income of €270,000 in 2015 and had 50,000 ordinary shares outstanding throughout the year. Also outstanding all year were 5,000 shares of cumulative preference shares, each convertible into 2 ordinary shares. The preference shares pay an annual dividend of €5 per share. DiCenta's tax rate is 40%. Compute DiCenta's 2015 diluted earnings per share.
- **BE16-14** Bedard Corporation reported net income of \$300,000 in 2015 and had 200,000 ordinary shares outstanding throughout the year. Also outstanding all year were 45,000 options to purchase ordinary shares at \$10 per share. The average market price of the shares during the year was \$15. Compute diluted earnings per share.
- **BE16-15** The 2015 income statement of Wasmeier Corporation showed net income of €480,000 and a loss from discontinued operations of €120,000. Wasmeier had 100,000 shares of ordinary shares outstanding all year. Prepare Wasmeier's income statement presentation of earnings per share.
- *BE16-16 Ferraro, Inc. established a share-appreciation rights (SARs) program on January 1, 2015, which entitles executives to receive cash at the date of exercise for the difference between the market price of the shares and the pre-established price of \$20 on 5,000 SARs. The required service period is 2 years. The fair value of the SARs are determined to be \$4 on December 31, 2015, and \$9 on December 31, 2016. Compute Ferraro's compensation expense for 2015 and 2016.

EXERCISES

E16-1 (Issuance and Repurchase of Convertible Bonds) Angela Corporation issues 2,000 convertible bonds at January 1, 2015. The bonds have a 3-year life and are issued at par with a face value of €1,000 per bond, giving total proceeds of €2,000,000. Interest is payable annually at 6%. Each bond is convertible into 250 ordinary shares (par value of €1). When the bonds are issued, the market rate of interest for similar debt without the conversion option is 8%.

Instructions

- (a) Compute the liability and equity component of the convertible bond on January 1, 2015.
- **(b)** Prepare the journal entry to record the issuance of the convertible bond on January 1, 2015.
- **(c)** Prepare the journal entry to record the repurchase of the convertible bond for cash at January 1, 2018, its maturity date.

E16-2 (Issuance and Repurchase of Convertible Bonds) Assume the same information in E16-1, except that Angela Corporation converts its convertible bonds on January 1, 2016.

Instructions

- (a) Compute the carrying value of the bond payable on January 1, 2016.
- (b) Prepare the journal entry to record the conversion on January 1, 2016.
- (c) Assume that the bonds were repurchased on January 1, 2016, for €1,940,000 cash instead of being converted. The net present value of the liability component of the convertible bonds on January 1, 2016, is €1,900,000. Prepare the journal entry to record the repurchase on January 1, 2016.
- **E16-3** (**Issuance and Repurchase of Convertible Bonds**) On January 1, 2015, Cai Company issued a 10% convertible bond at par, with a face value of ¥100,000, maturing on January 1, 2025. The bond is convertible into ordinary shares of Cai at a conversion price of ¥2,500 per share. Interest is payable annually. At date of issue, Cai could have issued at par non-convertible debt with a 10-year term bearing an interest rate of 11%.

Instructions

- (a) Prepare the journal entry to record the issuance of the convertible debt on January 1, 2015.
- (b) On January 1, 2018, Cai makes a tender offer to the holder of the convertible debt to repurchase the bond for ¥112,000, which the holder accepts. At the date of repurchase, Cai could have issued non-convertible debt with a 7-year term at an effective-interest rate of 8%. Prepare the journal entry to record this repurchase on January 1, 2018.
- **10 E16-4** (Issuance, Conversion, Repurchase of Convertible Bonds) On January 1, 2015, Lin Company issued a convertible bond with a par value of £50,000 in the market for £60,000. The bonds are convertible into 6,000 ordinary shares of £1 per share par value. The bond has a 5-year life and has a stated interest rate of 10% payable annually. The market interest rate for a similar non-convertible bond at January 1, 2015, is 8%. The liability component of the bond is computed to be £53,993. The following bond amortization schedule is provided for this bond.

EFFECTIVE-INTEREST METHOD 10% BOND DISCOUNTED AT 8%				
Date	Cash Paid	Interest Expense	Premium Amortized	Carrying Amount of Bonds
1/1/15				£53,993
12/31/15	£5,000	£4,319	£681	53,312
12/31/16	5,000	4,265	735	52,577
12/31/17	5,000	4,206	794	51,783
12/31/18	5,000	4,143	857	50,926
12/31/19	5,000	4,074	926	50,000

Instructions

- (a) Prepare the journal entry to record the issuance of the convertible bond on January 1, 2015.
- **(b)** Prepare the journal entry to record the payment of interest on December 31, 2016.
- (c) Assume that the bonds were converted on December 31, 2017. The fair value of the liability component of the bond is determined to be £54,000 on December 31, 2017. Prepare the journal entry to record the conversion on December 31, 2017. Assume that the accrual of interest related to 2017 has been recorded.
- (d) Assume that the convertible bonds were repurchased on December 31, 2017, for £55,500 instead of being converted. As indicated, the liability component of the bond is determined to be £54,000 on December 31, 2017. Assume that the accrual of interest related to 2017 has been recorded.
- **(e)** Assume that the bonds matured on December 31, 2019, and Lin repurchased the bonds. Prepare the entry(ies) to record this transaction.
- **1) E16-5** (**Conversion of Bonds**) Schuss Inc. issued €3,000,000 of 10%, 10-year convertible bonds on April 1, 2015, at 98. The bonds were dated April 1, 2015, with interest payable April 1 and October 1. Bond discount is amortized semiannually using the effective-interest method. The net present value of the bonds without the conversion feature discounted at 12% (its market rate) was €2,655,888.

On April 1, 2016, €1,000,000 of these bonds were converted into 30,000 shares of €20 par value ordinary shares. Accrued interest was paid in cash at the time of conversion.

Instructions

- (a) Prepare the entry to record the issuance of the convertible bond on April 1, 2015.
- **(b)** Prepare the entry to record the interest expense at October 1, 2015.
- (c) Prepare the entry(ies) to record the conversion on April 1, 2016. (The book value method is used.)

E16-6 (Conversion of Bonds) Gabel Company has bonds payable outstanding with a carrying value of \$406,000. When issued, Gabel recorded \$3,500 of conversion equity. Each \$1,000 bond is convertible into 20 shares of preference shares with par value of \$50 per share. All bonds are converted into preference shares.

Instructions

Assuming that the book value method was used, what entry would be made?

- 1 3 E16-7 (Issuance and Conversion of Bonds) For each of the unrelated transactions described below, present the entry(ies) required to record each transaction.
 - 1. Coyle Corp. issued €10,000,000 par value 10% convertible bonds at 99. If the bonds had not been convertible, the company's investment banker determines that they would have been sold at 95.
 - **2.** Lambert Company issued €10,000,000 par value 10% bonds at 98. One share warrant was issued with each €100 par value bond. At the time of issuance, the warrants were selling for €4. The net present value of the bonds without the warrants was €9,600,000.
 - **3.** Sepracor, Inc. called its convertible debt in 2015. Assume the following related to the transaction. The 11%, €10,000,000 par value bonds were converted into 1,000,000 shares of €1 par value ordinary shares on July 1, 2015. The carrying amount of the debt on July 1 was €9,700,000. The Share Premium—Conversion Equity account had a balance of €200,000, and the company paid an additional €75,000 to the bondholders to induce conversion of all the bonds. The company records the conversion using the book value method.
 - 3 E16-8 (Issuance of Bonds with Share Warrants) Sun Inc. has decided to raise additional capital by issuing HK\$175,000 face value of bonds with a coupon rate of 10%. In discussions with investment bankers, it was determined that to help the sale of the bonds, share warrants should be issued at the rate of one warrant for each HK\$100 bond sold. The fair value of the bonds without the warrants is HK\$136,000, and the estimated value of the warrants is HK\$18,000. The proceeds upon issuance of the bonds and warrants was HK\$150,000.

Instructions

- (a) What entry should be made at the time of the issuance of the bonds and warrants?
- (b) If the warrants were non-detachable, would the entries be different? Discuss.
- **E16-9 (Issuance of Bonds with Share Warrants)** On September 1, 2015, Tokachi Company sold at 104 (plus accrued interest) 30,000 of its 8%, 10-year, ¥10,000 face value, non-convertible bonds with detachable share warrants. Each bond carried two detachable warrants. Each warrant was for one ordinary share at a specified option price of ¥1,500 per share. The net present value of bonds is determined to be ¥290,000,000. Interest is payable on December 1 and June 1.

Instructions

Prepare in general journal format the entry to record the issuance of the bonds.

3 E16-10 (Issuance of Bonds with Share Warrants) On May 1, 2015, Barkley Company issued 3,000 €1,000 bonds at 102. Each bond was issued with one detachable share warrant. The fair value of the bonds on May 1, 2015, was €2,940,000.

Instructions

- (a) Prepare the entry to record the issuance of the bonds and warrants.
- (b) Assume the same facts as part (a), except that the warrants had an estimated fair value of €20. Prepare the entry to record the issuance of the bonds and warrants.
- **E16-11 (Issuance and Exercise of Share Options)** On November 1, 2014, Olympic Company adopted a share-option plan that granted options to key executives to purchase 40,000 shares of the company's £10 par value ordinary shares. The options were granted on January 2, 2015, and were vested 2 years after the date of grant if the grantee was still an employee of the company. The options expired 6 years from date of grant. The option price was set at £40, and the fair value option-pricing model determines the total compensation expense to be £600,000.

All of the options were exercised during the year 2017: 30,000 on January 3 when the market price was £67, and 10,000 on May 1 when the market price was £77 a share.

Instructions

Prepare journal entries relating to the share-option plan for the years 2015, 2016, and 2017. Assume that the employees perform services equally in 2015 and 2016.

E16-12 (Issuance, Exercise, and Forfeiture of Share Options) On January 1, 2015, Magilla Inc. granted share options to officers and key employees for the purchase of 20,000 of the company's €10 par ordinary shares at €25 per share. The options were exercisable within a 5-year period beginning January 1, 2017, by

grantees still in the employ of the company, and expiring December 31, 2021. The service period for this award is 2 years. Assume that the fair value option-pricing model determines total compensation expense to be €400,000.

On April 1, 2016, 3,000 options were forfeited when the employees resigned from the company. The market price of the ordinary shares was €35 per share on this date.

On March 31, 2017, 12,000 options were exercised when the market price of the ordinary shares was €40 per share.

Instructions

Prepare journal entries to record issuance of the share options, forfeiture of the share options, exercise of the share options, and charges to compensation expense, for the years ended December 31, 2015, 2016, and 2017.

E16-13 (Issuance, Exercise, and Expiration of Share Options) On January 1, 2014, Tsang Corporation granted 10,000 options to key executives. Each option allows the executive to purchase one share of Tsang's HK\$5 par value ordinary shares at a price of HK\$20 per share. The options were exercisable within a 2-year period beginning January 1, 2016, if the grantee is still employed by the company at the time of the exercise. On the grant date, Tsang's shares were trading at HK\$25 per share, and a fair value option-pricing model determines total compensation to be HK\$450,000.

On May 1, 2016, 9,000 options were exercised when the market price of Tsang's shares were HK\$30 per share. The remaining options lapsed in 2018 because executives decided not to exercise their options.

Instructions

Prepare the necessary journal entries related to the share-option plan for the years 2014 through 2018.

E16-14 (Accounting for Restricted Shares) Derrick Company issues 4,000 restricted shares to its CFO, Dane Yaping, on January 1, 2015. The shares have a fair value of £120,000 on this date. The service period related to these restricted shares is 4 years. Vesting occurs if Yaping stays with the company for 4 years. The par value of the shares is £5. At December 31, 2016, the fair value of the shares is £145,000.

Instructions

- (a) Prepare the journal entries to record the restricted shares on January 1, 2015 (the date of grant), and December 31, 2016.
- **(b)** On March 4, 2017, Yaping leaves the company. Prepare the journal entry (if any) to account for this forfeiture.
- **E16-15 (Accounting for Restricted Shares)** Lopez Company issues 10,000 restricted shares to its CFO, Juan Carlos, on January 1, 2015. The shares have a fair value of €500,000 on this date. The service period related to the restricted shares is 5 years. Vesting occurs if Carlos stays with the company for 6 years. The par value of the shares is €10. At December 31, 2015, the fair value of the shares is €450,000.

Instructions

- (a) Prepare the journal entries to record the restricted shares on January 1, 2015 (the date of grant), and December 31, 2016.
- **(b)** On January 1, 2020, Carlos leaves the company. Prepare the journal entry (if any) to account for this forfeiture.
- **E16-16 (Weighted-Average Number of Shares)** Portillo Inc. uses a calendar year for financial reporting. The company is authorized to issue 9,000,000 R\$10 par ordinary shares. At no time has Portillo issued any potentially dilutive securities. Listed below is a summary of Portillo's ordinary share activities.

1. Number of ordinary shares issued and outstanding at December 31, 2014	2,400,000
2. Shares issued as a result of a 10% share dividend on September 30, 2015	240,000
3. Shares issued for cash on March 31, 2016	2,000,000
Number of ordinary shares issued and outstanding at December 31, 2016	4,640,000

4. A 2-for-1 share split of Portillo's ordinary shares took place on March 31, 2017

Instructions

- (a) Compute the weighted-average number of ordinary shares used in computing earnings per ordinary share for 2015 on the 2016 comparative income statement.
- **(b)** Compute the weighted-average number of ordinary shares used in computing earnings per ordinary share for 2016 on the 2016 comparative income statement.
- (c) Compute the weighted-average number of ordinary shares to be used in computing earnings per ordinary share for 2016 on the 2017 comparative income statement.
- **(d)** Compute the weighted-average number of ordinary shares to be used in computing earnings per ordinary share for 2017 on the 2017 comparative income statement.

E16-17 (EPS: Simple Capital Structure) On January 1, 2015, Chang Corp. had 480,000 ordinary shares outstanding. During 2015, it had the following transactions that affected the ordinary share account.

February 1 Issued 120,000 shares

March 1 Issued a 20% share dividend

May 1 Acquired 100,000 treasury shares

June 1 Issued a 3-for-1 share split

October 1 Reissued 60,000 treasury shares

Instructions

- (a) Determine the weighted-average number of shares outstanding as of December 31, 2015.
- **(b)** Assume that Chang Corp. earned net income of \(\frac{\pmax}{3}\),256,000,000 during 2015. In addition, it had 100,000 shares of 9%, \(\frac{\pmax}{100}\) par, non-convertible, non-cumulative preference shares outstanding for the entire year. Because of liquidity considerations, however, the company did not declare and pay a preference dividend in 2015. Compute earnings per share for 2015, using the weighted-average number of shares determined in part (a).
- (c) Assume the same facts as in part (b), except that the preference shares were cumulative. Compute earnings per share for 2015.
- (d) Assume the same facts as in part (b), except that net income included a loss from discontinued operations of \(\xi\)432,000,000. The loss from discontinued operations is net of applicable income taxes. Compute earnings per share for 2015.
- **E16-18 (EPS: Simple Capital Structure)** Ott Company had 210,000 ordinary shares outstanding on December 31, 2015. During the year 2016, the company issued 8,000 shares on May 1 and retired 14,000 shares on October 31. For the year 2016, Ott Company reported net income of £229,690 after a loss on discontinued operations of £40,600 (net of tax).

Instructions

What earnings per share data should be reported at the bottom of its income statement?

6 E16-19 (EPS: Simple Capital Structure) Huang Company presented the following data (yen in thousands).

Net income	¥2,200,000
Preference shares: 50,000 shares outstanding,	
¥100 par, 8% cumulative, not convertible	5,000,000
Ordinary shares: Shares outstanding 1/1	600,000
Issued for cash, 5/1	300,000
Acquired treasury shares for cash, 8/1	150,000
2-for-1 share split, 10/1	

Instructions

Compute earnings per share.

E16-20 (EPS: Simple Capital Structure) A portion of the statement of income and retained earnings of Pierson Inc. for the current year follows.

,		
Income from continuing operations		\$15,000,000
Loss on discontinued operations, net of applicable income tax (Note 1)		1,340,000
Net income		13,660,000
Retained earnings at the beginning of the year		83,250,000
		96,910,000
Dividends declared:		
On preference shares—\$6.00 per share	\$ 300,000	
On ordinary shares—\$1.75 per share	14,875,000	15,175,000
Retained earnings at the end of the year		\$81,735,000

Note 1. During the year, Pierson Inc. had a loss from discontinued operations of \$1,340,000 after applicable income tax reduction of \$1,200,000.

At the end of the current year, Pierson Inc. has outstanding 8,000,000 shares of \$10 par ordinary shares and 50,000 shares of 6% preference shares.

On April 1 of the current year, Pierson Inc. issued 1,000,000 ordinary shares for \$32 per share to help finance the loss on discontinued operations.

Instructions

Compute the earnings per share on ordinary shares for the current year as it should be reported to share-holders.

E16-21 (EPS: Simple Capital Structure) On January 1, 2015, Bailey Industries had shares outstanding as follows.

6% cumulative preference shares, €100 par value, issued and outstanding 10,000 shares €1,000,000
Ordinary shares €10 par value, issued and outstanding 200,000 shares 2,000,000

To acquire the net assets of three smaller companies, Bailey authorized the issuance of an additional 170,000 ordinary shares. The acquisitions took place as shown below.

Date of Acquisition	Shares Issued
Company A: April 1, 2015	60,000
Company B: July 1, 2015	80,000
Company C: October 1, 2015	30,000

On May 14, 2015, Bailey realized a €90,000 (before taxes) gain from discontinued operations. On December 31, 2015, Bailey recorded net income of €300,000 before tax and exclusive of the gain.

Instructions

Assuming a 40% tax rate, compute the earnings per share data that should appear on the financial statements of Bailey Industries as of December 31, 2015.

E16-22 (EPS: Simple Capital Structure) At January 1, 2015, Cameron Company's outstanding shares included the following.

280,000 shares of R\$50 par value, 7% cumulative preference shares 800,000 shares of R\$1 par value ordinary shares

Net income for 2015 was R\$2,830,000. No cash dividends were declared or paid during 2015. On February 15, 2016, however, all preference dividends in arrears were paid, together with a 5% share dividend on ordinary shares. There were no dividends in arrears prior to 2015.

On April 1, 2015, 450,000 ordinary shares were sold for R\$10 per share. On October 1, 2015, 110,000 ordinary shares were purchased for R\$20 per share and held as treasury shares.

Instructions

Compute earnings per share for 2015. Assume that financial statements for 2015 were issued in March 2016.

E16-23 (EPS with Convertible Bonds, Various Situations) In 2015, Buraka Enterprises issued, at par, 75 \$1,000, 8% bonds, each convertible into 100 ordinary shares. The liability component of convertible bonds was \$950 per bond, based on a market rate of interest of 10%. Buraka had revenues of \$17,500 and expenses other than interest and taxes of \$8,400 for 2016. (Assume that the tax rate is 40%.) Throughout 2016, 2,000 ordinary shares were outstanding; none of the bonds was converted or redeemed.

Instructions

- (a) Compute diluted earnings per share for 2016.
- **(b)** Assume the same facts as those assumed for part (a), except that the 75 bonds were issued on September 1, 2016 (rather than in 2015), and none have been converted or redeemed.
- (c) Assume the same facts as assumed for part (a), except that 25 of the 75 bonds were actually converted on July 1, 2016.
- **E16-24 (EPS with Convertible Bonds)** On June 1, 2014, Bluhm Company and Amanar Company merged to form Davenport Inc. A total of 800,000 shares were issued to complete the merger. The new corporation reports on a calendar-year basis.

On April 1, 2016, the company issued an additional 600,000 shares for cash. All 1,400,000 shares were outstanding on December 31, 2016.

Davenport Inc. also issued €600,000 of 20-year, 8% convertible bonds at par on July 1, 2016. Each €1,000 bond converts to 40 ordinary shares at any interest date. None of the bonds have been converted to date. The interest expense on the liability component of convertible bonds for 2016 was €30,000.

Davenport Inc. is preparing its annual report for the fiscal year ending December 31, 2016. The annual report will show earnings per share figures based upon a reported after-tax net income of $\leq 1,540,000$. (The tax rate is 40%.)

Instructions

Determine the following for 2016.

- (a) The number of shares to be used for calculating:
 - (1) Basic earnings per share.
 - (2) Diluted earnings per share.
- **(b)** The earnings figures to be used for calculating:
 - (1) Basic earnings per share.
 - (2) Diluted earnings per share.
- **E16-25** (EPS with Convertible Bonds and Preference Shares) The Ottey Corporation issued 10-year, \$4,000,000 par, 7% callable convertible subordinated debentures on January 2, 2015. The bonds have a par value of \$1,000, with interest payable annually. The interest expense recorded on the liability component of the convertible bond for 2015 was \$320,000. The current conversion ratio is 14:1, and in 2 years it will increase to 18:1. At the date of issue, the bonds were sold at 98. Ottey's effective tax was 35%. Net income in 2015 was \$7,500,000, and the company had 2,000,000 shares outstanding during the entire year.

Instructions

- (a) Prepare a schedule to compute both basic and diluted earnings per share.
- **(b)** Discuss how the schedule would differ if the security was convertible preference shares.
- **E16-26 (EPS with Convertible Bonds and Preference Shares)** On January 1, 2015, Lund Company issued 10-year, €3,000,000 face value, 6% bonds, at par. Each €1,000 bond is convertible into 15 ordinary shares of Lund. Lund's net income in 2016 was €240,000, and its tax rate was 40%. Interest expense on the liability component in 2016 was €210,000. The company had 100,000 ordinary shares outstanding throughout 2015. None of the bonds were converted in 2015.

Instructions

- (a) Compute diluted earnings per share for 2015.
- (b) Compute diluted earnings per share for 2015, assuming the same facts as above, except that €1,000,000 of 6% convertible preference shares were issued instead of the bonds. Each €100 preference share is convertible into 5 ordinary shares of Lund.
- **TE16-27 (EPS with Options, Various Situations)** Zambrano Company's net income for 2015 is £40,000. The only potentially dilutive securities outstanding were 1,000 options issued during 2014, each exercisable for one share at £8. None has been exercised, and 10,000 ordinary shares were outstanding during 2015. The average market price of Zambrano's shares during 2015 was £20.

Instructions

- (a) Compute diluted earnings per share. (Round to two decimal places.)
- **(b)** Assume the same facts as those assumed for part (a), except that the 1,000 options were issued on October 1, 2015 (rather than in 2014). The average market price during the last 3 months of 2015 was £20.
- **E16-28 (EPS with Contingent Issuance Agreement)** Brooks Inc. recently purchased Donovan Corp., a large midwestern home painting corporation. One of the terms of the merger was that if Donovan's income for 2016 was \$110,000 or more, 10,000 additional shares would be issued to Donovan's shareholders in 2017. Donovan's income for 2015 was \$125,000.

Instructions

- (a) Would the contingent shares have to be considered in Brooks' 2015 earnings per share computations?
- **(b)** Assume the same facts, except that the 10,000 shares are contingent on Donovan's achieving a net income of \$130,000 in 2016. Would the contingent shares have to be considered in Brooks' earnings per share computations for 2015?
- **E16-29** (EPS with Warrants) Werth Corporation earned €260,000 during a period when it had an average of 100,000 ordinary shares outstanding. The ordinary shares sold at an average market price of €15 per share during the period. Also outstanding were 30,000 warrants that could be exercised to purchase one ordinary share for €10 for each warrant exercised.

Instructions

- (a) Are the warrants dilutive?
- **(b)** Compute basic earnings per share.
- (c) Compute diluted earnings per share.

8 *E16-30 (Share-Appreciation Rights) On December 31, 2012, Flessel Company issues 120,000 shareappreciation rights to its officers entitling them to receive cash for the difference between the market price of its shares and a pre-established price of £10. The fair value of the SARs is estimated to be £4 per SAR on December 31, 2013; £1 on December 31, 2014; £11 on December 31, 2015; and £9 on December 31, 2016. The service period is 4 years, and the exercise period is 7 years.

Instructions

- (a) Prepare a schedule that shows the amount of compensation expense allocable to each year affected by the share-appreciation rights plan.
- (b) Prepare the entry at December 31, 2016, to record compensation expense, if any, in 2016.
- (c) Prepare the entry on December 31, 2016, assuming that all 120,000 SARs are exercised.
- 8 *E16-31 (Share-Appreciation Rights) Dominquez Company establishes a share-appreciation rights program that entitles its new president Dan Scott to receive cash for the difference between the market price of the shares and a pre-established price of R\$30 (also market price) on December 31, 2013, on 40,000 SARs. The date of grant is December 31, 2013, and the required employment (service) period is 4 years. Scott exercises all of the SARs in 2019. The fair value of the SARs is estimated to be R\$6 per SAR on December 31, 2014; R\$9 on December 31, 2015; R\$15 on December 31, 2016; R\$8 on December 31, 2017; and R\$18 on December 31, 2018.

Instructions

- (a) Prepare a 5-year (2014–2018) schedule of compensation expense pertaining to the 40,000 SARs granted to Scott.
- (b) Prepare the journal entry for compensation expense in 2014, 2017, and 2018 relative to the 40,000 SARs.

PROBLEMS

1) 3) P16-1 (Entries for Various Dilutive Securities) The equity section of Martino Inc. at the beginning of the current year appears below.

Share capital-ordinary, €10 par value, authorized 1,000,000 shares, 300,000 shares issued and outstanding €3,000,000 Share premium—ordinary 600,000 Retained earnings 570,000

During the current year, the following transactions occurred.

- 1. The company issued to the shareholders 100,000 rights. Ten rights are needed to buy one share at €32. The rights were void after 30 days. The market price of the shares at this time was €34 per share.
- 2. The company sold to the public a €200,000, 10% bond issue at 104. The company also issued with each €100 bond one detachable share-purchase warrant, which provided for the purchase of ordinary shares at €30 per share. The net present value of the bonds without the warrants was €192,000.
- **3.** All but 5,000 of the rights issued in (1) were exercised in 30 days.
- 4. At the end of the year, 80% of the warrants in (2) had been exercised, and the remaining were outstanding and in good standing.
- 5. During the current year, the company granted share options for 10,000 ordinary shares to company executives. The company using a fair value option-pricing model determines that each option is worth €10. The option price is €30. The options were to expire at year-end and were considered compensation for the current year.
- **6.** All but 1,000 shares related to the share-option plan were exercised by year-end. The expiration resulted because one of the executives failed to fulfill an obligation related to the employment contract.

Instructions

- (a) Prepare general journal entries for the current year to record the transactions listed above.
- (b) Prepare the equity section of the statement of financial position at the end of the current year. Assume that retained earnings at the end of the current year is €750,000.
- 4 P16-2 (Share-Option Plan) Berg Company adopted a share-option plan on November 30, 2014, that provided that 70,000 shares of \$5 par value ordinary shares be designated as available for the granting of options to officers of the corporation at a price of \$9 a share. The market price was \$12 a share on November 30, 2014.

On January 2, 2015, options to purchase 28,000 shares were granted to president Tom Winter—15,000 for services to be rendered in 2015 and 13,000 for services to be rendered in 2016. Also on that date, options to purchase 14,000 shares were granted to vice president Michelle Bennett—7,000 for services to be rendered in 2015 and 7,000 for services to be rendered in 2016. The market price of the shares was \$14 a share on January 2, 2015. The options were exercisable for a period of one year following the year in which the services were rendered. The fair value of the options on the grant date was \$4 per option.

In 2016, neither the president nor the vice president exercised their options because the market price of the shares was below the exercise price. The market price was \$8 a share on December 31, 2016, when the options for 2015 services lapsed.

On December 31, 2017, both Winter and Bennett exercised their options for 13,000 and 7,000 shares, respectively, when the market price was \$16 a share.

Instructions

Prepare the necessary journal entries in 2014 when the share-option plan was adopted, in 2015 when options were granted, in 2016 when options lapsed, and in 2017 when options were exercised.

4 P16-3 (Share-Based Compensation) Assume that Sarazan Company has a share-option plan for top management. Each share option represents the right to purchase a R\$1 par value ordinary share in the future at a price equal to the fair value of the shares at the date of the grant. Sarazan has 5,000 share options outstanding, which were granted at the beginning of 2015. The following data relate to the option grant.

Exercise price for options	R\$40
Market price at grant date (January 1, 2015)	R\$40
Fair value of options at grant date (January 1, 2015)	R\$6
Service period	5 years

Instructions

- (a) Prepare the journal entry(ies) for the first year of the share-option plan.
- **(b)** Prepare the journal entry(ies) for the first year of the plan assuming that, rather than options, 700 shares of restricted shares were granted at the beginning of 2015.
- (c) Now assume that the market price of Sarazan shares on the grant date was R\$45 per share. Repeat the requirements for (a) and (b).
- (d) Sarazan would like to implement an employee share-purchase plan for rank-and-file employees, but it would like to avoid recording expense related to this plan. Explain how employee share-purchase plans are recorded.

P16-4 (EPS with Complex Capital Structure) Amy Dyken, controller at Fitzgerald Pharmaceutical Industries, a public company, is currently preparing the calculation for basic and diluted earnings per share and the related disclosure for Fitzgerald's financial statements. Selected financial information for the fiscal year ended June 30, 2015, is shown below.

FITZGERALD PHARMACEUTICAL INDUSTRIES SELECTED STATEMENT OF FINANCIAL POSITION INFORMATION JUNE 30, 2015

Equity		
Share capital—preference, 6% cumulative, €50 par value,		
100,000 shares authorized, 25,000 shares issued		
and outstanding	€ 1,250,000	
Share capital – ordinary, €1 par, 10,000,000 shares authorized,		
1,000,000 shares issued and outstanding	1,000,000	
Share premium—ordinary (includes any amounts for options		
and conversions)	4,000,000	
Retained earnings	6,000,000	
Total equity	€12,250,000	
Long-term debt		
Notes payable, 10%	€ 1,000,000	
Convertible bonds payable	5,000,000	
10% bonds payable	6,000,000	
Total long-term debt	€12,000,000	

The following transactions have also occurred at Fitzgerald.

1. Options were granted on July 1, 2014, to purchase 200,000 shares at €15 per share. Although no options were exercised during fiscal year 2015, the average price per ordinary share during fiscal year 2015 was €20 per share.

- 2. Each bond was issued at face value. The convertible bonds will convert into ordinary shares at 50 shares per €1,000 bond. It is exercisable after 5 years and was issued in 2013. The interest on the liability component of the convertible bonds payable for the fiscal year ending June 30, 2015, was €450,000.
- **3.** The preference shares were issued in 2013.
- **4.** There are no preference dividends in arrears; however, preference dividends were not declared in fiscal year 2015.
- **5.** The 1,000,000 ordinary shares were outstanding for the entire 2015 fiscal year.
- **6.** Net income for fiscal year 2015 was €1,500,000, and the average income tax rate is 40%.

Instructions

For the fiscal year ended June 30, 2015, calculate the following for Fitzgerald Pharmaceutical Industries.

- (a) Basic earnings per share.
- (b) Diluted earnings per share.
- P16-5 (Basic EPS: Two-Year Presentation) Meng Group is preparing the comparative financial statements for the annual report to its shareholders for fiscal years ended May 31, 2015, and May 31, 2016 (yen in thousands). The income from continuing operations for each year was ¥1,800,000 and ¥2,500,000, respectively. In both years, the company incurred a 10% interest expense on ¥2,400,000 of debt, an obligation that requires interest-only payments for 5 years. In 2016, the company experienced a loss from discontinued operations, net of tax, of ¥360,000. The company uses a 40% effective tax rate for income taxes.

The capital structure of Meng Group on June 1, 2014, consisted of 1 million ordinary shares outstanding and 20,000 shares of ¥50 par value, 6%, cumulative preference shares. There were no preference dividends in arrears, and the company had not issued any convertible securities, options, or warrants.

On October 1, 2014, Meng sold an additional 500,000 ordinary shares at ¥20 per share. Meng distributed a 20% share dividend on the ordinary shares outstanding on January 1, 2015. On December 1, 2015, Meng was able to sell an additional 800,000 ordinary shares at ¥22 per share. These were the only ordinary share transactions that occurred during the two fiscal years.

Instructions

- (a) Identify whether the capital structure at Meng Group is a simple or complex capital structure, and explain why.
- **(b)** Determine the weighted-average number of shares that Meng Group would use in calculating earnings per share for the fiscal year ended:
 - (1) May 31, 2015.
 - (2) May 31, 2016.
- (c) Prepare, in good form, a comparative income statement, beginning with income from operations, for Meng Group for the fiscal years ended May 31, 2015, and May 31, 2016. This statement will be included in Meng's annual report and should display the appropriate earnings per share presentations.

P16-6 (Computation of Basic and Diluted EPS) Charles Austin of the controller's office of Thompson Corporation was given the assignment of determining the basic and diluted earnings per share values for the year ending December 31, 2016. Austin has compiled the information listed below.

- **1.** The company is authorized to issue 8,000,000 \$10 par value ordinary shares. As of December 31, 2015, 2,000,000 shares had been issued and were outstanding.
- **2.** The per share market prices of the ordinary shares on selected dates were as follows.

	Price per Share
July 1, 2015	\$20.00
January 1, 2016	21.00
April 1, 2016	25.00
July 1, 2016	11.00
August 1, 2016	10.50
November 1, 2016	9.00
December 31, 2016	10.00

3. A total of 700,000 shares of an authorized 1,200,000 shares of convertible preference shares have been issued on July 1, 2015. Each share had a par value of \$25 and a cumulative dividend of \$3 per share. The shares are convertible into ordinary shares at the rate of one convertible preference share for one ordinary share. The rate of conversion is to be automatically adjusted for share splits and share dividends. Dividends are paid quarterly on September 30, December 31, March 31, and June 30.

- **4.** Thompson Corporation is subject to a 40% income tax rate.
- **5.** The after-tax net income for the year ended December 31, 2016, was \$11,550,000.

The following specific activities took place during 2016.

- **1.** January 1—A 5% ordinary share dividend was issued. The dividend had been declared on December 1, 2015, to all shareholders of record on December 29, 2015.
- **2.** April 1—A total of 400,000 shares of the \$3 convertible preference shares were converted into ordinary shares. The company issued new ordinary shares and retired the preference shares. This was the only conversion of the preference shares during 2016.
- **3.** July 1—A 2-for-1 split of the ordinary shares became effective on this date. The board of directors had authorized the split on June 1.
- 4. August 1—A total of 300,000 ordinary shares were issued to acquire a factory building.
- **5.** November 1—A total of 24,000 ordinary shares were purchased on the open market at \$9 per share. These shares were to be held as treasury shares and were still in the treasury as of December 31, 2016.
- Ordinary share cash dividends—Cash dividends to ordinary shareholders were declared and paid as follows.

April 15-\$0.30 per share.

October 15—\$0.20 per share.

7. Preference share cash dividends—Cash dividends to preference shareholders were declared and paid as scheduled.

Instructions

- (a) Determine the number of shares used to compute basic earnings per share for the year ended December 31, 2016.
- (b) Determine the number of shares used to compute diluted earnings per share for the year ended December 31, 2016.
- (c) Compute the adjusted net income to be used as the numerator in the basic earnings per share calculation for the year ended December 31, 2016.
- P16-7 (Computation of Basic and Diluted EPS) The information below pertains to Barkley Company for 2015.

Net income for the year	£1,200,000
8% convertible bonds issued at par (£1,000 per bond); each bond is convertible	
into 30 shares of ordinary shares; the liability component of the bonds is	
£1,800,000 based on a market rate of 9%	2,000,000
6% convertible, cumulative preference shares, £100 par value; each share	
is convertible into 3 shares of ordinary shares	4,000,000
Ordinary shares, £10 par value	6,000,000
Tax rate for 2015	40%
Average market price of ordinary shares	£25 per share

There were no changes during 2015 in the number of ordinary shares, preference shares, or convertible bonds outstanding. There are no treasury shares. The company also has ordinary share options (granted in a prior year) to purchase 75,000 ordinary shares at £20 per share.

Instructions

- (a) Compute basic earnings per share for 2015.
- **(b)** Compute diluted earnings per share for 2015.
- **6 P16-8 (EPS with Share Dividend and Discontinued Operations)** Agassi Corporation is preparing the comparative financial statements to be included in the annual report to shareholders. Agassi employs a fiscal year ending May 31.

Income before income tax for Agassi was €1,400,000 and €660,000, respectively, for fiscal years ended May 31, 2016 and 2015. Agassi experienced a loss from discontinued operations of €400,000 in March 2016. A 40% combined income tax rate pertains to any and all of Agassi Corporation's profits, gains, and losses.

Agassi's capital structure consists of preference shares and ordinary shares. The company has not issued any convertible securities or warrants, and there are no outstanding share options.

Agassi issued 40,000 shares of €100 par value, 6% cumulative preference shares in 2012. All of these shares are outstanding, and no preference dividends are in arrears.

There were 1,000,000 shares of €1 par ordinary shares outstanding on June 1, 2014. On September 1, 2014, Agassi sold an additional 400,000 ordinary shares at €17 per share. Agassi distributed a 20% share dividend on the ordinary shares outstanding on December 1, 2015. These were the only ordinary share transactions during the past 2 fiscal years.

Instructions

- (a) Determine the weighted-average number of ordinary shares that would be used in computing earnings per share on the current comparative income statement for:
 - (1) The year ended May 31, 2015.
 - (2) The year ended May 31, 2016.
- **(b)** Starting with income before income tax, prepare a comparative income statement for the years ended May 31, 2016 and 2015. The statement will be part of Agassi Corporation's annual report to shareholders and should include appropriate earnings per share presentation.
- **(c)** The capital structure of a corporation is the result of its past financing decisions. Furthermore, the earnings per share data presented on a corporation's financial statements is dependent upon the capital structure.
 - (1) Explain why Agassi Corporation is considered to have a simple capital structure.
 - **(2)** Describe how earnings per share data would be presented for a corporation that has a complex capital structure.

CONCEPTS FOR ANALYSIS

CA16-1 (**Dilutive Securities, EPS**) Two students are discussing the current chapter on dilutive securities and earnings per share. Here are some of the points raised in their discussion.

- 1. Is there a difference between issuing convertible debt versus issuing debt with share warrants? Also does it make a difference whether the share warrants are detachable or non-detachable?
- 2. Why is it that companies are not permitted to adjust compensation expense for share options when the options become worthless because the share price does not increase in value?
- 3. What is the rationale for using the treasury-share method in earnings per share computations?
- **4.** Why do companies have to report compensation expense for employee share-purchase plans? After the employee receives the shares, the price can go up or down, so what is the benefit that the employee is receiving?

Instructions

Prepare a response to each of the questions asked by the students.

CA16-2 (Ethical Issues—Compensation Plan) The executive officers of Rouse Corporation have a performance-based compensation plan. The performance criteria of this plan is linked to growth in earnings per share. When annual EPS growth is 12%, the Rouse executives earn 100% of the shares; if growth is 16%, they earn 125%. If EPS growth is lower than 8%, the executives receive no additional compensation.

In 2015, Gail Devers, the controller of Rouse, reviews year-end estimates of bad debt expense and warranty expense. She calculates the EPS growth at 15%. Kurt Adkins, a member of the executive group, remarks over lunch one day that the estimate of bad debt expense might be decreased, increasing EPS growth to 16.1%. Devers is not sure she should do this because she believes that the current estimate of bad debts is sound. On the other hand, she recognizes that a great deal of subjectivity is involved in the computation.

Instructions

Answer the following questions.

- (a) What, if any, is the ethical dilemma for Devers?
- (b) Should Devers' knowledge of the compensation plan be a factor that influences her estimate?
- (c) How should Devers respond to Adkins' request?

CA16-3 (Share Warrants—Various Types) For various reasons a corporation may issue warrants to purchase its ordinary shares at specified prices that, depending on the circumstances, may be less than, equal to, or greater than the current market price. For example, warrants may be issued:

- 1. To existing shareholders on a pro rata basis.
- 2. To certain key employees under an incentive share-option plan.
- 3. To purchasers of the corporation's bonds.

808 Chapter 16 Dilutive Securities and Earnings per Share

Instructions

For each of the three examples of how share warrants are used:

- (a) Explain why they are used.
- **(b)** Discuss the significance of the price (or prices) at which the warrants are issued (or granted) in relation to (1) the current market price of the company's shares, and (2) the length of time over which they can be exercised.
- **(c)** Describe the information that should be disclosed in financial statements, or notes thereto, that are prepared when share warrants are outstanding in the hands of the three groups listed above.

CA16-4 (Share Compensation Plans) The following item appeared on the Internet concerning the requirement to expense share options.

"Here We Go Again!" by Jack Ciesielski (2/21/2005, http://www.accountingobserver.com/blog/2005/02/here-we-go-again) On February 17, Congressman David Dreier (R–CA), and Congresswoman Anna Eshoo (D–CA), officially entered Silicon Valley's bid to gum up the launch of honest reporting of share option compensation: They co-sponsored a bill to "preserve broad-based employee share option plans and give investors critical information they need to understand how employee share options impact the value of their shares." You know what "critical information" they mean: stuff like the share compensation for the top five officers in a company, with a rigged value set as close to zero as possible. Investors crave this kind of information. Other ways the good Congresspersons want to "help" investors: The bill "also requires the SEC to study the effectiveness of those disclosures over three years, during which time, no new accounting standard related to the treatment of share options could be recognized. Finally, the bill requires the Secretary of Commerce to conduct a study and report to Congress on the impact of broad-based employee share option plans on expanding employee corporate ownership, skilled worker recruitment and retention, research and innovation, economic growth, and international competitiveness."

It's the old "four corners" basketball strategy: stall, stall. In the meantime, hope for regime change at your opponent, the FASB.

Instructions

- (a) What are the accounting requirements related to share-based compensation?
- (b) How do the provisions of IFRS in this area differ from the bill introduced by members of the U.S. Congress (Dreier and Eshoo), which would require expensing for options issued to only the top five officers in a company? Which approach do you think would result in more useful information? (Focus on comparability.)
- (c) The bill in the U.S. Congress urges a standard that preserves "the ability of companies to use this innovative tool to attract talented employees." Write a response to these congresspeople explaining the importance of neutrality in financial accounting and reporting.

CA16-5 (EPS: Preference Dividends, Options, and Convertible Debt) Earnings per share (EPS) is the most featured, single financial statistic about modern corporations. Daily published quotations of share prices have recently been expanded to include for many securities a "times earnings" figure that is based on EPS. Securities analysts often focus their discussions on the EPS of the corporations they study.

Instructions

- (a) Explain how dividends or dividend requirements on any class of preference shares that may be outstanding affect the computation of EPS.
- (b) One of the technical procedures applicable in EPS computations is the treasury-share method. Briefly describe the circumstances under which it might be appropriate to apply the treasury-share method.
- **(c)** Convertible debentures are considered potentially dilutive ordinary shares. Explain how convertible debentures are handled for purposes of EPS computations.

CA16-6 (EPS Concepts and Effect of Transactions on EPS) Chorkina Corporation, a new audit client of yours, has not reported earnings per share data in its annual reports to shareholders in the past. The treasurer, Beth Botsford, requested that you furnish information about the reporting of earnings per share data in the current year's annual report in accordance with IFRS.

Instructions

- (a) Define the term "earnings per share" as it applies to a corporation with a capitalization structure composed of only one class of ordinary shares. Explain how earnings per share should be computed and how the information should be disclosed in the corporation's financial statements.
- **(b)** Discuss the treatment, if any, that should be given to each of the following items in computing earnings per share of ordinary shares for financial statement reporting.
 - (1) Outstanding preference shares issued at a premium with a par value liquidation right.
 - (2) The exercise at a price below market price but above book value of an ordinary share option issued during the current fiscal year to officers of the corporation.

- (3) The replacement of a machine immediately prior to the close of the current fiscal year at a cost 20% above the original cost of the replaced machine. The new machine will perform the same function as the old machine that was sold for its book value.
- (4) The declaration of current dividends on cumulative preference shares.
- (5) The acquisition of some of the corporation's outstanding ordinary shares during the current fiscal year. The shares were classified as treasury shares.
- (6) A 2-for-1 share split of ordinary shares during the current fiscal year.
- (7) A provision created out of retained earnings for a contingent liability from a possible lawsuit.

CA16-7 (EPS, Antidilution) Brad Dolan, a shareholder of Rhode Corporation, has asked you, the firm's accountant, to explain why his share warrants were not included in diluted EPS. In order to explain this situation, you must briefly explain what dilutive securities are, why they are included in the EPS calculation, and why some securities are antidilutive and thus not included in this calculation.

Instructions

Write Mr. Dolan a 1–1.5 page letter explaining why the warrants are not included in the calculation. Use the following data to help you explain this situation.

Rhode Corporation earned \$228,000 during the period, when it had an average of 100,000 ordinary shares outstanding. The ordinary shares sold at an average market price of \$25 per share during the period. Also outstanding were 30,000 warrants that could be exercised to purchase one ordinary share at \$30 per warrant.

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) Under M&S's share-based compensation plan, share options are granted annually to key managers and directors.
 - (1) How many options were granted during 2013 under the plan?
 - (2) How many options were exercisable at year-end 2013?
 - (3) How many options were exercised in 2013, and what was the average price of those exercised?
 - (4) How many years from the grant date do the options expire?
 - (5) To what accounts are the proceeds from these option exercises credited?
 - **(6)** What was the number of outstanding options at year-end 2013, and at what average exercise price?
- (b) What number of diluted weighted-average shares outstanding was used by M&S in computing earnings per share for 2013 and 2012? What was M&S's diluted earnings per share in 2013 and 2012?
- (c) What other share-based compensation plans does M&S have?

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- (a) What employee share-option compensation plans are offered by adidas and Puma?
 - **(b)** What are the weighted-average number of shares used by adidas and Puma in 2012 and 2011 to compute diluted EPS?
 - (c) What was the diluted net income per share for adidas and Puma for 2012 and 2011?

810 Chapter 16 Dilutive Securities and Earnings per Share

International Reporting Case

Sepracor, **Inc.**, a U.S. drug company, reported the following information in a recent annual report (amounts in thousands). The company prepares its financial statements in accordance with U.S. GAAP.

Current liabilities	\$ 554,114
Convertible subordinated debt	648,020
Total liabilities	1,228,313
Stockholders' equity	176,413
Net income	58 333

Analysts attempting to compare Sepracor to international drug companies may face a challenge due to differences in accounting for convertible debt under IFRS. Under *IAS 32*, "Financial Instruments," convertible bonds, at issuance, must be classified separately into their debt and equity components based on estimated fair value.

Instructions

- (a) Compute the following ratios for Sepracor, Inc. (Assume that year-end balances approximate annual averages.)
 - (1) Return on assets.
 - (2) Return on shareholders' equity.
 - (3) Debt to assets ratio.
- **(b)** Briefly discuss the operating performance and financial position of Sepracor. Industry averages for these ratios were ROA 3.5%, return on equity 16%, and debt to assets 75%. Based on this analysis, would you make an investment in the company's 5% convertible bonds? Explain.
- (c) Assume you want to compare Sepracor to a company like Bayer (DEU), which prepares its financial statements in accordance with IFRS. Assuming that the fair value of the liability component of Sepracor's convertible bonds is \$398,020, how would you adjust the analysis above to make valid comparisons between Sepracor and Bayer?

Accounting, Analysis, and Principles

On January 1, 2015, Garner issued 10-year, €200,000 face value, 6% bonds at par. Each €1,000 bond is convertible into 30 shares of Garner €2, par value, ordinary shares. Interest on the bonds is paid annually on December 31. The market rate for Garner's non-convertible debt is 9%. The company has had 10,000 ordinary shares (and no preference shares) outstanding throughout its life. None of the bonds have been converted as of the end of 2016. (Ignore all tax effects.)

Accounting

- (a) Prepare the journal entry Garner would have made on January 1, 2015, to record the issuance of the bonds and prepare an amortization table for the first three years of the bonds.
- (b) Garner's net income in 2016 was €30,000 and was €27,000 in 2015. Compute basic and diluted earnings per share for Garner for 2016 and 2015.
- (c) Assume that all of the holders of Garner's convertible bonds convert their bonds to shares on January 2, 2017, when Garner's shares are trading at €32 per share. Garner pays €50 per bond to induce bondholders to convert. Prepare the journal entry to record the conversion, using the book value method.

Analysis

Show how Garner Company will report income and EPS for 2016 and 2015. Briefly discuss the importance of IFRS for EPS to analysts evaluating companies based on price-earnings ratios. Consider comparisons for a company over time, as well as comparisons between companies at a point in time.

Principles

In order to converge U.S. GAAP and IFRS, U.S. standard-setters (the FASB) are considering whether the equity element of a convertible bond should be reported as equity. Describe how the journal entry you made in part (a) above would differ under U.S. GAAP. In terms of the accounting principles discussed in Chapter 2, what does IFRS for convertible debt accomplish that U.S. GAAP potentially sacrifices? What does U.S. GAAP for convertible debt accomplish that IFRS potentially sacrifices?

Professional Research

Richardson Company is contemplating the establishment of a share-based compensation plan to provide long-run incentives for its top management. However, members of the compensation committee of the board of directors have voiced some concerns about adopting these plans, based on news accounts related

to a recent accounting standard in this area. They would like you to conduct some research on this recent standard so they can be better informed about the accounting for these plans.

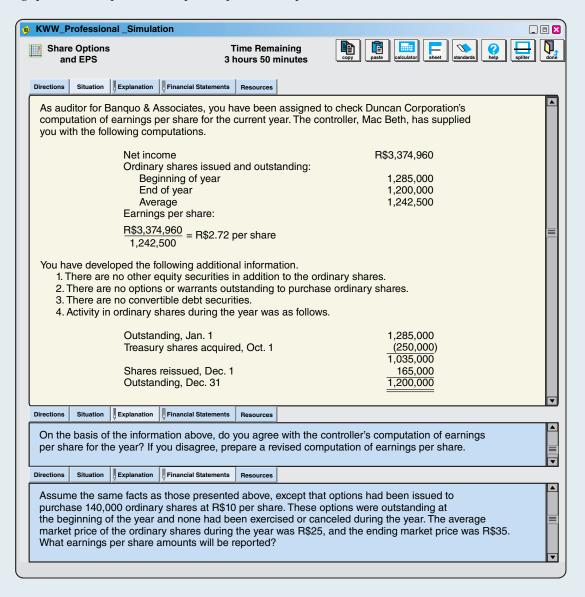

Instructions

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free eIFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) Identify the authoritative literature that addresses the accounting for share-based payment compensation plans.
- **(b)** Briefly discuss the objectives for the accounting for share-based compensation. What is the role of fair value measurement?
- (c) The Richardson Company board is also considering an employee share-purchase plan, but the Board does not want to record expense related to the plan. What are the IFRS requirements for the accounting for an employee share-purchase plan?

Professional Simulation

In this simulation, you are asked to address questions related to the accounting for share options and earnings per share computations. Prepare responses to all parts.

Remember to check the book's companion website, at www.wiley.com/college/kieso, to find additional resources for this chapter.

Investments

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **1** Describe the accounting framework for financial assets.
- 2 Understand the accounting for debt investments at amortized cost.
- **3** Understand the accounting for debt investments at fair value.
- **4** Describe the accounting for the fair value option.
- 5 Understand the accounting for equity investments at fair value.
- **6** Explain the equity method of accounting and compare it to the fair value method for equity investments.
- **7** Discuss the accounting for impairments of debt investments.
- 8 Describe the accounting for transfer of investments between categories.

What to Do?

A few years ago, a bank reported an \$87.3 million write-down on its mortgage-backed securities. However, the bank stated that it expected its actual losses to be only \$44,000. The loss of \$44,000 was equal to a modest loss on a condo foreclosure. The bank's regulator found "the accounting result absurd." However, the rest of the story is that the bank a year later raised its credit-loss estimate by **\$263.1 million**, quite a difference from its original loss estimate of **\$44,000**.

This bank example highlights the challenge of valuing financial assets such as loans, derivatives, and other debt investments. The fundamental question that emerged out of the example above and, more significantly, the recent financial crisis is: Should financial instruments be valued at amortized cost, fair value, or some other measure(s)? As one analyst noted, the opinion that fair value accounting weakens financial and economic stability has persisted among many regulators and politicians. But, some investors and others believe that fair value is the right answer because it is more transparent information. OK, so what to do?

The IASB's response was to issue a new standard on financial assets (*IFRS 9*) that uses a mixed-attribute approach. Some of the financial assets are valued at amortized cost and others at fair value. In addition, the FASB has issued an exposure draft on how it believes financial assets should be reported. Unfortunately, at this point the two bodies do not agree as to how these instruments should be accounted for and reported.

A survey by the Chartered Financial Analysts association on *IFRS 9* contained the following question on the new standard: "Do you agree that the IASB's new standard requiring classification into amortized cost or fair value will improve the decision-usefulness of overall financial instrument accounting?" The survey results indicate that 47 percent believe the IASB's approach improves the decision-usefulness of information. This lukewarm support for the new rules is somewhat troubling given that the group surveyed is representative of the IASB's key constituency—investors and creditors.

Interestingly, the European Union has refused to adopt the requirements of *IFRS* 9, arguing that this standard requires **too much** fair value information. Nevertheless, the standard was issued and other

countries that follow IFRS will soon be implementing the new standard. Thus, the early reaction to *IFRS 9* indicates that, unfortunately, once again politics is raising its ugly head on an accounting issue. Some European regulators have suggested that the IASB's future funding may even depend on the Board putting more regulators on it. Such an intrusion could lead to the end of the convergence efforts between the IASB and the FASB.

PREVIEW OF CHAPTER

17

As indicated in the opening story, the accounting for financial assets is highly controversial. How to measure, recognize, and disclose this information is now being debated and discussed extensively. In this

chapter, we address the accounting for debt and equity investments. Appendices to this chapter discuss the accounting for derivative instruments and fair value disclosures. The content and organization of the chapter are as follows.

Investments Accounting for Other Reporting Issues Debt Investments Equity Investments Financial Assets Measurement basis Amortized cost Holdings of less than 20% Impairment of value Fair value **Holdings between 20%** · Transfers between and 50% categories Fair value option Holdings of more than 50% Summary **Summary of debt** investment accounting

ACCOUNTING FOR FINANCIAL ASSETS

LEARNING OBJECTIVE 1

Describe the accounting framework for financial assets.

See the Authoritative Literature section (page 861).

A financial asset is cash, an equity investment of another company (e.g., ordinary or preference shares), or a contractual right to receive cash from another party (e.g., loans, receivables, and bonds). [1] The accounting for cash is relatively straightforward and is discussed in Chapter 7. The accounting and reporting for equity and debt investments, as discussed in the opening story, is extremely contentious, particularly in light of the credit crisis in the latter part of 2008.

Some users of financial statements support a single measurement—fair value—for all financial assets. They view fair value as more relevant than other measurements in helping investors assess the effect of current economic events on the future cash flows of a financial asset. In addition, they believe that the use of a single method promotes consistency in valuation and reporting on the asset, thereby improving the usefulness of the financial statements. Others disagree. These financial statement users note that many investments are not held for sale but rather for the income they will generate over the life of the investment. They believe cost-based information (referred to as amortized cost) provides the most relevant information for predicting future cash flows in these cases. Finally, some express concern that using fair value information to measure financial assets is unreliable when markets for the investments are not functioning in an ordinary fashion.

After much discussion, the IASB decided that reporting all financial assets at fair value is not the most appropriate approach for providing relevant information to financial statement users. The IASB noted that both fair value and a cost-based approach can provide useful information to financial statement readers for particular types of financial assets in certain circumstances. As a result, the IASB requires that companies classify financial assets into two measurement categories—amortized cost and fair value—depending on the circumstances.

Measurement Basis—A Closer Look

In general, IFRS requires that companies determine how to measure their financial assets based on two criteria:

- The company's business model for managing its financial assets; and
- The contractual cash flow characteristics of the financial asset.

If a company has (1) a business model whose objective is to hold assets in order to collect contractual cash flows and (2) the contractual terms of the financial asset provides specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding, then the company should use amortized cost. [2]

For example, assume that Mitsubishi (JPN) purchases a bond investment that it intends to hold to maturity. Its business model for this type of investment is to collect interest and then principal at maturity. The payment dates for the interest rate and principal are stated on the bond. In this case, Mitsubishi accounts for the investment at amortized cost. If, on the other hand, Mitsubishi purchased the bonds as part of a trading strategy to speculate on interest rate changes (a trading investment), then the debt investment is reported at fair value. As a result, only debt investments such as receivables, loans, and bond investments that meet the two criteria above are recorded at amortized cost. All other debt investments are recorded and reported at fair value.

¹The IASB indicates that the business model should be considered first. And, that the contractual cash flow characteristics should be considered only for financial assets (e.g., debt investments) that are eligible to be measured at amortized cost. It states that both classification conditions are essential to ensure that amortized cost provides useful information about debt investments. [3]

Equity investments are generally recorded and reported at fair value. Equity investments do not have a fixed interest or principal payment schedule and therefore cannot be accounted for at amortized cost. In summary, companies account for investments based on the type of security, as indicated in Illustration 17-1.

Type of Investment	Assessment of Accounting Criteria	Valuation Approach
Debt	Meets business model (held-for-collection) and contractual cash flow tests.	Amortized cost
	Does not meet the business model test (not held-for-collection).	Fair value
Equity	Does not meet contractual cash flow test.	Fair value*
*For some equity investments for which the investor exercises some control over the investee, use the equity method.		

ILLUSTRATION 17-1Summary of Investment

Accounting Approaches

We organize our study of investments by type of investment security. Within each section, we explain how the accounting for investments in debt and equity securities varies according to how the investment is managed and the contractual cash flow characteristics of the investment.

DEBT INVESTMENTS

Debt investments are characterized by contractual payments on specified dates of principal and interest on the principal amount outstanding. Companies measure debt investments at amortized cost if the objective of the company's business model is to hold the financial asset to collect the contractual cash flows (held-for-collection). Amortized cost is the initial recognition amount of the investment minus repayments, plus or minus cumulative amortization and net of any reduction for uncollectibility. If the criteria for measurement at amortized cost are not met, then the debt investment is valued and accounted for at fair value. Fair value is the amount for which an asset could be exchanged between knowledgeable willing parties in an arm's length transaction. [4]

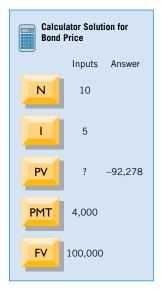

Debt Investments—Amortized Cost

Only debt investments can be measured at amortized cost. If a company like **Carrefour** (FRA) makes an investment in the bonds of **Nokia** (FIN), it will receive contractual cash flows of interest over the life of the bonds and repayment of the principal at maturity. If it is Carrefour's strategy to hold this investment in order to receive these cash flows over the life of the bond, it has a held-for-collection strategy and it will measure the investment at amortized cost.²

Example: Debt Investment at Amortized Cost

To illustrate the accounting for a debt investment at amortized cost, assume that Robinson Company purchased €100,000 of 8 percent bonds of Evermaster Corporation

²Classification as held-for-collection does not mean the security must be held to maturity. For example, a company may sell an investment before maturity if (1) the security does not meet the company's investment strategy (e.g., the company has a policy to invest in only AAA-rated bonds but the bond investment has a decline in its credit rating), (2) a company changes its strategy to invest only in securities within a certain maturity range, or (3) the company needs to sell a security to fund certain capital expenditures. However, if a company begins trading held-for-collection investments on a regular basis, it should assess whether such trading is consistent with the held-for-collection classification. [5]

on January 1, 2015, at a discount, paying €92,278. The bonds mature January 1, 2020, and yield 10 percent; interest is payable each July 1 and January 1. Robinson records the investment as follows.

January 1, 2015

Debt Investments	92,278
Cash	92,278

As indicated in Chapter 14, companies must amortize premiums or discounts using the **effective-interest method**. They apply the effective-interest method to bond investments in a way similar to that for bonds payable. To compute interest revenue, companies compute the effective-interest rate or yield at the time of investment and apply that rate to the beginning carrying amount (book value) for each interest period. The investment carrying amount is increased by the amortized discount or decreased by the amortized premium in each period.

Illustration 17-2 shows the effect of the discount amortization on the interest revenue that Robinson records each period for its investment in Evermaster bonds.

ILLUSTRATION 17-2

Schedule of Interest Revenue and Bond Discount Amortization— Effective-Interest Method

	Cash	Interest	Bond Discount	Carrying Amount
Date	Received	Revenue	Amortization	of Bonds
1/1/15				€ 92,278
7/1/15	€ 4,000 ^a	€ 4,614 ^b	€ 614 ^c	92,892°
1/1/16	4,000	4,645	645	93,537
7/1/16	4,000	4,677	677	94,214
1/1/17	4,000	4,711	711	94,925
7/1/17	4,000	4,746	746	95,671
1/1/18	4,000	4,783	783	96,454
7/1/18	4,000	4,823	823	97,277
1/1/19	4,000	4,864	864	98,141
7/1/19	4,000	4,907	907	99,048
1/1/20	4,000	4,952	952	100,000
	€40,000	€47,722	€7,722	

Robinson records the receipt of the first semiannual interest payment on July 1, 2015 (using the data in Illustration 17-2), as follows.

July 1, 2015

Cash	4,000
Debt Investments	614
Interest Revenue	4 614

Because Robinson is on a calendar-year basis, it accrues interest and amortizes the discount at December 31, 2015, as follows.

December 31, 2015

Interest Receivable	4,000	
Debt Investments	645	
Interest Revenue		4,645

Again, Illustration 17-2 shows the interest and amortization amounts.

Robinson reports its investment in Evermaster bonds in its December 31, 2015, financial statements, as follows.³

Statement of Financial Position Long-term investments Debt investments Current assets Interest receivable Income Statement Other income and expense Interest revenue (€4,614 + €4,645) € 9,259

ILLUSTRATION 17-3

Reporting of Bond Investments at Amortized Cost

Sometimes, a company sells a bond investment before its maturity. For example, Robinson Company may sell securities as part of a change in its investment strategy to move away from five-year debt investments, like the Evermaster bonds, to invest in shorter-term bonds. Such a strategy would allow the bonds to reprice more frequently in response to interest rate changes. Let's assume that Robinson Company sells its investment in Evermaster bonds on November 1, 2017, at 99¾ plus accrued interest. The discount amortization from July 1, 2017, to November 1, 2017, is €522 ($\frac{4}{6} × €783$). Robinson records this discount amortization as follows.

November 1, 2017

Debt Investments 522
Interest Revenue 522

Illustration 17-4 shows the computation of the realized gain on the sale.

Selling price of bonds (exclusive of accrued interest) Less: Book value of bonds on November 1, 2017:		€99,750
Amortized cost, July 1, 2017 Add: Discount amortized for the period July 1, 2017,	€95,671	
to November 1, 2017	522	96,193
Gain on sale of bonds		<u>€ 3,557</u>

ILLUSTRATION 17-4 Computation of Gain on Sale of Bonds

Robinson records the sale of the bonds as:

November 1, 2017

Cash	102,417
Interest Revenue (4/6 × €4,000)	2,667
Debt Investments	96,193
Gain on Sale of Investments	3,557

The credit to Interest Revenue represents accrued interest for four months, for which the purchaser pays cash. The debit to Cash represents the selling price of the bonds plus accrued interest (\leqslant 99,750 + \leqslant 2,667). The credit to Debt Investments represents the book value of the bonds on the date of sale. The credit to Gain on Sale of Investments represents the excess of the selling price over the book value of the bonds.

³Although the example here is based on a single investment, the IASB indicates that companies evaluate the investment strategy (or business model for managing the investments) at a higher level of aggregation than the individual security. As a result, a company may have more than one investment strategy. That is, a company may hold a portfolio of investments that is managed to collect contractual cash flows and another portfolio of investments that is managed to realize gains and losses on fair value changes. [6]

Debt Investments – Fair Value

In some cases, companies both manage and evaluate investment performance on a fair value basis. In these situations, these investments are managed and evaluated based on a documented risk-management or investment strategy based on fair value information. For example, some companies often hold debt investments with the intention of selling them in a short period of time. These debt

investments are often referred to as **trading investments** because companies frequently buy and sell these investments to generate profits from short-term differences in price.

Companies that account for and report debt investments at fair value follow the same accounting entries as debt investments held-for-collection during the reporting period. That is, they are recorded at amortized cost. However, at each reporting date, companies adjust the amortized cost to fair value, with any unrealized holding gain or loss reported as part of net income (fair value method). An unrealized holding gain or loss is the net change in the fair value of a debt investment from one period to another.

Example: Debt Investment at Fair Value (Single Security)

To illustrate the accounting for debt investments using the fair value approach, assume the same information as in our previous example for Robinson Company. Recall that Robinson Company purchased €100,000 of 8 percent bonds of Evermaster Corporation on January 1, 2015, at a discount, paying €92,278.⁴ The bonds mature January 1, 2020, and yield 10 percent; interest is payable each July 1 and January 1.

The journal entries in 2015 are exactly the same as those for amortized cost. These entries are as follows.

	January 1, 2015	
Debt Investments	92,278	
Cash		92,278
	July 1, 2015	
Cash	4,000	
Debt Investments	614	
Interest Revenue		4,614
	December 31, 2015	
Interest Receivable	4,000	
Debt Investments	645	
Interest Revenue		4,645

Again, Illustration 17-2 shows the interest and amortization amounts. If the debt investment is held-for-collection, no further entries are necessary. To apply the fair value approach, Robinson determines that, due to a decrease in interest rates, the fair value of the debt investment increased to \$95,000 at December 31, 2015. Comparing the fair value with the carrying amount of these bonds at December 31, 2015, Robinson has an unrealized holding gain of \$1,463, as shown in Illustration 17-5.

ILLUSTRATION 17-5

Computation of Unrealized Gain on Fair Value Debt Investment (2015)

Fair value at December 31, 2015 Amortized cost at December 31, 2015 (per Illustration 17-2)	€95,000 93,537	
Unrealized holding gain or (loss)	€ 1,463	

⁴Companies may incur brokerage and transaction costs in purchasing securities. For investments accounted for at fair value (both debt and equity), IFRS requires that these costs be recorded in net income as other income and expense and not as an adjustment to the carrying value of the investment. [7]

Robinson therefore makes the following entry to record the adjustment of the debt investment to fair value at December 31, 2015.

Fair Value Adjustment 1,463
Unrealized Holding Gain or Loss—Income 1,463

Robinson uses a valuation account (Fair Value Adjustment) instead of debiting Debt Investments to record the investment at fair value. The use of the Fair Value Adjustment account enables Robinson to maintain a record at amortized cost in the accounts. Because the valuation account has a debit balance, in this case the fair value of Robinson's debt investment is higher than its amortized cost.

The Unrealized Holding Gain or Loss—Income account is reported in the "Other income and expense" section of the income statement as part of net income. This account is closed to net income each period. The Fair Value Adjustment account is not closed each period and is simply adjusted each period to its proper valuation. The Fair Value Adjustment balance is not shown on the statement of financial position but is simply used to restate the debt investment account to fair value.

Robinson reports its investment in Evermaster bonds in its December 31, 2015, financial statements as shown in Illustration 17-6.

Statement of Financial Po	sition
Investments	
Debt investments	€95,000
Current assets	
Interest receivable	€ 4,000
Income Statement	
Other income and expense	
Interest revenue (€4,614 + €4,645)	€ 9,259
Unrealized holding gain or (loss)	1,463

ILLUSTRATION 17-6

Financial Statement Presentation of Debt Investments at Fair Value

Continuing with our example, at December 31, 2016, assume that the fair value of the Evermaster debt investment is $\le 94,000$. In this case, Robinson records an unrealized holding loss of $\le 2,388$, as shown in Illustration 17-7.

	DEBT INVESTMEN DECEMBER 31, 20		
	Amortized		
Investment	Cost	Fair Value	Unrealized Gain (Loss)
Evermaster Corporation 10% bonds Less: Previous fair value adjustment	€94,925	€94,000	€ (925)
balance (Dr.)			1,463
Fair value adjustment (Cr.)			<u>€(2,388)</u>

ILLUSTRATION 17-7 Computation of Unrealized Gain on Debt Investment (2016)

As indicated in Illustration 17-7, the fair value of the debt investment is now less than the amortized cost by \leq 925. However, Robinson had recorded an unrealized gain in 2015. Therefore, Robinson records a loss of \leq 2,388 (\leq 925 + \leq 1,463), which offsets the gain recorded in 2015, resulting in a credit in the Fair Value Adjustment account of \leq 925. Robinson makes the following journal entry.

Unrealized Holding Gain or Loss—Income 2,388
Fair Value Adjustment 2,388

A credit balance in the Fair Value Adjustment account of €925 (€2,388 − €1,463) reduces the amortized cost amount to fair value. Robinson reports its investment in

Evermaster bonds in its December 31, 2016, financial statements as shown in Illustration 17-8.

ILLUSTRATION 17-8

Financial Statement Presentation of Debt Investments at Fair Value (2016)

Statement of Financial Po	sition
Investments	
Debt investments	€94,000
Current assets	
Interest receivable	€ 4,000
Income Statement	
Other income and expense	
Interest revenue (€4,677 + €4,711)	€ 9,388
Unrealized holding gain or (loss)	€ (2,388)

Assume now that Robinson sells its investment in Evermaster bonds on November 1, 2017, at 99¾ plus accrued interest, similar to our earlier illustration on page 817. All the entries and computations are the same as the amortized cost example. The only difference occurs on December 31, 2017. In that case, since the bonds are no longer owned by Robinson, the Fair Value Adjustment account should now be reported at zero. Robinson makes the following entry to record the elimination of the valuation account.

December 31, 2017

Fair Value Adjustment 925
Unrealized Holding Gain or Loss—Income

ILLUSTRATION 17-9 Income Effects on Debt Investment (2015–2017)

At December 31, 2017, the income related to the Evermaster bonds is as shown in Illustration 17-9.

		Amortized Cos	st			Fair	Value	
Years	Interest	Gain on Sale	Unrealized Gain (Loss)	Total	Interest	Gain on Sale	Unrealized Gain (Loss)	Total
2015	€ 9,259	€ 0	€0	€ 9,259	€ 9,259	€ 0	€1,463	€10,722
2016	9,388	0	0	9,388	9,388	0	(2,388)	7,000
2017	7,935	3,557	0	11,492	7,935	3,557	925	12,417
Total	€26,582	€3,557	<u>€0</u>	€30,139	€26,582	€3,557	<u>€ 0</u>	€30,139

As indicated, over the life of the bond investment, interest revenue and the gain on sale are the same using either amortized cost or fair value measurement. However, under the fair value approach, an unrealized gain or loss is recorded in income in each year as the fair value of the investment changes. Overall, the gains or losses net out to zero.

What do the numbers mean?

WHAT IS FAIR VALUE?

In a recent letter to market regulators, the International Accounting Standards Board said some European financial institutions should have booked bigger losses on their Greek government bond holdings. The IASB criticized inconsistencies in the way financial institutions wrote down the value of their Greek sovereign debt in their quarterly earnings.

The IASB said "some companies" were not using market prices to calculate the fair value of their Greek bond holdings, relying instead on internal models. While some claimed this was because the market for Greek debt had become illiquid, the IASB disagreed. "Although the level of trading activity in Greek government bonds has decreased, transactions are still taking place," IASB chair Hans Hoogervorst wrote.

925

European banks, taking a €3 billion hit on their Greek bond holdings earlier, employed markedly different approaches to valuing the debt. The write-downs disclosed in their quarterly results varied from 21 to 50 percent, showing

a wide range of views on what they expect to get back from their holdings. Jacques Chahine, head of **J. Chahine Capital** (LUX) which manages €320 billion in assets, noted that "the Greek debt issue has been treated lightly. And it's not just Greek debt—all of it needs to be written down, Spain, Italy."

Many other issues of determining fair value have developed as well. For example, in the fall of 2000, Wall Street brokerage firm Morgan Stanley (USA) told investors that the rumor of big losses in its bond portfolio were "greatly exaggerated." As it turns out, Morgan Stanley was also exaggerating. As a result, the U.S. SEC accused Morgan Stanley of violating securities laws by overstating the value of certain bonds by \$75 million. The SEC said that the overvaluations

stemmed more from wishful thinking than reality, in violation of accounting standards. The SEC wrote, "In effect, Morgan Stanley valued its positions at the price at which it thought a willing buyer and seller should enter into an exchange, rather than at a price at which a willing buyer and a willing seller would enter into a **current** exchange."

Especially egregious, stated one accounting expert, were the findings that Morgan Stanley in some instances used its own more optimistic assumptions as a substitute for external pricing sources. "What that is saying is: 'Fair value is what you want the value to be. Pick a number. . . .' That's especially troublesome."

Sources: Adapted from "Accounting Board Criticizes European Banks on Greek Debt," The New York Times (August 30, 2011); and Susanne Craig and Jonathan Weil, "SEC Targets Morgan Stanley Values," Wall Street Journal (November 8, 2004), p. C3.

Example: Debt Investment at Fair Value (Portfolio)

To illustrate the accounting for a portfolio of debt investments, assume that Wang Corporation has two debt investments accounted for at fair value. Illustration 17-10 identifies the amortized cost, fair value, and the amount of the unrealized gain or loss (amounts in thousands).

DEBT INVESTMENT PORTFOLIO DECEMBER 31, 2015						
Amortized Investments Cost Fair Value Unrealized Gain (Loss)						
Watson Corporation 8% bonds Anacomp Corporation 10% bonds	¥ 93,537 200,000	¥103,600 180,400	¥ 10,063 (19,600)			
Total of portfolio Previous fair value adjustment	¥293,537	¥284,000	(9,537)			
balance						
Fair value adjustment—Cr.			¥ (9,537)			

ILLUSTRATION 17-10 Computation of Fair Value Adjustment—Fair Value Debt Investments

(2015)

The fair value of Wang's debt investment portfolio totals ¥284,000. The gross unrealized gains are ¥10,063, and the gross unrealized losses are ¥19,600, resulting in a net unrealized loss of ¥9,537. That is, the fair value of the portfolio is ¥9,537 lower than its amortized cost. Wang makes an adjusting entry to the Fair Value Adjustment account to record the decrease in value and to record the loss as follows.

December 31, 2015

Unrealized Holding Gain or Loss—Income 9,537
Fair Value Adjustment 9,537

Wang reports the unrealized holding loss of ¥9,537 in income.

Sale of Debt Investments

If a company sells bonds carried as fair value investments before the maturity date, it must make entries to remove from the Debt Investments account the amortized cost of bonds sold. To illustrate, assume that Wang Corporation sold the Watson bonds (from

Illustration 17-10) on July 1, 2016, for ¥90,000, at which time it had an amortized cost of ¥94,214. Illustration 17-11 shows the computation of the realized loss.

ILLUSTRATION 17-11

Computation of Loss on Sale of Bonds

Amortized cost (Watson bonds) Less: Selling price of bonds	¥94,214 90,000
Loss on sale of bonds	¥ 4,214

Wang records the sale of the Watson bonds as follows.

July 1, 2016

Cash	90,000	
Loss on Sale of Investments	4,214	
Debt Investments	94.2	214

Wang reports this realized loss in the "Other income and expense" section of the income statement. Assuming no other purchases and sales of bonds in 2016, Wang on December 31, 2016, has the information shown in Illustration 17-12.

ILLUSTRATION 17-12

Computation of Fair Value Adjustment (2016)

DEBT INVESTMENT PORTFOLIO DECEMBER 31, 2016

Fair Value Option

In some situations, a company meets the criteria for accounting for a debt investment at amortized cost, but it would rather account for the investment at fair value, with all gains and losses related to changes in fair value reported in income. The most common reason is to address a measurement or recognition "mismatch." For example, assume that Pirelli (ITA) purchases debt investments

4 LEARNING OBJECTIVE
Describe the accounting for the

fair value option.

that it plans to manage on a held-for-collection basis (and account for at amortized cost). Pirelli also manages and evaluates this investment in conjunction with a related liability that is measured at fair value. Pirelli has a mismatch on these related financial assets because, even though the fair value of the investment may change, no gains and losses are recognized, while gains and losses on the liability are recorded in income.

To address this mismatch, **companies have the option to report most financial assets at fair value**. This option is applied on an instrument-by-instrument basis and is generally available only at the time a company first purchases the financial asset or incurs a financial liability. If a company chooses to use the fair value option, it measures this instrument at fair value until the company no longer has ownership. **[8]** By choosing the fair value option for the debt investment, Pirelli records gains and losses in income, which will offset the gains and losses recorded on the liability, thereby providing more relevant information about these related financial assets.

To illustrate, assume that Hardy Company purchases bonds issued by the German Central Bank. Hardy plans to hold the debt investment until it matures in five years. At December 31, 2015, the amortized cost of this investment is €100,000; its fair value at December 31, 2015, is €113,000. If Hardy chooses the fair value option to account for this investment, it makes the following entry at December 31, 2015.

December 31, 2015

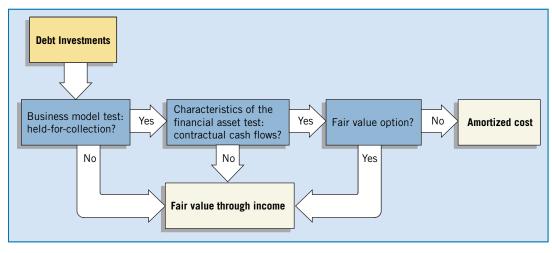

Debt Investment (German bonds) 13,000
Unrealized Holding Gain or Loss—Income 13,000

In this situation, Hardy uses an account titled Debt Investment to record the change in fair value at December 31. It does not use the Fair Value Adjustment account because the accounting for the fair value option is on an investment-by-investment basis rather than on a portfolio basis. Because Hardy selected the fair value option, the unrealized gain or loss is recorded as part of net income even though it is managing the investment on a held-for-collection basis. Hardy must continue to use the fair value method to record this investment until it no longer has ownership of the security.

Summary of Debt Investment Accounting

The following chart summarizes the basic accounting for debt investments.

ILLUSTRATION 17-14 Summary of Debt Investment Accounting

EQUITY INVESTMENTS

LEARNING OBJECTIVE [5]

Understand the accounting for equity investments at fair value.

An equity investment represents ownership interest, such as ordinary, preference, or other capital shares. It also includes rights to acquire or dispose of ownership interests at an agreed-upon or determinable price, such as in warrants and rights. The cost of equity investments is measured at the purchase price of the security. Broker's commissions and other fees incidental to the purchase are recorded as expense. [9]

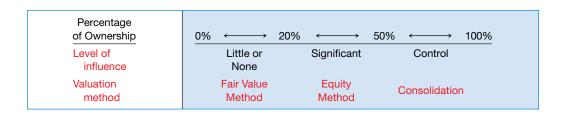

The degree to which one corporation (investor) acquires an interest in the shares of another corporation (investee) generally determines the accounting treatment for the investment subsequent to acquisition. The classification of such investments depends on the percentage of the investee voting shares that is held by the investor:

- **1.** Holdings of less than 20 percent (**fair value method**)—investor has passive interest.
- **2.** Holdings between 20 percent and 50 percent (**equity method**)—investor has significant influence.
- **3.** Holdings of more than 50 percent (**consolidated statements**)—investor has controlling interest.

Illustration 17-15 lists these levels of interest or influence and the corresponding valuation and reporting method that companies must apply to the investment.

ILLUSTRATION 17-15

Levels of Influence Determine Accounting Methods

The accounting and reporting for equity investments therefore depend on the level of influence and the type of security involved, as shown in Illustration 17-16.

ILLUSTRATION 17-16

Accounting and Reporting for Equity Investments by Category

Category Holdings less than 20%	Valuation	Unrealized Holding Gains or Losses	Other Income Effects
1. Trading	Fair value	Recognized in net income	Dividends declared; gains and losses from sale.
2. Non- Trading	Fair value	Recognized in "Other comprehensive income" and as separate component of equity	Dividends declared; gains and losses from sale.
Holdings between 20% and 50%	Equity	Not recognized	Proportionate share of investee's net income.
Holdings more than 50%	Consolidation	Not recognized	Not applicable.

Holdings of Less Than 20%

When an investor has an interest of less than 20 percent, it is presumed that the investor has little or no influence over the investee. As indicated in Illustration 17-16, there are two classifications for holdings less than 20 percent. Under IFRS, the presumption is that equity investments are held-for-trading. That is, companies hold these securities to profit from price changes. As with debt investments that are held-for-trading, the general accounting and reporting rule for these investments is to value the securities at fair value and record unrealized gains and losses in net income (fair value method).⁵

However, some equity investments are held for purposes other than trading. For example, a company may be required to hold an equity investment in order to sell its products in a particular area. In this situation, the recording of unrealized gains and losses in income, as is required for trading investments, is not indicative of the company's performance with respect to this investment. As a result, IFRS allows companies to classify some equity investments as non-trading. Non-trading equity investments are recorded at fair value on the statement of financial position, with unrealized gains and losses reported in other comprehensive income. [11]

Equity Investments – Trading (Income)

Upon acquisition, companies record equity investments at fair value.⁶ To illustrate, assume that on November 3, 2015, Republic Corporation purchased ordinary shares of three companies, each investment representing less than a 20 percent interest. These shares are held-for-trading.

	Cost
Burberry	€259,700
Nestlé	317,500
St. Regis Pulp Co.	141,350
Total cost	€718,550

Republic records these investments as follows.

November 3, 2015

Equity Investments 718,550

Cash 718,550

On December 6, 2015, Republic receives a cash dividend of €4,200 on its investment in the ordinary shares of Nestlé. It records the cash dividend as follows.

December 6, 2015

Cash 4,200
Dividend Revenue 4,200

⁵Fair value at initial recognition is the transaction price (exclusive of brokerage and other transaction costs). Subsequent fair value measurements should be based on market prices, if available. For non-trading investments, a valuation technique based on discounted expected cash flows can be used to develop a fair value estimate. While IFRS requires that all equity investments be measured at fair value, cost may be an appropriate estimate of fair value for an equity investment in certain limited cases. [10]

⁶Companies should record equity investments acquired in exchange for non-cash consideration (property or services) at the fair value of the consideration given, if the fair value can be measured reliably. Otherwise, the value of the exchange can be determined with reference to the fair value of the equity investment. Accounting for numerous purchases of securities requires the preservation of information regarding the cost of individual purchases, as well as the dates of purchases and sales. If specific identification is not possible, companies may use average-cost for multiple purchases of the same class of security. The first-in, first-out (FIFO) method of assigning costs to investments at the time of sale is also acceptable and normally employed.

All three of the investee companies reported net income for the year, but only Nestlé declared and paid a dividend to Republic. But, recall that when an investor owns less than 20 percent of the shares of another corporation, it is presumed that the investor has relatively little influence on the investee. As a result, **net income earned by the investee** is **not a proper basis for recognizing income from the investment by the investor**. Why? Because the increased net assets resulting from profitable operations may be permanently retained for use in the investee's business. Therefore, **the investor earns net income only when the investee declares cash dividends**.

At December 31, 2015, Republic's equity investment portfolio has the carrying value and fair value shown in Illustration 17-17.

ILLUSTRATION 17-17

Computation of Fair Value Adjustment— Equity Investment Portfolio (2015)

EQUITY INVESTMENT PORTFOLIO DECEMBER 31, 2015					
Investments	Carrying Value	Fair Value	Unrealized Gain (Loss)		
Burberry Nestlé St. Regis Pulp Co.	€259,700 317,500 141,350	€275,000 304,000 104,000	€ 15,300 (13,500) (37,350)		
Total of portfolio Previous fair value adjustment balance	€718,550 ———	<u>€683,000</u>	(35,550)		
Fair value adjustment—Cr.			€(35,550)		

For Republic's equity investment portfolio, the gross unrealized gains are $\le 15,300$, and the gross unrealized losses are $\le 50,850$ ($\le 13,500 + \le 37,350$), resulting in a net unrealized loss of $\le 35,550$. The fair value of the equity investment portfolio is below cost by $\le 35,550$.

Republic records the net unrealized gains and losses related to changes in the fair value of **equity** investments in an Unrealized Holding Gain or Loss—Income account. Republic reports this amount as "Other income and expense." In this case, Republic prepares an adjusting entry debiting the Unrealized Holding Gain or Loss—Income account and crediting the Fair Value Adjustment account to record the decrease in fair value and to record the loss as follows.

December 31, 2015

Unrealized Holding Gain or Loss—Income 35,550
Fair Value Adjustment 35,550

On January 23, 2016, Republic sold all of its Burberry ordinary shares, receiving €287,220. Illustration 17-18 shows the computation of the realized gain on the sale.

ILLUSTRATION 17-18

Computation of Gain on Sale of Burberry Shares

|--|

Republic records the sale as follows.

January 23, 2016

Cash287,220Equity Investments259,700Gain on Sale of Investments27,520

In addition, assume that on February 10, 2016, Republic purchased €255,000 of Continental Trucking ordinary shares (20,000 shares × €12.75 per share), plus brokerage commissions of €1,850.

Illustration 17-19 lists Republic's equity investment portfolio as of December 31, 2016.

Carrying Fair Unrealized				
Investments	Value	Value	Gain (Loss)	
Continental Trucking	 €255,000ª	€278,350	€ 23,350	
Nestlé	317,500	362,550	45,050	
St. Regis Pulp Co.	141,350	139,050	(2,300)	
Total of portfolio	€713,850	€779,950	66,100	
Previous fair value		<u> </u>		
adjustment balance-Cr.			(35,550)	
Fair value adjustment - Dr.			€101,650	

ILLUSTRATION 17-19

Computation of Fair Value Adjustment— Equity Investment Portfolio (2016)

At December 31, 2016, the fair value of Republic's equity investment portfolio exceeds carrying value by $\[\le 66,100 \]$ (unrealized gain). The Fair Value Adjustment account had a credit balance of $\[\le 35,550 \]$ at December 31, 2016. To adjust its December 31, 2016, equity investment portfolio to fair value, the company debits the Fair Value Adjustment account for $\[\le 101,650 \]$ ($\[\le 35,550 \]$ + $\[\le 66,100 \]$). Republic records this adjustment as follows.

December 31, 2016

Fair Value Adjustment 101,650
Unrealized Holding Gain or Loss—Income 101,650

Equity Investments—Non-Trading (OCI)

The accounting entries to record non-trading equity investments are the same as for trading equity investments, except for recording the unrealized holding gain or loss. For non-trading equity investments, companies **report the unrealized holding gain or loss as other comprehensive income**. Thus, the account titled Unrealized Holding Gain or Loss—Equity is used.

To illustrate, assume that on December 10, 2015, Republic Corporation purchased 1,000 ordinary shares of Hawthorne Company for €20.75 per share (total cost €20,750). The investment represents less than a 20 percent interest. Hawthorne is a distributor for Republic products in certain locales, the laws of which require a minimum level of share ownership of a company in that region. The investment in Hawthorne meets this regulatory requirement. As a result, Republic accounts for this investment at fair value, with unrealized gains and losses recorded in other comprehensive income (OCI). Republic records this investment as follows.

December	10,	2015
----------	-----	------

Equity Investments 20,750
Cash 20,750

⁷The classification of an equity investment as non-trading is irrevocable. This approach is designed to provide some discipline to the application of the non-trading classification, which allows unrealized gains and losses to bypass net income. [12]

On December 27, 2015, Republic receives a cash dividend of €450 on its investment in the ordinary shares of Hawthorne Company. It records the cash dividend as follows.

December 27, 2015

Cash 450
Dividend Revenue 450

Similar to the accounting for trading investments, when an investor owns less than 20 percent of the ordinary shares of another corporation, it is presumed that the investor has relatively little influence on the investee. Therefore, **the investor earns income when the investee declares cash dividends**.

At December 31, 2015, Republic's investment in Hawthorne has the carrying value and fair value shown in Illustration 17-20.

ILLUSTRATION 17-20

Computation of Fair Value Adjustment— Non-Trading Equity Investment (2015)

Non-Trading Equity Investment	Carrying Value	Fair Value	Unrealized Gain (Loss)
Hawthorne Company	€20,750	€24,000	€3,250
Previous fair value adjustment balance			0
Fair value adjustment (Dr.)			€3,250

For Republic's non-trading investment, the unrealized gain is €3,250. That is, the fair value of the Hawthorne investment exceeds cost by €3,250. Because Republic has classified this investment as non-trading, Republic records the unrealized gains and losses related to changes in the fair value of this non-trading equity investment in an Unrealized Holding Gain or Loss—Equity account. Republic reports this amount as a part of other comprehensive income and as a component of other accumulated comprehensive income (reported in equity). In this case, Republic prepares an adjusting entry crediting the Unrealized Holding Gain or Loss—Equity account and debiting the Fair Value Adjustment account to record the increase in fair value and to record the gain as follows.

December 31, 2015

Fair Value Adjustment 3,250
Unrealized Holding Gain or Loss—Equity 3,250

Republic reports its equity investments in its December 31, 2015, financial statements as shown in Illustration 17-21.

ILLUSTRATION 17-21

Financial Statement Presentation of Equity Investments at Fair Value (2015)

Statement of Financial Position				
Investments Equity investments	€24,000			
Equity Accumulated other comprehensive gain	€ 3,250			
Statement of Comprehensive Income				
Other income and expense Dividend revenue € 450				
Other comprehensive income Unrealized holding gain	€ 3,250			

During 2016, sales of Republic products through Hawthorne as a distributor did not meet management's goals. As a result, Republic withdrew from these markets. On December 20, 2016, Republic sold all of its Hawthorne Company ordinary shares,

receiving proceeds of €22,500. Republic determines the unrealized gain and loss on the investment at the time of the disposition as shown in Illustration 17-22.

Non-Trading Equity Investment	Cost	Fair Value	Unrealized Gain (Loss)
Hawthorne Company at 12/20/2016	€20,750	€22,500	€ 1,750
Previous fair value adjustment balance (Dr.)			(3,250)
Change in the Fair Value Adjustment account (loss)			€(1,500)

ILLUSTRATION 17-22 Adjustment to Carrying

Value of Investment

Republic makes the following entry to adjust the carrying value of the non-trading investment.

December 20, 2016

Unrealized Holding Gain or Loss—Equity 1,500
Fair Value Adjustment 1,500

The following entry is then made to record the sale of the investment.

December 20, 2016

Cash 22,500
Fair Value Adjustment 1,750
Equity Investments 20,750

As a result of these entries, the Fair Value Adjustment account is eliminated. Note that all gains and losses on the non-trading investment are recorded in equity.⁸

In summary, the accounting for non-trading equity investments deviates from the general provisions for equity investments. The IASB noted that while fair value provides the most useful information about investments in equity investments, recording unrealized gains or losses in other comprehensive income is more representative for non-trading equity investments. [14]

Holdings Between 20% and 50%

An investor corporation may hold an interest of less than 50 percent in an investee corporation and thus not possess legal control. However, an investment in voting shares of less than 50 percent can still give an investor the ability to exercise significant influence over the operating and financial policies of an investee. [15] For example, Siemens AG (DEU) owns 34 percent of Areva (FRA) (which constructs power plants). Areva is very important to Siemens because the power industry is a key customer for its generators and other power-related products. Thus, Siemens has a significant (but not controlling) ownership stake in a power plant construction company, which helps Siemens push its products into the market. Significant influence may be indicated in several ways. Examples include representation on the board of directors, participation in policy-making processes, material intercompany transactions, interchange of managerial personnel, or technological dependency.

Another important consideration is the extent of ownership by an investor in relation to the concentration of other shareholdings. To achieve a reasonable degree of uniformity in application of the "significant influence" criterion, the profession concluded that an investment (direct or indirect) of 20 percent or more of the voting shares of an

⁸Once non-trading equity investments are sold, companies may transfer the balance of unrealized holding gains or losses in accumulated other comprehensive income to retained earnings. Transferring the balance to retained earnings has merit, as these gains or losses would have been recorded in net income in a prior period if these securities were accounted for as trading securities. Some contend that these unrealized gains or losses should be "recycled"; that is, these amounts should be recorded in net income when a non-trading investment is sold. The IASB rejected this approach because it would increase the complexity of the accounting for these investments. [13]

6 LEARNING OBJECTIVE

Explain the equity method of accounting and compare it to the fair value method for equity investments.

investee should lead to a presumption that in the absence of evidence to the contrary, an investor has the ability to exercise significant influence over an investee.⁹

In instances of "significant influence" (generally an investment of 20 percent or more), the investor must account for the investment using the **equity method**.

Equity Method

Under the **equity method**, the investor and the investee acknowledge a substantive economic relationship. The company originally records the investment at the cost of the shares acquired but subsequently adjusts the amount each period for changes in the investee's net assets. That is, **the investor's proportionate share of the earnings (losses) of the investee periodically increases (decreases) the investment's carrying amount. All dividends received by the investor from the investee also decrease the investment's carrying amount.** The equity method recognizes that the investee's earnings increase the investee's net assets, and that the investee's losses and dividends decrease these net assets.

To illustrate the equity method and compare it with the fair value method, assume that Maxi Company purchases a 20 percent interest in Mini Company. To apply the fair value method in this example, assume that Maxi does not have the ability to exercise significant influence and classifies the investment as trading. Where this example applies the equity method, assume that the 20 percent interest permits Maxi to exercise significant influence. Illustration 17-23 shows the entries.

ILLUSTRATION 17-23

Comparison of Fair Value Method and Equity Method

		ENTRIES BY	MAXI COMPANY		
Fair Valu	ue Method		Equ	ity Method	
On January 2, 2015, Maxi C	Company acquired	d 48,000 shares (2	20% of Mini Company ordinary s	hares) at a cost of	\$10 a share.
Equity Investments Cash	480,000	480,000	Equity Investments Cash	480,000	480,000
For the year 2015, N	/lini Company rep	orted net income	of \$200,000; Maxi Company's sl	nare is 20%, or \$40	,000.
No	entry		Equity Investments Investment Income	40,000	40,000
At December 31, 2015,	the Mini Compar	ny 48,000 shares l	have a fair value (market price) o	of \$12 a share, or \$5	576,000.
Fair Value Adjustment Unrealized Holding Gain or Loss—Income	96,000	96,000	No	o entry	
On January 28, 2016, Mini Co	ompany announce	ed and paid a cas	h dividend of \$100,000; Maxi Cor	mpany received 20°	%, or \$20,000.
Cash Dividend Revenue	20,000	20,000	Cash Equity Investments	20,000	20,000
For the year 2	2016, Mini reporte	ed a net loss of \$5	50,000; Maxi Company's share is	20%, or \$10,000.	
No (entry		Investment Loss Equity Investments	10,000	10,000
At December 31, 2016,	the Mini Compar	ny 48,000 shares l	nave a fair value (market price) o	of \$11 a share, or \$5	528,000.
Unrealized Holding Gain or Loss—Income Fair Value Adjustment	48,000		No	o entry	
[(\$480,000 + \$96,000) - \$52	28,000]		48,000		

⁹Cases in which an investment of 20 percent or more might not enable an investor to exercise significant influence include (1) the investee opposes the investor's acquisition of its shares, (2) the investor and investee sign an agreement under which the investor surrenders significant shareholder rights, (3) the investor's ownership share does not result in "significant influence" because majority ownership of the investee is concentrated among a small group of shareholders who operate the investee without regard to the views of the investor, and (4) the investor tries and fails to obtain representation on the investee's board of directors. [16]

Note that under the **fair value method**, Maxi reports as revenue only the cash dividends received from Mini. **The earning of net income by Mini (the investee) is not considered a proper basis for recognition of income from the investment by Maxi (the investor).** Why? Mini may permanently retain in the business any increased net assets resulting from its profitable operation. Therefore, Maxi only recognizes revenue when it receives dividends from Mini.

Under the **equity method**, Maxi reports as revenue its share of the net income reported by Mini. Maxi records the cash dividends received from Mini as a decrease in the investment carrying value. As a result, Maxi records its share of the net income of Mini in the year when it is recognized. With significant influence, Maxi can ensure that Mini will pay dividends, if desired, on any net asset increases resulting from net income. To wait until receiving a dividend ignores the fact that Maxi is better off if the investee has earned income.

Using dividends as a basis for recognizing income poses an additional problem. For example, assume that the investee reports a net loss. However, the investor exerts influence to force a dividend payment from the investee. In this case, the investor reports income even though the investee is experiencing a loss. In other words, using dividends as a basis for recognizing income fails to report properly the economics of the situation.

For some companies, equity accounting can be a real pain to the bottom line. For example, Amazon.com (USA), the pioneer of Internet retailing, at one time struggled to turn a profit. Furthermore, some of Amazon's equity investments had resulted in Amazon's earnings performance going from bad to worse. At one time, Amazon disclosed equity stakes in such companies as Altera International (USA), Basis Technology (USA), Drugstore.com (USA), and Eziba.com (USA). These equity investees reported losses that made Amazon's already bad bottom line even worse, accounting for up to 22 percent of its reported loss in one year alone.

Investee Losses Exceed Carrying Amount. If an investor's share of the investee's losses exceeds the carrying amount of the investment, should the investor recognize additional losses? Ordinarily, the investor should discontinue applying the equity method and not recognize additional losses.

If the investor's potential loss is not limited to the amount of its original investment (by guarantee of the investee's obligations or other commitment to provide further financial support) or if imminent return to profitable operations by the investee appears to be assured, the investor should recognize additional losses. [17]

Underlying Concepts

A low level of ownership indicates that a company should defer the income from an investee until cash is received because such revenue may not meet recognition criteria.

Holdings of More Than 50%

When one corporation acquires a voting interest of more than 50 percent in another corporation, it is said to have a **controlling interest**. In such a relationship, the investor corporation is referred to as the **parent** and the investee corporation as the **subsidiary**. Companies present the investment in the ordinary shares of the subsidiary as a long-term investment on the separate financial statements of the parent.

When the parent treats the subsidiary as an investment, the parent generally prepares consolidated financial statements. Consolidated financial statements treat the parent and subsidiary corporations as a single economic entity. (Advanced accounting courses extensively discuss the subject of when and how to prepare consolidated financial statements.) Whether or not consolidated financial statements are prepared, the parent company generally accounts for the investment in the subsidiary **using the equity method** as explained in the previous section of this chapter.

What do the numbers mean?

WHO'S IN CONTROL HERE?

Lenovo Group (CHN) owns a significant percentage (23 percent) of the shares of IGRS Engineering Lab Limited (CHN). The core business of IGRS Engineering Lab is to grant advanced technologies and solutions to companies (like Lenovo); launch intelligent terminals to the market; and offer efficient, green, and energy-saving total solutions to the industry, based on IGRS standards.

As you have learned, because Lenovo owns less than 50 percent of the shares, Lenovo does not consolidate IGRS Engineering Lab but instead accounts for its investment using the *equity method*. Under the equity method, Lenovo reports a single income item for its profits from IGRS Engineering Lab and only the net amount of its investment in the statement of financial position. Equity method accounting gives Lenovo a pristine statement of financial position and income statement, by separating the assets and liabilities and the profit margins of the related companies from its laptop-computer businesses.

Lenovo also owns a 49 percent interest in Chengdu Lenovo Rongjin (CHN), which is a property development company. In addition, it owns a 49 percent interest in Shanghai Shiyun Network (CHN), which distributes and develops information technology and software. In both these cases, Lenovo uses the equity method of accounting.

Some are critical of equity method accounting; they argue that some investees, like the 49 percent-owned companies, should be consolidated. The IASB has been working to tighten up consolidation rules, so that companies will be more likely to consolidate more of their 20 to 50 percent-owned investments. Consolidation of entities, such as for Chengdu Lenovo Rongjin and Shanghai Shiyun Network, is warranted if Lenovo effectively controls its equity method investments. See http://www.iasb.org/Current+Projects/IASB+Projects/Consolidation/Consolidation.htm for more information on the consolidation project.

OTHER REPORTING ISSUES

LEARNING OBJECTIVE 7

Discuss the accounting for impairments of debt investments.

We have identified the basic issues involved in accounting for investments in debt and equity securities. In addition, the following issues relate to the accounting for investments.

- **1.** Impairment of value.
- **2.** Transfers between categories.

Impairment of Value

A company should evaluate every held-for-collection investment, at each reporting date, to determine if it has suffered **impairment**—a loss in value such that the fair value of the investment is below its carrying value. ¹⁰ For example, if an investee experiences a bankruptcy or a significant liquidity crisis, the investor may suffer a permanent loss. If the company determines that an investment is impaired, it writes down the amortized cost basis of the individual security to reflect this loss in value. The company accounts for the write-down as a realized loss, and it includes the amount in net income.

For debt investments, a company uses the impairment test to determine whether "it is probable that the investor will be unable to collect all amounts due according to the contractual terms." If an investment is impaired, the company should measure the loss due to the impairment. This impairment loss is calculated as the difference between the carrying amount plus accrued interest and the expected future cash flows discounted at the investment's historical effective-interest rate. [18]

¹⁰Note that impairment tests are conducted only for debt investments that are held-for-collection (which are accounted for at amortized cost). Other debt and equity investments are measured at fair value each period; thus, an impairment test is not needed.

Example: Impairment Loss

At December 31, 2014, Mayhew Company has a debt investment in Bao Group, purchased at par for ¥200,000 (amounts in thousands). The investment has a term of four years, with annual interest payments at 10 percent, paid at the end of each year (the historical effective-interest rate is 10 percent). This debt investment is classified as held-for-collection. Unfortunately, Bao is experiencing significant financial difficulty and indicates that it will be unable to make all payments according to the contractual terms. Mayhew uses the present value method for measuring the required impairment loss. Illustration 17-24 shows the cash flow schedule prepared for this analysis.

December 31	Contractual Cash Flows	Expected Cash Flows	Loss of Cash Flows
2015	¥ 20,000	¥ 16,000	¥ 4,000
2016	20,000	16,000	4,000
2017	20,000	16,000	4,000
2018	220,000	216,000	4,000
Total cash flows	¥280,000	¥264,000	¥16,000

ILLUSTRATION 17-24 Investment Cash Flows

As indicated, the expected cash flows of ¥264,000 are less than the contractual cash flows of ¥280,000. The amount of the impairment to be recorded equals the difference between the recorded investment of ¥200,000 and the present value of the expected cash flows, as shown in Illustration 17-25.

Recorded investment		¥200,000
Less: Present value of ¥200,000 due in 4 years at 10% (Table 6-2); FV(PVF _{4,10%}); (¥200,000 × .68301) Present value of ¥16,000 interest receivable annually	¥136,602	
for 4 years at 10% (Table 6-4); R(<i>PVF-OA</i> _{4,10%}); (¥16,000 × 3.16986)	50,718	187,320
Loss on impairment		¥ 12,680

ILLUSTRATION 17-25Computation of
Impairment Loss

The loss due to the impairment is ¥12,680.¹¹ Why isn't it ¥16,000 (¥280,000 – ¥264,000)? A loss of ¥12,680 is recorded because Mayhew must measure the loss at a present value amount, not at an undiscounted amount. Mayhew recognizes an impairment loss of ¥12,680 by debiting Loss on Impairment for the expected loss. At the same time, it reduces the overall value of the investment. The journal entry to record the loss is therefore as follows.

December 31, 2014

Loss on Impairment 12,680

Debt Investments 12,680

Recovery of Impairment Loss

Subsequent to recording an impairment, events or economic conditions may change such that the extent of the impairment loss decreases (e.g., due to an improvement in the debtor's credit rating). In this situation, some or all of the previously recognized impairment loss shall be reversed with a debit to the Debt Investments account and crediting Recovery of Impairment Loss. Similar to the accounting for impairments of receivables shown in Chapter 7, the reversal of impairment losses shall not result in a carrying amount of the investment that exceeds the amortized cost that would have been reported had the impairment not been recognized.

¹¹Many question this present value calculation because it uses the investment's historical effective-interest rate—not the current market rate. As a result, the present value computation does not reflect the fair value of the debt investment, and many believe the impairment loss is misstated.

Transfers Between Categories

LEARNING OBJECTIVE 18

Describe the accounting for transfer of investments between categories.

Transferring an investment from one classification to another should occur only when the business model for managing the investment changes. The IASB expects such changes to be rare. [19] Companies account for transfers between classifications prospectively, at the beginning of the accounting period after the change in the business model.¹²

To illustrate, assume that British Sky Broadcasting Group plc (GBR) has a portfolio of debt investments that are classified as trading; that is, the debt investments are not held-for-collection but managed to profit from interest rate changes. As a result, it accounts for these investments at fair value. At December 31, 2014, British Sky has the following balances related to these securities.

> Debt investments Fair value adjustment Carrying value

£1,200,000 125,000 £1,325,000

As part of its strategic planning process, completed in the fourth quarter of 2014, British Sky management decides to move from its prior strategy—which requires active management—to a held-for-collection strategy for these debt investments. British Sky makes the following entry to transfer these securities to the held-for-collection classification.

January 1, 2015

Debt Investments Fair Value Adjustment 125.000

125,000

Therefore, at January 1, 2015, the debt investments are stated at fair value. However, in subsequent periods, British Sky will account for the investment at amortized cost. The effective-interest rate used in the amortized cost model is the rate used to discount the future cash flows to the fair value of British Sky's debt investment of £1,325,000 on January 1, 2015.

Evolving Issue

FAIR VALUE CONTROVERSY

The reporting of investments is controversial. Some favor the present approach, which reflects a mixed-attribute model based on a company's business model for managing the investment and the type of security. Under this model, some debt investments are accounted for at amortized cost and others at fair value. Others call for fair value measurement for all financial assets, with gains and losses recorded in income. In this section, we look at some of the major unresolved issues.

• Measurement based on business model. Companies value debt investments at fair value or amortized cost, depending on the business model and cash flow tests for managing the investments. Some believe that this framework provides the most relevant information about the performance of these investments. Others disagree; they note that two identical debt investments could be reported in different ways in the financial statements. They argue that this approach increases complexity and reduces the understandability of financial statements. Furthermore, the held-for-collection classification relies on management's plans, which can change. In other words, the classifications are subjective, resulting in arbitrary and non-comparable classifications.

¹²The Board rejected retrospective application because recasting prior periods according to the new investment model would not reflect how the investments were managed in the prior periods. The IASB indicates that a change in a company's investment business model is a significant and demonstrable event, and it is likely that this change will be disclosed when the change occurs. Note that other types of transfers are also permitted, such as non-trading to held-for-collection and vice versa, but these situations should be rare. [20]

- Gains trading. Debt investments classified as held-forcollection are reported at amortized cost; unrealized gains and losses on these investments are not recognized in income. Similarly, the unrealized gains or losses on non-trading equity investments also bypass income. Although significant trading out of these classifications might call into question management's business model assertions with respect to these classifications, a company can engage in "gains trading" (also referred to as "cherry picking," "snacking," or "sell the best and keep the rest"). In gains trading, companies sell their "winners," reporting the gains in income, and hold on to the losers. Furthermore, as one IASB member noted, in the recent financial crisis some of the most significant losses were recorded on investments that qualify for accounting in which unrealized gains or losses were not reported in income. That is, fair value accounting would have provided much more timely information on these investments when the markets needed it the most.
- *Liabilities not fairly valued.* Many argue that if companies report investments at fair value, they also should report liabilities at fair value. Why? By recognizing

changes in value on only one side of the statement of financial position (the asset side), a high degree of volatility can occur in the income and equity amounts. Further, financial institutions are involved in asset and liability management (not just asset management). Viewing only one side may lead managers to make uneconomic decisions as a result of the accounting. As we discussed in Chapter 14, there is debate on the usefulness of fair value estimates for liabilities.

The IASB (and the FASB) believe that fair value information for many financial assets and financial liabilities provides more useful and relevant information than a cost-based system. The Boards take this position because fair value reflects the current cash equivalent of the financial instrument rather than the cost of a past transaction. As a consequence, only fair value provides an understanding of the current worth of the investment. Under *IFRS 9*, companies must report fair values for more types of financial assets relative to prior standards in this area. However, an exception is allowed for some debt investments. Whether this approach results in an improvement in the reporting for debt and equity investments remains to be seen.

Summary of Reporting Treatment of Investments

Illustration 17-26 summarizes the major debt and equity investment classifications and their reporting treatment.

ILLUSTRATION 17-26 Summary of Investment Accounting Approaches

		Accounting Approaches
Classification	Valuation Approach and Reporting on the Statement of Financial Position	Income Effects
Debt Investment 1. Meets business model (held-for-collection) and contractual cash flow tests.	Amortized cost. Current or Non-current assets.	Interest is recognized as revenue.
Does not meet the business model test (not held-for-collection).	Fair value. Current assets.	Interest is recognized as revenue. Unrealized holding gains and losses are included in income.
3. Fair value option.	Fair value. Current or Non-current assets.	Interest is recognized as revenue. Unrealized holding gains and losses are included in income.
Equity Investment		
Does not meet contractual cash flow test; holdings less than 20 percent (trading).	Fair value. Current assets.	Dividends are recognized as revenue. Unrealized holding gains and losses are included in income.
Does not meet contractual cash flow test; holdings less than 20 percent (non-trading).	Fair value. Non-current assets.	Dividends are recognized as revenue. Unrealized holding gains and losses are not included in income but in other comprehensive income.
Holdings greater than 20 percent (significant influence or control).	Investments originally recorded at cost with periodic adjustment for the investor's share of the investee's income or loss, and decreased by all dividends received from the investee. Non-current assets.	Revenue is recognized to the extent of the investee's income or loss reported subsequent to the date of the investment.

GLOBAL ACCOUNTING INSIGHTS

INVESTMENTS

Before the IASB issued *IFRS 9*, the accounting and reporting for investments under IFRS and U.S. GAAP were for the most part very similar. However, *IFRS 9* introduces new

investment classifications and increases the situations when investments are accounted for at fair value.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to investments.

Similarities

- U.S. GAAP and IFRS use similar classifications for trading investments.
- The accounting for trading investments is the same between U.S. GAAP and IFRS. Held-to-maturity (U.S. GAAP) and held-for-collection investments are accounted for at amortized cost. Gains and losses on some investments are reported in other comprehensive income.
- U.S. GAAP and IFRS use the same test to determine whether the equity method of accounting should be used, that is, significant influence with a general guide of over 20 percent ownership.
- U.S. GAAP and IFRS are similar in the accounting for the fair value option. That is, the option to use the fair value method must be made at initial recognition, the selection is irrevocable, and gains and losses are reported as part of income.
- The measurement of impairments is similar under U.S. GAAP and IFRS.

Differences

- While U.S. GAAP classifies investments as trading, available-for-sale (both debt and equity investments), and held-to-maturity (only for debt investments), IFRS uses held-for-collection (debt investments), trading (both debt and equity investments), and non-trading equity investment classifications.
- Under U.S. GAAP, a bipolar approach is used to determine consolidation, which is a risk-and-reward model (often referred to as a variable-entity approach) and a votinginterest approach. The basis for consolidation under IFRS is control. However, under both systems, for consolidation to occur, the investor company must generally own 50 percent of another company.
- While the measurement of impairments is similar under U.S. GAAP and IFRS, U.S. GAAP does not permit the reversal of an impairment charge related to availablefor-sale debt and equity investments. IFRS allows reversals of impairments of held-for-collection investments.
- While U.S. GAAP and IFRS are similar in the accounting for the fair value option, one difference is that U.S. GAAP permits the fair value option for equity method investments; IFRS does not.

About the Numbers

The following example illustrates the accounting for investment impairments under IFRS. Belerus Company has a held-for-collection investment in the 8 percent, 10-year bonds of Wimbledon Company. The investment has a carrying value of €2,300,000 at December 31, 2015. Early in January 2016, Belerus learns that Wimbledon has lost a major customer. As a result, Belerus determines that this investment is impaired and now has a fair value of €1,500,000. Belerus makes the following entry to record the impairment.

Loss on Impairment (€2,300,000 − €1,500,000) 800,000

Debt Investments (HFC) 800,000

Early in 2017, Wimbledon secures several new customers, and its prospects have improved considerably. Belerus determines the fair value of its investment is now €2,000,000 and makes the following entry under IFRS.

Debt Investments (HFC) (€2,000,000 − €1,500,000) Recovery of Investment Loss

500,000

500,000

Under U.S. GAAP, Belerus is prohibited from recording the recovery in value of the impaired investment. That is, once an investment is impaired, the impaired value becomes the new basis for the investment.

On the Horizon

At one time, both the FASB and IASB indicated that they believed that all financial instruments should be reported at fair value and that changes in fair value should be reported as part of net income. However, *IFRS 9* indicates that the IASB believes that certain debt investments should not

be reported at fair value. The IASB's decision to issue new rules on investments, earlier than the FASB has completed its deliberations on financial instrument accounting, could create obstacles for the Boards in converging the accounting in this area.

SUMMARY OF LEARNING OBJECTIVES

- Describe the accounting framework for financial assets. Financial assets (debt and equity investments) are accounted for either at amortized cost or fair value. If a company has (1) a business model whose objective is to hold assets in order to collect contractual cash flows and (2) the contractual terms of the financial asset give specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding, then the company should use amortized cost. Thus, only debt investments can be accounted for at amortized cost. Equity investments are generally recorded and reported at fair value. Equity investments do not have a fixed interest or principal payment schedule and therefore cannot be accounted for at amortized cost. In general, equity investments are valued at fair value, with all gains and losses reported in income.
- 2 Understand the accounting for debt investments at amortized cost. Similar to bonds payable, companies should amortize discounts or premiums on debt investments using the effective-interest method. They apply the effective-interest rate or yield to the beginning carrying value of the investment for each interest period in order to compute interest revenue.
- Understand the accounting for debt investments at fair value. Companies that account for and report debt investments at fair value follow the same accounting entries as debt investments held-for-collection during the reporting period. That is, they are recorded at amortized cost. However, at each reporting date, companies adjust the amortized cost to fair value, with any unrealized holding gain or loss reported as part of net income.
- **Describe the accounting for the fair value option.** Companies have the option to report most financial instruments at fair value, with all gains and losses related to changes in fair value reported in the income statement. This option is applied on an instrument-by-instrument basis. The fair value option is generally available only at the time a company first purchases the financial asset or incurs a financial liability. If a company chooses to use the fair value option, it must measure this instrument at fair value until the company no longer has ownership.
- **Understand the accounting for equity investments at fair value.** For equity investment holdings less than 20 percent, it is presumed that companies hold the investment to profit from price changes. The accounting and reporting rule for these investments is to value the investments at fair value and record unrealized gains and losses in net income (the fair value method). Dividends received are recorded in income. Equity investments held for purposes other than trading are recorded at fair value on the statement of financial position, with unrealized gains and losses reported in other comprehensive income.
- Explain the equity method of accounting and compare it to the fair value method for equity investments. The equity method is used when an investor

KEY TERMS

amortized cost, 815 consolidated financial statements, 831 controlling interest, 831 debt investments, 815 effective-interest method, 816 equity investments, 824 equity method, 830 exchange for non-cash consideration, 825 (n) fair value, 815 Fair Value Adjustment, 819 fair value method, 818, 825 financial assets, 814 held-for-collection, 815 impairment, 832 investee, 824 investor, 824 non-trading equity investments, 825 parent, 831 significant influence, 829 subsidiary, 831 trading investments, 818 unrealized holding gain, 818 unrealized holding loss, 818

company acquires ordinary shares of another company (investee), such that the investor has significant influence—a holding between 20 and 50 percent. Under the equity method, the investor and the investee acknowledge a substantive economic relationship. The company originally records the investment at cost but subsequently adjusts the amount each period for changes in the net assets of the investee. That is, the investor's proportionate share of the earnings (losses) of the investee periodically increases (decreases) the investment's carrying amount. In contrast to the fair value method, all dividends received by the investor from the investee decrease the investment's carrying amount.

- **Discuss the accounting for impairments of debt investments.** Companies use the impairment test to determine whether it is probable that the investor will be unable to collect all amounts due according to the contractual terms. This impairment loss is reported in income, calculated as the difference between the carrying amount plus accrued interest and the expected future cash flows discounted at the investment's historical effective-interest rate.
- Describe the accounting for transfer of investments between categories. Transfers of securities between categories of investments occur when a company changes it business model for managing the investments. The transfers are accounted for prospectively, at the beginning of the period following the business model change.

APPENDIX 17A

ACCOUNTING FOR DERIVATIVE INSTRUMENTS

LEARNING OBJECTIVE 9

Explain who uses derivatives and why.

Until the early 1970s, most financial managers worked in a cozy, if unthrilling, world. Since then, constant change caused by volatile markets, new technology, and deregulation has increased the risks to businesses. In response, the financial community developed products to manage these risks.

These products—called derivative financial instruments or simply derivatives—are useful for managing risk. Companies use the fair values or cash flows of these instruments to offset the changes in fair values or cash flows of the at-risk assets. The development of powerful computing and communication technology has aided the growth in derivative use. This technology provides new ways to analyze information about markets as well as the power to process high volumes of payments.

DEFINING DERIVATIVES

In order to understand derivatives, consider the following examples.

Example 1—Forward Contract. Assume that a company like **Lenovo** (CHN) believes that the price of **Yahoo!**'s (USA) shares will increase substantially in the next three months. Unfortunately, it does not have the cash resources to purchase the shares today. Lenovo therefore enters into a contract with a broker for delivery of 1,000,000 Yahoo! shares in three months at the price of \$37 per share.

Lenovo has entered into a **forward contract**, a type of derivative. As a result of the contract, Lenovo **has received the right** to receive 1,000,000 Yahoo! shares in three months. Further, it **has an obligation** to pay \$37 per share at that time. What is the benefit of this derivative contract? Lenovo can buy Yahoo! shares today and take delivery in three months. If the price goes up, as it expects, Lenovo profits. If the price goes down, Lenovo loses.

Example 2—Option Contract. Now suppose that Lenovo needs two weeks to decide whether to purchase Yahoo! shares. It therefore enters into a different type of contract, one that gives it the right to purchase Yahoo! shares at its current price any time within the next two weeks. As part of the contract, the broker charges \$30,000 for holding the contract open for two weeks at a set price.

Lenovo has now entered into an **option contract**, another type of derivative. As a result of this contract, **it has received the right**, **but not the obligation**, to purchase these shares. If the price of the Yahoo! shares increases in the next two weeks, Lenovo exercises its option. In this case, the cost of the shares is the price of the shares stated in the contract, plus the cost of the option contract. If the price does not increase, Lenovo does not exercise the contract but still incurs the cost for the option.

The forward contract and the option contract both involve a future delivery of shares. The value of the contract relies on the underlying asset—the Yahoo! shares. Thus, these financial instruments are known as derivatives because they **derive their value from** values of other assets (e.g., ordinary shares, bonds, or commodities). Or, put another way, their value relates to a market-determined indicator (e.g., share price, interest rates, or the London Stock Exchange composite index).

In this appendix, we discuss the accounting for three different types of derivatives:

- 1. Financial forwards or financial futures.
- 2. Options.
- 3. Swaps.

WHO USES DERIVATIVES, AND WHY?

Whether to protect for changes in interest rates, the weather, share prices, oil prices, or foreign currencies, derivative contracts help to smooth the fluctuations caused by various types of risks. A company that wants to ensure against certain types of business risks often uses derivative contracts to achieve this objective.¹³

Producers and Consumers

To illustrate, assume that Heartland Ag is a large producer of potatoes for the consumer market. The present price for potatoes is excellent. Unfortunately, Heartland needs two months to harvest its potatoes and deliver them to the market. Because Heartland expects the price of potatoes to drop in the coming months, it signs a forward contract. It agrees to sell its potatoes today at the current market price for delivery in two months.

Who would buy this contract? Suppose on the other side of the contract is McDonald's Corporation (USA). McDonald's wants to have potatoes (for French fries) in two months and believes that prices will increase. McDonald's is therefore agreeable to accepting delivery in two months at current prices. It knows that it will need potatoes in two months and that it can make an acceptable profit at this price level.

In this situation, if the price of potatoes increases before delivery, Heartland loses and McDonald's wins. Conversely, if the price decreases, Heartland wins and McDonald's loses. However, the objective is not to gamble on the outcome. Regardless of which way the price moves, both Heartland and McDonald's have received a price at which they obtain an acceptable profit. In this case, although Heartland is a **producer** and McDonald's is a **consumer**, both companies are **hedgers**. They both **hedge their positions** to ensure an acceptable financial result.

¹³Derivatives are traded on many exchanges throughout the world. In addition, many derivative contracts (primarily interest rate swaps) are privately negotiated.

Commodity prices are volatile. They depend on weather, crop production, and general economic conditions. For the producer and the consumer to plan effectively, it makes good sense to lock in specific future revenues or costs in order to run their businesses successfully.

Speculators and Arbitrageurs

In some cases, instead of McDonald's taking a position in the forward contract, a speculator may purchase the contract from Heartland. The **speculator** bets that the price of potatoes will rise, thereby increasing the value of the forward contract. The speculator, who may be in the market for only a few hours, will then sell the forward contract to another speculator or to a company like McDonald's.

Arbitrageurs also use derivatives. These market players attempt to exploit inefficiencies in markets. They seek to lock in profits by simultaneously entering into transactions in two or more markets. For example, an arbitrageur might trade in a futures contract. At the same time, the arbitrageur will also trade in the commodity underlying the futures contract, hoping to achieve small price gains on the difference between the two. Markets rely on speculators and arbitrageurs to keep the market liquid on a daily basis.

In these illustrations, we explained why Heartland (the producer) and McDonald's (the consumer) would become involved in a derivative contract. Consider other types of situations that companies face.

- **1.** Airlines, like **Japan Airlines** (JPN), **British Airways** (GBR), and **Delta** (USA), are affected by changes in the price of jet fuel.
- **2.** Financial institutions, such as **Barclays** (GBR), **Deutsche Bank** (DEU), and **ING** (NLD), are involved in borrowing and lending funds that are affected by changes in interest rates.
- Multinational corporations, like Nokia (FIN), Coca-Cola (USA), and Siemens (DEU), are subject to changes in foreign exchange rates.

In fact, most corporations are involved in some form of derivatives transactions. Companies give these reasons (in their annual reports) as to why they use derivatives:

- **1.** ExxonMobil (USA) uses derivatives to hedge its exposure to fluctuations in interest rates, foreign currency exchange rates, and hydrocarbon prices.
- **2.** HSBC (GBR) uses derivatives to manage foreign currency exchange rates and interest rates.
- **3.** GlaxoSmithKline (GBR) uses derivatives to manage the impact of interest rate and foreign exchange rate changes on earnings and cash flows.

Many corporations use derivatives extensively and successfully. However, derivatives can be dangerous. All parties involved must understand the risks and rewards associated with these contracts. ¹⁴

¹⁴There are some well-publicized examples of companies that have suffered considerable losses using derivatives. For example, companies such as Fannie Mae (USA), Enron (USA), Showa Shell Sekiyu (JPN), Metallgesellschaft (DEU), Procter & Gamble (USA), and Air Products & Chemicals (USA) incurred significant losses from investments in derivative instruments.

BASIC PRINCIPLES IN ACCOUNTING FOR DERIVATIVES

The IASB concluded that derivatives such as forwards and options are assets and liabilities. It also concluded that companies should report them in the statement of financial position **at fair value**. The Board believes that fair value will provide statement users the best information about derivatives. Relying on some other basis of valuation for derivatives, such as historical cost, does not make sense. Why? Because many derivatives have a historical cost of zero. Furthermore, the markets for derivatives, and the assets upon which derivatives' values rely, are well developed. As a result, the Board believes that companies can determine reliable fair value amounts for derivatives. The state of the

On the income statement, a company should recognize any unrealized gain or loss in income if it uses the derivative for speculation purposes. If using the derivative for hedging purposes, the accounting for any gain or loss depends on the type of hedge used. We discuss the accounting for hedged transactions later in the appendix.

In summary, companies follow these guidelines in accounting for derivatives.

- **1.** Recognize derivatives in the financial statements as assets and liabilities.
- 2. Report derivatives at fair value.
- **3.** Recognize gains and losses resulting from speculation in derivatives immediately in income.
- **4.** Report gains and losses resulting from hedge transactions differently, depending on the type of hedge.

Derivative Financial Instrument (Speculation)

To illustrate the measurement and reporting of a derivative for speculative purposes, we examine a derivative whose value depends on the market price of Laredo Inc. ordinary shares. A company can realize a gain from the increase in the value of the Laredo shares with the use of a derivative, such as a call option.¹⁷ A call option gives the holder the right, but not the obligation, to buy shares at a preset price. This price is often referred to as the strike price or the exercise price.

For example, assume a company enters into a call option contract with Baird Investment Co., which gives it the option to purchase Laredo shares at €100 per share. ¹8 If the

¹⁵IFRS covers accounting and reporting for all derivative instruments, whether financial or not. In this appendix, we focus on derivative financial instruments because of their widespread use in practice. **[21]**

¹⁶As discussed in earlier chapters, fair value is defined as "the amount for which an asset could be exchanged or a liability settled between knowledgeable, willing parties in an arm's length transaction." Fair value is therefore a market-based measure. The IASB has also developed a fair value hierarchy, which indicates the reporting of valuation techniques to use to determine fair value. Level 1 fair value measures are based on observable inputs that reflect quoted prices for identical assets or liabilities in active markets. Level 2 measures are based on inputs other than quoted prices included in Level 1 but that can be corroborated with observable data. Level 3 fair values are based on unobservable inputs (e.g., a company's own data or assumptions). Thus, Level 1 is the most reliable because it is based on quoted prices, like a closing share price in the Financial Times. Level 2 is the next most reliable and would rely on evaluating similar assets or liabilities in active markets. For Level 3 (the least reliable), much judgment is needed, based on the best information available, to arrive at a relevant and reliable fair value measurement. [22]

¹⁷Investors can use a different type of option contract—a **put option**—to realize a gain if anticipating a decline in the value of Laredo shares. A put option gives the holder the option to sell shares at a preset price. Thus, a put option **increases** in value when the underlying asset **decreases** in value.

¹⁸Baird Investment Co. is referred to as the **counterparty**. Counterparties frequently are investment bankers or other companies that hold inventories of financial instruments.

10 LEARNING OBJECTIVE

Understand the basic guidelines for accounting for derivatives.

111 LEARNING OBJECTIVE

Describe the accounting for derivative

financial instruments.

price of Laredo shares increases above €100, the company can exercise this option and purchase the shares for €100 per share. If Laredo's shares never increase above €100 per share, the call option is worthless.

Accounting Entries. To illustrate the accounting for a call option, assume that the company purchases a call option contract on January 2, 2015, when Laredo shares are trading at €100 per share. The contract gives it the option to purchase 1,000 shares (referred to as the notional amount) of Laredo shares at an option price of €100 per share. The option expires on April 30, 2015. The company purchases the call option for €400 and makes the following entry.

January 2, 2015

Call Option 400
Cash 400

This payment is referred to as the **option premium**. It is generally much less than the cost of purchasing the shares directly. The option premium consists of two amounts: (1) intrinsic value and (2) time value. Illustration 17A-1 shows the formula to compute the option premium.

ILLUSTRATION 17A-1

Option Premium Formula

Option Premium = Intrinsic Value + Time Value

Intrinsic value is the difference between the market price and the preset strike price at any point in time. It represents the amount realized by the option holder, if exercising the option immediately. On January 2, 2015, the intrinsic value is zero because the market price equals the preset strike price.

Time value refers to the option's value over and above its intrinsic value. Time value reflects the possibility that the option has a fair value greater than zero. How? Because there is some expectation that the price of Laredo shares will increase above the strike price during the option term. As indicated, the time value for the option is €400.¹⁹ The following additional data are available with respect to the call option.

Date	Market Price of Laredo Shares	Time Value of Call Option
March 31, 2015	€120 per share	€100
April 16, 2015	€115 per share	€60

As indicated, on March 31, 2015, the price of Laredo shares increases to €120 per share. The intrinsic value of the call option contract is now €20,000. That is, the company can exercise the call option and purchase 1,000 shares from Baird Investment for €100 per share. It can then sell the shares in the market for €120 per share. This gives the company a gain of €20,000 (€120,000 – €100,000) on the option contract. It records the increase in the intrinsic value of the option as follows.

March 31, 2015

Call Option	20,000	
Unrealized Holding Gain or Loss-Income		20.000

¹⁹This cost is estimated using option-pricing models, such as that based on the Black-Scholes equation. The volatility of the underlying shares, the expected life of the option, the risk-free rate of interest, and expected dividends on the underlying shares during the option term affect the Black-Scholes fair value estimate.

²⁰In practice, investors generally do not have to actually buy and sell the Laredo shares to settle the option and realize the gain. This is referred to as the **net settlement** feature of option contracts.

www.downloadslide.com

Appendix 17A: Accounting for Derivative Instruments 843

A market appraisal indicates that the time value of the option at March 31, 2015, is €100.²¹ The company records this change in value of the option as follows.

March 31, 2015

Unrealized Holding Gain or Loss—Income 300
Call Option (€400 − €100) 300

At March 31, 2015, the company reports the call option in its statement of financial position at fair value of €20,100.²² The unrealized holding gain increases net income for the period. The loss on the time value of the option decreases net income.

On April 16, 2015, the company settles the option before it expires. To properly record the settlement, it updates the value of the option for the decrease in the intrinsic value of ξ 5,000 ([ξ 20 – ξ 15]) \times 1,000) as follows.

April 16, 2015

Unrealized Holding Gain or Loss—Income 5,000
Call Option 5,000

The decrease in the time value of the option of ≤ 40 ($\leq 100 - \leq 60$) is recorded as follows.

April 16, 2015

Unrealized Holding Gain or Loss—Income 40
Call Option 40

Thus, at the time of the settlement, the call option's carrying value is as follows.

Call Option					
January 2, 2015	400	March 31, 2015	300		
March 31, 2015	20,000	April 16, 2015	5,000		
		April 16, 2015	40		
Balance, April 16, 2015	15.060				

The company records the settlement of the option contract with Baird as follows.

April 16, 2015

Cash 15,000
Loss on Settlement of Call Option 60
Call Option 15,060

Illustration 17A-2 summarizes the effects of the call option contract on net income.

Date	Transaction	Income (Loss) Effect
March 31, 2015	Net increase in value of call option (€20,000 - €300)	€19,700
April 16, 2015	Decrease in value of call option (€5,000 + €40)	(5,040)
April 16, 2015	Settle call option	(60)
	Total net income	<u>€14,600</u>

ILLUSTRATION 17A-2

Effect on Income— Derivative Financial Instrument

The accounting summarized in Illustration 17A-2 is in accord with IFRS. That is, because the call option meets the definition of an asset, the company records it in the statement of financial position on March 31, 2015. Furthermore, it reports the call option at fair value, with any gains or losses reported in income.

²¹The decline in value reflects both the decreased likelihood that the Laredo shares will continue to increase in value over the option period and the shorter time to maturity of the option contract.

²²As indicated earlier, the total value of the option at any point in time equals the intrinsic value plus the time value.

Differences between Traditional and Derivative Financial Instruments

How does a traditional financial instrument differ from a derivative one? A derivative financial instrument has the following three basic characteristics. [23]

- **1.** The instrument has (1) one or more underlyings and (2) an identified payment provision. An underlying is a specified interest rate, security price, commodity price, index of prices or rates, or other market-related variable. The interaction of the underlying, with the face amount or the number of units specified in the derivative contract (the notional amounts), determines payment. For example, the value of the call option increased in value when the value of the Laredo shares increased. In this case, the underlying is the share price. To arrive at the payment provision, multiply the change in the share price by the number of shares (notional amount).
- **2.** The instrument requires little or no investment at the inception of the contract. To illustrate, the company paid a small premium to purchase the call option—an amount much less than if purchasing the Laredo shares as a direct investment.
- **3.** The instrument requires or permits net settlement. As indicated in the call option example, the company could realize a profit on the call option without taking possession of the shares. This **net settlement** feature reduces the transaction costs associated with derivatives.

Illustration 17A-3 summarizes the differences between traditional and derivative financial instruments. Here, we use an equity investment (trading) for the traditional financial instrument and a call option as an example of a derivative one.

ILLUSTRATION 17A-3

Features of Traditional and Derivative Financial Instruments

Feature	Traditional Financial Instrument Equity Investment (Trading)	Derivative Financial Instrument (Call Option)
Payment provision	Share price times the number of shares.	Change in share price (underlying) times number of shares (notional amount).
Initial investment	Investor pays full cost.	Initial investment is much less than full cost.
Settlement	Deliver shares to receive cash.	Receive cash equivalent, based on changes in share price times the number of shares.

DERIVATIVES USED FOR HEDGING

Flexibility in use, and the low-cost features of derivatives relative to traditional financial instruments, explain the popularity of derivatives. An additional use for derivatives is in risk management. For example, companies such as Coca-Cola (USA), BP (GBR), and Siemens (DEU) borrow and lend substantial amounts in credit markets. In doing so, they are exposed to significant interest rate risk. That is, they face substantial risk that the fair values or cash flows of interest-sensitive assets or liabilities will change if interest rates increase or decrease. These same companies also have significant international operations. As such, they are also exposed to exchange rate risk—the risk that changes in foreign currency exchange rates will negatively impact the profitability of their international businesses.

Companies can use derivatives to offset the negative impacts of changes in interest rates or foreign currency exchange rates. This use of derivatives is referred to as hedging.

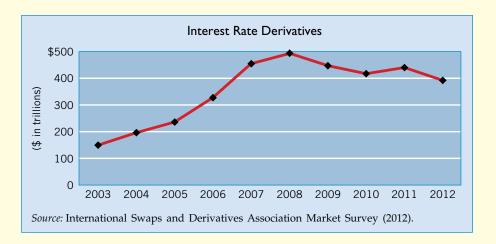

The IASB established accounting and reporting standards for derivative financial instruments used in hedging activities. IFRS allows special accounting for two types of hedges—fair value and cash flow hedges.²³

What do the numbers mean?

RISKY BUSINESS

In 2008, nearly \$500 trillion (in notional amounts) in derivative contracts were in play. As shown in the graph below, use of derivatives has grown but declined slightly in recent years. The primary players in the market for derivatives are

large companies and various financial institutions, which continue to find new uses for derivatives for speculation and risk management.

Financial engineers continue to develop new uses for derivatives, many times through the use of increasingly complex webs of transactions, spanning a number of markets. As new uses for derivatives appear, the financial system as a whole can be dramatically affected. As a result, some market-watchers are concerned about the risk that a crisis in one company or sector could bring the entire financial system to its knees.

This was the case recently when credit default swaps were used to facilitate the sales of mortgage-backed securities (MBS).

However, when the real estate market went south, the MBS defaulted, exposing large international financial institutions, like Barclays (GBR), AIG (USA), and Bank of America (USA), to massive losses. The losses were so widespread that government bailouts were required to prevent international securities markets from collapsing. In response, market regulators are proposing new rules to mitigate risks to broader markets from derivatives trading.

Source: P. Eavis, "Bill on Derivatives Overhaul Is Long Overdue," Wall Street Journal (April 14, 2010).

Fair Value Hedge

In a **fair value hedge**, a company uses a derivative to hedge (offset) the exposure to changes in the fair value of a recognized asset or liability or of an unrecognized commitment. In a perfectly hedged position, the gain or loss on the fair value of the derivative equals and offsets that of the hedged asset or liability.

12 LEARNING OBJECTIVE Explain how to account for a fair value hedge.

²³IFRS also addresses the accounting for certain foreign currency hedging transactions. In general, these transactions are special cases of the two hedges we discuss here. **[24]** Understanding of foreign currency hedging transactions requires knowledge related to consolidation of multinational entities, which is beyond the scope of this textbook.

Companies commonly use several types of fair value hedges. For example, companies use interest rate swaps to hedge the risk that changes in interest rates will impact the fair value of debt obligations. Or, they use put options to hedge the risk that an equity investment will decline in value.

To illustrate a fair value hedge, assume that on April 1, 2015, Hayward Co. purchases 100 ordinary shares of Sonoma Company at a market price of €100 per share. Due to a legal requirement, Hayward does not intend to actively trade this investment. It consequently classifies the Sonoma investment as a non-trading equity investment. Hayward records this investment as follows.

April 1, 2015

Equity Investments 10,000
Cash 10,000

Hayward records non-trading equity investments at fair value on the statement of financial position. It reports unrealized gains and losses in equity as part of other comprehensive income.²⁴ Fortunately for Hayward, the value of the Sonoma shares increases to €125 per share during 2015. Hayward records the gain on this investment as follows.

December 31, 2015

Fair Value Adjustment 2,500
Unrealized Holding Gain or Loss—Equity 2,500

Illustration 17A-4 indicates how Hayward reports the Sonoma investment in its statement of financial position.

ILLUSTRATION 17A-4

Statement of Financial Position Presentation of Non-Trading Equity Investment

HAYWARD CO. STATEMENT OF FINANCIAL POSITIO DECEMBER 31, 2015	N (PARTIAL)	
Assets Equity investment	€12,500	
Equity Accumulated other comprehensive incor Unrealized holding gain	ne €2,500	

While Hayward benefits from an increase in the price of Sonoma shares, it is exposed to the risk that the price of the Sonoma shares will decline. To hedge this risk, Hayward locks in its gain on the Sonoma investment by purchasing a put option on 100 Sonoma shares.

Hayward enters into the put option contract on January 2, 2016, and designates the option as a fair value hedge of the Sonoma investment. This put option (which expires in two years) gives Hayward the option to sell Sonoma shares at a price of €125. Since the exercise price equals the current market price, no entry is necessary at inception of the put option. 25

January 2, 2016

No entry required. A memorandum entry indicates the signing of the put option contract and its designation as a fair value hedge for the Sonoma investment.

At December 31, 2016, the price of the Sonoma shares has declined to €120 per share. Hayward records the following entry for the Sonoma investment.

²⁴We discussed the distinction between trading and non-trading equity investments in the chapter.

²⁵To simplify the example, we assume no premium is paid for the option.

www.downloadslide.com

500

Appendix 17A: Accounting for Derivative Instruments 847

December 31, 2016

Unrealized Holding Gain or Loss—Equity 500
Fair Value Adjustment

The following journal entry records the increase in value of the put option on Sonoma shares.

December 31, 2016

Put Option 500
Unrealized Holding Gain or Loss—Equity 500

The decline in the price of Sonoma shares results in an increase in the fair value of the put option. That is, Hayward could realize a gain on the put option by purchasing 100 shares in the open market for €120 and then exercise the put option, selling the shares for €125. This results in a gain to Hayward of €500 (100 shares × [€125 − €120]).

Note that upon designation of the hedge, the accounting for the put option changes from regular IFRS. That is, Hayward records the unrealized holding loss in equity, not in income. If Hayward had not followed this accounting, a mismatch of gains and losses in the income statement would result. Thus, special accounting for the hedging instrument (in this case, a put option) is necessary in a fair value hedge. [25]

Illustration 17A-5 indicates how Hayward reports the amounts related to the Sonoma investment and the put option.

HAYWARD CO. STATEMENT OF FINANCIAL POSITION (PARTIAL) DECEMBER 31, 2016 Assets Equity investment (non-trading) €12,000 Put option 500

ILLUSTRATION 17A-5

Statement of Financial Position Presentation of Fair Value Hedge

The increase in fair value on the option offsets or hedges the decline in value on Hayward's non-trading investment. The financial statements reflect the underlying substance of Hayward's net exposure to the risks of holding Sonoma shares. By using fair value accounting for both these financial instruments, the statement of financial position reports the amount that Hayward would receive on the investment and the put option contract if Hayward sold and settled them, respectively.

Illustration 17A-6 illustrates the reporting of the effects of the hedging transaction on income for the year ended December 31, 2016.

HAYWARD CO. STATEMENT OF COMPREHENSIVE INCOME (PARTIAL) FOR THE YEAR ENDED DECEMBER 31, 2016			
Other income and expense			
Unrealized holding gain—put option Unrealized holding loss—equity investment	€ 500 (500)		

ILLUSTRATION 17A-6

Income Statement Presentation of Fair Value Hedge

The statement of comprehensive income indicates that the gain on the put option offsets the loss on the equity investment.²⁷ The reporting for these financial instruments,

²⁶In practice, Hayward generally does not have to actually buy and sell the Sonoma shares to realize this gain. Rather, unless the counterparty wants to hold Hayward shares, Hayward can "close out" the contract by having the counterparty pay it €500 in cash. This is an example of the net settlement feature of derivatives.

²⁷Note that the fair value changes in the option contract will not offset **increases** in the value of the Hayward investment. Should the price of Sonoma shares increase above €125 per share, Hayward would have no incentive to exercise the put option.

even when they reflect a hedging relationship, illustrates why the IASB argued that fair value accounting provides the most relevant information about financial instruments, including derivatives.

Cash Flow Hedge

LEARNING OBJECTIVE

Explain how to account for a cash flow hedge.

Companies use cash flow hedges to hedge exposures to cash flow risk, which results from the variability in cash flows. The IASB allows special accounting for cash flow hedges. Generally, companies measure and report derivatives at fair value on the statement of financial position. They report gains and losses directly in net income. However, companies account for derivatives used in cash flow

hedges at fair value on the statement of financial position, but they **record gains or losses in equity**, **as part of other comprehensive income**.

To illustrate, assume that in September 2015 Allied Can Co. anticipates purchasing 1,000 metric tons of aluminum in January 2016. Concerned that prices for aluminum will increase in the next few months, Allied wants to hedge the risk that it might pay higher prices for inventory in January 2016. As a result, Allied enters into an aluminum futures contract.

A **futures contract** gives the holder the right and the obligation to purchase an asset at a preset price for a specified period of time. In this case, the aluminum futures contract gives Allied the right and the obligation to purchase 1,000 metric tons of aluminum for \$1,550 per ton (amounts in thousands). This contract price is good until the contract expires in January 2016. The underlying for this derivative is the price of aluminum. If the price of aluminum rises above \$1,550, the value of the futures contract to Allied increases. Why? Because Allied will be able to purchase the aluminum at the lower price of \$1,550 per ton. Provided in the price of \$1,550 per ton.

Allied enters into the futures contract on September 1, 2015. Assume that the price to be paid today for inventory to be delivered in January—the **spot price**—equals the contract price. With the two prices equal, the futures contract has no value. Therefore, no entry is necessary.

September 1, 2015

No entry required. A memorandum entry indicates the signing of the futures contract.

At December 31, 2015, the price for January delivery of aluminum increases to \$1,575 per metric ton. Allied makes the following entry to record the increase in the value of the futures contract.

December 31, 2015

Futures Contract 25,000
Unrealized Holding Gain or Loss—Equity
([¥1,575 - ¥1,550] × 1,000 tons)

25,000

Allied reports the futures contract in the statement of financial position as a current asset. It reports the gain on the futures contract as part of other comprehensive income.

Since Allied has not yet purchased and sold the inventory, this gain arises from an **anticipated transaction**. In this type of transaction, a company accumulates in equity gains or losses on the futures contract as part of other comprehensive income until the period in which it sells the inventory, thereby affecting earnings.

²⁸A **futures contract** is a firm contractual agreement between a buyer and seller for a specified asset on a fixed date in the future. The contract also has a standard specification so both parties know exactly what is being traded. A **forward** is similar but is not traded on an exchange and does not have standardized conditions.

²⁹As with the earlier call option example, the actual aluminum does not have to be exchanged. Rather, the parties to the futures contract settle by paying the cash difference between the futures price and the price of aluminum on each settlement date.

www.downloadslide.com

Appendix 17A: Accounting for Derivative Instruments 849

In January 2016, Allied purchases 1,000 metric tons of aluminum for ¥1,575 and makes the following entry.³⁰

January 2016

Aluminum Inventory 1,575,000

Cash (¥1,575 × 1,000 tons) 1,575,000

At the same time, Allied makes final settlement on the futures contract. It records the following entry.

January 2016

Cash 25,000

Futures Contract (¥1,575,000 - ¥1,550,000) 25,000

Through use of the futures contract derivative, Allied fixes the cost of its inventory. The ¥25,000 futures contract settlement offsets the amount paid to purchase the inventory at the prevailing market price of \(\frac{\pmathbf{\frac{41}}}{1,575,000}\). The result: net cash outflow of \(\frac{\pmathbf{\frac{41}}}{1,550}\) per metric ton, as desired. As Illustration 17A-7 shows, Allied has therefore effectively hedged the cash flow for the purchase of inventory.

Anticipated Cash Flows

Wish to fix cash paid for inventory at ¥1,550,000

Actual Cash Flows

Actual cash paid ¥1,575,000 Less: Cash received on futures contract Final cash paid

(25,000)¥1,550,000

There are no income effects at this point. Allied accumulates in equity the gain on the futures contract as part of other comprehensive income until the period when it sells

For example, assume that Allied processes the aluminum into finished goods (cans). The total cost of the cans (including the aluminum purchases in January 2016) is ¥1,700,000. Allied sells the cans in July 2016 for ¥2,000,000, and records this sale as follows.

July 2016

Cash 2,000,000

the inventory, affecting earnings through cost of goods sold.

Sales Revenue 2,000,000

Cost of Goods Sold 1,700,000

Inventory (cans) 1,700,000

Since the effect of the anticipated transaction has now affected earnings, Allied makes the following entry related to the hedging transaction.

Unrealized Holding Gain or Loss-Equity 25,000

Cost of Goods Sold 25.000

The gain on the futures contract, which Allied reported as part of other comprehensive income, now reduces cost of goods sold. As a result, the cost of aluminum included in the overall cost of goods sold is ¥1,550,000. The futures contract has worked as planned. Allied has managed the cash paid for aluminum inventory and the amount of cost of goods sold.³¹

ILLUSTRATION 17A-7

Effect of Hedge on Cash Flows

³⁰In practice, futures contracts are settled on a daily basis. For our purposes, we show only one settlement for the entire amount.

 $^{^{31}}$ Recently, the IASB published an amendment to *IFRS 9* related to hedging. The main changes relate to determining when a hedge occurs and the eligibility of items as hedged items and hedging instruments. A key change allows components of non-financial items to be hedged as long as these components are separately identifiable and reliably measurable.

OTHER REPORTING ISSUES

LEARNING OBJECTIVE 14

Identify special reporting issues related to derivative financial instruments that cause unique accounting problems.

The preceding examples illustrate the basic reporting issues related to the accounting for derivatives. Next, we discuss the following additional issues:

- **1.** The accounting for embedded derivatives.
- **2.** Qualifying hedge criteria.

Embedded Derivatives

As we indicated at the beginning of this appendix, rapid innovation in the development of complex financial instruments drove efforts toward unifying and improving the accounting standards for derivatives. In recent years, this innovation has led to the development of hybrid securities. These securities have characteristics of both debt and equity. They often combine traditional and derivative financial instruments.

For example, a convertible bond (discussed in Chapter 16) is a hybrid instrument. It consists of two parts: (1) a debt security, referred to as the host security, combined with (2) an option to convert the bond to ordinary shares, the embedded derivative.

In accounting for embedded derivatives, some support an approach similar to the accounting for other derivatives; that is, separate the embedded derivative from the host security and then account for it using the accounting for derivatives. This separation process is referred to as bifurcation. However, the IASB, based on concerns about the complexity of the bifurcation approach, required that the embedded derivative and host security be accounted for as a single unit. 32 The accounting followed is based on the classification of the host security.³³

Qualifying Hedge Criteria

The IASB identified certain criteria that hedging transactions must meet before requiring the special accounting for hedges. The IASB designed these criteria to ensure the use of hedge accounting in a consistent manner across different hedge transactions. The general criteria relate to the following areas.

1. Documentation, risk management, and designation. At inception of the hedge, there must be formal documentation of the hedging relationship, the company's risk management objective, and the strategy for undertaking the hedge. Designation refers to identifying the hedging instrument, the hedged item or transaction, the nature of the risk being hedged, and how the hedging instrument will offset changes in the fair value or cash flows attributable to the hedged risk. [26]

The IASB decided that documentation and designation are critical to the implementation of the special accounting for hedges. Without these requirements, companies might try to apply the hedge accounting provisions retroactively, only in response to negative changes in market conditions, to offset the negative impact of a transaction on the financial statements. Allowing special hedge accounting in such a setting could mask the speculative nature of the original transaction.

2. Effectiveness of the hedging relationship. At inception and on an ongoing basis, the hedging relationship should be effective in achieving offsetting changes in fair value or cash flows. Companies must assess effectiveness whenever preparing financial statements. [27]

³²A company can also designate such a derivative as a hedging instrument. The company would apply the hedge accounting provisions outlined earlier in the chapter.

³³As discussed in Chapter 16, the **issuer** of the convertible bonds would bifurcate the option component of the convertible bonds payable.

The general guideline for effectiveness is that the fair values or cash flows of the hedging instrument (the derivative) and the hedged item exhibit a high degree of correlation. In our earlier hedging examples (put option and the futures contract on aluminum inventory), the fair values and cash flows are perfectly correlated. That is, when the cash payment for the inventory purchase increased, it offset, euro for euro, the cash received on the futures contract.

If the effectiveness criterion is not met, either at inception or because of changes following inception of the hedging relationship, IFRS no longer allows special hedge accounting. The company should then account for the derivative or the part of the derivative that is not effective in the hedging relationship as a free-standing derivative.³⁴

3. Effect on reported earnings of changes in fair values or cash flows. A change in the fair value of a hedged item or variation in the cash flow of a hedged forecasted transaction must have the potential to change the amount recognized in reported earnings. There is no need for special hedge accounting if a company accounts for both the hedging instrument and the hedged item at fair value under existing IFRS. In this case, earnings will properly reflect the offsetting gains and losses. ³⁵

For example, special accounting is not needed for a fair value hedge of a trading security because a company accounts for both the investment and the derivative at fair value on the statement of financial position with gains or losses reported in earnings. Thus, "special" hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under IFRS.³⁶

Summary of Derivatives Accounting

Illustration 17A-8 summarizes the accounting provisions for derivatives and hedging transactions.

Derivative Use	Accounting for Derivative	Accounting for Hedged Item	Common Example
Speculation	At fair value with unreal- ized holding gains and losses recorded in income.	Not applicable.	Call or put option on an equity security.
Hedging			
Fair value	At fair value with holding gains and losses recorded in income.	At fair value with gains and losses recorded in income.	Put option to hedge a non-trading equity investment.
Cash flow	At fair value with unrealized holding gains and losses from the hedge recorded in other comprehensive income, and reclassified in income when the hedged transaction's cash flows affect earnings.	Use other IFRS for the hedged item.	Use of a futures contract to hedge a forecasted purchase of inventory.

ILLUSTRATION 17A-8Summary of Derivative Accounting under IFRS

³⁴The accounting for the part of a derivative that is not effective in a hedge is at fair value, with gains and losses recorded in income.

³⁵IFRS gives companies the option to measure most types of financial instruments—from equity investments to debt issued by the company—at fair value. Changes in fair value are recognized in net income each reporting period. Thus, IFRS provides companies with the opportunity to hedge their financial instruments without the complexity inherent in applying hedge accounting provisions. [28]

³⁶An important criterion specific to cash flow hedges is that the forecasted transaction in a cash flow hedge "is likely to occur." A company should support this probability (defined as significantly greater than the term "more likely than not") by observable facts such as frequency of similar past transactions and its financial and operational ability to carry out the transaction.

As indicated, the general accounting for derivatives relies on fair values. IFRS also establishes special accounting guidance when companies use derivatives **for hedging purposes**. For example, when a company uses a put option to hedge price changes in a non-trading equity investment in a fair value hedge (see the Hayward example earlier), it records unrealized gains on the investment in earnings, which is not IFRS for these investments without such a hedge. This special accounting is justified in order to accurately report the nature of the hedging relationship in the statement of financial position (recording both the put option and the investment at fair value) and in the statement of comprehensive income (reporting offsetting gains and losses in the same period).

Special accounting also is used for cash flow hedges. Companies account for derivatives used in qualifying cash flow hedges at fair value on the statement of financial position but record unrealized holding gains or losses in other comprehensive income until selling or settling the hedged item. In a cash flow hedge, a company continues to record the hedged item at its historical cost.

Disclosure requirements for derivatives are complex. Recent pronouncements on fair value information and financial instruments provide a helpful disclosure framework for reporting derivative instruments. In general, companies that have derivatives are required to disclose the objectives for holding or issuing those instruments (speculation or hedging), the hedging context (fair value or cash flow), and the strategies for achieving risk-management objectives.

COMPREHENSIVE HEDGE ACCOUNTING EXAMPLE

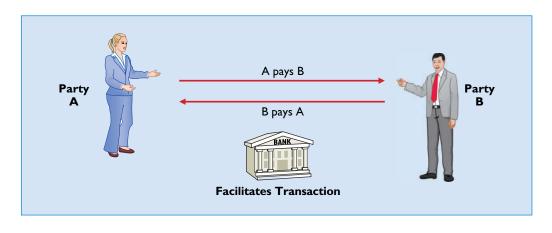

To provide a comprehensive example of hedge accounting, we examine the use of an interest rate swap. First, let's consider how swaps work and why companies use them.

Options and futures trade on organized securities exchanges. Because of this, options and futures have standardized terms. Although that standardization makes the trading easier, it limits the flexibility needed to tailor contracts to specific circumstances. In addition, most types of derivatives have relatively short time horizons, thereby excluding their use for reducing long-term risk exposure.

As a result, many corporations instead turn to the swap, a very popular type of derivative. A **swap** is a transaction between two parties in which the first party promises to make a payment to the second party. Similarly, the second party promises to make a simultaneous payment to the first party.

The most common type of swap is the **interest rate swap**. In this type, one party makes payments based on a fixed or floating rate, and the second party does just the opposite. In most cases, large money-center banks bring together the two parties. These banks handle the flow of payments between the parties, as shown in Illustration 17A-9.

ILLUSTRATION 17A-9 Swap Transaction

Fair Value Hedge

Cash

Bonds Payable

To illustrate the use of a swap in a fair value hedge, assume that Jones Company issues €1,000,000 of five-year, 8 percent bonds on January 2, 2015. Jones records this transaction as follows.

January 2, 2015 1,000,000 1,000,000

Jones offered a fixed interest rate to appeal to investors. But Jones is concerned that if market interest rates decline, the fair value of the liability will increase. The company will then suffer an economic loss.³⁷ To protect against the risk of loss, Jones hedges the risk of a decline in interest rates by entering into a five-year interest rate swap contract. Jones agrees to the following terms:

- **1.** Jones will receive fixed payments at 8 percent (based on the €1,000,000 amount).
- **2.** Jones will pay variable rates, based on the market rate in effect for the life of the swap contract. The variable rate at the inception of the contract is 6.8 percent.

As Illustration 17A-10 shows, this swap allows Jones to change the interest on the bonds payable from a fixed rate to a variable rate.

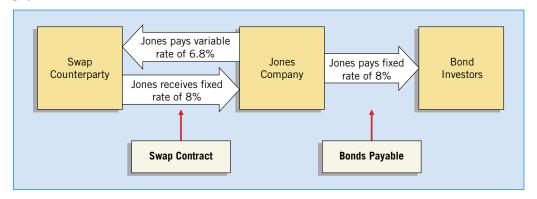

ILLUSTRATION 17A-10 Interest Rate Swap

The settlement dates for the swap correspond to the interest payment dates on the debt (December 31). On each interest payment (settlement) date, Jones and the counterparty compute the difference between current market interest rates and the fixed rate of 8 percent, and determine the value of the swap.³⁸ If interest rates decline, the value of the swap contract to Jones increases (Jones has a gain), while at the same time Jones's fixed-rate debt obligation increases (Jones has an economic loss).

The swap is an effective risk-management tool in this setting. Its value relates to the same underlying (interest rates) that will affect the value of the fixed-rate bond payable. Thus, if the value of the swap goes up, it offsets the loss related to the debt obligation.

Assuming that Jones enters into the swap on January 2, 2015 (the same date as the issuance of the debt), the swap at this time has no value. Therefore, no entry is necessary.

January 2, 2015

No entry required. A memorandum entry indicates the signing of the swap contract.

At the end of 2015, Jones makes the interest payment on the bonds. It records this transaction as follows.

December 31, 2015 Interest Expense 80,000 Cash $(8\% \times \text{€1,000,000})$ 80,000

 $^{^{37}}$ This economic loss arises because Jones is locked into the 8 percent interest payments even if rates decline.

³⁸The underlying for an interest rate swap is some index of market interest rates. The most commonly used index is the London Interbank Offer Rate, or LIBOR. In this example, we assume the LIBOR is 6.8 percent.

At the end of 2015, market interest rates have declined substantially. Therefore, the value of the swap contract increases. Recall (see Illustration 17A-9) that in the swap, Jones receives a fixed rate of 8 percent, or $\leq 80,000 \ (\leq 1,000,000 \times 8\%)$, and pays a variable rate (6.8%), or $\leq 68,000$. Jones therefore receives $\leq 12,000 \ (\leq 80,000 - \leq 68,000)$ as a settlement payment on the swap contract on the first interest payment date. Jones records this transaction as follows.

December 31, 2015

Cash 12,000

Interest Expense 12,000

In addition, a market appraisal indicates that the value of the interest rate swap has increased €40,000. Jones records this increase in value as follows.³⁹

December 31, 2015

Swap Contract 40,000

Unrealized Holding Gain or Loss—Income 40,000

Jones reports this swap contract in the statement of financial position. It reports the gain on the hedging transaction in the income statement. Because interest rates have declined, the company records a loss and a related increase in its liability as follows.

December 31, 2015

Unrealized Holding Gain or Loss—Income 40,000

Bonds Payable 40,000

Jones reports the loss on the hedging activity in net income. It adjusts bonds payable in the statement of financial position to fair value.

Financial Statement Presentation of an Interest Rate Swap

Illustration 17A-11 indicates how Jones reports the asset and liability related to this hedging transaction on the statement of financial position.

ILLUSTRATION 17A-11

Statement of Financial Position Presentation of Fair Value Hedge

JONES CO STATEMENT OF FINANCIA DECEMBER	AL POSITION (PARTIAL)	
Current assets		
Swap contract	€40,000	
Non-current liabilities		
Bonds payable	€1,040,000	

The effect on Jones's statement of financial position is the addition of the swap asset and an increase in the carrying value of the bonds payable. Illustration 17A-12 indicates how Jones reports the effects of this swap transaction in the income statement.

ILLUSTRATION 17A-12

Income Statement Presentation of Fair Value Hedge

JONES COMPANY INCOME STATEMENT (PARTIAL) FOR THE YEAR ENDED DECEMBER 31, 2015				
Interest expense (€80,000 − €12,000)		€68,000		
Other income and expense				
Unrealized holding gain—swap contract	€40,000			
Unrealized holding loss—bonds payable	(40,000)			
Net gain (loss)		€-0-		

³⁹Theoretically, this fair value change reflects the present value of expected future differences in variable and fixed interest rates.

On the income statement, Jones reports interest expense of \le 68,000. Jones has effectively changed the debt's interest rate from fixed to variable. That is, by receiving a fixed rate and paying a variable rate on the swap, the company converts the fixed rate on the bond payable to variable. This results in an effective interest rate of 6.8 percent in 2015. Also, the gain on the swap offsets the loss related to the debt obligation. Therefore, the net gain or loss on the hedging activity is zero.

Illustration 17A-13 shows the overall impact of the swap transaction on the financial statements.

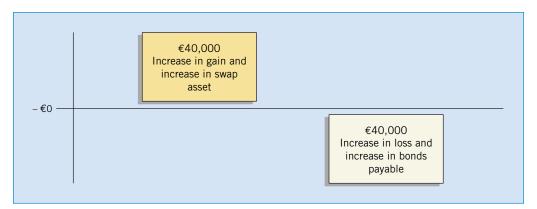

ILLUSTRATION 17A-13 Impact on Financial Statements of Fair Value Hedge

In summary, to account for fair value hedges (as illustrated in the Jones example) record the derivative at its fair value in the statement of financial position, and record any gains and losses in income. Thus, the gain on the swap offsets or hedges the loss on the bond payable, due to the decline in interest rates.

By adjusting the hedged item (the bond payable in the Jones case) to fair value, with the gain or loss recorded in earnings, the accounting for the Jones bond payable deviates from amortized cost. This special accounting is justified in order to report accurately the nature of the hedging relationship between the swap and the bond payable in the statement of financial position (both the swap and the debt obligation are recorded at fair value) and in the income statement (offsetting gains and losses are reported in the same period).⁴¹

CONTROVERSY AND CONCLUDING REMARKS

Companies need rules to properly measure and report derivatives in financial statements. However, some argue that reporting derivatives at fair value results in unrealized gains and losses that are difficult to interpret. Still, others raise concerns about the complexity and cost of implementing IFRS in this area.

However, we believe that the benefits of using fair value and reporting derivatives at fair value will far outweigh any implementation costs. As the volume and complexity of derivatives and hedging transactions continue to grow, so does the risk that investors and creditors will be exposed to unexpected losses arising from

⁴⁰Jones will apply similar accounting and measurement at future interest payment dates. Thus, if interest rates increase, Jones will continue to receive 8 percent on the swap (records a loss) but will also be locked into the fixed payments to the bondholders at an 8 percent rate (records a gain).

⁴¹An interest rate swap can also be used in a cash flow hedge. A common setting is the cash flow risk inherent in having variable rate debt as part of a company's debt structure. In this situation, the variable debt issuer can hedge the cash flow risk by entering into a swap contract to receive variable rate cash flows but pay a fixed rate. The cash received on the swap contract will offset the variable cash flows to be paid on the debt obligation.

derivative transactions. Statement readers must have comprehensive information concerning many derivative financial instruments and the effects of hedging transactions using derivatives.

SUMMARY OF LEARNING OBJECTIVES FOR APPENDIX 17A

- Explain who uses derivatives and why. Any company or individual that wants to ensure against different types of business risks may use derivative contracts to achieve this objective. In general, these transactions involve some type of hedge. Speculators also use derivatives, attempting to find an enhanced return. Speculators are very important to the derivatives market because they keep it liquid on a daily basis. Arbitrageurs attempt to exploit inefficiencies in various derivative contracts. A company primarily uses derivatives for purposes of hedging its exposure to fluctuations in interest rates, foreign currency exchange rates, and commodity prices.
- **Understand the basic guidelines for accounting for derivatives.** Companies should recognize derivatives in the financial statements as assets and liabilities, and report them at fair value. Companies should recognize gains and losses resulting from speculation immediately in income. They report gains and losses resulting from hedge transactions in different ways, depending on the type of hedge.
- **Describe the accounting for derivative financial instruments.** Companies report derivative financial instruments in the statement of financial position and record them at fair value. Except for derivatives used in hedging, companies record realized and unrealized gains and losses on derivative financial instruments in income.
- **Explain how to account for a fair value hedge.** A company records the derivative used in a qualifying fair value hedge at its fair value in the statement of financial position, recording any gains and losses in income. In addition, the company also accounts for the item being hedged with the derivative at fair value. By adjusting the hedged item to fair value, with the gain or loss recorded in earnings, the accounting for the hedged item may deviate from IFRS in the absence of a hedge relationship. This special accounting is justified in order to report accurately the nature of the hedging relationship between the derivative hedging instruments and the hedged item. A company reports both in the statement of financial position, reporting offsetting gains and losses in income in the same period.
- **Explain how to account for a cash flow hedge.** Companies account for derivatives used in qualifying cash flow hedges at fair value on the statement of financial position but record gains or losses in equity as part of other comprehensive income. Companies accumulate these gains or losses, and reclassify them in income when the hedged transaction's cash flows affect earnings. Accounting is according to IFRS for the hedged item.
- Identify special reporting issues related to derivative financial instruments that cause unique accounting problems. A company should, based on the classification of the host security, account for a hybrid security containing a host security and an embedded derivative as a single unit. Special hedge accounting is allowed only for hedging relationships that meet certain criteria. The main criteria are as follows. (1) There is formal documentation of the hedging relationship, the company's risk management objective, and the strategy for undertaking the hedge, and the company designates the derivative as either a cash flow or fair value hedge. (2) The company expects the hedging relationship to be highly effective in achieving offsetting changes in fair value or cash flows. (3) "Special" hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under IFRS.

APPENDIX 17B

FAIR VALUE DISCLOSURES

As indicated in the chapter, the IASB believes that fair value information is relevant for making effective business decisions. However, others express concern about fair value measurements for two reasons: (1) the lack of reliability related to the fair value measurements in certain cases, and (2) the ability to manipulate fair value measurements to achieve financial results inconsistent with the underlying economics of the situation.

15 LEARNING OBJECTIVE

Describe required fair value disclosures.

The Board recognizes these concerns and has attempted to develop a sound conceptual basis for measuring and reporting fair value information. In addition, it has placed emphasis on developing guidelines for reporting fair value information for financial instruments because many of these instruments have relatively active markets for which valuations can be reliably determined. The purpose of this appendix is to explain the disclosure requirements for financial instruments related to fair value information.

DISCLOSURE OF FAIR VALUE INFORMATION: FINANCIAL INSTRUMENTS

One requirement related to fair value disclosure is that both the cost and the fair value of all financial instruments be reported in the notes to the financial statements. This enables financial statement users to understand the fair value of the company's financial instruments and the potential gains and losses that might occur in the future as a result of these instruments.

The Board also decided that companies should disclose information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value measurement. Two reasons for additional disclosure beyond the simple itemization of fair values are:

- **1.** Differing levels of reliability exist in the measurement of fair value information. It therefore is important to understand the varying risks involved in measurement. It is difficult to incorporate these levels of uncertainty into the financial statements. Disclosure provides a framework for addressing the qualitative aspects related to risk and measurement.
- **2.** Changes in the fair value of financial instruments are reported differently in the financial statements, depending on the type of financial instrument involved and whether the fair value option is employed. Note disclosure provides an opportunity to explain more precisely the impact that changes in the value of financial instruments have on financial results. In assessing the inputs, the Board recognizes that the reliability of the fair value measurement is of extreme importance. Many financial instruments are traded in active markets, and their valuation is not difficult. Other instruments are complex/illiquid, and their valuation is difficult.

To highlight these levels of reliability in valuation, the IASB established a fair value hierarchy. As discussed in Chapter 2 (page 41), this hierarchy identifies three broad levels—1, 2, and 3—related to the measurement of fair values. Level 1 is the most reliable measurement because fair value is based on quoted prices in active markets *for identical assets or liabilities*. Level 2 is less reliable; it is not based on quoted market prices for identical assets and liabilities but instead may be based on *similar assets or liabilities*. Level 3 is least reliable; it uses unobservable inputs that reflect the company's assumption as to the value of the financial instrument.

Illustration 17B-1 is an example of a fair value note disclosure for Sabathia Company. It includes both the fair value amounts and the reliability level. (A similar disclosure would be presented for liabilities.)

ILLUSTRATION 17B-1

Example of Fair Value Hierarchy

SABATHIA COMPANY NOTES TO THE FINANCIAL STATEMENTS							
(amounts in thousands) Fair Value Measurements at Reporting Data Using							
	Quoted Prices Significant in Active Other Significant Fair Markets for Observable Unobservab Value Identical Assets Inputs Inputs						
Description	12/31/15	(Level 1)	(Level 2)	(Level 3)			
Trading securities Non-trading securities	\$115 75	\$105 75	\$10				
Derivatives Venture capital investments	60 10	25	15	\$20 10			
Total	\$260	\$205	\$25	\$30			

For assets and liabilities measured at fair value and classified as Level 3, a reconciliation of Level 3 changes for the period is required. In addition, companies should report an analysis of how Level 3 changes in fair value affect total gains and losses and their impact on net income. Illustration 17B-2 is an example of this disclosure.

ILLUSTRATION 17B-2

Reconciliation of Level 3 Inputs

SABATHIA COMPANY NOTES TO THE FINANCIAL STATEMENTS				
(amounts in thousands)		easurements Using nobservable Inputs (Level 3)	J

Change in unrealized gains or losses relating to assets still reporting date	held at	\$7 ==	<u>\$2</u>	

Sabathia Company's disclosure provides to the user of the financial statements an understanding of the following:

1. The carrying amount and the fair value of the company's financial instruments segregated by level of reliability. Thus, financial statement users have a basis for judging what credence should be given to the fair value amounts.

- **2.** For Level 3 financial instruments, a reconciliation of the balance from the beginning to the end of the period. This reconciliation enables users to understand the composition of the change. It is important because these calculations are most affected by subjective estimates and could be subject to manipulation.
- **3.** The impact of changes in fair value on the net assets of the company from one period to the next.

For companies that choose to use the fair value option for some or all of their financial instruments, they are permitted to incorporate the entire guidelines related to fair value measurement into one master schedule, or they can provide in a separate schedule information related solely to the fair value option.

Finally, companies must provide the following (with special emphasis on Level 3 measurements):

- **1.** Quantitative information about significant unobservable inputs used for all Level 3 measurements.
- **2.** A qualitative discussion about the sensitivity of recurring Level 3 measurements to changes in the unobservable inputs disclosed, including interrelationships between inputs.
- **3.** A description of the company's valuation process.
- **4.** Any transfers between Levels 1 and 2 of the fair value hierarchy.
- **5.** Information about non-financial assets measured at fair value at amounts that differ from the assets' highest and best use.
- **6.** The proper hierarchy classification for items that are not recognized on the statement of financial position but are disclosed in the notes to the financial statements.

A typical disclosure related to Level 3 fair value measurements is presented in Illustration 17B-3.

ILLUSTRATION 17B-3 Quantitative Information about Level 3 Fair Value Measurements

(amounts in millions)	Fair Value at 12/31/2015	Valuation Technique(s)	Unobservable Input	Range (Weighted-Average)
Residential mortgage-backed securities	125	Discounted cash flow	Constant prepayment rate Probability of default Loss severity	3.5%-5.5% (4.5%) 5%-50% (10%) 40%-100% (60%)
Collateralized debt obligations	35	Consensus pricing	Offered quotes Comparability adjustments (%)	20–45 -10%–+15% (+5%)
Direct venture capital investments: Healthcare	53	Discounted cash flow	Weighted-average cost of capital Long-term revenue growth rate Long-term pretax operating margin Discount for lack of marketability ^a Control premium ^a	7%–16% (12.1%) 2%–5% (4.2%) 3%–20% (10.3%) 5%–20% (17%) 10%–30% (20%)
		Market-comparable companies	EBITDA multiple ^b Revenue multiple ^b Discount for lack of marketability ^a Control premium ^a	6.5–12 (9.5) 1.0–3.0 (2.0) 5%–20% (10%) 10%–20% (12%)
Credit contracts	38	Option model	Annualized volatility of credit ^c Counterparty credit risk ^d Own credit risk ^d	10%–20% 0.5–3.5% 0.3–2.0%

^aRepresents amounts used when the reporting entity has determined that market participants would take into account these premiums and discounts when pricing the investments.

(Note: For liabilities, a similar table should be presented.)

^bRepresents amounts used when the reporting entity has determined that market participants would use such multiples when pricing the investments.

cRepresents the range of the volatility curves used in the valuation analysis that the reporting entity has determined market participants would use when pricing the contracts.

^dRepresents the range of the credit default swap spread curves used in the valuation analysis that the reporting entity has determined market participants would use when pricing the contracts.

DISCLOSURE OF FAIR VALUES: IMPAIRED ASSETS OR LIABILITIES

In addition to financial instruments, companies often have assets or liabilities that are remeasured on a non-recurring basis due to impairment. In this case, the fair value hierarchy can highlight the reliability of the measurement, coupled with the related gain or loss for the period. Illustration 17B-4 highlights this disclosure for McClung Company.

ILLUSTRATION 17B-4

Disclosure of Fair Value, with Impairment

McCLUNG COMPANY NOTES TO THE FINANCIAL STATEMENTS					
(amounts in millions) Fair Value Measurements Using:					
		Quoted			
		Prices in			
		Active	Significant		
		Markets for	Other	Significant	
	Year	Identical	Observable	Unobservable	
	Ended	Assets	Inputs	Inputs	
Description	12/31/15	(Level 1)	(Level 2)	(Level 3)	
Long-lived assets held and used	\$75	_	\$75	_	
Goodwill	30	_	_	\$30	
Long-lived assets held for sale	26	_	26	_	

Long-lived assets held and used with a carrying amount of \$100 million were written down to their fair value of \$75 million, resulting in an impairment charge of \$25 million, which was included in earnings for the period.

Goodwill with a carrying amount of \$65 million was written down to its fair value of \$30 million, resulting in an impairment charge of \$35 million, which was included in earnings for the period.

Long-lived assets held for sale with a carrying amount of \$35 million were written down to their fair value of \$26 million, less cost to sell of \$6 million (or \$20 million), resulting in a loss of \$15 million, which was included in earnings for the period.

CONCLUSION

With recent joint IASB and FASB standard-setting efforts, we now have convergence with respect to fair value measurement, both in terms of the definition and measurement guidelines when fair value is the measurement approach in IFRS and U.S. GAAP. In addition, IFRS and U.S. GAAP have the same fair value disclosure requirements, as illustrated in this appendix. As the former chair of the IASB noted, this "marks the completion of a major convergence project and is a fundamentally important element of our joint response to the global crisis. The result is clearer and more consistent guidance on measuring fair value, where its use is already required."

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 17B

Describe required fair value disclosures. The IASB has developed required fair value disclosures in response to concerns about the reliability of fair value measures. Disclosure elements include fair value amounts and reliability levels as well as impaired assets and liabilities.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

QUESTIONS

- Describe the two criteria for determining the valuation of financial assets.
- **2.** Which types of investments are valued at amortized cost? Explain the rationale for this accounting.
- 3. What is amortized cost? What is fair value?
- **4.** Lady Gaga Co. recently made an investment in the bonds issued by Chili Peppers Inc. Lady Gaga's business model for this investment is to profit from trading in response to

- changes in market interest rates. How should this investment be classified by Lady Gaga? Explain.
- 5. Consider the bond investment by Lady Gaga in Question 4. Discuss the accounting for this investment if Lady Gaga's business model is to hold the investment to collect interest while outstanding and to receive the principal at maturity.
- 6. On July 1, 2015, Wheeler Company purchased €4,000,000 of Duggen Company's 8% bonds, due on July 1, 2022. The bonds, which pay interest semiannually on January 1 and July 1, were purchased for €3,500,000 to yield 10%. Determine the amount of interest revenue Wheeler should report on its income statement for year ended December 31, 2015, assuming Wheeler plans to hold this investment to collect contractual cash flows.
- 7. If the bonds in Question 6 are classified as trading and they have a fair value at December 31, 2015, of €3,604,000, prepare the journal entry (if any) at December 31, 2015, to record this transaction.
- Indicate how unrealized holding gains and losses should be reported for investments classified as trading and heldfor-collection.
- 9. (a) Assuming no Fair Value Adjustment account balance at the beginning of the year, prepare the adjusting entry at the end of the year if Laura Company's trading bond investment has a fair value €60,000 below carrying value.
 (b) Assume the same information as part (a), except that Laura Company has a debit balance in its Fair Value Adjustment account of €10,000 at the beginning of the year. Prepare the adjusting entry at year-end.
- 10. What is the fair value option? Briefly describe its application to debt investments.
- 11. Franklin Corp. has an investment that it has held for several years. When it purchased the investment, Franklin accounted for the investment at amortized cost. Can Franklin use the fair value option for this investment? Explain.
- **12.** Identify and explain the different types of classifications for equity investments.
- **13.** Why is the held-for-collection classification not applicable to equity investments?
- **14.** Hayes Company purchased 10,000 ordinary shares of Kenyon Co., paying \$26 per share plus \$1,500 in broker fees. Hayes plans to actively trade this investment. Prepare the entry to record this investment.
- **15.** Hayes Company sold 10,000 shares of Kenyon Co. that it bought in Question 14 for \$27.50 per share, incurring \$1,770 in brokerage commissions. The carrying value of the investment is \$260,000. Prepare the entry to record the sale of this investment.
- **16.** Distinguish between the accounting treatment for non-trading equity investments and trading equity investments.
- **17.** What constitutes "significant influence" when an investor's financial interest is below the 50% level?
- **18.** Explain how the investment account is affected by investee activities under the equity method.

- **19.** When the equity method is applied, what amounts relate to the investment, and where will these amounts be reported in the financial statements?
- **20.** Hiram Co. uses the equity method to account for investments in ordinary shares. What accounting should be made for dividends received from these investments subsequent to the date of investment?
- **21.** Raleigh Corp. has an investment with a carrying value (equity method) on its books of £170,000 representing a 30% interest in Borg Company, which suffered a £620,000 loss this year. How should Raleigh Corp. handle its proportionate share of Borg's loss?
- **22.** Where on the asset side of the statement of financial position are amounts related to equity investments classified as trading and non-trading reported? Explain.
- **23.** When is a debt investment considered impaired? Explain how to account for the impairment of a held-for-collection debt investment.
- **24.** Briefly discuss how a transfer of investments from the trading category to the held-for-collection category affects the financial statements.
- 25. Briefly describe the unresolved issues related to fair value accounting.
- **26.** Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for investments.

- 27. Ramirez Company has a held-for-collection investment in the 6%, 20-year bonds of Soto Company. The investment was originally purchased for R\$1,200,000 in 2013. Early in 2014, Ramirez recorded an impairment of R\$300,000 on the Soto investment, due to Soto's financial distress. In 2015, Soto returned to profitability and the Soto investment was no longer impaired. What entry does Ramirez make in 2015 under (a) U.S. GAAP and (b) IFRS?
- **28.** Discuss how recent IFRS developments in the accounting for investments might affect convergence with U.S. GAAP.

- *29. What is meant by the term underlying as it relates to derivative financial instruments?
- *30. What are the main distinctions between a traditional financial instrument and a derivative financial instrument?
- *31. What is the purpose of a fair value hedge?
- *32. In what situation will the unrealized holding gain or loss on a non-trading equity investment be reported in income?
- *33. Why might a company become involved in an interest rate swap contract to receive fixed interest payments and pay variable?
- *34. What is the purpose of a cash flow hedge?
- *35. Where are gains and losses related to cash flow hedges involving anticipated transactions reported?
- *36. What are hybrid securities? Give an example of a hybrid security.

BRIEF EXERCISES

- **BE17-1** Garfield Company made an investment in €80,000 of the 9%, 5-year bonds of Chester Corporation for €74,086, which provides an 11% return. Garfield plans to hold these bonds to collect contractual cash flows. Prepare Garfield's journal entries for (a) the purchase of the investment, and (b) the receipt of annual interest and discount amortization.
- BE17-2 Use the information from BE17-1 but assume Garfield plans to actively trade the bonds to profit from market interest rates changes. Prepare Garfield's journal entries for (a) the purchase of the investment, (b) the receipt of annual interest and discount amortization, and (c) the year-end fair value adjustment. The bonds have a year-end fair value of €75,500.
 - **BE17-3** Carow Corporation purchased, as a held-for-collection investment, €60,000 of the 8%, 5-year bonds of Harrison, Inc. for €65,118, which provides a 6% return. The bonds pay interest semiannually. Prepare Carow's journal entries for (a) the purchase of the investment, and (b) the receipt of semiannual interest and premium amortization.
 - **BE17-4** Hendricks Corporation purchased \$50,000 of bonds at par. Hendricks has an active trading business model for this investment. At December 31, Hendricks received annual interest of \$2,000, and the fair value of the bonds was \$47,400. Prepare Hendricks' journal entries for (a) the purchase of the investment, (b) the interest received, and (c) the fair value adjustment.
 - **BE17-5** Refer to the information in BE17-3. Assume that, to address a measurement mismatch, Carow elects the fair value option for this debt investment. Prepare the journal entry at year-end, assuming the fair value of the bonds is €64,000.
 - **BE17-6** Fairbanks Corporation purchased 400 ordinary shares of Sherman Inc. as a trading investment for £13,200. During the year, Sherman paid a cash dividend of £3.25 per share. At year-end, Sherman shares were selling for £34.50 per share. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.
 - **BE17-7** Use the information from BE17-6 but assume the shares were purchased to meet a non-trading regulatory requirement. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.
 - **BE17-8** Cleveland Company has a non-trading equity investment portfolio valued at \$4,000. Its cost was \$3,300. If the Fair Value Adjustment account has a debit balance of \$200, prepare the journal entry at year-end.
 - **BE17-9** Zoop Corporation purchased for \$300,000 a 30% interest in Murphy, Inc. This investment enables Zoop to exert significant influence over Murphy. During the year, Murphy earned net income of \$180,000 and paid dividends of \$60,000. Prepare Zoop's journal entries related to this investment.
 - **BE17-10** Hillsborough Co. has a held-for-collection investment in the bonds of Schuyler Corp. with a carrying (and fair) value of \$70,000. Due to poor economic prospects for Schuyler, Hillsborough determined that it will not be able to collect all contractual cash flows and the bonds have decreased in value to \$60,000. It is determined that this is a permanent loss in value. Prepare the journal entry, if any, to record the reduction in value.
 - **BE17-11** Cameron Company has a portfolio of debt investments that it has managed as a trading investment. At December 31, 2015, Cameron had the following balances related to this portfolio: debt investments, £250,000; fair value adjustment, £10,325 (Dr). Cameron management decides to change its business model for these investments to a held-for-collection strategy, beginning in January 2016. Prepare the journal entry to transfer these investments to the held-for-collection classification.

EXERCISES

- 1 3 E17-1 (Investment Classifications) For the following investments, identify whether they are:
 - 1. Debt investments at amortized cost.
 - 2. Debt investments at fair value.
 - **3.** Trading equity investments.
 - **4.** Non-trading equity investments.

Each case is independent of the other.

- (a) A bond that will mature in 4 years was bought 1 month ago when the price dropped. As soon as the value increases, which is expected next month, it will be sold.
- **(b)** 10% of the outstanding shares of Farm-Co was purchased. The company is planning on eventually getting a total of 30% of its outstanding shares.
- (c) 10-year bonds were purchased this year. The bonds mature at the first of next year, and the company plans to sell the bonds if interest rates fall.
- **(d)** Bonds that will mature in 5 years are purchased. The company has a strategy to hold them to collect the contractual cash flows on the bonds.
- **(e)** A bond that matures in 10 years was purchased. The company is investing money set aside for an expansion project planned 10 years from now.
- (f) Ordinary shares in a distributor are purchased to meet a regulatory requirement for doing business in the distributor's region. The investment will be held indefinitely.
- **E17-2** (**Debt Investments**) On January 1, 2015, Jennings Company purchased at par 10% bonds having a maturity value of €300,000. They are dated January 1, 2015, and mature January 1, 2020, with interest receivable December 31 of each year. The bonds are held to collect contractual cash flows.

Instructions

- (a) Prepare the journal entry at the date of the bond purchase.
- **(b)** Prepare the journal entry to record the interest received for 2015.
- (c) Prepare the journal entry to record the interest received for 2016.
- **E17-3** (**Debt Investments**) On January 1, 2015, Roosevelt Company purchased 12% bonds having a maturity value of \$500,000 for \$537,907.40. The bonds provide the bondholders with a 10% yield. They are dated January 1, 2015, and mature January 1, 2020, with interest receivable December 31 of each year. Roosevelt's business model is to hold these bonds to collect contractual cash flows.

Instructions

- (a) Prepare the journal entry at the date of the bond purchase.
- **(b)** Prepare a bond amortization schedule.
- (c) Prepare the journal entry to record the interest received and the amortization for 2015.
- (d) Prepare the journal entry to record the interest received and the amortization for 2016.
- **E17-4** (**Debt Investments**) On January 1, 2015, Morgan Company acquires \$300,000 of Nicklaus, Inc., 9% bonds at a price of \$278,384. The interest is payable each December 31, and the bonds mature December 31, 2017. The investment will provide Morgan Company a 12% yield. The bonds are classified as held-for-collection.

Instructions

- (a) Prepare a 3-year schedule of interest revenue and bond discount amortization. (Round to nearest cent.)
- (b) Prepare the journal entry for the interest receipt of December 31, 2016, and the discount amortization.
- **E17-5 (Debt Investments)** Assume the same information as in E17-3 except that Roosevelt has an active trading strategy for these bonds. The fair value of the bonds at December 31 of each year-end is as follows.

2015	\$534,200	2018	\$517,000
2016	\$515,000	2019	\$500,000
2017	\$513,000		

Instructions

- (a) Prepare the journal entry at the date of the bond purchase.
- (b) Prepare the journal entries to record the interest received and recognition of fair value for 2015.
- (c) Prepare the journal entry to record the recognition of fair value for 2016.
- **E17-6** (Fair Value Option) Refer to the information in E17-3 and assume that Roosevelt elected the fair value option for this held-for-collection investment.

Instructions

- (a) Prepare any entries necessary at December 31, 2015, assuming the fair value of the bonds is \$540,000.
- (b) Prepare any entries necessary at December 31, 2016, assuming the fair value of the bonds is \$525,000.
- **E17-7** (Fair Value Option) Presented on page 865 is selected information related to the financial instruments of Dawson Company at December 31, 2015 (amounts in thousands). This is Dawson Company's first year of operations.

	Carrying Amount	Fair Value (at December 31)
Debt investments (intent is to hold for collection)	¥ 40,000	¥ 41,000
Bonds payable	220,000	195,000

Instructions

- (a) Dawson elects to use the fair value option whenever possible. Assuming that Dawson's net income is \(\frac{\pmathbf{1}}{100,000}\) in 2015 before reporting any financial instrument gains or losses, determine Dawson's net income for 2015.
- **(b)** Record the journal entry, if any, necessary at December 31, 2015, to record the fair value option for the bonds payable.
- **E17-8 (Entries for Equity Investments)** The following information is available for Kinney Company at December 31, 2015, regarding its investments.

Investments	Cost	Fair Value
3,000 ordinary shares of Petty Corporation	£40,000	£46,000
1,000 preference shares of Dowe Incorporated	25,000	22,000
	£65,000	£68,000

Instructions

- (a) Prepare the adjusting entry (if any) for 2015, assuming the investments are classified as trading.
- (b) Prepare the adjusting entry (if any) for 2015, assuming the investments are classified as non-trading.
- (c) Discuss how the amounts reported in the financial statements are affected by the entries in (a) and (b).
- **E17-9** (Equity Investments) On December 21, 2015, Zurich Company provided you with the following information regarding its trading investments.

	December 31, 201	5	
Investments (Trading)	Cost	Fair Value	Unrealized Gain (Loss)
Stargate Corp. shares	€20,000	€19,000	€(1,000)
Carolina Co. shares	10,000	9,000	(1,000)
Vectorman Co. shares	20,000	20,600	600
Total of portfolio	€50,000	€48,600	(1,400)
Previous fair value adjustment balance			0
Fair value adjustment - Cr.			<u>€(1,400)</u>

During 2016, Carolina Co. shares were sold for €9,500. The fair value of the shares on December 31, 2016, was Stargate Corp. shares—€19,300; Vectorman Co. shares—€20,500.

Instructions

- (a) Prepare the adjusting journal entry needed on December 31, 2015.
- (b) Prepare the journal entry to record the sale of the Carolina Co. shares during 2016.
- (c) Prepare the adjusting journal entry needed on December 31, 2016.
- **E17-10 (Equity Investment Entries and Reporting)** Player Corporation makes an equity investment costing \$73,000 and classifies it as non-trading. At December 31, the fair value of the investment is \$67,000.

Instructions

Prepare the adjusting entry to report the investment properly. Indicate the statement presentation of the accounts in your entry.

E17-11 (Equity Investment Entries and Financial Statement Presentation) At December 31, 2015, the equity investment portfolio for Wenger, Inc. is as follows.

Investment	Cost	Fair Value	Unrealized Gain (Loss)
Α	\$17,500	\$15,000	(\$2,500)
В	12,500	14,000	1,500
С	23,000	25,500	2,500
Total	\$53,000	\$54,500	1,500
Previous fair value adjustment balance—Dr.			200
Fair value adjustment-Dr.			\$1,300

On January 20, 2016, Wenger, Inc. sold investment A for \$15,300. The sale proceeds are net of brokerage fees.

Instructions

- (a) Prepare the adjusting entry at December 31, 2015, to report the portfolio at fair value.
- **(b)** Show the statement of financial position presentation of the investment-related accounts at December 31, 2015. (Ignore notes presentation.)
- (c) Prepare the journal entry(ies) for the 2016 sale of investment A.
- (d) Repeat requirement (a), assuming the portfolio of investments is non-trading.
- **E17-12** (Equity Investment Entries) Capriati Corporation made the following cash investments during 2015, which is the first year in which Capriati invested in securities.
 - **1.** On January 15, purchased 9,000 ordinary shares of Gonzalez Company at \$33.50 per share plus commission \$1,980.
 - 2. On April 1, purchased 5,000 ordinary shares of Belmont Co. at \$52.00 per share plus commission \$3,370.
 - **3.** On September 10, purchased 7,000 preference shares of Thep Co. at \$26.50 per share plus commission \$4,910.

On May 20, 2015, Capriati sold 3,000 shares of Gonzalez Company at a market price of \$35 per share less brokerage commissions, taxes, and fees of \$2,850. The year-end fair values per share were Gonzalez \$30, Belmont \$55, and Thep \$28. In addition, the chief accountant of Capriati told you that Capriati Corporation plans to actively trade these investments.

Instructions

- (a) Prepare the journal entries to record the above three investment purchases.
- **(b)** Prepare the journal entry for the investment sale on May 20.
- (c) Compute the unrealized gains or losses and prepare the adjusting entries for Capriati on December 31, 2015.
- **6 E17-13 (Journal Entries for Fair Value and Equity Methods)** Presented below are two independent situations.

Situation 1: Hatcher Cosmetics acquired 10% of the 200,000 ordinary shares of Ramirez Fashion at a total cost of \$14 per share on March 18, 2015. On June 30, Ramirez declared and paid a \$75,000 cash dividend. On December 31, Ramirez reported net income of \$122,000 for the year. At December 31, the market price of Ramirez Fashion was \$15 per share. The investment is classified as trading.

Situation 2: Holmes, Inc. obtained significant influence over Nadal Corporation by buying 25% of Nadal's 30,000 outstanding ordinary shares at a total cost of \$9 per share on January 1, 2015. On June 15, Nadal declared and paid a cash dividend of \$36,000. On December 31, Nadal reported a net income of \$85,000 for the year.

Instructions

Prepare all necessary journal entries in 2015 for both situations.

E17-14 (Equity Method) Gator Co. invested £1,000,000 in Demo Co. for 25% of its outstanding shares. Demo Co. pays out 40% of net income in dividends each year.

Instructions

Use the information in the following T-account for the investment in Demo to answer the following questions.

Investment in	Demo Co.
1,000,000	
130,000	
	52,000

- (a) How much was Gator Co.'s share of Demo Co.'s net income for the year?
- **(b)** How much was Gator Co.'s share of Demo Co.'s dividends for the year?
- (c) What was Demo Co.'s total net income for the year?
- (d) What was Demo Co.'s total dividends for the year?
- **E17-15** (Equity Investments—Trading) Feiner Co. had purchased 300 shares of Guttman Co. for £40 each this year and classified the investment as a trading investment. Feiner Co. sold 100 shares for £43 each. At year-end, the price per share had dropped to £35.

Instructions

Prepare the journal entries for these transactions and any year-end adjustments.

E17-16 (Equity Investments—Trading) Swanson Company has the following trading investment portfolio on December 31, 2015.

Cost	Fair Value
£ 71,500	£ 69,000
180,000	175,000
60,000	61,600
£311,500	£305,600
	£ 71,500 180,000 60,000

All of the investments were purchased in 2015. In 2016, Swanson completed the following investment transactions.

March 1 Sold the 1,500 ordinary shares of Parker, Inc., @ £45 less fees of £1,200.

April 1 Bought 700 ordinary shares of McDowell Corp., @ £75 plus fees of £1,300.

Swanson Company's portfolio of trading investments appeared as follows on December 31, 2016.

Investments (Trading)	Cost	Fair Value
5,000 ordinary shares of Beilman Corp.	£180,000	£175,000
700 ordinary shares of McDowell Corp.	52,500	50,400
400 preference shares of Duncan, Inc.	60,000	58,000
	£292,500	£283,400

Instructions

Prepare the general journal entries for Swanson Company for:

- (a) The 2015 adjusting entry.
- **(b)** The sale of the Parker shares.
- **(c)** The purchase of the McDowell shares.
- (d) The 2016 adjusting entry for the trading portfolio.
- **5 6 E17-17** (**Fair Value and Equity Method Compared**) Chen Inc. acquired 20% of the outstanding ordinary shares of Cho Corp. on December 31, 2015. The purchase price was ¥125,000,000 for 50,000 shares. Cho Corp. declared and paid an ¥80 per share cash dividend on June 30 and on December 31, 2016. Cho reported net income of ¥73,000,000 for 2016. The fair value of Cho's shares was ¥2,700 per share at December 31, 2016.

Instructions

- (a) Prepare the journal entries for Chen Inc. for 2015 and 2016, assuming that Chen cannot exercise significant influence over Cho. The investments should be classified as trading.
- **(b)** Prepare the journal entries for Chen Inc. for 2015 and 2016, assuming that Chen can exercise significant influence over Cho.
- (c) At what amount is the investment reported on the statement of financial position under each of these methods at December 31, 2016? What is the total net income reported in 2016 under each of these methods?
- **E17-18** (**Equity Method**) On January 1, 2015, Meredith Corporation purchased 25% of the ordinary shares of Pirates Company for £200,000. During the year, Pirates earned net income of £80,000 and paid dividends of £20,000.

Instructions

Prepare the entries for Meredith to record the purchase and any additional entries related to this investment in Pirates Company in 2015.

E17-19 (Impairment) Cairo Corporation has government bonds classified as held-for-collection at December 31, 2015. These bonds have a par value of \$800,000, an amortized cost of \$800,000, and a fair value of \$740,000. In evaluating the bonds, Cairo determines the bonds have a \$60,000 permanent decline in value. That is, the company believes that impairment accounting is now appropriate for these bonds.

Instructions

- (a) Prepare the journal entry to recognize the impairment.
- **(b)** What is the new cost basis of the bonds? Given that the maturity value of the bonds is \$800,000, should Cairo Corporation amortize the difference between the carrying amount and the maturity value over the life of the bonds?
- (c) At December 31, 2016, the fair value of the municipal bonds is \$760,000. Prepare the entry (if any) to record this information.

E17-20 (Impairment) Komissarov Company has a debt investment in the bonds issued by Keune Inc. The bonds were purchased at par for €400,000 and, at the end of 2015, have a remaining life of 3 years with annual interest payments at 10%, paid at the end of each year. This debt investment is classified as held-for-collection. Keune is facing a tough economic environment and informs its investors that it will be unable to make all payments according to the contractual terms. The controller of Komissarov has prepared the following revised expected cash flow forecast for this bond investment.

5 04	Expected	
Dec. 31	Cash Flows	
2016	€ 35,000	
2017	35,000	
2018	385,000	
Total cash flows	€455,000	

Instructions

- (a) Determine the impairment loss for Komissarov at December 31, 2015.
- **(b)** Prepare the entry to record the impairment loss for Komissarov at December 31, 2015.
- (c) On January 15, 2016, Keune receives a major capital infusion from a private equity investor. It informs Komissarov that the bonds now will be paid according to the contractual terms. Briefly describe how Komissarov would account for the bond investment in light of this new information.
- *E17-21 (Derivative Transaction) On January 2, 2015, Jones Company purchases a call option for \$300 on Merchant ordinary shares. The call option gives Jones the option to buy 1,000 shares of Merchant at a strike price of \$50 per share. The market price of a Merchant share is \$50 on January 2, 2015 (the intrinsic value is therefore \$0). On March 31, 2015, the market price for Merchant shares is \$53 per share, and the time value of the option is \$200.

Instructions

- (a) Prepare the journal entry to record the purchase of the call option on January 2, 2015.
- (b) Prepare the journal entry(ies) to recognize the change in the fair value of the call option as of March 31, 2015.
- (c) What was the effect on net income of entering into the derivative transaction for the period January 2 to March 31, 2015? (Ignore tax effects.)
- *E17-22 (Fair Value Hedge) On January 2, 2015, MacCloud Co. issued a 4-year, €100,000 note at 6% fixed interest, interest payable semiannually. MacCloud now wants to change the note to a variable-rate note.

As a result, on January 2, 2015, MacCloud Co. enters into an interest rate swap where it agrees to receive 6% fixed and pay LIBOR of 5.7% for the first 6 months on €100,000. At each 6-month period, the variable rate will be reset. The variable rate is reset to 6.7% on June 30, 2015.

Instructions

- (a) Compute the net interest expense to be reported for this note and related swap transaction as of June 30, 2015.
- **(b)** Compute the net interest expense to be reported for this note and related swap transaction as of December 31, 2015.
- *E17-23 (Cash Flow Hedge) On January 2, 2015, Parton Company issues a 5-year, \$10,000,000 note at LIBOR, with interest paid annually. The variable rate is reset at the end of each year. The LIBOR rate for the first year is 5.8%.

Parton Company decides it prefers fixed-rate financing and wants to lock in a rate of 6%. As a result, Parton enters into an interest rate swap to pay 6% fixed and receive LIBOR based on \$10 million. The variable rate is reset to 6.6% on January 2, 2016.

Instructions

- (a) Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2015.
- **(b)** Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2016.
- *E17-24 (Fair Value Hedge) Sarazan Company issues a 4-year, 7.5% fixed-rate interest only, non-prepayable £1,000,000 note payable on December 31, 2015. It decides to change the interest rate from a fixed rate to variable rate and enters into a swap agreement with M&S Corp. The swap agreement specifies that Sarazan will receive a fixed rate at 7.5% and pay variable with settlement dates that match

the interest payments on the debt. Assume that interest rates have declined during 2016 and that Sarazan received £13,000 as an adjustment to interest expense for the settlement at December 31, 2016. The loss related to the debt (due to interest rate changes) was £48,000. The value of the swap contract increased £48,000.

Instructions

- (a) Prepare the journal entry to record the payment of interest expense on December 31, 2016.
- **(b)** Prepare the journal entry to record the receipt of the swap settlement on December 31, 2016.
- (c) Prepare the journal entry to record the change in the fair value of the swap contract on December 31, 2016.
- (d) Prepare the journal entry to record the change in the fair value of the debt on December 31, 2016.
- *E17-25 (Call Option) On August 15, 2015, Outkast Co. invested idle cash by purchasing a call option on Counting Crows Inc. ordinary shares for \$360. The notional value of the call option is 400 shares, and the option price is \$40. (Market price of a Counting Crows share is \$40.) The option expires on January 31, 2016. The following data are available with respect to the call option.

	Market Price of Counting	
Date	Crows Shares	Time Value of Call Option
September 30, 2015	\$48 per share	\$180
December 31, 2015	46 per share	65
January 15, 2016	47 per share	30

Instructions

Prepare the journal entries for Outkast for the following dates.

- (a) Investment in call option on Counting Crows shares on August 15, 2015.
- (b) September 30, 2015—Outkast prepares financial statements.
- (c) December 31, 2015—Outkast prepares financial statements.
- (d) January 15, 2016—Outkast settles the call option on the Counting Crows shares.
- *E17-26 (Cash Flow Hedge) Choi Golf Co. uses titanium in the production of its specialty drivers. Choi anticipates that it will need to purchase 200 ounces of titanium in October 2015, for clubs that will be shipped in the holiday shopping season. However, if the price of titanium increases, this will increase the cost to produce the clubs, which will result in lower profit margins.

To hedge the risk of increased titanium prices, on May 1, 2015, Choi enters into a titanium futures contract and designates this futures contract as a cash flow hedge of the anticipated titanium purchase. The notional amount of the contract is 200 ounces, and the terms of the contract give Choi the right and the obligation to purchase titanium at a price of \(\frac{1}{2}\)50,000 per ounce. The price will be good until the contract expires on November 30, 2015.

Assume the following data with respect to the price of the call options and the titanium inventory purchase.

	Spot Price for
Date	November Delivery
May 1, 2015	¥50,000 per ounce
June 30, 2015	52,000 per ounce
September 30, 2016	52,500 per ounce

Instructions

Present the journal entries for the following dates/transactions.

- (a) May 1, 2015—Inception of futures contract, no premium paid.
- **(b)** June 30, 2015—Choi prepares financial statements.
- (c) September 30, 2015—Choi prepares financial statements.
- (d) October 5, 2015—Choi purchases 200 ounces of titanium at ¥52,500 per ounce and settles the futures contract.
- (e) December 15, 2015—Choi sells clubs containing titanium purchased in October 2015 for ¥25,000,000. The cost of the finished goods inventory is ¥14,000,000.
- **(f)** Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2015.

PROBLEMS

P17-1 (Debt Investments) Presented below is an amortization schedule related to Spangler Company's 5-year, \$100,000 bond with a 7% interest rate and a 5% yield, purchased on December 31, 2012, for \$108,660.

	Cash	Interest	Bond Premium	Carrying Amount
Date	Received	Revenue	Amortization	of Bonds
12/31/12				\$108,660
12/31/13	\$7,000	\$5,433	\$1,567	107,093
12/31/14	7,000	5,354	1,646	105,447
12/31/15	7,000	5,272	1,728	103,719
12/31/16	7,000	5,186	1,814	101,905
12/31/17	7,000	5,095	1,905	100,000

The following schedule presents a comparison of the amortized cost and fair value of the bonds at year-end.

	12/31/13	12/31/14	12/31/15	12/31/16	12/31/17
Amortized cost	\$107,093	\$105,447	\$103,719	\$101,905	\$100,000
Fair value	106,500	107,500	105,650	103,000	100,000

Instructions

- (a) Prepare the journal entry to record the purchase of these bonds on December 31, 2012, assuming the bonds are classified as held-for-collection investments.
- (b) Prepare the journal entry(ies) related to the held-for-collection bonds for 2013.
- (c) Prepare the journal entry(ies) related to the held-for-collection bonds for 2015.
- (d) Prepare the journal entry(ies) to record the purchase of these bonds, assuming they are classified as trading.
- (e) Prepare the journal entry(ies) related to the trading bonds for 2013.
- (f) Prepare the journal entry(ies) related to the trading bonds for 2015.
- P17-2 (Debt Investments, Fair Value Option) On January 1, 2015, Novotna Company purchased €400,000, 8% bonds of Aguirre Co. for €369,114. The bonds were purchased to yield 10% interest. Interest is payable semiannually on July 1 and January 1. The bonds mature on January 1, 2020. Novotna Company plans to hold the bonds to collect contractual cash flows. On January 1, 2017, after receiving interest, Novotna Company sold the bonds for €370,726 after receiving interest to meet its liquidity needs.

Instructions

- (a) Prepare the journal entry to record the purchase of bonds on January 1.
- **(b)** Prepare the amortization schedule for the bonds.
- (c) Prepare the journal entries to record the semiannual interest on July 1, 2015, and December 31, 2015.
- (d) Prepare the journal entry to record the sale of the bonds on January 1, 2017.
- (e) Assume that Novotna elected the fair value option for this investment. If the fair value of Aguirre bonds is €368,000 on December 31, 2015, prepare the necessary adjusting entry.
- **5 P17-3** (**Debt and Equity Investments**) Cardinal Paz Corp. carries an account in its general ledger called Investments, which contained debits for investment purchases, and no credits, with the following descriptions.

Feb. 1, 2015	Sharapova Company ordinary shares, \$100 par, 200 shares	\$ 37,400
April 1	Government bonds, 11%, due April 1, 2025, interest payable	
	April 1 and October 1, 110 bonds of \$1,000 par each	110,000
July 1	McGrath Company 12% bonds, par \$50,000, dated March 1, 2015	
	purchased at 104, plus accrued interest payable annually on March 1,	
	due March 1, 2035	54,000

Instructions

(Round all computations to the nearest dollar.)

- **(a)** Prepare entries necessary to classify the amounts into proper accounts, assuming that Paz plans to actively manage these investments.
- **(b)** Prepare the entry to record the accrued interest on December 31, 2015.
- (c) The fair values of the investments on December 31, 2015, were:

Sharapova Company shares	\$ 31,800
Government bonds	124,700
McGrath Company bonds	58,600

What entry or entries, if any, would you recommend be made?

(d) The government bonds were sold on July 1, 2016, for \$119,200 plus accrued interest. Give the proper entry.

3 P17-4 (Debt Investments) Presented below is information taken from a bond investment amortization schedule with related fair values provided. These bonds are managed to profit from changes in market interest rates.

	12/31/15	12/31/16	12/31/17
Amortized cost	€491,150	€519,442	€550,000
Fair value	497,000	509,000	550,000

Instructions

- (a) Indicate whether the bonds were purchased at a discount or at a premium.
- (b) Prepare the adjusting entry to record the bonds at fair value at December 31, 2015. The Fair Value Adjustment account has a debit balance of €1,000 prior to adjustment.
- (c) Prepare the adjusting entry to record the bonds at fair value at December 31, 2016.
- **P17-5** (Equity Investment Entries and Disclosures) Parnevik Company has the following investments in its investment portfolio on December 31, 2015 (all investments were purchased in 2015): (1) 3,000 ordinary shares of Anderson Co. which cost \$58,500, (2) 10,000 ordinary shares of Munter Ltd. which cost \$580,000, and (3) 6,000 preference shares of King Company which cost \$255,000. The Fair Value Adjustment account shows a credit of \$10,100 at the end of 2015.

In 2016, Parnevik completed the following investment transactions.

- 1. On January 15, sold 3,000 ordinary shares of Anderson at \$22 per share less fees of \$2,150.
- 2. On April 17, purchased 1,000 ordinary shares of Castle at \$33.50 per share plus fees of \$1,980.

On December 31, 2016, the fair values per share of these investments were: Munter \$61, King \$40, and Castle \$29. Parnevik classifies these investments as trading.

Instructions

- (a) Prepare the entry for the sale on January 15, 2016.
- **(b)** Prepare the journal entry to record the purchase on April 17, 2016.
- (c) Compute the unrealized gains or losses and prepare the adjusting entry for Parnevik on December 31, 2016.
- (d) How should the unrealized gains or losses be reported on Parnevik's financial statements?
- **(e)** Assuming the investment in King Company preference shares is classified as non-trading, briefly describe the accounting and reporting of this investment.
- **P17-6 (Equity Investments)** McElroy Company has the following portfolio of investments at September 30, 2015, its last reporting date.

Trading Investments	Cost	Fair Value
Horton, Inc. ordinary (5,000 shares)	£215,000	£200,000
Monty, Inc. preference (3,500 shares)	133,000	140,000
Oakwood Corp. ordinary (1,000 shares)	180,000	179,000

On October 10, 2015, the Horton shares were sold at a price of £54 per share. In addition, 3,000 ordinary shares of Patriot were acquired at £54.50 per share on November 2, 2015. The December 31, 2015, fair values were Monty £106,000, Patriot £132,000, and Oakwood £193,000. All the investments are classified as trading.

Instructions

- (a) Prepare the journal entries to record the sale, purchase, and adjusting entries related to the trading investments in the last quarter of 2015.
- (b) How would the entries in part (a) change if the investments were classified as non-trading?
- 2 3 P17-7 (Debt Investment Entries) The following information relates to the debt investments of Wildcat Company.
 - **1.** On February 1, the company purchased 10% bonds of Gibbons Co. having a par value of £300,000 at 100 plus accrued interest. Interest is payable April 1 and October 1.
 - **2.** On April 1, semiannual interest is received.
 - **3.** On July 1, 9% bonds of Sampson, Inc. were purchased. These bonds with a par value of £200,000 were purchased at 100 plus accrued interest. Interest dates are June 1 and December 1.
 - **4.** On September 1, bonds with a par value of £60,000, purchased on February 1, are sold at 99 plus accrued interest.
 - **5.** On October 1, semiannual interest is received.
 - **6.** On December 1, semiannual interest is received.
 - 7. On December 31, the fair value of the bonds purchased February 1 and July 1 are 95 and 93, respectively.

Instructions

- (a) Prepare any journal entries you consider necessary, including year-end entries (December 31), assuming these investments are managed to profit from changes in market interest rates.
- **(b)** If Wildcat classified these as held-for-collection investments, explain how the journal entries would differ from those in part (a).
- (c) Assume that Wildcat elects the fair value option for these investments under the part (b) conditions. Briefly discuss how the accounting will change.
- P17-8 (Fair Value and Equity Methods) Brooks Corp. is a medium-sized corporation specializing in quarrying stone for building construction. The company has long dominated the market, at one time achieving a 70% market penetration. During prosperous years, the company's profits, coupled with a conservative dividend policy, resulted in funds available for outside investment. Over the years, Brooks has had a policy of investing idle cash in equity investments. In particular, Brooks has made periodic investments in the company's principal supplier, Norton Industries. Although the firm currently owns 12% of the outstanding ordinary shares of Norton Industries, Brooks does not have significant influence over the operations of Norton Industries.

Cheryl Thomas has recently joined Brooks as assistant controller, and her first assignment is to prepare the 2015 year-end adjusting entries for the accounts that are valued by the "fair value" rule for financial reporting purposes. Thomas has gathered the following information about Brooks' pertinent accounts.

- **1.** Brooks has trading equity investments related to Delaney Motors and Patrick Electric. During this fiscal year, Brooks purchased 100,000 shares of Delaney Motors for \$1,400,000; these shares currently have a fair value of \$1,600,000. Brooks' investment in Patrick Electric has not been profitable; the company acquired 50,000 shares of Patrick in April 2015 at \$20 per share, a purchase that currently has a value of \$720,000.
- **2.** Prior to 2015, Brooks invested \$22,500,000 in Norton Industries and has not changed its holdings this year. This investment in Norton Industries was valued at \$21,500,000 on December 31, 2014. Brooks' 12% ownership of Norton Industries has a current fair value of \$22,225,000.

Instructions

- (a) Prepare the appropriate adjusting entries for Brooks as of December 31, 2015, to reflect the application of the "fair value" rule for both classes of investments described above.
- **(b)** For both classes of investments presented above, describe how the results of the valuation adjustments made in (a) would be reflected in Brooks' 2015 financial statements.
- **(c)** Prepare the entries for the Norton investment, assuming that Brooks owns 25% of Norton's shares. Norton reported income of \$500,000 in 2015 and paid cash dividends of \$100,000.
- **P17-9** (Financial Statement Presentation of Equity Investments) Kennedy Company has the following portfolio of trading investments at December 31, 2015.

		Percent	Per Share	
Investment	Quantity	Interest	Cost	Market
Frank, Inc.	2,000 shares	8%	\$11	\$16
Ellis Corp.	5,000 shares	14%	23	19
Mendota Company	4,000 shares	2%	31	24

On December 31, 2016, Kennedy's portfolio of trading investments consisted of the following investments.

		Percent	Per Share	
Investment	Quantity	Interest	Cost	Market
Ellis Corp.	5,000 shares	14%	\$23	\$28
Mendota Company	4,000 shares	2%	31	23
Mendota Company	2,000 shares	1%	25	23

At the end of year 2016, Kennedy Company changed the classification of its investment in Frank, Inc. to non-trading when the shares were selling for \$8 per share.

Instructions

(a) What should be reported on Kennedy's December 31, 2015, statement of financial position relative to these equity investments?

- **(b)** What should be reported on the face of Kennedy's December 31, 2016, statement of financial position relative to the trading investments? What should be reported to reflect the transactions above in Kennedy's 2016 income statement?
- **P17-10** (Equity Investments) Castleman Holdings, Inc. had the following investment portfolio at January 1, 2015.

Evers Company	1,000 shares @ £15 each	£15,000
Rogers Company	900 shares @ £20 each	18,000
Chance Company	500 shares @ £9 each	4,500
Non-trading investments at cost		37,500
Fair value adjustment		(7,500)
Non-trading investments at fair value		£30,000

During 2015, the following transactions took place.

- 1. On March 1, Rogers Company paid a £2 per share dividend.
- 2. On April 30, Castleman Holdings, Inc. sold 300 shares of Chance Company for £11 per share.
- 3. On May 15, Castleman Holdings, Inc. purchased 100 more shares of Evers Co. at £16 per share.
- **4.** At December 31, 2015, the shares had the following price per share values: Evers £17, Rogers £19, and Chance £8.

During 2016, the following transactions took place.

- 5. On February 1, Castleman Holdings, Inc. sold the remaining Chance shares for £8 per share.
- **6.** On March 1, Rogers Company paid a £2 per share dividend.
- **7.** On December 21, Evers Company declared a cash dividend of £3 per share to be paid in the next month.
- **8.** At December 31, 2016, the shares had the following price per shares values: Evers £19 and Rogers £21.

Instructions

- (a) Prepare journal entries for each of the above transactions.
- **(b)** Prepare a partial statement of financial position showing the Investments account at December 31, 2015 and 2016.
- (c) Briefly describe how the accounting would change if the Evers investment was classified as trading.
- **P17-11 (Investments—Statement Presentation)** Fernandez Corp. invested its excess cash in equity investments during 2015. The business model for these investments is to profit from trading on price changes.

Instructions

(a) As of December 31, 2015, the equity investment portfolio consisted of the following.

Investment	Quantity		Cost	Fair Value
Lindsay Jones, Inc.	1,000 shares		€ 15,000	€ 21,000
Poley Corp.	2,000 shares		40,000	42,000
Arnold Aircraft	2,000 shares		72,000	60,000
		Totals	€127,000	€123,000

What should be reported on Fernandez's December 31, 2015, statement of financial position relative to these investments? What should be reported on Fernandez's 2015 income statement?

(b) During the year 2016, Fernandez Corp. sold 2,000 shares of Poley Corp. for €38,200 and purchased 2,000 more shares of Lindsay Jones, Inc. and 1,000 shares of Duff Company. On December 31, 2016, Fernandez's equity investment portfolio consisted of the following.

Investment	Quantity		Cost	Fair Value
Lindsay Jones, Inc.	1,000 shares		€ 15,000	€20,000
Lindsay Jones, Inc.	2,000 shares		33,000	40,000
Duff Company	1,000 shares		16,000	12,000
Arnold Aircraft	2,000 shares		72,000	22,000
		Totals	€136,000	€94,000

What should be reported on Fernandez's December 31, 2016, statement of financial position? What should be reported on Fernandez's 2016 income statement?

(c) During the year 2017, Fernandez Corp. sold 3,000 shares of Lindsay Jones, Inc. for €39,900 and 500 shares of Duff Company at a loss of €2,700. On December 31, 2017, Fernandez's equity investment portfolio consisted of the following.

Investment	Quantity		Cost	Fair Value
Arnold Aircraft	2,000 shares		€72,000	€82,000
Duff Company	500 shares		8,000	6,000
		Totals	€80,000	€88,000

What should be reported on the face of Fernandez's December 31, 2017, statement of financial position? What should be reported on Fernandez's 2017 income statement?

*P17-12 (Derivative Financial Instrument) The treasurer of Miller Co. has read on the Internet that the price of Wade Inc. ordinary shares is about to take off. In order to profit from this potential development, Miller Co. purchased a call option on Wade shares on July 7, 2015, for €240. The call option is for 200 shares (notional value), and the strike price is €70. (The market price of a Wade share on that date is €70.) The option expires on January 31, 2016. The following data are available with respect to the call option.

Date	Market Price of Wade Shares	Time Value of Call Option
September 30, 2015	€77 per share	€180
December 31, 2015	75 per share	65
January 4, 2016	76 per share	30

Instructions

Prepare the journal entries for Miller Co. for the following dates.

- (a) July 7, 2015—Investment in call option on Wade shares.
- **(b)** September 30, 2015—Miller prepares financial statements.
- (c) December 31, 2015—Miller prepares financial statements.
- (d) January 4, 2016—Miller settles the call option on the Wade shares.
- *P17-13 (Derivative Financial Instrument) Johnstone Co. purchased a put option on Ewing ordinary shares on July 7, 2015, for €240. The put option is for 200 shares, and the strike price is €70. (The market price of an ordinary share of Ewing on that date is €70.) The option expires on January 31, 2016. The following data are available with respect to the put option.

Date	Market Price of Ewing Shares	Time Value of Put Option
September 30, 2015	€77 per share	€125
December 31, 2015	75 per share	50
January 31, 2016	78 per share	0

Instructions

Prepare the journal entries for Johnstone Co. for the following dates.

- (a) July 7, 2015—Investment in put option on Ewing shares.
- (b) September 30, 2015—Johnstone prepares financial statements.
- (c) December 31, 2015—Johnstone prepares financial statements.
- (d) January 31, 2016—Put option expires.
- *P17-14 (Free-Standing Derivative) Warren Co. purchased a put option on Echo ordinary shares on January 7, 2015, for \$360. The put option is for 400 shares, and the strike price is \$85 (which equals the price of an Echo share on the purchase date). The option expires on July 31, 2015. The following data are available with respect to the put option.

Date	Market Price of Echo Shares	Time Value of Put Option
March 31, 2015	\$80 per share	\$200
June 30, 2015	82 per share	90
July 6, 2015	77 per share	25

Instructions

Prepare the journal entries for Warren Co. for the following dates.

- (a) January 7, 2015—Investment in put option on Echo shares.
- **(b)** March 31, 2015—Warren prepares financial statements.
- (c) June 30, 2015—Warren prepares financial statements.
- (d) July 6, 2015—Warren settles the put option on the Echo shares.
- *P17-15 (Fair Value Hedge Interest Rate Swap) On December 31, 2015, Mercantile Corp. had a \$10,000,000, 8% fixed-rate note outstanding, payable in 2 years. It decides to enter into a 2-year swap with Chicago First Bank to convert the fixed-rate debt to variable-rate debt. The terms of the swap indicate that Mercantile will receive interest at a fixed rate of 8.0% and will pay a variable rate equal to the 6-month LIBOR rate, based on the \$10,000,000 amount. The LIBOR rate on December 31, 2015, is 7%. The LIBOR rate will be reset every 6 months and will be used to determine the variable rate to be paid for the following 6-month period.

Mercantile Corp. designates the swap as a fair value hedge. Assume that the hedging relationship meets all the conditions necessary for hedge accounting. The 6-month LIBOR rate and the swap and debt fair values are as follows.

Date	6-Month LIBOR Rate	Swap Fair Value	Debt Fair Value
December 31, 2015	7.0%	_	\$10,000,000
June 30, 2016	7.5%	\$(200,000)	9,800,000
December 31, 2016	6.0%	60,000	10,060,000

Instructions

- (a) Present the journal entries to record the following transactions.
 - (1) The entry, if any, to record the swap on December 31, 2015.
 - (2) The entry to record the semiannual debt interest payment on June 30, 2016.
 - **(3)** The entry to record the settlement of the semiannual swap amount receivables at 8%, less amount payable at LIBOR, 7%.
 - (4) The entry to record the change in the fair value of the debt on June 30, 2016.
 - (5) The entry to record the change in the fair value of the swap at June 30, 2016.
- **(b)** Indicate the amount(s) reported on the statement of financial position and income statement related to the debt and swap on December 31, 2015.
- (c) Indicate the amount(s) reported on the statement of financial position and income statement related to the debt and swap on June 30, 2016.
- (d) Indicate the amount(s) reported on the statement of financial position and income statement related to the debt and swap on December 31, 2016.
- *P17-16 (Cash Flow Hedge) Suzuki Jewelry Co. uses gold in the manufacture of its products. Suzuki anticipates that it will need to purchase 500 ounces of gold in October 2015, for jewelry that will be shipped for the holiday shopping season. However, if the price of gold increases, Suzuki's cost to produce its jewelry will increase, which would reduce its profit margins.

To hedge the risk of increased gold prices, on April 1, 2015, Suzuki enters into a gold futures contract and designates this futures contract as a cash flow hedge of the anticipated gold purchase. The notional amount of the contract is 500 ounces, and the terms of the contract give Suzuki the right and the obligation to purchase gold at a price of \(\frac{\pmathbf{x}}{30,000}\) per ounce. The price will be good until the contract expires on October 31, 2015.

Assume the following data with respect to the price of the gold inventory purchase.

Date	Spot Price for October Delivery	
April 1, 2015	¥30,000 per ounce	
June 30, 2015	31,000 per ounce	
September 30, 2015	31,500 per ounce	

Instructions

Prepare the journal entries for the following transactions.

- (a) April 1, 2015—Inception of the futures contract, no premium paid.
- **(b)** June 30, 2015—Suzuki Co. prepares financial statements.
- (c) September 30, 2015—Suzuki Co. prepares financial statements.

- (d) October 10, 2015—Suzuki Co. purchases 500 ounces of gold at ¥31,500 per ounce and settles the futures contract.
- (e) December 20, 2015—Suzuki sells jewelry containing gold purchased in October 2015 for ¥35,000,000. The cost of the finished goods inventory is ¥20,000,000.
- (f) Indicate the amount(s) reported on the statement of financial position and income statement related to the futures contract on June 30, 2015.
- (g) Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2015.

*P17-17 (Fair Value Hedge) On November 3, 2015, Sprinkle Co. invested €200,000 in 4,000 ordinary shares of Pratt Co. Sprinkle classified this investment as non-trading equity. Sprinkle Co. is considering making a more significant investment in Pratt Co. at some point in the future but has decided to wait and see how the shares do over the next several quarters.

To hedge against potential declines in the value of Pratt shares during this period, Sprinkle also purchased a put option on the Pratt shares. Sprinkle paid an option premium of €600 for the put option, which gives Sprinkle the option to sell 4,000 Pratt shares at a strike price of €50 per share. The option expires on July 31, 2016. The following data are available with respect to the values of the Pratt shares and the put option.

Date	Market Price of Pratt Shares	Time Value of Put Option
December 31, 2015	€50 per share	€375
March 31, 2016	45 per share	175
June 30, 2016	43 per share	40

Instructions

- (a) Prepare the journal entries for Sprinkle Co. for the following dates.
 - (1) November 3, 2015—Investment in Pratt shares and the put option on Pratt shares.
 - **(2)** December 31, 2015—Sprinkle Co. prepares financial statements.
 - (3) March 31, 2016—Sprinkle prepares financial statements.
 - **(4)** June 30, 2016—Sprinkle prepares financial statements.
 - (5) July 1, 2016—Sprinkle settles the put option and sells the Pratt shares for €43 per share.
- **(b)** Indicate the amount(s) reported on the statement of financial position and income statement related to the Pratt investment and the put option on December 31, 2015.
- (c) Indicate the amount(s) reported on the statement of financial position and income statement related to the Pratt investment and the put option on June 30, 2016.

CONCEPTS FOR ANALYSIS

CA17-1 (Issues Raised about Investments) You have just started work for Warren Co. as part of the controller's group involved in current financial reporting problems. Jane Henshaw, controller for Warren, is interested in your accounting background because the company has experienced a series of financial reporting surprises over the last few years. Recently, the controller has learned from the company's auditors that there is authoritative literature that may apply to its debt and equity investments. She assumes that you are familiar with literature in this area and asks how the following situations should be reported in the financial statements.

Situation 1: Investments that are actively traded are reported in the current assets section and have a fair value that is €4,200 lower than cost.

Situation 2: A debt investment whose fair value is currently less than cost is transferred to the held-for-collection category.

Situation 3: A debt investment whose fair value is currently less than cost is classified as non-current but is to be reclassified as current.

Situation 4: A company's portfolio of debt investments at fair value consists of the bonds of one company. At the end of the prior year, the fair value of the bonds was 50% of original cost, and this reduction in value was reported as an impairment. However, at the end of the current year, the fair value of the bonds had appreciated to twice the original cost.

Situation 5: The company has purchased some convertible debentures that it plans to sell if the price increases. The fair value of the convertible debentures is $\notin 7,700$ below its cost.

Instructions

What is the effect upon carrying value and earnings for each of the situations above? Assume that these situations are unrelated.

CA17-2 (Equity Investments) Lexington Co. has the following equity investments on December 31, 2015 (its first year of operations).

	Cost	Fair Value
Greenspan Corp. ordinary shares	\$20,000	\$19,000
Summerset Company ordinary shares	9,500	8,800
Tinkers Company ordinary shares	20,000	20,600
	\$49,500	\$48,400

During 2016, Summerset Company shares were sold for \$9,200, the difference between the \$9,200 and the "fair value" of \$8,800 being recorded as a "Gain on Sale of Investments." The market price of the shares on December 31, 2016, was Greenspan Corp. shares \$19,900, Tinkers Company shares \$20,500.

Instructions

- (a) What justification is there for valuing these investments at fair value and reporting the unrealized gain or loss in income?
- **(b)** How should Lexington Company apply this rule on December 31, 2015? Explain.
- **(c)** Did Lexington Company properly account for the sale of the Summerset Company shares? Explain.
- (d) Are there any additional entries necessary for Lexington Company at December 31, 2016, to reflect the facts on the financial statements in accordance with IFRS? Explain.

CA17-3 (Financial Statement Effect of Investments) Presented below are three unrelated situations involving investments.

Situation 1: A debt investment portfolio, whose fair value is currently less than cost, is classified as trading but is to be reclassified as held-for-collection.

Situation 2: A debt investment portfolio with an aggregate fair value in excess of cost includes one particular debt investment whose fair value has declined to less than one-half of the original cost. The decline in value is considered to be permanent.

Situation 3: The portfolio of trading equity investments has a cost in excess of fair value of £13,500. The portfolio of non-trading equity investments has a fair value in excess of cost of £28,600.

Instructions

What is the effect upon carrying value and earnings for each of the situations above?

CA17-4 (Equity Investments) The IASB issued accounting guidance to clarify accounting methods and procedures with respect to debt and equity investments. An important part of the statement concerns the distinction between held-for-collection debt investments, trading debt and equity investments, and non-trading equity investments.

Instructions

- (a) Why does a company maintain investment portfolios for these different types of investments?
- **(b)** What factors should be considered in determining whether investments should be classified as held-for-collection, trading, or non-trading? How do these factors affect the accounting treatment for unrealized losses?

CA17-5 (Investment Accounted for under the Equity Method) On July 1, 2016, Fontaine Company purchased for cash 40% of the outstanding ordinary shares of Knoblett Company. Both Fontaine Company and Knoblett Company have a December 31 year-end. Knoblett Company, whose shares are actively traded in the over-the-counter market, reported its total net income for the year to Fontaine Company and also paid cash dividends on November 15, 2016, to Fontaine Company and its other shareholders.

Instructions

How should Fontaine Company report the above facts in its December 31, 2016, statement of financial position and its income statement for the year then ended? Discuss the rationale for your answer.

CA17-6 (Equity Investments) On July 1, 2015, Selig Company purchased for cash 40% of the outstanding ordinary shares of Spoor Corporation. Both Selig and Spoor have a December 31 year-end. Spoor Corporation, whose shares are actively traded on the American Stock Exchange, paid a cash dividend on November 15, 2015, to Selig Company and its other shareholders. It also reported its total net income for the year of \$920,000 to Selig Company.

Instructions

Prepare a one-page memorandum of instructions on how Selig Company should report the above facts in its December 31, 2015, statement of financial position and its 2015 income statement. In your memo, identify and describe the method of valuation you recommend. Provide rationale where you can. Address your memo to the chief accountant at Selig Company.

CA17-7 (Fair Value) Addison Manufacturing holds a large portfolio of debt and equity investments. The fair value of the portfolio is greater than its original cost, even though some investments have decreased in value. Sam Beresford, the financial vice president, and Angie Nielson, the controller, are near year-end in the process of classifying for the first time this investment portfolio in accordance with IFRS. Beresford wants to classify those investments that have increased in value during the period as trading investments in order to increase net income this year. He wants to classify all the investments that have decreased in value as non-trading (the equity investments) and as held-for-collection (the debt investments).

Nielson disagrees. She wants to classify those investments that have decreased in value as trading and those that have increased in value as non-trading (equity) and held-for-collection (debt). She contends that the company is having a good earnings year and that recognizing the losses will help to smooth the income this year. As a result, the company will have built-in gains for future periods when the company may not be as profitable.

Instructions

Answer the following questions.

- (a) Will classifying the portfolio as each proposes actually have the effect on earnings that each says it will?
- **(b)** Is there anything unethical in what each of them proposes? Who are the stakeholders affected by their proposals?
- (c) Assume that Beresford and Nielson properly classify the entire portfolio into trading, non-trading, and held-for-collection categories. But then each proposes to sell just before year-end the investments with gains or with losses, as the case may be, to accomplish their effect on earnings. Is this unethical?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What investments does M&S report in fiscal year 2013, and where are these investments reported in its financial statements?
- (b) How are M&S's investments valued? How does M&S determine fair value?
- (c) How does M&S use derivative financial instruments?

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Based on the information contained in these financial statements, determine each of the following for each company.

- (a) Cash used in (for) investing activities during 2012 (from the statement of cash flows).
- (b) Cash used for acquisitions and investments in unconsolidated affiliates during 2012.
- (c) Total investment in unconsolidated affiliates (or investments and other assets) at the end of 2012.
- (d) What information do adidas and Puma provide on the classifications of their investments?

Financial Statement Analysis Case

Union Planters

Union Planters is a bank holding company (that is, a corporation that owns banks). Union Planters manages \$32 billion in assets, the largest of which is its loan portfolio of \$19 billion. In addition to its loan portfolio, however, like other banks it has significant debt investments. These investments vary from short-term to long-term in nature. As a consequence, consistent with the requirements of accounting rules, Union Planters reports both the fair value and amortized cost of its investments. The following facts were found in a recent Union Planters' annual report.

		Gross	Gross	
	Amortized	Unrealized	Unrealized	Fair
(amounts in millions)	Cost	Gains	Losses	Value
Trading account assets	\$ 275	_	_	\$ 275
Non-trading equity investments	8,209	\$108	\$15	8,302
Net income				224
Net investment gains (losses)				(9)

Instructions

- (a) Why do you suppose Union Planters purchases investments, rather than simply making loans? Why does it purchase investments that vary both in terms of their maturities and in type (debt versus equity)?
- (b) How must Union Planters account for its investments at fair value and amortized cost?
- **(c)** In what ways does classifying investments into two different categories assist investors in evaluating the profitability of a company like Union Planters?
- (d) Could Union Planters adjust its investment portfolio to increase reported profit? If so, how much could it have increased reported profit? Why do you suppose it chose not to do this?

Accounting, Analysis, and Principles

Instar Company has several investments in other companies. The following information regarding these investments is available at December 31, 2015.

1. Instar holds bonds issued by Dorsel Corp. The bonds have an amortized cost of \$320,000 (which is par value) and their fair value at December 31, 2015, is \$400,000. Instar plans to hold the bonds to collect

880 Chapter 17 Investments

- contractual cash flows until they mature on December 31, 2025. The bonds pay interest at 10%, payable annually on December 31.
- 2. Instar has invested idle cash in the equity investments of several publicly traded companies. Instar intends to sell these investments during the first quarter of 2016, when it will need the cash to acquire seasonal inventory. These equity investments have a cost basis of \$800,000 and a fair value of \$920,000 at December 31, 2015.
- 3. Instar has an ownership stake in one of the companies that supplies Instar with various components that Instar uses in its products. Instar owns 6% of the ordinary shares of the supplier, does not have any representation on the supplier's board of directors, does not exchange any personnel with the supplier, and does not consult with the supplier on any of the supplier's operating, financial, or strategic decisions. The cost basis of the investment in the supplier is \$1,200,000, and the fair value of the investment at December 31, 2015, is \$1,550,000. Instar may sell the investment if it needs cash. The supplier reported net income of \$80,000 for 2015 and paid no dividends.
- **4.** Instar owns 1% of Forter Corp. ordinary shares. The cost basis of the investment in Forter is \$200,000, and the fair value at December 31, 2015, is \$187,000. Instar does not intend to trade the investment because it helps it meet regulatory requirements to sell its products in Forter's market area. The investment is not considered impaired.
- 5. Instar purchased 25% of the shares of Slobbaer Co. for \$900,000. Instar has significant influence over the operating activities of Slobbaer Co. During 2015, Slobbaer Co. reported net income of \$300,000 and paid a dividend of \$100,000.

Accounting

- (a) Determine whether each of the investments described above should be classified as held-for-collection, trading, or non-trading equity.
- **(b)** Prepare any December 31, 2015, journal entries needed for Instar relating to Instar's various investments in other companies. Assume 2015 is Instar's first year of operations.

Analysis

What is the effect on Instar's 2015 net income (as reported on Instar's income statement) of its investments in other companies?

Principles

Briefly explain the different rationales for the different accounting and reporting rules for different types of investments in other companies.

BRIDGE TO THE PROFESSION

Professional Research

Your client, Cascade Company, is planning to invest some of its excess cash in 5-year revenue bonds issued by the county and in the shares of one of its suppliers, Teton Co. Teton's shares trade on the over-the-counter market but trading activity is quite low. Cascade plans to classify these investments as trading. The company would like you to conduct some research on the accounting for these investments.

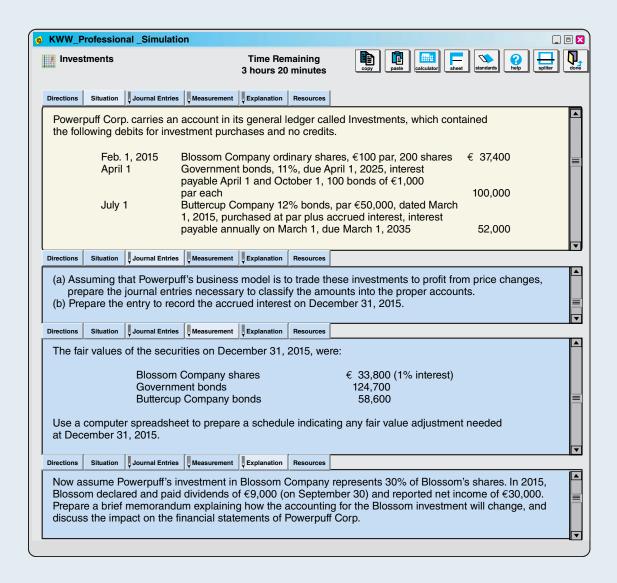

Instructions

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free eIFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) Since the Teton shares are not actively traded, Cascade argues that this investment's market prices do not provide a good fair value measurement. According to the authoritative literature, what factors should be evaluated to conclude that a market price cannot be used as an estimate of fair value?
- **(b)** To avoid volatility in their financial statements due to fair value adjustments, Cascade debated whether the bond investment could be classified as held-for-collection; Cascade is pretty sure it will hold the bonds for 5 years. What criteria must be met for Cascade to classify it as held-for-collection?

Professional Simulation

In this simulation, you are asked to address questions related to investments. Provide responses to all parts.

18

Revenue Recognition

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Understand revenue recognition issues.
- **2** Identify the five steps in the revenue recognition process.
- 3 Identify the contract with customers.
- 4 Identify the separate performance obligations in the contract.
- **5** Determine the transaction price.

- **6** Allocate the transaction price to the separate performance obligations.
- **7** Recognize revenue when the company satisfies its performance obligation.
- 8 Identify other revenue recognition issues.
- **9** Describe presentation and disclosure regarding revenue.

It's Back

Revenue recognition practices are the most prevalent reasons for accounting restatements. A number of the revenue recognition issues relate to possible fraudulent behavior by company executives and employees. Consider the following situations.

- Rolls-Royce (GBR) was questioned by investors about the revenue recognition practices for its
 "Totalcare" contracts, where engines are sold at little or no profit but tie the customer into long-term
 servicing and parts purchases. When it was revealed that market regulators were exploring these
 revenue practices and changes in how Rolls booked fees from its risk-sharing partnerships, the
 company's share price slipped to a one-year low.
- The former co-chairman and CEO of Qwest Communications International Inc. (USA) and eight other former Qwest officers and employees were charged with fraud and other violations of U.S. securities laws. Three of these people fraudulently characterized non-recurring revenue from one-time sales as revenue from recurring data and Internet services. Internal correspondence likened Qwest's dependence on these transactions to fill the gap between actual and projected revenue to an addiction.
- Sinovel Wind Group (CHN) was scrutinized by Chinese regulators over accounting problems related to its turbine business. The accounting irregularities led to an overstatement of revenue by 10 percent and profits by 20 percent in 2011—its first year as a public company. Sinovel attributed the error to incorrectly recognizing revenue for uncompleted projects. Following the investigation, Sinovel's founder resigned as chairman but remained on the board of directors.
- Three former senior officers of iGo Corp. (USA) caused the company to improperly recognize
 revenue on consignment sales and products that were not shipped or that were shipped after the
 end of a fiscal quarter.

Though the cases cited involved fraud and irregularity, not all revenue recognition errors are intentional. For example, **Turquoise Hill Resources** (CAN) restated its financial results for three years due to revenue recognition irregularities. The restatement corrected errors in the accounting treatment for sales contracts, which provide for transfer of title—and revenue recognition—upon loading the coal onto customers' trucks. It was determined that, due to the changing nature of the contracts, revenue should not be recognized until customers pay.

Revenue numbers are attracting more attention from investors these days. A concern expressed recently is that revenue growth is not robust, and increases in net income (the bottom line) are caused by

factors such as low financing costs and lower labor costs which in the long run may not be sustainable. So more focus is now being given to a company's top-line revenue number as many believe strong revenue growth suggests a more profitable company in the future.

Recently, the IASB issued a new standard on revenue recognition that hopefully will improve the reporting of revenue transactions. This new standard provides a set of guidelines to follow in determining when revenue should be reported and how it should be measured. The new standard is comprehensive and applies to all companies. As a result, comparability and consistency in reporting revenue should be enhanced. After studying this chapter, you should have a good understanding of the new revenue recognition concepts.

> See the **Underlying Concepts** on pages 885 and 891.

> Read the **Evolving Issue** on page 912 for a discussion of the implementation of the recently issued revenue recognition standard.

INTERNATIONAL FOCUS

> With the issuance of the new standard ("Revenue from Contracts with Customers"), the accounting for revenue recognition is now converged under IFRS and U.S. GAAP.

PREVIEW OF CHAPTER

18

As indicated in the opening story, the issue of when revenue should be recognized is complex. The many methods of marketing products and services make it difficult to develop guidelines that will apply to all

situations. This chapter provides you with general guidelines used in most business transactions. The content and organization of the chapter are as follows.

Revenue Recognition

Overview of Revenue Other Revenue Recognition The Five-Step Process Presentation and Disclosure Recognition Issues Background Contract with customers · Right of return Presentation **New revenue recognition** Separate performance Repurchase agreements Disclosure standard obligations **Bill-and-hold arrangements Determining the transaction Principal-agent relationships** price **Consignments** Allocating the transaction **Warranties** price Non-refundable upfront fees Satisfying performance obligations

OVERVIEW OF REVENUE RECOGNITION

Background

LEARNING OBJECTIVE 1

Understand revenue recognition issues.

Most revenue transactions pose few problems for revenue recognition. This is because, in many cases, the transaction is initiated and completed at the same time. However, not all transactions are that simple. For example, consider a cell phone contract between a company such as **Vodafone** (GBR) and a customer.

The customer is often provided with a package that may include a handset, free minutes of talk time, data downloads, and text messaging service. In addition, some providers will bundle that with a fixed-line broadband service. At the same time, the customer may pay for these services in a variety of ways, possibly receiving a discount on the handset and then paying higher prices for connection fees and so forth. In some cases, depending on the package purchased, the company may provide free applications in subsequent periods. How, then, should the various pieces of this sale be reported by Vodafone? The answer is not obvious.

It is therefore not surprising that a recent survey of financial executives noted that the revenue recognition process is increasingly more complex to manage, more prone to error, and more material to financial statements compared to any other area in financial reporting. The report went on to note that revenue recognition is a top fraud risk and that regardless of the accounting rules followed (IFRS or U.S. GAAP), the risk of errors and inaccuracies in revenue reporting is significant.¹

The IASB (and FASB) has indicated that the state of reporting for revenue was unsatisfactory. IFRS was criticized because it lacked guidance in a number of areas. For example, IFRS had one basic standard on revenue recognition—*IAS 18*—plus some limited guidance related to certain minor topics. In contrast, U.S. GAAP had numerous standards related to revenue recognition (by some counts, well over 100), but many believed the standards were often inconsistent with one another. Thus, the accounting for revenues provided a most fitting contrast of the principles-based (IFRS) and rules-based (U.S. GAAP) approaches. While both sides had their advocates, the IASB and FASB recognized a number of deficiencies in this area.²

Recently, the IASB and FASB issued a converged standard on revenue recognition entitled *Revenue from Contracts with Customers*. [1] To address the inconsistencies and weaknesses of the previous approaches, a comprehensive revenue recognition standard now applies to a wide range of transactions and industries. The Boards believe this new standard will improve IFRS and U.S. GAAP by:

- (a) Providing a more robust framework for addressing revenue recognition issues.
- **(b)** Improving comparability of revenue recognition practices across entities, industries, jurisdictions, and capital markets.

I F R

See the Authoritative Literature section (page 930).

¹See www.prweb.com/releases/RecognitionRevenue/IFRS/prweb1648994.htm.

²See, for example, "Preliminary Views on Revenue Recognition in Contracts with Customers," *IASB/FASB Discussion Paper* (December 19, 2008). Some noted that U.S. GAAP has so many standards that at times they are inconsistent with each other in applying basic principles. In addition, even with the many standards, no comprehensive guidance was provided for service transactions. Conversely, IFRS lacked guidance in certain fundamental areas such as multiple-deliverable arrangements. In addition, there were inconsistencies in applying revenue recognition principles to long-term contracts versus other elements of revenue recognition.

- **(c)** Simplifying the preparation of financial statements by reducing the number of requirements to which companies must refer.
- (d) Requiring enhanced disclosures to help financial statement users better understand the amount, timing, and uncertainty of revenue that is recognized. [2]

New Revenue Recognition Standard

The new standard, Revenue from Contracts with Customers, adopts an asset-liability approach as the basis for revenue recognition. The asset-liability approach recognizes and measures revenue based on changes in assets and liabilities. The Boards decided that focusing on (a) the recognition and measurement of assets and liabilities and (b) changes in those assets or liabilities over the life of the contract brings more discipline to the measurement of revenue, compared to the "risk and rewards" criteria in prior standards.

Under the asset-liability approach, companies account for revenue based on the asset or liability arising from contracts with customers. Companies are required to analyze contracts with customers because these contracts are the lifeblood of most companies. Contracts indicate the terms of the transaction and the measurement of the consideration. Without contracts, companies cannot know whether promises will be met.

Illustration 18-1 shows the key concepts related to this new standard on revenue recognition. The new standard first identifies the key objective of revenue recognition, followed by a five-step process that companies should use to ensure that revenue is measured and reported correctly. The culmination of the process is the **revenue recognition principle**, that is, recognition of revenue when the performance obligation is satisfied. We examine all steps in more detail in the following section.

Underlying Concepts

The asset-liability approach is consistent with the conceptual framework approach to recognition.

KEY OBJECTIVE

Recognize revenue to depict the transfer of goods or services to customers in an amount that reflects the consideration that the company receives, or expects to receive, in exchange for these goods or services.

FIVE-STEP PROCESS FOR REVENUE RECOGNITION

- 1. Identify the contract with customers.
- 2. Identify the separate performance obligations in the contract.
- 3. Determine the transaction price.
- 4. Allocate the transaction price to the separate performance obligations.
- 5. Recognize revenue when each performance obligation is satisfied.

REVENUE RECOGNITION PRINCIPLE

Recognize revenue in the accounting period when the performance obligation is satisfied.

ILLUSTRATION 18-1

Key Concepts of Revenue Recognition

THE FIVE-STEP PROCESS

Assume that Airbus (FRA) signs a contract to sell airplanes to Cathay Pacific Airlines (HKG) for €100 million. Illustration 18-2 (on page 886) shows the five steps that Airbus follows to recognize revenue.

Identify the five steps in the revenue recognition process.

ILLUSTRATION 18-2 Five Steps of Revenue Recognition

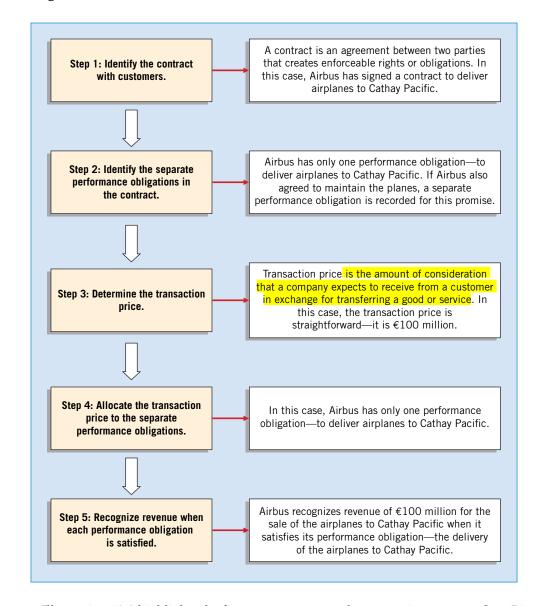

Illustration 18-2 highlights the five-step process used to recognize revenue. Step 5 is when Airbus recognizes revenue related to the sale of the airplanes to Cathay Pacific. At this point, Airbus delivers the airplanes to Cathay Pacific and satisfies its performance obligation. [3] In essence, a change in control from Airbus to Cathay Pacific occurs. Cathay Pacific now controls the assets because it has the ability to direct the use of and obtain substantially all the remaining benefits from the airplanes. Control also includes Cathay Pacific's ability to prevent other companies from directing the use of, or receiving the benefits from, the airplanes. In the following sections, we provide an expanded discussion of this five-step process.

Identifying the Contract with Customers—Step 1

A contract is an agreement between two or more parties that creates enforceable rights or obligations. Contracts can be written, oral, or implied from customary business practice. A company applies the revenue guidance to a contract according to the following criteria in Illustration 18-3.

In some cases, there are multiple contracts related to the transaction, and accounting for each contract may or may not occur, depending on the circumstances. These situations often develop when not only a product is provided but some type of service is performed as well.

Apply Revenue Guidance to Contracts If: **Disregard Revenue Guidance to Contracts If:** The contract has commercial substance; • The contract is wholly unperformed, and • The parties to the contract have approved the · Each party can unilaterally terminate the contract and are committed to perform their contract without compensation. respective obligations; · The company can identify each party's rights regarding the goods or services to be transferred; and • The company can identify the payment terms for the goods and services to be transferred. • It is probable that the company will collect the consideration to which it will be entitled.3

ILLUSTRATION 18-3

Contract Criteria for Revenue Guidance

In some cases, a company should combine contracts and account for them as one contract.

Basic Accounting

Revenue from a contract with a customer cannot be recognized until a contract exists.

On entering into a contract with a customer, a company obtains rights to receive consideration from the customer and assumes obligations to transfer goods or services to the customer (performance obligations). The combination of those rights and performance obligations gives rise to an (net) asset or (net) liability. If the measure of the remaining rights exceeds the measure of the remaining performance obligations, the contract is an asset (a contract asset). Conversely, if the measure of the remaining performance obligations exceeds the measure of the remaining rights, the contract is a liability (a contract liability). However, a company does not recognize contract assets or liabilities until one or both parties to the contract perform. The basic accounting for a contract in which both parties perform is shown in Illustration 18-4.

CONTRACTS AND RECOGNITION

Facts: On March 1, 2015, Margo Company enters into a contract to transfer a product to Soon Yoon on July 31, 2015. The contract is structured such that Soon Yoon is required to pay the full contract price of HK\$5,000 on August 31, 2015. The cost of the goods transferred is HK\$3,000. Margo delivers the product to Soon Yoon on July 31, 2015.

Question: What journal entries should Margo Company make in regards to this contract in 2015?

Solution: No entry is required on March 1, 2015, because neither party has performed on the contract. On July 31, 2015, Margo delivers the product and therefore should recognize revenue on that date as it satisfies its performance obligation by delivering the product to Soon Yoon.

The journal entry to record the sale and related cost of goods sold is as follows.

July 31, 2015

Accounts Receivable 5,000
Sales Revenue 5,000
Cost of Goods Sold 3,000
Inventory 3,000

After receiving the cash payment on August 31, 2015, Margo makes the following entry.

August 31, 2015

5,000

Cash 5,000
Accounts Receivable

·

³The IASB included this criterion (which acts like a collectibility threshold) because the Board concluded that the assessment of a customer's credit risk was an important part of determining whether a contract is valid. That is, under the revenue standard (and discussed later in the chapter), collectibility is not a consideration for determining whether revenue is recognized. However, collectibility may be a consideration in assessing whether parties to the contract are committed to perform. In determining whether it is probable that a company will collect the amount of consideration to which it is entitled, the company assesses both the customer's ability and intent to pay as amounts become due. [4]

ILLUSTRATION 18-4

Basic Revenue Transaction

A key feature of the revenue arrangement is that the signing of the contract by the two parties is not recorded until one or both of the parties *perform under the contract*. **Until performance occurs, no net asset or net liability occurs.**

Contract Modifications

Companies sometimes change the contract terms while it is ongoing; this is referred to as a **contract modification**. When a contract modification occurs, companies determine whether a new contract (and performance obligations) results or whether it is a modification of the existing contract.

Separate Performance Obligation. A company accounts for a contract modification as a new contract if **both** of the following conditions are satisfied:

- The promised **goods or services are distinct** (i.e., the company sells them separately and they are not interdependent with other goods and services), and
- The company has the right to receive an amount of **consideration that reflects the standalone selling price** of the promised goods or services. **[5]**

For example, Crandall Co. has a contract to sell 100 products to a customer for €10,000 (€100 per product) at various points in time over a six-month period. After 60 products have been delivered, Crandall modifies the contract by promising to deliver 20 more products for an additional €1,900, or €95 per product (which is the standalone selling price of the products at the time of the contract modification). Crandall regularly sells the products separately. In this situation, the contract modification for the additional 20 products is, in effect, a **new and separate contract**, which does not affect the accounting for the original contract.

Given a new contract, Crandall recognizes an additional €4,000 [(100 units − 60 units) × €100] related to the original contract terms and €1,900 (20 units × €95) related to the new products. Total revenue after the modification is therefore €5,900 (€4,000 + €1,900).

Prospective Modification. What if Crandall Co. determines that the additional products are not a separate performance obligation? This might arise if the new products are not priced at the proper standalone selling price or if they are not distinct. In this situation, companies generally account for the modification using a prospective approach.

Under the prospective approach, Crandall should account for the effect of the change in the period of change as well as future periods if the change affects both. Crandall should not change previously reported results. Thus, for Crandall, the amount recognized as revenue for each of the remaining products would be a blended price of €98.33, computed as shown in Illustration 18-5.

ILLUSTRATION 18-5

Revenue Under Prospective Modification Consideration for products not yet delivered under original contract (€100 × 40)

Consideration for products to be delivered under the contract modification (€95 × 20)

Total remaining revenue

1,900 €5,900

€4.000

Revenue per remaining unit ($\le 5,900 \div 60$) = ≤ 98.33 .

Therefore, under the prospective approach, this computation differs from that in the separate performance obligation approach in that revenue on the remaining units is recognized at the blended price. Total revenue after the modification is therefore €5,900

(60 units \times €98.33). Illustration 18-6 shows the revenue reported under the two contract modification approaches for Crandall Co.

	Revenue Recognized Prior to Modification	Revenue Recognized After Modification	Total Revenue Recognized
Separate performance obligation	€6,000	€5,900	€11,900
No separate performance obligation—prospectively	€6,000	€5,900	€11,900

ILLUSTRATION 18-6 Comparison of Contract Modification Approaches

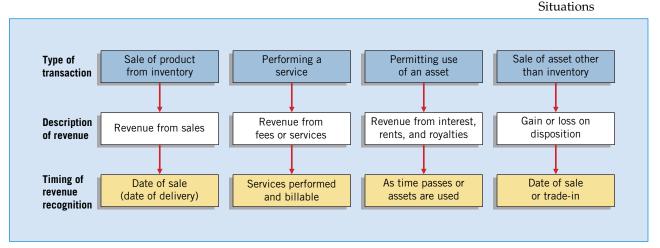

As indicated, whether a modification is treated as a separate performance obligation or prospectively, the same amount of revenue is recognized before and after the modification. However, under the prospective approach, a blended price (\leq 98.33) is used for sales in the periods after the modification.⁴

Identifying Separate Performance Obligations—Step 2

A performance obligation is a promise in a contract to provide a product or service to a customer. This promise may be explicit, implicit, or possibly based on customary business practice. To determine whether a performance obligation exists, the company must provide a distinct product or service. Illustration 18-7 summarizes some classic situations when revenue is recognized as a result of providing a distinct product or service, therefore satisfying its performance obligation.

LEARNING OBJECTIVE Identify the separate performance obligations in the contract.

ILLUSTRATION 18-7 Revenue Recognition

⁴Another approach to account for a contract modification is to report the information in a cumulative catch-up manner. In other words, assuming that these new products are part of the original contract, companies adjust the revenue account to reflect the cumulative effect for periods prior to when the modification occurred. An example of a catch-up situation is a long-term construction contract, which is discussed in more detail in Appendix 18A. Use of the prospective approach avoids the complexity of opening up the accounting for previously satisfied performance obligations. However, it ignores any adjustments to revenue that have already been recognized. [6] For homework purposes, unless instructed otherwise, use the prospective approach for modifications that do not result in a separate performance obligation. Expanded discussion of the prospective and cumulative catch-up (retrospective) approaches to accounting changes is provided in Chapter 22.

The accounting for the transactions in Illustration 18-7 is straightforward as only one performance obligation exists. However, many revenue arrangements may have more than one performance obligation. To determine whether a company has to account for multiple performance obligations, it evaluates a second condition: whether the product is distinct within the contract. In other words, if the performance obligation is not highly dependent on, or interrelated with, other promises in the contract, then each performance obligation should be accounted for separately. Conversely, if each of these services is interdependent and interrelated, these services are combined and reported as one performance obligation.

To illustrate, assume that **Tata Motors** (IND) sells an automobile to Marquart Auto Dealers at a price that includes six months of telematics services such as navigation and remote diagnostics. These telematics services are regularly sold on a standalone basis by Tata for a monthly fee. After the six-month period, the consumer can renew these services on a fee basis with Tata. In this case, two performance obligations exist, one related to providing the automobile and the other related to the telematics services. **Both are distinct (they can be sold separately) and are not interdependent**.

Illustration 18-8 provides additional case examples of issues related to identifying performance obligations.

ILLUSTRATION 18-8 Identifying Performance Obligations

Case 1: Single Performance Obligation

SoftTech Inc. licenses customer-relationship software to Lopez Company. In addition to providing the software itself, SoftTech promises to perform consulting services by extensively customizing the software to Lopez's information technology environment, for a total consideration of \$600,000. In this case, SoftTech is providing a significant service by integrating the goods and services (the license and the consulting service) into one combined item for which Lopez has contracted. In addition, the software is significantly customized by SoftTech in accordance with specifications negotiated by Lopez. As a result, the license and the consulting services are distinct but interdependent, and therefore should be accounted for as one performance obligation.

Case 2: Separate Performance Obligation

Chen Computer Inc. manufactures and sells computers that include a warranty to make good on any defect in its computers for 120 days (often referred to as an assurance warranty). In addition, it sells separately an extended warranty, which provides protection from defects for 3 years beyond the 120 days (often referred to as a service warranty). In this case, two performance obligations exist, one related to the sale of the computer and the assurance warranty, and the other to the extended warranty (service warranty). In this case, the sale of the computer and related assurance warranty are one performance obligation as they are interdependent and interrelated with each other. However, the extended warranty is separately sold and is not interdependent.

Determining the Transaction Price—Step 3

LEARNING OBJECTIVEDetermine the transaction price.

The transaction price is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services. The transaction price in a contract is often easily determined because the customer agrees to pay a fixed amount to the company over a short period of time. In other contracts, companies must consider the following factors. [7]

• Variable consideration

- Time value of money
- Non-cash consideration
- Consideration paid or payable to customers

Variable Consideration

the appropriate method. [8]

In some cases, the price of a good or service is dependent on future events. These future events might include discounts, rebates, credits, performance bonuses, or royalties. In these cases, the company estimates the amount of variable consideration it will receive from the contract to determine the amount of revenue to recognize. Companies use either the expected value, which is a probability-weighted amount, or the most likely amount in a range of possible amounts to estimate variable consideration. Companies select among these two

amounts to estimate variable consideration. Companies select among these two methods based on which approach better predicts the amount of consideration to which a company is entitled. Illustration 18-9 highlights the issues to be considered in selecting

Underlying Concepts

The expected value approach is also illustrated in Chapter 6 to determine the liability for warranties.

Expected Value: Probability-weighted amount in a range of possible consideration amounts.

- May be appropriate if a company has a large number of contracts with similar characteristics.
- Can be based on a limited number of discrete outcomes and probabilities.

Most Likely Amount: The single most likely amount in a range of possible consideration outcomes.

 May be appropriate if the contract has only two possible outcomes.

ILLUSTRATION 18-9 Estimating Variable

Consideration

Illustration 18-10 provides an application of the two estimation methods.

ESTIMATING VARIABLE CONSIDERATION

Facts: Peabody Construction Company enters into a contract with a customer to build a warehouse for \$100,000, with a performance bonus of \$50,000 that will be paid based on the timing of completion. The amount of the performance bonus decreases by 10% per week for every week beyond the agreed-upon completion date. The contract requirements are similar to contracts that Peabody has performed previously, and management believes that such experience is predictive for this contract. Management estimates that there is a 60% probability that the contract will be completed by the agreed-upon completion date, a 30% probability that it will be completed 1 week late, and only a 10% probability that it will be completed 2 weeks late.

Question: How should Peabody account for this revenue arrangement?

Solution: The transaction price should include management's estimate of the amount of consideration to which Peabody will be entitled. Management has concluded that the **probability-weighted method** is the most predictive approach for estimating the variable consideration in this situation:

```
60% chance of $150,000 [$100,000 + ($50,000 \times 1.0)] = $ 90,000 30% chance of $145,000 [$100,000 + ($50,000 \times .90)] = 43,500 10% chance of $140,000 [$100,000 + ($50,000 \times .80)] = 14,000 \overline{\phantom{0}}
```

Thus, the total transaction price is \$147,500 based on the probability-weighted estimate. Management should update its estimate at each reporting date. Using a most likely outcome approach may be more predictive if a performance bonus is binary (Peabody either will or will not earn the performance bonus), such that Peabody earns either \$50,000 for completion on the agreed-upon date or nothing for completion after the agreed-upon date. In this scenario, if management believes that Peabody will meet the deadline and estimates the consideration using the **most likely outcome**, the total transaction price would be \$150,000 (the outcome with 60% probability).

A word of caution—a company only allocates variable consideration if it is reasonably assured that it will be entitled to that amount. Companies therefore may only recognize variable consideration if (1) they have experience with similar contracts and are able to estimate the cumulative amount of revenue, and (2) based on experience,

ILLUSTRATION 18-10

Transaction Price— Variable Consideration

it is highly probable that there will not be a significant reversal of revenue previously recognized.⁵ If these criteria are not met, revenue recognition is constrained. Illustration 18-11 provides an example of how the revenue constraint works. **[10]**

ILLUSTRATION 18-11

Transaction Price— Revenue Constraint

REVENUE CONSTRAINT

Facts: On January 1, Shera Company enters into a contract with Hornung Inc. to perform asset-management services for 1 year. Shera receives a quarterly management fee based on a percentage of Hornung's assets under management at the end of each quarter. In addition, Shera receives a performance-based incentive fee of 20% of the fund's return in excess of the return of an observable index at the end of the year.

Shera accounts for the contract as a single performance obligation to perform investment-management services for 1 year because the services are interdependent and interrelated. To recognize revenue for satisfying the performance obligation over time, Shera selects an output method of measuring progress toward complete satisfaction of the performance obligation. Shera has had a number of these types of contracts with customers in the past.

Question: At what point should Shera recognize the management fee and the performance-based incentive fee related to Hornung?

Solution: Shera should record the management fee each quarter as it performs the management of the fund over the year. However, Shera should not record the incentive fee until the end of the year. Although Shera has experience with similar contracts, that experience is not predictive of the outcome of the current contract because the amount of consideration is highly susceptible to volatility in the market. In addition, the incentive fee has a large number and high variability of possible consideration amounts. Thus, revenue related to the incentive fee is constrained (not recognized) until the incentive fee is known at the end of the year.

Time Value of Money

Timing of payment to the company sometimes does not match the transfer of the goods or services to the customer. In most situations, companies receive consideration after the product is provided or the service performed. In essence, the company provides financing for the customer.

Companies account for the time value of money if the contract **involves a significant financing component**. When a sales transaction involves a significant financing component (i.e., interest is accrued on consideration to be paid over time), the fair value is determined either by measuring the consideration received or by discounting the payment using an imputed interest rate. The imputed interest rate is the more clearly determinable of either (1) the prevailing rate for a similar instrument of an issuer with a similar credit rating, or (2) a rate of interest that discounts the nominal amount of the instrument to the current sales price of the goods or services. The company

⁵Conditions such as one of the following would indicate that the revenue is constrained (or not recognized):

- **1.** The amount of consideration is highly susceptible to factors outside the company's influence. Factors include volatility in a market, the judgment of third parties, weather conditions, and a high risk of obsolescence of the promised good or service.
- **2.** The uncertainty about the amount of consideration is not expected to be resolved for a long period of time.
- **3.** The company's experience (or other evidence) with similar types of performance obligations is limited.
- 4. The contract has a large number and broad range of possible consideration amounts. [9]

will report the effects of the financing either as interest expense or interest revenue. Illustration 18-12 provides an example of a financing transaction.

EXTENDED PAYMENT TERMS

Facts: On July 1, 2015, SEK Company sold goods to Silva Company for R\$900,000 in exchange for a 4-year, zero-interest-bearing note with a face amount of R\$1,416,163. The goods have an inventory cost on SEK's books of R\$590,000.

Questions: (a) How much revenue should SEK Company record on July 1, 2015? (b) How much revenue should it report related to this transaction on December 31, 2015?

Solution:

- (a) SEK should record revenue of R\$900,000 on July 1, 2015, which is the fair value of the inventory in this case.
- (b) SEK is also financing this purchase and records interest revenue on the note over the 4-year period. In this case, the interest rate is imputed and is determined to be 12%. SEK records interest revenue of R\$54,000 ($12\% \times \frac{1}{2} \times R$900,000$) at December 31, 2015.

The entry to record SEK's sale to Silva Company is as follows.

July 1, 2015

Notes Receivable 1,416,163

Sales Revenue 900,000
Discount on Notes Receivable 516,163

The related entry to record the cost of goods sold is as follows.

July 1, 2015

Cost of Goods Sold 590,000

Inventory 590,000

SEK makes the following entry to record interest revenue at the end of the year.

December 31, 2015

Discount on Notes Receivable 54,000

Interest Revenue (12% \times ½ \times R\$900,000) 54,000

As a practical expedient, companies are not required to reflect the time value of money to determine the transaction price if the time period for payment is less than a year. [11]

Non-Cash Consideration

Companies sometimes receive consideration in the form of goods, services, or other non-cash consideration. When these situations occur, **companies generally recognize revenue on the basis of the fair value of what is received.** For example, assume that Raeylinn Company receives ordinary shares of Monroe Company in payment for consulting services. In that case, Raeylinn Company recognizes revenue in the amount of the fair value of the ordinary shares received. If Raeylinn cannot determine this amount, then it should estimate the selling price of the services performed and recognize this amount as revenue.

In addition, companies sometimes receive contributions (e.g., donations and gifts). A contribution is often some type of asset (e.g., securities, land, buildings, or use of facilities) but it could be the forgiveness of debt. In these cases, companies recognize revenue for the fair value of the consideration received. Similarly, customers sometimes contribute goods or services, such as equipment or labor, as consideration for goods provided or services performed. This consideration should be recognized as revenue based on the fair value of the consideration received.

ILLUSTRATION 18-12

Transaction Price— Extended Payment Terms

Consideration Paid or Payable to Customers

Companies often make payments to their customers as part of a revenue arrangement. Consideration paid or payable may include discounts, volume rebates, coupons, free products, or services. In general, these elements reduce the consideration received and the revenue to be recognized. Illustration 18-13 provides an example of this type of transaction.

ILLUSTRATION 18-13

Transaction Price— Volume Discount

VOLUME DISCOUNT

Facts: Sansung Company offers its customers a 3% volume discount if they purchase at least ¥2 million of its product during the calendar year. On March 31, 2015, Sansung has made sales of ¥700,000 to Artic Co. In the previous 2 years, Sansung sold over ¥3,000,000 to Artic in the period April 1 to December 31.

Question: How much revenue should Sansung recognize for the first 3 months of

Solution: In this case, Sansung should reduce its revenue by ¥21,000 (¥700,000 × 3%) because it is probable that it will provide this rebate. Revenue is therefore ¥679,000 (¥700,000 - ¥21,000). To not recognize this volume discount overstates Sansung's revenue for the first 3 months of 2015. In other words, the appropriate revenue is ¥679,000, not ¥700,000.

Given these facts, Sansung makes the following entry on March 31, 2015, to recognize revenue.

Accounts Receivable

Accounts Receivable

679,000

Sales Revenue

679,000

Assuming that Sansung's customer meets the discount threshold, Sansung makes the following entry.

Cash

679,000 679,000

If Sansung's customer fails to meet the discount threshold, Sansung makes the following entry upon payment.

> 700.000 Cash

679,000 Accounts Receivable Sales Discounts Forfeited 21,000

As indicated in Chapter 7 (pages 301-302), Sales Discounts Forfeited is reported in the "Other income and expense" section of the income statement.

In many cases, companies provide cash discounts to customers for a short period of time (often referred to as prompt settlement discounts). For example, assume that terms are payment due in 60 days, but if payment is made within five days, a two percent discount is given (referred to as 2/5, net 60). These prompt settlement discounts should reduce revenues, if material. In most cases, companies record the revenue at full price (gross) and record a sales discount if payment is made within the discount period.

Allocating the Transaction Price to Separate Performance Obligations—Step 4

LEARNING OBJECTIVE 6

Allocate the transaction price to the separate performance obligations.

Companies often have to allocate the transaction price to more than one performance obligation in a contract. If an allocation is needed, the transaction price allocated to the various performance obligations is based on their relative fair values. The best measure of fair value is what the company could sell the good or

service for on a standalone basis, referred to as the **standalone selling price**. If this information is not available, companies should use their best estimate of what the good or service might sell for as a standalone unit. Illustration 18-14 summarizes the approaches that companies follow.

Allocation Approach Implementation Evaluate the market in which it sells goods or services and estimate the price that customers in that market are willing to pay for those goods or services. That Adjusted market assessment approach approach also might include referring to prices from the company's competitors for similar goods or services and adjusting those prices as necessary to reflect the company's costs and margins. Forecast expected costs of satisfying a performance Expected cost plus a margin approach obligation and then add an appropriate margin for that good or service. If the standalone selling price of a good or service is highly variable or uncertain, then a company may estimate the standalone selling price by reference to Residual approach the total transaction price less the sum of the observable standalone selling prices of other goods or services promised in the contract.6

ILLUSTRATION 18-14
Transaction Price
Allocation

Illustrations 18-15 and 18-16 (on page 896) are examples of the measurement issues involved in allocating the transaction price.

MULTIPLE PERFORMANCE OBLIGATIONS-EXAMPLE 1

Facts: Lonnie Company enters into a contract to build, run, and maintain a highly complex piece of electronic equipment for a period of 5 years, commencing upon delivery of the equipment. There is a fixed fee for each of the build, run, and maintenance deliverables, and any progress payments made are non-refundable. All the deliverables have a standalone value. There is verifiable evidence of the selling price for the building and maintenance but not for running the equipment. It is determined that the transaction price must be allocated to the three performance obligations: building, running, and maintaining the equipment.

Question: What procedure should Lonnie Company use to allocate the transaction price to the three performance obligations?

Solution: The performance obligations relate to building the equipment, running the equipment, and maintaining the equipment. As indicated, Lonnie can determine standalone values for the equipment and the maintenance agreements. The company then can make a best estimate of the selling price for running the equipment, using the adjusted market assessment approach or expected cost plus a margin approach. Lonnie next applies the relative fair value method at the inception of the transaction to determine the proper allocation to each performance obligation. Once the allocation is performed, Lonnie recognizes revenue independently for each performance obligation using regular revenue recognition criteria.

If, on the other hand, the standalone selling price for running the equipment is highly variable or uncertain, Lonnie may use a residual approach. In this case, Lonnie uses the fair values of the equipment and maintenance agreements and subtracts their fair value from the total transaction price to arrive at a residual value for running the equipment.

⁶A selling price is highly variable when a company sells the same good or service to different customers (at or near the same time) for a broad range of amounts. A selling price is uncertain when a company has not yet established a price for a good or service and the good or service

has not previously been sold. [12]

ILLUSTRATION 18-15

Allocation—Multiple Performance Obligations

ILLUSTRATION 18-16

Multiple Performance Obligations—Product, Installation, and Service

MULTIPLE PERFORMANCE OBLIGATIONS-EXAMPLE 2

Facts: Handler Company is an experienced manufacturer of equipment used in the construction industry. Handler's products range from small to large individual pieces of automated machinery to complex systems containing numerous components. Unit selling prices range from \$600,000 to \$4,000,000 and are quoted inclusive of installation and training. The installation process does not involve changes to the features of the equipment and does not require proprietary information about the equipment in order for the installed equipment to perform to specifications. Handler has the following arrangement with Chai Company.

- Chai purchases equipment from Handler for a price of \$2,000,000 and chooses Handler to do the installation. Handler charges the same price for the equipment irrespective of whether it does the installation or not. (Some companies do the installation themselves because they either prefer their own employees to do the work or because of relationships with other customers.) The price of the installation service is estimated to have a fair value of \$20,000.
- The fair value of the training sessions is estimated at \$50,000. Other companies can also perform these training services.
- Chai is obligated to pay Handler the \$2,000,000 upon the delivery and installation of the equipment.
- Handler delivers the equipment on September 1, 2015, and completes the installation of the equipment on November 1, 2015. Training related to the equipment starts once the installation is completed and lasts for 1 year. The equipment has a useful life of 10 years.

Questions: (a) What are the performance obligations for purposes of accounting for the sale of the equipment? (b) If there is more than one performance obligation, how should the payment of \$2,000,000 be allocated to various components?

Solution:

- (a) The first condition for separation into a standalone unit for the equipment is met. That is, the equipment, installation, and training are distinct and not interdependent—they are three separate products or services, and each of these items has a standalone selling price.
- (b) The total revenue of \$2,000,000 should be allocated to the three components based on their relative fair values. In this case, the fair value of the equipment should be considered \$2,000,000, the installation fee is \$20,000, and the training is \$50,000. The total fair value to consider is \$2,070,000 (\$2,000,000 + \$20,000 + \$50,000). The allocation is as follows.

Equipment \$1,932,367 [(\$2,000,000 \div \$2,070,000) \times \$2,000,000] Installation \$19,324 [(\$20,000 \div \$2,070,000) \times \$2,000,000] Training \$48,309 [(\$50,000 \div \$2,070,000) \times \$2,000,000]

Handler makes the following entry on November 1, 2015, to record both sales revenue and service revenue on the installation, as well as unearned service revenue.

November 1, 2015

Cash 2,000,000

Service Revenue (installation) 19,324 Unearned Service Revenue 48,309 Sales Revenue 1,932,367

Assuming the cost of the equipment is \$1,500,000, the entry to record cost of goods sold is as follows.

November 1, 2015

Cost of Goods Sold 1,500,000

Inventory 1,500,000

As indicated by these entries, Handler recognizes revenue from the sale of the equipment once the installation is completed on November 1, 2015. In addition, it recognizes revenue for the installation fee because these services have been performed.

Handler recognizes the training revenues on a straight-line basis starting on November 1, 2015, or 44,026 ($44,009 \div 12$) per month for one year (unless a more appropriate method such as the percentage-of-completion method is warranted). The journal entry to recognize the training revenue for 2 months in 2015 is as follows.

December 31, 2015

Unearned Service Revenue 8.052

Service Revenue (training) ($4,026 \times 2$) 8,052

Therefore, Handler recognizes revenue at December 31, 2015, in the amount of \$1,959,743 (\$1,932,367 + \$19,324 + \$8,052). Handler makes the following journal entry to recognize the training revenue in 2016, assuming adjusting entries are made at year-end.

December 31, 2016

Unearned Service Revenue 40,257

Service Revenue (training) (\$48,309 - \$8,052) 40,257

When a company sells a bundle of goods or services, the selling price of the bundle is often less than the sum of the individual standalone prices. In this case, the company should allocate the discount to the product (or products) that is causing the discount and not to the entire bundle. Illustration 18-17 indicates how a discount should be allocated.

DISCOUNTED TRANSACTION PRICE

Facts: Java Joe's Golf Shop provides the following information related to three items that are often sold as a package.

Item	Standalone Selling Price	Price When Bundled
Lessons (per session)	€100	€100
Custom irons	525	500
Putter	125	25
Total	€750	€625

Question: How should the discount be allocated to the elements of the revenue arrangement?

Solution: As indicated, the standalone price for the lesson, custom irons, and putter is €750, but the bundled price for all three is €625. In this case, the discount applies to the performance obligations related to providing the custom irons and putter. As a result, Java Joe's allocates the discount solely to the custom irons and putter, and not to the lessons, as follows.

	Allocated Amounts
Lessons	€100
Custom irons and putter	525
Total	€625

ILLUSTRATION 18-17

Allocating Transaction Price with a Discount

Recognizing Revenue When (or as) Each Performance Obligation Is Satisfied—Step 5

A company satisfies its performance obligation when the customer obtains control of the good or service. As indicated earlier, the concept of change in control is the deciding factor in determining when a performance obligation is satisfied. The customer controls the product or service when it has the ability to direct the use of and obtain substantially all the remaining benefits from the asset or service. Control also includes the customer's ability to prevent other companies from directing the use of, or receiving the benefits, from the asset or service. Illustration 18-18 summarizes the indicators that the customer has obtained control. [13]

- 1. The company has a right to payment for the asset.
- 2. The company has transferred legal title to the asset.
- 3. The company has transferred physical possession of the asset.
- 4. The customer has significant risks and rewards of ownership.
- 5. The customer has accepted the asset.

ILLUSTRATION 18-18Change in Control

Indicators

Companies satisfy performance obligations either at a point in time or over a period of time. Companies recognize revenue over a period of time if the customer receives and consumes the benefits as the seller performs and one of the following two criteria is met.

- **1.** The customer controls the asset as it is created or enhanced (e.g., a builder constructs a building on a customer's property).
- **2.** The company does not have an alternative use for the asset created or enhanced (e.g., an aircraft manufacturer builds specialty jets to a customer's specifications) and either (a) the customer receives benefits as the company performs and therefore the task would not need to be re-performed, or (b) the company has a right to payment and this right is enforceable.

Illustration 18-19 provides an example of the point in time when revenue should be recognized.

ILLUSTRATION 18-19

Satisfying a Performance Obligation

TIMING OF REVENUE RECOGNITION

Facts: Gomez Software Company enters into a contract with Hurly Company to develop and install customer relationship management (CRM) software. Progress payments are made upon completion of each stage of the contract. If the contract is terminated, then the partly completed CRM software passes to Hurly Company. Gomez Software is prohibited from redirecting the software to another customer.

Question: At what point should Gomez Software Company recognize revenue related to its contract with Hurly Company?

Solution: Gomez Software does not create an asset with an alternative use because it is prohibited from redirecting the software to another customer. In addition, Gomez Software is entitled to payments for performance to date and expects to complete the project. Therefore, Gomez Software concludes that the contract meets the criteria for recognizing revenue over time.

A company recognizes revenue from a performance obligation over time by measuring the progress toward completion. The method selected for measuring progress should depict the transfer of control from the company to the customer. Companies use various methods to determine the extent of progress toward completion. The most common are the cost-to-cost and units-of-delivery methods. The objective of all these methods is to measure the extent of progress in terms of costs, units, or value added. Companies identify the various measures (costs incurred, labor hours worked, tons produced, floors completed, etc.) and classify them as input or output measures.

Input measures (e.g., costs incurred and labor hours worked) are efforts devoted to a contract. Output measures (with units of delivery measured as tons produced, floors of a building completed, miles of a highway completed, etc.) track results. Neither is universally applicable to all long-term projects. Their use requires the exercise of judgment and careful tailoring to the circumstances.

The most popular input measure used to determine the progress toward completion is the cost-to-cost basis. Under this basis, a company measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs required to complete the contract. The percentage-of-completion method is discussed more fully in Appendix 18A, which examines the accounting for long-term contracts.

Summary

Illustration 18-20 provides a summary of the five-step revenue recognition process.

Step in Process Description		Implementation	
Identify the contract with customers.	A contract is an agreement that creates enforceable rights or obligations.	A company applies the revenue guidance to contracts with customers and must determine if new performance obligations are created by a contract modification.	
Identify the separate performance obligations in the contract.	A performance obligation is a promise in a contract to provide a product or service to a customer. A performance obligation exists if the customer can benefit from the good or service on its own or together with other readily available resources.	A contract may be comprised of multiple performance obligations. The accounting for multiple performance obligations is based on evaluation of whether the product or service is distinct within the contract. If each of the goods or services is distinct, but is interdependent and interrelated, these goods and services are combined and reported as one performance obligation.	
Determine the transaction price.	The transaction price is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services.	In determining the transaction price, companies must consider the following factors: (1) variable consideration, (2) time value of money, (3) non-cash consideration, and (4) consideration paid or payable to customer.	
Allocate the transaction price to the separate performance obligations.	If more than one performance obligation exists, allocate the transaction price based on relative fair values.	The best measure of fair value is what the good or service could be sold for on a standalone basis (standalone selling price). Estimates of standalone selling price can be based on (1) adjusted market assessment, (2) expected cost plus a margin approach, or (3) a residual approach.	
5. Recognize revenue when each performance obligation is satisfied.	A company satisfies its performance obligation when the customer obtains control of the good or service.	Companies satisfy performance obligations either at a point in time or over a period of time. Companies recognize revenue over a period of time if (1) the customer controls the asset as it is created or (2) the company does not have an alternative use for the asset.	

ILLUSTRATION 18-20

Summary of the Five-Step Revenue Recognition Process

OTHER REVENUE RECOGNITION ISSUES

The revenue recognition principle and the concept of control are illustrated for the following situations.

- Right of return
- Repurchase agreements
- Bill and hold
- Principal-agent relationships
- Consignments
- Warranties
- Non-refundable upfront fees

13 LEARNING OBJECTIVE

Identify other revenue recognition issues.

Right of Return

Sales with rights of return have long been a challenge in the area of revenue recognition. For example, assume that Hogland Glass Works transfers control of hurricane glass to Henlo Builders. Hogland grants Henlo the **right of return** for the product for various reasons (e.g., dissatisfaction with the product) and to receive any combination of the following.

- **1.** A full or partial refund of any consideration paid.
- **2.** A credit that can be applied against amounts owed, or that will be owed, to the seller.
- **3.** Another product in exchange.

To account for the transfer of this glass with a right of return (and for some services that are performed subject to a refund), Hogland should recognize all of the following.

- (a) Revenue for the transferred products in the amount of consideration to which Hogland is reasonably assured to be entitled (considering the products expected to be returned).
- (b) A refund liability.
- (c) An asset (and corresponding adjustment to cost of sales) for its right to recover glass from Henlo on settling the refund liability.

An example of a return situation is presented in Illustration 18-21.⁷

ILLUSTRATION 18-21

Recognition—Right of Return

RIGHT OF RETURN

Facts: Venden Company sells 100 products for €100 each to Amaya Inc. for cash. Venden allows Amaya to return any unused product within 30 days and receive a full refund. The cost of each product is €60. To determine the transaction price, Venden decides that the approach that is most predictive of the amount of consideration to which it will be entitled is the most likely amount. Using the most likely amount, Venden estimates that:

- 1. Three products will be returned.
- 2. The costs of recovering the products will be immaterial.
- 3. The returned products are expected to be resold at a profit.

Question: How should Venden record this sale?

Solution: Upon transfer of control of the products, Venden recognizes (a) revenue of €9,700 (€100 \times 97 products expected not to be returned), (b) a refund liability for €300 (€100 \times 3 products expected to be returned), and (c) an asset of €180 (€60 \times 3 products) for its right to recover products from customers on settling the refund liability. Hence, the amount recognized in cost of sales for 97 products is €5.820 (€60 \times 97).

Venden records the sale as follows.

Cash 10,000
Sales Revenue 9,700
Refund Liability 300

Venden also records the related cost of goods sold with the following entry.

Cost of Goods Sold 5,820
Estimated Inventory Returns 180
Inventory

When a return occurs, Venden should reduce the Refund Liability and Estimated Inventory Returns accounts. In addition, Venden recognizes the returned inventory in a Returned Inventory account as shown in the following entries for the return of two products.

Refund Liability (2 × €100)	200	
Accounts Payable		200
Returned Inventory (2 × €60)	120	
Estimated Inventory Returns		120

6,000

Companies record the returned asset in a separate account from inventory to provide transparency. The carrying value of the returned asset is subject to impairment testing, separate from the inventory. If a company is unable to estimate the level of returns with any reliability, it should not report any revenue until the returns become predictive.

⁷Adapted from "Revenue from Contracts with Customers," *Illustrative Examples (Revised)* (London, U.K.: IASB, November 14, 2011), p. 26.

Repurchase Agreements

In some cases, companies enter into **repurchase agreements**, which allow them to transfer control of (sell) an asset to a customer but have an obligation or right to repurchase the asset at a later date. In these situations, the question is whether the company sold the asset. Generally, companies report these transactions as a financing (borrowing). That is, if the company has an obligation or right to repurchase the asset for an amount **greater than or equal to its selling price**, then the transaction is a financing transaction by the company. Illustration 18-22 examines the issues related to a repurchase agreement.

REPURCHASE AGREEMENT

Facts: Morgan Inc., an equipment dealer, sells equipment on January 1, 2015, to Lane Company for £100,000. It agrees to repurchase this equipment from Lane Company on December 31, 2016, for a price of £121,000.

Question: Should Morgan Inc. record a sale for this transaction?

Solution: For a sale and repurchase agreement, the terms of the agreement need to be analyzed to determine whether the seller has transferred control to the customer, Lane Company. As indicated earlier, control of an asset refers to the ability to direct the use of and obtain substantially all the benefits from the asset. Control also includes the ability to prevent other companies from directing the use of and receiving the benefit from a good or service. In this case, Morgan Inc. continues to have control of the asset. Therefore, this agreement is a financing transaction and not a sale. Thus, the asset is not removed from the books of Morgan Inc.

Assuming that an interest rate of 10% is imputed from the agreement, Morgan Inc. makes the following entries to record this agreement. Morgan Inc. records the financing on January 1, 2015, as follows.

January 1, 2015

Cash 100,000

Liability to Lane Company 100,000

Morgan Inc. records interest on December 31, 2015, as follows.

December 31, 2015

Interest Expense 10,000

Liability to Lane Company

 $(£100,000 \times 10\%)$ 10,000

Morgan Inc. records interest and retirement of its liability to Lane Company as follows.

December 31, 2015

Interest Expense 11,000

Liability to Lane Company

 $(£110,000 \times 10\%)$ 11,000

Liability to Lane Company 121,000

Cash (£100,000 + £10,000 + £11,000) 121,000

Rather than Morgan Inc. having the obligation or right to repurchase the asset, assume that Lane Company has the option to require Morgan Inc. to repurchase the asset at December 31, 2016. This option is a put option; that is, Lane Company has the option to put the asset back to Morgan Inc. Recall from the discussion in Appendix 17A

ILLUSTRATION 18-22

Recognition— Repurchase Agreement

⁸Beyond financing motivations, a company may transfer inventory to another party on a short-term basis to avoid inventory taxes. If the counterparty is able to use the inventory during the transfer period, the transaction may more appropriately be accounted for as a rental agreement.

that the value of a put option increases when the value of the underlying asset (in this case, the equipment) decreases. In determining how to account for this transaction, Morgan Inc. has to determine whether Lane Company will have an economic incentive to exercise this put option at the end of 2016.

Specifically, Lane Company has a significant economic incentive to exercise its put option if the value of the equipment declines. In this case, the transaction is reported as a financing transaction as shown above. That is, Lane Company will return (put) the equipment back to Morgan Inc. if the repurchase price exceeds the fair value of the equipment. For example, if the repurchase price of the equipment is £150,000 but its fair value is £125,000, Lane Company is better off returning the equipment to Morgan Inc.

Conversely, if Lane Company does not have a significant economic incentive to exercise its put option, then the transaction should be reported as a sale of a product with a right of return.

What do the numbers mean? NO TAKE-BACKS

Investors in Lucent Technologies (USA) were negatively affected when Lucent violated one of the fundamental criteria for revenue recognition—the "no take-back" rule. This rule holds that revenue should not be booked on inventory that is shipped if the customer can return it at some point in the future. In this particular case, Lucent agreed to take back shipped inventory from its distributors if the distributors were unable to sell the items to their customers.

In essence, Lucent was "stuffing the channel." By booking sales when goods were shipped, even though they most likely would get them back, Lucent was able to report continued sales growth. However, Lucent investors got a nasty surprise when distributors returned those goods and Lucent had to restate its financial results. The restatement erased \$679 million in revenues, turning an operating profit into a loss. In response to this bad news, Lucent's share price

declined \$1.31 per share, or 8.5 percent. Lucent is not alone in this practice. **Nortel** (CAN) got caught stuffing the sales channel with circuit boards and other electronic components, which contributed to its troubles when it was forced to restate its earnings.

Investors can be tipped off to potential channel stuffing by carefully reviewing a company's revenue recognition policy for generous return policies or use of cash incentives to encourage distributors to buy products (as was done at Monsanto (USA)) and by watching inventory and receivables levels. When sales increase along with receivables, that's one sign that customers are not paying for goods shipped on credit. And growing inventory levels are an indicator that customers have all the goods they need. Both scenarios suggest a higher likelihood of goods being returned and revenues and income being restated. So remember, no take-backs!

Young, "Lucent Slashes First Quarter Outlook, Erases Revenue from Latest Quarter," Wall Street Journal Online (December 22, 2000); Tracey Byrnes, "Too Many Thin Mints: Spotting the Practice of Channel Stuffing," Wall Street Journal Online (February 7, 2002); and H. Weitzman, "Monsanto to Restate Results After SEC Probe," Financial Times (October 5, 2011).

Bill-and-Hold Arrangements

A bill-and-hold arrangement is a contract under which an entity bills a customer for a product but the entity retains physical possession of the product until it is transferred to the customer at a point in time in the future. Bill-and-hold sales result when the buyer is not yet ready to take delivery but does take title and accepts billing. For example, a customer may request a company to enter into such an arrangement because of (1) lack of available space for the product, (2) delays in its production schedule, or (3) more than sufficient inventory in its distribution channel. Illustration 18-23 provides an example of a bill-and-hold arrangement.

⁹"Revenue from Contracts with Customers," *Exposure Draft* (London, U.K.: IASB, June 24, 2010), pp. 63–64.

BILL AND HOLD

Facts: Kaya Company sells \$450,000 (cost \$280,000) of fireplaces on March 1, 2015, to a local coffee shop, Baristo, which is planning to expand its locations around the city. Under the agreement, Baristo asks Kaya to retain these fireplaces in its warehouses until the new coffee shops that will house the fireplaces are ready. Title passes to Baristo at the time the agreement is signed.

Question: When should Kaya recognize the revenue from this bill-and-hold arrangement?

Solution: When to recognize revenue in a bill-and-hold arrangement depends on the circumstances. Kaya determines when it has satisfied its performance obligation to transfer a product by evaluating when Baristo obtains control of that product. For Baristo to have obtained control of a product in a bill-and-hold arrangement, all of the following criteria should be met:

- (a) The reason for the bill-and-hold arrangement must be substantive.
- (b) The product must be identified separately as belonging to Baristo.
- (c) The product currently must be ready for physical transfer to Baristo.
- (d) Kaya cannot have the ability to use the product or to direct it to another customer.

In this case, it appears that the above criteria were met, and therefore revenue recognition should be permitted at the time the contract is signed. Kaya has transferred control to Baristo; that is, Kaya has a right to payment for the fireplaces and legal title has transferred.

Kaya makes the following entry to record the bill-and-hold sale and related cost of goods sold.

March 1, 2015

Accounts Receivable 450,000
Sales Revenue 450,000

Cost of Goods Sold 280,000

Inventory 280,000

Principal-Agent Relationships

In a principal-agent relationship, the principal's performance obligation is to provide goods or perform services for a customer. The agent's performance obligation is to arrange for the principal to provide these goods or services to a customer. Examples of principal-agent relationships are as follows.

- Preferred Travel Company (agent) facilitates the booking of cruise excursions by finding customers for Regency Cruise Company (principal).
- **Priceline** (USA) (agent) facilitates the sale of various services such as car rentals at **Hertz** (USA) (principal).

In these types of situations, amounts collected on behalf of the principal are not revenue of the agent. Instead, revenue for the agent is the amount of the commission it receives (usually a percentage of total revenue). Illustration 18-24 provides an example of the issues related to principal-agent relationships.

PRINCIPAL-AGENT RELATIONSHIP

Facts: Fly-Away Travel sells airplane tickets for British Airways (BA) (GBR) to various customers.

Question: What are the performance obligations in this situation and how should revenue be recognized for both the principal and agent?

Solution: The principal in this case is BA and the agent is Fly-Away Travel. Because BA has the performance obligation to provide air transportation to the customer, it is the principal. Fly-Away Travel facilitates the sale of the airline ticket to the customer in exchange for a fee or commission. Its performance obligation is to arrange for BA to provide air transportation to the customer.

Although Fly-Away collects the full airfare from the customer, it then remits this amount to BA less the commission. Fly-Away therefore should not record the full amount of the fare as revenue on its books—to do so overstates revenue. Its revenue is the commission, not the full price. Control of performing the air transportation is with BA, not Fly-Away Travel.

ILLUSTRATION 18-23

Recognition—Bill and Hold

ILLUSTRATION 18-24 Recognition—Principal-

Agent Relationship

Some might argue that there is no harm in letting Fly-Away record revenue for the full price of the ticket and then charging the cost of the ticket against the revenue (often referred to as the **gross method** of recognizing revenue). Others note that this approach overstates the agent's revenue and is misleading. The revenue received is the commission for providing the travel services, not the full fare price (often referred to as the **net approach**). The profession believes the net approach is the correct method for recognizing revenue in a principal-agent relationship. As a result, there are specific criteria to determine when a principal-agent relationship exists. ¹⁰ An important feature in deciding whether Fly-Away is acting as an agent is whether the amount it earns is predetermined, being either a fixed fee per transaction or a stated percentage of the amount billed to the customer.

What do the numbers mean? GROSSED OUT

As you learned in Chapter 4, many corporate executives obsess over the bottom line. However, analysts on the outside look at the big picture, which includes examination of both the top line and the important subtotals in the income statement, such as gross profit. Recently, the top line is causing some concern, with nearly all companies in a global 500 index reporting a 2 percent decline in the bottom line while the top line saw revenue decline by 1 percent. This is troubling because it is the first decline in revenues since we crawled out of the recession following the financial crisis of 2008. McDonald's (USA) gave an ominous preview—it saw its first monthly sales decline in nine years.

What about income subtotals like gross margin? These metrics too have been under pressure. There is concern that struggling companies may employ a number of manipulations to mask the impact of gross margin declines on the bottom line. In fact, Marks and Spencer (GBR) prepares an income statement that omits the gross margin subtotal. While the gross margin is reported in the notes to the financial statements, a number of other items, such as impairments and fair value adjustments, are added back, offsetting a weak operating profit number.

Or, consider the classic case of **Priceline.com** (USA), the company made famous by William Shatner's ads about

"naming your own price" for airline tickets and hotel rooms. In one quarter, Priceline reported that it earned \$152 million in revenues. But, that included the full amount customers paid for tickets, hotel rooms, and rental cars. Traditional travel agencies call that amount "gross bookings," not revenues. And, much like regular travel agencies, Priceline keeps only a small portion of gross bookings—namely, the spread between the customers' accepted bids and the price Priceline paid for the merchandise. The rest, which Priceline calls "product costs," it pays to the airlines and hotels that supply the tickets and rooms.

However, Priceline's product costs came to \$134 million, leaving Priceline just \$18 million of what it calls "gross profit" and what most other companies would call revenues. And that's before all of Priceline's other costs—like advertising and salaries—which netted out to a loss of \$102 million. The difference isn't academic. Priceline shares traded at about 23 times its reported revenues but at a mind-boggling 214 times its "gross profit." This and other aggressive recognition practices explain the stricter revenue recognition guidance, indicating that if a company performs as an agent or broker without assuming the risks and rewards of ownership of the goods, the company should report sales on a net (fee) basis.

Sources: Jeremy Kahn, "Presto Chango! Sales Are Huge," Fortune (March 20, 2000), p. 44; and S. Jakab, "Weak Revenue Is New Worry for Investors," Wall Street Journal (November 25, 2012).

Consignments

A common principal-agent relationship involves consignments. In these cases, manufacturers (or wholesalers) deliver goods but retain title to the goods until they are sold. This specialized method of marketing certain types of products makes use of an

¹⁰Indicators that the company's performance obligation is to arrange for the providing of goods or the performing of services by another party (i.e., the company is an agent and should recognize revenue in the net amount) include the following: (a) the other party is primarily responsible for fulfilling the contract; (b) the company does not have inventory risk before or after the customer order, during shipping, or on return; (c) the company does not have latitude in establishing prices for the other party's goods or services and, hence, the benefit that the company can receive from those goods or services is constrained; (d) the company's consideration is in the form of a commission; and (e) the company does not have customer credit risk for the amount receivable in exchange for the other party's goods or services. [14]

agreement known as a **consignment**. Under this arrangement, the **consignor** (manufacturer or wholesaler) ships merchandise to the **consignee** (dealer), who is to act as an agent for the consignor in selling the merchandise. Both consignor and consignee are interested in selling—the former to make a profit or develop a market, the latter to make a commission on the sale.

The consignee accepts the merchandise and agrees to exercise due diligence in caring for and selling it. The consignee remits to the consignor cash received from customers, after deducting a sales commission and any chargeable expenses. In consignment sales, the consignor uses a modified version of the point-of-sale basis of revenue recognition. That is, the consignor recognizes revenue only after receiving notification of the sale and the cash remittance from the consignee.

The consignor carries the merchandise as inventory throughout the consignment, separately classified as Inventory (consignments). The consignee does not record the merchandise as an asset on its books. Upon sale of the merchandise, the consignee has a liability for the net amount due the consignor. The consignor periodically receives from the consignee a report called account sales that shows the merchandise received, merchandise sold, expenses chargeable to the consignment, and the cash remitted. Revenue is then recognized by the consignor. Analysis of a consignment arrangement is provided in Illustration 18-25.

SALES ON CONSIGNMENT

Facts: Garcia Manufacturing Co. ships merchandise costing €36,000 on consignment to Best Value Stores. Garcia pays €3,750 of freight costs, and Best Value pays €2,250 for local advertising costs that are reimbursable from Garcia. By the end of the period, Best Value has sold two-thirds of the consigned merchandise for €40,000 cash. Best Value notifies Garcia of the sales, retains a 10% commission, and remits the cash due Garcia.

Question: What are the journal entries that the consignor (Garcia) and the consignee (Best Value) make to record this transaction?

Solution: GARCIA MFG. CO. **BEST VALUE STORES** (CONSIGNOR) (CONSIGNEE) Shipment of consigned merchandise Inventory (consignments) 36,000 No entry (record memo of merchandise 36,000 Finished Goods Inventory received). Payment of freight costs by consignor 3.750 Inventory (consignments) No entry. Cash 3,750 Payment of advertising by consignee No entry until notified. Receivable from Consignor 2,250 2.250 Cash Sales of consigned merchandise No entry until notified. 40,000 40,000 Payable to Consignor Notification of sales and expenses and remittance of amount due Cash 33,750 Payable to Consignor 40,000 Advertising Expense 2.250 Receivable from Commission Expense 4,000 Consignor 2,250 Revenue from Commission Revenue Consignment Sales 4,000 40,000 (€40,000 × 10%) Cash 33,750 Adjustment of inventory on consignment for cost of sales Cost of Goods Sold No entry. 26,500 Inventory (consignments) $[2/3 \ (\in 36,000 + \in 3,750) = \in 26,500]$

ILLUSTRATION 18-25

Recognition—Sales on Consignment

Under the consignment arrangement, the consignor accepts the risk that the merchandise might not sell and relieves the consignee of the need to commit part of its working capital to inventory. Consignors use a variety of systems and account titles to record consignments, but they all share the common goal of postponing the recognition of revenue until it is known that a sale to a third party has occurred. **Consignees only recognize revenue associated with commissions.**

Warranties

Companies often provide one of two types of warranties to customers:

- **1.** Warranties that the product **meets agreed-upon specifications in the contract at the time the product is sold**. This type of warranty is included in the sales price of a company's product and is often referred to as an **assurance-type warranty**.
- **2.** Warranties that provide an **additional service beyond the assurance-type warranty**. This warranty is not included in the sales price of the product and is referred to as a **service-type warranty**. As a consequence, it is recorded as a separate performance obligation.

Companies do not record a separate performance obligation for assurance-type warranties. This type of warranty is nothing more than a quality guarantee that the good or service is free from defects at the point of sale. These types of obligations should be expensed in the period the goods are provided or services performed (in other words, at the point of sale). In addition, the company should record a warranty liability. The estimated amount of the liability includes all the costs that the company will incur after sale due to the correction of defects or deficiencies required under the warranty provisions.

In addition, companies sometimes provide customers with an option to purchase a warranty separately. In most cases, these extended warranties provide the customer a service beyond fixing defects that existed at the time of sale. For example, when you purchase a TV, you are entitled to the company's warranty. You will also undoubtedly be offered an extended warranty on the product at an additional cost. These service-type warranties represent a **separate service and are an additional performance obligation**. As a result, companies should allocate a portion of the transaction price to this performance obligation. The company recognizes revenue in the period that the service-type warranty is in effect. Illustration 18-26 presents an example of both an assurance-type and a service-type warranty.

ILLUSTRATION 18-26

Recognition— Performance Obligations and Warranties

WARRANTIES

Facts: Maverick Company sold 1,000 Rollomatics during 2015 at a total price of \$6,000,000, with a warranty guarantee that the product was free of any defects. The cost of Rollomatics sold is \$4,000,000. The term of the assurance warranty is 2 years, with an estimated cost of \$30,000. In addition, Maverick sold extended warranties related to 400 Rollomatics for 3 years beyond the 2-year period for \$12,000.

Question: What are the journal entries that Maverick Company should make in 2015 related to the sale and the related warranties?

Solution: To record the revenue and liabilities related to the warranties:

Cash (\$6,000,000 + \$12,000) 6,012,000 Warranty Expense 30,000

Warranty Liability 30,000
Unearned Warranty Revenue 12,000
Sales Revenue 6,000,000

To reduce inventory and recognize cost of goods sold:

Cost of Goods Sold 4,000,000

Inventory 4,000,000

Similar to that illustrated in Chapter 13 (pages 615–616), Maverick Company reduces the Warranty Liability account over the first two years as the actual warranty costs are incurred. The company also recognizes revenue related to the service-type warranty over the three-year period that extends beyond the assurance warranty period (two years). In most cases, the unearned warranty revenue is recognized on a straight-line basis. The costs associated with the service-type warranty are expensed as incurred.

Non-Refundable Upfront Fees

Companies sometimes receive payments (**upfront fees**) from customers before they deliver a product or perform a service. Upfront payments generally relate to the initiation, activation, or setup of a good or service to be provided or performed in the future. In most cases, these upfront payments are non-refundable. Examples include fees paid for membership in a health club or buying club, and activation fees for phone, Internet, or cable.

Companies must determine whether these non-refundable advance payments are for products or services in the current period. In most situations, these payments are for future delivery of products and services and should therefore not be recorded as revenue at the time of payment. In some cases, the upfront fee is viewed similar to a renewal option for future products and services at a reduced price. An example would be a health club where once the initiation fee is paid, no additional fee is necessary upon renewal. Illustration 18-27 provides an example of an upfront fee payment.

UPFRONT FEE CONSIDERATIONS

Facts: Erica Felise signs a 1-year contract with Bigelow Health Club. The terms of the contract are that Erica is required to pay a non-refundable initiation fee of $\mathfrak{L}200$ and an annual membership fee of $\mathfrak{L}50$ per month. Bigelow determines that its customers, on average, renew their annual membership two times before terminating their membership.

Question: What is the amount of revenue Bigelow Health Club should recognize in the first year?

Solution: In this case, the membership fee arrangement may be viewed as a single performance obligation (similar services are provided in all periods). That is, Bigelow is providing a discounted price in the second and third years for the same services, and this should be reflected in the revenue recognized in those periods. Bigelow determines the total transaction price to be £2,000—the upfront fee of £200 and the 3 years of monthly fees of £1,800 (£50 \times 36)—and allocates it over the 3 years. In this case, Bigelow would report revenue of £55.56 (£2,000 \div 36) each month for 3 years. *Unless otherwise instructed, use this approach for homework problems*. ¹¹

ILLUSTRATION 18-27

Transaction Price— Upfront Fee Considerations

Summary

Illustration 18-28 (page 908) provides a summary of the additional issues related to transfer of control and revenue recognition.

 $^{^{11}}$ The initiation fee might be viewed as a separate performance obligation (it provides a renewal option at a lower price than normally charged, perhaps with different services). In this situation, in the first period, Bigelow would report revenue of £600 (£50 \times 12). The initiation fee would then be allocated to years two and three (£100 in each year) unless forfeited earlier.

Issue	Description	Implementation
Right of return	Return of product by customer (e.g., due to dissatisfaction with the product) in exchange for refunds, a credit against amounts owed or that will be owed, and/or another product in exchange.	Seller may recognize (a) an adjustment to revenue for the products expected to be returned, (b) a refund liability, and (c) an asset for the right to recover the product.
Repurchase agreements	Seller has an obligation or right to repurchase the asset at a later date.	Generally, if the company has an obligation or right to repurchase the asset for an amount greater than its selling price, then the transaction is a financing transaction.
Bill and hold	Result when the buyer is not yet ready to take delivery but does take title and accept billing.	Revenue is recognized depending on when the customer obtains control of that product.
Principal-agent	Arrangement in which the principal's performance obligation is to provide goods or perform services for a customer. The agent's performance obligation is to arrange for the principal to provide these goods or services to a customer.	Amounts collected on behalf of the principal are not revenue of the agent. Instead, revenue for the agent is the amount of the commission it receives. The principal recognizes revenue when the goods or services are sold to a third-party customer.
Consignments	A principal-agent relationship in which the consignor (manufacturer or wholesaler) ships merchandise to the consignee (dealer), who is to act as an agent for the consignor in selling the merchandise.	The consignor recognizes revenue only after receiving notification of the sale and the cash remittance from the consignee (consignor carries the merchandise as inventory throughout the consignment). The consignee records commission revenue (usually some percentage of the selling price).
Warranties	Warranties can be assurance-type (product meets agreed-upon specifications) or service-type (provides additional service beyond the assurance-type warranty).	A separate performance obligation is not recorded for assurance-type warranties (considered part of the product). Service-type warranties are recorded as a separate performance obligation. Companies should allocate a portion of the transaction price to service type-warranties, when present.
Non-refundable upfront fees	Upfront payments generally relate to initiation, activation, or setup activities for a good or service to be delivered in the future.	The upfront payment should be allocated over the periods benefited.

ILLUSTRATION 18-28

Summary—Other Revenue Recognition Issues

PRESENTATION AND DISCLOSURE

Presentation

Describe presentation and disclosure regarding revenue.

Companies now use an asset-liability approach to recognize revenue. For example, when Cereal Partners (GBR) delivers cereal to Carrefour (FRA) (satisfying its performance obligation), it has a right to consideration from Carrefour and therefore has a contract asset. If, on the other hand, Carrefour performs first, by prepaying for this cereal, Cereal Partners has a contract liability. Com-

panies must present these contract assets and contract liabilities on their statements of financial position.

Contract Assets and Liabilities

Contract assets are of two types: (1) unconditional rights to receive consideration because the company has satisfied its performance obligation with a customer, and (2) conditional rights to receive consideration because the company has satisfied one performance obligation but must satisfy another performance obligation in the contract before it can bill the customer. Companies should report unconditional rights to receive consideration as a receivable on the statement of financial position. Conditional rights on the statement of financial position should be reported separately as contract assets. Illustration 18-29 provides an example of the accounting and reporting for a contract asset.

CONTRACT ASSET

Facts: On January 1, 2015, Finn Company enters into a contract to transfer Product A and Product B to Obermine Co. for €100,000. The contract specifies that payment of Product A will not occur until Product B is also delivered. In other words, payment will not occur until both Product A and Product B are transferred to Obermine. Finn determines that standalone prices are €30,000 for Product A and €70,000 for Product B. Finn delivers Product A to Obermine on February 1, 2015. On March 1, 2015, Finn delivers Product B to Obermine.

Question: What journal entries should Finn Company make in regards to this contract in 2015?

Solution: No entry is required on January 1, 2015, because neither party has performed on the contract. On February 1, 2015, Finn records the following entry.

February 1, 2015

Contract Asset 30,000

Sales Revenue 30,000

On February 1, Finn has satisfied its performance obligation and therefore reports revenue of €30,000. However, it does not record an accounts receivable at this point because it does not have an unconditional right to receive the €100,000 unless it also transfers Product B to Obermine. In other words, a contract asset occurs generally when a company must satisfy another performance obligation before it is entitled to bill the customer. When Finn transfers Product B on March 1, 2015, it makes the following entry.

March 1, 2015

Accounts Receivable 100,000

Contract Asset 30,000 Sales Revenue 70,000

As indicated above, a **contract liability** is a company's obligation to transfer goods or services to a customer for which the company has received consideration from the customer. A contract liability is generally referred to as Unearned Sales Revenue, Unearned Service Revenue, or another appropriate account title. Illustration 18-30 provides an example of the recognition and presentation of a contract liability.

CONTRACT LIABILITY

Facts: On March 1, 2015, Henly Company enters into a contract to transfer a product to Propel Inc. on July 31, 2015. It is agreed that Propel will pay the full price of \$10,000 in advance on April 1, 2015. The contract is non-cancelable. Propel, however, does not pay until April 15, 2015, and Henly delivers the product on July 31, 2015. The cost of the product is \$7,500.

Question: What journal entries are required in 2015?

Solution: No entry is required on March 1, 2015, because neither party has performed on the contract. On receiving the cash on April 15, 2015, Henly records the following entry.

April 15, 2015

Cash 10,000

Unearned Sales Revenue 10,000

On satisfying the performance obligation on July 31, 2015, Henly records the following entry to record the sale.

July 31, 2015

Unearned Sales Revenue 10,000

Sales Revenue 10,000

In addition, Henly records cost of goods sold as follows.

Cost of Goods Sold 7,500

Inventory 7,500

ILLUSTRATION 18-29

Contract Asset Recognition and Presentation

ILLUSTRATION 18-30

Contract Liability Recognition and Presentation

Companies are not required to use the terms "contract assets" and "contract liabilities" on the statement of financial position. For example, contract liabilities are performance obligations. Therefore, more descriptive titles (as noted earlier) such as unearned service revenue, unearned sales revenue, repurchase liability, and return liability may be used where appropriate. For contract assets, it is important that financial statement users can differentiate between unconditional and conditional rights through appropriate account presentation.

Costs to Fulfill a Contract

Companies may also report assets associated with fulfillment costs related to a revenue arrangement. Companies divide fulfillment costs (contract acquisition costs) into two categories:

- **1.** Those that give rise to an asset.
- **2.** Those that are expensed as incurred.

Companies recognize an asset for the incremental costs if these costs are incurred to obtain a contract with a customer. In other words, incremental costs are those that a company would not incur if the contract had not been obtained (e.g., selling commissions). Additional examples are (a) direct labor, direct materials, and allocation of costs that relate directly to the contract (e.g., costs of contract management and supervision, insurance, and depreciation of tools and equipment); and (b) costs that generate or enhance resources of the company that will be used in satisfying performance obligations in the future. Such costs include intangible design or engineering costs that will continue to give rise to benefits in the future.

Other costs that are expensed as incurred include general and administrative costs (unless those costs are explicitly chargeable to the customer under the contract) as well as costs of wasted materials, labor, or other resources to fulfill the contract that were not reflected in the price of the contract. That is, **companies only capitalize costs that are direct, incremental, and recoverable** (assuming that the contract period is more than one year). Illustration 18-31 provides an example of costs capitalized to fulfill a contract.

ILLUSTRATION 18-31 Recognition—Contract Costs

CONTRACT COSTS

Facts: Rock Integrators enters into a contract to operate Dello Company's information technology data center for 5 years. Rock Integrators incurs selling commission costs of R\$10,000 to obtain the contract. Before performing the services, Rock Integrators designs and builds a technology platform that interfaces with Dello's systems. That platform is not transferred to Dello. Dello promises to pay a fixed fee of R\$20,000 per month. Rock Integrators incurs the following costs: design services for the platform R\$40,000, hardware for the platform R\$120,000, software R\$90,000, and migration and testing of data center R\$100,000.

Question: What are Rock Integrators' costs for fulfilling the contract to Dello Company?

Solution: The R\$10,000 selling commission costs related to obtaining the contract are recognized as an asset. The design services cost of R\$40,000 and the hardware for the platform of R\$120,000 are also capitalized. As the technology platform is independent of the contract, the pattern of amortization of this platform may not be related to the terms of the contract. The migration and testing costs are expensed as incurred; in general, these costs are not recoverable.

As a practical expedient, a company recognizes the incremental costs of obtaining a contract as an expense when incurred if the amortization period of the asset that the company otherwise would have recognized is one year or less.

Collectibility

As indicated earlier, if it is probable that the transaction price will not be collected, this is an indication that the parties are not committed to their obligations. As a result, one of the criteria for the existence of a contract is not met and therefore revenue is not recognized.

Any time a company sells a product or performs a service on account, a collectibility issue occurs. Collectibility refers to a customer's credit risk, that is, the risk that a customer will be unable to pay the amount of consideration in accordance with the contract. Under the revenue guidance—as long as a contract exists (it is probable that the customer will pay)—the amount recognized as revenue is not adjusted for customer credit risk.

Thus, companies report the revenue gross (without consideration of credit risk) and then present an allowance for any impairment due to bad debts (recognized initially and subsequently in accordance with the respective bad debt guidance). An impairment related to bad debts is reported as an operating expense in the income statement. Whether a company will get paid for satisfying a performance obligation is not a consideration in determining revenue recognition. [15]

Disclosure

The disclosure requirements for revenue recognition are designed to help financial statement users understand the nature, amount, timing, and uncertainty of revenue and cash flows arising from contracts with customers. To achieve that objective, companies disclose qualitative and quantitative information about all of the following:

- Contracts with customers. These disclosures include the disaggregation of revenue, presentation of opening and closing balances in contract assets and contract liabilities, and significant information related to their performance obligations.
- *Significant judgments*. These disclosures include judgments and changes in these judgments that affect the determination of the transaction price, the allocation of the transaction price, and the determination of the timing of revenue.
- Assets recognized from costs incurred to fulfill a contract. These disclosures include
 the closing balances of assets recognized to obtain or fulfill a contract, the amount
 of amortization recognized, and the method used for amortization.

To implement these requirements and meet the disclosure objectives, companies provide a range of disclosures, as summarized in Illustration 18-32. 12

ILLUSTRATION 18-32 Revenue Disclosures

Disclosure Type	Requirements
Disaggregation of revenue	Disclose disaggregated revenue information in categories that depict how the nature, amount, timing, and uncertainty of revenue and cash flows are affected by economic factors. Reconcile disaggregated revenue to revenue for reportable segments.
Reconciliation of contract balances	Disclose opening and closing balances of contract assets (e.g., unbilled receivables) and liabilities (e.g., deferred revenue) and provide a qualitative description of significant changes in these amounts. Disclose the amount of revenue recognized in the current period relating to performance obligations satisfied in a prior period (e.g., from contracts with variable consideration). Disclose the opening and closing balances of trade receivables if not presented elsewhere.
Remaining performance obligations	Disclose the amount of the transaction price allocated to performance obligations of any remaining performance obligations not subject to significant revenue reversal. Provide a narrative discussion of potential additional revenue in constrained arrangements.
Costs to obtain or fulfill contracts	Disclose the closing balances of capitalized costs to obtain and fulfill a contract and the amount of amortization in the period. Disclose the method used to determine amortization for each reporting period.
Other qualitative disclosures	Disclose significant judgments and changes in judgments that affect the amount and timing of revenue from contracts with customers. Disclose how management determines the minimum amount of revenue not subject to the variable consideration constraint.

Evolving Issue

CH, CH, CH CHANGES IN REVENUE RECOGNITION

As you have learned in this chapter, the recently issued revenue recognition standard provides a comprehensive and general framework for recognizing revenue and should result in improvements in the reporting of revenue. However, these new rules reflect significant change relative to the prior revenue guidance and are expected to create implementation challenges, especially for companies that:

- Currently recognize revenue using industry-specific guidance.
- Have customer contracts with diverse terms and conditions.
- Have arrangements with goods or services delivered over long periods.
- Have systems or processes that do not easily provide new data requirements.

Among the companies that are likely to experience significant changes are those in the telecommunications, aerospace, construction, asset management, real estate, and software industries.

In the months after issuance of the new guidance, the IASB (and FASB) plans to issue documents that will address common questions posed by these industries. In addition, the Boards have created a joint transition resource group that is responsible for informing the IASB and FASB about

interpretive issues that could arise when companies, institutions, and other organizations implement the revenue recognition standard. The transition group is comprised of specialists representing financial statement preparers, auditors, regulators, users, and other stakeholders, as well as members of the IASB and FASB.

The resource group solicits, analyzes, and discusses stakeholder issues that apply to common transactions that could reasonably create diversity in practice. In addition to providing a forum to discuss the application of the requirements, the transition group provides information that will help the Boards determine what, if any, action will be needed to resolve that diversity. The group itself will not issue guidance.

As noted by Hans Hoogervorst, chairman of the IASB:

"Revenue is a key performance indicator and is important to every business. Our joint transition group will help to ensure that stakeholders are reading the words in the new revenue standard in the way that we intend that they be read."

So change is necessary to achieve improvements in revenue recognition accounting. Hopefully, the extended transition period and expanded support by the transition group will make the change a bit less painful.

SUMMARY OF LEARNING OBJECTIVES

KEY TERMS

asset-liability approach, 885 assurance-type warranty, 906 bill-and-hold arrangement, 902 collectibility, 911 consignee, 905 consignment, 905 consignor, 905 contract, 886 contract assets, 908 contract liability, 909 contract modification, 888 performance obligation, principal-agent

relationship, 903

- **Understand revenue recognition issues.** Most revenue transactions pose few problems for revenue recognition. This is because, in many cases, the transaction is initiated and completed at the same time. Increasing complexity of business and revenue arrangements have resulted in revenue recognition practices being identified as the most prevalent reasons for accounting restatements. A number of the revenue recognition issues relate to possible fraudulent behavior by company executives and employees, but are also due to sometimes incomplete and inconsistent accounting guidelines for revenue recognition. A recent new standard provides a set of guidelines to follow in determining when revenue should be reported and how it should be measured. The standard is comprehensive and applies to all companies. As a result, comparability and consistency in reporting revenue should be enhanced.
- Identify the five steps in the revenue recognition process. The five steps in the revenue recognition process are (1) identify the contract with customers, (2) identify the separate performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the separate performance obligations, and (5) recognize revenue when each performance obligation is satisfied.
- Identify the contract with customers. A contract is an agreement that creates enforceable rights or obligations. A company applies the revenue guidance to contracts with customers and must determine if new performance obligations are created by a contract modification.

- Identify the separate performance obligations in the contract. A performance obligation is a promise in a contract to provide a product or service to a customer. A contract may be comprised of multiple performance obligations. The accounting for multiple performance obligations is based on evaluation of whether the product or service is distinct within the contract. If each of the goods or services is distinct but is interdependent and interrelated, these goods and services are combined and reported as one performance obligation.
- **Determine the transaction price.** The transaction price is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services. In determining the transaction price, companies must consider the following factors: (1) variable consideration, (2) time value of money, (3) non-cash consideration, and (4) consideration paid or payable to a customer.
- Allocate the transaction price to the separate performance obligations. If more than one performance obligation exists in a contract, allocate the transaction price based on relative fair values. The best measure of fair value is what the good or service could be sold for on a standalone basis (standalone selling price). Estimates of standalone selling price can be based on (1) adjusted market assessment, (2) expected cost plus a margin approach, or (3) a residual approach.
- Recognize revenue when the company satisfies its performance obligation. A company satisfies its performance obligation when the customer obtains control of the good or service. Companies satisfy performance obligations either at a point in time or over a period of time. Companies recognize revenue over a period of time if (1) the customer controls the asset as it is created or (2) the company does not have an alternative use for the asset.
- **Identify other revenue recognition issues.** Refer to Illustration 18-28 (page 908) for a summary of the accounting for (a) right of return, (b) repurchase agreements, (c) bill-and-hold arrangements, (d) principal-agent relationships, (e) consignments, (f) warranties, and (g) non-refundable upfront fees.
- Describe presentation and disclosure regarding revenue. Under the asset-liability approach, to recognize revenue, companies present contract assets and contract liabilities on their statements of financial position. Contract assets are rights to receive consideration. A contract liability is a company's obligation to transfer goods or services to a customer for which the company has received consideration from the customer. Companies may also report assets associated with fulfillment costs and contract acquisition costs related to a revenue arrangement. Companies disclose qualitative and quantitative information about (a) contracts with customers with disaggregation of revenue, presentation of opening and closing balances in contract assets and contract liabilities, and significant information related to their performance obligations; (b) significant judgments that affect the determination of the transaction price, the allocation of the transaction price, and the determination of the timing of revenue; and (c) assets recognized from costs incurred to fulfill a contract.

APPENDIX **18A**

LONG-TERM CONSTRUCTION CONTRACTS

REVENUE RECOGNITION OVER TIME

For the most part, companies recognize revenue at the point of sale because that is when the performance obligation is satisfied. However, as indicated in the chapter, under certain circumstances companies recognize revenue over time.

Apply the percentage-of-completion method for long-term contracts.

The most notable context in which revenue may be recognized over time is long-term construction contract accounting.

Long-term contracts frequently provide that the seller (builder) may bill the purchaser at intervals, as the builder reaches various points in the project. Examples of long-term contracts are construction-type contracts, development of military and commercial aircraft, weapons-delivery systems, and space exploration hardware. When the project consists of separable units, such as a group of buildings or miles of roadway, contract provisions may provide for delivery in installments. In that case, the seller would bill the buyer and transfer title at stated stages of completion, such as the completion of each building unit or every 10 miles of road. The accounting records should record sales when installments are "delivered."

A company satisfies a performance obligation and recognizes revenue over time if at least one of the following two criteria is met: [17]

- **1.** The company's performance creates or enhances an asset (e.g., work in process) that the customer controls as the asset is created or enhanced; or
- **2.** The company's performance does not create an asset with an alternative use. For example, the asset cannot be used by another customer. In addition to this alternative use element, at least *one* of the following criteria must be met:
 - (a) The customer simultaneously receives and consumes the benefits of the entity's performance as the entity performs.
 - **(b)** Another company would not need to substantially re-perform the work the company has completed to date if that other company were to fulfill the remaining obligation to the customer.
 - (c) The company has a right to payment for its performance completed to date, and it expects to fulfill the contract as promised.¹³

Therefore, if criterion 1 or 2 is met, then a company recognizes revenue over time *if* it can reasonably estimate its progress toward satisfaction of the performance obligations. That is, the company recognizes revenues and gross profits each period based upon the progress of the construction—referred to as the **percentage-of-completion method**. The company accumulates construction costs plus gross profit recognized to date in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).

The rationale for using percentage-of-completion accounting is that under most of these contracts, the buyer and seller have enforceable rights. The buyer has the legal right to require specific performance on the contract. The seller has the right to require progress payments that provide evidence of the buyer's ownership interest. As a result, a continuous sale occurs as the work progresses. Companies should recognize revenue according to that progression.

Alternatively, if the criteria for recognition over time are not met, the company recognizes revenues and gross profit at a point in time, that is, when the contract is completed. In these cases, contract revenue is recognized only to the extent of costs incurred that are expected to be recoverable. Once all costs are recognized, profit is recognized. This approach is referred to as the **cost-recovery (zero-profit) method**. The company accumulates construction costs in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).

¹³The right to payment for performance completed to date does not need to be for a fixed amount. However, the company must be entitled to an amount that would compensate the company for performance completed to date (even if the customer can terminate the contract for reasons other than the company's failure to perform as promised). Compensation for performance completed to date includes payment that approximates the selling price of the goods or services transferred to date (e.g., recovery of the company's costs plus a reasonable profit margin).

Percentage-of-Completion Method

The percentage-of-completion method recognizes revenues, costs, and gross profit as a company makes progress toward completion on a long-term contract. To defer recognition of these items until completion of the entire contract is to misrepresent the efforts (costs) and accomplishments (revenues) of the accounting periods during the contract. In order to apply the percentage-of-completion method, a company must have some basis or standard for measuring the progress toward completion at particular interim dates.

Measuring the Progress Toward Completion

As one practicing accountant wrote, "The big problem in applying the percentage-of-completion method . . . has to do with the ability to make reasonably accurate estimates of completion and the final gross profit." Companies use various methods to determine the **extent of progress toward completion**. The most common are the *cost-to-cost* and *units-of-delivery* methods.

As indicated in the chapter, the objective of all these methods is to measure the extent of progress in terms of costs, units, or value added. Companies identify the various measures (costs incurred, labor hours worked, tons produced, floors completed, etc.) and classify them as input or output measures. **Input measures** (costs incurred, labor hours worked) are efforts devoted to a contract. **Output measures** (with units of delivery measured as tons produced, floors of a building completed, miles of a highway completed, etc.) track results. Neither measure is universally applicable to all long-term projects. Their use requires the exercise of judgment and careful tailoring to the circumstances.

Both input and output measures have certain disadvantages. The input measure is based on an established relationship between a unit of input and productivity. If inefficiencies cause the productivity relationship to change, inaccurate measurements result. Another potential problem is front-end loading, in which significant upfront costs result in higher estimates of completion. To avoid this problem, companies should disregard some early-stage construction costs—for example, costs of uninstalled materials or costs of subcontracts not yet performed—if they do not relate to contract performance.

Similarly, output measures can produce inaccurate results if the units used are not comparable in time, effort, or cost to complete. For example, using floors (stories) completed can be deceiving. Completing the first floor of an eight-story building may require more than one-eighth the total cost because of the substructure and foundation construction.

The most popular input measure used to determine the progress toward completion is the **cost-to-cost basis**. Under this basis, a company like **Ultra Electronics Holdings (UEH)** (GBR) measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs required to complete the contract. Illustration 18A-1 shows the formula for the cost-to-cost basis.

Costs Incurred to Date

Most Recent Estimate of Total Costs

Percent Complete

ILLUSTRATION 18A-1Formula for Percentage-of-Completion, Cost-to-

Cost Basis

Once UEH knows the percentage that costs incurred bear to total estimated costs, it applies that percentage to the total revenue or the estimated total gross profit on the contract. The resulting amount is the revenue or the gross profit to be recognized to date. Illustration 18A-2 shows this computation.

Percent × Total Revenue = Profit) to Be

Complete (or Gross Profit) Recognized to Date

To find the amounts of revenue and gross profit recognized each period, UEH subtracts total revenue or gross profit recognized in prior periods, as shown in Illustration 18A-3.

ILLUSTRATION 18A-3

Formula for Amount of Current-Period Revenue (or Gross Profit), Cost-to-Cost Basis

Profit) to Be - Profit) F	(or Gross Current-Period ecognized = Revenue Periods (or Gross Profit)
---------------------------	--

Because **the cost-to-cost method is widely used** (without excluding other bases for measuring progress toward completion), we have adopted it for use in our examples.

Example of Percentage-of-Completion Method—Cost-to-Cost Basis

To illustrate the percentage-of-completion method, assume that Hardhat Construction Company has a contract to construct a £4,500,000 bridge at an estimated cost of £4,000,000. The contract is to start in July 2015, and the bridge is to be completed in October 2017. The following data pertain to the construction period. (Note that by the end of 2016, Hardhat has revised the estimated total cost from £4,000,000 to £4,050,000.)

	2015	2016	2017
Costs to date	£1,000,000	£2,916,000	£4,050,000
Estimated costs to complete	3,000,000	1,134,000	_
Progress billings during the year	900,000	2,400,000	1,200,000
Cash collected during the year	750,000	1,750,000	2,000,000
	Estimated costs to complete Progress billings during the year	Costs to date £1,000,000 Estimated costs to complete 3,000,000 Progress billings during the year 900,000	Costs to date £1,000,000 £2,916,000 Estimated costs to complete 3,000,000 1,134,000 Progress billings during the year 900,000 2,400,000

Hardhat would compute the percent complete as shown in Illustration 18A-4.

ILLUSTRATION 18A-4

Application of Percentage-of-Completion Method, Cost-to-Cost Basis

Contract price	2015 £4,500,000	2016 £4,500,000	2017 £4,500,000
Less estimated cost: Costs to date Estimated costs to complete	1,000,000	2,916,000 1,134,000	4,050,000
Estimated total costs	4,000,000	4,050,000	4,050,000
Estimated total gross profit Percent complete	£ 500,000 25%	£ 450,000 72%	£ 450,000 100%
, droding demplote	$\left(\frac{£1,000,000}{£4,000,000}\right)$	$\left(\frac{£2,916,000}{£4,050,000}\right)$	$\left(\frac{£4,050,000}{£4,050,000}\right)$

On the basis of the data above, Hardhat would make the following entries to record (1) the costs of construction, (2) progress billings, and (3) collections. These entries appear as summaries of the many transactions that would be entered individually as they occur during the year.

ILLUSTRATION 18A-5

Journal Entries— Percentage-of-Completion Method, Cost-to-Cost Basis

	20	015	20	116	20-	17
To record costs of construction:						
Construction in Process	1,000,000		1,916,000		1,134,000	
Materials, Cash,						
Payables, etc.		1,000,000		1,916,000		1,134,000
To record progress billings:						
Accounts Receivable	900,000		2,400,000		1,200,000	
Billings on Construction						
in Process		900,000		2,400,000		1,200,000
To record collections:						
Cash	750,000		1,750,000		2,000,000	
Accounts Receivable		750,000		1,750,000		2,000,000

In this example, the costs incurred to date are a measure of the extent of progress toward completion. To determine this, Hardhat evaluates the costs incurred to date as a proportion of the estimated total costs to be incurred on the project. The estimated revenue and gross profit that Hardhat will recognize for each year are calculated as shown in Illustration 18A-6.

	To Date	Recognized in Prior Years	Recognized in Current Year
2015

ILLUSTRATION 18A-7

Journal Entries to Recognize Revenue and Gross Profit and to Record Contract Completion—Percentageof-Completion Method, Cost-to-Cost Basis

Note that Hardhat debits gross profit (as computed in Illustration 18A-6) to Construction in Process. Similarly, it credits Revenue from Long-Term Contracts for the amounts computed in Illustration 18A-6. Hardhat then debits the difference between the amounts recognized each year for revenue and gross profit to a nominal account, Construction Expenses (similar to Cost of Goods Sold in a manufacturing company). It reports that amount in the income statement as the actual cost of construction incurred in that period. For example, in 2015 Hardhat uses the actual costs of £1,000,000 to compute both the gross profit of £125,000 and the percent complete (25 percent).

Hardhat continues to accumulate costs in the Construction in Process account, in order to maintain a record of total costs incurred (plus recognized gross profit) to date. Although theoretically a series of "sales" takes place using the percentage-of-completion method, the selling company cannot remove the inventory cost until the construction is completed and transferred to the new owner. Hardhat's Construction in Process account for the bridge would include the following summarized entries over the term of the construction project.

ILLUSTRATION 18A-8

Content of Construction in Process Account—
Percentage-ofCompletion Method

Construction in Process					
2015 Construction costs 2015 Recognized gross profit 2016 Construction costs 2016 Recognized gross profit 2017 Construction costs 2017 Recognized gross profit	£1,000,000 125,000 1,916,000 199,000 1,134,000 126,000	12/31/17	To close completed project	£4,500,000	
Total	£4,500,000	Total		£4,500,000	

Recall that the Hardhat Construction Company example contained a **change in estimated costs**: In the second year, 2016, it increased the estimated total costs from £4,000,000 to £4,050,000. The change in estimate is accounted for in a **cumulative catch-up manner**. This is done by first adjusting the percent completed to the new estimate of total costs. Next, Hardhat deducts the amount of revenues and gross profit recognized in prior periods from revenues and gross profit computed for progress to date. That is, it accounts for the change in estimate in the period of change. That way, the statement of financial position at the end of the period of change and the accounting in subsequent periods are as they would have been if the revised estimate had been the original estimate.

Financial Statement Presentation—Percentage-of-Completion

Generally, when a company records a receivable from a sale, it reduces the Inventory account. Under the percentage-of-completion method, however, the company continues to carry both the receivable and the inventory. Subtracting the balance in the **Billings account** from Construction in Process avoids double-counting the inventory. During the life of the contract, Hardhat reports in the statement of financial position the difference between the Construction in Process and the Billings on Construction in Process accounts. If that amount is a debit, Hardhat reports it **as a current asset**; if it is a credit, it reports it **as a current liability**.

At times, the costs incurred plus the gross profit recognized to date (the balance in Construction in Process) exceed the billings. In that case, Hardhat reports this excess as a current asset entitled "Costs and recognized profit in excess of billings." Hardhat can at any time calculate the unbilled portion of revenue recognized to date by subtracting the billings to date from the revenue recognized to date, as shown for 2015 for Hardhat Construction in Illustration 18A-9.

ILLUSTRATION 18A-9

Computation of Unbilled Contract Price at 12/31/15 Contract revenue recognized to date: $£4,500,000 \times \frac{£1,000,000}{£4,000,000}$ £1,125,000Billings to date (900,000)

Unbilled revenue £25,000

At other times, the billings exceed costs incurred and gross profit to date. In that case, Hardhat reports this excess as a current liability entitled "Billings in excess of costs and recognized profit."

What happens, as is usually the case, when companies have more than one project going at a time? When a company has a number of projects, costs exceed billings on some contracts and billings exceed costs on others. In such a case, the company segregates the contracts. The asset side includes only those contracts on which costs

and recognized profit exceed billings. The liability side includes only those on which billings exceed costs and recognized profit. Separate disclosures of the dollar (or other currency) volume of billings and costs are preferable to a summary presentation of the net difference.

Using data from the bridge example, Hardhat Construction Company would report the status and results of its long-term construction activities under the percentage-of-completion method as shown in Illustration 18A-10.

HARDHAT CONSTRUCTION COMPAI	NY
Income Statement (from Illustration 18A-6)	2015
Revenue from long-term contracts Costs of construction	£1,125,000 1,000,000
Gross profit	£ 125,000

Costs of construction	1,134,000
Gross profit	£ 126,000

ILLUSTRATION 18A-12

Financial Statement Presentation—Percentageof-Completion Method (2017)

In addition, Hardhat should disclose the following information in each year.

ILLUSTRATION 18A-13

Percentage-of-Completion Method Note Disclosure

Note 1. Summary of significant accounting policies.

Long-Term Construction Contracts. The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the percentage-of-completion method of accounting. These contracts generally extend for periods in excess of one year. The amounts of revenues and profits recognized each year are based on the ratio of costs incurred to the total estimated costs. Costs included in construction in process include direct materials, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred and are not allocated to construction contracts.

Cost-Recovery (Zero-Profit) Method

LEARNING OBJECTIVE 111

Apply the cost-recovery method for long-term contracts.

During the early stages of a contract, a company like **Alcatel-Lucent** (FRA) may not be able to estimate reliably the outcome of a long-term construction contract. Nevertheless, Alcatel-Lucent is confident that it will recover the contract costs incurred. In this case, Alcatel-Lucent uses the **cost-recovery method (zero-profit**

method). This method recognizes revenue only to the extent of costs incurred that are expected to be recoverable. Only after all costs are incurred is gross profit recognized.

To illustrate the cost-recovery method for the bridge project illustrated on the preceding pages, Hardhat Construction would report the following revenues and costs for 2015–2017, as shown in Illustration 18A-14.

ILLUSTRATION 18A-14

Cost-Recovery Method Revenue, Costs, and Gross Profit by Year

	To Date	Recognized in Prior Years	Recognized in Current Year
2015			
Revenues (costs incurred)	£1,000,000		£1,000,000
Costs	1,000,000		1,000,000
Gross profit	£ 0		£ 0
2016			
Revenues (costs incurred)	£2,916,000	£1,000,000	£1,916,000
Costs	2,916,000	1,000,000	1,916,000
Gross profit	£ 0	£ 0	£ 0
2017			
Revenues (£4,500,000 × 100%)	£4,500,000	£2,916,000	£1,584,000
Costs	4,050,000	2,916,000	1,134,000
Gross profit	£ 450,000	£ 0	£ 450,000

ILLUSTRATION 18A-15

Journal Entries— Cost-Recovery Method Illustration 18A-15 shows Hardhat's entries to recognize revenue and gross profit each year and to record completion and final approval of the contract.

	20	15	20	16	20	17
Construction Expenses Revenue from Long-Term Contracts (To recognize costs and related expenses)	1,000,000	1,000,000	1,916,000	1,916,000		
Construction in Process (Gross Profit) Construction Expenses Revenue from Long-Term Contracts (To recognize costs and related expenses)					450,000 1,134,000	1,584,000
Billings on Construction in Process Construction in Process (To record completion of the contract)					4,500,000	4,500,000

As indicated, no gross profit is recognized in 2015 and 2016. In 2017, Hardhat then recognizes gross profit and closes the Billings and Construction in Process accounts.

Illustration 18A-16 compares the amount of gross profit that Hardhat Construction Company would recognize for the bridge project under the two revenue recognition methods.

	Percentage-of-Completion	Cost-Recovery
2015	£125,000	£ 0
2016	199,000	0
2017	126,000	450,000

ILLUSTRATION 18A-16

Comparison of Gross Profit Recognized under Different Methods

Under the cost-recovery method, Hardhat Construction would report its long-term construction activities as shown in Illustration 18A-17.

Billings Less: Construction in process Billings in excess of costs	£3,300,000 2,916,000			
and recognized profits			£ 384,000	£ -0-

Note 1. Summary of significant accounting policies.

Long-Term Construction Contracts. The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the cost-recovery method. These contracts generally extend for periods in excess of one year. Contract costs and billings are accumulated during the periods of construction, and revenues are recognized only to the extent of costs incurred that are expected to be recoverable. Only after all costs are incurred is net income recognized. Costs included in construction in process include direct material, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred.

Long-Term Contract Losses

Two types of losses can become evident under long-term contracts:

1. Loss in the current period on a profitable contract. This condition arises when, during construction, there is a significant increase in the estimated total contract costs but the increase does not eliminate all profit on the contract. Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a change in accounting estimate (discussed in Chapter 22).

12 LEARNING OBJECTIVE

Identify the proper accounting for losses on long-term contracts.

2. Loss on an unprofitable contract. Cost estimates at the end of the current period may indicate that a loss will result on completion of the *entire* contract. Under both the percentage-of-completion and the cost-recovery methods, the company must recognize in the current period the entire expected contract loss.

The treatment described for unprofitable contracts is consistent with the accounting custom of anticipating foreseeable losses to avoid overstatement of current and future income (conservatism).¹⁴

Loss in Current Period

To illustrate a loss in the current period on a contract expected to be profitable upon completion, we'll continue with the Hardhat Construction Company bridge project. Assume that on December 31, 2016, Hardhat estimates the costs to complete the bridge contract at £1,468,962 instead of £1,134,000 (refer to page 916). Assuming all other data are the same as before, Hardhat would compute the percentage complete and recognize the loss as shown in Illustration 18A-18. Compare these computations with those for 2016 in Illustration 18A-4 (page 916). The "percent complete" has dropped, from 72 percent to $66\frac{1}{2}$ percent, due to the increase in estimated future costs to complete the contract.

ILLUSTRATION 18A-18

Computation of Recognizable Loss, 2016—Loss in Current Period

Cost to date (12/31/16)	£2,916,000
Estimated costs to complete (revised)	_1,468,962
Estimated total costs	£4,384,962
Percent complete (£2,916,000 ÷ £4,384,962) Revenue recognized in 2016	661/2%
$(£4,500,000 \times 66\frac{1}{2}\%) - £1,125,000$	£1,867,500
Costs incurred in 2016	_1,916,000
Loss recognized in 2016	£ (48,500)

The 2016 loss of £48,500 is a cumulative adjustment of the "excessive" gross profit recognized on the contract in 2015. Instead of restating the prior period, the company absorbs the prior period misstatement entirely in the current period. In this illustration, the adjustment was large enough to result in recognition of a loss.

Hardhat Construction would record the loss in 2016 as follows.

Construction Expenses	1,916,000
Construction in Process (loss)	48,500
Revenue from Long-Term Contracts	1,867,500

Hardhat will report the loss of £48,500 on the 2016 income statement as the difference between the reported revenue of £1,867,500 and the costs of £1,916,000. ¹⁵ **Under the cost-recovery method, the company does not recognize a loss in 2016.** Why not? Because the company still expects the contract **to result in a profit**, to be recognized in the year of completion.

Loss on an Unprofitable Contract

To illustrate the accounting for an **overall loss on a long-term contract**, assume that at December 31, 2016, Hardhat Construction Company estimates the costs to complete the

 $^{^{14}}$ The accounting for losses reflects application of the accounting for onerous contracts. **[18]** 15 In 2017, Hardhat Construction will recognize the remaining 33½ percent of the revenue (£1,507,500), with costs of £1,468,962 as expected, and will report a gross profit of £38,538. The total gross profit over the three years of the contract would be £115,038 [£125,000 (2015) – £48,500 (2016) + £38,538 (2017)]. This amount is the difference between the total contract revenue of £4,500,000 and the total contract costs of £4,384,962.

bridge contract at £1,640,250 instead of £1,134,000. Revised estimates for the bridge contract are as follows.

Contract price Estimated total cost Estimated gross profit Estimated loss	2015 Original Estimates £4,500,000 4,000,000 £ 500,000	2016 Revised Estimates £4,500,000 4,556,250* £ (56,250)	
*(£2,916,000 + £1,640,250)			

Under the percentage-of-completion method, Hardhat recognized £125,000 of gross profit in 2015 (see Illustration 18A-18 on page 922). This amount must be offset in 2016 because it is no longer expected to be realized. In addition, since losses must be recognized as soon as estimable, the company must recognize the total estimated loss of £56,250 in 2016. Therefore, Hardhat must recognize a total loss of £181,250 (£125,000 + £56,250) in 2016.

Illustration 18A-19 shows Hardhat's computation of the revenue to be recognized in 2016.

Revenue recognized in 2016: Contract price Percent complete Revenue recognizable to date Less: Revenue recognized prior to 2016		£4,500,000 × 64%* 2,880,000 1,125,000
Revenue recognized in 2016		£1,755,000
*Cost to date (12/31/16)	£2,916,000	
Estimated cost to complete	1,640,250	
Estimated total costs	£4,556,250	
Percent complete: £2,916,000 ÷ £4,556,250 = 64%		

ILLUSTRATION 18A-19 Computation of Revenue Recognizable, 2016— Unprofitable Contract

To compute the construction costs to be expensed in 2016, Hardhat adds the total loss to be recognized in 2016 (£125,000 + £56,250) to the revenue to be recognized in 2016. Illustration 18A-20 shows this computation.

Revenue recognized in 2016 (computed above)		£1,755,000
Total loss recognized in 2016:		
Reversal of 2015 gross profit	£125,000	
Total estimated loss on the contract	56,250	181,250
Construction cost expensed in 2016		£1,936,250

ILLUSTRATION 18A-20 Computation of Construction Expense, 2016—Unprofitable Contract

Hardhat Construction would record the long-term contract revenues, expenses, and loss in 2016 as follows.

Construction Expenses 1,936,250
Construction in Process (loss) 181,250
Revenue from Long-Term Contracts 1,755,000

At the end of 2016, Construction in Process has a balance of £2,859,750 as shown below. 16

ILLUSTRATION 18A-21

Content of Construction in Process Account at End of 2016—
Unprofitable Contract

_	Constructio	n in Process	
2015 Construction costs	1,000,000		
2015 Recognized gross profit	125,000		
2016 Construction costs	1,916,000	2016 Recognized loss	181,250
Balance	2,859,750		

Under the cost-recovery method, Hardhat also would recognize the contract loss of £56,250 through the following entry in 2016 (the year in which the loss first became evident).

56.250

Loss from Long-Term Contracts 56,250
Construction in Process (loss)

Just as the Billings account balance cannot exceed the contract price, neither can the balance in Construction in Process exceed the contract price. In circumstances where the Construction in Process balance exceeds the billings, the company can deduct the recognized loss from such accumulated costs on the statement of financial position. That is, under both the percentage-of-completion and the cost-recovery methods, the provision for the loss (the credit) may be combined with Construction in Process, thereby reducing the inventory balance. In those circumstances, however (as in the 2016 example above), where the billings exceed the accumulated costs, Hardhat must report separately on the statement of financial position, as a current liability, the amount of the estimated loss. That is, under both the percentage-of-completion and the cost-recovery methods, Hardhat would take the £56,250 loss, as estimated in 2016, from the Construction in Process account and report it separately as a current liability titled "Estimated liability from long-term contracts."

SUMMARY OF LEARNING OBJECTIVES FOR APPENDIX 18A

KEY TERMS

Billings account, 918
cost-recovery (zero-profit)
method, 914
cost-to-cost basis, 915
input measures, 915
output measures, 915
percentage-of-completion
method, 914

Apply the percentage-of-completion method for long-term contracts.

To apply the percentage-of-completion method to long-term contracts, a company must have some basis for measuring the progress toward completion at particular interim dates. One of the most popular input measures used to determine the progress toward completion is the cost-to-cost basis. Using this basis, a company measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs to complete the contract. The company applies that percentage to the total revenue or the estimated total gross profit on the contract, to arrive at the amount of revenue or gross profit to be recognized to date.

Apply the cost-recovery method for long-term contracts. Under this method, companies recognize revenue and gross profit only at the point of sale, that is, when the company completes the contract. The company accumulates costs of long-term contracts in process and current billings. This method (sometimes referred to as the

 16 If the costs in 2017 are £1,640,250 as projected, at the end of 2017 the Construction in Process account will have a balance of £1,640,250 + £2,859,750, or £4,500,000, equal to the contract price. When the company matches the revenue remaining to be recognized in 2017 of £1,620,000 [£4,500,000 (total contract price) – £1,125,000 (2015) – £1,755,000 (2016)] with the construction expense to be recognized in 2017 of £1,620,000 [total costs of £4,556,250 less the total costs recognized in prior years of £2,936,250 (2015, £1,000,000; 2016, £1,936,250)], a zero profit results. Thus, the total loss has been recognized in 2016, the year in which it first became evident.

13 LEARNING OBJECTIVE

Explain revenue recognition for

franchises.

zero-profit method) recognizes revenue only to the extent of costs incurred that are expected to be recoverable. Only after all costs are incurred is gross profit recognized.

Identify the proper accounting for losses on long-term contracts.

Two types of losses can become evident under long-term contracts. (1) Loss in current period on a profitable contract: Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a change in accounting estimate. (2) Loss on an unprofitable contract: Under both the percentage-of-completion and the cost-recovery methods, the company must recognize the entire expected contract loss in the current period.

APPENDIX 18B

REVENUE RECOGNITION FOR FRANCHISES

In this appendix, we cover a common yet unique type of business transaction franchises. As indicated throughout this chapter, companies recognize revenue when performance obligations in a revenue arrangement are satisfied. Franchises represent a challenging area because a variety of performance obligations may exist in a given franchise agreement. As a result, companies must carefully analyze franchise agreements to identify the separate performance obligations, determine when performance obligations are met, and, therefore, when revenue should be recognized.¹⁷

Four types of franchising arrangements have evolved: (1) manufacturer-retailer, (2) manufacturer-wholesaler, (3) service sponsor-retailer, and (4) wholesaler-retailer. The fastest-growing category of franchising, and the one that has given rise to accounting challenges, is the third category, service sponsor-retailer. Included in this category are such industries and businesses as food drive-ins, restaurants, motels, and car rentals.

Franchise companies derive their revenue from one or both of two sources: (1) from the sale of initial franchises and related assets or services, and (2) from continuing fees based on the operations of franchises. The franchisor (the party who grants business rights under the franchise) normally provides the franchisee (the party who operates the franchised business) with the following services.

- **1.** Assistance in site selection: (a) analyzing location and (b) negotiating lease.
- **2.** Evaluation of potential income.
- **3.** Supervision of construction activity: (a) obtaining financing, (b) designing building, and (c) supervising contractor while building.
- **4.** Assistance in the acquisition of signs, fixtures, and equipment.
- 5. Bookkeeping and advisory services: (a) setting up franchisee's records; (b) advising on income, real estate, and other taxes; and (c) advising on local regulations of the franchisee's business.
- **6.** Employee and management training.
- 7. Quality control.
- **8.** Advertising and promotion.

¹⁷Franchises are an example of a license or similar rights to use intellectual property. In such arrangements, a company grants a customer the right to use, but not own, intellectual property of the company. Other examples of intellectual property include (1) software and technology; (2) motion pictures, music, and other forms of media and entertainment; and (3) patents, trademarks, and copyrights. Generally, revenue is recognized in these situations when the customer obtains control of the rights. In some cases, a license is a promise to provide a right, which transfers to the customer at a point in time. In other cases, a license is a promise to provide access to an entity's intellectual property, which transfers benefits to the customer over time. [19]

In the past, it was standard practice for franchisors to recognize the entire franchise fee at the date of sale, whether the fee was received then or was collectible over a long period of time. Frequently, franchisors recorded the entire amount as revenue in the year of sale even though many of the services were yet to be performed and uncertainty existed regarding the collection of the entire fee. (In effect, the franchisors were counting their fried chickens before they were hatched.) However, a franchise agreement may provide for refunds to the franchisee if certain conditions are not met, and franchise fee profit can be reduced sharply by future costs of obligations and services to be rendered by the franchisor.

FRANCHISE ACCOUNTING

As indicated, the performance obligations in a franchise arrangement relate to the right to open a business, use of the trade name or other intellectual property of the franchisor, and continuing services, such as marketing help, training, and in some cases supplying inventory and inventory management. Franchisors commonly charge an initial franchise fee as well as continuing franchise fees. The initial franchise fee is payment for establishing the franchise relationship and providing some initial services. Continuing franchise fees are received in return for the continuing rights granted by the franchise agreement and for providing such services as management training, advertising and promotion, legal assistance, and other support. Illustration 18B-1 provides an example of a franchise arrangement.

ILLUSTRATION 18B-1 Recognition—Franchise

FRANCHISE

Facts: Tum's Pizza Inc. enters into a franchise agreement on December 31, 2015, giving Food Fight Corp. the right to operate as a franchisee of Tum's Pizza for 5 years. Tum's charges Food Fight an initial franchise fee of \$50,000 for the right to operate as a franchisee. Of this amount, \$20,000 is payable when Food Fight signs the agreement, and the note balance is payable in five annual payments of \$6,000 each on December 31. As part of the arrangement, Tum's helps locate the site, negotiate the lease or purchase of the site, supervise the construction activity, and provide employee training and the equipment necessary to be a distributor of its products. Similar training services and equipment are sold separately.

Food Fight also promises to pay ongoing royalty payments of 1% of its annual sales (payable each January 31 of the following year) and is obliged to purchase products from Tum's at its current standalone selling prices at the time of purchase. The credit rating of Food Fight indicates that money can be borrowed at 8%. The present value of an ordinary annuity of five annual receipts of \$6,000 each discounted at 8% is \$23,957. The discount of \$6,043 represents the interest revenue to be accrued by Tum's over the payment period.

Question: What are the performance obligations in this arrangement and the point in time at which the performance obligations for Tum's are satisfied and revenue is recognized?

Solution: To identify the performance obligations, Tum's must determine whether the promised rights, site selection and construction services, training services, and equipment are distinct.

- Rights to the trade name, market area, and proprietary know-how for 5 years are not individually distinct because each one is not sold separately and cannot be used with other goods or services that are readily available to the franchisee. Therefore, those combined rights give rise to a single performance obligation. Tum's satisfies the performance obligation to grant those rights at the point in time when Food Fight obtains control of the rights. That is, once Food Fight begins operating the store, Tum's has no further obligation with respect to these rights.
- Training services and equipment are distinct because similar services and equipment are sold separately. Tum's satisfies those performance obligations when it transfers the services and equipment to Food Fight.
- Turn's cannot recognize revenue for the royalty payments because it is not reasonably assured to be entitled to those sales-based royalty amounts. That is, these payments represent variable consideration. Therefore, Tum's recognizes revenue for the royalties when (or as) the uncertainty is resolved.

Arrangement

Tum's promise to stand ready to provide products to the franchisee in the future at standalone selling prices is not accounted for as a separate performance obligation in the contract because it does not provide Food Fight with a material right. Thus, revenue from those sales is recorded in the future when the sales are made.

To illustrate the accounting for this franchise, consider the following values for allocation of the transaction price at December 31, 2015.

Rights to the trade name, market area,	
and proprietary know-how	\$20,000
Training services	9,957
Equipment (cost of \$10,000)	14,000
Total transaction price	\$43,957

Training is completed in January 2016, the equipment is installed in January 2016, and Food Fight holds a grand opening on February 2, 2016. The entries for the Tum's franchise arrangement are summarized in Illustration 18B-2.

Tum's signs the agreement and receives up	mont payment an	iu note.

Franchise Entries— Inception and Commencement of Operations

As indicated, when Food Fight begins operations, Tum's satisfies the performance obligations related to the franchise rights, training, and equipment under the franchise agreement. That is, Tum's has no further obligations related to these elements of the franchise.

During 2016, Food Fight does well, recording \$525,000 of sales in its first year of operations. The entries for Tum's related to the first year of operations of the franchise are summarized in Illustration 18B-3.

Interest Revenue		1,917

Tum's will make similar entries in subsequent years of the franchise agreement.

RECOGNITION OF FRANCHISE RIGHTS REVENUE OVER TIME

In the franchise example presented in Illustration 18B-1, Tum's transferred control of the franchise rights at a point in time—that is, when the franchise began operations and could benefit from control of the rights—with no further involvement by Tum's. In other situations, depending on the economic substance of the rights, the franchisor may be providing *access to the right* rather than transferring control of the franchise rights. In this case, **the franchise revenue is recognized over time**, rather than at a point in time. The franchise arrangement presented in Illustration 18B-4 provides an example of a franchise agreement with revenue recognized over time.

ILLUSTRATION 18B-4

Revenue Recognition over Time—Franchise

FRANCHISE REVENUE OVER TIME

Facts: Tech Solvers Corp. is a franchisor in the emerging technology consulting service business. Tech Solvers' stores perform a range of computing services (hardware/software installation, repairs, data backup, device syncing, and network solutions) on popular Apple and PC devices. Each franchise agreement gives a franchisee the right to open a Tech Solvers store and sell Tech Solvers' products and services in the area for 5 years. Under the contract, Tech Solvers also provides the franchisee with a number of services to support and enhance the franchise brand, including (a) advising and consulting on the operations of the store, (b) communicating new hardware and software developments and service techniques, (c) providing business and training manuals, and (d) advertising programs and training. As an almost entirely service operation (all parts and other supplies are purchased as needed by customers), Tech Solvers performs few upfront services to franchisees. Instead, the franchisee recruits service technicians, who are given Tech Solvers' training materials (online manuals and tutorials), which are updated for technology changes on a monthly basis at a minimum.

Tech Solvers enters into a franchise agreement on December 15, 2015, giving a franchisee the rights to operate a Tech Solvers franchise in eastern Bavaria for 5 years. Tech Solvers charges an initial franchise fee of €5,000 for the right to operate as a franchisee, payable upon signing the contract. Tech Solvers also receives ongoing royalty payments of 7% of the franchisee's annual sales (payable each January 15 of the following year).

Question: What are the performance obligations in this arrangement and the point in time at which the performance obligations will be satisfied and revenue will be recognized?

Solution: To identify the performance obligations, Tech Solvers must determine whether the promised rights and the ongoing franchisee technology support and training services are distinct.

- Rights to the trade name, market area, and proprietary know-how for 5 years are not individually distinct because each one is not sold separately and cannot be used with other goods or services that are readily available to the franchisee. In addition, these licensed rights have a close connection with the underlying Tech Solvers' intellectual property (its ability to keep its service and training materials up-to-date). Therefore, those combined rights and the ongoing training materials are a single performance obligation. Tech Solvers satisfies the performance obligation over time. That is, once the franchisee begins operating a Tech Solvers franchise, Tech Solvers is providing access to the rights and must continue to perform updates and services.
- Tech Solvers cannot recognize revenue for the royalty payments because it is not reasonably
 assured to be entitled to those revenue-based royalty amounts. That is, these payments represent
 variable consideration. Therefore, Tech Solvers recognizes revenue for the royalties when (or as)
 the uncertainty is resolved.

The entries for Tech Solvers related to the franchise are summarized in Illustration 18B-5.

Franchise agreement signed and receipt of upfront payment and note		
December 15, 20	15

To record payment received from franchisee		
January 15, 2017		
Cash	5,950	
Accounts Receivable	5,950	

ILLUSTRATION 18B-5

Franchise Entries— Revenue Recognized over Time

As indicated, Tech Solvers satisfies the performance obligation related to access to the franchise rights and training materials over time (in this case, on a straight-line basis). Continuing franchise fees are recognized when uncertainty related to the variable consideration is resolved.

In summary, analysis of the characteristics of the Tech Solvers' franchise indicates that it does not reflect a right that is transferred at a point in time. That is, Tech Solvers has a continuing obligation to provide updated materials and ongoing support, suggesting the control of the right has not been transferred to the franchisee. Thus, revenue from the franchise rights is recognized over time.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 18B

KEY TERMS

continuing franchise fees, 926 franchisee, 925 franchises, 925 franchisor, 925 initial franchise fee, 926 **Explain revenue recognition for franchises.** In a franchise arrangement, the franchisor satisfies its performance obligation for a franchise license when control of the franchise rights is transferred, generally when the franchisee begins operations of the franchise. In situations where the franchisor provides *access to the rights* rather than transferring control of the franchise rights, the franchise rights' revenue is recognized over time rather than at a point in time. Franchisors recognize continuing franchise fees as uncertainty related to the variable consideration is resolved, that is, over time.

QUESTIONS

- **1.** Explain the current environment regarding revenue recognition.
- **2.** What was viewed as a major criticism of IFRS as regards revenue recognition?
- 3. Describe the revenue recognition principle.
- 4. Identify the five steps in the revenue recognition process.
- **5.** Describe the critical factor in evaluating whether a performance obligation is satisfied.
- 6. When is revenue recognized in the following situations? (a) Revenue from selling products, (b) revenue from services performed, (c) revenue from permitting others to use company assets, and (d) revenue from disposing of assets other than products.
- Explain the importance of a contract in the revenue recognition process.
- 8. On October 10, 2015, Executor Co. entered into a contract with Belisle Inc. to transfer Executor's specialty products (sales value of €10,000, cost of €6,500) on December 15, 2015. Belisle agrees to make a payment of €5,000 upon delivery and signs a promissory note to pay the remaining balance on January 15, 2016. What entries does Executor make in 2015 on this contract? Ignore time value of money considerations.
- **9.** Explain the accounting for contract modifications.
- **10.** What is a performance obligation? Under what conditions does a performance obligation exist?
- **11.** When must multiple performance obligations in a revenue arrangement be accounted for separately?
- 12. Engelhart Implements Inc. sells tractors to area farmers. The price for each tractor includes GPS positioning service for 9 months (which facilitates field settings for planting and harvesting equipment). The GPS service is regularly sold on a standalone basis by Engelhart for a monthly fee. After the 9-month period, the consumer can renew the service on a fee basis. Does Engelhart have one or multiple performance obligations? Explain.
- **13.** What is the transaction price? What additional factors related to the transaction price must be considered in determining the transaction price?
- **14.** What are some examples of variable consideration? What are the two approaches for estimating variable consideration?
- **15.** Allee Corp. is evaluating a revenue arrangement to determine proper revenue recognition. The contract is for construction of 10 speedboats for a contract price of £400,000. The customer needs the boats in its showrooms by February 1, 2015, for the boat purchase season; the customer provides a bonus payment of £21,000 if all boats are delivered by the February 1 deadline. The bonus is reduced by

- £7,000 each week that the boats are delivered after the deadline until no bonus is paid if the boats are delivered after February 15, 2015. Allee frequently includes such bonus terms in it contracts and thus has good historical data for estimating the probabilities of completion at different dates. It estimates an equal probability (25%) for each full delivery outcome. What approach should Allee use to determine the transaction price for this contract? Explain.
- **16.** Refer to the information in Question 15. Assume that Allee has limited experience with a construction project on the same scale as the 10 speedboats. How does this affect the accounting for the variable consideration?
- 17. In measuring the transaction price, explain the accounting for (a) time value of money, and (b) non-cash consideration.
- **18.** What is the proper accounting for volume discounts on sales of products?
- 19. On what basis should the transaction price be allocated to various performance obligations? Identify the approaches for allocating the transaction price.
- 20. Fuhremann Co. is a full-service manufacturer of surveil-lance equipment. Customers can purchase any combination of equipment, installation services, and training as part of Fuhremann's security services. Thus, each of these performance obligations are separate with individual standalone values. Laplante Inc. purchased cameras, installation, and training at a total price of \$80,000. Estimated standalone fair values of the equipment, installation, and training are \$90,000, \$7,000, and \$3,000, respectively. How should the transaction price be allocated to the equipment, installation, and training?
- **21.** When does a company satisfy a performance obligation? Identify the indicators of satisfaction of a performance obligation.
- **22.** Under what conditions does a company recognize revenue over a period of time?
- **23.** How do companies recognize revenue from a performance obligation over time?
- **24.** Explain the accounting for sales with right of return.
- **25.** What are the reporting issues in a sale with a repurchase agreement?
- **26.** Explain a bill-and-hold sale. When is revenue recognized in these situations?
- **27.** Explain a principal-agent relationship and its significance to revenue recognition.
- **28.** What is the nature of a sale on consignment?
- **29.** What are the two types of warranties? Explain the accounting for each type.

- **30.** Kwon Cellular provides cell phones and 1 year of cell service to students for an upfront, non-refundable fee of HK\$300 and a usage fee of HK\$5 per month. Students may renew the service for each year they are on campus (on average, students renew their service one time). What amount of revenue should Kwon Cellular recognize in the first year of the contract?
- **31.** Describe the conditions when contract assets and liabilities are recognized and presented in financial statements.
- **32.** Explain the reporting for (a) costs to fulfill a contract and (b) collectibility.
- **33.** What qualitative and quantitative disclosures are required related to revenue recognition?
- *34. What are the two basic methods of accounting for long-term construction contracts? Indicate the circumstances that determine when one or the other of these methods should be used.

- *35. For what reasons should the percentage-of-completion method be used over the cost-recovery method whenever possible?
- *36. What methods are used in practice to determine the extent of progress toward completion? Identify some "input measures" and some "output measures" that might be used to determine the extent of progress.
- *37. What are the two types of losses that can become evident in accounting for long-term contracts? What is the nature of each type of loss? How is each type accounted for?
- *38. Why in franchise arrangements may it not be proper to recognize the entire franchise fee as revenue at the date of sale?
- *39. How should a franchisor account for continuing franchise fees and routine sales of equipment and supplies to franchisees?

BRIEF EXERCISES

- BE18-1 On May 10, 2015, Cosmo Co. enters into a contract to deliver a product to Greig Inc. on June 15, 2015. Greig agrees to pay the full contract price of €2,000 on July 15, 2015. The cost of the goods is €1,300. Cosmo delivers the product to Greig on June 15, 2015, and receives payment on July 15, 2015. Prepare the journal entries for Cosmo related to this contract.
- **BE18-2** Stengel Co. enters into a 3-year contract to perform maintenance services to Laplante Inc. Laplante promises to pay \$100,000 at the beginning of each year (the standalone selling price of the service at contract inception is \$100,000 per year). At the end of the second year, the contract is modified and the fee for third year of service, which reflects a reduced menu of maintenance services to be performed at Laplante locations, is reduced to \$80,000 (the standalone selling price of the services at the beginning of the third year is \$80,000 per year). Briefly describe the accounting for this contract modification.
- **BE18-3** Ismail Construction enters into a contract to design and build a hospital. Ismail is responsible for the overall management of the project and identifies various goods and services to be provided, including engineering, site clearance, foundation, procurement, construction of the structure, piping and wiring, installation of equipment, and finishing. Does Ismail have a single performance obligation to the customer in this revenue arrangement? Explain.
- BE18-4 Mauer Company licenses customer-relationship software to Hedges Inc. for 3 years. In addition to providing the software, Mauer promises to perform consulting services over the life of the license to maintain operability within Hedges' computer system. The total transaction price is £200,000. Based on standalone values, Mauer estimates the consulting services have a value of £75,000 and the software license has a value of £125,000. Upon installation of the software on July 1, 2015, Hedges pays £100,000; the contract balance is due on December 31, 2015. Identify the performance obligations and the revenue in 2015, assuming (a) the performance obligations are interdependent and (b) the performance obligations are not interdependent.
- **BE18-5** Nair Corp. enters into a contract with a customer to build an apartment building for \$1,000,000. The customer hopes to rent apartments at the beginning of the school year and provides a performance bonus of \$150,000 to be paid if the building is ready for rental beginning August 1, 2015. The bonus is reduced by \$50,000 each week that completion is delayed. Nair commonly includes these completion bonuses in its contracts and, based on prior experience, estimates the following completion outcomes:

Completed by	Probability
August 1, 2015	70%
August 8, 2015	20
August 15, 2015	5
After August 15, 2015	5

Determine the transaction price for this contract.

- **BE18-6** Referring to the revenue arrangement in BE18-5, determine the transaction price for the contract, assuming (a) Nair is only able to estimate whether the building can be completed by August 1, 2015, or not (Nair estimates that there is a 70% chance that the building will be completed by August 1, 2015), and (b) Nair has limited information with which to develop a reliable estimate of completion by the August 1, 2015, deadline.
- **BE18-7** On January 2, 2015, Adani Inc. sells goods (cost R\$6,000) to Geo Company in exchange for a zero-interest-bearing note with face value of R\$11,000, with payment due in 12 months. The fair value of the goods at the date of sale is R\$10,000. Prepare the journal entry to record this transaction on January 2, 2015. How much total revenue should be recognized on this sale in 2015?
- **BE18-8** On March 1, 2015, Parnevik Company sold goods to Goosen Inc. for €660,000 in exchange for a 5-year, zero-interest-bearing note in the face amount of €1,062,937. The goods have an inventory cost on Parnevik's books of €400,000. Prepare the journal entries for Parnevik on (a) March 1, 2015, and (b) December 31, 2015.
- **BE18-9** Telephone Sellers Inc. sells prepaid telephone cards to customers. Telephone Sellers then pays the telecommunications company, TeleExpress, for the actual use of its telephone lines related to the prepaid telephone cards. Assume that Telephone Sellers sells \$4,000 of prepaid cards in January 2015. It then pays TeleExpress based on usage, which turns out to be 50% in February, 30% in March, and 20% in April. The total payment by Telephone Sellers for TeleExpress lines over the 3 months is \$3,000. Indicate how much income Telephone Sellers should recognize in January, February, March, and April.
- **BE18-10** Manual Company sells goods to Nolan Company during 2015. It offers Nolan the following rebates based on total sales to Nolan. If total sales to Nolan are 10,000 units, it will grant a rebate of 2%. If it sells up to 20,000 units, it will grant a rebate of 4%. If it sells up to 30,000 units, it will grant a rebate of 6%. In the first quarter of the year, Manual sells 11,000 units to Nolan at a sales price of \$110,000. Manual, based on past experience, has sold over 40,000 units to Nolan, and these sales normally take place in the third quarter of the year. Prepare the journal entry that Manual should make to record the sale of the 11,000 units in the first quarter of the year.
- **BE18-11** Geraths Windows manufactures and sells custom storm windows for three-season porches. Geraths also provides installation service for the windows. The installation process does not involve changes in the windows, so this service can be performed by other vendors. Geraths enters into the following contract on July 1, 2015, with a local homeowner. The customer purchases windows for a price of £2,400 and chooses Geraths to do the installation. Geraths charges the same price for the windows irrespective of whether it does the installation or not. The price of the installation service is estimated to have a fair value of £600. The customer pays Geraths £2,000 (which equals the fair value of the windows, which have a cost of £1,100) upon delivery and the remaining balance upon installation of the windows. The windows are delivered on September 1, 2015, Geraths completes installation on October 15, 2015, and the customer pays the balance due. Prepare the journal entries for Geraths in 2015. (Round amounts to nearest pound.)
- **BE18-12** Refer to the revenue arrangement in BE18-11. Repeat the requirements, assuming (a) Geraths estimates the standalone value of the installation based on an estimated cost of £400 plus a margin of 20% on cost, and (b) given uncertainty of finding skilled labor, Geraths is unable to develop a reliable estimate for the fair value of the installation. (Round amounts to nearest pound.)
 - BE18-13 On July 10, 2015, Amodt Music sold CDs to retailers on account and recorded sales revenue of €700,000 (cost €560,000). Amodt grants the right to return CDs that do not sell in 3 months following delivery. Past experience indicates that the normal return rate is 15%. By October 11, 2015, retailers returned CDs to Amodt and were granted credit of €78,000. Prepare Amodt's journal entries to record (a) the sale on July 10, 2015, and (b) €78,000 of returns on October 11, 2015.
 - BE18-14 Kristin Company sells 300 units of its products for \$20 each to Logan Inc. for cash. Kristin allows Logan to return any unused product within 30 days and receive a full refund. The cost of each product is \$12. To determine the transaction price, Kristin decides that the approach that is most predictive of the amount of consideration to which it will be entitled is the probability-weighted amount. Using the probability-weighted amount, Kristin estimates that (1) 10 products will be returned and (2) the returned products are expected to be resold at a profit. Prepare the journal entry for Kristin at the time of the sale to Logan.
 - BE18-15 On June 1, 2015, Mills Company sells \$200,000 of shelving units to a local retailer, ShopBarb, which is planning to expand its stores in the area. Under the agreement, ShopBarb asks Mills to retain the shelving units at its factory until the new stores are ready for installation. Title passes to ShopBarb at the time the agreement is signed. The shelving units are delivered to the stores on September 1, 2015, and ShopBarb pays in full. Prepare the journal entries for this bill-and-hold arrangement (assuming that conditions for recognizing the sale have been met) for Mills on June 1 and September 1, 2015. The cost of the shelving units to Mills is \$110,000.

- **BE18-16** Travel Inc. sells tickets for a Caribbean cruise on ShipAway Cruise Lines to Carmel Company employees. The total cruise package price to Carmel Company employees is R\$70,000. Travel Inc. receives a commission of 6% of the total price. Travel Inc. therefore remits R\$65,800 to ShipAway. Prepare the journal entry to record the remittance and revenue recognized by Travel Inc. on this transaction.
- **BE18-17** Jansen Corporation shipped \$20,000 of merchandise on consignment to Gooch Company. Jansen paid freight costs of \$2,000. Gooch Company paid \$500 for local advertising, which is reimbursable from Jansen. By year-end, 60% of the merchandise had been sold for \$21,500. Gooch notified Jansen, retained a 10% commission, and remitted the cash due to Jansen. Prepare Jansen's journal entry when the cash is received.
- BE18-18 Talarczyk Company sold 10,000 Super-Spreaders on July 1, 2015, at a total price of €1,000,000, with a warranty guarantee that the product was free of any defects. The cost of the spreaders sold is €550,000. The assurance warranties extend for a 2-year period and are estimated to cost €40,000. Talarczyk also sold extended warranties (service-type warranties) related to 2,000 spreaders for 2 years beyond the 2-year period for €12,000. Prepare the journal entries that Talarczyk should make in 2015 related to the sale and the related warranties.
- 9 BE18-19 On May 1, 2015, Mount Company enters into a contract to transfer a product to Eric Company on September 30, 2015. It is agreed that Eric will pay the full price of \$25,000 in advance on June 15, 2015. Eric pays on June 15, 2015, and Mount delivers the product on September 30, 2015. Prepare the journal entries required for Mount in 2015.
- **BE18-20** Nate Beggs signs a 1-year contract with BlueBox Video. The terms of the contract are that Nate is required to pay a non-refundable initiation fee of \$100 and an annual membership fee of \$5 per month. BlueBox determines that its customers, on average, renew their annual membership three times after the first year before terminating their membership. What amount of revenue should BlueBox recognize in its first year?
- *BE18-21 Turner, Inc. began work on a £7,000,000 contract in 2015 to construct an office building. During 2015, Turner, Inc. incurred costs of £1,700,000, billed its customers for £1,200,000, and collected £960,000. At December 31, 2015, the estimated future costs to complete the project total £3,300,000. Prepare Turner's 2015 journal entries using the percentage-of-completion method.
- *BE18-22 Guillen, Inc. began work on a \$7,000,000 contract in 2015 to construct an office building. Guillen uses the cost-recovery method. At December 31, 2015, the balances in certain accounts were Construction in Process \$1,715,000, Accounts Receivable \$240,000, and Billings on Construction in Process \$1,000,000. Indicate how these accounts would be reported in Guillen's December 31, 2015, statement of financial position.
- **12** *BE18-23 Archer Construction Company began work on a \$420,000 construction contract in 2015. During 2015, Archer incurred costs of \$278,000, billed its customer for \$215,000, and collected \$175,000. At December 31, 2015, the estimated future costs to complete the project total \$162,000. Prepare Archer's journal entry to record profit or loss, if any, using (a) the percentage-of-completion method and (b) the cost-recovery method.
- *BE18-24 Frozen Delight, Inc. charges an initial franchise fee of \$75,000 for the right to operate as a franchisee of Frozen Delight. Of this amount, \$25,000 is collected immediately. The remainder is collected in four equal annual installments of \$12,500 each. These installments have a present value of \$41,402. As part of the total franchise fee, Frozen Delight also provides training (with a fair value of \$2,000) to help franchisees get the store ready to open. The franchise agreement is signed on April 1, 2015, training is completed, and the store opens on July 1, 2015. Prepare the journal entries required by Frozen Delight in 2015.

EXERCISES

E18-1 (Sales with Discounts) Jupiter Company sells goods to Danone Inc. on account on January 1, 2015. The goods have a sales price of €610,000 (cost €500,000). The terms of the sale are net 30. If Danone pays within 5 days, it receives a cash discount of €10,000. Past history indicates the cash discount will be taken.

- (a) Prepare the journal entries for Jupiter for January 1, 2015.
- **(b)** Prepare the journal entries for Jupiter for January 31, 2015, assuming Danone does not make payment until January 31, 2015.

- **3 5 E18-2** (**Transaction Price**) Presented below are three revenue recognition situations.
 - (a) Grupo sells goods to MTN for \$1,000,000, payment due at delivery.
 - **(b)** Grupo sells goods on account to Grifols for \$800,000, payment due in 30 days.
 - (c) Grupo sells goods to Magnus for \$500,000, payment due in two installments: the first installment payable in 18 months and the second payment due 6 months later. The present value of the future payments is \$464,000.

Instructions

Indicate the transaction price for each of these transactions and when revenue will be recognized.

E18-3 (Contract Modification) In September 2015, Gaertner Corp. commits to selling 150 of its iPhone-compatible docking stations to Better Buy Co. for R\$15,000 (R\$100 per product). The stations are delivered to Better Buy over the next 6 months. After 90 stations are delivered, the contract is modified and Gaertner promises to deliver 45 more products for an additional R\$4,275 (R\$95 per station). All sales are cash on delivery.

Instructions

- (a) Prepare the journal entry for Gaertner for the sale of the first 90 stations. The cost of each station is R\$54.
- **(b)** Prepare the journal entry for the sale of 10 more stations after the contract modification, assuming that the price for the additional stations reflects the standalone selling price at the time of the contract modification. In addition, the additional stations are distinct from the original products as Gaertner regularly sells the products separately.
- (c) Prepare the journal entry for the sale of 10 more stations (as in (b)), assuming that the pricing for the additional products *does not* reflect the standalone selling price of the additional products and the prospective method is used.
- 3 E18-4 (Contract Modification) Tyler Financial Services performs bookkeeping and tax-reporting services to startup companies in the Oconomowoc area. On January 1, 2015, Tyler entered into a 3-year service contract with Walleye Tech. Walleye promises to pay \$10,000 at the beginning of each year, which at contract inception is the standalone selling price for these services. At the end of the second year, the contract is modified and the fee for the third year of services is reduced to \$8,000. In addition, Walleye agrees to pay an additional \$20,000 at the beginning of the third year to cover the contract for 3 additional years (i.e., 4 years remain after the modification). The extended contract services are similar to those provided in the first 2 years of the contract.

Instructions

- (a) Prepare the journal entries for Tyler in 2015 and 2016 related to this service contract.
- **(b)** Prepare the journal entries for Tyler in 2017 related to the modified service contract, assuming a prospective approach.
- (c) Repeat the requirements for part (b), assuming Tyler and Walleye agree on a revised set of services (fewer bookkeeping services but more tax services) in the extended contract period and the modification results in a separate performance obligation.
- **E18-5** (Variable Consideration) Bai Biotech enters into a licensing agreement with Pang Pharmaceutical for a drug under development. Bai will receive a payment of ¥10,000,000 if the drug receives regulatory approval. Based on prior experience in the drug-approval process, Bai determines it is 90% likely that the drug will gain approval and a 10% chance of denial.

Instructions

- (a) Determine the transaction price of the arrangement for Bai Biotech.
- **(b)** Assuming that regulatory approval was granted on December 20, 2015, and that Bai received the payment from Pang on January 15, 2016, prepare the journal entries for Bai.
- E18-6 (Trailing Commission) Aaron's Agency sells an insurance policy offered by Capital Insurance Company for a commission of \$100. In addition, Aaron will receive an additional commission of \$10 each year for as long as the policyholder does not cancel the policy. After selling the policy, Aaron does not have any remaining performance obligations. Based on Aaron's significant experience with these types of policies, it estimates that policyholders on average renew the policy for 4.5 years. It has no evidence to suggest that previous policyholder behavior will change.

- (a) Determine the transaction price of the arrangement for Aaron, assuming 100 policies are sold.
- **(b)** Prepare the journal entries, assuming that the 100 policies are sold in January 2015 and that Aaron receives commissions from Capital.

E18-7 (Sales with Discounts) On June 3, 2015, Hunt Company sold to Ann Mount merchandise having a sales price of £8,000 (cost £5,600) with terms of 2/10, n/60, f.o.b. shipping point. Hunt estimates that merchandise with a sales value of £800 will be returned. An invoice totaling £120, terms n/30, was received by Mount on June 8 from Olympic Transport Service for the freight cost. Upon receipt of the goods, on June 5, Mount notified Hunt that £300 of merchandise contained flaws. The same day, Hunt issued a credit memo covering the defective merchandise and asked that it be returned at Hunt's expense. Hunt estimates the returned items to have a fair value of £120. The freight on the returned merchandise was £24, paid by Hunt on June 7. On June 12, the company received a check for the balance due from Mount.

Instructions

- (a) Prepare journal entries for Hunt Company to record all the events noted above assuming sales and receivables are entered at gross selling price.
- (b) Prepare the journal entry assuming that Ann Mount did not remit payment until August 5.
- E18-8 (Sales with Discounts) Taylor Marina has 300 available slips that rent for €800 per season. Payments must be made in full at the start of the boating season, April 1, 2015. The boating season ends October 31, and the marina has a December 31 year-end. Slips for future seasons may be reserved if paid for by December 31, 2015. Under a new policy, if payment for 2016 season slips is made by December 31, 2015, a 5% discount is allowed. If payment for 2017 season slips is made by December 31, 2015, renters get a 20% discount (this promotion hopefully will provide cash flow for major dock repairs).

On December 31, 2014, all 300 slips for the 2015 season were rented at full price. On December 31, 2015, 200 slips were reserved and paid for the 2016 boating season, and 60 slips were reserved and paid for the 2017 boating season.

Instructions

- (a) Prepare the appropriate journal entries for December 31, 2015, and December 31, 2016.
- **(b)** Assume the marina operator is unsophisticated in business. Explain the managerial significance of the above accounting to this person.
- **E18-9 (Allocate Transaction Price)** Sanchez Co. enters into a contract to sell Product A and Product B on January 2, 2015, for an upfront cash payment of R\$150,000. Product A will be delivered in 2 years (January 2, 2017) and Product B will be delivered in 5 years (January 2, 2020). Sanchez Co. allocates the R\$150,000 to Products A and B on a relative standalone selling price basis as follows.

	Standalone	Percent	Allocated
	Selling Prices	Allocated	Amounts
Product A	R\$ 40,000	25%	R\$ 37,500
Product B	120,000	75%	112,500
	R\$160,000		R\$150,000

Sanchez Co. uses an interest rate of 6%, which is its incremental borrowing rate.

Instructions

- (a) Prepare the journal entries necessary on January 2, 2015, and December 31, 2015.
- **(b)** Prepare the journal entries necessary on December 31, 2016.
- (c) Prepare the journal entries necessary on January 2, 2017.
- **E18-10** (Allocate Transaction Price) Shaw Company sells goods that cost \$300,000 to Ricard Company for \$410,000 on January 2, 2015. The sales price includes an installation fee, which is valued at \$40,000. The fair value of the goods is \$370,000. The installation is considered a separate performance obligation and is expected to take 6 months to complete.

- (a) Prepare the journal entries (if any) to record the sale on January 2, 2015.
- **(b)** Shaw prepares an income statement for the first quarter of 2015, ending on March 31, 2015 (installation was completed on June 18, 2015). How much revenue should Shaw recognize related to its sale to Ricard?
- **E18-11 (Allocate Transaction Price)** Crankshaft Company manufactures equipment. Crankshaft's products range from simple automated machinery to complex systems containing numerous components. Unit selling prices range from \$200,000 to \$1,500,000 and are quoted inclusive of installation. The installation process does not involve changes to the features of the equipment and does not require proprietary information about the equipment in order for the installed equipment to perform to specifications. Crankshaft has the following arrangement with Winkerbean Inc.

- Winkerbean purchases equipment from Crankshaft for a price of \$1,000,000 and contracts with Crankshaft to install the equipment. Crankshaft charges the same price for the equipment irrespective of whether it does the installation or not. Using market data, Crankshaft determines installation service is estimated to have a fair value of \$50,000. The cost of the equipment is \$600,000.
- Winkerbean is obligated to pay Crankshaft the \$1,000,000 upon the delivery and installation of the equipment.

Crankshaft delivers the equipment on June 1, 2015, and completes the installation of the equipment on September 30, 2015. The equipment has a useful life of 10 years. Assume that the equipment and the installation are two distinct performance obligations which should be accounted for separately.

Instructions

- (a) How should the transaction price of \$1,000,000 be allocated among the service obligations?
- **(b)** Prepare the journal entries for Crankshaft for this revenue arrangement in 2015 assuming Crankshaft receives payment when installation is completed.
- **6 E18-12** (Allocate Transaction Price) Refer to the revenue arrangement in E18-11.

Instructions

Repeat requirements (a) and (b) assuming Crankshaft does not have market data with which to determine the standalone selling price of the installation services. As a result, an expected cost plus margin approach is used. The cost of installation is \$36,000; Crankshaft prices these services with a 25% margin relative to cost.

E18-13 (Allocate Transaction Price) Appliance Center is an experienced home appliance dealer. Appliance Center also offers a number of services together with the home appliances that it sells. Assume that Appliance Center sells ovens on a standalone basis. Appliance Center also sells installation services and maintenance services for ovens. However, Appliance Center does not offer installation or maintenance services to customers who buy ovens from other vendors. Pricing for ovens is as follows.

Oven only	€ 800
Oven with installation service	850
Oven with maintenance services	975
Oven with installation and maintenance services	1,000

In each instance in which maintenance services are provided, the maintenance service is separately priced within the arrangement at €175. Additionally, the incremental amount charged by Appliance Center for installation approximates the amount charged by independent third parties. Ovens are sold subject to a general right of return. If a customer purchases an oven with installation and/or maintenance services, in the event Appliance Center does not complete the service satisfactorily, the customer is only entitled to a refund of the portion of the fee that exceeds €800.

Instructions

- (a) Assume that a customer purchases an oven with both installation and maintenance services for €1,000. Based on its experience, Appliance Center believes that it is probable that the installation of the equipment will be performed satisfactorily to the customer. Assume that the maintenance services are priced separately. Identify the separate performance obligations related to the Appliance Center revenue arrangement.
- **(b)** Indicate the amount of revenue that should be allocated to the oven, the installation, and to the maintenance contract.
- **E18-14 (Sales with Returns)** Organic Growth Company is presently testing a number of new agricultural seeds that it has recently harvested. To stimulate interest, it has decided to grant to five of its largest customers the unconditional right of return to these products if not fully satisfied. The right of return extends for 4 months. Organic Growth sells these seeds on account for £1,500,000 (cost £800,000) on January 2, 2015. Customers are required to pay the full amount due by March 15, 2015.

- **(a)** Prepare the journal entry for Organic Growth at January 2, 2015, assuming Organic Growth estimates returns of 20% based on prior experience.
- **(b)** Assume that one customer returns the seeds on March 1, 2015, due to unsatisfactory performance. Prepare the journal entry to record this transaction, assuming this customer purchased £100,000 of seeds from Organic Growth.
- **(c)** Briefly describe the accounting for these sales if Organic Growth is unable to reliably estimate returns.

E18-15 (Sales with Returns) Uddin Publishing Co. publishes college textbooks that are sold to bookstores on the following terms. Each title has a fixed wholesale price, terms f.o.b. shipping point, and payment is due 60 days after shipment. The retailer may return a maximum of 30% of an order at the retailer's expense. Sales are made only to retailers who have good credit ratings. Past experience indicates that the normal return rate is 12%, and the average collection period is 72 days.

Instructions

- (a) Identify alternative revenue recognition criteria that Uddin could employ concerning textbook sales.
- **(b)** Briefly discuss the reasoning for your answers in (a) above.
- (c) On July 1, 2015, Uddin shipped books invoiced at €15,000,000 (cost €12,000,000). Prepare the journal entry to record this transaction.
- (d) On October 3, 2015, €1.5 million of the invoiced July sales were returned according to the return policy, and the remaining €13.5 million was paid. Prepare the journal entries for the return and payment.
- **E18-16** (Sales with Repurchase) Cramer Corp. sells idle machinery to Enyart Company on July 1, 2015, for \$40,000. Cramer agrees to repurchase this equipment from Enyart on June 30, 2016, for a price of \$42,400 (an imputed interest rate of 6%).

Instructions

- (a) Prepare the journal entry for Cramer for the transfer of the asset to Enyart on July 1, 2015.
- **(b)** Prepare any other necessary journal entries for Cramer in 2015.
- (c) Prepare the journal entry for Cramer when the machinery is repurchased on June 30, 2016.
- **E18-17 (Repurchase Agreement)** Zagat Inc. enters into an agreement on March 1, 2015, to sell Werner Metal Company aluminum ingots in 2 months. As part of the agreement, Zagat also agrees to repurchase the ingots in 60 days at the original sales price of \$200,000 plus 2%. (Because Zagat has an unconditional obligation to repurchase the ingots at an amount greater than the original sales price, the transaction is treated as a financing.)

Instructions

- (a) Prepare the journal entry necessary on March 1, 2015.
- **(b)** Prepare the journal entry for the repurchase of the ingots on May 1, 2015.
- E18-18 (Bill and Hold) Wood-Mode Company is involved in the design, manufacture, and installation of various types of wood products for large construction projects. Wood-Mode recently completed a large contract for Stadium Inc., which consisted of building 35 different types of concession counters for a new soccer arena under construction. The terms of the contract are that upon completion of the counters, Stadium would pay \$2,000,000. Unfortunately, due to the depressed economy, the completion of the new soccer arena is now delayed. Stadium has therefore asked Wood-Mode to hold the counters for 2 months at its manufacturing plant until the arena is completed. Stadium acknowledges in writing that it ordered the counters and that they now have ownership. The time that Wood-Mode Company must hold the counters is totally dependent on when the arena is completed. Because Wood-Mode has not received additional progress payments for the arena due to the delay, Stadium has provided a deposit of \$300,000.

Instructions

- (a) Explain this type of revenue recognition transaction.
- **(b)** What factors should be considered in determining when to recognize revenue in this transaction?
- (c) Prepare the journal entry(ies) that Wood-Mode should make, assuming it signed a valid sales contract to sell the counters and received at the time the \$300,000 deposit.
- **E18-19** (Consignment Sales) On May 3, 2015, Eisler Company consigned 80 freezers, costing €500 each, to Remmers Company. The cost of shipping the freezers amounted to €840 and was paid by Eisler Company. On December 30, 2015, a report was received from the consignee, indicating that 40 freezers had been sold for €750 each. Remittance was made by the consignee for the amount due after deducting a commission of 6%, advertising of €200, and total installation costs of €320 on the freezers sold.

- (a) Compute the inventory value of the units unsold in the hands of the consignee.
- **(b)** Compute the profit for the consignor for the units sold.
- **(c)** Compute the amount of cash that will be remitted by the consignee.
- **E18-20 (Warranty Arrangement)** On December 31, 2015, Grando Company sells production equipment to Feliz Inc. for R\$50,000. Grando includes a 1-year assurance warranty service with the sale of all its equipment. The customer receives and pays for the equipment on December 31, 2015. Grando estimates the prices to be R\$48,800 for the equipment and R\$1,200 for the cost of the warranty.

Instructions

- (a) Prepare the journal entry to record this transaction on December 31, 2015.
- (b) Repeat the requirements for (a), assuming that in addition to the assurance warranty, Grando sold an extended warranty (service-type warranty) for an additional 2 years (2017–2018) for R\$800.
- E18-21 (Warranties) Celic Inc. manufactures and sells computers that include an assurance-type warranty for the first 90 days. Celic offers an optional extended coverage plan under which it will repair or replace any defective part for 3 years from the expiration of the assurance-type warranty. Because the optional extended coverage plan is sold separately, Celic determines that the 3 years of extended coverage represent a separate performance obligation. The total transaction price for the sale of a computer and the extended warranty is \$3,600 on October 1, 2015, and Celic determines the standalone selling price of each is \$3,200 and \$400, respectively. Further, Celic estimates, based on historical experience, it will incur \$200 in costs to repair defects that arise within the 90-day coverage period for the assurance-type warranty. The cost of the equipment is \$1,440.

Instructions

- (a) Prepare the journal entry(ies) to record the sale of the computer, cost of goods sold, and liabilities related to the warranties.
- **(b)** Briefly describe the accounting for the service-type warranty after the 90-day assurance-type warranty period.
- E18-22 (Existence of a Contract) On January 1, 2015, Gordon Co. enters into a contract to sell a customer a wiring base and shelving unit that sits on the base in exchange for \$3,000. The contract requires delivery of the base first but states that payment for the base will not be made until the shelving unit is delivered. Gordon identifies two performance obligations and allocates \$1,200 of the transaction price to the wiring base and the remainder to the shelving unit. The cost of the wiring base is \$700; the shelves have a cost of \$320.

Instructions

- (a) Prepare the journal entry on January 1, 2015, for Gordon.
- **(b)** Prepare the journal entry on February 5, 2015, for Gordon when the wiring base is delivered to the customer.
- (c) Prepare the journal entry on February 25, 2015, for Gordon when the shelving unit is delivered to the customer and Gordon receives full payment.
- **E18-23** (Existence of a Contract) On May 1, 2015, Richardson Inc. entered into a contract to deliver one of its specialty mowers to Kickapoo Landscaping Co. The contract requires Kickapoo to pay the contract price of \$900 in advance on May 15, 2015. Kickapoo pays Richardson on May 15, 2015, and Richardson delivers the mower (with cost of \$575) on May 31, 2015.

Instructions

- (a) Prepare the journal entry on May 1, 2015, for Richardson.
- **(b)** Prepare the journal entry on May 15, 2015, for Richardson.
- (c) Prepare the journal entry on May 31, 2015, for Richardson.
- **E18-24 (Contract Costs)** Rex's Reclaimers entered into a contract with Dan's Demolition to manage the processing of recycled materials on Dan's various demolition projects. Services for the 3-year contract include collecting, sorting, and transporting reclaimed materials to recycling centers or contractors who will reuse them. Rex's incurs selling commission costs of £2,000 to obtain the contract. Before performing the services, Rex's also designs and builds specialty receptacles and loading equipment that interfaces with Dan's demolition equipment at a cost of £27,000. These receptacles and equipment are retained by Rex's. Dan's promises to pay a fixed fee of £12,000 per year, payable every 6 months for the services under the contract. Rex's incurs the following costs: design services for the receptacles to interface with Dan's equipment £3,000, loading equipment controllers £6,000, and special testing and government inspection fees £2,000 (some of Dan's projects are on government property).

Instructions

- (a) Determine the costs that should be capitalized as part of Rex's Reclaimers revenue arrangement with Dan's Demolition.
- **(b)** Dan's also expects to incur general and administrative costs related to this contract, as well as costs of wasted materials and labor that likely cannot be factored into the contract price. Can these costs be capitalized? Explain.
- **E18-25** (Contract Costs, Collectibility) Refer to the information in E18-24.

Instructions

(a) Does the accounting for capitalized costs change if the contract is for 1 year rather than 3 years? Explain.

- **(b)** Dan's Demolition is a startup company. As a result, there is more than insignificant uncertainty about Dan's ability to make the 6-month payments on time. Does this uncertainty affect the amount of revenue to be recognized under the contract? Explain.
- *E18-26 (Recognition of Profit on Long-Term Contracts) During 2015, Nilsen Company started a construction job with a contract price of €1,600,000. The job was completed in 2017. The following information is available.

	2015	2016	2017
Costs incurred to date	€400,000	€825,000	€1,070,000
Estimated costs to complete	600,000	275,000	-0-
Billings to date	300,000	900,000	1,600,000
Collections to date	270,000	810,000	1,425,000

Instructions

- (a) Compute the amount of gross profit to be recognized each year, assuming the percentage-ofcompletion method is used.
- **(b)** Prepare all necessary journal entries for 2016.
- (c) Compute the amount of gross profit to be recognized each year, assuming the cost-recovery method is used.
- *E18-27 (Analysis of Percentage-of-Completion Financial Statements) In 2015, Steinrotter Construction Corp. began construction work under a 3-year contract. The contract price was €1,000,000. Steinrotter uses the percentage-of-completion method for financial accounting purposes. The income to be recognized each year is based on the proportion of cost incurred to total estimated costs for completing the contract. The financial statement presentations relating to this contract at December 31, 2015, are shown below.

Statement of Financial Position	
Construction in process	€65,000
Less: Billings	61,500
Costs and recognized profit in excess of billings	3,500
Accounts receivable	18,000
Income Statement	
Income (before tax) on the contract recognized in 2015	€19,500

Instructions

- (a) How much cash was collected in 2015 on this contract?
- **(b)** What was the initial estimated total income before tax on this contract?
- *E18-28 (Gross Profit on Uncompleted Contract) On April 1, 2015, Dougherty Inc. entered into a cost plus fixed fee contract to construct an electric generator for Altom Corporation. At the contract date, Dougherty estimated that it would take 2 years to complete the project at a cost of \$2,000,000. The fixed fee stipulated in the contract is \$450,000. Dougherty appropriately accounts for this contract under the percentage-of-completion method. During 2015, Dougherty incurred costs of \$800,000 related to the project. The estimated cost at December 31, 2015, to complete the contract is \$1,200,000. Altom was billed \$600,000 under the contract.

Instructions

Prepare a schedule to compute the amount of gross profit to be recognized by Dougherty under the contract for the year ended December 31, 2015. Show supporting computations in good form.

*E18-29 (Recognition of Revenue on Long-Term Contract and Entries) Hamilton Construction Company uses the percentage-of-completion method of accounting. In 2015, Hamilton began work under contract #E2-D2, which provided for a contract price of £2,200,000. Other details follow:

	2015	2016
Costs incurred during the year	£640,000	£1,425,000
Estimated costs to complete, as of December 31	960,000	-0-
Billings during the year	420,000	1,680,000
Collections during the year	350,000	1,500,000

Instructions

- (a) What portion of the total contract price would be recognized as revenue in 2015? In 2016?
- **(b)** Assuming the same facts as those above except that Hamilton uses the cost-recovery method of accounting, what portion of the total contract price would be recognized as gross profit in 2016?
- (c) Prepare a complete set of journal entries for 2015 (using the percentage-of-completion method).
- 10 *E18-30 (Recognition of Profit and Statement of Financial Position Amounts for Long-Term Contracts) Yanmei Construction Company began operations on January 1, 2015. During the year, Yanmei Construction entered into a contract with Lundquist Corp. to construct a manufacturing facility. At that time, Yanmei estimated that it would take 5 years to complete the facility at a total cost of ¥4,500,000. The total contract price for construction of the facility is ¥6,000,000. During the year, Yanmei incurred ¥1,185,800 in construction costs related to the construction project. The estimated cost to complete the contract is

¥4,204,200. Lundquist Corp. was billed and paid 25% of the contract price.

Instructions

Prepare schedules to compute the amount of gross profit to be recognized for the year ended December 31, 2015, and the amount to be shown as "costs and recognized profit in excess of billings" or "billings in excess of costs and recognized profit" at December 31, 2015, under each of the following methods. Show supporting computations in good form.

- (a) Cost-recovery method.
- **(b)** Percentage-of-completion method.
- *E18-31 (Franchise Entries) Pacific Crossburgers Inc. charges an initial franchise fee of \$70,000. Upon the signing of the agreement (which covers 3 years), a payment of \$28,000 is due. Thereafter, three annual payments of \$14,000 are required. The credit rating of the franchisee is such that it would have to pay interest at 10% to borrow money. The franchise agreement is signed on May 1, 2015, and the franchise commences operation on July 1, 2015.

Instructions

Prepare the journal entries in 2015 for the franchisor under the following assumptions. (Round to the nearest dollar.)

- (a) No future services are required by the franchisor once the franchise starts operations.
- (b) The franchisor has substantial services to perform, once the franchise begins operations, to maintain the value of the franchise.
- (c) The total franchise fee includes training services (with a value of \$2,400) for the period leading up to the franchise opening and for 2 months following opening.
- *E18-32 (Franchise Fee, Initial Down Payment) On January 1, 2015, Lesley Benjamin signed an agreement (covering 5 years) to operate as a franchisee of Campbell Inc. for an initial franchise fee of €50,000. The amount of €10,000 was paid when the agreement was signed, and the balance is payable in five annual payments of €8,000 each, beginning January 1, 2016. The agreement provides that the down payment is non-refundable and that no future services are required of the franchisor once the franchise commences operations on April 1, 2015. Lesley Benjamin's credit rating indicates that she can borrow money at 11% for a loan of this type.

Instructions

- (a) Prepare journal entries for Campbell for 2015-related revenue for this franchise arrangement.
- (b) Prepare journal entries for Campbell for 2015-related revenue for this franchise arrangement, assuming that in addition to the franchise rights, Campbell also provides 1 year of operational consulting and training services, beginning on the signing date. These services have a value of €3,600.
- (c) Repeat the requirements for part (a), assuming that Campbell must provide services to Benjamin throughout the franchise period to maintain the franchise value.

PROBLEMS

4 5 P18-1 (Allocate Transaction Price, Upfront Fees) Tablet Tailors sells tablet PCs combined with Internet service (Tablet Bundle A) that permits the tablet to connect to the Internet anywhere (set up a Wi-Fi hot spot). The price for the tablet and a 4-year Internet connection service contract is €500. The standalone selling price of the tablet is €250 (cost to Tablet Tailors €175). Tablet Tailors sells the Internet access service independently for an upfront payment of €100, plus €72 payments at the beginning of years 2–4 of the

contract. With an imputed interest rate of 8%, the standalone value of the service is €286. On January 2, 2015, Tablet Tailors signed 100 contracts, receiving a total of €31,445 in cash (full payment of €500 each in cash, less the upfront fee for Internet service, less the present value of the note for the future service plan payments), delivered tablets, and started service for 100 tablet packages.

Instructions

- (a) Prepare any journal entries to record this revenue arrangement on January 2, 2015.
- **(b)** Prepare any journal entries to record this revenue arrangement on December 31, 2016.
- (c) Prepare any journal entries to record this revenue arrangement on December 31, 2017.
- (d) Repeat the requirements for part (a), assuming that Tablet Tailors has no reliable data with which to estimate the standalone selling price for the Internet service.
- **3 4 P18-2** (Modification of Contract, Allocate Transaction Price) Refer to the revenue arrangement in P18-1.
- Instructions

Consider the following information and respond to the requirements indicated.

- (a) In response to competitive pressures for the Internet access service for Bundle A, at the end of the second year of the 4-year contract, Tablet Tailors offers a modified contract and extension incentive. The extended contract services are similar to those provided in the first 2 years of the contract. Signing the extension and paying €120 (which equals the fair value of the revised service package) extends access for 2 more years of Internet connection. Assuming 40 Bundle A customers sign up for this offer, prepare the journal entries when the contract is signed in January 2, 2017, and at December 31, 2017, for those contracts. Assume the modification does not result in a separate performance obligation.
- (b) Tablet Tailors offers a second package (Tablet Bundle B) which includes a service plan for the tablet PC covering the 4-year contract period. That product bundle sells for €600. Tablet Tailors provides the tablet service as a separate product with a standalone selling price of €160. Prepare any journal entries to record the sale of 200 of these packages on January 2, 2015.
- P18-3 (Allocate Transaction Price, Discounts, Time Value) Grill Master Company sells total outdoor
 grilling solutions, providing gas and charcoal grills, accessories, and installation services for custom patio grilling stations.

Instructions

Respond to the requirements related to the following independent revenue arrangements for Grill Master products and services.

- (a) Grill Master offers contract GM205, which is comprised of a free-standing gas grill for small patio use plus installation to a customer's gas line for a total price £800. On a standalone basis, the grill sells for £700 (cost £425), and Grill Master estimates that the fair value of the installation service (based on cost-plus estimation) is £150. Grill Master signed 10 GM205 contracts on April 20, 2015, and customers paid the contract price in cash. The grills were delivered and installed on May 15, 2015. Prepare journal entries for Grill Master for GM205 in April and May 2015.
- (b) A local shire is planning major renovations in its parks during 2015 and enters into a contract with Grill Master to purchase 400 durable, easy maintenance, standard charcoal grills during 2015. The grills are priced at £200 each (with a cost of £160 each), and Grill Master provides a 6% volume discount if the shire purchases at least 300 grills during 2015. On April 17, 2015, Grill Master delivered and received payment for 280 grills. Based on prior experience with the shire's renovation projects, the delivery of this many grills makes it certain that the shire will meet the discount threshold. Prepare the journal entries for Grill Master for grills sold on April 17, 2015.
- (c) Grill Master sells its specialty combination gas/wood-fired grills to local restaurants. Each grill is sold for £1,000 (cost £550) on credit with terms 3/30, net/90. Prepare the journal entries for the sale of 20 grills on September 1, 2015, and upon payment, assuming the customer paid on (1) September 25, 2015, and (2) October 15, 2015. Assume the company records sales net.
- (d) On October 1, 2015, Grill Master sold one of its super deluxe combination gas/charcoal grills to a local builder. The builder plans to install it in one of its "Parade of Homes" houses. Grill Master accepted a 3-year, zero-interest-bearing note with face amount of £5,324. The grill has an inventory cost of £2,700. An interest rate of 10% is an appropriate market rate of interest for this customer. Prepare the journal entries on October 1, 2015, and December 31, 2015.
- P18-4 (Allocate Transaction Price, Discounts, Time Value) Economy Appliance Co. manufactures low-price, no-frills appliances that are in great demand for rental units. Pricing and cost information on Economy's main products are as shown on page 943.

	Standalone
Item	Selling Price (Cost)
Refrigerator	\$500 (\$260)
Range	560 (\$275)
Stackable washer/dryer unit	700 (\$400)

Customers can contract to purchase either individually at the stated prices or a three-item bundle with a price of \$1,800. The bundle price includes delivery and installation. Economy provides delivery and installation as a standalone service for any of its products for a price of \$100.

Instructions

Respond to the requirements related to the following independent revenue arrangements for Economy Appliance Co.

- (a) On June 1, 2015, Economy sold 100 washer/dryer units without installation to Laplante Rentals for \$70,000. Laplante is a newer customer and is unsure how this product will work in its older rental units. Economy offers a 60-day return privilege and estimates, based on prior experience with sales on this product, 4% of the units will be returned. Prepare the journal entries for the sale and related cost of goods sold on June 1, 2015.
- (b) YellowCard Property Managers operates upscale student apartment buildings. On May 1, 2015, Economy signs a contract with YellowCard for 300 appliance bundles to be delivered and installed in one of its new buildings. YellowCard pays 20% cash at contract signing and will pay the balance upon delivery and installation no later than August 1, 2015. Prepare journal entries for Economy on (1) May 1, 2015, and (2) August 1, 2015, when all appliances are delivered and installed.
- (c) Refer to the arrangement in part (b). It would help YellowCard secure lease agreements with students if the delivery and installation of the appliance bundles can be completed by July 1, 2015. YellowCard offers a 10% bonus payment if Economy can complete delivery and installation by July 1, 2015. Economy estimates its chances of meeting the bonus deadline to be 60%, based on a number of prior contracts of similar scale. Repeat the requirement for part (b), given this bonus provision. Assume installation is completed by July 1, 2015.
- (d) Epic Rentals would like to take advantage of the bundle price for its 400-unit project. On February 1, 2015, Economy signs a contract with Epic for delivery and installation of 400 bundles. Under the agreement, Economy will hold the appliance bundles in its warehouses until the new rental units are ready for installation. Epic pays 10% cash at contract signing. On April 1, 2015, Economy completes manufacture of the appliances in the Epic bundle order and places them in the warehouse. Economy and Epic have documented the warehouse arrangement and identified the units designated for Epic. The units are ready to ship, and Economy may not sell these units to other customers. Prepare journal entries for Economy on (1) February 1, 2015, and (2) April 1, 2015.
- P18-5 (Allocate Transaction Price, Returns, and Consignments) Ritt Ranch & Farm is a distributor of ranch and farm equipment. Its products range from small tools, power equipment for trench-digging and fencing, grain dryers, and barn winches. Most products are sold direct via its company catalog and Internet site. However, given some of its specialty products, select farm implement stores carry Ritt's products. Pricing and cost information on three of Ritt's most popular products are as follows.

	Standalone
Item	Selling Price (Cost)
Mini-trencher	\$ 3,600 (\$2,000)
Power fence hole auger	1,200 (\$800)
Grain/hay dryer	14,000 (\$11,000)

Instructions

Respond to the requirements related to the following independent revenue arrangements for Ritt Ranch & Farm

(a) On January 1, 2015, Ritt sells augers to Mills Farm & Fleet for \$48,000. Mills signs a 6-month note at an annual interest rate of 12%. Ritt allows Mills to return any auger that it cannot use within 60 days and receive a full refund. Based on prior experience, Ritt estimates that 5% of units sold to customers like Mills will be returned (using the most likely outcome approach). Ritt's costs to recover the products will be immaterial, and the returned augers are expected to be resold at a profit. Prepare the journal entry for Ritt on January 1, 2015.

- **(b)** On August 10, 2015, Ritt sells 16 mini-trenchers to a farm co-op in western Minnesota. Ritt provides a 4% volume discount on the mini-trenchers if the co-op has a 15% increase in purchases from Ritt compared to the prior year. Given the slowdown in the farm economy, sales to the co-op have been flat, and it is highly uncertain that the benchmark will be met. Prepare the journal entry for Ritt on August 10, 2015.
- (c) Ritt sells three grain/hay dryers to a local farmer at a total contract price of \$45,200. In addition to the dryers, Ritt provides installation, which has a standalone sales value of \$1,000 per unit installed. The contract payment also includes a \$1,200 maintenance plan for the dryers for 3 years after installation. Ritt signs the contract on June 20, 2015, and receives a 20% down payment from the farmer. The dryers are delivered and installed on October 1, 2015, and full payment is made to Ritt. Prepare the journal entries for Ritt in 2015 related to this arrangement.
- (d) On April 25, 2015, Ritt ships 100 augers to Farm Depot, a farm supply dealer in Nebraska, on consignment. By June 30, 2015, Farm Depot has sold 60 of the consigned augers at the listed price of \$1,200 per unit. Farm Depot notifies Ritt of the sales, retains a 10% commission, and remits the cash due Ritt. Prepare the journal entries for Ritt and Farm Depot for the consignment arrangement.
- **P18-6 (Warranty, Customer Loyalty Program)** Hui Hardware takes pride as the "shop around the corner" that can compete with the big-box home improvement stores by providing good service from knowledgeable sales associates (many of whom are retired local handymen). Hui has developed the following two revenue arrangements to enhance its relationships with customers and increase its bottom line (HK\$ in thousands).
 - 1. Hui sells a specialty portable winch that is popular with many of the local customers for use at their lake homes (putting docks in and out, launching boats, etc.). The Hui winch is a standard manufacture winch that Hui modifies so the winch can be used for a variety of tasks. Hui sold 70 of these winches during 2015 at a total price of HK\$21,000, with a warranty guarantee that the product was free of any defects. The cost of winches sold is HK\$16,000. The assurance warranties extend for a 3-year period with an estimated cost of HK\$2,100. In addition, Hui sold extended warranties related to 20 Hui winches for 2 years beyond the 3-year period for HK\$400 each.
 - **2.** To bolster its already strong customer base, Hui implemented a customer loyalty program that rewards a customer with 1 loyalty point for every HK\$10 of purchases on a select group of Hui products. Each point is redeemable for a HK\$1 discount on any purchases of Hui merchandise in the following 2 years. During 2015, customers purchased select group products for HK\$100,000 (all products are sold to provide a 45% gross profit) and earned 10,000 points redeemable for future purchases. The standalone selling price of the purchased products is HK\$100,000. Based on prior experience with incentives programs like this, Hui expects 9,500 points to be redeemed related to these sales (Hui appropriately uses this experience to estimate the value of future consideration related to bonus points).

- (a) Identify the separate performance obligations in the Hui warranty and bonus point programs, and briefly explain the point in time when the performance obligations are satisfied.
- **(b)** Prepare the journal entries for Hui related to the sales of Hui winches with warranties.
- (c) Prepare the journal entries for the bonus point sales for Hui in 2015.
- (d) How much additional sales revenue is recognized by Hui in 2016, assuming 4,500 bonus points are redeemed?
- P18-7 (Customer Loyalty Program) Martz Inc. has a customer loyalty program that rewards a customer with 1 customer loyalty point for every €10 of purchases. Each point is redeemable for a €3 discount on any future purchases. On July 2, 2015, customers purchase products for €300,000 (with a cost of €171,000) and earn 30,000 points redeemable for future purchases. Martz expects 25,000 points to be redeemed (based on its past experience, which is predictive of the amount of consideration to which it will be entitled). Martz estimates a standalone selling price of €2.50 per point (or €75,000 total) on the basis of the likelihood of redemption. The points provide a material right to customers that they would not receive without entering into a contract. As a result, Martz concludes that the points are a separate performance obligation.

Instructions

- (a) Determine the transaction price for the product and the customer loyalty points.
- (b) Prepare the journal entries to record the sale of the product and related points on July 2, 2015.
- (c) At the end of the first reporting period (July 31, 2015), 10,000 loyalty points are redeemed. Martz continues to expect 25,000 loyalty points to be redeemed in total. Determine the amount of loyalty point revenue to be recognized at July 31, 2015.

[4] F18-8 (Comprehensive Three-Part Revenue Recognition) Van Hatten Consolidated has three operating divisions: DeMent Publishing Division, Ankiel Securities Division, and Depp Advisory Division. Each division maintains its own accounting system.

DeMent Publishing Division

The DeMent Publishing Division sells large volumes of novels to a few book distributors, which in turn sell to several national chains of bookstores. DeMent allows distributors to return up to 30% of sales, and distributors give the same terms to bookstores. While returns from individual titles fluctuate greatly, the returns from distributors have averaged 20% in each of the past 5 years. A total of \$7,000,000 of paperback novel sales were made to distributors during fiscal 2015. On November 30, 2015 (the end of the fiscal year), \$1,500,000 of fiscal 2015 sales were still subject to return privileges over the next 6 months. The remaining \$5,500,000 of fiscal 2015 sales had actual returns of 21%. Sales from fiscal 2014 totaling \$2,000,000 were collected in fiscal 2015 less 18% returns. This division records revenue according to the revenue recognition method when the right of return exists.

Ankiel Securities Division

The Ankiel Securities Division works through manufacturers' agents in various cities. Orders for alarm systems and down payments are forwarded from agents, and the division ships the goods f.o.b. factory directly to customers (usually police departments and security guard companies). Customers are billed directly for the balance due plus actual shipping costs. The company received orders for \$6,000,000 of goods during the fiscal year ended November 30, 2015. Down payments of \$600,000 were received, and \$5,200,000 of goods were billed and shipped. Actual freight costs of \$100,000 were also billed. Commissions of 10% on product price are paid to manufacturing agents after goods are shipped to customers. Such goods are warranted for 90 days after shipment, and warranty returns have been about 1% of sales. Revenue is recognized at the point of sale by this division.

Depp Advisory Division

The Depp Advisory Division performs asset management services. This division grew out of Van Hatten's own treasury and asset management operations that several of its customers asked to have access to. On January 1, 2015, Depp entered into a contract with Scutaro Co. to perform asset management services for 1 year. Depp receives a quarterly management fee of 0.25% of Scutaro's assets under management at the end of each quarter. In addition, Depp receives a performance-based incentive fee of 20% of the fund's return in excess of the return of the S&P 500 index at the end of the quarter (multiplied by the assets under management at quarter-end). At the end of the first quarter of 2015, Depp was managing \$2,400,000 of Scutaro assets. The annualized return on the portfolio was 6.2% (the S&P 500 index had an annualized return of 5.7%).

Instructions

- (a) For each division's revenue arrangements, identify the separate performance obligations, briefly explain allocation of the transaction process to each performance obligation, and indicate when the performance obligations are satisfied.
- (b) Compute the revenue to be recognized in fiscal year 2015 for each of the three operating divisions of Van Hatten in accordance with IFRS.

Instructions

Respond to the requirements related to each revenue arrangement.

(a) Colbert sells 3-D printer systems. Recently, Colbert provided a special promotion of zero-interest financing for 2 years on any new 3-D printer system. Assume that Colbert sells Lyle Cartright a 3-D system receiving a £5,000 zero-interest-bearing note on January 1, 2015. The cost of the 3-D printer system is £4,000. Colbert imputes a 6% interest rate on this zero-interest-bearing note transaction. Prepare the journal entry to record the sale on January 1, 2015, and compute the total amount of revenue to be recognized in 2015.

(b) Colbert sells 20 non-refundable £100 gift cards for 3-D printer paper on March 1, 2015. The paper has a standalone selling price of £100 (cost £80). The gift cards expiration date is June 30, 2015. Colbert estimates that customers will not redeem 15% of these gift cards. The pattern of redemption is as follows.

	Redemption Total
March 31	50%
April 30	80%
June 30	85%

Prepare the 2015 journal entries related to the gift cards at March 1, March 31, April 30, and June 30. (c) Colbert sells 3-D printers along with a number of retail items. The package price and standalone selling prices of each item are as follows

	Standalone Selling	Price When	Bundling
Item	Price	Bundled	Discount
3-D printer (cost £4,000)	£5,000	£4,500	£500
Custom stand (cost £200)	450	450	0
Special 3-D paper (cost £135)	175	175	0
Total for bundle	£5,625	£5,125	£500

Due to the timing of delivery—the paper is delivered 6 months after the printer is delivered to the customer—Colbert chooses to account for two performance obligations: (1) the printer and stand, and (2) the paper. Prepare the journal entries for Colbert on (a) March 1, 2015, when Colbert receives £51,250 for the sale of 10 printer bundles, and (b) September 1, 2015, when the paper is delivered to customers.

*P18-10 (Recognition of Profit on Long-Term Contract) Shanahan Construction Company has entered into a contract beginning January 1, 2015, to build a parking complex. It has been estimated that the complex will cost \$600,000 and will take 3 years to construct. The complex will be billed to the purchasing company at \$900,000. The following data pertain to the construction period.

	2015	2016	2017
Costs to date	\$270,000	\$450,000	\$610,000
Estimated costs to complete	330,000	150,000	-0-
Progress billings to date	270,000	550,000	900,000
Cash collected to date	240.000	500.000	900.000

- (a) Using the percentage-of-completion method, compute the estimated gross profit that would be recognized during each year of the construction period.
- **(b)** Using the cost-recovery method, compute the estimated gross profit that would be recognized during each year of the construction period.
- *P18-11 (Long-Term Contract with Interim Loss) On March 1, 2015, Pechstein Construction Company contracted to construct a factory building for Fabrik Manufacturing Inc. for a total contract price of €8,400,000. The building was completed by October 31, 2017. The annual contract costs incurred, estimated costs to complete the contract, and accumulated billings to Fabrik for 2015, 2016, and 2017 are given below.

	2015	2016	2017
Contract costs incurred during the year	€2,880,000	€2,230,000	€ 2,190,000
Estimated costs to complete the			
contract at 12/31	3,520,000	2,190,000	-0-
Billings to Fabrik during the year	3,200,000	3,500,000	1,700,000

Instructions

- (a) Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2015, 2016, and 2017. (Ignore income taxes.)
- **(b)** Using the cost-recovery method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2015, 2016, and 2017. (Ignore incomes taxes.)
- *P18-12 (Long-Term Contract with an Overall Loss) On July 1, 2015, Torvill Construction Company Inc. contracted to build an office building for Gumbel Corp. for a total contract price of \$1,900,000. On July 1, Torvill estimated that it would take between 2 and 3 years to complete the building. On December 31, 2017, the building was deemed substantially completed. Following are accumulated contract costs incurred, estimated costs to complete the contract, and accumulated billings to Gumbel for 2015, 2016, and 2017.

	At 12/31/15	At 12/31/16	At 12/31/17
Contract costs incurred to date	\$ 300,000	\$1,200,000	\$2,100,000
Estimated costs to complete the contract	1,200,000	800,000	-0-
Billings to Gumbel	300,000	1,100,000	1,850,000

Instructions

- (a) Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2015, 2016, and 2017. (Ignore income taxes.)
- **(b)** Using the cost-recovery method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2015, 2016, and 2017. (Ignore income taxes.)
- *P18-13 (Franchise Revenue) Amigos Burrito Inc. sells franchises to independent operators throughout the northwestern part of Brazil. The contract with the franchisee includes the following provisions.
 - **1.** The franchisee is charged an initial fee of R\$120,000. Of this amount, R\$20,000 is payable when the agreement is signed, and a R\$20,000 zero-interest-bearing note is payable at the end of each of the 5 subsequent years.
 - **2.** All of the initial franchise fee collected by Amigos is to be refunded and the remaining obligation canceled if, for any reason, the franchise fails to open his or her franchise.
 - **3.** In return for the initial franchise fee, Amigos agrees to (a) assist the franchisee in selecting the location for the business, (b) negotiate the lease for the land, (c) obtain financing and assist with building design, (d) supervise construction, (e) establish accounting and tax records, and (f) provide expert advice over a 5-year period relating to such matters as employee and management training, quality control, and promotion. This continuing involvement by Amigos helps maintain the brand value of the franchise.
 - **4.** In addition to the initial franchise fee, the franchisee is required to pay to Amigos a monthly fee of 2% of sales for menu planning, recipe innovations, and the privilege of purchasing ingredients from Amigos at or below prevailing market prices.

Management of Amigos Burrito estimates that the value of the services rendered to the franchisee at the time the contract is signed amounts to at least R\$20,000. All franchisees to date have opened their locations at the scheduled time, and none have defaulted on any of the notes receivable. The credit ratings of all franchisees would entitle them to borrow at the current interest rate of 10%. The present value of an ordinary annuity of five annual receipts of R\$20,000 each discounted at 10% is R\$75,816.

- (a) Discuss the alternatives that Amigos Burrito Inc. might use to account for the franchise fees.
- (b) Prepare the journal entries for the initial and continuing franchise fees, assuming:
 - (1) Franchise agreement is signed on January 5, 2015.
 - (2) Amigos completes franchise startup tasks and the franchise opens on July 1, 2015.
 - **(3)** The franchisee records R\$260,000 in sales in the first 6 months of operations and remits the monthly franchise fee on December 31, 2015.
- (c) Briefly describe the accounting for any unearned franchise fees, assuming that Amigos has little or no involvement with the franchisee related to expert advice on employee and management training, quality control, and promotion, once the franchise opens.

CONCEPTS FOR ANALYSIS

CA18-1 (Five-Step Revenue Process) Revenue is recognized based on a five-step process that is applied to a company's revenue arrangements.

Instructions

- (a) Briefly describe the five-step process.
- **(b)** Explain the importance of contracts when analyzing revenue arrangements.
- (c) How are fair value measurement concepts applied in implementation of the five-step process?
- (d) How does the five-step process reflect application of the definitions of assets and liabilities?

CA18-2 (Satisfying Performance Obligations) Judy Schaeffer is getting up to speed on the new guidance on revenue recognition. She is trying to understand the revenue recognition principle as it relates to the five-step revenue recognition process.

Instructions

- (a) Describe the revenue recognition principle.
- **(b)** Briefly discuss how the revenue recognition principle relates to the definitions of assets and liabilities. What is the importance of control?
- **(c)** Judy recalls that previous revenue recognition guidance required that revenue not be recognized unless the revenue was realized or realizable (also referred to as collectibility). Is collectibility a consideration in the recognition of revenue? Explain.

CA18-3 (Recognition of Revenue—Theory) Revenue is usually recognized at the point of sale (a point in time). Under special circumstances, however, bases other than the point of sale are used for the timing of revenue recognition.

Instructions

- (a) Why is the point of sale usually used as the basis for the timing of revenue recognition?
- **(b)** Disregarding the special circumstances when bases other than the point of sale are used, discuss the merits of each of the following objections to the sale basis of revenue recognition:
 - (1) It is too conservative because revenue is earned throughout the entire process of production.
 - (2) It is not conservative enough because accounts receivable do not represent disposable funds, sales returns and allowances may be made, and collection and bad debt expenses may be incurred in a later period.
- (c) Revenue may also be recognized over time. Give an example of the circumstances in which revenue is recognized over time and accounting merits of its use instead of the point-of-sale basis

CA18-4 (Recognition of Revenue—Theory) Revenue is recognized for accounting purposes when a performance obligation is satisfied. In some situations, revenue is recognized over time as the fair values of assets and liabilities change. In other situations, however, accountants have developed guidelines for recognizing revenue at the point of sale.

Instructions

(Ignore income taxes.)

- (a) Explain and justify why revenue is often recognized at the time of sale.
- **(b)** Explain in what situations it would be appropriate to recognize revenue over time.

CA18-5 (Discounts) Fahey Company sells Stairmasters to a retailer, Physical Fitness, Inc., for €2,000,000. Fahey has a history of providing price concessions on this product if the retailer has difficulty selling the Stairmasters to customers. Fahey has experience with sales like these in the past and estimates that the maximum amount of price concessions is €300,000.

- (a) Determine the amount of revenue that Fahey should recognize at the date of the sale of Stairmasters to Physical Fitness, Inc.
- **(b)** According to IFRS, in some situations, the amount of revenue recognized may be constrained. Explain how the accounting for the Stairmasters sales might be affected by the revenue constraint due to variable consideration or returns.
- **(c)** Some believe that revenue recognition should be constrained by collectibility. Is such a view consistent with IFRS? Explain.

CA18-6 (Recognition of Revenue from Subscriptions) *Cutting Edge* is a monthly magazine that has been on the market for 18 months. It currently has a circulation of 1.4 million copies. Negotiations are underway to obtain a bank loan in order to update the magazine's facilities. *Cutting Edge* is producing close to capacity and expects to grow at an average of 20% per year over the next 3 years.

After reviewing the financial statements of *Cutting Edge*, Andy Rich, the bank loan officer, had indicated that a loan could be offered to *Cutting Edge* only if it could increase its current ratio and decrease its debt to equity ratio to a specified level. Jonathan Embry, the marketing manager of *Cutting Edge*, has devised a plan to meet these requirements. Embry indicates that an advertising campaign can be initiated to immediately increase circulation. The potential customers would be contacted after the purchase of another magazine's mailing list. The campaign would include:

- 1. An offer to subscribe to *Cutting Edge* at three-fourths the normal price.
- **2.** A special offer to all new subscribers to receive the most current world atlas whenever requested at a guaranteed price of \$2.
- An unconditional guarantee that any subscriber will receive a full refund if dissatisfied with the magazine.

Although the offer of a full refund is risky, Embry claims that few people will ask for a refund after receiving half of their subscription issues. Embry notes that other magazine companies have tried this sales promotion technique and experienced great success. Their average cancellation rate was 25%. On average, each company increased its initial circulation threefold and in the long run increased circulation to twice that which existed before the promotion. In addition, 60% of the new subscribers are expected to take advantage of the atlas premium. Embry feels confident that the increased subscriptions from the advertising campaign will increase the current ratio and decrease the debt to equity ratio.

You are the controller of *Cutting Edge* and must give your opinion of the proposed plan.

Instructions

- (a) When should revenue from the new subscriptions be recognized?
- (b) How would you classify the estimated sales returns stemming from the unconditional guarantee?
- (c) How should the atlas premium be recorded? Is the estimated premium claims a liability? Explain.
- (d) Does the proposed plan achieve the goals of increasing the current ratio and decreasing the debt to equity ratio?

CA18-7 (Recognition of Revenue—Bonus Points) Griseta & Dubel Inc. was formed early this year to sell merchandise credits to merchants, who distribute the credits free to their customers. For example, customers can earn additional credits based on the money they spend with a merchant (e.g., airlines and hotels). Accounts for accumulating the credits and catalogs illustrating the merchandise for which the credits may be exchanged are maintained online. Centers with inventories of merchandise premiums have been established for redemption of the credits. Merchants may not return unused credits to Griseta & Dubel.

The following schedule expresses Griseta & Dubel's expectations as to the percentages of a normal month's activity that will be attained. For this purpose, a "normal month's activity" is defined as the level of operations expected when expansion of activities ceases or tapers off to a stable rate. The company expects that this level will be attained in the third year and that sales of credits will average £6,000,000 per month throughout the third year.

Month	Actual Credit Sales Percent	Merchandise Premium Purchases Percent	Credit Redemptions Percent
6th	30%	40%	10%
12th	60	60	45
18th	80	80	70
24th	90	90	80
30th	100	100	95

Griseta & Dubel plans to adopt an annual closing date at the end of each 12 months of operation.

- (a) Discuss the factors to be considered in determining when revenue should be recognized.
- (b) Apply the revenue recognition factors to the Griseta & Dubel Inc. revenue arrangement.
- **(c)** Provide statement of financial position accounts that should be used and indicate how each should be classified.

CA18-8 (Revenue Recognition—Membership Fees) Midwest Health Club (MHC) offers 1-year memberships. Membership fees are due in full at the beginning of the individual membership period. As an incentive to new customers, MHC advertised that any customers not satisfied for any reason could receive a refund of the remaining portion of unused membership fees. As a result of this policy, Richard Nies, corporate controller, recognized revenue ratably over the life of the membership. MHC is in the process of preparing its year-end financial statements. Rachel Avery, MHC's treasurer, is concerned about the company's lackluster performance this year. She reviews the financial statements Nies prepared and tells Nies to recognize membership revenue when the fees are received.

Instructions

Answer the following questions.

- (a) What are the ethical issues involved?
- **(b)** What should Nies do?

*CA18-9 (Long-Term Contract—Percentage-of-Completion) Widjaja Company is accounting for a long-term construction contract using the percentage-of-completion method. It is a 4-year contract that is currently in its second year. The latest estimates of total contract costs indicate that the contract will be completed at a profit to Widjaja Company.

Instructions

- (a) What theoretical justification is there for Widjaja Company's use of the percentage-of-completion method?
- **(b)** How would progress billings be accounted for? Include in your discussion the classification of progress billings in Widjaja Company financial statements.
- **(c)** How would the income recognized in the second year of the 4-year contract be determined using the cost-to-cost method of determining percentage of completion?
- (d) What would be the effect on earnings per share in the second year of the 4-year contract of using the cost-recovery method instead of the percentage-of-completion method? Discuss.

USING YOUR JUDGMENT

As the new revenue recognition guidance is not yet implemented, note that the financial statements and notes for Marks and Spencer, adidas, Puma, and British Airways reflect revenue recognition under prior standards.

FINANCIAL REPORTING

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What were M&S's sales for 2013?
- (b) What was the percentage of increase or decrease in M&S's sales from 2012 to 2013?
- (c) In its notes to the financial statements, what criteria does M&S use to recognize revenue?
- (d) How does M&S account for discounts and loyalty schemes? Does the accounting conform to accrual-accounting concepts? Explain.

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- (a) What were adidas's and Puma's net revenues (sales) for the year 2012? Which company increased its revenues more (amounts and percentage) from 2011 to 2012?
- **(b)** Are the revenue recognition policies of adidas and Puma similar? Explain.
- (c) In which foreign countries (geographic areas) did adidas (see Note) and Puma experience significant revenues in 2012?

Financial Statement Analysis Case

British Airways

The following note appears in the "Summary of Significant Accounting Policies" section of the annual report of **British Airways** (GBR).

Summary of significant accounting policies (in part)

Revenue

Passenger and cargo revenue is recognised when the transportation service is provided. Passenger tickets net of discounts are recorded as current liabilities in the 'sales in advance of carriage' account until recognised as revenue. Unused tickets are recognised as revenue using estimates regarding the timing of recognition based on the terms and conditions of the ticket and historical trends. Other revenue is recognised at the time the service is provided. Commission costs are recognised at the same time as the revenue to which they relate and are charged to operating expenditure.

Key Accounting Estimates and Judgments

Passenger revenue recognition

Passenger revenue is recognised when the transportation is provided. Ticket sales that are not expected to be used for transportation ('unused tickets') are recognised as revenue using estimates regarding the timing of recognition based on the terms and conditions of the ticket and historical trends. During the current year, changes in estimates regarding the timing of revenue recognition primarily for unused flexible tickets were made, resulting in increased revenue in the current year of $\mathfrak{L}109$ million. During the prior year, changes in estimates regarding the timing of revenue recognition for unused restricted tickets were made, resulting in increased revenue in the prior year of $\mathfrak{L}36$ million. Both the above changes reflect more accurate and timely data obtained through the increased use of electronic tickets.

Instructions

- (a) Identify the revenue recognition policies used by British Airways as discussed in its note on significant accounting policies.
- **(b)** Under what conditions are the revenue recognition methods identified in the first paragraph of British Airways' note above acceptable?
- (c) From the information provided in the second paragraph of British Airways' note, identify the type of operation being described and defend the acceptability of the revenue recognition method.

Accounting, Analysis, and Principles

Diversified Industries manufactures sump-pumps. Its most popular product is called the Super Soaker, which has a retail price of \$1,200 and costs \$540 to manufacture. It sells the Super Soaker on a standalone basis directly to businesses. Diversified also provides installation services for these commercial

952 Chapter 18 Revenue Recognition

customers, who want an emergency pumping capability (with regular and back-up generator power) at their businesses. Diversified also distributes the Super Soaker through a consignment agreement with Menards. Income data for the first quarter of 2015 from operations other than the Super Soaker are as follows.

Revenues \$9,500,000 Expenses 7,750,000

Diversified has the following information related to two Super Soaker revenue arrangements during the first quarter of 2015.

- 1. Diversified sells 30 Super Soakers to businesses in flood-prone areas for a total contract price of \$54,600. In addition to the pumps, Diversified also provides installation (at a cost of \$150 per pump). On a standalone basis, the fair value of this service is \$200 per unit installed. The contract payment also includes a \$10 per month service plan for the pumps for 3 years after installation (Diversified's cost to perform this service is \$7 per month). The Super Soakers are delivered and installed on March 1, 2015, and full payment is made to Diversified. Any discount is applied to the pump/installation bundle.
- 2. Diversified ships 300 Super Soakers to Menards on consignment. By March 31, 2015, Menards has sold two-thirds of the consigned merchandise at the listed price of \$1,200 per unit. Menards notifies Diversified of the sales, retains a 5% commission, and remits the cash due Diversified.

Accounting

Determine Diversified Industries' 2015 first-quarter net income. (Ignore taxes.)

Analysis

Determine free cash flow (see Chapter 5) for Diversified Industries for the first quarter of 2015. In the first quarter, Diversified had depreciation expense of \$175,000 and a net increase in working capital (change in accounts receivable and accounts payable) of \$250,000. In the first quarter, capital expenditures were \$500,000; Diversified paid dividends of \$120,000.

Principles

Explain how the five-step revenue recognition process, when applied to Diversified's two revenue arrangements, reflects the concept of control in the definition of an asset and trade-offs between relevance and faithful representation.

BRIDGE TO THE PROFESSION

Professional Research

Employees at your company disagree about the accounting for sales returns. The sales manager believes that granting more generous return provisions and allowing customers to order items on a bill-and-hold basis can give the company a competitive edge and increase sales revenue. The controller cautions that, depending on the terms granted, loose return or bill-and-hold provisions might lead to non-IFRS revenue recognition. The company CFO would like you to research the issue to provide an authoritative answer.

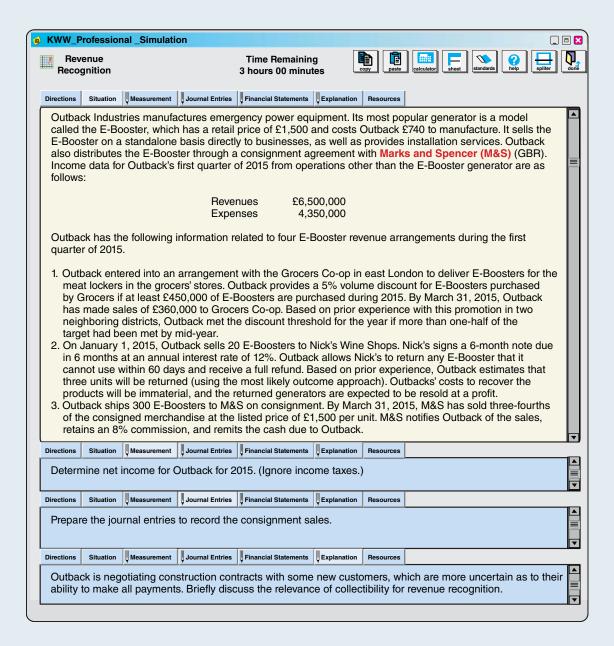

Instructions

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free elFRS access at this site). Under the Standards Development tab, click on Work plan for IFRS and go to Revenue Recognition. Click on "Summary of Board Deliberations." When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) What is the authoritative literature addressing revenue recognition when right of return exists?
- **(b)** What is meant by "right of return"? "Bill and hold"?
- (c) Describe the accounting when there is a right of return.
- (d) When goods are sold on a bill-and-hold basis, what conditions must be met to recognize revenue upon receipt of the order?

Professional Simulation

In this simulation, you are asked to address questions related to revenue recognition issues. Prepare responses to all parts.

Accounting for Income Taxes

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Identify differences between pretax financial income and taxable income.
- 2 Describe a temporary difference that results in future taxable amounts.
- 3 Describe a temporary difference that results in future deductible amounts.
- **4** Explain the non-recognition of a deferred tax asset.
- 5 Describe the presentation of income tax expense in the income statement.

- **6** Describe various temporary and permanent differences.
- **7** Explain the effect of various tax rates and tax rate changes on deferred income taxes.
- **8** Apply accounting procedures for a loss carryback and a loss carryforward.
- **9** Describe the presentation of income taxes in financial statements.
- 10 Indicate the basic principles of the asset-liability method.

Safe (Tax) Haven?

One set of costs that companies manage are those related to taxes. In fact, in today's competitive markets, managers are expected to look for places in the tax code that a company can exploit to pay less tax to various tax authorities. By paying less in taxes, companies have more cash available to fund operations, finance expansion, and create new jobs. What happens, though, when companies push the tax-saving envelope? Well, they may face a tax audit, the results of which could hurt their financial statements.

A notable example of corporate maneuvering to reduce taxable income involved **Limited Brands Inc.** (USA). It managed its tax costs downward by locating part of its business in low-tax-rate jurisdictions while operating retail outlets elsewhere. For example, by basing a subsidiary (which does nothing more than hold the trademarks for Bath and Body Works and Victoria's Secret) in a low-tax jurisdiction, the company was able to transfer hundreds of millions of dollars from Limited's retail outlets in high-tax jurisdictions into a jurisdiction with a zero tax rate.

However, regulators have been increasing their scrutiny of these tax-evasion transactions that do not serve a legitimate business purpose. In the Limited Brands case, a prosecutor alleged that the company "... engaged in hocus pocus bookkeeping and deceptive accounting," the sole purpose of which was to reduce its tax bill. The court agreed, and Limited Brands had to pay millions of dollars in taxes dating back to 1994.

Limited Brands' shareholders likely got an unpleasant surprise when they learned the company also had a big tax obligation from its "uncertain tax position" related to off-shore locations. The same can be said for many other companies that take tax deductions that may not hold up under the scrutiny of regulators. International tax regulators are now working together to crack down on tax havens. For example, the **G20**, a group of finance ministers and central bank governors from 20 major economies (19 countries plus the European Union), has been at the forefront of efforts to establish a more effective, efficient, and fair international tax system since they declared the era of bank secrecy over at the G20 London Summit in April 2009. Here are some key elements identified by this group for implementation.

- **1.** In an increasingly borderless world, **strengthening international cooperation in tax matters** is essential to ensuring the integrity of national tax systems and maintaining trust in governments.
- 2. The development of a new global tax standard with automatic exchange of information. Recent developments involving undisclosed foreign bank accounts have highlighted the urgent need to move to this new standard. The Global Forum (an international body for ensuring the implementation of the internationally agreed-upon standards of transparency and exchange of information on request in the tax area) will establish a mechanism to monitor and review the effective implementation of the new tax standard.
- 3. International collective efforts to address the tax base erosion resulting from international tax planning. Base erosion and profit shifting (BEPS) relates chiefly to instances where the interaction of different tax rules result in tax planning that

may be used by multinational enterprises to artificially shift profits out of the countries where they are earned, resulting in very low taxes or even double non-taxation. These prac> Read the Global Accounting Insights on pages 982–983 for a discussion of non-IFRS financial reporting for income taxes.

tices, if left unchecked, undermine the fairness and integrity of our tax systems. They fundamentally distort competition because businesses that engage in cross-border BEPS strategies gain a competitive advantage compared with enterprises that operate mostly at the domestic level. Fair, transparent, and efficient tax systems are not only key pillars for sound public finances, they also provide a sustainable framework for dynamic economies.

4. Encouraging countries to examine how their domestic tax laws contribute to BEPS. Such efforts help ensure that international and domestic tax rules do not allow or encourage multinational enterprises to reduce overall taxes paid by artificially shifting profits to low-tax jurisdictions. International tax rules, which date back to the 1920s, have not kept pace with the changing business environment, including the growing importance of intangibles and the digital economy.

Hopefully, through the efforts of these organizations and others, a more balanced and fair international tax system will emerge.

PREVIEW OF CHAPTER

19

As our opening story indicates, companies spend a considerable amount of time and effort to minimize their income tax payments. And with good reason, as income taxes are a major cost of doing

business for most corporations. Yet, at the same time, companies must present financial information to the investment community that provides a clear picture of present and potential tax obligations and tax benefits. In this chapter, we discuss the basic guidelines that companies must follow in reporting income taxes. The content and organization of the chapter are as follows.

Accounting for Income Taxes

Fundamentals of Financial Statement Review of Asset-Liability Accounting for Net Accounting for Operating Losses Presentation Method **Income Taxes Future taxable amounts** Loss carryback Statement of financial and deferred taxes position Loss carryforward **Future deductible amounts** Income statement Loss carryback example and deferred taxes Tax reconciliation Loss carryforward example Non-recognition of deferred tax asset **Income statement** presentation · Specific differences **Rate considerations**

FUNDAMENTALS OF ACCOUNTING FOR INCOME TAXES

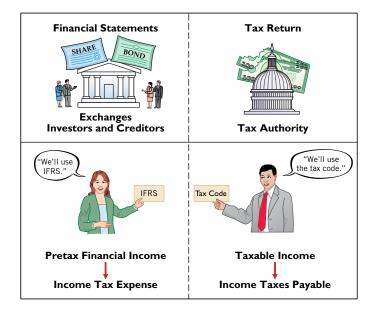

LEARNING OBJECTIVE 1

Identify differences between pretax financial income and taxable income.

Up to this point, you have learned the basic guidelines that corporations use to report information to investors and creditors. Corporations also must file income tax returns following the guidelines developed by the appropriate tax authority. Because IFRS and tax regulations differ in a number of ways, so frequently do pretax financial income and taxable income. Consequently, the amount that a company reports as tax expense will differ from the amount of taxes payable to the tax authority. Illustration 19-1 highlights these differences.

ILLUSTRATION 19-1

Fundamental Differences between Financial and Tax Reporting

Pretax financial income is a *financial reporting* term. It also is often referred to as *income before taxes, income for financial reporting purposes*, or *income for book purposes*. Companies determine pretax financial income according to IFRS. They measure it with the objective of providing useful information to investors and creditors.

Taxable income (income for tax purposes) is a *tax accounting* term. It indicates the amount used to compute income taxes payable. Companies determine taxable income according to the tax regulations. Income taxes provide money to support government operations.

To illustrate how differences in IFRS and tax rules affect financial reporting and taxable income, assume that Chelsea Inc. reported revenues of \$130,000 and expenses of \$60,000 in each of its first three years of operations. Illustration 19-2 shows the (partial) income statement over these three years.

ILLUSTRATION 19-2

Financial Reporting Income

		EA INC. PORTING		
	2015	2016	2017	Total
Revenues	\$130,000	\$130,000	\$130,000	
Expenses	60,000	60,000	60,000	
Pretax financial income	\$ 70,000	\$ 70,000	\$ 70,000	\$ 210,000
Income tax expense (40%)	\$ 28,000	\$ 28,000	\$ 28,000	\$ 84,000

For tax purposes (following the tax rules), Chelsea reported the same expenses to the tax authority in each of the years. But, as Illustration 19-3 shows, Chelsea reported taxable revenues of \$100,000 in 2015, \$150,000 in 2016, and \$140,000 in 2017.

CHELSEA INC. TAX REPORTING				
	2015	_2016	_2017	Total
Revenues	\$100,000	\$150,000	\$140,000	
Expenses	60,000	60,000	60,000	
Taxable income	\$ 40,000	\$ 90,000	\$ 80,000	\$ 210,000
Income taxes payable (40%)	\$ 16,000	\$ 36,000	\$ 32,000	\$ 84,000

ILLUSTRATION 19-3
Tax Reporting Income

Income tax expense and income taxes payable differed over the three years but were equal **in total**, as Illustration 19-4 shows.

CHELSEA INC. INCOME TAX EXPENSE AND INCOME TAXES PAYABLE				
	2015	2016	2017	_Total_
Income tax expense	\$28,000	\$28,000	\$28,000	\$84,000
Income taxes payable	16,000	36,000	32,000	84,000
Difference	\$12,000	\$ (8,000)	\$ (4,000)	\$ 0

ILLUSTRATION 19-4 Comparison of Income Tax Expense to Income Taxes Payable

The differences between income tax expense and income taxes payable in this example arise for a simple reason. For financial reporting, companies use the full accrual method to report revenues. For tax purposes, they generally use a modified cash basis. As a result, Chelsea reports pretax financial income of \$70,000 and income tax expense of \$28,000 for each of the three years. However, taxable income fluctuates. For example, in 2015 taxable income is only \$40,000, so Chelsea owes just \$16,000 to the tax authority that year. Chelsea classifies the income taxes payable as a current liability on the statement of financial position.

As Illustration 19-4 indicates, for Chelsea the \$12,000 (\$28,000 - \$16,000) difference between income tax expense and income taxes payable in 2015 reflects taxes that it will pay in future periods. This \$12,000 difference is often referred to as a **deferred tax amount**. In this case, it is a **deferred tax liability**. In cases where taxes will be lower in the future, Chelsea records a **deferred tax asset**. We explain the measurement and accounting for deferred tax liabilities and assets in the following two sections. 1

Future Taxable Amounts and Deferred Taxes

The example summarized in Illustration 19-4 shows how income taxes payable can differ from income tax expense. This can happen when there are temporary differences between the amounts reported for tax purposes and those reported for book purposes. A **temporary difference** is the difference between the tax basis of an asset or liability and its reported (carrying or book) amount in the financial statements, which will result in taxable amounts or deductible amounts in future years.

2 LEARNING OBJECTIVE
Describe a temporary difference that results in future taxable amounts.

¹Determining the amount of tax to pay the tax authority is a costly exercise for both individuals and companies. Individuals and businesses must pay not only the taxes owed but also the costs of their own time spent filing and complying with the tax code, including (1) the tax collection costs of the tax authority, and (2) the tax compliance outlays that individuals and businesses pay to help them file their taxes. One study estimated this cost to be 30 cents on every dollar sent to the government. Another study noted how big the tax-compliance industry has become. See A. Laffer, "The 30-Cent Tax Premium," *Wall Street Journal* (April 18, 2011).

Taxable amounts increase taxable income in future years. **Deductible amounts** decrease taxable income in future years.

In Chelsea's situation, the only difference between the book basis and tax basis of the assets and liabilities relates to accounts receivable that arose from revenue recognized for book purposes. Illustration 19-5 indicates that Chelsea reports accounts receivable at \$30,000 in the December 31, 2015, IFRS-basis statement of financial position. However, the receivables have a zero tax basis.

ILLUSTRATION 19-5

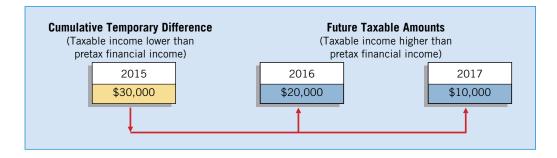

Temporary Difference, Accounts Receivable

What will happen to the \$30,000 temporary difference that originated in 2015 for Chelsea? Assuming that Chelsea expects to collect \$20,000 of the receivables in 2016 and \$10,000 in 2017, this collection results in future taxable amounts of \$20,000 in 2016 and \$10,000 in 2017. These future taxable amounts will cause taxable income to exceed pretax financial income in both 2016 and 2017.

An assumption inherent in a company's IFRS statement of financial position is that companies recover and settle the assets and liabilities at their reported amounts (carrying amounts). This assumption creates a requirement under accrual accounting to recognize *currently* the deferred tax consequences of temporary differences. That is, companies recognize the amount of income taxes that are payable (or refundable) when they recover and settle the reported amounts of the assets and liabilities, respectively. Illustration 19-6 shows the reversal of the temporary difference described in Illustration 19-5 and the resulting taxable amounts in future periods.

ILLUSTRATION 19-6 Reversal of Temporary Difference, Chelsea Inc.

Chelsea assumes that it will collect the accounts receivable and report the \$30,000 collection as taxable revenues in future tax returns. A payment of income tax in both 2016 and 2017 will occur. Chelsea should therefore record in its books in 2015 the deferred tax consequences of the revenue and related receivables reflected in the 2015 financial statements. Chelsea does this by recording a deferred tax liability.

Deferred Tax Liability

A deferred tax liability is the deferred tax consequences attributable to taxable temporary differences. In other words, a deferred tax liability represents the increase in taxes payable in future years as a result of taxable temporary differences existing at the end of the current year.

Recall from the Chelsea example that income taxes payable is \$16,000 ($$40,000 \times 40\%$) in 2015 (Illustration 19-4 on page 957). In addition, a temporary difference exists at year-end because Chelsea reports the revenue and related accounts receivable differently for book and tax purposes. The book basis of accounts receivable is \$30,000, and the tax basis is zero. Thus, the total deferred tax liability at the end of 2015 is \$12,000, computed as shown in Illustration 19-7.

Fundamentals of Accounting for Income Taxes 959

Book basis of accounts receivable Tax basis of accounts receivable	\$30,000 0	
Cumulative temporary difference at the end of 2015 Tax rate	30,000 × 40%	
Deferred tax liability at the end of 2015	\$12,000	

ILLUSTRATION 19-7

Computation of Deferred Tax Liability, End of 2015

Companies may also compute the deferred tax liability by preparing a schedule that indicates the future taxable amounts due to existing temporary differences. Such a schedule, as shown in Illustration 19-8, is particularly useful when the computations become more complex.

	Future	Years	
	2016	2017	_Total_
Future taxable amounts	\$20,000	\$10,000	\$30,000
Tax rate	\times 40%	\times 40%	
Deferred tax liability at the end of 2015	\$ 8,000	\$ 4,000	\$12,000

ILLUSTRATION 19-8

Schedule of Future Taxable Amounts

Because it is the first year of operations for Chelsea, there is no deferred tax liability at the beginning of the year. Chelsea computes the income tax expense for 2015 as shown in Illustration 19-9.

Deferred tax liability at end of 2015 Deferred tax liability at beginning of 2015	\$12,000 0
Deferred tax expense for 2015 Current tax expense for 2015 (income taxes payable)	12,000 16,000
Income tax expense (total) for 2015	\$28,000

ILLUSTRATION 19-9

Computation of Income Tax Expense, 2015

This computation indicates that income tax expense has two components—current tax expense (the amount of income taxes payable for the period) and deferred tax expense. Deferred tax expense is the increase in the deferred tax liability balance from the beginning to the end of the accounting period.

Companies credit taxes due and payable to Income Taxes Payable and credit the increase in deferred taxes to Deferred Tax Liability. They then debit the sum of those two items to Income Tax Expense. For Chelsea, it makes the following entry at the end of 2015.

Income Tax Expense	28,000	
Income Taxes Payable		16,000
Deferred Tax Liability		12,000

At the end of 2016 (the second year), the difference between the book basis and the tax basis of the accounts receivable is \$10,000. Chelsea multiplies this difference by the applicable tax rate to arrive at the deferred tax liability of $$4,000 ($10,000 \times 40\%)$, which it reports at the end of 2016. Income taxes payable for 2016 is \$36,000 (Illustration 19-3 on page 957), and the income tax expense for 2016 is as shown in Illustration 19-10.

Deferred tax liability at end of 2016 Deferred tax liability at beginning of 2016	\$ 4,000 12,000
Deferred tax expense (benefit) for 2016 Current tax expense for 2016 (income taxes payable)	(8,000) 36,000
Income tax expense (total) for 2016	\$28,000

ILLUSTRATION 19-10

Computation of Income Tax Expense, 2016

Chelsea records income tax expense, the change in the deferred tax liability, and income taxes payable for 2016 as follows.

Income Tax Expense 28,000
Deferred Tax Liability 8,000

Income Taxes Payable 36,000

The entry to record income taxes at the end of 2017 reduces the Deferred Tax Liability by \$4,000. The Deferred Tax Liability account appears as follows at the end of 2017.

ILLUSTRATION 19-11

Deferred Tax Liability Account after Reversals

Deferred Tax Liability			
2016 2017	-,	2015	12,000

The Deferred Tax Liability account has a zero balance at the end of 2017.

What do the numbers mean?

"REAL LIABILITIES"

Some analysts dismiss deferred tax liabilities when assessing the financial strength of a company. But the IASB indicates that the deferred tax liability meets the definition of a liability established in the IASB Conceptual Framework because:

- **1.** *It is a present obligation.* Taxable income in future periods will exceed pretax financial income as a result of this temporary difference. Thus, a present obligation exists.
- **2.** It results from a past transaction. In the Chelsea example, the company performed services for customers and recognized revenue in 2015 for financial reporting purposes but deferred it for tax purposes.
- **3.** *It represents a future outflow of resources.* Taxable income and taxes due in future periods will result from past events. The payment of these taxes when they come due is the future outflow of resources.

A study by B. Ayers indicates that the market views deferred tax assets and liabilities similarly to other assets and liabilities. Further, the study concludes that the accounting rules in this area increased the usefulness of deferred tax amounts in financial statements.

IFR

See the Authoritative Literature section (page 992).

Summary of Income Tax Accounting Objectives

One objective of accounting for income taxes is to recognize the amount of taxes payable or refundable for the current year. In Chelsea's case, income taxes payable is \$16,000 for 2015.

A **second objective** is to recognize deferred tax liabilities and assets for the future tax consequences of events already recognized in the financial statements or tax returns. **[1]** For example, Chelsea sold services to customers that resulted in accounts receivable of \$30,000 in 2015. It reported that amount on the 2015 income statement but not on the tax return as income. That amount will appear on future tax returns as income for the period **when collected**. As a result, a \$30,000 temporary difference exists at the end of 2015, which will cause future taxable amounts. Chelsea reports a deferred tax liability of \$12,000 on the statement of financial position at the end of 2015, which represents the increase in taxes payable in future years (\$8,000 in 2016 and \$4,000 in 2017) as a result of a temporary difference existing at the end of the current year. The related deferred tax liability is reduced by \$8,000 at the end of 2016 and by another \$4,000 at the end of 2017.

In addition to affecting the statement of financial position, deferred taxes impact income tax expense in each of the three years affected. In 2015, taxable income (\$40,000) is less than pretax financial income (\$70,000). Income taxes payable for 2015 is therefore \$16,000 (based on taxable income). Deferred tax expense of \$12,000 results from the increase in the Deferred Tax Liability account on the statement of financial position. Income tax expense is then \$28,000 for 2015.

In 2016 and 2017, however, taxable income will exceed pretax financial income due to the reversal of the temporary difference (\$20,000 in 2016 and \$10,000 in 2017). Income taxes payable will therefore exceed income tax expense in 2016 and 2017. Chelsea will debit the Deferred Tax Liability account for \$8,000 in 2016 and \$4,000 in 2017. It records credits for these amounts in Income Tax Expense. These credits are often referred to as a **deferred tax benefit** (which we discuss again later on).

Future Deductible Amounts and Deferred Taxes

Assume that during 2015, Cunningham Inc. estimated its warranty costs related to the sale of microwave ovens to be \$500,000, paid evenly over the next two years. For book purposes, in 2015 Cunningham reported warranty expense and a related estimated liability for warranties of \$500,000 in its financial statements. For tax purposes, the warranty tax deduction is not allowed until paid. Therefore, Cunningham recognizes no warranty liability on a tax-basis statement of financial position. Illustration 19-12 shows the statement of financial position difference at the end of 2015.

Per Books	12/31/15	Per Tax Return	12/31/15
Estimated liability for		Estimated liability for	
warranties	\$500,000	warranties	<u>\$-0-</u>

ILLUSTRATION 19-12

Temporary Difference, Warranty Liability

When Cunningham pays the warranty liability, it reports an expense (deductible amount) for tax purposes. Because of this temporary difference, Cunningham should recognize in 2015 the tax benefits (positive tax consequences) for the tax deductions that will result from the future settlement of the liability. Cunningham reports this future tax benefit in the December 31, 2015, statement of financial position as a **deferred tax asset**.

We can think about this situation another way. Deductible amounts occur in future tax returns. These **future deductible amounts** cause taxable income to be less than pretax financial income in the future as a result of an existing temporary difference. Cunningham's temporary difference originates (arises) in one period (2015) and reverses over two periods (2016 and 2017). Illustration 19-13 diagrams this situation.

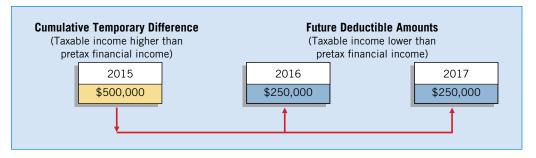

ILLUSTRATION 19-13Reversal of Temporary
Difference, Cunningham

Inc.

A deferred tax asset is the deferred tax consequence attributable to deductible temporary differences. In other words, a deferred tax asset represents the increase in taxes refundable (or saved) in future years as a result of deductible temporary differences existing at the end of the current year.

To illustrate, assume that Hunt Co. accrues a loss and a related liability of \$50,000 in 2015 for financial reporting purposes because of pending litigation. Hunt cannot deduct this amount for tax purposes until the period it pays the liability, expected in 2016. As a result, a deductible amount will occur in 2016 when Hunt settles the liability, causing taxable income to be lower than pretax financial income. Illustration 19-14 (on page 962) shows the computation of the deferred tax asset at the end of 2015 (assuming a 40 percent tax rate).

www.downloadslide.com

962 Chapter 19 Accounting for Income Taxes

ILLUSTRATION 19-14

Computation of Deferred Tax Asset, End of 2015

Book basis of litigation liability Tax basis of litigation liability	\$50,000 O	
Cumulative temporary difference at the end of 2015 Tax rate	50,000 × 40%	
Deferred tax asset at the end of 2015	<u>\$20,000</u>	

Hunt can also compute the deferred tax asset by preparing a schedule that indicates the future deductible amounts due to deductible temporary differences. Illustration 19-15 shows this schedule.

ILLUSTRATION 19-15

Schedule of Future Deductible Amounts

	Future Years
Future deductible amounts Tax rate	\$50,000 _× 40%
Deferred tax asset at the end of 2015	\$20,000

Assuming that 2015 is Hunt's first year of operations, and income taxes payable is \$100,000, Hunt computes its income tax expense as follows.

ILLUSTRATION 19-16

Computation of Income Tax Expense, 2015

Deferred tax asset at end of 2015 Deferred tax asset at beginning of 2015	\$ 20,000 	
Deferred tax expense (benefit) for 2015 Current tax expense for 2015 (income taxes payable)	(20,000) 100,000	
Income tax expense (total) for 2015	\$ 80,000	

The **deferred tax benefit** results from the increase in the deferred tax asset from the beginning to the end of the accounting period (similar to the Chelsea deferred tax liability example earlier). The deferred tax benefit is a negative component of income tax expense. The total income tax expense of \$80,000 on the income statement for 2015 thus consists of two elements—current tax expense of \$100,000 and a deferred tax benefit of \$20,000. For Hunt, it makes the following journal entry at the end of 2015 to record income tax expense, deferred income taxes, and income taxes payable.

Income Tax Expense 80,000

Deferred Tax Asset 20,000

Income Taxes Payable 100,000

At the end of 2016 (the second year), the difference between the book value and the tax basis of the litigation liability is zero. Therefore, there is no deferred tax asset at this date. Assuming that income taxes payable for 2016 is \$140,000, Hunt computes income tax expense for 2016 as shown in Illustration 19-17.

ILLUSTRATION 19-17

Computation of Income Tax Expense, 2016

Deferred tax asset at the end of 2016	\$ -0-
Deferred tax asset at the beginning of 2016	20,000
Deferred tax expense (benefit) for 2016	20,000
Current tax expense for 2016 (income taxes payable)	140,000
Income tax expense (total) for 2016	\$160,000

The company records income taxes for 2016 as follows.

Income Tax Expense 160,000

Deferred Tax Asset 20,000

Income Taxes Payable 140,000

The total income tax expense of \$160,000 on the income statement for 2016 thus consists of two elements—current tax expense of \$140,000 and deferred tax expense of \$20,000. Illustration 19-18 shows the Deferred Tax Asset account at the end of 2016.

Deferred Tax Asset					
2015	20,000	2016	20,000		

ILLUSTRATION 19-18 Deferred Tax Asset Account after Reversals

What do the numbers mean?

"REAL ASSETS"

A key issue in accounting for income taxes is whether a company should recognize a deferred tax asset in the financial records. Based on the conceptual definition of an asset, a deferred tax asset meets the three main conditions for an item to be recognized as an asset:

- **1.** The entity controls access to the benefits. In the Hunt example, the company can obtain the benefit of existing deductible temporary differences by reducing its taxes payable in the future. Hunt has the exclusive right to that benefit and can control others' access to it.
- **2.** *It results from a past transaction.* For Hunt, the accrual of the loss contingency is the past event that gives rise to a future deductible temporary difference.
- **3.** It gives rise to a probable benefit in the future. Taxable income exceeds Hunt's pretax financial income in the

current year (2015). However, in the next year the exact opposite occurs. That is, taxable income is lower than pretax financial income. Because this deductible temporary difference reduces taxes payable in the future, a probable future benefit exists at the end of the current period.

Market analysts' reactions to the write-off of deferred tax assets also supports their treatment as assets. For example, many believe MF Global's (USA) recent bankruptcy was precipitated by the large write-off of its deferred tax assets. In essence, the company was saying that it was highly unlikely that it would have future taxable profits with which to match these deferred tax deductions. As a result, investors lost total confidence in the firm.

Sources: J. Weil and S. Liesman, "Stock Gurus Disregard Most Big Write-Offs But They Often Hold Vital Clues to Outlook," Wall Street Journal Online (December 31, 2001); and Tim Worstall, "Why MF Global Really Went Bankrupt," Forbes (December 16, 2011).

Deferred Tax Asset (Non-Recognition)

Companies recognize a deferred tax asset for all deductible temporary differences. However, based on available evidence, a company should reduce a deferred tax asset if it is probable that it will not realize some portion or all of the deferred tax asset. "Probable" means a level of likelihood of at least slightly more than 50 percent.

LEARNING OBJECTIVE

Explain the non-recognition of a deferred tax asset.

Assume that Jensen Co. has a deductible temporary difference of €1,000,000 at the end of its first year of operations. Its tax rate is 40 percent, which means it records a deferred tax asset of €400,000 (€1,000,000 \times 40%). Assuming €900,000 of income taxes payable, Jensen records income tax expense, the deferred tax asset, and income taxes payable as follows.

> Income Tax Expense 500,000 **Deferred Tax Asset** 400.000

Income Taxes Payable 900,000

After careful review of all available evidence, Jensen determines that it is probable that it will not realize €100,000 of this deferred tax asset. Jensen records this reduction in asset value as follows.

> Income Tax Expense 100,000

Deferred Tax Asset 100.000

This journal entry increases income tax expense in the current period because Jensen does not expect to realize a favorable tax benefit for a portion of the deductible temporary difference. Jensen simultaneously recognizes a reduction in the carrying amount

of the deferred tax asset. Jensen then reports a deferred tax asset of €300,000 in its statement of financial position.

Jensen evaluates the deferred tax asset account at the end of each accounting period. If, at the end of the next period, it expects to realize €350,000 of this deferred tax asset, Jensen makes the following entry to adjust this account.

> Deferred Tax Asset (€350,000 - €300,000) 50,000 Income Tax Expense 50,000

Jensen should consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs to adjust the deferred tax asset. For example, if Jensen has been experiencing a series of loss years, it reasonably assumes that these losses will continue. Therefore, Jensen will lose the benefit of the future deductible amounts.

Generally, sufficient taxable income arises from temporary taxable differences that will reverse in the future or from a tax-planning strategy that will generate taxable income in the future. Illustration 19-19 shows how Ahold (NLD) describes its reporting of deferred assets.

ILLUSTRATION 19-19

Deferred Tax Asset Disclosure

Ahold

Note 11. Significant judgment is required in determining whether deferred tax assets are realizable. Ahold determines this on the basis of expected taxable profits arising from recognized deferred tax liabilities and on the basis of budgets, cash flow forecasts, and impairment models. Where utilization is not considered probable, deferred taxes are not recognized.

Income Statement Presentation

LEARNING OBJECTIVE 5

Describe the presentation of income tax expense in the income statement.

Circumstances dictate whether a company should add or subtract the change in deferred income taxes to or from income taxes payable in computing income tax expense. For example, a company adds an increase in a deferred tax liability to income taxes payable. On the other hand, it subtracts an increase in a deferred

tax asset from income taxes payable. The formula in Illustration 19-20 is used to compute income tax expense (benefit).

ILLUSTRATION 19-20

Formula to Compute Income Tax Expense

Total Income Taxes Change in **Income Tax** ± **Deferred Income** Payable or = **Expense or** Refundable Taxes **Benefit**

In the income statement or in the notes to the financial statements, a company should disclose the significant components of income tax expense attributable to continuing operations. Given the information related to Chelsea on page 959, the company reports its income statement as follows.

ILLUSTRATION 19-21

Income Statement Presentation of Income Tax Expense

CHELSEA Income Sta For the Year Ending D	TEMENT	2015
Revenues		\$130,000
Expenses		60,000
Income before income taxes Income tax expense		70,000
Current	\$16,000	
Deferred	12,000	28,000
Net income		\$ 42,000

As illustrated, Chelsea reports both the current portion (amount of income taxes payable for the period) and the deferred portion of income tax expense. Another option is to simply report the total income tax expense on the income statement and then indicate in the notes to the financial statements the current and deferred portions. Income tax expense is often referred to as "Provision for income taxes." Using this terminology, the current provision is \$16,000, and the provision for deferred taxes is \$12,000.

Specific Differences

Numerous items create differences between pretax financial income and taxable income. For purposes of accounting recognition, these differences are of two types: (1) temporary, and (2) permanent.

6 LEARNING OBJECTIVE

Describe various temporary and permanent differences.

Temporary Differences

Taxable temporary differences are temporary differences that will result in taxable amounts in future years when the related assets are recovered. **Deductible temporary differences** are temporary differences that will result in deductible amounts in future years, when the related book liabilities are settled. Taxable temporary differences give rise to recording deferred tax liabilities. Deductible temporary differences give rise to recording deferred tax assets. Illustration 19-22 provides examples of temporary differences.

ILLUSTRATION 19-22 Examples of Temporary Differences

Revenues or gains are taxable after they are recognized in financial income (deferred tax liability).

An asset (e.g., accounts receivable or investment) may be recognized for revenues or gains that will result in **taxable amounts in future years** when the asset is recovered. Examples:

- 1. Sales accounted for on the accrual basis for financial reporting purposes and on the installment (cash) basis for tax purposes.
- 2. Contracts accounted for under the percentage-of-completion method for financial reporting purposes and the cost-recovery method (zero-profit method) for tax purposes.
- 3. Investments accounted for under the equity method for financial reporting purposes and under the cost method for tax purposes.
- 4. Gain on involuntary conversion of non-monetary asset which is recognized for financial reporting purposes but deferred for tax purposes.
- 5. Unrealized holding gains for financial reporting purposes (including use of the fair value option) but deferred for tax purposes.

Expenses or losses are deductible after they are recognized in financial income (deferred tax asset).

A liability (or contra asset) may be recognized for expenses or losses that will result in **deductible amounts in future years** when the liability is settled. Examples:

- 1. Product warranty liabilities.
- 2. Estimated liabilities related to discontinued operations or restructurings.
- 3. Litigation accruals.
- 4. Bad debt expense recognized using the allowance method for financial reporting purposes; direct write-off method used for tax purposes.
- 5. Share-based compensation expense.
- 6. Unrealized holding losses for financial reporting purposes (including use of the fair value option) but deferred for tax purposes.

Revenues or gains are taxable before they are recognized in financial income (deferred tax asset).

A liability may be recognized for an advance payment for goods or services to be provided or performed in future years. For tax purposes, the advance payment is included in taxable income upon the receipt of cash. Future sacrifices to provide goods or perform services (or future refunds to those who cancel their orders) that settle the liability will result in **deductible amounts in future years**. Examples:

- 1. Subscriptions received in advance.
- 2. Advance rental receipts.
- 3. Sales and leasebacks for financial reporting purposes (income deferral) but reported as sales for tax purposes.
- 4. Prepaid contracts and royalties received in advance.

Expenses or losses are deductible before they are recognized in financial income (deferred tax liability).

The cost of an asset may have been deducted for tax purposes faster than it was expensed for financial reporting purposes. Amounts received upon future recovery of the amount of the asset for financial reporting (through use or sale) will exceed the remaining tax basis of the asset and thereby result in **taxable amounts in future years**. Examples:

- 1. Depreciable property, depletable resources, and intangibles.
- 2. Deductible pension funding exceeding expense.
- 3. Prepaid expenses that are deducted on the tax return in the period paid.
- 4. Development costs that are deducted on the tax return in the period paid.

Determining a company's temporary differences may prove difficult. A company should prepare a statement of financial position for tax purposes that it can compare with its IFRS statement of financial position. Many of the differences between the two statements of financial position are temporary differences.

Originating and Reversing Aspects of Temporary Differences. An originating temporary difference is the initial difference between the book basis and the tax basis of an asset or liability, regardless of whether the tax basis of the asset or liability exceeds or is exceeded by the book basis of the asset or liability. A reversing difference, on the other hand, occurs when eliminating a temporary difference that originated in prior periods and then removing the related tax effect from the deferred tax account.

For example, assume that Sharp Co. has tax depreciation in excess of book depreciation of £2,000 in 2013, 2014, and 2015. Further, it has an excess of book depreciation over tax depreciation of £3,000 in 2016 and 2017 for the same asset. Assuming a tax rate of 30 percent for all years involved, the Deferred Tax Liability account reflects the following.

ILLUSTRATION 19-23

Tax Effects of Originating and Reversing Differences

		Deferred ⁻	Tax Liability	/	
Tax Effects	∫2016	900	2013	600	Tax Effects
of	2017	900	2014	600	of
Reversing Differences			2015	600	Originating Differences

The originating differences for Sharp in each of the first three years are £2,000. The related tax effect of each originating difference is £600. The reversing differences in 2016 and 2017 are each £3,000. The related tax effect of each is £900.

Permanent Differences

Some differences between taxable income and pretax financial income are permanent. **Permanent differences** result from items that (1) enter into pretax financial income but **never** into taxable income, or (2) enter into taxable income but **never** into pretax financial income.

Governments enact a variety of tax law provisions to attain certain political, economic, and social objectives. Some of these provisions exclude certain revenues from taxation, limit the deductibility of certain expenses, and permit the deduction of certain other expenses in excess of costs incurred. A corporation that has tax-free income, non-deductible expenses, or allowable deductions in excess of cost has an effective tax rate that differs from its statutory (regular) tax rate.

Since permanent differences affect only the period in which they occur, they do not give rise to future taxable or deductible amounts. As a result, **companies recognize no deferred tax consequences**. Illustration 19-24 shows examples of permanent differences, given typical country laws.

ILLUSTRATION 19-24

Examples of Permanent Differences

Items are recognized for financial reporting purposes but not for tax purposes.

Examples:

- 1. Interest received on certain types of government obligations.
- 2. Expenses incurred in obtaining tax-exempt income.
- 3. Fines and expenses resulting from a violation of law.
- 4. Charitable donations recognized as expense but sometimes not deductible for tax purposes.

Items are recognized for tax purposes but not for financial reporting purposes.

Examples

- 1. "Percentage depletion" of natural resources in excess of their cost.
- 2. The deduction for dividends received from other corporations, sometimes considered tax-exempt.

Examples of Temporary and Permanent Differences

To illustrate the computations used when both temporary and permanent differences exist, assume that Bio-Tech Company reports pretax financial income of €200,000 in each of the years 2013, 2014, and 2015. The company is subject to a 30 percent tax rate and has the following differences between pretax financial income and taxable income.

- **1.** Bio-Tech reports an installment sale of €18,000 in 2013 for tax purposes over an 18-month period at a constant amount per month beginning January 1, 2014. It recognizes the entire sale for book purposes in 2013.
- **2.** It pays life insurance premiums for its key officers of €5,000 in 2014 and 2015. Although not tax-deductible, Bio-Tech expenses the premiums for book purposes.

The installment sale is a temporary difference, whereas the life insurance premium is a permanent difference. Illustration 19-25 shows the reconciliation of Bio-Tech's pretax financial income to taxable income and the computation of income taxes payable.

	2013	2014	2015
Pretax financial income Permanent difference	€200,000	€200,000	€200,000
Non-deductible expense Temporary difference		5,000	5,000
Installment sale	(18,000)	12,000	6,000
Taxable income	182,000	217,000	211,000
Tax rate	× 30%	× 30%	× 30%

ILLUSTRATION 19-25
Reconciliation and
Computation of Income
Taxes Payable

Note that Bio-Tech **deducts** the installment sales revenue from pretax financial income to arrive at taxable income. The reason: Pretax financial income includes the installment sales revenue; taxable income does not. Conversely, it **adds** the €5,000 insurance premium to pretax financial income to arrive at taxable income. The reason: Pretax financial income records an expense for this premium, but for tax purposes the premium is not deductible. As a result, pretax financial income is lower than taxable income. Therefore, the life insurance premium must be added back to pretax financial income to reconcile to taxable income.

Bio-Tech records income taxes for 2013, 2014, and 2015 as follows.

December 31, 2013		
Income Tax Expense (€54,600 + €5,400)	60,000	
Deferred Tax Liability (€18,000 × 30%)		5,400
Income Taxes Payable (€182,000 × 30%)		54,600
December 31, 2014		
Income Tax Expense (€65,100 - €3,600)	61,500	
Deferred Tax Liability (€12,000 × 30%)	3,600	
Income Taxes Payable (€217,000 × 30%)		65,100
December 31, 2015		
Income Tax Expense (€63,300 - €1,800)	61,500	
Deferred Tax Liability (€6,000 × 30%)	1,800	
Income Taxes Payable (€211,000 × 30%)		63,300

Bio-Tech has one temporary difference, which originates in 2013 and reverses in 2014 and 2015. It recognizes a deferred tax liability at the end of 2013 because the temporary difference causes future taxable amounts. As the temporary difference reverses, Bio-Tech reduces the deferred tax liability. There is no deferred tax amount associated with the difference caused by the non-deductible insurance expense because it is a permanent difference.

Although an enacted tax rate of 30 percent applies for all three years, the effective rate differs from the enacted rate in 2014 and 2015. Bio-Tech computes the **effective tax rate** by dividing total income tax expense for the period by pretax financial income. The effective rate is 30 percent for 2013 (€60,000 \div €200,000 = 30%) and 30.75 percent for 2014 and 2015 (€61,500 \div €200,000 = 30.75%).

Tax Rate Considerations

LEARNING OBJECTIVE 7

Explain the effect of various tax rates and tax rate changes on deferred income taxes.

In our previous illustrations, the enacted tax rate did not change from one year to the next. Thus, to compute the deferred income tax amount to report on the statement of financial position, a company simply multiplies the cumulative temporary difference by the current tax rate. Using Bio-Tech as an example, it multiplies the cumulative temporary difference of €18,000 by the enacted tax rate, 30 percent

in this case, to arrive at a deferred tax liability of \leq 5,400 (\leq 18,000 \times 30%) at the end of 2013.

Future Tax Rates

What happens if tax rates are expected to change in the future? In this case, a company should use the **substantially enacted tax rate** expected to apply.² Therefore, a company must consider presently enacted changes in the tax rate that become effective for a particular future year(s) when determining the tax rate to apply to existing temporary differences. For example, assume that Wang Group at the end of 2012 has the following cumulative temporary difference of \(\frac{4}{3}00,000\), computed as shown in Illustration 19-26.

ILLUSTRATION 19-26

Computation of Cumulative Temporary Difference

Book basis of depreciable assets Tax basis of depreciable assets To0,000 Cumulative temporary difference Y1,000,000 700,000 Y300,000			
· · · · · · · · · · · · · · · · · · ·	E	Book basis of depreciable assets	¥1,000,000
Cumulative temporary difference ¥ 300,000	Т	ax basis of depreciable assets	700,000
	C	Cumulative temporary difference	¥ 300,000

Furthermore, assume that the \(\frac{4}{3}00,000\) will reverse and result in taxable amounts in the future, with the enacted tax rates shown in Illustration 19-27.

ILLUSTRATION 19-27

Deferred Tax Liability Based on Future Rates

	2013	2014	2015	2016	2017	Total
Future taxable amounts	¥80,000	¥70,000	¥60,000	¥50,000	¥40,000	¥300,000
Tax rate	_×40%	<u>×40%</u>	<u>×35%</u>	<u>×30%</u>	<u>×30%</u>	
Deferred tax liability	¥32,000	¥28,000	¥21,000	¥15,000	¥12,000	¥108,000

The total deferred tax liability at the end of 2012 is ¥108,000. Wang may only use tax rates other than the current rate when the future tax rates have been enacted, as is the case in this example. If new rates are not yet enacted for future years, Wang should use the current rate.

In some countries, the applicable tax rate depends on how the carrying amount of an asset or liability is recovered or settled. For example, a company could be operating a plant that it intends to hold for continued use. The tax rate on normal operations is 35 percent. On the other hand, if the company wishes to sell the plant and the related capital gain or loss is subject to a tax rate of 15 percent, then the applicable tax rate may change. [3]

Revision of Future Tax Rates

When a change in the tax rate is enacted, companies should record its effect on the existing deferred income tax accounts immediately. A company reports the effect as an adjustment to income tax expense in the period of the change.

Assume that on December 10, 2014, a new income tax act is signed into law that lowers the corporate tax rate from 40 percent to 35 percent, effective January 1, 2016. If

²Substantially enacted generally means "virtually certain." The IASB provides guidelines as to how to interpret substantially enacted. [2] For purposes of discussion and homework, assume that the term "enacted" is interchangeable with "substantially enacted."

Fundamentals of Accounting for Income Taxes 969

Hostel Co. has one temporary difference at the beginning of 2014 related to \$3 million of excess tax depreciation, then it has a Deferred Tax Liability account with a balance of \$1,200,000 ($$3,000,000 \times 40\%$) at January 1, 2014. If taxable amounts related to this difference are scheduled to occur equally in 2015, 2016, and 2017, the deferred tax liability at the end of 2014 is \$1,100,000, computed as follows.

Future taxable amounts Tax rate	2015 \$1,000,000 × 40%	2016 \$1,000,000 × 35%	2017 \$1,000,000 × 35%	Total \$3,000,000
Deferred tax liability	\$ 400,000	\$ 350,000	\$ 350,000	\$1,100,000

ILLUSTRATION 19-28 Schedule of Future Taxable Amounts and Related Tax Rates

Hostel, therefore, recognizes the decrease of \$100,000 (\$1,200,000 - \$1,100,000) at the end of 2014 in the deferred tax liability as follows.

Deferred Tax Liability 100,000 Income Tax Expense

Corporate tax rates do not change often. Therefore, companies usually employ the current rate. However, tax rates in some jurisdictions change more frequently, and they require adjustments in deferred income taxes accordingly.³

What do the numbers mean?

GLOBAL TAX RATES

100.000

If you are concerned about your tax rate and the taxes you pay, you might want to consider moving to the Cayman Islands or the Bahamas, which have a personal tax rate of zero percent. You don't want to move to Denmark though. Yes, the people of Denmark are regularly voted to be the happiest people on Earth but it's uncertain how many of these polls take place at tax time. The government in Denmark charges income tax rates up to 55.4 percent. So, taxes are a major item to many individuals, wherever they reside.

Taxes are also a big deal to corporations. For example, the Organisation for Economic Co-operation and Development (OECD) is an international organization of 38 countries that accepts the principles of a free-market economy. Most OECD members are high-income economies and are regarded as developed countries. However, companies in the OECD can be subject to significant tax levies, as indicated in the following list of the 10 highest corporate income tax rates for the OECD countries.

United States	40.0%	Germany	29.5%
Japan	38.0	Luxembourg	28.8
Belgium	33.9	New Zealand	28.0
France	33.3	Spain	28.0
Australia	30.0	Canada	26.0

On the low end of the tax rate spectrum are Iceland and Ireland, with tax rates of 15 percent and 12.5 percent, respectively. Indeed, corporate tax rates have been dropping around the world as countries attempt to spur capital investment, which in turn encourages international tax competition. However, with stagnant global economic growth, there is concern that governments will target increases in corporate tax rates as a source of revenues to address budget shortfalls. In addition, further expansion of value-added taxes (VAT) is being considered. Indirect taxes such as the VAT are charged on consumption of goods and services, which is much more stable than the corporate tax.

If these tax proposals result in changes in the tax rates applied to future deductible and taxable amounts, be prepared for significant remeasurement of deferred tax assets and liabilities.

Source: The rates reported reflect the base corporate rate in effect in 2012. Effective rates paid may vary depending on country-specific additional levies for such items as unemployment and local taxes, and, in the case of Japan, earthquake damage assessments. Effective rates may be lower due to credits for investments and capital gains. See http://www.kpmg.com/global/en/services/tax-tools-and-resources/pages/tax-rates-online.aspx. See also P. Toscano, "The World's Highest Tax Rates," http://www.cnbc.com/id/30727913 (May 13, 2009).

³Tax rate changes nearly always will substantially impact income numbers and the reporting of deferred income taxes on the statement of financial position. As a result, you can expect to hear an economic consequences argument every time that a government decides to change the tax rates. For example, when one country raised the corporate rate from 34 percent to 35 percent, companies took an additional "hit" to earnings if they were in a deferred tax liability position.

ACCOUNTING FOR NET OPERATING LOSSES

LEARNING OBJECTIVE [3]

Apply accounting procedures for a loss carryback and a loss carryforward.

Every management hopes its company will be profitable. But hopes and profits may not materialize. For a start-up company, it is common to accumulate operating losses while expanding its customer base but before realizing economies of scale. For an established company, a major event such as a labor strike, a rapidly

changing regulatory environment, or a competitive situation can cause expenses to exceed revenues—a net operating loss.

A net operating loss (NOL) occurs for tax purposes in a year when tax-deductible expenses exceed taxable revenues. An inequitable tax burden would result if companies were taxed during profitable periods without receiving any tax relief during periods of net operating losses. Under certain circumstances, therefore, tax laws permit taxpayers to use the losses of one year to offset the profits of other years.

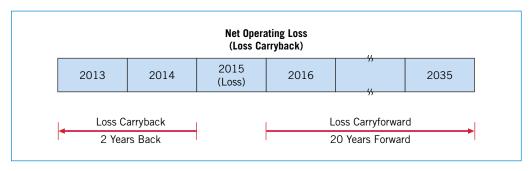

Companies accomplish this income-averaging provision through the carryback and carryforward of net operating losses. Under this provision, a company pays no income taxes for a year in which it incurs a net operating loss. In addition, it may select one of the two options discussed below and on the following pages.⁴

Loss Carryback

Through use of a loss carryback, a company may carry the net operating loss back two years and receive refunds for income taxes paid in those years. The company must apply the loss to the earlier year first and then to the second year. It may carry forward any loss remaining after the two-year carryback up to 20 years to offset future taxable income. Illustration 19-29 diagrams the loss carryback procedure, assuming a loss in 2015.

ILLUSTRATION 19-29

Loss Carryback Procedure

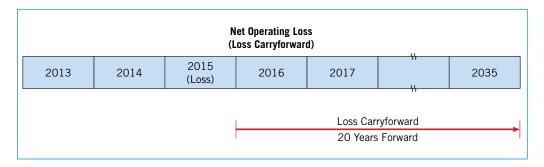

Loss Carryforward

A company may forgo the loss carryback and use only the loss carryforward option, offsetting future taxable income for up to 20 years. Illustration 19-30 shows this approach.

ILLUSTRATION 19-30

Loss Carryforward Procedure

 4 Countries differ as to the years that operating losses can be carried back and forward. In our discussion, we assume that companies can carry their operating losses back two years and can carry them forward 20 years. For homework purposes, use these periods as the basis for carrybacks and carryforwards.

Loss Carryback Example

To illustrate the accounting procedures for a net operating loss carryback, assume that Groh Inc. has no temporary or permanent differences. Groh experiences the following.

	Taxable Income		
Year	or Loss	Tax Rate	Tax Paid
2011	\$ 50,000	35%	\$17,500
2012	100,000	30%	30,000
2013	200,000	40%	80,000
2014	(500,000)	_	-0-

In 2014, Groh incurs a net operating loss that it decides to carry back. Under the law, Groh must apply the carryback first to the **second year preceding the loss year**. Therefore, it carries the loss back first to 2012. Then, Groh carries back any unused loss to 2013. Accordingly, Groh files amended tax returns for 2012 and 2013, receiving refunds for the \$110,000 (\$30,000 + \$80,000) of taxes paid in those years.

For accounting as well as tax purposes, the \$110,000 represents the tax effect (tax benefit) of the loss carryback. Groh should recognize this tax effect in 2014, the loss year. Since the tax loss gives rise to a refund that is both measurable and currently realizable, Groh should recognize the associated tax benefit in this loss period.

Groh makes the following journal entry for 2014.

Income Tax Refund Receivable 110,000

Benefit Due to Loss Carryback (Income Tax Expense) 110,000

Groh reports the account debited, **Income Tax Refund Receivable**, on the statement of financial position as a current asset at December 31, 2014. It reports the account credited on the income statement for 2014 as shown in Illustration 19-31.

GROH INC. INCOME STATEMENT (PARTIAL) FO	DR 2014
Operating loss before income taxes Income tax benefit	\$(500,000)
Benefit due to loss carryback	110,000
Net loss	<u>\$(390,000)</u>

ILLUSTRATION 19-31 Recognition of Benefit of the Loss Carryback in the Loss Year

Since the \$500,000 net operating loss for 2014 exceeds the \$300,000 total taxable income from the two preceding years, Groh carries forward the remaining \$200,000 loss.

Loss Carryforward Example

If a carryback fails to fully absorb a net operating loss or if the company decides not to carry the loss back, then it can carry forward the loss for up to 20 years. Because companies use carryforwards to offset future taxable income, the **tax effect of a loss carryforward** represents **future tax savings**. Realization of the future tax benefit depends on future earnings, an uncertain prospect.

The key accounting issue is whether there should be different requirements for recognition of a deferred tax asset for (a) deductible temporary differences, and (b) operating loss carryforwards. The IASB's position is that in substance these items are the same—both are tax-deductible amounts in future years. As a result, the Board concluded

that there **should not be different requirements** for recognition of a deferred tax asset from deductible temporary differences and operating loss carryforwards.⁵

Carryforward (Recognition)

To illustrate the accounting for an operating loss carryforward, return to the Groh example from the preceding section. In 2014, the company records the tax effect of the \$200,000 loss carryforward as a deferred tax asset of \$80,000 ($$200,000 \times 40\%$), assuming that the enacted future tax rate is 40 percent. Groh records the benefits of the carryback and the carryforward in 2014 as follows.

To recognize benefit of loss carryback

Income Tax Refund Receivable 110,000

Benefit Due to Loss Carryback (Income Tax Expense) 110,000

To recognize benefit of loss carryforward

Deferred Tax Asset 80,000

Benefit Due to Loss Carryforward (Income Tax Expense) 80,000

Groh realizes the income tax refund receivable of \$110,000 immediately as a refund of taxes paid in the past. It establishes a Deferred Tax Asset for the benefits of future tax savings. The two accounts credited are contra income tax expense items, which Groh presents on the 2014 income statement shown in Illustration 19-32.

ILLUSTRATION 19-32

Recognition of the Benefit of the Loss Carryback and Carryforward in the Loss Year

GROH INCOME STATEMENT (PAR		
Operating loss before income taxes Income tax benefit		\$(500,000)
Benefit due to loss carryback	\$110,000	
Benefit due to loss carryforward	80,000	190,000
Net loss		\$(310,000)

The **current tax benefit** of \$110,000 is the income tax refundable for the year. Groh determines this amount by applying the carryback provisions of the tax law to the taxable loss for 2014. The \$80,000 is the **deferred tax benefit** for the year, which results from an increase in the deferred tax asset.

For 2015, assume that Groh returns to profitable operations and has taxable income of \$250,000 (prior to adjustment for the NOL carryforward), subject to a 40 percent tax rate. Groh then realizes the benefits of the carryforward for tax purposes in 2015, which it recognized for accounting purposes in 2014. Groh computes the income taxes payable for 2015 as shown in Illustration 19-33.

ILLUSTRATION 19-33

Computation of Income Taxes Payable with Realized Loss Carryforward

Taxable income prior to loss carryforward Loss carryforward deduction	\$ 250,000 (200,000)
Taxable income for 2015 Tax rate	50,000 × 40%
Income taxes payable for 2015	\$ 20,000

⁵This requirement is controversial because some believe that companies should never recognize deferred tax assets for loss carryforwards until realizing the income in the future.

Groh records income taxes in 2015 as follows.

Income Tax Expense 100,000

Deferred Tax Asset 80,000 Income Taxes Payable 20,000

The benefits of the NOL carryforward, realized in 2015, reduce the Deferred Tax Asset account to zero.

The 2015 income statement that appears in Illustration 19-34 does **not report** the tax effects of either the loss carryback or the loss carryforward because Groh had reported both previously.

GROH INCOME STATEMENT (15	
Income before income taxes Income tax expense		\$250,000	
Current	\$20,000		
Deferred	80,000	100,000	
Net income		<u>\$150,000</u>	

ILLUSTRATION 19-34 Presentation of the Benefit of Loss Carryforward Realized in 2015,

Recognized in 2014

Carryforward (Non-Recognition)

Let us continue with the Groh example. Assume now that it is probable that Groh will *not* realize the entire NOL carryforward in future years. In this situation, Groh records the tax benefits of \$110,000 associated with the \$300,000 NOL carryback, as we previously described. It does not recognize a deferred tax asset for the loss carryforward because it is probable that it will not realize the carryforward. Groh makes the following journal entry in 2014.

To recognize benefit of loss carryback

Income Tax Refund Receivable 110,000

Benefit Due to Loss Carryback (Income Tax Expense) 110,000

Illustration 19-35 shows Groh's 2014 income statement presentation.

GROH INC. Income Statement (Partial) Fo	DR 2014
Operating loss before income taxes Income tax benefit	\$(500,000)
Benefit due to loss carryback	_110,000
Net loss	\$(390,000)

ILLUSTRATION 19-35 Recognition of Benefit of Loss Carryback Only

In 2015, assuming that Groh has taxable income of \$250,000 (before considering the carryforward), subject to a tax rate of 40 percent, it realizes the deferred tax asset. Groh records the following entries.

To recognize deferred tax asset and loss carryforward

Deferred Tax Asset 80,000

Benefit Due to Loss Carryforward (Income Tax Expense) 80,000

To record current and deferred income taxes

Income Tax Expense 100,000

Deferred Tax Asset 80,000 Income Taxes Payable 20,000

Groh reports the \$80,000 Benefit Due to the Loss Carryforward on the 2015 income statement. The company did not recognize it in 2014 because it was probable that it

would not be realized. Assuming that Groh derives the income for 2015 from continuing operations, it prepares the income statement as shown in Illustration 19-36.

ILLUSTRATION 19-36

Recognition of Benefit of Loss Carryforward When Realized

GROH IN Income Statement (PA			
Income before income taxes Income tax expense		\$250,000	
Current	\$ 20,000		
Deferred	80,000		
Benefit due to loss carryforward	(80,000)	20,000	
Net income		\$230,000	

Another method is to report only one line for total income tax expense of \$20,000 on the face of the income statement and disclose the components of income tax expense in the notes to the financial statements.

Non-Recognition Revisited

Whether the company will realize a deferred tax asset depends on whether sufficient taxable income exists or will exist within the carryforward period available under tax law. Illustration 19-37 shows possible sources of taxable income and related factors that companies can consider in assessing the probability that taxable income will be available against which the unused tax losses or unused tax credits can be utilized.⁶

ILLUSTRATION 19-37

Possible Sources of Taxable Income

Taxable Income Sources

- a. Whether the company has sufficient taxable temporary differences relating to the same tax authority, which will result in taxable amounts against which the unused tax losses or unused tax credits can be utilized before they expire;
- **b.** Whether it is probable that the company will have taxable profits before the unused tax losses or unused tax credits expire;
- c. Whether the unused tax losses result from identifiable causes, which are unlikely to recur; and
- **d.** Whether tax-planning opportunities are available to the company that will create taxable profit in the period in which the unused tax losses or unused tax credits can be utilized. [4]

To the extent that it is not probable that taxable profit will be available against which the unused tax losses or unused tax credits can be utilized, the deferred tax asset is not recognized.

Forming a conclusion that recognition of a loss carryforward is probable is difficult when there is negative evidence (such as cumulative losses in recent years). However, companies often cite positive evidence indicating that recognition of the carryforward is warranted.⁷

⁶Companies implement a tax-planning strategy to realize a tax benefit for an operating loss or tax carryforward before it expires. Companies consider tax-planning strategies when assessing the need of a deferred tax asset to recognize.

⁷Sony Corp. (JPN) announced a \$3.2 billion net loss, blaming a \$4.4 billion write-off on a certain portion of deferred tax assets in Japan, in what would be the company's third straight year of red ink. The write-off is an admission that the March 2011 earthquake and tsunami have shattered its expectations for a robust current fiscal year. In the wake of the disaster, Sony temporarily shut 10 plants in and around the quake-hit region. Like other Japanese auto and electronics makers, Sony faced uncertainties because its recovery prospects are partially dependent on parts and materials suppliers, many of which have also been affected by the quake. Thus, the post-quake outlook put Sony in a position where it had to set aside reserves of approximately \$3 billion on certain deferred tax assets in its fiscal fourth quarter. See J. Osawa, "Sony Expects Hefty Loss: Electronics Giant Reverses Prediction for Full-Year Profit, Blaming Earthquake," Wall Street Journal (May 24, 2011).

LEARNING OBJECTIVE

Unfortunately, the subjective nature of determining an impairment for a deferred tax asset provides a company with an opportunity to manage its earnings. As one accounting expert notes, "The 'probable' provision is perhaps the most judgmental clause in accounting." Some companies may recognize the loss carryforward immediately and then use it to increase income as needed. Others may take the income immediately to increase capital or to offset large negative charges to income.

FINANCIAL STATEMENT PRESENTATION

Statement of Financial Position

Companies classify taxes receivable or payable as current assets or current liabilities. Although current tax assets and liabilities are separately recognized and mea-Describe the presentation of income sured, they are often offset in the statement of financial position. The offset occurs taxes in financial statements. because companies normally have a legally enforceable right to set off a current tax asset (Income Taxes Receivable) against a current tax liability (Income Taxes Payable) when they relate to income taxes levied by the same taxation authority. [5] Deferred tax assets and deferred tax liabilities are also separately recognized and measured but may be offset in the statement of financial position.8 The net deferred tax asset or net deferred tax

liability is reported in the non-current section of the statement of financial position.

To illustrate, assume that K. Scott Company has four deferred tax items at December 31, 2015, as shown in Illustration 19-38.

	Resulting Deferred Tax	
Temporary Difference	_(Asset)	Liability
Rent collected in advance: recognized when performance obligation satisfied for accounting purposes and when		
received for tax purposes.	\$(42,000)	
Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes.		\$214,000
 Recognition of profits on installment sales during period of sale for accounting purposes and during period of collection for tax purposes. 		45,000
4. Warranty liabilities: recognized for accounting purposes at time of sale; for tax purposes at time paid.	_(12,000)	
Totals	\$(54,000)	\$259,000

ILLUSTRATION 19-38 Classification of Temporary Differences

As indicated, K. Scott has a total deferred tax asset of \$54,000 and a total deferred tax liability of \$259,000. Assuming these two items can be offset, K. Scott reports a deferred tax liability of \$205,000 (\$259,000 - \$54,000) in the non-current liability section of its statement of financial position.

To provide another illustration, Wm Morrison Supermarkets plc (GBR) reports its information related to income taxes on its consolidated balance sheet (statement of financial position) and related note on defined income taxes as shown in Illustration 19-39 (on page 976).

⁸Companies are permitted to offset deferred tax assets and deferred tax liabilities if, and only if: (1) the company has a legally enforceable right to set off current tax assets against current tax liabilities, and (2) the deferred tax assets and the deferred tax liabilities relate to income taxes levied by the same tax authority and for the same company. [6]

⁹Deferred tax amounts should not be discounted. The IASB apparently considers discounting to be an unnecessary complication even if the effects are material. [7]

Wm Morrison St Consolidated Balance S 3 February 2013 (£ in millions)	upermarkets plc Sheet			
			2013	2012
	Current liabilities Current tax liabilities		(149)	(163)
	Non-current liabilities Deferred tax liabilities	(Note 19)	(471)	(464)
19 Deferred tax			2013	2012
Deferred tax liability			(519)	(509)
Deferred tax asset			48	_45
Net deferred tax liability			(471)	(464)

IAS 12 'Income taxes' permits the offsetting of balances within the same tax jurisdiction. All of the deferred tax assets are available for offset against deferred tax liabilities.

The movements in deferred tax (liabilities)/assets during the period are shown below:

Current period	Property, plant and equipment	Pensions	Share-based payments	short term temporary differences	<u>Total</u>
At 29 January 2012 (Charged)/credited to profit for the period Charged to other comprehensive expense and equity	(509) (10)	2 5 (2)	6 (4) (2)	37 6 —	(464) (3) (4)
At 3 February 2013 Prior period	(519)	5	Ξ	43	(471)
At 30 January 2011 Credited/(charged) to profit for the period Credited to other comprehensive expense and equity	(534) 25 	(10) (1) <u>13</u>	3 2 <u>1</u>	42 (11) <u>6</u>	(499) 15 20
At 29 January 2012	(509)	2	6	37	(464)

Included within the total (charged)/credited to profit for the period is an amount credited of £41m (2012: £42m), and within the total charged to other comprehensive expense a charge of £4m (2012: £2m) in respect of the change in the tax rate at which deferred tax balances are expected to reverse.

ILLUSTRATION 19-39

Income Tax Reporting

In Note 19, Morrison Supermarkets explains how the net deferred tax liability is computed as well as the composition of the liability. A user of the financial statements and related notes therefore understands what comprises the net deferred tax liability of £471 million, which provides insight into the likelihood of future cash outflows related to the net deferred tax liability.

Other

Income Statement

Companies allocate income tax expense (or benefit) to continuing operations, discontinued operations, other comprehensive income, and prior period adjustments. This approach is referred to as **intraperiod tax allocation**. In addition, the components of income tax expense (benefit) may include:

- **1.** Current tax expense (benefit).
- **2.** Any adjustments recognized in the period for current tax of prior periods.
- **3.** The amount of deferred tax expense (benefit) relating to the origination and reversal of temporary differences.
- **4.** The amount of deferred tax expense (benefit) relating to changes in tax rates or the imposition of new taxes.

5. The amount of the benefit arising from a previously unrecognized tax loss, tax credit, or temporary difference of a prior period that is used to reduce current and deferred tax expense.¹⁰

To illustrate, the relevant portion of the consolidated statement of comprehensive income of Morrison Supermarkets is presented in Illustration 19-40.

¹⁰Other components that should be reported are the deferred tax expense arising from the write-down, or reversal of a previous write-down, of a deferred tax asset, as well as the amount of tax expense (benefit) relating to those changes in accounting policies and errors that are included in profit or loss in accordance with *IAS 8*. [8]

ILLUSTRATION 19-41

Components of Income Tax

As shown in Illustration 19-41, income taxes reduced profit by £232 million. In addition, taxes related to other comprehensive expense and equity are shown net of tax. Illustration 19-41 also provides information that identifies the components of the tax charge of \in 232 million. In addition, the individual tax effects related to other comprehensive expense and equity of £4 million are explained.

Tax Reconciliation

Another important disclosure is the reconciliation between actual tax expense and the applicable tax rate. Companies either provide:

- A numerical reconciliation between tax expense (benefit) and the product of accounting profit multiplied by the applicable tax rate(s), disclosing also the basis on which the applicable tax rate(s) is (are) computed; or
- A numerical reconciliation between the average effective tax rate and the applicable tax rate, disclosing also the basis on which the applicable tax rate is computed.

Morrison Supermarket provides the first type of reconciliation but also notes that the effective tax rate is higher than the applicable (standard) rate, as shown in a continuation of its tax note in Illustration 19-42.

ILLUSTRATION 19-42

Tax Reconciliation
Disclosure

Wm Morrison Supermarkets plc

(£ in millions)

c) Tax reconciliation

The tax for the period is higher (2012: higher) than the standard rate of corporation tax in the UK of 24.3% (2012: 26.3%). The differences are explained below:

	2013	2012
Profit before tax	879	947
Profit before tax at 24.3% (2012: 26.3%) Effects of:	214	249
Expenses not deductible for tax purposes	10	12
Non-qualifying depreciation	39	38
Deferred tax on Safeway acquisition assets	(10)	(12)
Effect of change in tax rate	(41)	(42)
Other	5	10
Prior period adjustments	15	2
Tax charge for the period	232	257

Factors affecting current and future tax charges

Legislation to reduce the rate of corporation tax from 24% to 23% was included in the Finance Act 2012, and as it had been substantively enacted at the balance sheet date the deferred tax balances as at 3 February 2013 have been measured at this rate. The impact of this change in tax rate is a credit of £41m to the income statement. In addition, further changes to the UK corporation tax system were announced in the Autumn Statement 2012. This includes a further reduction to the main rate to reduce the rate to 21% from 1 April 2014. This change had not been substantively enacted at the balance sheet date, and, therefore, is not included in these financial statements.

The proposed reduction of the main rate of corporation tax to 21% from 1 April 2014 will be enacted separately. The overall effect of this further change, if it applied to the deferred tax balance at 3 February 2013, would be to further reduce the deferred tax liability by an additional $\pounds 40m$.

In explaining the relationship between tax expense (benefit) and accounting income, companies use an applicable tax rate that provides the most meaningful information to the users of its financial statements.¹¹

¹¹Often, the most meaningful rate is the domestic rate of tax in the country in which the company is located, aggregating the tax rate applied for national taxes, with the rates applied for any local taxes, which are computed on a substantially similar level of taxable profit (tax loss). However, for a company operating in several jurisdictions, it may be more meaningful to aggregate separate reconciliations prepared using the domestic rate in each individual jurisdiction.

These income tax disclosures are required for several reasons:

- **1.** Assessing quality of earnings. Many investors seeking to assess the quality of a company's earnings are interested in the relation between pretax financial income and taxable income. Analysts carefully examine earnings that are enhanced by a favorable tax effect, particularly if the tax effect is non-recurring. For Morrison Supermarkets, it is interesting to note that its applicable tax rate is greater than the effective tax rate (taxes paid divided by income before income taxes). Non-qualifying depreciation charges for tax purposes, as well as a prior period adjustment, are the primary reasons for this situation.
- **2.** *Making better predictions of future cash flows*. Examination of the deferred portion of income tax expense provides information as to whether taxes payable are likely to be higher or lower in the future. In Morrison Supermarkets' case, analysts expect future taxable amounts and higher tax payments, due to lower depreciation in the future. It also appears that Morrison Supermarkets is generating other deductible amounts related to pensions, share-based payments, and other short-term temporary differences. These deferred tax items indicate that actual tax payments for Morrison Supermarkets will be lower than the tax expense reported on the income statement in the future. Conversely, the tax rate is expected to drop to as low as 21 percent, which will lead to lower current and deferred taxes.
- **3.** *Predicting future cash flows for operating loss carryforwards.* Companies should disclose the amounts and expiration dates of any operating loss carryforwards for tax purposes. From this disclosure, analysts determine the amount of income that the company may recognize in the future on which it will pay no income tax. Morrison Supermarkets has no loss carryforwards.¹²

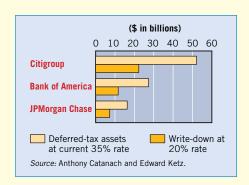

What do the numbers mean?

THE TAX TWIST

As indicated in the information related to the tax reconciliation at **Wm Morrison Supermarkets plc** (GBR), a favorable development for the company is that tax rates decreased from 26.3 percent in 2012 to 24.3 percent in 2013. In addition, it is likely that rates will drop to 21 percent in the near future. As indicated in Illustration 19-41, this may lead to an additional reduction of deferred income taxes of £41 million, which will result in income tax expense also being decreased.

However, the reduction in rates can be a double-edged sword for companies that have large deferred tax asset balances. A tax rate decrease means that deferred tax assets are worth less since lower tax bills mean fewer opportunities to use deferred tax assets before they expire. Citigroup (USA), for example, indicated recently that a reduction in its tax rate could lead to a deferred tax write-off of \$4 billion to \$5 billion. The following graphic illustrates how that might

happen if U.S. rates dropped from 35 percent to 20 percent, which has recently been proposed by some politicians.

So there is a tax twist in a tax rate reduction, which may not be positive for some companies that have large deferred tax asset balances.

Source: "Double-Edged Deferral: How Lower Taxes Could Hurt America's Big Banks," The Economist (December 10, 2011).

¹²P. McConnell, J. Pegg, C. Senyak, and D. Mott, "The ABCs of NOLs," *Accounting Issues*, Bear Stearns Equity Research (June 2005). Regulators frown on acquisitions done solely to obtain operating loss carryforwards. If they determine that the merger is solely tax-motivated, the regulators generally disallow the deductions. But, because it is very difficult to determine whether a merger is or is not tax-motivated, the "purchase of operating loss carryforwards" continues.

REVIEW OF THE ASSET-LIABILITY METHOD

LEARNING OBJECTIVE 110

Indicate the basic principles of the asset-liability method.

The IASB believes that the asset-liability method (sometimes referred to as the liability approach) is the most consistent method for accounting for income taxes. One objective of this approach is to recognize the amount of taxes payable or refundable for the current year. A second objective is to recognize deferred tax liabilities and assets for the future tax consequences of events that have been

recognized in the financial statements or tax returns.

To implement the objectives, companies apply some basic principles in accounting for income taxes at the date of the financial statements, as listed in Illustration 19-43.

ILLUSTRATION 19-43

Basic Principles of the Asset-Liability Method

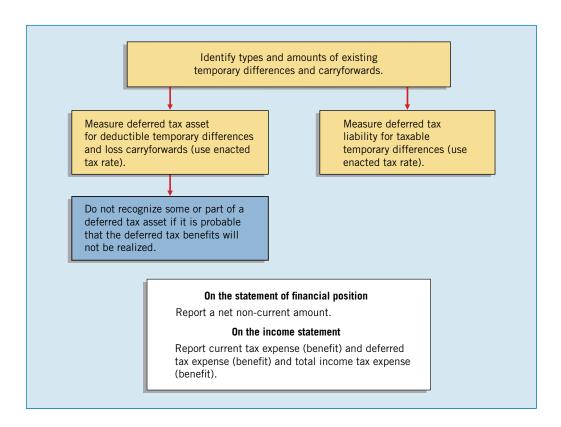

Basic Principles

- a. A current tax liability or asset is recognized for the estimated taxes payable or refundable on the tax return for the current year.
- b. A deferred tax liability or asset is recognized for the estimated future tax effects attributable to temporary differences and carryforwards.
- c. The measurement of current and deferred tax liabilities and assets is based on provisions of the enacted tax law; the effects of future changes in tax laws or rates are not anticipated.
- d. The measurement of deferred tax assets is reduced, if necessary, by the amount of any tax benefits that, based on available evidence, are not expected to be realized.

Illustration 19-44 diagrams the procedures for implementing the asset-liability method.

ILLUSTRATION 19-44

Procedures for Computing and Reporting Deferred **Income Taxes**

As an aid to understanding deferred income taxes, we provide the following glossary.

KEY DEFERRED INCOME TAX TERMS

CARRYBACKS. Deductions or credits that cannot be utilized on the tax return during a year and that may be carried back to reduce taxable income or taxes paid in a prior year. An **operating loss carryback** is an excess of tax deductions over gross income in a year. A **tax carryback** is the amount by which tax credits available for utilization exceed statutory limitations.

CARRYFORWARDS. Deductions or credits that cannot be utilized on the tax return during a year and that may be carried forward to reduce taxable income or taxes payable in a future year. An **operating loss carryforward** is an excess of tax deductions over gross income in a year. A **tax carryforward** is the amount by which tax credits available for utilization exceed statutory limitations.

CURRENT TAX EXPENSE (BENEFIT). The amount of income taxes paid or payable (or refundable) for a year as determined by applying the provisions of the enacted tax law to the taxable income or excess of deductions over revenues for that year.

DEDUCTIBLE TEMPORARY DIFFERENCE. Temporary differences that result in deductible amounts in future years when recovering or settling the related asset or liability, respectively.

DEFERRED TAX ASSET. The deferred tax consequences attributable to deductible temporary differences and carryforwards.

DEFERRED TAX CONSEQUENCES. The future effects on income taxes as measured by the enacted tax rate and provisions of the enacted tax law resulting from temporary differences and carryforwards at the end of the current year.

DEFERRED TAX EXPENSE (BENEFIT). The change during the year in a company's deferred tax liabilities and assets.

DEFERRED TAX LIABILITY. The deferred tax consequences attributable to taxable temporary differences.

INCOME TAXES. Domestic and foreign federal (national), state, and local (including franchise) taxes based on income.

INCOME TAXES CURRENTLY PAYABLE (REFUNDABLE). Refer to current tax expense (benefit).

INCOME TAX EXPENSE (BENEFIT). The sum of current tax expense (benefit) and deferred tax expense (benefit).

TAXABLE INCOME. The excess of taxable revenues over tax-deductible expenses and exemptions for the year as defined by the governmental tax authority.

TAXABLE TEMPORARY DIFFERENCE. Temporary differences that result in taxable amounts in future years when recovering or settling the related asset or liability, respectively.

TAX-PLANNING STRATEGY. An action that meets certain criteria and that a company implements to realize a tax benefit for an operating loss or tax carryforward before it expires. Companies consider tax-planning strategies when assessing whether to recognize a deferred tax asset.

TEMPORARY DIFFERENCE. A difference between the tax basis of an asset or liability and its reported amount in the financial statements that will result in taxable or deductible amounts in future years when recovering or settling the reported amount of the asset or liability, respectively.

GLOBAL ACCOUNTING INSIGHTS

INCOME TAXES

Similar to IFRS, U.S. GAAP uses the asset and liability approach for recording deferred taxes. The differences between IFRS and U.S. GAAP involve a few exceptions to the asset-

liability approach; some minor differences in the recognition, measurement, and disclosure criteria; and differences in implementation guidance.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to accounting for taxes.

Similarities

 As indicated above, U.S. GAAP and IFRS both use the asset and liability approach for recording deferred taxes.

Differences

- Under U.S. GAAP, deferred tax assets and liabilities are classified based on the classification of the asset or liability to which it relates (see discussion in About the Numbers below). The classification of deferred taxes under IFRS is always non-current.
- U.S. GAAP uses an impairment approach to assess the need for a valuation allowance. In this approach, the deferred tax asset is recognized in full. It is then reduced by a valuation account if it is more likely than not that all or a portion of the deferred tax asset will not be realized. Under IFRS, an affirmative judgment approach is used, by

- which a deferred tax asset is recognized up to the amount that is probable to be realized.
- Under U.S. GAAP, the enacted tax rate must be used in measuring deferred tax assets and liabilities. IFRS uses the enacted tax rate or substantially enacted tax rate ("substantially enacted" means virtually certain).
- Under U.S. GAAP, charges or credits for all tax items are recorded in income. That is not the case under IFRS, in which the charges or credits related to certain items are reported in equity.
- U.S. GAAP requires companies to assess the likelihood of uncertain tax positions being sustainable upon audit. Potential liabilities must be accrued and disclosed if the position is more likely than not to be disallowed. Under IFRS, all potential liabilities must be recognized. With respect to measurement, IFRS uses an expected-value approach to measure the tax liability, which differs from U.S. GAAP.

About the Numbers

Classification of Deferred Tax Assets and Liabilities

Under U.S. GAAP, deferred tax accounts are reported on the balance sheet (statement of financial position) as assets and liabilities. Companies should classify these accounts as a net current amount and a net non-current amount. An individual deferred tax liability or asset is classified as current or non-current based on the classification of the related asset or liability for financial reporting purposes.

A company considers a deferred tax asset or liability to be related to an asset or liability if reduction of the asset or liability causes the temporary difference to reverse or turn around. A company should classify a deferred tax liability or asset that is unrelated to an asset or liability for financial reporting, including a deferred tax asset related to a loss carryforward, according to the expected reversal date of the temporary difference.

To illustrate, assume that **PepsiCo**, **Inc**. (USA) records bad debt expense using the allowance method for accounting purposes and the direct write-off method for tax purposes. It currently has Accounts Receivable and Allowance for Doubtful Accounts balances of \$2 million and \$100,000,

respectively. In addition, given a 40 percent tax rate, PepsiCo has a debit balance in the Deferred Tax Asset account of \$40,000 ($40\% \times $100,000$). It considers the \$40,000 debit balance in the Deferred Tax Asset account to be related to the Accounts Receivable and the Allowance for Doubtful Accounts balances because collection or write-off of the receivables will cause the temporary difference to reverse. Therefore, PepsiCo classifies the Deferred Tax Asset account as current, the same as the Accounts Receivable and Allowance for Doubtful Accounts balances.

In practice, most companies engage in a large number of transactions that give rise to deferred taxes. Companies should classify the balances in the deferred tax accounts on the balance sheet in two categories: one for the **net current amount** and one for the **net non-current amount**.

As we indicated earlier, a deferred tax asset or liability may not be related to an asset or liability for financial reporting purposes. One example is an operating loss carryforward. In this case, a company records a deferred tax asset, but there is no related identifiable asset or liability for financial reporting purposes. In these limited situations, deferred

income taxes are classified according to the expected reversal date of the temporary difference. That is, a company should report the tax effect of any temporary difference reversing next year as current and the remainder as non-current. If a deferred tax asset is non-current, a company should classify it in the "Other assets" section.

The total of all deferred tax liabilities, the total of all deferred tax assets, and the total valuation allowance should be disclosed. In addition, companies should disclose the following: (1) any net change during the year in the total valuation allowance, and (2) the types of temporary differences, carryforwards, or carrybacks that give rise to significant portions of deferred tax liabilities and assets. Income taxes payable is reported as a current liability on the balance sheet.

U.S. GAAP/IFRS Differences

The following schedule taken from a recent annual report of **Glaxo-SmithKline plc** (GBR) indicates the impact of differences in IFRS and U.S. GAAP for deferred taxes.

Reconciliation to U.S. accounting prin	ciples
(e) Deferred taxation (in part):	
Total tax expense (in millions of British p	ounds)
Current tax expense	2,710

Deferred tax (credit)/expense	(409)
Total tax expense	2,301
U.S. GAAP:	
Current tax expense	2,735
Deferred tax credit	(685)
Total tax expense	2,050
Total tax expense difference	(251)

Thus, due to the differences highlighted above, Glaxo's income tax expense under IFRS is £251 million higher than that reported under U.S. GAAP.

On the Horizon

The IASB and the FASB have been working to address some of the differences in the accounting for income taxes. One of the issues under discussion is the term "probable" under IFRS for recognition of a deferred tax asset, which might be interpreted to mean "more likely than not." If the term is changed, the reporting for impairments of deferred tax assets will be essentially the same between U.S. GAAP and IFRS. In addition, the IASB is considering adoption of the classification approach used in U.S. GAAP for deferred assets and liabilities. Also, U.S. GAAP will likely continue to use

the enacted tax rate in computing deferred taxes, except in situations where the U.S. taxing jurisdiction is not involved. In that case, companies should use IFRS, which is based on enacted rates or substantially enacted tax rates. Finally, the issue of allocation of deferred income taxes to equity for certain transactions under IFRS must be addressed in order to converge with U.S. GAAP, which allocates the effects to income. At the time of this printing, deliberations on the income tax project have been suspended indefinitely.

SUMMARY OF LEARNING OBJECTIVES

Identify differences between pretax financial income and taxable income. Companies compute pretax financial income (or income for book purposes) in accordance with IFRS. They compute taxable income (or income for tax purposes) in accordance with prescribed tax regulations. Because tax regulations and IFRS differ in many ways, so frequently do pretax financial income and taxable income. Differences may exist, for example, in the timing of revenue recognition and the timing of expense recognition.

Describe a temporary difference that results in future taxable amounts. Revenue recognized for book purposes in the period when the performance obligation is satisfied but deferred and reported as revenue for tax purposes when collected results in future taxable amounts. The future taxable amounts will occur in the periods the company recovers the receivable and reports the collections as revenue for tax purposes. This results in a deferred tax liability.

Describe a temporary difference that results in future deductible amounts. An accrued warranty expense that a company pays for and deducts for tax purposes, in a period later than the period in which it incurs and recognizes it for book purposes, results in future deductible amounts. The future deductible amounts will

KEY TERMS

asset-liability method, 980 current tax expense (benefit), 959, 972 deductible amounts, 958 deductible temporary difference, 965 deferred tax asset, 961 deferred tax benefit, 962, 972 deferred tax expense (benefit), 959, 972 deferred tax liability, 958 effective tax rate, 968 **Income Tax Refund** Receivable, 971 intraperiod tax allocation, 976 loss carryback, 970 loss carryforward, 970

net operating loss (NOL), 970 originating temporary difference, 966 permanent difference, 966 pretax financial income, 956 probable, 963 reversing difference, 966 substantially enacted tax rate, 968 taxable amounts, 958 taxable income, 956 taxable temporary difference, 965 tax effect (tax benefit), 971 temporary difference, 957

occur in the periods during which the company settles the related liability for book purposes. This results in a deferred tax asset.

- **Explain the non-recognition of a deferred tax asset.** A deferred tax asset should be reduced if it is probable that the company will not realize some portion or all of the deferred tax asset. The company should carefully consider possible sources of taxable income and related factors to assess the probability that taxable income will be available against which the unused tax losses or unused tax credits can be utilized. To the extent that it is not probable that taxable profit will be available against which the unused tax losses or unused tax credits can be utilized, the deferred tax asset is not recognized.
- Describe the presentation of income tax expense in the income statement. Significant components of income tax expense should be disclosed in the income statement or in the notes to the financial statements. The most commonly encountered components are the current expense (or benefit) and the deferred expense (or benefit).
- **Describe various temporary and permanent differences.** Examples of temporary differences are (1) revenue or gains that are taxable after recognition in financial income, (2) expenses or losses that are deductible after recognition in financial income, (3) revenues or gains that are taxable before recognition in financial income, and (4) expenses or losses that are deductible before recognition in financial income. Examples of permanent differences are (1) items recognized for financial reporting purposes but not for tax purposes, and (2) items recognized for tax purposes but not for financial reporting purposes.
- **Explain the effect of various tax rates and tax rate changes on deferred income taxes.** Companies may use tax rates other than the current rate only after enactment or substantial enactment of the future tax rates. When a change in the tax rate is enacted, a company should immediately recognize its effect on the deferred income tax accounts. The company reports the effects as an adjustment to income tax expense in the period of the change.
- Apply accounting procedures for a loss carryback and a loss carryforward. A company may carry a net operating loss back two years and receive refunds for income taxes paid in those years. The loss is applied to the earlier year first and then to the second year. Any loss remaining after the two-year carryback may be carried forward up to 20 years to offset future taxable income. A company may forgo the loss carryback and use the loss carryforward, offsetting future taxable income for up to 20 years.
- Describe the presentation of income taxes in financial statements. Companies report deferred tax accounts on the statement of financial position as assets and liabilities. Companies classify taxes receivable or payable as current assets or current liabilities, and these items may be offset in the statement of financial position. Deferred tax assets and deferred tax liabilities are also separately recognized and measured, and may be offset in the statement of financial position. The net deferred tax asset or net deferred tax liability is reported in the non-current section of the statement of financial position. In the income statement, companies allocate income tax expense (or benefit) to continuing operations, discontinued operations, other comprehensive income, and prior period adjustments (intraperiod tax allocation), and indicate current tax expense (benefit) and deferred tax expense (benefit). An important disclosure is the reconciliation between actual tax expense and the applicable tax rate.
- Indicate the basic principles of the asset-liability method. Companies apply the following basic principles in accounting for income taxes at the date of the financial statements. (1) Recognize a current tax liability or asset for the estimated taxes payable or refundable on the tax return for the current year. (2) Recognize a deferred tax liability or asset for the estimated future tax effects attributable to temporary differences

Appendix 19A: Comprehensive Example of Interperiod Tax Allocation 985

and carryforwards using the enacted tax rate. (3) Base the measurement of current and deferred tax liabilities and assets on provisions of the enacted (or substantially enacted) tax law. (4) Reduce the measurement of deferred tax assets, if necessary, by the amount of any tax benefits that, based on available evidence, companies do not expect to realize.

APPENDIX 19A

COMPREHENSIVE EXAMPLE OF INTERPERIOD TAX ALLOCATION

This appendix presents a comprehensive illustration of a deferred income tax problem with several temporary and permanent differences. The example follows one company through two complete years (2014 and 2015). Study it carefully. It should help you understand the concepts and procedures presented in the chapter.

ILEARNING OBJECTIVE Understand and apply the concepts and procedures of interperiod tax allocation.

FIRST YEAR - 2014

Akai Company, which began operations at the beginning of 2014, produces various products on a contract basis. Each contract generates an income of \(\frac{1}{2}\)80,000 (amounts in thousands). Some of Akai's contracts provide for the customer to pay on an installment basis. Under these contracts, Akai collects one-fifth of the contract revenue in each of the following four years. For financial reporting purposes, the company recognizes income in the year of completion (accrual basis); for tax purposes, Akai recognizes income in the year cash is collected (installment basis).

Presented below is information related to Akai's operations for 2014.

- **1.** In 2014, the company completed seven contracts that allow for the customer to pay on an installment basis. Akai recognized the related income of ¥560,000 for financial reporting purposes. It reported only ¥112,000 of income on installment sales on the 2014 tax return. The company expects future collections on the related receivables to result in taxable amounts of ¥112,000 in each of the next four years.
- **2.** At the beginning of 2014, Akai purchased depreciable assets with a cost of ¥540,000. For financial reporting purposes, Akai depreciates these assets using the straightline method over a six-year service life. The depreciation schedules for both financial reporting and tax purposes are shown as follows.

Year	Depreciation for Financial Reporting Purposes	Depreciation for Tax Purposes	Difference
2014	¥ 90,000	¥108,000	¥(18,000)
2015	90,000	172,800	(82,800)
2016	90,000	103,680	(13,680)
2017	90,000	62,208	27,792
2018	90,000	62,208	27,792
2019	90,000	31,104	58,896
	¥540,000	¥540,000	¥ -0-

3. The company warrants its product for two years from the date of completion of a contract. During 2014, the product warranty liability accrued for financial reporting purposes was \(\frac{4}{2}00,000\), and the amount paid for the satisfaction of warranty liability was ¥44,000. Akai expects to settle the remaining ¥156,000 by expenditures of ¥56,000 in 2015 and ¥100,000 in 2016.

- **4.** In 2014, non-taxable governmental bond interest revenue was ¥28,000.
- **5.** During 2014, non-deductible fines and penalties of \(\frac{4}{26}\),000 were paid.
- 6. Pretax financial income for 2014 amounts to ¥412,000.
- **7.** Tax rates enacted before the end of 2014 were:

2014 50% 2015 and later years 40%

- **8.** The accounting period is the calendar year.
- **9.** The company is expected to have taxable income in all future years.

Taxable Income and Income Taxes Payable - 2014

The first step is to determine Akai's income taxes payable for 2014 by calculating its taxable income. Illustration 19A-1 shows this computation.

ILLUSTRATION 19A-1

Computation of Taxable Income, 2014

Pretax financial income for 2014	¥412,000	
Permanent differences:		
Non-taxable revenue – governmental bond interest	(28,000)	
Non-deductible expenses—fines and penalties	26,000	
Temporary differences:		
Excess contract income per books (¥560,000 - ¥112,000)	(448,000)	
Excess depreciation per tax (¥108,000 - ¥90,000)	(18,000)	
Excess warranty expense per books (¥200,000 - ¥44,000)	156,000	
Taxable income for 2014	¥100,000	

Akai computes income taxes payable on taxable income for ¥100,000 as follows.

ILLUSTRATION 19A-2

Computation of Income Taxes Payable, End of 2014

Taxable income for 2014 Tax rate	¥100,000 × 50%
Income taxes payable (current tax expense) for 2014	¥ 50,000

Computing Deferred Income Taxes - End of 2014

The schedule in Illustration 19A-3 summarizes the temporary differences and the resulting future taxable and deductible amounts.

ILLUSTRATION 19A-3

Schedule of Future Taxable and Deductible Amounts, End of 2014

		F	uture Years			
	2015	2016	2017	2018	2019	Total
Future taxable (deductible) amounts:						
Installment sales	¥112,000	¥112,000	¥112,000	¥112,000		¥448,000
Depreciation	(82,800)	(13,680)	27,792	27,792	¥58,896	18,000
Warranty costs	(56,000)	(100,000)				(156,000)

Akai computes the amounts of deferred income taxes to be reported at the end of 2014 as shown in Illustration 19A-4.

ILLUSTRATION 19A-4

Computation of Deferred Income Taxes, End of 2014

	Future Taxable (Deductible)	Tax	Deferred Tax	
Temporary Difference	Amounts	Rate	(Asset)	Liability
Installment sales	¥448,000	40%		¥179,200
Depreciation	18,000	40%		7,200
Warranty costs	(156,000)	40%	¥(62,400)	
Totals	¥310,000		¥(62,400)	¥186,400°

A temporary difference is caused by the use of the accrual basis for financial reporting purposes and the installment method for tax purposes. This temporary difference will result in future taxable amounts and hence a deferred tax liability. Because of the installment contracts completed in 2014, a temporary difference of ¥448,000 originates that will reverse in equal amounts over the next four years. The company expects to have taxable income in all future years, and there is only one enacted tax rate applicable to all future years. Akai uses that rate (40 percent) to compute the entire deferred tax liability resulting from this temporary difference.

The temporary difference caused by different depreciation policies for books and for tax purposes originates over three years and then reverses over three years. This difference will cause deductible amounts in 2015 and 2016 and taxable amounts in 2017, 2018, and 2019. These amounts sum to a net future taxable amount of ¥18,000 (which is the cumulative temporary difference at the end of 2014). Because the company expects to have taxable income in all future years and because there is only one tax rate enacted for all of the relevant future years, Akai applies that rate to the net future taxable amount to determine the related net deferred tax liability.

The third temporary difference is caused by different methods of accounting for warranties. This difference will result in deductible amounts in each of the two future years it takes to reverse. Because the company expects to report a positive income on all future tax returns and because there is only one tax rate enacted for each of the relevant future years, Akai uses that 40 percent rate to calculate the resulting deferred tax asset.

Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes — 2014

To determine the deferred tax expense (benefit), Akai needs to compare the beginning and ending balances of the deferred income tax accounts. Illustration 19A-5 shows that computation.

Deferred tax asset at the end of 2014 Deferred tax asset at the beginning of 2014	¥ 62,400 -0-
Deferred tax expense (benefit)	¥ (62,400)
Deferred tax liability at the end of 2014	¥186,400
Deferred tax liability at the beginning of 2014	
Deferred tax expense (benefit)	¥186,400

ILLUSTRATION 19A-5

Computation of Deferred Tax Expense (Benefit),

The ¥62,400 increase in the deferred tax asset causes a deferred tax benefit to be reported in the income statement. The ¥186,400 increase in the deferred tax liability during 2014 results in a deferred tax expense. These two amounts **net** to a deferred tax expense of ¥124,000 for 2014.

Deferred tax expense (benefit) Deferred tax expense (benefit)	¥ (62,400) 186,400
Net deferred tax expense for 2014	¥124,000

ILLUSTRATION 19A-6

Computation of Net Deferred Tax Expense, 2014

Akai then computes the total income tax expense as follows.

|--|

ILLUSTRATION 19A-7

Computation of Total Income Tax Expense, 2014

Akai records income taxes payable, deferred income taxes, and income tax expense as follows.

Income Tax Expense 174,000 Deferred Tax Asset 62,400

Income Taxes Payable 50,000 Deferred Tax Liability 186,400

Financial Statement Presentation - 2014

Companies should classify deferred tax assets and liabilities as non-current on the statement of financial position. Deferred tax assets are therefore netted against deferred tax liabilities to compute a net deferred asset (liability). Illustration 19A-8 shows the classification of Akai's deferred tax accounts at the end of 2014.

ILLUSTRATION 19A-8

Classification of Deferred Tax Accounts, End of 2014

	Resu Deferre	· ·	
Temporary Difference	(Asset)	Liability	
Installment sales		¥179,200	
Depreciation		7,200	
Warranty costs	¥(62,400)		
Totals	¥(62,400)	¥186,400	

The statement of financial position at the end of 2014 reports the following amounts.

ILLUSTRATION 19A-9

Statement of Financial Position Presentation of Deferred Taxes, 2014

Non-current liabilities		
Deferred tax liability (¥186,400 - ¥62,400)	¥124,000	
Current liabilities		
Income taxes payable	¥ 50,000	

Akai's income statement for 2014 reports the following.

ILLUSTRATION 19A-10

Income Statement Presentation of Income Tax Expense, 2014

Income before income taxes Income tax expense		¥412,000	
Current Deferred	¥ 50,000 124,000	174,000	
Net income		¥238,000	

SECOND YEAR-2015

- **1.** During 2015, Akai collected ¥112,000 from customers for the receivables arising from contracts completed in 2014. The company expects recovery of the remaining receivables to result in taxable amounts of ¥112,000 in each of the following three years.
- **2.** In 2015, the company completed four new contracts that allow for the customer to pay on an installment basis. These installment sales created new installment receivables. Future collections of these receivables will result in reporting income of ¥64,000 for tax purposes in each of the next four years.
- **3.** During 2015, Akai continued to depreciate the assets acquired in 2014 according to the depreciation schedules appearing on page 985. Thus, depreciation amounted to ¥90,000 for financial reporting purposes and ¥172,800 for tax purposes.

Appendix 19A: Comprehensive Example of Interperiod Tax Allocation 989

4. An analysis at the end of 2015 of the product warranty liability account shows the following details.

Balance of liability at beginning of 2015	¥156,000
Expense for 2015 income statement purposes	180,000
Amount paid for contracts completed in 2014	(56,000)
Amount paid for contracts completed in 2015	(50,000)
Balance of liability at end of 2015	¥230,000

The balance of the liability is expected to require expenditures in the future as follows.

¥100,000 in 2016 due to 2014 contracts
¥ 50,000 in 2016 due to 2015 contracts
¥ 80,000 in 2017 due to 2015 contracts

¥230,000

- **5.** During 2015, non-taxable governmental bond interest revenue was ¥24,000.
- **6.** Akai accrued a loss of ¥172,000 for financial reporting purposes because of pending litigation. This amount is not tax-deductible until the period the loss is realized, which the company estimates to be 2023.
- **7.** Pretax financial income for 2015 amounts to ¥504,800.
- **8.** The enacted tax rates still in effect are:

2014 50%2015 and later years 40%

Taxable Income and Income Taxes Payable - 2015

Akai computes taxable income for 2015 as follows.

Pretax financial income for 2015	¥504,800
Permanent difference:	
Non-taxable revenue—governmental bond interest	(24,000)
Reversing temporary differences:	
Collection on 2014 installment sales	112,000
Payments on warranties from 2014 contracts	(56,000)
Originating temporary differences:	
Excess contract income per books—2015 contracts	(256,000)
Excess depreciation per tax	(82,800)
Excess warranty expense per books—2015 contracts	130,000
Loss accrual per books	172,000
Taxable income for 2015	¥500,000
	

ILLUSTRATION 19A-11 Computation of Taxable Income, 2015

Income taxes payable for 2015 is as follows.

Taxable income for 2015 Tax rate	¥500,000 × 40%	
Income taxes payable (current tax expense) for 2015	¥200,000	

ILLUSTRATION 19A-12

Computation of Income Taxes Payable, End of 2015

ILLUSTRATION 19A-13

Schedule of Future Taxable and Deductible Amounts, End of 2015

Computing Deferred Income Taxes—End of 2015

The schedule in Illustration 19A-13 summarizes the temporary differences existing at the end of 2015 and the resulting future taxable and deductible amounts.

			Future Year	s		
	2016	2017	2018	2019	§ 2023	Total
Future taxable (deductible) amounts:					}}	
Installment sales-2014	¥112,000	¥112,000	¥112,000		}}	¥336,000
Installment sales - 2015	64,000	64,000	64,000	¥64,000	}	256,000
Depreciation	(13,680)	27,792	27,792	58,896	}	100,800
Warranty costs	(150,000)	(80,000)			}	(230,000)
Loss accrual						(172,000)

Akai computes the amounts of deferred income taxes to be reported at the end of 2015 as follows.

ILLUSTRATION 19A-14

Computation of Deferred Income Taxes, End of 2015

	Taxable (Deductible)	Tax	Deferr	ed Tax
Temporary Difference	Amounts	Rate	(Asset)	Liability
Installment sales	¥592,000*	40%		¥236,800
Depreciation	100,800	40%		40,320
Warranty costs	(230,000)	40%	¥ (92,000)	
Loss accrual	(172,000)	40%	(68,800)	
Totals	¥290,800		¥(160,800)	¥277,120°

Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes — 2015

To determine the deferred tax expense (benefit), Akai must compare the beginning and ending balances of the deferred income tax accounts, as shown in Illustration 19A-15.

ILLUSTRATION 19A-15

Computation of Deferred Tax Expense (Benefit), 2015

Deferred tax asset at the end of 2015 Deferred tax asset at the beginning of 2015	¥160,800 62,400
Deferred tax expense (benefit)	¥ (98,400)
Deferred tax liability at the end of 2015	¥277,120
Deferred tax liability at the beginning of 2015	186,400
Deferred tax expense (benefit)	¥ 90,720

The deferred tax expense (benefit) and the total income tax expense for 2015 are therefore as follows.

ILLUSTRATION 19A-16

Computation of Total Income Tax Expense, 2015

Deferred tax expense (benefit) Deferred tax expense (benefit)	¥ (98,400) 90,720
Deferred tax benefit for 2015 Current tax expense for 2015	(7,680) 200,000
Income tax expense (total) for 2015	¥192,320

www.downloadslide.com

Summary of Learning Objective for Appendix 19A 991

The deferred tax expense of ¥90,720 and the deferred tax benefit of ¥98,400 net to a deferred tax benefit of ¥7,680 for 2015.

Akai records income taxes for 2015 with the following journal entry.

Income Tax Expense 192,320 Deferred Tax Asset 98,400

Income Taxes Payable 200,000
Deferred Tax Liability 90,720

Financial Statement Presentation – 2015

Illustration 19A-17 shows the classification of Akai's deferred tax accounts at the end of 2015.

	Resulting Deferred Tax	
Temporary Difference	(Asset)	Liability
Installment sales		¥236,800
Depreciation		40,320
Warranty costs	¥ (92,000)	
Loss accrual	(68,800)	
Totals	¥(160,800)	¥277,120

ILLUSTRATION 19A-17

Classification of Deferred Tax Accounts, End of 2015

Akai's statement of financial position at the end of 2015 reports the following amounts.

Non-current liabiliti Deferred tax liab	es Ility (¥277,120 – ¥160,800) ¥116,320	
Current liabilities Income taxes pa	yable ¥200,000	

ILLUSTRATION 19A-18

Statement of Financial Position Presentation of Deferred Taxes, End of 2015

The income statement for 2015 reports the following.

Income before income taxes Income tax expense		¥504,800	
Current Deferred	¥200,000 (7,680)	192,320	
Net income		¥312,480	

ILLUSTRATION 19A-19

Income Statement Presentation of Income Tax Expense, 2015

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 19A

Understand and apply the concepts and procedures of interperiod tax allocation. Accounting for deferred taxes involves the following steps. (1) Calculate taxable income and income taxes payable for the year. (2) Compute deferred income taxes at the end of the year. (3) Determine deferred tax expense (benefit) and make the journal entry to record income taxes. (4) Classify deferred tax assets and liabilities and report a net deferred tax asset or liability.

QUESTIONS

- Explain the difference between pretax financial income and taxable income.
- **2.** What are the two objectives of accounting for income taxes?
- **3.** Interest on governmental bonds is often referred to as a permanent difference when determining the proper amount to report for deferred taxes. Explain the meaning of permanent differences, and give two other examples.
- **4.** Explain the meaning of a temporary difference as it relates to deferred tax computations, and give three examples.
- **5.** Differentiate between an originating temporary difference and a reversing difference.
- 6. The book basis of depreciable assets for Erwin Co. is €900,000 and the tax basis is €700,000 at the end of 2015. The enacted tax rate is 34% for all periods. Determine the amount of deferred taxes to be reported on the statement of financial position at the end of 2015.
- 7. Roth Inc. has a deferred tax liability of €68,000 at the beginning of 2015. At the end of 2015, it reports accounts receivable on the books at €90,000 and the tax basis at zero (its only temporary difference). If the enacted tax rate is 34% for all periods and income taxes payable for the period is €230,000, determine the amount of total income tax expense to report for 2015.
- **8.** What is the difference between a future taxable amount and a future deductible amount? When is it not appropriate to recognize a portion or all of a deferred tax asset?
- 9. Pretax financial income for Lake Inc. is £300,000, and its taxable income is £100,000 for 2015. Its only temporary

- difference at the end of the period relates to a £70,000 difference due to excess depreciation for tax purposes. If the tax rate is 40% for all periods, compute the amount of income tax expense to report in 2015. No deferred income taxes existed at the beginning of the year.
- **10.** How are deferred tax assets and deferred tax liabilities reported on the statement of financial position?
- **11.** Describe the procedure(s) involved in classifying deferred tax amounts on the statement of financial position.
- **12.** At the end of the year, Falabella Co. has pretax financial income of \$550,000. Included in the \$550,000 is \$70,000 interest income on governmental bonds, a \$25,000 fine for dumping hazardous waste, and depreciation of \$60,000. Depreciation for tax purposes is \$45,000. Compute income taxes payable, assuming the tax rate is 30% for all periods.
- 13. Addison Co. has one temporary difference at the beginning of 2014 of £500,000. The deferred tax liability established for this amount is £150,000, based on a tax rate of 30%. The temporary difference will provide the following taxable amounts: £100,000 in 2015, £200,000 in 2016, and £200,000 in 2017. If a new tax rate for 2017 of 20% is enacted into law at the end of 2014, what is the journal entry necessary in 2014 (if any) to adjust deferred taxes?
- **14.** What are some of the reasons that the components of income tax expense should be disclosed and a reconciliation between the statutory tax rate and the effective rate be provided?
- **15.** Differentiate between "loss carryback" and "loss carryforward." Which can be accounted for with the greater certainty when it arises? Why?

- **16.** What are the possible treatments for tax purposes of a net operating loss? What are the circumstances that determine the option to be applied? What is the proper treatment of a net operating loss for financial reporting purposes?
- 17. What controversy relates to the accounting for net operating loss carryforwards?
- 18. Briefly describe some of the similarities and differences accounting.

19. Describe the current convergence efforts of the IASB and FASB in the area of accounting for taxes.

BRIEF EXERCISES

- **BE19-1** In 2015, Amirante Corporation had pretax financial income of \$168,000 and taxable income of \$120,000. The difference is due to the use of different depreciation methods for tax and accounting purposes. The effective tax rate is 40%. Compute the amount to be reported as income taxes payable at December 31, 2015.
- 1 2 BE19-2 Oxford Corporation began operations in 2015 and reported pretax financial income of €225,000 for the year. Oxford's tax depreciation exceeded its book depreciation by €40,000. Oxford's tax rate for 2015 and years thereafter is 30%. In its December 31, 2015, statement of financial position, what amount of deferred tax liability should be reported?
 - **9 BE19-3** Using the information from BE19-2, assume this is the only difference between Oxford's pretax financial income and taxable income. Prepare the journal entry to record the income tax expense, deferred income taxes, and income taxes payable, and show how the deferred tax liability will be classified on the December 31, 2015, statement of financial position.
- **5 BE19-4** At December 31, 2014, Appaloosa Corporation had a deferred tax liability of \$25,000. At December 31, 2015, the deferred tax liability is \$42,000. The corporation's 2015 current tax expense is \$48,000. What amount should Appaloosa report as total 2015 tax expense?
- 3 BE19-5 At December 31, 2015, Suffolk Corporation had an estimated warranty liability of £105,000 for accounting purposes and £0 for tax purposes. (The warranty costs are not deductible until paid.) The effective tax rate is 40%. Compute the amount Suffolk should report as a deferred tax asset at December 31, 2015.
- 3 5 BE19-6 At December 31, 2014, Percheron Inc. had a deferred tax asset of \$30,000. At December 31, 2015, the deferred tax asset is \$59,000. The corporation's 2015 current tax expense is \$61,000. What amount should Percheron report as total 2015 tax expense?
 - 4 BE19-7 At December 31, 2015, Hillyard Corporation has a deferred tax asset of £200,000. After a careful review of all available evidence, it is determined that it is probable that £60,000 of this deferred tax asset will not be realized. Prepare the necessary journal entry.
 - **BE19-8** Mitchell Corporation had income before income taxes of \$195,000 in 2015. Mitchell's current income tax expense is \$48,000, and deferred income tax expense is \$30,000. Prepare Mitchell's 2015 income statement, beginning with income before income taxes.
- 2 3 BE19-9 Shetland Inc. had pretax financial income of \$154,000 in 2015 in its first year of operations. Included in the computation of that amount is insurance expense of \$4,000, which is not deductible for tax purposes. In addition, depreciation for tax purposes exceeds accounting depreciation by \$10,000. Prepare Shetland's journal entry to record 2015 taxes, assuming a tax rate of 45%.
 - 2 BE19-10 Clydesdale Corporation has a cumulative temporary difference related to depreciation of \$580,000 at December 31, 2014. This difference will reverse as follows: 2015, \$42,000; 2016, \$244,000; and 2017, \$294,000. Enacted tax rates are 34% for 2015 and 2016, and 40% for 2017. Compute the amount Clydesdale should report as a deferred tax liability at December 31, 2014.
 - **BE19-11** At December 31, 2015, Takeshi Corporation had a deferred tax liability of ¥680,000,000 resulting from future taxable amounts of ¥2,000,000,000 and an enacted tax rate of 34%. In May 2016, a new income tax act is signed into law that raises the tax rate to 40% for 2016 and future years. Prepare the journal entry for Takeshi to adjust the deferred tax liability.
 - **8 BE19-12** Conlin Corporation had the following tax information.

Year	Taxable Income	Tax Rate	Taxes Paid
2012	€300,000	35%	€105,000
2013	€325,000	30%	€ 97,500
2014	€400,000	30%	€120,000

In 2015, Conlin suffered a net operating loss of €480,000, which it elected to carry back. The 2015 enacted tax rate is 29%. Prepare Conlin's entry to record the effect of the loss carryback.

- **BE19-13** Rode Inc. incurred a net operating loss of €500,000 in 2015. Combined income for 2013 and 2014 was €350,000. The tax rate for all years is 40%. Rode elects the carryback option. Prepare the journal entries to record the benefits of the loss carryback and the loss carryforward.
- **BE19-14** Use the information for Rode Inc. given in BE19-13. Assume that it is probable that the entire net operating loss carryforward will not be realized in future years. Prepare the journal entry(ies) necessary at the end of 2015.
 - **9 BE19-15** Youngman Corporation has temporary differences at December 31, 2015, that result in the following deferred taxes.

Deferred tax asset HK\$24,000
Deferred tax liability HK\$69,000

Indicate how these balances would be presented in Youngman's December 31, 2015, statement of financial position.

EXERCISES

E19-1 (One Temporary Difference, Future Taxable Amounts, One Rate, No Beginning Deferred Taxes) Starfleet Corporation has one temporary difference at the end of 2014 that will reverse and cause taxable amounts of \$55,000 in 2015, \$60,000 in 2016, and \$75,000 in 2017. Starfleet's pretax financial income for 2014 is \$400,000, and the tax rate is 30% for all years. There are no deferred taxes at the beginning of 2014.

Instructions

- (a) Compute taxable income and income taxes payable for 2014.
- **(b)** Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2014.
- (c) Prepare the income tax expense section of the income statement for 2014, beginning with the line "Income before income taxes."
- **E19-2** (Two Differences, No Beginning Deferred Taxes, Tracked through 2 Years) The following information is available for McKee Corporation for 2015.
 - **1.** Excess of tax depreciation over book depreciation, £40,000. This £40,000 difference will reverse equally over the years 2016–2019.
 - 2. Deferral, for book purposes, of £25,000 of rent received in advance. The rent will be recorded as revenue in 2016.
 - **3.** Pretax financial income, £350,000.
 - **4.** Tax rate for all years, 40%.

Instructions

- (a) Compute taxable income for 2015.
- **(b)** Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2015.
- (c) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2016, assuming taxable income of £325,000.
- E19-3 (One Temporary Difference, Future Taxable Amounts, One Rate, Beginning Deferred Taxes) Brennan Corporation began 2015 with a \$90,000 balance in the Deferred Tax Liability account. At the end of 2015, the related cumulative temporary difference amounts to \$350,000, and it will reverse evenly over the next 2 years. Pretax accounting income for 2015 is \$525,000, the tax rate for all years is 40%, and taxable income for 2015 is \$400,000.

- (a) Compute income taxes payable for 2015.
- **(b)** Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2015.
- (c) Prepare the income tax expense section of the income statement for 2015, beginning with the line "Income before income taxes."

- 2 3 E19-4 (Three Differences, Compute Taxable Income, Entry for Taxes) Havaci Company reports pretax financial income of €80,000 for 2015. The following items cause taxable income to be different than pretax financial income.
 - 1. Depreciation on the tax return is greater than depreciation on the income statement by €16,000.
 - 2. Rent collected on the tax return is greater than rent revenue reported on the income statement by €27,000.
 - **3.** Fines for pollution appear as an expense of €11,000 on the income statement.

Havaci's tax rate is 30% for all years, and the company expects to report taxable income in all future years. There are no deferred taxes at the beginning of 2015.

Instructions

- (a) Compute taxable income and income taxes payable for 2015.
- **(b)** Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2015.
- (c) Prepare the income tax expense section of the income statement for 2015, beginning with the line "Income before income taxes."
- (d) Compute the effective income tax rate for 2015.
- **E19-5** (Two Temporary Differences, One Rate, Beginning Deferred Taxes) The following facts relate to Alschuler Corporation.
 - 1. Deferred tax liability, January 1, 2015, £40,000.
 - 2. Deferred tax asset, January 1, 2015, £0.
 - **3.** Taxable income for 2015, £115,000.
 - **4.** Pretax financial income for 2015, £200,000.
 - **5.** Cumulative temporary difference at December 31, 2015, giving rise to future taxable amounts, £220,000.
 - **6.** Cumulative temporary difference at December 31, 2015, giving rise to future deductible amounts, £35,000.
 - **7.** Tax rate for all years, 40%.
 - **8.** The company is expected to operate profitably in the future.

Instructions

- (a) Compute income taxes payable for 2015.
- **(b)** Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2015.
- (c) Prepare the income tax expense section of the income statement for 2015, beginning with the line "Income before income taxes."
- **E19-6 (Identify Temporary or Permanent Differences)** Listed below and on page 996 are items that are commonly accounted for differently for financial reporting purposes than they are for tax purposes.

Instructions

For each item below, indicate whether it involves:

- (1) A temporary difference that will result in future deductible amounts and therefore will usually give rise to a deferred income tax asset.
- (2) A temporary difference that will result in future taxable amounts and therefore will usually give rise to a deferred income tax liability.
- (3) A permanent difference.

Use the appropriate number to indicate your answer for each.

- (a) _____ An accelerated depreciation system is used for tax purposes, and the straight-line depreciation method is used for financial reporting purposes for some plant assets.
 (b) ____ A landlord collects some rents in advance. Rents received are taxable in the period when they are received.
 (c) ____ Expenses are incurred in obtaining tax-exempt income.
 (d) ____ Costs of guarantees and warranties are estimated and accrued for financial reporting purposes.
 (e) ____ Installment sales of investments are accounted for by the accrual method for financial reporting purposes and the installment method for tax purposes.
- **(f)** _____ Interest is received on an investment in tax-exempt governmental obligations.

		ble income	₩830,000,000	₩880,000,000	₩933,000,000	

The income tax rate for all years is 40%.

- **(a)** Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2014, 2015, and 2016.
- **(b)** Assuming there were no temporary differences prior to 2014, indicate how deferred taxes will be reported on the 2016 statement of financial position. Jeonbuk's product warranty is for 12 months.
- (c) Prepare the income tax expense section of the income statement for 2016, beginning with the line "Pretax financial income."
- **E19-9 (Carryback and Carryforward of NOL, No Temporary Differences)** The pretax financial income (or loss) figures for Synergetics Company are as follows.

2010	\$160,000
2011	250,000
2012	90,000
2013	(160,000)
2014	(350,000)
2015	120,000
2016	100,000

Pretax financial income (or loss) and taxable income (loss) were the same for all years involved. Assume a 45% tax rate for 2010 and 2011 and a 40% tax rate for the remaining years.

Instructions

Prepare the journal entries for the years 2012 to 2016 to record income tax expense and the effects of the net operating loss carrybacks and carryforwards, assuming Synergetics Company uses the carryback provision. All income and losses relate to normal operations. (In recording the benefits of a loss carryforward, assume that it is probable the loss carryforward will be realized.)

E19-10 (Two NOLs, No Temporary Differences, Entries and Income Statement) Lanier Corporation has pretax financial income (or loss) equal to taxable income (or loss) from 2007 through 2015 as follows.

	Income (Loss)	Tax Rate
2007	€ 29,000	30%
2008	40,000	30%
2009	22,000	35%
2010	48,000	50%
2011	(150,000)	40%
2012	90,000	40%
2013	30,000	40%
2014	105,000	40%
2015	(50,000)	45%

Pretax financial income (loss) and taxable income (loss) were the same for all years since Lanier has been in business. Assume the carryback provision is employed for net operating losses. In recording the benefits of a loss carryforward, assume that it is probable that the related benefits will be realized.

Instructions

- (a) What entry(ies) for income taxes should be recorded for 2011?
- **(b)** Indicate what the income tax expense portion of the income statement for 2011 should look like. Assume all income (loss) relates to continuing operations.
- (c) What entry for income taxes should be recorded in 2012?
- (d) How should the income tax expense section of the income statement for 2012 appear?
- (e) What entry for income taxes should be recorded in 2015?
- (f) How should the income tax expense section of the income statement for 2015 appear?
- 2 3 E19-11 (Three Differences, Classify Deferred Taxes) At December 31, 2014, Cascade Company had the following deferred tax items.

Temporary Differences	in Deferred Taxes
1. Excess of tax depreciation over book depreciation.	€200,000
Accrual, for book purposes, of estimated loss contingency from pending lawsuit that is expected to be settled in 2015. The loss will be deducted on the tax return when paid.	(50,000)
Accrual method used for book purposes and installment method used for tax purposes for an isolated installment sale	(00,000)
of an investment.	300,000

Doculting Palances

In analyzing the temporary differences, you find that €30,000 of the depreciation temporary difference will reverse in 2015, and €120,000 of the temporary difference due to the installment sale will reverse in 2015. The tax rate for all years is 40%.

Instructions

Indicate the manner in which deferred taxes should be presented on Cascade Company's December 31, 2014, statement of financial position.

- E19-12 (Two Temporary Differences, One Rate, Beginning Deferred Taxes, Compute Pretax Financial Income) The following facts relate to McKane Corporation.
 - 1. Deferred tax liability, January 1, 2015, \$60,000.
 - **2.** Deferred tax asset, January 1, 2015, \$20,000.
 - **3.** Taxable income for 2015, \$115,000.

- 4. Cumulative temporary difference at December 31, 2015, giving rise to future taxable amounts, \$210,000.
- **5.** Cumulative temporary difference at December 31, 2015, giving rise to future deductible amounts, \$95,000.
- **6.** Tax rate for all years, 40%. No permanent differences exist.
- **7.** The company is expected to operate profitably in the future.

Instructions

- (a) Compute the amount of pretax financial income for 2015.
- **(b)** Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2015.
- **(c)** Prepare the income tax expense section of the income statement for 2015, beginning with the line "Income before income taxes."
- (d) Compute the effective tax rate for 2015.
- **2 7 E19-13 (One Difference, Multiple Rates, Effect of Beginning Balance versus No Beginning Deferred Taxes)** At the end of 2015, Wasicsko Company has €180,000 of cumulative temporary differences that will result in reporting future taxable amounts as follows.

2016	€ 70,000
2017	50,000
2018	40,000
2019	20,000
	€180,000

Tax rates enacted as of the beginning of 2014 are:

2014 and 2015	40%
2016 and 2017	30%
2018 and later	25%

Wasicsko's taxable income for 2015 is €340,000. Taxable income is expected in all future years.

Instructions

- (a) Prepare the journal entry for Wasicsko to record income taxes payable, deferred income taxes, and income tax expense for 2015, assuming that there were no deferred taxes at the end of 2014.
- (b) Prepare the journal entry for Wasicsko to record income taxes payable, deferred income taxes, and income tax expense for 2015, assuming that there was a balance of €22,000 in a Deferred Tax Liability account at the end of 2014.
- E19-14 (Deferred Tax Asset) Callaway Corp. has a deferred tax asset account with a balance of €150,000 at the end of 2014 due to a single cumulative temporary difference of €375,000. At the end of 2015, this same temporary difference has increased to a cumulative amount of €500,000. Taxable income for 2015 is €850,000. The tax rate is 40% for all years.

- (a) Record income tax expense, deferred income taxes, and income taxes payable for 2015, assuming that it is probable that the deferred tax asset will be realized.
- (b) Assuming that it is probable that €30,000 of the deferred tax asset will not be realized, prepare the journal entry at the end of 2015 to recognize this probability.
- **3 4 E19-15** (**Deferred Tax Asset**) Assume the same information as in E19-14 for Callaway Corp.
 - 5 Instructions
 - (a) Record income tax expense, deferred income taxes, and income taxes payable for 2015, assuming that it is probable that €20,000 of the deferred tax asset will be realized in full.
 - **(b)** Record income tax expense, deferred income taxes, and income taxes payable for 2015, assuming that it is probable that none of the deferred tax asset will be realized.
- E19-16 (Deferred Tax Liability, Change in Tax Rate, Prepare Section of Income Statement) Sharrer Inc.'s only temporary difference at the beginning and end of 2015 is caused by a \$2 million deferred gain for tax purposes for an installment sale of a plant asset, and the related receivable is due in equal installments in 2016 and 2017. The related deferred tax liability at the beginning of the year is \$800,000. In the third quarter of 2015, a new tax rate of 34% is enacted into law and is scheduled to become effective for 2017. Taxable income for 2015 is \$5,000,000, and taxable income is expected in all future years.

Instructions

- (a) Determine the amount reported as a deferred tax liability at the end of 2015. Indicate proper classification(s).
- **(b)** Prepare the journal entry (if any) necessary to adjust the deferred tax liability when the new tax rate is enacted into law.
- (c) Draft the income tax expense portion of the income statement for 2015. Begin with the line "Income before income taxes." Assume no permanent differences exist.
- 2 3 E19-17 (Two Temporary Differences, Tracked through 3 Years, Multiple Rates) Taxable income and pretax financial income would be identical for Jiang Group except for its treatments of gross profit on installment sales and estimated costs of warranties. The following income computations have been prepared (amounts in thousands).

Taxable income	2014	2015	2016
Excess of revenues over expenses			
(excluding two temporary differences)	¥160,000	¥210,000	¥90,000
Installment income collected	8,000	8,000	8,000
Expenditures for warranties	(5,000)	(5,000)	(5,000)
Taxable income	¥163,000	¥213,000	¥93,000
Pretax financial income	2014	2015	2016
Excess of revenues over expenses			
(excluding two temporary differences)	¥160,000	¥210,000	¥90,000
Installment gross profit earned	24,000	-0-	-0-
Estimated cost of warranties	(15,000)	0	0
Income before taxes	¥169,000	¥210,000	¥90,000

The tax rates in effect are 2014, 45%; 2015 and 2016, 40%. All tax rates were enacted into law on January 1, 2014. No deferred income taxes existed at the beginning of 2014. Taxable income is expected in all future years.

Instructions

Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2014, 2015, and 2016.

2 3 E19-18 (Three Differences, Multiple Rates, Future Taxable Income) During 2015, Graham Co.'s first year of operations, the company reports pretax financial income of £250,000. Graham's enacted tax rate is 40% for 2015 and 35% for all later years. Graham expects to have taxable income in each of the next 5 years. The effects on future tax returns of temporary differences existing at December 31, 2015, are summarized below.

	Future Years					
	2016	2017	2018	2019	2020	Total
Future taxable (deductible)						
amounts:						
Installment sales	£32,000	£32,000	£32,000			£ 96,000
Depreciation	6,000	6,000	6,000	£6,000	£6,000	30,000
Unearned rent	(50,000)	(50,000)				(100,000)

- (a) Complete the schedule below to compute deferred taxes at December 31, 2015.
- **(b)** Compute taxable income for 2015.
- (c) Prepare the journal entry to record income taxes payable, deferred taxes, and income tax expense for 2015.

	Future Taxable		Decembe	r 31, 2015
	(Deductible) Tax		Deferr	ed Tax
Temporary Difference	Amounts	Rate	(Asset)	Liability
Installment sales	£ 96,000			
Depreciation	30,000			
Unearned rent	(100,000)			
Totals	£			

2 3 E19-19 (Two Differences, One Rate, Beginning Deferred Balance, Compute Pretax Financial Income)

Luo Co. establishes a ¥90 million liability at the end of 2015 for the estimated litigation settlement for manufacturing defects. All related costs will be paid and deducted on the tax return in 2016. Also, at the end of 2015, the company has ¥50 million of temporary differences due to excess depreciation for tax purposes, ¥7 million of which will reverse in 2016.

The enacted tax rate for all years is 40%, and the company pays taxes of ¥64 million on ¥160 million of taxable income in 2015. Luo expects to have taxable income in 2016.

Instructions

- (a) Determine the deferred taxes to be reported at the end of 2015.
- **(b)** Indicate how the deferred taxes computed in (a) are to be reported on the statement of financial position.
- (c) Assuming that the only deferred tax account at the beginning of 2015 was a deferred tax liability of \(\frac{1}{2}\)10,000,000, draft the income tax expense portion of the income statement for 2015, beginning with the line "Income before income taxes." (*Hint*: You must first compute (1) the amount of temporary difference underlying the beginning \(\frac{1}{2}\)10,000,000 deferred tax liability, then (2) the amount of temporary differences originating or reversing during the year, and then (3) the amount of pretax financial income.)
- 2 3 E19-20 (Two Differences, No Beginning Deferred Taxes, Multiple Rates) Macinski Inc., in its first year of operations, has the following differences between the book basis and tax basis of its assets and liabilities at the end of 2015.

	Book Basis	Tax Basis
Equipment (net)	\$400,000	\$340,000
Estimated warranty liability	150,000	-0-

It is estimated that the warranty liability will be settled in 2016. The difference in equipment (net) will result in taxable amounts of \$20,000 in 2016, \$30,000 in 2017, and \$10,000 in 2018. The company has taxable income of \$550,000 in 2015. As of the beginning of 2015, the enacted tax rate is 34% for 2015–2017, and 30% for 2018. Macinski expects to report taxable income through 2018.

Instructions

- (a) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2015.
- **(b)** Indicate how deferred income taxes will be reported on the statement of financial position at the end of 2015.
- E19-21 (Two Temporary Differences, Multiple Rates, Future Taxable Income)
 Flynn Inc. has two temporary differences at the end of 2015. The first difference stems from installment sales, and the second one results from the accrual of a loss contingency. Flynn's accounting department has developed a schedule of future taxable and deductible amounts related to these temporary differences as follows.

	2016	_2017_	_2018_	2019
Taxable amounts	\$40,000	\$50,000	\$60,000	\$90,000
Deductible amounts		(15,000)	(19,000)	
	\$40,000	\$35,000	<u>\$41,000</u>	\$90,000

As of the beginning of 2015, the enacted tax rate is 34% for 2015 and 2016, and 38% for 2017–2020. At the beginning of 2015, the company had no deferred income taxes on its statement of financial position. Taxable income for 2015 is \$400,000. Taxable income is expected in all future years.

- **(a)** Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2015.
- **(b)** Indicate how deferred income taxes would be classified on the statement of financial position at the end of 2015.
- E19-22 (Two Differences, One Rate, First Year) The differences between the book basis and tax basis of the assets and liabilities of Morgan Corporation at the end of 2015 are presented below.

	Book Basis	Tax Basis
Accounts receivable	\$50,000	\$-0-
Litigation liability	20,000	-0-

It is estimated that the litigation liability will be settled in 2016. The difference in accounts receivable will result in taxable amounts of \$30,000 in 2016 and \$20,000 in 2017. The company has taxable income of \$300,000 in 2015 and is expected to have taxable income in each of the following 2 years. Its enacted tax rate is 34% for all years. This is the company's first year of operations.

Instructions

- (a) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2015.
- **(b)** Indicate how deferred income taxes will be reported on the statement of financial position at the end of 2015.
- E19-23 (NOL Carryback and Carryforward, Recognition versus Non-Recognition) Sondgeroth Inc. reports the following pretax income (loss) for both financial reporting purposes and tax purposes. (Assume the carryback provision is used for a net operating loss.)

Year	Pretax Income (Loss)	Tax Rate
2013	£110,000	34%
2014	90,000	34%
2015	(260,000)	38%
2016	220,000	38%

The tax rates listed were all enacted by the beginning of 2013.

Instructions

- (a) Prepare the journal entries for the years 2013–2016 to record income tax expense (benefit) and income taxes payable (refundable) and the tax effects of the loss carryback and carryforward, assuming that at the end of 2015 it is probable that the benefits of the loss carryforward will be realized in the future.
- **(b)** Using the assumption in (a), prepare the income tax section of the 2015 income statement, beginning with the line "Operating loss before income taxes."
- (c) Prepare the journal entries for 2015 and 2016, assuming that based on the weight of available evidence at 12/31/15, it is probable that one-fourth of the benefits of the loss carryforward will not be realized.
- (d) Using the assumption in (c), prepare the income tax section of the 2015 income statement, beginning with the line "Operating loss before income taxes."
- E19-24 (NOL Carryback and Carryforward, Non-Recognition) Nielson Inc. reports the following pretax income (loss) for both book and tax purposes. (Assume the carryback provision is used where possible for a net operating loss.)

Year	Pretax Income (Loss)	Tax Rate
2013	€100,000	40%
2014	90,000	40%
2015	(240,000)	45%
2016	120,000	45%

The tax rates listed were all enacted by the beginning of 2013.

- (a) Prepare the journal entries for years 2013–2016 to record income tax expense (benefit) and income taxes payable (refundable) and the tax effects of the loss carryback and loss carryforward, assuming that based on the weight of available evidence it is probable that one-half of the benefits of the loss carryforward will not be realized.
- **(b)** Prepare the income tax section of the 2015 income statement, beginning with the line "Operating loss before income taxes."
- **(c)** Prepare the income tax section of the 2016 income statement, beginning with the line "Income before income taxes."
- **E19-25 (NOL Carryback and Carryforward, Non-Recognition)** Hayes Co. reported the following pretax financial income (loss) for the years 2013–2017.

\$240,000
350,000
90,000
(550,000)
180,000

Pretax financial income (loss) and taxable income (loss) were the same for all years involved. The enacted tax rate was 34% for 2013 and 2014, and 40% for 2015–2017. Assume the carryback provision is used first for net operating losses.

Instructions

- (a) Prepare the journal entries for the years 2015–2017 to record income tax expense, income taxes payable (refundable), and the tax effects of the loss carryback and loss carryforward, assuming that based on the weight of available evidence it is probable that one-fifth of the benefits of the loss carryforward will not be realized.
- **(b)** Prepare the income tax section of the 2016 income statement, beginning with the line "Income (loss) before income taxes."

PROBLEMS

- 2 3 P19-1 (Three Differences, No Beginning Deferred Taxes, Multiple Rates) The following information is available for Remmers Corporation for 2015.
 - **1.** Depreciation reported on the tax return exceeded depreciation reported on the income statement by \$120,000. This difference will reverse in equal amounts of \$30,000 over the years 2016–2019.
 - 2. Interest received on governmental bonds was \$10,000.
 - **3.** Rent collected in advance on January 1, 2015, totaled \$60,000 for a 3-year period. Of this amount, \$40,000 was reported as unearned at December 31 for book purposes.
 - **4.** The tax rates are 40% for 2015 and 35% for 2016 and subsequent years.
 - **5.** Income taxes of \$320,000 are due per the tax return for 2015.
 - **6.** No deferred taxes existed at the beginning of 2015.

Instructions

- (a) Compute taxable income for 2015.
- **(b)** Compute pretax financial income for 2015.
- (c) Prepare the journal entries to record income tax expense, deferred income taxes, and income taxes payable for 2015 and 2016. Assume taxable income was \$980,000 in 2016.
- (d) Prepare the income tax expense section of the income statement for 2015, beginning with "Income before income taxes."
- P19-2 (One Temporary Difference, Tracked for 4 Years, One Permanent Difference, Change in Rate) The
 pretax financial income of Truttman Company differs from its taxable income throughout each of 4 years as follows.

	Pretax	laxable	
Year	Financial Income	Income	Tax Rate
2014	€290,000	€180,000	35%
2015	320,000	225,000	40%
2016	350,000	260,000	40%
2017	420,000	560,000	40%

Pretax financial income for each year includes a non-deductible expense of €30,000 (never deductible for tax purposes). The remainder of the difference between pretax financial income and taxable income in each period is due to one depreciation temporary difference. No deferred income taxes existed at the beginning of 2014.

- (a) Prepare journal entries to record income taxes in all 4 years. Assume that the change in the tax rate to 40% was not enacted until the beginning of 2015.
- **(b)** Prepare the income statement for 2015, beginning with income before income taxes.
- P19-3 (Second Year of Depreciation Difference, Two Differences, Single Rate) The following information has been obtained for the Gocker Corporation.
 - **1.** Prior to 2014, taxable income and pretax financial income were identical.
 - **2.** Pretax financial income is €1,700,000 in 2014 and €1,400,000 in 2015.
 - **3.** On January 1, 2014, equipment costing €1,200,000 is purchased. It is to be depreciated on a straight-line basis over 5 years for tax purposes and over 8 years for financial reporting purposes. (Under applicable tax law, a half-year of tax depreciation is recorded in 2014 and 2019.)
 - **4.** Interest of €60,000 was earned on tax-exempt governmental obligations in 2015.

- **5.** Included in 2015 pretax financial income is a gain on discontinued operations of €200,000, which is fully taxable.
- **6.** The tax rate is 35% for all periods.
- **7.** Taxable income is expected in all future years.

Instructions

- (a) Compute taxable income and income taxes payable for 2015.
- (b) Prepare the journal entry to record 2015 income tax expense, income taxes payable, and deferred taxes.
- (c) Prepare the bottom portion of Gocker's 2015 income statement, beginning with "Income before income taxes."
- (d) Indicate how deferred income taxes should be presented on the December 31, 2015, statement of financial position.
- P19-4 (Permanent and Temporary Differences, One Rate) The accounting records of Shinault Inc. showthe following data for 2015.
 - **1.** Equipment was acquired in early January for \$300,000. Straight-line depreciation over a 5-year life is used, with no residual value. For tax purposes, Shinault used a 30% rate to calculate depreciation.
 - 2. Interest revenue on governmental bonds totaled \$4,000.
 - **3.** Product warranties were estimated to be \$50,000 in 2015. Actual repair and labor costs related to the warranties in 2015 were \$10,000. The remainder is estimated to be paid evenly in 2016 and 2017.
 - **4.** Sales on an accrual basis were \$100,000. For tax purposes, \$75,000 was recorded on the installment-sales method.
 - **5.** Fines incurred for pollution violations were \$4,200.
 - **6.** Pretax financial income was \$750,000. The tax rate is 30%.

Instructions

- (a) Prepare a schedule starting with pretax financial income in 2015 and ending with taxable income in 2015.
- **(b)** Prepare the journal entry for 2015 to record income taxes payable, income tax expense, and deferred income taxes.
- 5 7

P19-5 (Recognition of NOL) Jennings Inc. reported the following pretax income (loss) and related tax rates during the years 2010–2016.

	Pretax Income (loss)	Tax Rate
2010	£ 40,000	30%
2011	25,000	30%
2012	50,000	30%
2013	80,000	40%
2014	(180,000)	45%
2015	70,000	40%
2016	100 000	35%

Pretax financial income (loss) and taxable income (loss) were the same for all years since Jennings began business. The tax rates from 2013–2016 were enacted in 2013.

- (a) Prepare the journal entries for the years 2014–2016 to record income taxes payable (refundable), income tax expense (benefit), and the tax effects of the loss carryback and carryforward. Assume that Jennings elects the carryback provision where possible and it is probable that it will realize the benefits of any loss carryforward in the year that immediately follows the loss year.
- (b) Indicate the effect the 2014 entry(ies) has on the December 31, 2014, statement of financial position.
- (c) Prepare the portion of the income statement, starting with "Operating loss before income taxes," for 2014.
- (d) Prepare the portion of the income statement, starting with "Income before income taxes," for 2015.
- P19-6 (Two Differences, Two Rates, Future Income Expected) Presented below and on page 1004 are two independent situations related to future taxable and deductible amounts resulting from temporary differences existing at December 31, 2014.
 - 1. Mooney Co. has developed the following schedule of future taxable and deductible amounts.

	2015	2016	2017	2018	2019
Taxable amounts	\$300	\$300	\$300	\$ 300	\$300
Deductible amount	_	_	_	(1,600)	_

2. Roesch Co. has the following schedule of future taxable and deductible amounts.

	2015	2016	2017	2018
Taxable amounts	\$300	\$300	\$ 300	\$300
Deductible amount	_	_	(2.300)	_

Both Mooney Co. and Roesch Co. have taxable income of \$4,000 in 2014 and expect to have taxable income in all future years. The tax rates enacted as of the beginning of 2014 are 30% for 2014-2017 and 35% for years thereafter.

Instructions

For each of these two situations, compute the net amount of deferred income taxes to be reported at the end of 2014, and indicate how it should be classified on the statement of financial position.

2) 5) P19-7 (One Temporary Difference, Tracked 3 Years, Change in Rates, Income Statement Presentation) Crosley Corp. sold an investment on an installment basis. The total gain of £60,000 was reported for financial reporting purposes in the period of sale. The company qualifies to use the installment-sales method for tax purposes. The installment period is 3 years; one-third of the sale price is collected in the period of sale. The tax rate was 40% in 2014, and 35% in 2015 and 2016. The 35% tax rate was not enacted in law until 2015. The accounting and tax data for the 3 years is shown below.

	Financial	Tax
	Accounting	Return
2014 (40% tax rate)		
Income before temporary difference	£ 70,000	£70,000
Temporary difference	60,000	20,000
Income	£130,000	£90,000
2015 (35% tax rate)		
Income before temporary difference	£ 70,000	£70,000
Temporary difference		20,000
Income	£ 70,000	£90,000
2016 (35% tax rate)		
Income before temporary difference	£ 70,000	£70,000
Temporary difference		20,000
Income	£ 70,000	£90,000

Instructions

- (a) Prepare the journal entries to record the income tax expense, deferred income taxes, and the income taxes payable at the end of each year. No deferred income taxes existed at the beginning of 2014.
- (b) Explain how the deferred taxes will appear on the statement of financial position at the end of each year.
- (c) Draft the income tax expense section of the income statement for each year, beginning with "Income before income taxes."

P19-8 (Two Differences, 2 Years, Compute Taxable Income and Pretax Financial Income) The following information was disclosed during the audit of Zheng Inc.

1.

Amount Due Year per Tax Return 2014 ¥130,000,000 2015 104,000,000

- 2. On January 1, 2014, equipment costing \(\frac{1}{2}\)600,000,000 is purchased. For financial reporting purposes, the company uses straight-line depreciation over a 5-year life. For tax purposes, the company uses the double-declining balance method over 5 years.
- 3. In January 2015, ¥225,000,000 is collected in advance rental of a building for a 3-year period. The entire ¥225,000,000 is reported as taxable income in 2015, but ¥150,000,000 of the ¥225,000,000 is reported as unearned revenue in 2015 for financial reporting purposes. The remaining amount of unearned revenue is to be recognized equally in 2016 and 2017.
- **4.** The tax rate is 40% in 2014 and all subsequent periods. (*Hint*: To find taxable income in 2014 and 2015, the related income taxes payable amounts will have to be "grossed up.")
- 5. No temporary differences existed at the end of 2013. Zheng expects to report taxable income in each of the next 5 years.

Instructions

- (a) Determine the amount to report for deferred income taxes at the end of 2014, and indicate how it should be classified on the statement of financial position.
- **(b)** Prepare the journal entry to record income taxes for 2014.
- **(c)** Draft the income tax section of the income statement for 2014, beginning with "Income before income taxes." (*Hint:* You must compute taxable income and then combine that with changes in cumulative temporary differences to arrive at pretax financial income.)
- (d) Determine the deferred income taxes at the end of 2015, and indicate how they should be classified on the statement of financial position.
- **(e)** Prepare the journal entry to record income taxes for 2015.
- **(f)** Draft the income tax section of the income statement for 2015, beginning with "Income before income taxes."

- **1.** Pretax financial income for 2015 is €100,000.
- **2.** The tax rate enacted for 2015 and future years is 40%.
- 3. Differences between the 2015 income statement and tax return are listed below:(a) Warranty expense accrued for financial reporting purposes amounts to €7,000. Warranty deductions per the tax return amount to €2,000.
 - (b) Income on construction contracts using the percentage-of-completion method per books amounts to €92,000. Income on construction contracts for tax purposes amounts to €67,000.
 - (c) Depreciation of property, plant, and equipment for financial reporting purposes amounts to €60,000. Depreciation of these assets amounts to €80,000 for the tax return.
 - (d) A €3,500 fine paid for violation of pollution laws was deducted in computing pretax financial income.
 - (e) Interest revenue recognized on an investment in tax-exempt bonds amounts to €1,500.
- **4.** Taxable income is expected for the next few years.

Instructions

- (a) Compute taxable income for 2015.
- **(b)** Compute the deferred taxes at December 31, 2015, that relate to the temporary differences described above. Clearly label them as deferred tax asset or liability.
- (c) Prepare the journal entry to record income tax expense, deferred taxes, and income taxes payable for 2015.
- (d) Draft the income tax expense section of the income statement, beginning with "Income before income taxes."

CONCEPTS FOR ANALYSIS

CA19-1 (Objectives and Principles for Accounting for Income Taxes) The amount of income taxes due to the government for a period of time is rarely the amount reported on the income statement for that period as income tax expense.

Instructions

- (a) Explain the objectives of accounting for income taxes in general-purpose financial statements.
- **(b)** Explain the basic principles that are applied in accounting for income taxes at the date of the financial statements to meet the objectives discussed in (a).
- (c) List the steps in the annual computation of deferred tax liabilities and assets.

CA19-2 (Basic Accounting for Temporary Differences) Dexter Company appropriately uses the asset-liability method to record deferred income taxes. Dexter reports depreciation expense for certain machinery purchased this year using an accelerated method for income tax purposes and the straight-line basis for financial reporting purposes. The tax deduction is the larger amount this year.

Dexter received rent revenues in advance this year. These revenues are included in this year's taxable income. However, for financial reporting purposes, these revenues are reported as unearned revenues, a current liability.

- **(a)** What are the principles of the asset-liability approach?
- **(b)** How would Dexter account for the temporary differences?
- **(c)** How should Dexter classify the deferred tax consequences of the temporary differences on its statement of financial position?

CA19-3 (Identify Temporary Differences and Classification Criteria) The asset-liability approach for recording deferred income taxes is an integral part of IFRS.

Instructions

- (a) Indicate whether each of the following independent situations should be treated as a temporary difference or as a permanent difference, and explain why.
 - (1) Estimated warranty costs (covering a 3-year warranty) are expensed for financial reporting purposes at the time of sale but deducted for income tax purposes when paid.
 - (2) Depreciation for book and income tax purposes differs because of different bases of carrying the related property, which was acquired in a trade-in. The different bases are a result of different rules used for book and tax purposes to compute the basis of property acquired in a trade-in.
 - (3) A company properly uses the equity method to account for its 30% investment in another company. The investee pays dividends that are about 10% of its annual earnings.
 - (4) A company reports a gain on an involuntary conversion of a non-monetary asset to a monetary asset. The company elects to replace the property within the statutory period using the total proceeds so the gain is not reported on the current year's tax return.
- **(b)** Discuss the nature of the deferred income tax accounts and possible classifications in a company's statement of financial position. Indicate the manner in which these accounts are to be reported.

CA19-4 (Accounting for Deferred Income Taxes)

This year, Gumowski Company has each of the following items in its income statement.

- 1. Income on installment sales.
- 2. Revenues on long-term construction contracts.
- **3.** Estimated costs of product warranty contracts.
- **4.** Interest on tax-exempt bonds.

Instructions

- (a) Under what conditions would deferred income taxes need to be reported in the financial statements?
- **(b)** Specify when deferred income taxes would need to be recognized for each of the items above, and indicate the rationale for such recognition.

CA19-5 (Explain Computation of Deferred Tax Liability for Multiple Tax Rates) At December 31, 2014, Higley Corporation has one temporary difference which will reverse and cause taxable amounts in 2015. In 2014, a new tax act set taxes equal to 45% for 2014, 40% for 2015, and 34% for 2016 and years thereafter.

Instructions

Explain what circumstances would call for Higley to compute its deferred tax liability at the end of 2014 by multiplying the cumulative temporary difference by:

- (a) 45%.
- **(b)** 40%.
- (c) 34%.

CA19-6 (Explain Future Taxable and Deductible Amounts, How Carryback and Carryforward Affects Deferred Taxes) Maria Rodriquez and Lynette Kingston are discussing accounting for income taxes. They are currently studying a schedule of taxable and deductible amounts that will arise in the future as a result of existing temporary differences. The schedule is as follows.

	Current Year	Future Years			
	2015	2016	2017	2018	2019
Taxable income	€850,000				
Taxable amounts Deductible amounts		€375,000	€375,000	€ 375,000 (2,400,000)	€375,000
Enacted tax rate	50%	45%	40%	35%	30%

Instructions

- (a) Explain the concept of future taxable amounts and future deductible amounts as illustrated in the schedule.
- **(b)** How do the carryback and carryforward provisions affect the reporting of deferred tax assets and deferred tax liabilities?

CA19-7 (**Deferred Taxes**, **Income Effects**) Stephanie Delaney, a public accountant, is the newly hired director of corporate taxation for Acme Incorporated, which is a publicly traded corporation. Ms. Delaney's first job with Acme was the review of the company's accounting practices on deferred income taxes. In

doing her review, she noted differences between tax and book depreciation methods that permitted Acme to realize a sizable deferred tax liability on its statement of financial position. As a result, Acme paid very little in income taxes at that time.

Delaney also discovered that Acme has an explicit policy of selling off plant assets before they reversed in the deferred tax liability account. This policy, coupled with the rapid expansion of its plant asset base, allowed Acme to "defer" all income taxes payable for several years, even though it always has reported positive earnings and an increasing EPS. Delaney confirmed with the legal department that the policy is legal, but she is uncomfortable with the ethics of it.

Instructions

Answer the following questions.

- (a) Why would Acme have an explicit policy of selling plant assets before the temporary differences reversed in the deferred tax liability account?
- **(b)** What are the ethical implications of Acme's "deferral" of income taxes?
- (c) Who could be harmed by Acme's ability to "defer" income taxes payable for several years, despite positive earnings?
- (d) In a situation such as this, what are Ms. Delaney's professional responsibilities as a public accountant?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What amounts relative to income taxes does M&S report in its:
 - (1) 2013 income statement?
 - (2) 30 March 2013 statement of financial position?
 - (3) 2013 statement of cash flows?
- **(b)** M&S's provision for income taxes in 2012 and 2013 was computed at what effective tax rates? (See the notes to the financial statements.)
- (c) How much of M&S's 2013 total provision for income taxes was current tax expense, and how much was deferred tax expense?
- (d) What did M&S report as the significant components (the details) of its 30 March 2013 deferred tax assets and liabilities?

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- (a) What are the amounts of adidas's and Puma's provision for income taxes for the year 2012? Of each company's 2012 provision for income taxes, what portion is current expense and what portion is deferred expense?
- **(b)** What amount of cash was paid in 2012 for income taxes by adidas and by Puma?
- (c) What was the effective tax rate in 2012 for adidas and Puma? Why might their effective tax rates differ?
- (d) For year-end 2012, what amounts were reported by adidas and Puma as (1) gross deferred tax assets and (2) gross deferred tax liabilities?
- **(e)** Do either adidas or Puma disclose any net operating loss carrybacks and/or carryforwards at year-end 2012? What are the amounts, and when do the carryforwards expire?

Financial Statement Analysis Case

Homestake Mining Company

Homestake Mining Company (USA) is a 120-year-old international gold mining company with substantial gold mining operations and exploration in the United States, Canada, and Australia. At year-end, Homestake reported the following items related to income taxes (thousands of dollars).

Total current taxes Total deferred taxes	\$ 26,349 (39,436)
Total income and mining taxes (the provision for taxes per its income statement)	(13,087)
Deferred tax liabilities Deferred tax assets, net of an unrecognized amount of \$207,175 Net deferred tax liability	\$303,050 95,275 \$207,775
Note 6 (partial):	
Tax loss carryforwards (U.S., Canada, Australia, and Chile) Tax credit carryforwards	\$71,151 \$12,007

Instructions

- (a) What is the significance of Homestake's disclosure of "Current taxes" of \$26,349 and "Deferred taxes" of \$(39,436)?
- **(b)** Explain the concept behind Homestake's disclosure of deferred tax liabilities (future taxable amounts) and deferred tax assets (future deductible amounts).
- (c) Homestake reported tax loss carryforwards of \$71,151 and tax credit carryforwards of \$12,007. How do the carryback and carryforward provisions affect the reporting of deferred tax assets and deferred tax liabilities?

Accounting, Analysis, and Principles

Adler Company, which began operations at the beginning of 2013, produces various products on a contract basis. Each contract generates income of $\le 80,000$. Some of Adler's contracts provide for the customer to pay on an installment basis. Under these contracts, Adler collects one-fifth of the contract revenue in each of the following 4 years. For financial reporting purposes, the company recognizes income on an accrual basis; for tax purposes, Adler recognizes income in the year cash is collected (installment basis).

Presented below is information related to Adler's operations for 2015.

- 1. In 2015, the company completed seven contracts that allow for the customer to pay on an installment basis. Adler recognized the related income of €560,000 for financial reporting purposes. It reported only €112,000 of income on installment sales on the 2015 tax return. The company expects future collections on the related installment receivables to result in taxable amounts of €112,000 in each of the next 4 years.
- 2. Non-taxable government bond interest revenue was €28,000.
- 3. Non-deductible fines and penalties of €26,000 were paid.
- **4.** Pretax financial income amounts to €500,000.
- 5. Tax rates (enacted before the end of 2015) are 50% for 2015 and 40% for 2016 and later.
- 6. The accounting period is the calendar year.
- 7. The company is expected to have taxable income in all future years.
- 8. The company had a deferred tax liability balance of €40,000 related to prior year installment sales at the end of 2014. None of this temporary difference reversed in 2015.

Accounting

Prepare the journal entry to record income taxes for 2015.

Analysis

Classify deferred income taxes on the statement of financial position at December 31, 2015, and indicate, starting with income before income taxes, how income taxes are reported on the income statement. What is Adler's effective tax rate?

Principles

Explain how the IASB Conceptual Framework is used as a basis for determining the proper accounting for deferred income taxes.

BRIDGE TO THE PROFESSION

Professional Research

Kleckner Company started operations in 2011. Although it has grown steadily, the company reported accumulated operating losses of \$450,000 in its first four years in business. In the most recent year (2015), Kleckner appears to have turned the corner and reported modest taxable income of \$30,000. In addition to a deferred tax asset related to its net operating loss, Kleckner has recorded a deferred tax asset related to product warranties and a deferred tax liability related to accelerated depreciation.

Given its past operating results, Kleckner has determined that it is not probable that it will realize any of the deferred tax assets. However, given its improved performance, Kleckner management wonders whether there are any accounting consequences for its deferred tax assets. They would like you to conduct some research on the accounting for recognition of its deferred tax asset.

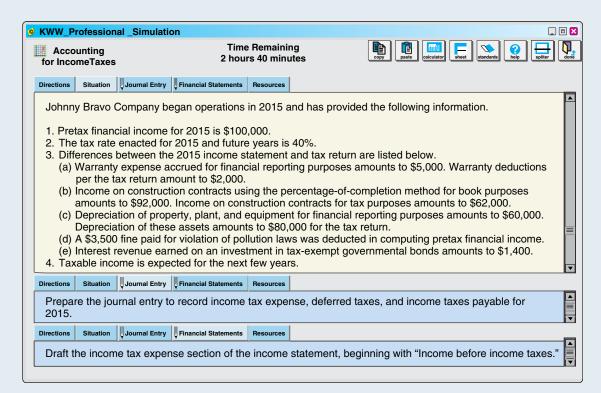

Instructions

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free elFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) Briefly explain to Kleckner management the importance of future taxable income as it relates to the recognition of deferred tax assets.
- **(b)** What are the sources of income that may be relied upon in assessing realization of a deferred tax asset?
- (c) What are tax-planning strategies? From the information provided, does it appear that Kleckner could employ a tax-planning strategy in evaluating its deferred tax asset?

Professional Simulation

In this simulation, you are asked to address questions related to the accounting for income taxes. Prepare responses to all parts.

Remember to check the book's companion website, at www.wiley.com/college/kieso, to find additional resources for this chapter.

20

Accounting for Pensions and Postretirement Benefits

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **1** Distinguish between accounting for the employer's pension plan and accounting for the pension fund.
- 2 Identify types of pension plans and their characteristics.
- **3** Explain measures for valuing the pension obligation.
- 4 Identify amounts reported in financial statements.
- 5 Use a worksheet for employer's pension plan entries.

- 6 Explain the accounting for past service costs.
- **7** Explain the accounting for remeasurements.
- 8 Describe the requirements for reporting pension plans in financial statements.
- **9** Explain the accounting for other postretirement benefits.

Pension Peril

The effects of the financial crisis of 2008 and the resultant economic downturn continue to ripple through global markets. Pension plans, both those sponsored by governments and private companies, are now feeling the effects. Consider the following actions by private companies to deal with the effects of the financial crisis.

- Britain's employers are **shutting down pension schemes** at a rapid rate. A new study has concluded that traditional final salary pension benefits will soon become a thing of the past. The study found that total service cost—the cost of providing the current year's pension promises—had fallen by 15 percent as a result of the shutdown. The drop reflects a decline in the number of workers who are earning pension benefits. At this rate, final salary pensions in the private sector will no longer be available within six years.
- United Utilities (GBR) has made its defined benefit pension schemes less generous to employees as the United Kingdom's biggest listed water company looks to cut costs in the face of a harsher regulatory regime. The utility announced that the move was backed by unions. The company said it had amended the terms of its defined benefit schemes to increase contributions made by members, while also increasing the retirement age and capping increases in pensionable salaries.
- Marks and Spencer plc (GBR) is planning to increase contributions to its pension plan (£800 million) to address a deficit in the plan assets relative to its pension obligations. The retailer insisted that it had no plans to close the final salary scheme to existing members. The clothing and food chain, which has 20,000 current members in its defined benefits scheme, said it would not be following the growing band of companies—such as BP (GBR) and Vodafone (GBR)—which are closing their final salary schemes to existing members. In fact, recent data indicate that 88 percent of U.K. defined benefit pension plans have closed the door to new participants.

Just as market declines create challenges for companies and their pension plans, market recoveries can quickly reverse the negative consequences of market downturns for pension plans. This is what we are seeing recently, with 27 percent of the 1,000 largest global companies reporting pension plan funded status (which is defined as pension assets minus pension liabilities) of greater than 100 percent in 2013. That means these companies had more assets than liabilities, which is quite a change in two years when just 4.4 percent of these companies reported fully funded or overfunded pension plans. A good example is Marks and Spencer. As discussed above, it reported a net pension liability or deficit of £283.3 million at the

height of the financial crisis in 2008. In 2013, the company reported a pension surplus of £193.3 million—quite a swing in a five-year period.

Why are pension plans so vulnerable to the effects of swings in financial markets? As you will learn in this chapter, pensions are a form of deferred compensation. When a pension is included in a salary and benefit package, employees may accept

lower pay while working in exchange for pension benefits that will be paid in the future at retirement. Companies and governments must set aside assets to meet these future obligations. However, when economic times are tough, assets in the funds (shares and bonds) lose value, and companies and governments may not have the resources to contribute to the funds. As a result, a pension deficit arises and employees' pensions may be in peril. Given the need for good information about the impact of these continuing pension perils on companies, the IASB has issued new rules to improve the accounting for pensions and other postretirement benefit plans.

Sources: Adapted from Norma Cohen, "Study Sees End for Final Salary Pensions," Financial Times (May 17, 2010); J. Raife, "Time to Talk Real Public Sector Pension Costs," Financial Times (June 27, 2010); S. Johnson, "Sea Change in the Pipeline for BP's Pension Fund," Financial Times (January 12, 2014); and Towers and Watson, "Funded Status of Fortune 1000 Pension Plans Estimated to Have Improved," Insider (January 2014).

PREVIEW OF CHAPTER

20

As our opening story indicates, the financial crisis of 2008 has put pension plans in peril and the cost of retirement benefits is getting steep. For example, **British Airways'** (GBR) pension and healthcare

INTERNATIONAL FOCUS

> Read the Global Accounting Insights on

pages 1036–1037 for a discussion of non-IFRS

financial reporting of postretirement benefits.

costs for retirees in a recent year totaled £149 million, or approximately £4 per passenger carried. Many other companies have substantial pension and other postretirement expenses and obligations as well. The content and organization of the chapter are as follows.

Accounting for Pensions and Postretirement Benefits

Pension Plans	Pensions	Worksheet	in Financial Statements
 Defined benefit plan Role of actuaries 	 Measures of the pension liability Net defined benefit obligation (asset) Changes in the defined benefit obligation (asset) Plan assets and actual return 	 2015 entries and worksheet Past service cost 2016 entries and worksheet Remeasurements 2017 entries and worksheet 	 Within the financial statements Within the notes to the financial statements Other postretirement benefits

NATURE OF PENSION PLANS

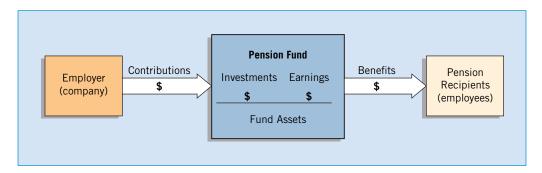

LEARNING OBJECTIVE 1

Distinguish between accounting for the employer's pension plan and accounting for the pension fund.

A pension plan is an arrangement whereby an employer provides benefits (payments) to retired employees for services they performed in their working years. Pension accounting may be divided and separately treated as accounting for the employer and accounting for the pension fund. The *company* or *employer* is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The fund or plan is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the retired employees (pension recipients). Illustration 20-1 shows the three entities involved in a pension plan and indicates the flow of cash among them.

ILLUSTRATION 20-1

Flow of Cash among Pension Plan Participants

A pension plan is **funded** when the employer makes payments to a funding agency. That agency accumulates the assets of the pension fund and makes payments to the recipients as the benefits come due.

Some pension plans are contributory. In these, the employees bear part of the cost of the stated benefits or voluntarily make payments to increase their benefits. Other plans are non-contributory. In these plans, the employer bears the entire cost. In some countries, companies design their pension plans so as to take advantage of certain income tax benefits. Plans that offer tax benefits are often called qualified pension plans. They permit deductibility of the employer's contributions to the pension fund and tax-free status of earnings from pension fund assets.

The pension fund should be a separate legal and accounting entity. The pension fund, as a separate entity, maintains a set of books and prepares financial statements. Maintaining records and preparing financial statements for the fund, an activity known as "accounting for employee benefit plans," is not the subject of this chapter. Instead, this chapter explains the pension accounting and reporting problems of the employer as the sponsor of a pension plan.

The need to properly administer and account for pension funds becomes apparent when you understand the size of these funds. Listed in Illustration 20-2 are the pension fund assets and pension expenses of six major companies in a recent year. The two most common types of pension plans are defined contribution plans and defined **benefit plans**. We look at each of them in the following sections.

¹When used as a verb, fund means to pay to a funding agency (as to fund future pension benefits or to fund pension cost). Used as a noun, it refers to assets accumulated in the hands of a funding agency (trustee) for the purpose of meeting pension benefits when they

²The IASB issued a separate standard covering the accounting and reporting for employee benefit plans. [1]

Company	Size of Pension Fund*	2012 Pension Expense*	Pension Expense as % of Pretax Income (Loss)
Siemens (DEU)	€24,052	€332	4.56%
AB InBev (BEL)	€5,704	€86	0.77%
BASF (DEU)	€16,739	€427	5.12%

ILLUSTRATION 20-2 Pension Funds and Pension Expense

Defined Contribution Plan

In a **defined contribution plan**, the employer agrees to contribute to a pension trust a certain sum each period, based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. **The plan defines only the employer's contribution.** It makes no promise regarding the ultimate benefits paid out to the employees.

LEARNING OBJECTIVE Identify types of pension plans and their characteristics.

The size of the pension benefits that the employee finally collects under the plan depends on several factors: the amounts originally contributed to the pension trust, the income accumulated in the trust, and the treatment of forfeitures of funds caused by early terminations of other employees. A company usually turns over to an **independent third-party trustee** the amounts originally contributed. The trustee, acting on behalf of the beneficiaries (the participating employees), assumes ownership of the pension assets and is accountable for their investment and distribution. The trust is separate and distinct from the employer.

The accounting for a defined contribution plan is straightforward. The employee gets the benefit of gain (or the risk of loss) from the assets contributed to the pension plan. The employer simply contributes each year based on the formula established in the plan. As a result, the employer's annual cost (pension expense) is simply the amount that it is obligated to contribute to the pension trust. The employer reports a liability on its statement of financial position only if it does not make the contribution in full. The employer reports an asset only if it contributes more than the required amount and must disclose the amount of expense recorded for the defined contribution plan. [2]

Defined Benefit Plan

A **defined benefit plan** outlines the benefits that employees will receive when they retire. These benefits typically are a function of an employee's years of service and of the compensation level in the years approaching retirement.

To meet the defined benefit commitments that will arise at retirement, a company must determine what the contribution should be today (a time value of money computation). Companies may use many different contribution approaches. However, the funding method should provide enough money at retirement to meet the benefits defined by the plan.

The **employees** are the beneficiaries of a defined **contribution** trust, but the **employer** is the beneficiary of a defined **benefit** trust. Under a defined benefit plan, the trust's primary purpose is to safeguard and invest assets so that there will be enough to pay the employer's obligation to the employees. **In form**, the trust is a separate entity.

1014 Chapter 20 Accounting for Pensions and Postretirement Benefits

In substance, the trust assets and liabilities belong to the employer. That is, as long as the plan continues, the employer is responsible for the payment of the defined benefits (without regard to what happens in the trust). The employer must make up any shortfall in the accumulated assets held by the trust. On the other hand, the employer can recapture any excess accumulated in the trust, either through reduced future funding or through a reversion of funds.

Because a defined benefit plan specifies benefits in terms of uncertain future variables, a company must establish an appropriate funding pattern to ensure the availability of funds at retirement in order to provide the benefits promised. This funding level depends on a number of factors such as turnover, mortality, length of employee service, compensation levels, and interest earnings.

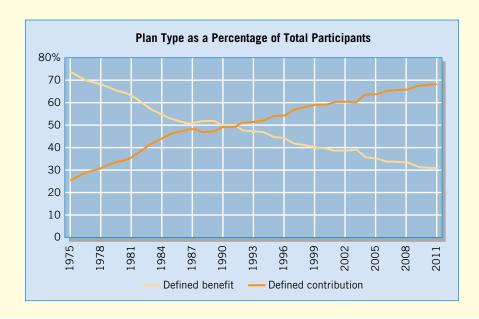

Employers are at risk with defined benefit plans because they must contribute enough to meet the cost of benefits that the plan defines. The expense recognized each period is not necessarily equal to the cash contribution. Similarly, the liability is controversial because its measurement and recognition relate to unknown future variables. Thus, the accounting issues related to this type of plan are complex. Our discussion in the following sections deals primarily with defined benefit plans.³

What do the numbers mean?

WHICH PLAN IS RIGHT FOR YOU?

Defined contribution plans are more popular with employers than defined benefit plans. One reason is that they are cheaper. Defined contribution plans often cost no more than 3 percent of payroll, whereas defined benefit plans can cost 5 to 6 percent of payroll.

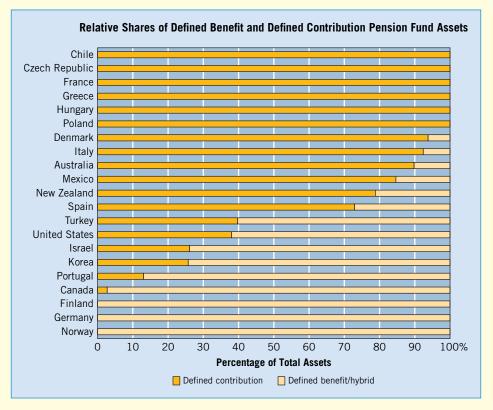

In the late 1970s, approximately 15 million individuals had defined contribution plans. Today, over 62 million do. The following chart reflects this significant change. It shows the percentage of companies in one country using various types of plans, based on a survey of over 650,000 single-employer pension plans.

³In many cases, companies offer a defined contribution plan in combination with a defined benefit plan.

Although many companies are changing to defined contribution plans, the number of existing defined benefit plans and benefits paid from these plans are substantial. Further, while the balance between defined benefit and defined

contribution plans has been shifting over time, there is also significant variation in the types of plans across countries, as shown in the chart below.

As indicated, for 12 of the 21 countries, assets in defined contribution plans outweighed those in defined benefit plans. In six countries, namely Chile, the Czech Republic, France, Greece, Hungary, and Poland, defined benefit plans did not

exist at all. Defined benefit funds dominate the pension markets in Canada, Finland, Germany, Israel, Korea, Norway, Portugal, Turkey, and the United States.

The Role of Actuaries in Pension Accounting

The problems associated with pension plans involve complicated mathematical considerations. Therefore, companies engage **actuaries** to ensure that a pension plan is appropriate for the employee group covered. Actuaries are individuals trained through a long and rigorous certification program to assign probabilities to future events and their financial effects. The insurance industry employs actuaries to assess risks and to advise on the setting of premiums and other aspects of insurance policies. Employers rely heavily on actuaries for assistance in developing, implementing, and funding pension funds.

⁴An actuary's primary purpose is to ensure that the company has established an appropriate funding pattern to meet its pension obligations. This computation involves developing a set of assumptions and continued monitoring of these assumptions to ensure their realism. IFRS encourages, but does not require, companies to use actuaries in the measurement of the pension amounts. [3] That the general public has little understanding of what an actuary does is illustrated by the following excerpt from the *Wall Street Journal*: "A polling organization once asked the general public what an actuary was, and received among its more coherent responses the opinion that it was a place where you put dead actors."

1016 Chapter 20 Accounting for Pensions and Postretirement Benefits

Actuaries make predictions (called actuarial assumptions) of mortality rates, employee turnover, interest and earnings rates, early retirement frequency, future salaries, and any other factors necessary to operate a pension plan. They also compute the various pension measures that affect the financial statements, such as the pension obligation, the annual cost of servicing the plan, and the cost of amendments to the plan. In summary, accounting for defined benefit pension plans relies heavily upon information and measurements provided by actuaries.

ACCOUNTING FOR PENSIONS

LEARNING OBJECTIVE [3]

Explain measures for valuing the pension obligation.

In accounting for a company's pension plan, two questions arise. (1) What is the pension obligation that a company should report in the financial statements? (2) What is the pension expense for the period? Attempting to answer the first question has produced much controversy.

Measures of the Pension Liability

Most agree that an employer's **pension obligation** is the deferred compensation obligation it has to its employees for their service under the terms of the pension plan. Measuring that obligation is not so simple, though, because there are alternative ways of measuring it.

One measure of the pension obligation is to base it only on the benefits vested to the employees. Vested benefits are those that the employee is entitled to receive even if he or she renders no additional services to the company. Most pension plans require a certain minimum number of years of service to the employer before an employee achieves vested benefits status. Companies compute the vested benefit obligation using only vested benefits at current salary levels.

Another way to measure the obligation uses both vested and non-vested years of service. On this basis, the company computes the deferred compensation amount on all years of employees' service—both vested and non-vested—using current salary levels. This measurement of the pension obligation is called the accumulated benefit obligation.

A third measure bases the deferred compensation amount on both vested and nonvested service using future salaries. This measurement of the pension obligation is called the defined benefit obligation. Because future salaries are expected to be higher than current salaries, this approach results in the largest measurement of the pension obligation.

The choice between these measures is critical. The choice affects the amount of a company's pension liability and the annual pension expense reported. The diagram in Illustration 20-3 (page 1017) presents the differences in these three measurements.

Which of these alternative measures of the pension liability does the profession favor? The profession adopted the defined benefit obligation—the present value (without deducting any plan assets) of the expected future payments required to settle the obligation resulting from employee service in current and prior periods.⁵ [4] Those in favor of the defined benefit obligation contend that a promise by an employer to pay benefits based on a percentage of the employees' future salaries is far greater than a promise to pay a percentage of their current salary, and such a difference should be reflected in the pension liability and pension expense.

bWhen we use the term "present value of benefits" throughout this chapter, we really mean the actuarial present value of benefits. Actuarial present value is the amount payable adjusted to reflect the time value of money and the probability of payment (by means of decrements for events such as death, disability, withdrawals, or retirement) between the present date and the expected date of payment. For simplicity, though, we use the term "present value" instead of "actuarial present value" in our discussion.

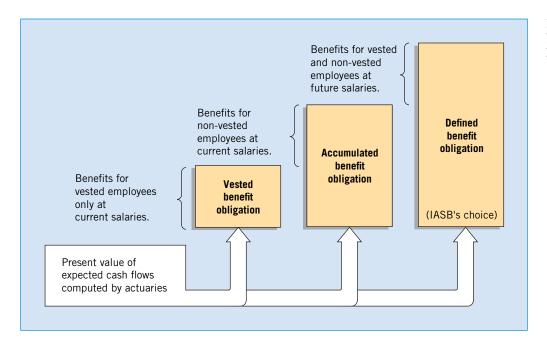

ILLUSTRATION 20-3
Different Measures of the Pension Obligation

Moreover, companies discount to present value the estimated future benefits to be paid. Minor changes in the interest rate used to discount pension benefits can dramatically affect the measurement of the employer's obligation. For example, a 1 percent decrease in the discount rate can increase pension liabilities 15 percent. Accounting rules require that, at each measurement date, a company must determine the appropriate discount rate used to measure the pension liability, based on current interest rates. [5]

Net Defined Benefit Obligation (Asset)

The **net defined benefit obligation (asset)** (also referred to as the **funded status**) is the deficit or surplus related to a defined pension plan. The deficit or surplus is measured as follows.

Defined Benefit Obligation – Fair Value of Plan Assets (if any)

The deficit or surplus is often referred to as the funded status of the plan.

If the defined benefit obligation is greater than the plan assets, the pension plan has a deficit. Conversely, if the defined benefit obligation is less than the plan assets, the pension plan has a surplus. Illustration 20-4 shows these relationships.

Deficit		Surplus	
Defined benefit obligation Plan assets Net defined benefit obligation	€(1,000,000) 900,000 € (100,000)	Defined benefit obligation Plan assets Net defined benefit asset	€(150,000) 200,000 € 50,000

ILLUSTRATION 20-4
Presentation of Funded
Status

The net defined benefit obligation (asset) is often referred to simply as the pension liability or the pension asset on the statement of financial position.

As indicated, companies should report either a pension asset or pension liability related to a pension plan on the statement of financial position (often referred to as the **net approach**). To illustrate, assume that at year-end Acer Company has a defined benefit

1018 Chapter 20 Accounting for Pensions and Postretirement Benefits

obligation of €4,000,000 and plan assets of €3,700,000. In this case, Acer reports €300,000 (€4,000,000 - €3,700,000) as a pension liability on its statement of financial position.

Some believe that companies should report separately both the defined benefit obligation and the plan assets on the statement of financial position. This approach (often referred to as the **gross approach**) would report Acer's defined benefit obligation of \leq 4,000,000 and its plan assets of \leq 3,700,000 on the statement of financial position. The IASB disagrees, indicating that offsetting these amounts is consistent with its standard on when assets and liabilities should be netted.

Reporting Changes in the Defined Benefit Obligation (Asset)

The IASB requires that all changes in the defined benefit obligation and plan assets in the current period be recognized in comprehensive income. This approach reflects application of accrual-based accounting for pensions (expense recognition principle). That is, companies report pension expense as employees work and earn benefits rather than when employees are paid benefits after retirement (referred to as cash basis or pay as you go). The Board believes that immediate recognition of the effects of these changes in the statement of comprehensive income provides the most understandable and useful information to financial statement users. The IASB requires that companies report changes arising from different elements of pension liabilities and assets in different sections of the statement of comprehensive income, depending on their nature.

In the past, companies often reported only a single pension expense number in the comprehensive income statement. Disclosing additional segmentation of the **components of pension cost** provides additional transparency about the nature of these costs. [7] The three components are as follows.

- Service cost. Service cost is either current service cost or past service cost. Current service cost is the increase in the present value of the defined benefit obligation from employee service in the current period. Past service cost is the change in the present value of the defined benefit obligation for employee service for prior periods—generally resulting from a plan amendment (e.g., changes to the plan). This component is reported in the statement of comprehensive income in the operating section of the statement and affects net income.
- Net interest. Net interest is computed by multiplying the discount rate by the defined benefit obligation and the plan assets. If the plan has a net defined benefit obligation at the end of the period, the company reports interest expense. Conversely, if it has a net defined benefit asset, it reports interest revenue. This approach is justified on the basis of its simplicity and that any financing costs should be based on the funded status of the plan. This amount is often shown below the operating section of the income statement in the financing section and affects net income.
- Remeasurements. Remeasurements are gains and losses related to the defined benefit
 obligation (changes in discount rate or other actuarial assumptions) and gains or
 losses on the fair value of the plan assets (actual rate of return less interest revenue
 included in the finance component). This component is reported in other comprehensive income, net of tax. These remeasurement gains or losses therefore affect
 comprehensive income but not net income.

Illustration 20-5 (page 1019) shows the components of changes in the pension liability (asset) and their placement on the statement of comprehensive income.

⁶IAS 32 states that a financial asset and a financial liability should be offset and the net amount reported in the statement of financial position when a company (a) has a legally enforceable right to set off the recognized amounts and (b) intends either to settle on a net basis, or to realize the asset and settle it simultaneously. [6]

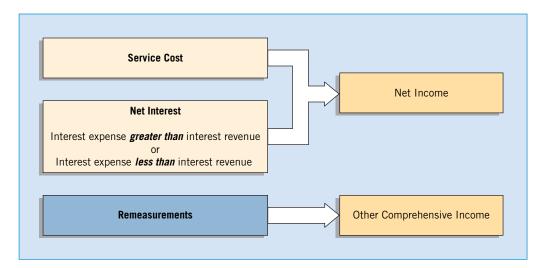

ILLUSTRATION 20-5
Reporting Changes in the
Pension Obligation
(Assets)

As indicated in Illustration 20-5, service cost and net interest are reported in net income. We discuss determination of each of these components in the following section. Remeasurements, which are reported in other comprehensive income, are discussed in a later section.

Service Cost

To determine current service cost and the related increase in the defined benefit obligation, companies must:

- **1.** Apply an actuarial valuation method.
- **2.** Assign benefits to period of service.
- **3.** Make actuarial assumptions.⁷

In applying an actuarial valuation method, the IASB concluded that **companies** must consider future compensation levels in measuring the present obligation and periodic pension expense if the plan benefit formula incorporates them. In other words, the present obligation resulting from a promise to pay a benefit of 1 percent of an employee's final pay differs from the promise to pay 1 percent of current pay. To overlook this fact is to ignore an important aspect of pension expense. Thus, the Board adopts the projected unit credit method (often referred to as the benefits/years-of-service method), which determines pension expense based on future salary levels.

Some object to this determination, arguing that a company should have more freedom to select an expense recognition pattern. Others believe that incorporating future salary increases into current pension expense is accounting for events that have not yet happened. They argue that if a company terminates the plan today, it pays only liabilities for accumulated benefits. Nevertheless, the IASB indicates that the defined benefit obligation provides a more realistic measure of the employer's obligation under the plan on a going concern basis. Therefore, companies should use it as the basis for determining service cost.

The assignment of benefits to periods of service is based on the actuarial valuation method. The actuary then allocates the cost of the pension benefits over the expected service life of the company's employees. In determining the proper service cost for a period, the actuary makes assumptions related to such factors as mortality; rates of

⁷As indicated earlier, service cost is comprised of current and past service cost. Determination of past service cost is based on the same actuarial valuation model as that used for current service cost. We discuss recognition of past service cost in a later section.

1020 Chapter 20 Accounting for Pensions and Postretirement Benefits

employee turnover, disability, and early retirement; discount rate; benefit levels; and future salary levels. While *IAS 19* does not require use of an actuary, given the complexity of these estimates, just about all companies rely on an actuary to determine service cost and related other defined benefit measures.

Net Interest

In computing net interest, companies assume that the discount rate, the net defined benefit obligation, and the pension asset are determined at the beginning of the year.⁸ The **discount rate** is based on the yields of high-quality bonds with terms consistent with the company's pension obligation. Net interest is then computed as indicated in the following equation.

Net Interest = (Defined Benefit Obligation × Discount Rate) - (Plan Assets × Discount Rate)

That is, net interest is determined by multiplying the net defined benefit obligation (asset) by the discount rate. [9]

Because payment of the pension obligation is deferred, companies record the pension liability on a discounted basis. As a result, the liability accrues interest over the service life of the employee (passage of time), which is essentially interest expense (interest on the liability). Similarly, companies earn a return on their plan assets. That is, a company assumes that it earns interest based on multiplying the discount rate by the plan assets. While the IASB recognizes that the actual return on plan assets may differ from the assumed interest revenue computed, it believes that the change in plan assets can be divided into an amount that arises from the passage of time and amounts that arise from other changes. As we discuss in the next section, changes not related to the passage of time are reported in other comprehensive income as remeasurements. Thus, the growth in the plan assets should mirror the growth in the defined benefit obligation. In other words, the assumed interest revenue on the plan assets based on the passage of time offsets the interest expense on the defined benefit obligation.

In summary, pension expense is comprised of two components: (1) service cost and (2) net interest. Companies report each of these components in the statement of comprehensive income. In some cases, companies may choose to report these components in one section of the statement of comprehensive income as a single amount of total pension expense. Other companies may choose to report the service cost component in operating income and the net interest in a separate section related to financing.⁹

Plan Assets and Actual Return

Pension plan assets are usually investments in shares, bonds, other securities, and real estate that a company holds to earn a reasonable rate of return. Plan assets are reported at fair value. Companies generally hold these assets in a separate legal entity (a pension fund) that exists only to administer the employee benefit plan. These assets held by the pension fund are therefore not available to the company's own creditors (even in bankruptcy). Employer contributions and the actual return on plan assets increase pension plan assets. Actual return on plan assets is the increase in the pension fund assets arising

⁸The IASB indicates that if the beginning of the year amount changes materially (due to contributions to or payments out of the plan), an adjustment to the beginning balances should be made. [8] For homework purposes, unless information indicates that balances have changed materially, use the beginning of the year balances.

⁹The IASB does not provide guidance on which of these two approaches is preferred. [10] For homework purposes, report pension expense as a single total in income from operations in the statement of comprehensive income.

from interest, dividends, and realized and unrealized changes in the fair value of the plan. Benefits paid to retired employees decrease plan assets.

To illustrate, assume that Hasbro Company has pension plan assets of €4,200,000 on January 1, 2015. During 2015, Hasbro contributed €300,000 to the plan and paid out retirement benefits of €250,000. Its actual return on plan assets was €210,000 for the year. Hasbro's plan assets at December 31, 2015, are €4,460,000, computed as shown in Illustration 20-6.

Plan assets, January 1, 2015	€4,200,000
Contributions by Hasbro to plan	300,000
Actual return	210,000
Benefits paid to employees	(250,000)
Plan assets, December 31, 2015	€4,460,000

ILLUSTRATION 20-6
Determination of Pension
Assets

In some cases, companies compute that actual return by adjusting the change in plan assets for the effect of contributions during the year and benefits paid during the year. The equation in Illustration 20-7, or a variation thereof, can be used to compute the actual return.

```
Actual Return = \begin{pmatrix} Plan & Plan \\ Assets & Assets \\ Ending & Beginning \\ Balance & Balance \end{pmatrix} - (Contributions - Benefits Paid)
```

ILLUSTRATION 20-7 Equation for Computing Actual Return

Stated another way, the actual return on plan assets is the difference between the fair value of the plan assets at the beginning of the period and the end of the period, adjusted for contributions and benefit payments. Illustration 20-8 uses the equation above to compute actual return, using the information provided in Illustration 20-6.

Plan assets, December 31, 2015		€4,460,000	
Plan assets, January 1, 2015		(4,200,000)	
Increase in fair value of plan assets		260,000	
Deduct: Contributions to plan	€300,000		
Add: Benefit payments to employees	250,000	(50,000)	
Actual return		€ 210,000	

ILLUSTRATION 20-8 Computation of Actual Return on Plan Assets

In this case, Hasbro has a positive actual return on plan assets. Recently, some pension plans have experienced negative actual returns due to the increased volatility in global securities markets.

USING A PENSION WORKSHEET

We will now illustrate the basic computation of pension expense using the first two components: (1) service cost and (2) net interest. We discuss remeasurements in later sections.

LEARNING OBJECTIVEUse a worksheet for employer's

Companies often use a worksheet to record pension-related information.

As its name suggests, the worksheet is a working tool. A worksheet is **not** a permanent accounting record. It is neither a journal nor part of the general ledger. The worksheet is merely a device to make it easier to prepare entries and the financial statements. ¹⁰ Illustration 20-9 (on page 1022) shows the format of the **pension worksheet**.

¹⁰The use of a pension entry worksheet is recommended and illustrated by Paul B. W. Miller, "The New Pension Accounting (Part 2)," *Journal of Accountancy* (February 1987), pp. 86–94.

5	ltems	Expense	Cash	Liability	Obligation	Assets
6						
7						
8						
9						

The "General Journal Entries" columns of the worksheet (near the left side) determine the entries to record in the formal general ledger accounts. The "Memo Record" columns (on the right side) maintain balances in the defined benefit obligation and the plan assets. The difference between the defined benefit obligation and the fair value of the plan assets is the **pension asset/liability**, which is shown in the statement of financial position. If the defined benefit obligation is greater than the plan assets, a pension liability occurs. If the defined benefit obligation is less than the plan assets, a pension asset occurs.

On the first line of the worksheet, a company enters the beginning balances (if any). It then records subsequent transactions and events related to the pension plan using debits and credits, using both sets of columns as if they were one. For each transaction or event, the debits must equal the credits. The ending balance in the Pension Asset/Liability column should equal the net balance in the memo record.

2015 Entries and Worksheet

To illustrate the use of a worksheet and how it helps in accounting for a pension plan, assume that Zarle Company provides the following information related to its pension plan for the year 2015.

- Plan assets, January 1, 2015, are €100,000.
- Defined benefit obligation, January 1, 2015, is €100,000.
- Annual service cost is €9,000.
- Discount rate is 10 percent.
- Funding contributions are €8,000.
- Benefits paid to retirees during the year are €7,000.

Using this data, the worksheet in Illustration 20-10 presents the beginning balances and all of the pension entries recorded by Zarle in 2015. Zarle records the beginning balances for the defined benefit obligation and the pension plan assets on the first line of the worksheet in the memo record. Because the defined benefit obligation and the plan assets are the same at January 1, 2015, the Pension Asset/Liability account has a zero balance at January 1, 2015.

Entry (a) in Illustration 20-10 records the service cost component, which increases pension expense by $\[\in \]$ 9,000 and increases the liability (defined benefit obligation) by $\[\in \]$ 9,000. Entry (b) accrues the interest expense component, which increases both the liability and the pension expense by $\[\in \]$ 10,000 (the beginning defined benefit obligation multiplied by the discount rate of 10 percent). Entry (c) records the interest revenue component, which increases plan assets and decreases pension expense by $\[\in \]$ 10,000. This is computed by multiplying the beginning plan assets by the discount rate of 10 percent. As a result,

16									
17	*€9,000 – €8,000 = €1,000								
18	**€112,000 - €111,000 = €1,000								

ILLUSTRATION 20-10 Pension Worksheet—2015

interest expense (income) is zero in 2015. Entry (d) records Zarle's contribution (funding) of assets to the pension fund, thereby decreasing cash by $\{0.000\}$ and increasing plan assets by $\{0.000\}$. Entry (e) records the benefit payments made to retirees, which results in equal $\{0.000\}$ decreases to the plan assets and the defined benefit obligation.

Zarle makes the "formal journal entry" on December 31, which records the pension expense in 2015 as follows.

20	15	
Pension Expense	9,000	
Cash		8,000
Pension Asset/Liability		1,000

The credit to Pension Asset/Liability for €1,000 represents the difference between the 2015 pension expense of €9,000 and the amount funded of €8,000. Pension Asset/Liability (credit) is a liability because Zarle underfunds the plan by €1,000. The Pension Asset/Liability account balance of €1,000 also equals the net of the balances in the memo accounts. Illustration 20-11 shows that the defined benefit obligation exceeds the plan assets by €1,000, which reconciles to the pension liability reported in the statement of financial position.

Defined benefit obligation (Credit) Plan assets at fair value (Debit) Pension asset/liability (Credit)	€(112,000) 111,000 € (1,000)	
--	------------------------------------	--

ILLUSTRATION 20-11
Pension Reconciliation
Schedule—December 31,
2015

If the net of the memo record balances is a credit, the reconciling amount in the Pension Asset/Liability column will be a credit equal in amount. If the net of the memo record balances is a debit, the Pension Asset/Liability amount will be a debit equal in amount. The worksheet is designed to produce this reconciling feature, which is useful later in the preparation of the financial statements and required note disclosure related to pensions.

In this illustration (for 2015), the debit to Pension Expense exceeds the credit to Cash, resulting in a credit to Pension Asset/Liability—the recognition of a liability. If the

credit to Cash exceeded the debit to Pension Expense, Zarle would debit Pension Asset/Liability—the recognition of an asset.¹¹

Past Service Cost

LEARNING OBJECTIVE [6]

Explain the accounting for past service costs.

Past service cost (PSC) is the change in the present value of the defined benefit obligation resulting from a plan amendment or a curtailment.¹² For example, a plan amendment arises when a company decides to provide additional benefits to existing employees for past service. Conversely, the company may decide that it is necessary to reduce its benefit package retroactively for existing employees,

thereby reducing their pension benefit. A **curtailment** occurs when the company has a significant reduction in the number of employees covered by the plan. Because a curtailment has the same effect as a reduction in benefits due to an amendment to the plan, these situations are accounted for in the same way. Illustration 20-12 summarizes the nature of past service costs.

ILLUSTRATION 20-12

Types of Past Service Costs

PAST SERVICE COSTS (EXPENSE IN CURRENT PERIOD)

Plan Amendments

- Introduction of a plan.
- Withdrawal of a plan.
- · Changes to a plan.

Curtailments

 Significant reduction in the number of employees covered by the plan.

The accounting for past service cost is straightforward—expense past service cost in the period of the amendment or curtailment. As a result, a substantial increase (decrease) in pension expense and the defined benefit obligation often results when a plan amendment or curtailment occurs. Because current and past service costs relate directly to employment, they are reported in the operating section of the statement of comprehensive income.

Some disagree with the IASB position of expensing these costs in the year a plan is amended or curtailed. They argue that a company would not provide these additional benefits for past years of service unless it expects to receive benefits in the future. According to this reasoning, a company should not recognize the full past service cost in the year of the amendment. Instead, the past service cost should be spread out over the remaining service life of employees who are expected to benefit from the changes in the plan. Others believe that if they are truly past service costs, they should be treated retroactively as an adjustment made to prior periods.

However, the IASB decided that any changes in the defined benefit obligation or plan assets should be recognized in the current period. To do otherwise is not informative and leads to delayed recognition of costs or reduced benefits that are neither assets nor liabilities. [13]

It is also possible to decrease past service costs by decreasing the defined benefit obligation (referred to as negative past service cost). Negative past service cost arises when an entity changes the benefits attributable to past service cost so that the present value of the defined benefit obligation decreases. In that case, pension expense is decreased. Both positive (increased pension expense) and negative (decreased pension

¹¹The IASB in *IAS 19* limits the amount of a pension asset that is recognized, based on a recoverability test. This test, which has been further clarified in *IFRIC 14*, limits the amount of the pension asset to the sum of unrecognized actuarial gains and losses (discussed later in this chapter) and amounts that will be received by the company in the form of refunds or reduction of future contributions. **[11]** *For purposes of homework, assume that a pension asset, if present, meets the criteria for full recognition.*

¹²The IASB also indicates that gains and losses on non-routine settlements are considered past service costs. **[12]** A **settlement** is a payment of benefits that is not set out in the terms of the plan.

expense) past service cost adjustments are handled in the same manner; that is, adjust pension expense immediately.

2016 Entries and Worksheet

Continuing the Zarle Company illustration into 2016, we note that the company amends the pension plan on January 1, 2016, to grant employees past service benefits with a present value of €81,600. The following additional facts apply to the pension plan for the year 2016.

- Annual service cost is €9,500.
- Discount rate is 10 percent.
- Annual funding contributions are €20,000.
- Benefits paid to retirees during the year are €8,000.

Illustration 20-13 presents a worksheet of all the pension entries and information recorded by Zarle in 2016.

ILLUSTRATION 20-13

Pension Worksheet— 2016

The first line of the worksheet shows the beginning balances of the Pension Asset/Liability account and the memo accounts. Entry (f) records Zarle's granting of past service cost, by adding \in 81,600 to the defined benefit obligation and to Pension Expense. Entry (g) records the current service cost; entry (h) records interest expense for the period. Because the past service cost occurred at the beginning of the year, interest is computed on the January 1, 2016, balance of the defined benefit obligation, adjusted for the past service cost. Interest expense is therefore \in 19,360 (\in 193,600 \times 10%). Entry (i) records interest revenue for the period of \in 11,100 (\in 111,000 \times 10%). Entries (j) and (k) are similar to the corresponding entries in 2015.

Zarle makes the following journal entry on December 31 to formally record the 2016 pension expense—the sum of the annual pension expense column.

 2016

 Pension Expense
 99,360

 Cash
 20,000

 Pension Asset/Liability
 79,360

Because the expense exceeds the funding, Zarle credits the Pension Asset/Liability account for the $\[< 79,360 \]$ difference. That account is a liability. In 2016, as in 2015, the balance of the Pension Asset/Liability account ($\[< 80,360 \]$) is equal to the net of the balances in the memo accounts, as shown in Illustration 20-14.

ILLUSTRATION 20-14

Pension Reconciliation Schedule—December 31, 2016

|--|

The **reconciliation** is the formula that makes the worksheet work. It relates the components of pension accounting, recorded and unrecorded, to one another.

Remeasurements

LEARNING OBJECTIVE 7

Explain the accounting for remeasurements.

Of great concern to companies that have pension plans are the uncontrollable and unexpected swings that can result from (1) sudden and large changes in the fair value of plan assets and (2) changes in actuarial assumptions that affect the amount of the defined benefit obligation. How should these changes (referred to

as **remeasurements**) affect the financial statements, most notably pension expense? The IASB believes that the most informative way is to recognize the remeasurement in other comprehensive income. The rationale for this reporting is that the predictive nature of remeasurements is much different than the other two components of pension benefit cost—service cost and net interest. **[14]**

Remeasurements are generally of two types:

- **1.** Gains and losses on plan assets.
- **2.** Gains and losses on the defined benefit obligation.

Asset Gains and Losses

The gains and losses on plan assets (referred to as **asset gains and losses**) is the difference between the actual return and the interest revenue computed in determining net interest. Asset gains occur when actual returns exceed the interest revenue. Asset losses occur when the actual returns are less than interest revenue. To illustrate, assume that Shopbob Company has plan assets at January 1, 2015, of €100,000. The discount rate for the year is 6 percent, and the actual return on the plan assets for 2015 is €8,000. In 2015, Shopbob should record an asset gain of €2,000, computed as follows.

ILLUSTRATION 20-15

Computation of Asset Gain

Actual return	€8,000
Less: Interest revenue (€100,000 × 6%)	6,000
Asset gain	<u>€2,000</u>

Shopbob therefore debits plan assets for the asset gain of $\[\in \] 2,000$ and credits Other Comprehensive Income (G/L) for the same amount. If interest revenue exceeds the actual return, Shopbob debits Other Comprehensive Income (G/L) for the asset loss and credits plan assets.

Liability Gains and Losses

In estimating the defined benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the defined benefit obligation. Seldom does actual experience coincide exactly with actuarial

predictions. These gains or losses from changes in the defined benefit obligation are called **liability gains and losses**.

Companies report liability gains (resulting from unexpected decreases in the liability balance) and liability losses (resulting from unexpected increases in the liability balance) in Other Comprehensive Income (G/L). Companies combine the liability gains and losses in the same Other Comprehensive Income (G/L) account used for asset gains and losses. They accumulate the asset and liability gains and losses from year to year in Accumulated Other Comprehensive Income. This amount is reported on the statement of financial position in the equity section.

2017 Entries and Worksheet

Continuing the Zarle Company illustration, the following facts apply to the pension plan for 2017.

- Annual service cost is €13,000.
- Discount rate is 10 percent.
- Actual return on plan assets is €12,000.
- Annual funding contributions are €24,000.
- Benefits paid to retirees during the year are €10,500.
- Changes in actuarial assumptions establish the end-of-year defined benefit obligation at €265,000.

The worksheet in Illustration 20-16 presents all of Zarle's 2017 pension entries and related information. The first line of the worksheet records the beginning balances that relate to the pension plan. In this case, Zarle's beginning balances are the ending balances from its 2016 pension worksheet in Illustration 20-13 (page 1025).

18								

¹³The IASB is silent as to whether the Accumulated Other Comprehensive Income account should be used instead of another equity account, like Retained Earnings. *For homework purposes, use the Accumulated Other Comprehensive Income account.* The IASB also permits the transfer of the balance in the Accumulated Other Comprehensive Income account to other equity accounts at a later date.

Entries (l), (m), (n), (o), and (p) are similar to the corresponding entries in 2015 or 2016. Entries (m) and (n) are related. Entry (m) records the interest expense of €21,446 (€214,460 × 10%). Entry (n) records interest revenue of €13,410 (€134,100 × 10%). Therefore, net interest expense is €8,036 (€21,446 - €13,410.) Entries (o) and (p) are recorded similarly in 2017 as those in 2015 and 2016.

Entries (q) and (r) need additional explanation. As indicated, the actual return on plan assets for 2017 was \le 12,000. However, as indicated in entry (n), pension expense was decreased \le 13,410 as a result of multiplying the beginning plan assets by the discount rate to arrive at an assumed interest revenue of \le 13,410. As a result, Zarle has an asset loss of \le 1,410 (\le 13,410 – \le 12,000) because the assumed interest revenue is greater than the actual return. This asset loss is debited to Other Comprehensive Income (G/L) and credited to plan assets. Pension plan assets are then properly stated at their fair value.

Entry (r) records the change in the defined benefit obligation resulting from the changes in the actuarial assumptions related to this obligation. As indicated in the facts above, the actuary has determined that the ending balance in the defined benefit obligation should be €265,000 at December 31, 2017. However, the balance at December 31, 2017, before any adjustment for actuarial gains and losses related to the defined benefit obligation is €238,406, as shown in Illustration 20-17.

ILLUSTRATION 20-17

Defined Benefit Obligation Balance (Unadjusted)

December 31, 2016, DBO balance	€214,460	
Service cost [entry (I)]	13,000	
Interest expense [entry (m)]	21,446	
Benefits paid	(10,500)	
December 31, 2017, DBO balance (before liability increases)	€238,406	

The difference between the ending balance of €265,000 as determined by the actuary and the present balance of €238,406 is €26,594 (a liability loss on the defined benefit liability). As shown on the worksheet, this liability loss is debited to Other Comprehensive Income (G/L) and credited to the defined benefit obligation. After this worksheet adjustment, the defined benefit obligation is stated at its actuarial value of €265,000. The journal entry to record the information related to the pension plan at December 31, 2017, based on the pension worksheet in Illustration 20-16, is as follows.

Pension Expense 21,036
Other Comprehensive Income (G/L) 28,004
Cash 24,000
Pension Asset/Liability 25,040

As the 2017 worksheet indicates, the \le 105,400 balance in the Pension Asset/Liability account at December 31, 2017, is equal to the net of the balances in the memo accounts. Illustration 20-18 shows this computation.

ILLUSTRATION 20-18

Pension Reconciliation Schedule—December 31, 2017

Defined benefit obligation (Credit) Plan assets at fair value (Debit)	€(265,000) 	
Pension asset/liability	<u>€(105,400)</u>	

Zarle carries the 2017 ending balances for Pension Asset/Liability and Accumulated Other Comprehensive Income forward as the beginning balances for pension plan accounting in 2018. These balances will be adjusted by changes in the defined benefit obligation and plan assets as shown in the prior examples. For example, assume that Zarle's pension plan had the following activity in 2018:

Pension expense	€17,450	
Contributions	32,000	
Asset gain	13,150	
Decrease in Pension Asset/Liability	27,700	

The ending balances for the defined benefit obligation and plan assets are €303,560 and €225,860, respectively. These elements are summarized in the partial 2018 pension worksheet shown in Illustration 20-19.

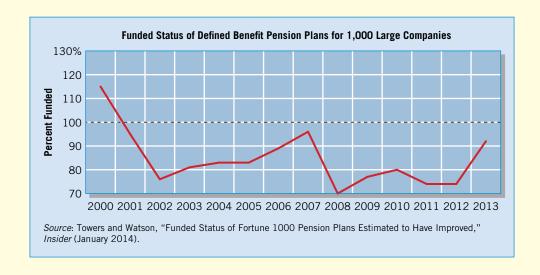

ILLUSTRATION 20-19 Partial Pension Worksheet—2018

	Partial Pension Worksheet — 2018.xls							
	Home Insert Page Layout Formulas Data Review View							
	P18							
	Α	В	С	D	E	F	G	
1			General Jo	ournal Entries		Memo	Record	
3	ltems	Annual Pension	Cash	OCI— Gain/Loss	Pension Asset/	Defined Benefit	Plan Assets	
5	Balance, Jan. 1, 2018	Expense	Casii	28,004 Dr.	Liability 105,400 Cr.	Obligation 265,000 Cr.	159,600 Dr.	
7		~~~			~~~			
9	Journal entry for 2018	17,450 Dr.	32,000 Cr.	13,150 Cr.	27,700 Dr.			
10 11	Accumulated OCI, Jan. 1, 2018			28,004 Dr.				
12	Balance, Dec. 31, 2018			14,854 Dr.	77,700 Cr.	303,560 Cr.	225,860 Dr.	
13								

Focusing on the "Journal Entry" row, in 2018 Zarle records pension expense of €17,450 and a decrease in Pension Asset/Liability of €27,700. The reduction in Pension Asset/Liability is due in part to the asset gain of €13,150 recorded in 2018. As a result, Zarle's 2018 ending balances (which become the 2019 beginning balances) are €77,700 for Pension Asset/Liability and Accumulated Other Comprehensive Income €14,854 (beginning Accumulated OCI of €28,004 – gain of €13,150).

What do the numbers mean? ROLLER COASTER

The chart below shows what has happened to the financial health of pension plans over the last few years. It is a real roller coaster.

At the turn of the century, when the securities market was strong, pension plans were overfunded. However, the bubble burst. By 2002, companies saw their pension plans funded at just 76 percent of reported liabilities. As discussed in the opening story, the funded status of plans bounced back in 2007, declined in the wake of the financial crisis of 2008, and recently is trending up toward fully funded status again.

A number of factors cause a fund to change from being overfunded to underfunded. First, low interest rates decimate returns on pension plan assets. As a result, pension fund assets have not grown; in some cases, they have declined in value. Second, using low interest rates to discount the projected benefit payments leads to a higher pension liability. Finally, more individuals are retiring, which leads to a depletion of the pension plan assets.

Source: D. Zion and A. Varshay, "Strong Returns Didn't Close Pension Funding Gaps Last Year; But So Far So Good This Year," Credit Suisse Equity Research (February 5, 2013).

REPORTING PENSION PLANS IN FINANCIAL STATEMENTS

LEARNING OBJECTIVE [3]

Describe the requirements for reporting pension plans in financial statements.

As you might suspect, a phenomenon as significant and complex as pensions involves extensive reporting and disclosure requirements. We will cover these requirements in two categories: (1) those within the financial statements and (2) those within the notes to the financial statements.

Within the Financial Statements

Pension Expense

As indicated earlier, pension expense (service cost and net interest) affects net income and is reported in the statement of comprehensive income. Companies may choose to report these components in one section of the statement of comprehensive income and report total pension expense. Other companies may choose to report the service cost component in operating income and the net interest in a separate section related to financing.14

Gains and Losses (Remeasurements)

Asset and liability gains and losses are recognized in other comprehensive income. By recognizing these gains and losses as part of other comprehensive income but not net income, the Board believes that the usefulness of financial statements is enhanced.

To illustrate the presentation of other comprehensive income and related accumulated OCI, assume that Obey Company provides the following information for the year 2015.

Net income for 2015	€100,000	
Liability loss for 2015	60,000	
Asset loss for 2015	15,000	
Accumulated OCI, January 1, 2015	40,000	

¹⁴For homework purposes, report pension expense as a single total in income from operations in the statement of comprehensive income. Note that other IFRSs require inclusion of some employee benefit costs within the costs of assets, such as inventories and property, plant, and equipment. Any postemployment benefit costs included in the cost of such assets will include an appropriate proportion of service cost and net interest. [15]

Reporting Pension Plans in Financial Statements 1031

Both the liability loss and the asset loss decrease the funded status of the plan on the statement of financial position. This results because the defined benefit obligation increases and the plan assets decrease. However, neither the liability loss nor the asset loss affects pension expense in 2015.

For Obey Company, the computation of "Other comprehensive loss" for 2015 is as follows.

Liability loss Asset loss	€60,000 15,000	
Other comprehensive loss	<u>€75,000</u>	

ILLUSTRATION 20-20

Computation of Other Comprehensive Income

The computation of "Comprehensive income" for 2015 is as follows.

Net income	€100,000
Other comprehensive loss	_ 75,000
Comprehensive income	€ 25,000

ILLUSTRATION 20-21

Computation of Comprehensive Income

The components of other comprehensive income must be reported using one of two formats: (1) a two statement approach or (2) a one statement approach (a combined statement of comprehensive income). Regardless of the format used, net income must be added to other comprehensive income to arrive at comprehensive income. For homework purposes, use the two statement approach unless stated otherwise. Earnings per share information related to comprehensive income is not required.

To illustrate the two statement approach, assume that Obey Company has reported a traditional income statement. The comprehensive income statement is shown in Illustration 20-22.

OBEY COMPANY COMPREHENSIVE INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2015			
Net income		€100,000	
Other comprehensive loss			
Liability loss	€60,000		
Asset loss	15,000	75,000	
Comprehensive income		€ 25,000	

ILLUSTRATION 20-22

Comprehensive Income Reporting

The computation of "Accumulated other comprehensive income" as reported in equity at December 31, 2015, is as follows.

Accumulated other comprehensive income, January 1, 2015 Other comprehensive loss	€40,000 _75,000	
Accumulated other comprehensive loss, December 31, 2015	€35,000	

ILLUSTRATION 20-23Computation of

Accumulated Other
Comprehensive Income

Regardless of the display format for the income statement, the accumulated other comprehensive loss is reported in the equity section of the statement of financial position of Obey Company as shown in Illustration 20-24. (Illustration 20-24 uses assumed data for the share capital—ordinary and retained earnings information.)

ILLUSTRATION 20-24

Reporting of Accumulated OCI

OBEY COMPANY STATEMENT OF FINANCIAL POSITION AS OF DECEMBER 31, 2015 (EQUITY SECTION)	v
Equity	
Share capital—ordinary	€100,000
Retained earnings	60,000
Accumulated other comprehensive loss	35,000
Total equity	€125,000

By providing information on the components of comprehensive income as well as total accumulated other comprehensive income, the company communicates all changes in net assets.

The IASB prohibits recycling of other comprehensive income items. Recycling means that other comprehensive income items are reclassified (through amortization) to net income over a period of time. Recycling, for example, is used under U.S. GAAP. The IASB notes that it is difficult to establish a reasonable basis for making these transfers. **[16]** In addition, not adjusting these amounts over time into net income signals that these items have characteristics different than normal revenues and expenses.

Recognition of the Net Funded Status of the Pension Plan

Companies must recognize on their statement of financial position the overfunded (pension asset) or underfunded (pension liability) status of their defined benefit pension plan. The overfunded or underfunded status is measured as the difference between the fair value of the plan assets and the defined benefit obligation.

Classification of Pension Asset or Pension Liability

The IASB does not indicate whether a company should distinguish current and noncurrent portions of assets and liabilities arising from pension benefits. *For homework purposes, assume that no portion of a pension asset is reported as a current asset.* The excess of the fair value of the plan assets over the defined benefit obligation is classified as a noncurrent asset. The rationale for non-current classification is that the pension plan assets are restricted. That is, these assets are used to fund the defined benefit obligation, and therefore non-current classification is appropriate.

The current portion of a net pension liability represents the amount of benefit payments to be paid in the next 12 months (or operating cycle, if longer) if that amount cannot be funded from existing plan assets. Otherwise, the pension liability is classified as a non-current liability.

Aggregation of Pension Plans

Some companies have two or more pension plans. In such instances, a question arises as to whether these multiple plans should be combined and shown as one amount on the statement of financial position. The Board takes the position that in general pension

plans should not be combined. The only situation in which offsetting is permitted is when a company:

- (a) Has a legally enforceable right to use a surplus in one plan to settle obligations in the other plan, and
- **(b)** Intends either to settle the obligation on a net basis, or to realize the surplus in one plan and settle its obligations under the other plan simultaneously.

Within the Notes to the Financial Statements

Information on pension plans is frequently important to understanding a company's financial position, results of operations, and cash flows. To increase understanding of pension plans, a company is required to disclose information that: [17]

- (a) Explains characteristics of its defined benefit plans and risks associated with them.
- **(b)** Identifies and explains the amounts in its financial statements arising from its defined benefit plans.
- **(c)** Describes how its defined benefit plans may affect the amount, timing, and uncertainty of the company's future cash flows.

To meet these requirements, companies provide extensive disclosures related to their defined benefit plans. We focus our discussion on the second objective that requires identifying and explaining the amounts in financial statements arising from defined pension plans. These requirements are summarized in Illustration 20-25.

ILLUSTRATION 20-25 Pension Disclosure

Requirements

Amounts reported in the financial statements:

Companies should provide reconciliation from the beginning balance to the ending balance for each of the following:

- 1. Plan assets.
- 2. Defined benefit obligation.
- 3. Funded status of the plan.

This reconciliation should report the following, where appropriate.

- Current service cost.
- Interest revenue or expense.
- Remeasurements of the net defined benefit liability (asset) showing separately (a) the return on plan assets, excluding amounts of interest revenue computed in (2); and (b) actuarial gains and losses arising from changes in the defined benefit obligation.
- · Past service cost and curtailments.
- · Contributions and payments to the plan.

Information on how the defined benefit plan may affect the amount, timing, and uncertainty of future cash flows:

- 1. Sensitivity analysis for each significant actuarial assumption, showing how the defined benefit obligation would have been affected by changes in the relevant actuarial assumption that were reasonably possible at the reporting date.
- 2. Methods and assumptions used in preparing the sensitivity analyses required by (1) and the limitations of those methods.
- 3. Changes from the previous period in the methods and assumptions used in preparing the sensitivity analyses and the reasons for such changes.
- 4. Description of any funding arrangements and funding policy that affect future contributions.
- 5. Expected contributions to the plan for the next annual reporting period.
- 6. Information about the maturity profile of the defined benefit obligation, including information about the distribution of the timing of benefit payments, such as a maturity analysis of the benefit payments.

The reconciliation is a key element of the pension disclosure package. By having a reconciliation of the changes in the assets and liabilities from the beginning of the year to the end of the year, statement readers can better understand the underlying economics of the plan. In essence, this disclosure contains the information in the pension worksheet for the defined benefit obligation and plan asset columns in accordance with *IAS 19* requirements. Using the information

Underlying Concepts

This represents another compromise between relevance and faithful representation. Disclosure attempts to balance these objectives.

for Zarle presented earlier in the chapter, the schedule in Illustration 20-26 provides an example of the reconciliation.

ILLUSTRATION 20-26

Pension Disclosure for Zarle Company—2015, 2016, 2017

ZARLE COMPANY PENSION DISCLOSURE			
	2015	2016	2017
Change in benefit obligation			
Benefit obligation at beginning of year	€100,000	€112,000	€ 214,460
Service cost	9,000	9,500	13,000
Interest expense	10,000	19,360	21,446
Amendments (Past service cost)	0	81,600	0
Benefits paid	(7,000)	(8,000)	(10,500)
Actuarial loss	0	0	26,594
Benefit obligation at end of year	(112,000)	(214,460)	(265,000)
Change in plan assets			
Fair value of plan assets at beginning of year	100,000	111,000	134,100
Interest revenue	10,000	11,100	13,410
Contributions	8,000	20,000	24,000
Benefits paid	(7,000)	(8,000)	(10,500)
Asset loss	0	0	(1,410)
Fair value of plan assets at end of year	111,000	134,100	159,600
Funded status (Pension asset/liability)	€ (1,000)	€ (80,360)	€(105,400)

The 2015 column reveals that Zarle underfunds the defined benefit obligation by €1,000. The 2016 column reveals that Zarle reports the underfunded liability of £80,360 in the statement of financial position. Finally, the 2017 column indicates that Zarle recognizes the underfunded liability of £105,400 in the statement of financial position.

Other Postretirement Benefits

LEARNING OBJECTIVE [9]

ner

In addition to pensions, companies often promise other types of postretirement benefits. The benefits include life insurance outside a pension plan; medical, dental, and eye care; legal and tax services; and so on. Because healthcare benefits are the largest of other postretirement benefits, we provide a general description of how they differ from a traditional pension plan. Illustration 20-27 shows these differences.

ILLUSTRATION 20-27

Differences between Pensions and Postretirement Healthcare Benefits

Item	Pensions	Healthcare Benefits
Funding	Generally funded.	Generally not funded.
Benefit	Well-defined and level dollar amount.	Generally uncapped and great variability.
Beneficiary	Retiree (maybe some benefit to surviving spouse).	Retiree, spouse, and other dependents.
Benefit payable	Monthly.	As needed and used.
Predictability	Variables are reasonably predictable.	Utilization difficult to predict. Level of cost varies geographically and fluctuates over time.

Two of the differences in Illustration 20-27 highlight why measuring the future payments for healthcare benefit plans is so much more difficult than for pension plans.

1. *Many postretirement plans do not set a limit on healthcare benefits.* No matter how serious the illness or how long it lasts, the benefits continue to flow. (Even if the

- employer uses an insurance company plan, the premiums will escalate according to the increased benefits provided.)
- **2.** The levels of healthcare benefit use and healthcare costs are difficult to predict. Increased longevity, unexpected illnesses (e.g., AIDS, SARS, and H1N1 flu), along with new medical technologies and cures, cause changes in healthcare utilization.

Additionally, although the fiduciary and reporting standards for employee benefit funds under government regulations generally cover healthcare benefits, the stringent minimum vesting, participation, and funding standards that apply to pensions do not apply to healthcare benefits. Nevertheless, the basic concepts of pension accounting apply to other postretirement benefits. As a result, the IASB indicates that the accounting and reporting of these other types of postretirement benefits should be the same as that used for pension plan reporting. However, companies with both pension and other postretirement benefit plans must separately disclose the plan details when the plans are subject to materially different risks. **[18]**

Concluding Observations

Hardly a day goes by without the financial press analyzing in depth some issue related to pension plans around the world. This is not surprising since pension funds now hold trillions of dollars, euros, pounds, and yen in assets. As you have seen, the accounting issues related to pension plans are complex. Recent changes to IFRS have clarified many of these issues and should help users understand the financial implications of a company's pension plans on its financial position, results of operations, and cash flows.

What do the numbers mean?

HOW'S YOUR VOLATILITY?

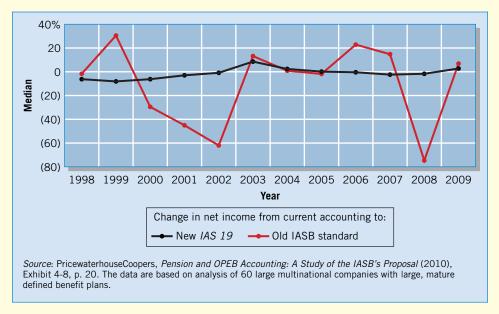

Companies were not required to adopt the changes arising from the amendments to *IAS 19* until 2013. In the period leading up to adoption, many were analyzing the impact on financial statements and the implications for users of

financial statements. The following table summarizes some of the key accounting impacts and their consequences—some good, some bad.

Accounting/Financial Reporting Impact	Consequences of the Changes
Potentially <i>higher pension expense</i> due to use of a single (usually lower) discount rate to determine return on assets (interest revenue) and recognition of all past service costs in net income.	Could lead to violation of loan covenants or increased bonus payments for performance plans based on net income.
Increased volatility in statement of financial position and shareholders' equity due to recognition of all remeasurements in other comprehensive income.	Could lead to violation of loan covenants based on shareholders' equity and affect regulatory oversight based on share capital.
Reduced net income volatility for companies that previously recognized all gains and losses in net income.	Companies may realize lower cost of capital because less volatility is associated with lower risk.

The reduced net income volatility could be a significant benefit when companies adopt the new rules. For example, the chart on page 1036 indicates that if the new rules would have been applied in the years 1998–2009 (black line), changes in net income would have been much less volatile, compared to

net income changes reported under the prior rules (red line). Change can be painful. However, in this case the change to the new rules will likely result in less pain associated with net income volatility.

Not surprisingly, the biggest differences in income under the new and old rules emerge in periods of market decline (e.g., 2000–2002 and 2007–2008). In more stable market periods, there is expected to be minimal difference in reported pension

expense. For example, in 2012 Roche Group (CHE) indicated that the effect on income would be CHF164 million or just 1 percent of operating profits. The company expects the ongoing impact for 2013 and beyond to be of a similar magnitude.

GLOBAL ACCOUNTING INSIGHTS

POSTRETIREMENT BENEFITS

The underlying concepts for the accounting for postretirement benefits are similar between U.S. GAAP and IFRS—both U.S. GAAP and IFRS view pensions and other post-

retirement benefits as forms of deferred compensation. At present, there are significant differences in the specific accounting provisions as applied to these plans.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to pensions.

Similarities

- U.S. GAAP and IFRS separate pension plans into defined contribution plans and defined benefit plans. The accounting for defined contribution plans is similar.
- U.S. GAAP and IFRS recognize a pension asset or liability
 as the funded status of the plan (i.e., defined benefit obligation minus the fair value of plan assets). (Note that defined
 benefit obligation is referred to as the projected benefit
 obligation in U.S. GAAP.)
- U.S. GAAP and IFRS compute unrecognized past service cost (PSC) (referred to as prior service cost in U.S. GAAP) in the same manner.

Differences

- U.S. GAAP includes an asset return component based on the expected return on plan assets. While both U.S. GAAP and IFRS include interest expense on the liability in pension expense, under IFRS for asset returns, pension expense is reduced by the amount of interest revenue (based on the discount rate times the beginning value of pension assets).
- U.S. GAAP amortizes PSC over the remaining service lives of employees, while IFRS recognizes past service cost as a component of pension expense in income immediately.
- U.S. GAAP recognizes liability and asset gains and losses in "Accumulated other comprehensive income" and amortizes these amounts to income over remaining service lives (generally using the "corridor approach"). Under IFRS, companies

recognize both liability and asset gains and losses (referred to as remeasurements) in other comprehensive income. These gains and losses are not "recycled" into income in subsequent periods.

 U.S. GAAP has separate standards for pensions and postretirement benefits, and significant differences exist in the accounting. The accounting for pensions and other postretirement benefit plans is the same under IFRS.

About the Numbers

As indicated, U.S. GAAP and IFRS differ in the amounts included in pension expense. Consider the following

pension expense elements for Altidore Company, as measured under U.S. GAAP and IFRS.

Current service cost Past service cost Interest expense Interest revenue	U.S. GAAP €28,000 — 21,000	IFRS €28,000 30,000 21,000 (18,000)
Amortization of past service cost (10-year service lives) Amortization of liability and asset gain/loss	3,000 500	_ _
Pension expense	€23,700	€61,000

Under U.S. GAAP, in determining pension expense, Altidore includes only current service cost, expected return on plan assets (which includes unexpected gains and losses). Gains and losses and past service costs are amortized to income over the service lives of employees. Under IFRS, Altidore in-

cludes all service costs and net interest elements in pension expense. Thus, depending on the features of the pension plan (e.g., in a year when past service costs are granted), pension expense can be significantly different between U.S. GAAP and IFRS.

On the Horizon

The IASB and the FASB have been working collaboratively on a postretirement benefit project. The recent amendments issued by the IASB moves IFRS closer to U.S. GAAP with respect to recognition of the funded status on the statement of financial position. However, as illustrated in the "About

the Numbers" section above, significant differences remain in the components of pension expense. If the FASB restarts a project to reexamine expense measurement of postretirement benefit plans, it likely will consider the recent IASB amendments in this area.

SUMMARY OF LEARNING OBJECTIVES

- Distinguish between accounting for the employer's pension plan and accounting for the pension fund. The company or employer is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The fund or plan is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the pension recipients (retired employees). The fund should be a separate legal and accounting entity; it maintains a set of books and prepares financial statements.
- Identify types of pension plans and their characteristics. The two most common types of pension arrangements are as follows. (1) *Defined contribution plans:* The employer agrees to contribute to a pension trust a certain sum each period based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. Only the employer's contribution is defined; no promise is made regarding the ultimate benefits paid out to the employees. (2) *Defined benefit plans:* These plans define the benefits that the employee will receive at the time of retirement. The formula typically provides for the benefits to be a function of the employee's years of service and the compensation level when he or she nears retirement.

KEY TERMS

accumulated benefit

obligation, 1016 actual return on plan assets, 1020 actuarial present value, 1016 (n) actuaries, 1015 asset gains and losses, 1026 benefits/years-of-service method, 1019 components of pension cost, 1018 contributory pension plan, 1012 curtailment, 1024 defined benefit obligation, 1016

defined benefit plan, 1013 defined contribution plan, 1013 discount rate, 1020 funded pension plan, 1012 funded status, 1017 interest on the liability (interest expense), 1020 liability gains and losses, 1027 net defined benefit obligation (asset), 1017 non-contributory pension plan, 1012 past service cost (PSC), 1024 pension asset/ liability, 1022 pension plan, 1012 pension worksheet, 1021 plan assets, 1020 projected unit credit method (benefits/ vears-of-service method), 1019 qualified pension plan, 1012 reconciliation, 1026 remeasurements, 1026 service cost, 1018 settlement, 1024 (n) vested benefit obligation, 1016

vested benefits, 1016

- **Explain measures for valuing the pension obligation.** One measure bases the pension obligation only on the benefits vested to the employees. Vested benefits are those that the employee is entitled to receive even if he or she renders no additional services under the plan. Companies compute the *vested benefits pension obligation* using current salary levels; this obligation includes only vested benefits. Another measure of the obligation, called the *accumulated benefit obligation*, computes the deferred compensation amount based on all years of service performed by employees under the plan—both vested and non-vested—using current salary levels. A third measure, called the *defined benefit obligation*, bases the computation of the deferred compensation amount on both vested and non-vested service using future salaries.
- Identify amounts reported in financial statements. In the statement of financial position, companies report the net defined benefit obligation/asset (funded status), which is the defined benefit obligation less the fair value of plan assets (if any). Changes in the net defined benefit obligation (asset) are reported in comprehensive income. Service cost (current and past) and net interest (computed by multiplying the discount rate by the funded status of the plan) are reported in the operating section of comprehensive income. Remeasurements are gains and losses related to the defined benefit obligation (changes in discount rate or other actuarial assumptions) and gains or losses on the fair value of the plan assets. Remeasurements are reported in other comprehensive income.
- Use a worksheet for employer's pension plan entries. Companies may use a worksheet unique to pension accounting. This worksheet records both the formal entries and the memo entries to keep track of all the employer's relevant pension plan items and components.
- **Explain the accounting for past service costs.** Past service cost is the change in the value of the defined benefit obligation resulting from a plan amendment or a curtailment. Past service costs are expensed in the period of the amendment or curtailment. As a result, a substantial increase (decrease) in pension expense and the defined benefit obligation often results when a plan amendment or curtailment occurs.
- Explain the accounting for remeasurements. Remeasurements arise from (1) gains and losses on plan assets and (2) gains and losses on the defined benefit obligation. The gains and losses on plan assets (asset gain or loss) is the difference between the actual return and the interest revenue computed in determining net interest. Asset gains occur when actual returns exceed the interest revenue. Asset losses occur when the actual returns are less than interest revenue. The gains or losses on the defined benefit obligation (liability gain/loss) are due to changes in actuarial assumptions that affect the amount of the defined benefit obligation. All remeasurements are reported in other comprehensive income. These amounts are not recycled into income in subsequent periods.
- **Describe the requirements for reporting pension plans in financial statements.** A company reports the pension asset/liability as an asset or a liability in the statement of financial position at the end of a reporting period. The classification as non-current or current follows the general guidelines used for classification of other assets or liabilities. On the income statement (or related notes), the company must report the amount of pension expense for the period. In addition, any actuarial gains or losses charged or credited to other comprehensive income should be reported in the statement of comprehensive income.

In the notes, a company is required to disclose information that (a) explains characteristics of its defined benefit plans and risks associated with them, (b) identifies and explains the amounts in its financial statements arising from its defined benefit plans, and (c) describes how its defined benefit plans may affect the amount, timing, and uncertainty of the company's future cash flows. Important note disclosures are summarized in Illustration 20-25 (page 1033). The reconciliation of the changes in the pension assets and liabilities is a key element of the pension disclosure package.

Explain the accounting for other postretirement benefits. Companies often provide other types of non-pension postretirement benefits, such as life insurance outside a pension plan, medical care, and legal and tax services. The accounting for these other types of postretirement benefits is the same as that used for pension plan reporting. Companies with both pension and other postretirement benefit plans must separately disclose the plan details when the plans are subject to materially different risks.

QUESTIONS

- **1.** What is a pension plan? How does a contributory pension plan differ from a non-contributory plan?
- Differentiate between a defined contribution pension plan and a defined benefit pension plan. Explain how the employer's obligation differs between the two types of plans.
- **3.** Differentiate between "accounting for the employer" and "accounting for the pension fund."
- **4.** The meaning of the term "fund" depends on the context in which it is used. Explain its meaning when used as a noun. Explain its meaning when used as a verb.

- 5. What is the role of an actuary relative to pension plans? What are actuarial assumptions?
- 6. What factors must be considered by the actuary in measuring the amount of pension benefits under a defined benefit plan?
- 7. Name three approaches to measuring benefits from a pension plan and explain how they differ.
- 8. Explain how cash-basis accounting for pension plans differs from accrual-basis accounting for pension plans. Why is cash-basis accounting generally considered unacceptable for pension plan accounting?
- 9. What is the net benefit obligation (asset)? How is the net benefit obligation (asset) reported in the financial statements?
- 10. What elements comprise changes in the net benefit obligation (asset)? How are these changes reported in the financial statements?
- 11. Identify the components of pension expense. Briefly explain the nature of each component.
- 12. What is service cost, and what is the basis of its measurement?
- 13. What is net interest? Identify the elements of net interest and explain how they are computed.
- 14. Given the following items and amounts, compute the actual return on plan assets: fair value of plan assets at the beginning of the period \$9,200,000; benefits paid during the period \$1,400,000; contributions made during the period \$1,000,000; and fair value of the plan assets at the end of the period \$10,150,000.
- 15. Explain the difference between service cost and past service cost.
- 16. What is meant by "past service cost"? When is past service cost recognized as pension expense?
- 17. What is a pension plan curtailment? Explain the accounting for pension plan curtailments.
- 18. Sarah is a finance major who has only taken one accounting course. She asserts that pension remeasurements, like many other accounting adjustments, are recorded in net income. Is Sarah correct? Explain.
- 19. How does an "asset gain or loss" develop in pension accounting?

- 20. What are "liability gains and losses," and how are they accounted for?
- 21. If pension expense recognized in a period exceeds the current amount funded by the employer, what kind of account arises, and how should it be reported in the financial statements? If the reverse occurs—that is, current funding by the employer exceeds the amount recognized as pension expense-what kind of account arises, and how should it be reported?
- 22. Bill Haley is learning about pension accounting. He is convinced that in years when companies record liability gains and losses, total comprehensive income will not be affected. Is Bill correct? Explain.
- 23. At the end of the current period, Jacob Inc. has a defined benefit obligation of €125,000 and pension plan assets with a fair value of €98,000. The amount of the vested benefits for the plan is €95,000. What amount and account(s) related to its pension plan will be reported on the company's statement of financial position?
- 24. At the end of the current year, Joshua Co. has a defined benefit obligation of £335,000 and pension plan assets with a fair value of £345,000. The amount of the vested benefits for the plan is £225,000. Joshua has a liability gain of £8,300. What amount and account(s) related to its pension plan will be reported on the company's statement of financial position?
- 25. Explain the meaning of the following terms.
 - (a) Contributory plan.
 - (b) Vested benefits.
 - (c) Retroactive benefits.
- 26. Of what value to the financial statement reader is the schedule reconciling the funded status of the plan with amounts reported in the employer's statement of financial position?
- 27. What are postretirement benefits other than pensions?
- 28. What are the major differences between postretirement healthcare benefits and pension benefits?
- 29. Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for pensions and other postretirement benefits.

30. Briefly discuss the convergence efforts that are underway with respect to the accounting for pensions and other postretirement benefits.

BRIEF EXERCISES

4 BE20-1 Assume that Cathay Pacific Airlines (CHN) reported the following in a recent annual report (in millions).

> HK\$316 Service cost Interest on DBO 342 Interest revenue on plan assets 371

Compute Cathay Pacific's pension expense.

- **BE20-2** For Becker Corporation, year-end plan assets were €2,000,000. At the beginning of the year, plan assets were €1,680,000. During the year, contributions to the pension fund were €120,000, and benefits paid were €200,000. Compute Becker's actual return on plan assets.
- **BE20-3** At January 1, 2015, Uddin Company had plan assets of \$250,000 and a defined benefit obligation of the same amount. During 2015, service cost was \$27,500, the discount rate was 10%, actual return on plan assets was \$25,000, contributions were \$20,000, and benefits paid were \$17,500. Prepare a pension worksheet for Uddin Company for 2015.
- **BE20-4** For 2015, assume that **Wm Morrison Supermarkets plc** (GBR) had pension expense of £61 million and contributed £52 million to the pension fund. Prepare Morrison's journal entry to record pension income and funding.
- **BE20-5** Duesbury Corporation amended its pension plan on January 1, 2015, and granted \$120,000 of past service costs to its employees. The employees have an average time to vesting of 4 years. Current service cost for 2015 is \$23,000, and net interest expense is \$8,000. Compute pension expense for Duesbury in 2015.
- BE20-6 Villa Company has experienced tough competition, leading it to seek concessions from its employees in the company's pension plan. In exchange for promises to avoid layoffs and wage cuts, the employees agreed to receive lower pension benefits in the future. As a result, Villa amended its pension plan on January 1, 2015, and recorded negative past service cost of €125,000. The average period to vesting for the benefits affected by this plan is 5 years. Current service cost for 2015 is €26,000. Interest expense is €9,000, and interest revenue is €2,500. Actual return on assets in 2015 is €1,500. Compute pension expense for Villa in 2015.
- **BE20-7** Refer to the information for Villa Company in BE20-6. Compute the gain or loss on pension plan assets for Villa Company and indicate the accounting and reporting for the asset gains or losses.
- **BE20-8** Hemera Corporation had a defined benefit obligation of R\$3,100,000 and plan assets of R\$2,900,000 at January 1, 2015. Hemera's discount rate is 6%. In 2015, actual return on plan assets is R\$160,000. Hemera contributed R\$200,000 to the pension fund and paid benefits of R\$150,000. Service cost for 2015 is R\$50,000; Hemera reports that the defined benefit obligation at December 31, 2015, is R\$3,600,000. Determine (a) pension expense for 2015; (b) pension assets at December 31, 2015; and (c) pension asset and liability gains and losses. Indicate how pension gains and losses will be reported by Hemera in the statement of comprehensive income and the statement of financial position.
 - **BE20-9** Tevez Company experienced an actuarial loss of €750 in its defined benefit plan in 2015. For 2015, Tevez's revenues are €125,000, and expenses (excluding pension expense of €14,000) are €85,000. Prepare Tevez's statement of comprehensive income for 2015.
 - **BE20-10** At December 31, 2015, Conway Corporation had a defined benefit obligation of €510,000 and plan assets of €322,000. Prepare a pension reconciliation schedule for Conway.
 - **9 BE20-11** Caleb Corporation has the following information available concerning its postretirement medical benefit plan for 2015.

Service cost	\$40,000
Interest expense	52,400
Interest revenue	26 900

Compute Caleb's 2015 postretirement expense.

9 BE20-12 For 2015, Benjamin Inc. computed its annual postretirement expense as £240,900. Benjamin's contribution to the plan during 2015 was £160,000. Prepare Benjamin's 2015 entry to record postretirement expense.

EXERCISES

E20-1 (**Pension Expense**, **Journal Entry**) The following information is available for the pension plan of Radcliffe Company for the year 2015.

Interest revenue on plan assets	\$ 15,000
Benefits paid to retirees	40,000
Contributions (funding)	90,000
Discount (interest) rate	10%
Defined benefit obligation, January 1, 2015	500,000
Service cost	60,000

Instructions

- (a) Compute pension expense for the year 2015.
- **(b)** Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2015.
- **E20-2 (Computation of Pension Expense)** Veldre Company provides the following information about its defined benefit pension plan for the year 2015.

Service cost	€ 90,000
Contribution to the plan	105,000
Benefits paid	40,000
Plan assets at January 1, 2015	640,000
Defined benefit obligation at January 1, 2015	700,000
Discount (interest) rate	10%

Instructions

Compute the pension expense for the year 2015.

- **E20-3** (**Preparation of Pension Worksheet**) Using the information in E20-2, prepare a pension worksheet inserting January 1, 2015, balances, showing December 31, 2015, balances, and the journal entry recording pension expense.
- **E20-4** (Basic Pension Worksheet) The following facts apply to the pension plan of Boudreau Inc. for the year 2015.

Plan assets, January 1, 2015	£490,000
Defined benefit obligation, January 1, 2015	490,000
Discount (interest) rate	8%
Service cost	40,000
Contributions (funding)	25,000
Actual return on plan assets	39,200
Benefits paid to retirees	33,400

Instructions

Using the preceding data, compute pension expense for the year 2015. As part of your solution, prepare a pension worksheet that shows the journal entry for pension expense for 2015 and the year-end balances in the related pension accounts.

E20-5 (Computation of Actual Return) Gingrich Importers provides the following pension plan information.

Fair value of pension plan assets, January 1, 2015	₺2,400,000
Fair value of pension plan assets, December 31, 2015	2,725,000
Contributions to the plan in 2015	280,000
Benefits paid retirees in 2015	350,000
Discount (interest) rate	7%

Instructions

- (a) From the data above, compute the actual return on the plan assets for 2015.
- **(b)** Compute asset gain or loss, and indicate how the gain or loss will be reported.
- **E20-6** (Basic Pension Worksheet) The following defined pension data of Yang Corp. apply to the year 2015 (amounts in thousands).

Defined benefit obligation, 1/1/15 (before amendment)	¥560,000
Plan assets, 1/1/15	546,200
Pension liability	13,800
On January 1, 2015, Yang Corp., through plan amendment,	
grants past service benefits having a present value of	120,000
Discount (interest) rate	9%
Service cost	58,000
Contributions (funding)	65,000
Actual return on plan assets	49,158
Benefits paid to retirees	40,000

Instructions

For 2015, prepare a pension worksheet for Yang Corp. that shows the journal entry for pension expense and the year-end balances in the related pension accounts.

5 8 E20-7 (Pension Worksheet, Gains and Losses) Kennedy Company had a defined benefit obligation of \$6,300,000 and plan assets of \$4,900,000 at January 1, 2015. Kennedy has the following data related to the plan during 2015.

Discount (interest) rate	7%
Service cost	\$120,000
Actual return on plan assets	295,000
Contributions	400,000
Benefits paid	300,000

Defined benefit obligation at December 31, 2015, is \$6,650,000. There are no accumulated gains or losses at December 31, 2015.

Instructions

- (a) Prepare a pension worksheet for Kennedy Company for 2015.
- **(b)** Prepare the journal entry to record 2015 pension expense.
- **(c)** Indicate how pension gains and losses (if any) will be reported by Kennedy in the statement of comprehensive income and the statement of financial position.
- **E20-8** (Disclosures: Pension Expense and Other Comprehensive Income) Taveras Enterprises provides the following information related to its defined benefit pension plan.

Balances or Values at December 31, 2015

Defined benefit obligation	€2,737,000
Fair value of plan assets	2,278,329
Accumulated OCI-Net loss (1/1/15 balance, -0-)	34,220
Other pension plan data:	
Service cost for 2015	94,000
Actual return on plan assets in 2015	130,000
Interest on January 1, 2015, defined benefit obligation	164,220
Contributions to plan in 2015	93,329
Benefits paid	140,000
Discount (interest) rate	6%

Instructions

- (a) Prepare the note disclosing the components of pension expense for the year 2015.
- **(b)** Determine the amounts of other comprehensive income and comprehensive income for 2015. Net income for 2015 is €35,000.
- (c) Compute the amount of accumulated other comprehensive income reported at December 31, 2015.
- **5 E20-9** (**Pension Worksheet**) Webb Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2015, the following balances relate to this plan.

Plan assets	\$480,000
Defined benefit obligation	600,000
Pension asset/liability	120,000
Accumulated OCI	-0-

As a result of the operation of the plan during 2015, the following additional data are provided by the actuary.

Service cost for 2015	\$90,000
Discount (interest) rate	6%
Actual return on plan assets in 2015	55,000
Unexpected loss from change in defined benefit obligation,	
due to change in actuarial predictions	76,000
Contributions in 2015	99,000
Benefits paid retirees in 2015	85,000

- (a) Using the data above, compute pension expense for Webb Corp. for the year 2015 by preparing a pension worksheet.
- **(b)** Prepare the journal entry for pension expense for 2015.
- **8 E20-10** (**Pension Expense, Journal Entries, Statement Presentation**) Henning Company sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the year 2015.
 - **1.** The actuarial present value of future benefits earned by employees for services rendered in 2015 amounted to £56,000.

- 2. The company's funding policy requires a contribution to the pension trustee amounting to £145,000 for 2015.
- **3.** As of January 1, 2015, the company had a defined benefit obligation of £900,000, an accumulated benefit obligation of £800,000, and a balance of £40,000 in accumulated OCI (Loss). The fair value of pension plan assets amounted to £600,000 at the beginning of the year. The discount rate was 9%. Actual return on plan assets was £60,000, and no benefits were paid.

Instructions

- (a) Determine the amounts of the components of pension expense that should be recognized by the company in 2015.
- **(b)** Prepare the journal entry or entries to record pension expense and the employer's contribution to the pension trustee in 2015.
- (c) Indicate the amounts that would be reported on the income statement and the statement of financial position for the year 2015.
- E20-11 (Pension Expense, Journal Entries, Statement Presentation) Ferreri Company received the following selected information from its pension plan trustee concerning the operation of the company's defined benefit pension plan for the year ended December 31, 2015.

	January 1,	December 31,
	2015	2015
Defined benefit obligation	€1,500,000	€1,527,000
Fair value of plan assets	800,000	1,130,000
Accumulated benefit obligation	1,600,000	1,720,000
Accumulated OCI (G/L)—Net gain	-0-	200,000

The service cost component of pension expense for employee services rendered in the current year amounted to €77,000. The company's actual funding (contributions) of the plan in 2015 amounted to €250,000. The discount (interest) rate was 10%. Assume no benefits paid in 2015.

Instructions

- (a) Determine the amounts of the components of pension expense that should be recognized by the company in 2015.
- **(b)** Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2015.
- **(c)** Indicate the pension-related amounts that would be reported on the income statement and the statement of financial position for Ferreri Company for the year 2015.
- E20-12 (Computation of Actual Return, Gains and Losses, and Pension Expense) Erickson Company sponsors a defined benefit pension plan. The corporation's actuary provides the following information about the plan.

	January 1, 2015	December 31, 2015
Vested benefit obligation	£1,500	£1,900
Accumulated benefit obligation	1,900	2,730
Defined benefit obligation	2,500	3,300
Plan assets (fair value)	1,700	2,620
Discount (interest) rate		10%
Pension asset/liability	800	?
Service cost for the year 2015		400
Contributions (funding in 2015)		700
Benefits paid in 2015		200

- (a) Compute the actual return on the plan assets in 2015.
- **(b)** Compute the amount of net gain or loss for 2015.
- (c) Compute the amount of the other comprehensive income (G/L) as of December 31, 2015. (Assume the January 1, 2015, balance was zero.)
- **E20-13** (Worksheet for E20-12) Using the information in E20-12 about Erickson Company's defined benefit pension plan, prepare a 2015 pension worksheet with supplementary schedules of computations. Prepare the journal entries at December 31, 2015, to record pension expense and related pension transactions. Also, indicate the pension amounts reported in the statement of financial position.

E20-14 (Pension Expense, Journal Entries) Latoya Company provides the following selected information related to its defined benefit pension plan for 2015.

Pension asset/liability (January 1)	\$ 25,000 Cr.
Accumulated benefit obligation (December 31)	400,000
Actual return on plan assets	67,500
Contributions (funding) in 2015	50,000
Discount (interest) rate	10%
Defined benefit obligation (January 1)	700,000
Service cost	80,000

Instructions

- (a) Compute pension expense and prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2015. Preparation of a pension worksheet is not required. Benefits paid in 2015 were \$35,000.
- **(b)** Indicate the pension-related amounts that would be reported in the company's statement of comprehensive income and statement of financial position for 2015.
- **E20-15** (Pension Worksheet—Missing Amounts) The accounting staff of Usher Inc. has prepared the following pension worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked for your assistance in completing the worksheet and the accounting tasks related to the pension plan for 2015.

- **(a)** Determine the missing amounts in the 2015 pension worksheet, indicating whether the amounts are debits or credits.
- **(b)** Prepare the journal entry to record 2015 pension expense for Usher Inc.
- **9 E20-16** (**Postretirement Benefit Expense Computation**) Kreter Co. provides the following information about its postretirement benefit plan for the year 2015.

Service cost	₽ 45,000
Contribution to the plan	10,000
Actual return on plan assets (at 8%)	8,800
Benefits paid	20,000
Plan assets at January 1, 2015	110,000
Defined postretirement benefit obligation	
at January 1, 2015	330,000
Discount (interest) rate	8%

Instructions

Compute the postretirement benefit expense for 2015.

- **E20-17 (Postretirement Benefit Worksheet)** Using the information in E20-16, prepare a worksheet inserting January 1, 2015, balances, and showing December 31, 2015, balances. Prepare the journal entry recording postretirement benefit expense.
- **E20-18 (Postretirement Benefit Expense Computation)** Garner Inc. provides the following information related to its postretirement benefits for the year 2015.

Defined postretirement benefit obligation at January 1, 2015	\$710,000
Actual return on plan assets (at 10%)	34,000
Discount (interest) rate	10%
Service cost	83,000

Instructions

Compute postretirement benefit expense for 2015.

E20-19 (Postretirement Benefit Expense Computation) Englehart Co. provides the following information about its postretirement benefit plan for the year 2015.

Service cost	€ 90,000
Contribution to the plan	56,000
Actual return on plan assets	62,000
Benefits paid	40,000
Plan assets at January 1, 2015	710,000
Defined postretirement benefit obligation at January 1, 2015	760,000
Accumulated OCI (Loss) at January 1, 2015	100 Dr.
Discount (interest) rate	9%

Instructions

Compute the postretirement benefit expense for 2015.

- **E20-20 (Postretirement Benefit Worksheet)** Using the information in E20-19, prepare a worksheet inserting January 1, 2015, balances, showing December 31, 2015, balances, and the journal entry recording postretirement benefit expense.
- **E20-21 (Postretirement Benefit Worksheet—Missing Amounts)** The accounting staff of Holder Inc. has prepared the following postretirement benefit worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2015.

Instructions

- (a) Determine the missing amounts in the 2015 postretirement worksheet, indicating whether the amounts are debits or credits.
- **(b)** Prepare the journal entry to record 2015 postretirement expense for Holder Inc.
- (c) What discount rate is Holder using in accounting for the interest on its other postretirement benefit plan? Explain.

PROBLEMS

P20-1 (2-Year Worksheet) On January 1, 2015, Harrington Company has the following defined benefit pension plan balances.

> Defined benefit obligation €4,500,000 Fair value of plan assets 4,200,000

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2016, the company amends its pension agreement so that past service costs of €500,000 are created. Other data related to the pension plan are as follows.

	2015	2016
Service cost	€150,000	€180,000
Contributions (funding) to the plan	240,000	285,000
Benefits paid	200,000	280,000
Actual return on plan assets	420.000	260.000

Instructions

- (a) Prepare a pension worksheet for the pension plan for 2015 and 2016.
- **(b)** For 2016, prepare the journal entry to record pension-related amounts.

6 P20-2 (3-Year Worksheet, Journal Entries, and Reporting) Jackson Company adopts acceptable accounting for its defined benefit pension plan on January 1, 2014, with the following beginning balances: plan assets \$200,000 and defined benefit obligation \$250,000. Other data relating to 3 years' operation of the plan are shown below.

	2014	2015	2016
Annual service cost	\$16,000	\$19,000	\$26,000
Discount (interest) rate	10%	10%	10%
Actual return on plan assets	20,000	22,000	24,000
Annual funding (contributions)	16,000	40,000	48,000
Benefits paid	14,000	16,400	21,000
Past service cost (plan amended, 1/1/15)		160,000	
Change in actuarial assumptions establishes			
a December 31, 2016, defined benefit obligation of:			520,000

Instructions

- (a) Prepare a pension worksheet presenting all 3 years' pension balances and activities.
- (b) Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.
- (c) Indicate the pension-related amounts reported in the financial statements for 2016.

7 P20-3 (Pension Expense, Journal Entries) Gottschalk Company sponsors a defined benefit plan for its 100 employees. On January 1, 2015, the company's actuary provided the following information.

Pension plan assets (fair value and market-related asset value)	£200,000
Accumulated benefit obligation	260,000
Defined benefit obligation	380,000

The average remaining service period for the participating employees is 10 years. All employees are expected to receive benefits under the plan. On December 31, 2015, the actuary calculated that the present value of future benefits earned for employee services rendered in the current year amounted to £52,000; the defined benefit obligation was £490,000, fair value of pension assets was £276,000, and the accumulated

benefit obligation amounted to £365,000. The discount (interest) rate is 10%. The actual return on plan assets is £11,000. The company's current year's contribution to the pension plan amounted to £65,000. No benefits were paid during the year.

Instructions

- (a) Determine the components of pension expense that the company would recognize in 2015. (With only one year involved, you need not prepare a worksheet.)
- **(b)** Prepare the journal entry to record the pension expense and the company's funding of the pension plan in 2015.
- (c) Compute the amount of the 2015 increase/decrease in gains or losses.
- (d) Indicate the pension amounts reported in the financial statement as of December 31, 2015.
- **P20-4** (Pension Expense, Journal Entries for 2 Years) Gordon Company sponsors a defined benefit pension plan. The following information related to the pension plan is available for 2015 and 2016.

	2015	2016
Plan assets (fair value), December 31	\$699,000	\$849,000
Defined benefit obligation, January 1	700,000	800,000
Pension asset/liability, January 1	140,000 Cr.	?
Service cost	60,000	90,000
Actual return on plan assets	24,000	30,000
Contributions (funding)	115,000	120,000
Accumulated benefit obligation, December 31	500,000	550,000
Discount (interest) rate	9%	9%

Instructions

- (a) Compute pension expense for 2015 and 2016.
- **(b)** Prepare the journal entries to record the pension expense and the company's funding of the pension plan for both years.
- **P20-5 (Computation of Pension Expense, Journal Entries for 3 Years)** Hiatt Toothpaste Company initiates a defined benefit pension plan for its 50 employees on January 1, 2015. The insurance company which administers the pension plan provided the following selected information for the years 2015, 2016, and 2017.

	For Year Ended December 31,		
	2015	2016	2017
Plan assets (fair value)	€50,000	€ 85,000	€180,000
Vested benefit obligation	45,000	165,000	292,000
Defined benefit obligation	60,000	200,000	324,000
Net (gain) loss	-0-	78,900	5,800
Employer's funding contribution (made at end of year)	50,000	60,000	105,000

There were no balances as of January 1, 2015, when the plan was initiated. The actual return on plan assets was 10% over the 3-year period, but the discount (interest) rate was 13% in 2015, 11% in 2016, and 8% in 2017. The service cost component of net periodic pension expense amounted to the following: 2015, €60,000; 2016, €85,000; and 2017, €119,000. No benefits were paid in 2015, €30,000 of benefits were paid in 2016, and €18,500 of benefits were paid in 2017 (all benefits paid at end of year).

Instructions

(Round to the nearest euro.)

- (a) Calculate the amount of net periodic pension expense that the company would recognize in 2015, 2016, and 2017.
- **(b)** Prepare the journal entries to record net periodic pension expense, employer's funding contribution, and related pension amounts for the years 2015, 2016, and 2017.
- **P20-6** (Pension Expense, Journal Entries, and Net Gain or Loss) Aykroyd Inc. has sponsored a non-contributory, defined benefit pension plan for its employees since 1989. Prior to 2015, cumulative net pension expense recognized equaled cumulative contributions to the plan. Other relevant information about the pension plan on January 1, 2015, is as follows.
 - 1. The company has 200 employees. All these employees are expected to receive benefits under the plan.
 - **2.** The defined benefit obligation amounted to \$5,000,000 and the fair value of pension plan assets was \$3,000,000. The market-related asset value was also \$3,000,000.

On December 31, 2015, the defined benefit obligation and the vested benefit obligation were \$4,850,000 and \$4,025,000, respectively. The fair value of the pension plan assets amounted to \$4,100,000 at the end of the year. A 10% discount rate was used in the actuarial present value computations in the pension plan. The present value of benefits attributed by the pension benefit formula to employee service in 2015 amounted to \$200,000. The employer's contribution to the plan assets amounted to \$775,000 in 2015. This problem assumes no payment of pension benefits.

Instructions

(Round all amounts to the nearest dollar.)

- (a) Compute pension expense for the year 2015.
- (b) Prepare the journal entries required to report the accounting for the company's pension plan for
- (c) Compute the amount of the 2015 increase/decrease in net gains or losses in 2015.
- 7 P20-7 (Pension Worksheet) Hanson Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2015, the following balances related to this plan.

Plan assets (fair value)	£520,000
Defined benefit obligation	700,000
Pension asset/liability	180,000 Cr.
Accumulated net gain (loss)	91.000

As a result of the operation of the plan during 2015, the actuary provided the following additional data on December 31, 2015.

Service cost for 2015	£108,000
Discount (interest) rate	9%
Actual return on plan assets in 2015	48,000
Contributions in 2015	133,000
Benefits paid retirees in 2015	85,000

Instructions

Using the preceding data, compute pension expense for Hanson Corp. for the year 2015 by preparing a pension worksheet that shows the journal entry for pension expense.

P20-8 (Comprehensive 2-Year Worksheet) Lemke Company sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the years 2015 and 2016.

	2015	2016
Defined benefit obligation, January 1	R600,000	
Plan assets (fair value), January 1	410,000	
Pension asset/liability, January 1	190,000 Cr.	
Service cost	40,000	R 59,000
Discount (interest) rate	10%	10%
Actual return on plan assets	36,000	61,000
Annual contributions	97,000	81,000
Benefits paid retirees	31,500	54,000
Increase in defined benefit obligation due to		
changes in actuarial assumptions	87,000	-0-
Accumulated benefit obligation at December 31	721,800	789,000
Vested benefit obligation at December 31		464,000

Instructions

- (a) Prepare a pension worksheet presenting both years 2015 and 2016.
- (b) Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.
- (c) For 2016, indicate the pension amounts reported in the financial statements.

5 6 P20-9 (Comprehensive 2-Year Worksheet) Hobbs Co. has the following defined benefit pension plan balances on January 1, 2015.

Defined benefit obligation €4,600,000 4,600,000 Fair value of plan assets

The discount (interest) rate applicable to the plan is 10%. On January 1, 2016, the company amends its pension agreement so that past service costs of €600,000 are created. Other data related to the pension plan are as follows.

	2015	2016
Service cost	€150,000	€170,000
Contributions (funding) to the plan	200,000	184,658
Benefits paid	220,000	280,000
Actual return on plan assets	252,000	350,000

Instructions

- (a) Prepare a pension worksheet for the pension plan in 2015.
- (b) Prepare any journal entries related to the pension plan that would be needed at December 31, 2015.
- (c) Prepare a pension worksheet for 2016 and any journal entries related to the pension plan as of December 31, 2016.
- (d) Indicate the pension-related amounts reported in the 2016 financial statements.
- **P20-10 (Pension Worksheet—Missing Amounts)** Kramer Co. has prepared the following pension worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2015.

Instructions

- (a) Determine the missing amounts in the 2015 pension worksheet, indicating whether the amounts are debits or credits.
- **(b)** Prepare the journal entry to record 2015 pension expense for Kramer Co.
- (c) Determine for Kramer for 2015 the discount rate used to determine interest expense/revenue.
- P20-11 (Pension Worksheet) The following data relate to the operation of Kramer Co.'s pension plan in 2016. The pension worksheet for 2015 is provided in P20-10.

Service cost	\$59,000
Actual return on plan assets	32,000
Annual contributions	51,000
Benefits paid retirees	27 000

For 2016, Kramer will use a discount rate of 8%.

- (a) Prepare a pension worksheet for 2016.
- **(b)** Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31.
- (c) Indicate the pension amounts reported in the financial statements.

7 P20-12 (Pension Worksheet) Chen Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2015, the following balances related to this plan (amounts in thousands).

Plan assets (market-related value)	¥270,000
Defined benefit obligation	340,000
Pension asset/liability	70,000 Cr.
OCI-Loss	39,000

As a result of the operation of the plan during 2015, the actuary provided the following additional data at December 31, 2015.

Service cost for 2015	¥45,000
Actual return on plan assets in 2015	27,000
Contributions in 2015	65,000
Benefits paid retirees in 2015	41,000
Discount (interest) rate	7%

Instructions

- (a) Compute pension expense for Chen Corp. for the year 2015 by preparing a pension worksheet that shows the journal entry for pension expense.
- **(b)** Indicate the pension amounts reported in the financial statements.

9) P20-13 (Postretirement Benefit Worksheet) Hollenbeck Foods Inc. sponsors a postretirement medical and dental benefit plan for its employees. The following balances relate to this plan on January 1, 2015.

Plan assets	\$200,000
Defined postretirement benefit obligation	200,000

As a result of the plan's operation during 2015, the following additional data are provided by the actuary.

> Service cost for 2015 is \$70,000 Discount (interest) rate is 10% Contributions to plan in 2015 are \$65,000 Actual return on plan assets is \$15,000 Benefits paid to employees are \$44,000

Instructions

- (a) Using the preceding data, compute the net periodic postretirement benefit cost for 2015 by preparing a worksheet that shows the journal entry for postretirement expense and the year-end balances in the related postretirement benefit memo accounts. (Assume that contributions and benefits are paid at the end of the year.)
- (b) Prepare any journal entries related to the postretirement plan for 2015 and indicate the postretirement amounts reported in the financial statements for 2015.
- 9 P20-14 (Postretirement Benefit Worksheet—2 Years) Elton Co. has the following postretirement benefit plan balances on January 1, 2015.

Defined postretirement benefit obligation	€2,250,000
Fair value of plan assets	2,250,000

The discount (interest) rate applicable to the plan is 10%. On January 1, 2016, the company amends the plan so that past service costs of €175,000 are created. Other data related to the plan are as follows.

	2015	2016
Service costs	€ 75,000	€ 85,000
Contributions (funding) to the plan	45,000	35,000
Benefits paid	40,000	45,000
Actual return on plan assets	140.000	120.000

- (a) Prepare a worksheet for the postretirement plan in 2015.
- (b) Prepare any journal entries related to the postretirement plan that would be needed at December 31, 2015.
- (c) Prepare a worksheet for 2016 and any journal entries related to the postretirement plan as of December 31, 2016.
- (d) Indicate the postretirement-benefit–related amounts reported in the 2016 financial statements.

CONCEPTS FOR ANALYSIS

CA20-1 (Pension Terminology and Theory) Since the late 1800s, many business organizations have been concerned with providing for the retirement of their employees. During recent decades, a marked increase in this concern has resulted in the establishment of pension plans in most large companies and in many medium- and small-sized ones.

The substantial growth of these plans, both in numbers of employees covered and in amounts of retirement benefits, has increased the significance of pension cost in relation to the financial position, results of operations, and cash flows of many companies. In examining the costs of pension plans, a public accountant encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if IFRS is to be reflected in the financial statements of entities with pension plans.

Instructions

- (a) Define a pension plan. How does a contributory pension plan differ from a non-contributory plan?
- **(b)** Differentiate between "accounting for the employer" and "accounting for the pension fund."
- (c) Explain the terms "funded" and "pension liability" as they relate to:
 - (1) The pension fund.
 - (2) The employer.
- (d) (1) Discuss the theoretical justification for accrual recognition of pension costs.
 - (2) Discuss the relative objectivity of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.
- (e) Distinguish among the following as they relate to pension plans.
 - (1) Service cost.
 - (2) Past service costs.
 - (3) Vested benefits.

CA20-2 (Pension Terminology) The following items appear on Hollingsworth Company's financial statements.

- **1.** Under the caption Assets:
 - Pension asset/liability.
- **2.** Under the caption Liabilities:
 - Pension asset/liability.
- **3.** Under the caption Equity:
 - Asset loss as a component of Accumulated Other Comprehensive Income.
- **4.** On the income statement: Pension expense.

Instructions

Explain the significance of each of the items above on corporate financial statements. (*Note:* All items set forth above are not necessarily to be found on the statements of a single company.)

CA20-3 (Basic Terminology) In examining the costs of pension plans, Leah Hutcherson, public accountant, encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if IFRS is to be reflected in the financial statements of entities with pension plans.

- (a) (1) Explain the application of accrual concepts to recognition of pension costs.
 - (2) Discuss the relative verifiability and neutrality of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.
- **(b)** Explain the following terms as they apply to accounting for pension plans.
 - (1) Fair value of pension assets.
 - (2) Defined benefit obligation.
 - (3) Net interest.
- (c) What information should be disclosed about a company's pension plans in its financial statements and its notes?

CA20-4 (Major Pension Concepts) Lyons Corporation is a medium-sized manufacturer of paperboard containers and boxes. The corporation sponsors a non-contributory, defined benefit pension plan that covers its 250 employees. Tim Shea has recently been hired as president of Lyons Corporation. While reviewing last year's financial statements with Anita Kroll, controller, Shea expressed confusion about several of the items in the footnote to the financial statements relating to the pension plan. In part, the footnote reads as follows.

Note J. The company has a defined benefit pension plan covering substantially all of its employees. The benefits are based on years of service and the employee's compensation during the last four years of employment. The company's funding policy is to contribute annually the maximum amount allowed under the tax law. Contributions are intended to provide for benefits expected to be earned in the future as well as those earned to date.

The net periodic pension expense on Lyons Corporation's comparative income statement was £72,000 in 2016 and £57,680 in 2015.

The following are selected figures from the plan's funded status and amounts recognized in the Lyons Corporation's statement of financial position at December 31, 2016 (amounts in thousands).

Defined benefit obligation	£(1,200)
Plan assets at fair value	1,050
Defined benefit obligation in excess of plan assets	£ (150)

Given that Lyons Corporation's workforce has been stable for the last 6 years, Shea could not understand the increase in the net periodic pension expense. Kroll explained that the net periodic pension expense consists of several elements, some of which may increase or decrease the net expense.

Instructions

- (a) The determination of the net periodic pension expense is a function of two elements. List and briefly describe each of the elements.
- **(b)** Describe the major difference and the major similarity between the vested benefit obligation and the defined benefit obligation.
- (c) (1) Explain why pension gains and losses are not recognized in net income in the period in which they arise.
 - (2) Briefly describe how pension gains and losses are recognized.

CA20-5 (Implications of *International Accounting Standard No. 19*) Ruth Moore and Carl Nies have to do a class presentation on the pension pronouncement "Employee Benefits." In developing the class presentation, they decided to provide the class with a series of questions related to pensions and then discuss the answers in class. Given that the class has all read *IAS 19*, they felt this approach would provide a lively discussion. Here are the situations:

- 1. In an article prior to the recent amendments to *IAS 19*, it was reported that the discount rates used by the largest 200 companies for pension reporting ranged from 5% to 11%. How can such a situation exist, and does the pension pronouncement alleviate this problem?
- **2.** An article indicated that when *IAS 19* was issued, it caused an increase in the liability for pensions for a significant number of companies. Why might this situation occur?
- 3. A recent article noted that most gains and losses are recognized in net income. However, pension accounting has long been recognized as an exception—an area of accounting in which at least some dampening of market swings is appropriate. This is because pension funds are managed so that their performance is insulated from the extremes of short-term market swings. A pension expense that reflects the volatility of market swings might, for that reason, convey information of little relevance. Are these statements true?
- 4. Many companies held assets twice as large as they needed to fund their pension plans at one time. Are these assets reported on the statement of financial position of these companies per the pension pronouncement? If not, where are they reported?
- **5.** Understanding the impact of the changes required in pension reporting requires detailed information about its pension plan(s) and an analysis of the relationship of many factors, particularly:
 - (a) The type of plan(s) and any significant amendments.
 - **(b)** The plan participants.
 - **(c)** The funding status.
 - (d) The actuarial funding method and assumptions currently used.

What impact does each of these items have on financial statement presentation?

Instructions

What answers do you believe Ruth and Carl gave to each of these questions?

CA20-6 (Non-Vested Employees—An Ethical Dilemma) Cardinal Technology recently merged with College Electronix (CE), a computer graphics manufacturing firm. In performing a comprehensive audit of CE's accounting system, Richard Nye, internal audit manager for Cardinal Technology, discovered that the new subsidiary did not capitalize pension assets and liabilities, subject to the requirements of IFRS

The fair value of CE's pension assets was \$15.5 million, the vested benefit obligation was \$12.9 million, and the defined benefit obligation was \$17.4 million. Nye reported this audit finding to Renée Selma, the newly appointed controller of CE. A few days later, Selma called Nye for his advice on what to do. Selma started her conversation by asking, "Can't we eliminate the negative income effect of our pension dilemma simply by terminating the employment of non-vested employees before the end of our fiscal year?"

Instructions

How should Nye respond to Selma's remark about firing non-vested employees?

USING YOUR JUDGMENT

FINANCIAL REPORTING PROBLEM

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What kind of pension plan does M&S provide its employees?
- **(b)** What was M&S's pension expense for 2013 and 2012?
- (c) What is the impact of M&S's pension plans for 2013 on its financial statements?
- **(d)** What information does M&S provide on the target allocation of its pension assets? How do the allocations relate to the expected returns on these assets?

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions related to adidas and Puma.

- (a) What kind of pension plans do adidas and Puma provide their employees?
- (b) What net periodic pension expense (cost) did adidas and Puma report in 2012?
- (c) What is the year-end 2012 funded status of adidas's and Puma's plans?
- (d) What relevant rates were used by adidas and Puma in computing their pension amounts?
- (e) Compare the expected benefit payments and contributions for adidas and Puma.

International Reporting Case

Walgreens (USA) is the leading drug store chain in the United States. The company provided the following disclosures related to its retirement benefits in its 2013 annual report.

Walgreens

15. Retirement Benefits (in part)

The principal retirement plan for employees is the Walgreen Profit-Sharing Retirement Plan, to which both the Company and the employees contribute.

The Company provides certain health insurance benefits for retired employees who meet eligibility requirements, including age, years of service and date of hire. The costs of these benefits are accrued over the service life of the employee. The Company's postretirement health benefit plans are not funded.

Components	of net	neriodic	hanafit	costs (In	millione	١.

Accounting

Prepare an income statement for 2015 and a statement of financial position as of December 31, 2015. Also, prepare the pension expense journal entry for the year ended December 31, 2015. Round to the nearest tenth (e.g., round 2.87 to 2.9).

Analysis

Compute return on equity for PENCOMP for 2015 (assume equity is equal to year-end equity). Do you think an argument can be made for including some or even all of the asset/liability gains and losses in the numerator of return on equity? Illustrate that calculation.

Principles

Explain a rationale for why the IASB has (so far) decided to exclude from the current-period income statement the effects of gains and losses due to changes in actuarial assumptions.

Professional Research

Jack Kelly Company has grown rapidly since its founding in 2002. To instill loyalty in its employees, Kelly is contemplating establishment of a defined benefit plan. Kelly knows that lenders and potential investors will pay close attention to the impact of the pension plan on the company's financial statements, particularly

any gains or losses that develop in the plan. Kelly has asked you to conduct some research on the accounting for gains and losses in a defined benefit plan.

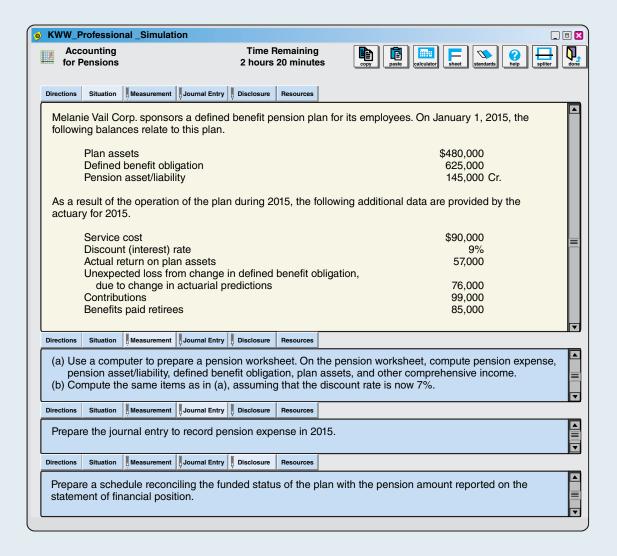

Instructions

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free eIFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) Briefly describe how pension gains and losses are accounted for.
- **(b)** Explain the rationale behind the accounting method described in part (a).
- **(c)** What is the related pension asset or liability that may show up on the statement of financial position? When will each of these situations occur?

Professional Simulation

In this simulation, you are asked to address questions related to the accounting for pensions. Prepare responses to all parts.

Remember to check the book's companion website, at www.wiley.com/college/kieso, to find additional resources for this chapter.

Accounting for Leases

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

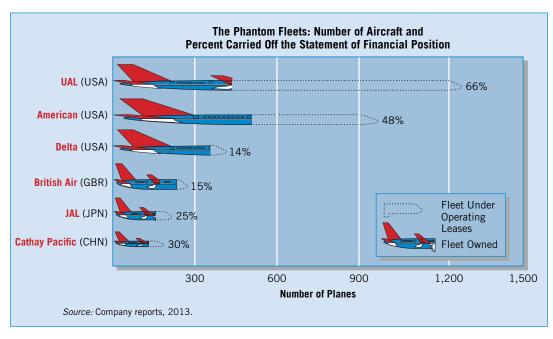

- **1** Explain the nature, economic substance, and advantages of lease transactions.
- **2** Describe the accounting criteria and procedures for capitalizing leases by the lessee.
- **3** Contrast the operating and capitalization methods of recording leases.
- 4 Explain the advantages and economics of leasing to lessors and identify the classifications of leases for the lessor.
- **5** Describe the lessor's accounting for direct-financing leases.
- **6** Identify special features of lease arrangements that cause unique accounting problems.
- **7** Describe the effect of residual values, guaranteed and unguaranteed, on lease accounting.
- 8 Describe the lessor's accounting for sales-type leases.
- 9 List the disclosure requirements for leases.

More Companies Ask, "Why Buy?"

Leasing has grown tremendously in popularity. Today, it is the fastest growing form of capital investment. Instead of borrowing money to buy an airplane, computer, nuclear core, or satellite, a company makes periodic payments to lease these assets. Even gambling casinos lease their slot machines. Companies that lease tend to be smaller, high growth, and in technology-oriented industries (see www.techlease.com).

A classic example is the airline industry. Many travelers on **British Airways** (GBR), **Cathay Pacific** (CHN), and **Japan Airlines** (JPN) believe these airlines own the planes on which they are flying. Often, this is not the case. Airlines lease many of their airplanes due to the favorable accounting treatment they receive if they lease rather than purchase. Presented below are the lease percentages for the major international airlines.

What about other companies? They are also exploiting the existing lease-accounting rules to keep assets and liabilities off the books. For example, **Krispy Kreme** (USA), a chain of 217 doughnut shops, had been showing good growth and profitability using

a relatively small bit of capital. That's an impressive feat if you care about return on capital. But, there's a hole in this doughnut. The company explained that it was building a \$30 million new mixing plant and warehouse. Yet, the financial statements failed to disclose the investments and obligations associated with that \$30 million.

By financing through a synthetic lease, Krispy Kreme kept the investment and obligation off the books. In a synthetic lease, a financial institution like **Credit Suisse** (CHE) sets up a special-purpose entity (SPE) that borrows money to build the plant and then leases it to Krispy Kreme. For accounting purposes, Krispy Kreme reports only rent expense. But, for tax

See the Underlying Concepts on pages 1064 and 1102.

> Read the **Evolving Issue** on pages 1093–1094 for a discussion of off-balance-sheet reporting of leases.

INTERNATIONAL FOCUS

> Read the **Global Accounting Insights** on pages 1094–1095 for a discussion of non-IFRS financial reporting for leases.

purposes, Krispy Kreme can be considered the owner of the asset and gets depreciation tax deductions. However, in response to negative publicity about the use of SPEs to get favorable financial reporting and tax benefits, Krispy Kreme announced it would change its method of financing construction of its doughnut-making plant.

As you will learn in this chapter, due to lease accounting rules, financial statement users must make an educated guess on the real-but-hidden leverage of leasing by using only the information disclosed in the notes and by applying a rule-of-thumb multiple. As the chairperson for the IASB noted, "It seems odd to expect an analyst to guess the liabilities associated with leases when management already has this information at its fingertips." This concern explains why the IASB (and FASB) is working on a new standard on leasing so that assets and liabilities avoid on-balance-sheet treatment simply by calling a loan a "lease."

Ketz, "Still Searching for the 'Rite' Stuff," Grumpy Old Accountants (April 30, 2012), http://blogs.smeal.psu.edu/grumpyoldaccountants/archives/643; and Hans Hoogervorst, "Harmonisation and Global Economic Consequences," public lecture at the London School of Economics (November 6, 2012).

PREVIEW OF CHAPTER

21

Our opening story indicates the increased significance and prevalence of lease arrangements. As a result, the need for uniform accounting and informative reporting of these transactions has intensified. In this

chapter, we look at the accounting issues related to leasing. The content and organization of this chapter are as follows.

Accounting for Leases

Special Accounting The Leasing **Accounting by Accounting Environment** the Lessee by the Lessor **Problems** Who are the players? Capitalization criteria · Economics of leasing Residual values Advantages of leasing Accounting differences Classification of leases Sales-type leases Conceptual nature of a Finance lease method **Direct-financing method** • Bargain-purchase option lease Operating method **Operating method** Initial direct costs Comparison of finance and **Current versus non-current** operating leases **Disclosure** Unresolved problems

THE LEASING ENVIRONMENT

LEARNING OBJECTIVE 1

1

Explain the nature, economic substance, and advantages of lease transactions.

Aristotle once said, "Wealth does not lie in ownership but in the use of things!" Clearly, many companies have decided that Aristotle is right, as they have become heavily involved in leasing assets rather than owning them. For example, according to the 2014 *Global Leasing Report* by the White Clarke Group, the global leasing market is a \$658 billion business. White Clarke estimates that 38 percent

of lease volume is in Europe, 19 percent in Asia, and 37 percent in North America. Bouncing back from the financial-crisis-induced global recession, leasing activity grew by nearly 9 percent. Remember that these statistics are just for equipment leasing; add in real estate leasing, which is probably larger, and we are talking about a very large and growing business, one that is at least in part driven by the accounting.

What types of assets are being leased? As the opening story indicated, any type of equipment can be leased, such as railcars, helicopters, bulldozers, barges, CT scanners, computers, and so on.

Illustration 21-1 summarizes, in their own words, what several major companies are leasing.

ILLUSTRATION 21-1

What Do Companies Lease?

Company	Description
Carrefour (FRA)	"Stores not fully owned are rented under leasing agreements. The Group also owns shopping centres, mainly anchored by its hypermarkets and supermarkets, that are rented out."
Delhaize Group (BEL)	"Delhaize Group operates a significant number of its stores unde finance and operating lease arrangements. Various properties leased are (partially or in full) subleased to third parties, where the Group is therefore acting as a lessor (see further below). Lease terms (including reasonably certain renewal options) generally range from 1 to 36 years with renewal options ranging from 3 to 30 years."
Diageo (GBR)	"The company owns or leases land and buildings throughout the world. Diageo's largest individual facility, in terms of net book value of property, is St James's Gate brewery in Dublin. Approximately 96% by value of the group's properties are owned and approximately 3% are held under leases running for 50 years or longer."
Marks and Spencer plc (GBR)	"The Group leases various stores, offices, warehouses and equipment under non-cancellable operating lease agreements. The leases have varying terms, escalation clauses and renewal rights."
McDonald's Corp. (USA)	"The Company was the lessee at 15,235 restaurant locations through ground leases (the Company leases the land and the Company or franchisee owns the building) and through improved leases (the Company leases land and buildings)."
Reed Elsevier (NLD)	"The company leases various properties, principally offices and warehouses, which have varying terms and renewal rights that are typical to the territory in which they are located."

The largest group of leased equipment involves information technology equipment, followed by assets in the transportation area (trucks, aircraft, rail), and then construction and agriculture.

Who Are the Players?

A **lease** is a contractual agreement between a lessor and a lessee. This arrangement gives the **lessee** the right to use specific property, owned by the **lessor**, for an agreed period of time. In return for the use of the property, the lessee makes rental payments over the lease term to the lessor.

Who are the lessors that own this property? They generally fall into one of three categories:

- 1. Banks.
- 2. Captive leasing companies.
- 3. Independents.

Banks

Banks are the largest players in the leasing business. They have low-cost funds, which give them the advantage of being able to purchase assets at less cost than their competitors. Banks also have been more aggressive in the leasing markets. They have decided that there is money to be made in leasing, and as a result they have expanded their product lines in this area. Finally, leasing transactions are now more standardized, which gives banks an advantage because they do not have to be as innovative in structuring lease arrangements. Thus, banks like **Credit Suisse** (CHE), **Chase** (USA), **Barclays** (GBR), and **Deutsche Bank** (DEU) have substantial leasing subsidiaries.

Captive Leasing Companies

Captive leasing companies are subsidiaries whose primary business is to perform leasing operations for the parent company. Companies like CNH Capital (NLD) (for CNH Global), BMW Financial Services (DEU) (for BMW), and IBM Global Financing (USA) (for IBM) facilitate the sale of products to consumers. For example, suppose that Ivanhoe Mines Ltd. (CAN) wants to acquire a number of earthmovers from CNH Global. In this case, CNH Capital will offer to structure the transaction as a lease rather than as a purchase. Thus, CNH Capital provides the financing rather than an outside financial institution.

Captive leasing companies have the point-of-sale advantage in finding leasing customers. That is, as soon as CNH Global receives a possible order, its leasing subsidiary can quickly develop a lease-financing arrangement. Furthermore, the captive lessor has product knowledge that gives it an advantage when financing the parent's product.

The current trend is for captives to focus primarily on their companies' products rather than do general lease financing. For example, **Boeing Capital** (USA) and **UPS Capital** (USA) are two captives that have left the general finance business to focus exclusively on their parent companies' products.

Independents

Independents are the final category of lessors. Independents have not done well over the last few years. Their market share has dropped fairly dramatically as banks and captive leasing companies have become more aggressive in the lease-financing area. Independents do not have point-of-sale access, nor do they have a low cost of funds advantage. What they *are* often good at is developing innovative contracts for lessees. In addition, they are starting to act as captive finance companies for some companies that do not have a leasing subsidiary.

According to recent data at *www.ficinc.com* on new business volume by lessor type, banks hold about 44 percent of the market, followed by independents at 30 percent. Captives had the remaining 26 percent of new business. Data on changes in market share show that both banks and captives have increased business at the expense of the independents. That is, banks' and captives' market shares had grown by 58 percent and 36 percent, respectively, while the independents' market share declined by 44 percent.

Advantages of Leasing

The growth in leasing indicates that it often has some genuine advantages over owning property, such as:

1. 100% financing at fixed rates. Leases are often signed without requiring any money down from the lessee. This helps the lessee conserve scarce cash—an especially

desirable feature for new and developing companies. In addition, lease payments often remain fixed, which protects the lessee against inflation and increases in the cost of money. The following comment explains why companies choose a lease instead of a conventional loan: "Our local bank finally came up to 80 percent of the purchase price but wouldn't go any higher, and they wanted a floating interest rate. We just couldn't afford the down payment, and we needed to lock in a final payment rate we knew we could live with."

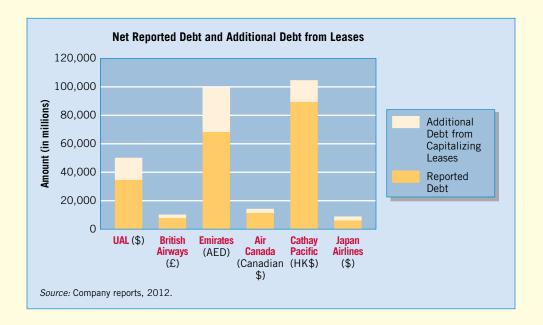

- **2.** Protection against obsolescence. Leasing equipment reduces risk of obsolescence to the lessee, and in many cases passes the risk of residual value to the lessor. For example, Elan (IRL) (a pharmaceutical maker) leases computers. Under the lease agreement, Elan may turn in an old computer for a new model at any time, canceling the old lease and writing a new one. The lessor adds the cost of the new lease to the balance due on the old lease, less the old computer's trade-in value. As one treasurer remarked, "Our instinct is to purchase." But if a new computer is likely to come along in a short time, "then leasing is just a heck of a lot more convenient than purchasing." Naturally, the lessor also protects itself by requiring the lessee to pay higher rental payments or provide additional payments if the lessee does not maintain the asset.
- **3.** Flexibility. Lease agreements may contain less restrictive provisions than other debt agreements. Innovative lessors can tailor a lease agreement to the lessee's special needs. For instance, the duration of the lease—the lease term—may be anything from a short period of time to the entire expected economic life of the asset. The rental payments may be level from year to year, or they may increase or decrease in amount. The payment amount may be predetermined or may vary with sales, the prime interest rate, a price index, or some other factor. In most cases, the rent is set to enable the lessor to recover the cost of the asset plus a fair return over the life of the lease.
- **4.** Less costly financing. Some companies find leasing cheaper than other forms of financing. For example, start-up companies in depressed industries or companies in low tax brackets may lease to claim tax benefits that they might otherwise lose. Depreciation deductions offer no benefit to companies that have little if any taxable income. Through leasing, the leasing companies or financial institutions use these tax benefits. They can then pass some of these tax benefits back to the user of the asset in the form of lower rental payments.
- **5.** *Tax advantages.* In some cases, companies can "have their cake and eat it too" with tax advantages that leases offer. That is, for financial reporting purposes, companies do not report an asset or a liability for the lease arrangement. For tax purposes, however, companies can capitalize and depreciate the leased asset. As a result, a company takes deductions earlier rather than later and also reduces its taxes. A common vehicle for this type of transaction is a "synthetic lease" arrangement, such as that described in the opening story for **Krispy Kreme** (USA).
- **6.** Off-balance-sheet financing. Certain leases do not add debt on a statement of financial position or affect financial ratios. In fact, they may add to borrowing capacity. Such off-balance-sheet financing is critical to some companies.

¹As demonstrated later in this chapter, certain types of lease arrangements are not capitalized on the statement of financial position. The liabilities section is thereby relieved of large future lease commitments that, if recorded, would adversely affect the debt to equity ratio. The reluctance to record lease obligations as liabilities is one of the primary reasons some companies resist capitalized lease accounting.

What do the numbers mean?

OFF-BALANCE-SHEET FINANCING

As shown in our opening story, airlines use lease arrangements extensively. This results in a great deal of off-balance-sheet financing. The following chart indicates that many airlines that lease aircraft understate debt levels by a substantial amount.

Airlines are not the only ones playing the off-balancesheet game. As indicated in Illustration 21-1, retailers like Marks and Spencer plc and Carrefour, and publisher Reed Elsevier employ leases in their businesses. Thus, analysts must adjust reported debt levels for the effects of noncapitalized leases. A methodology for making this adjustment is discussed in D. Zion and A. Varshney, "Leases Landing on Balance Sheets, Appendix: HOLT's Capitalization of Operating Leases," *Credit Suisse Equity Research* (August 17, 2010).

As also discussed in the opening story, the IASB is working on new rules to bring more leases on-balance-sheet. A PricewaterhouseCoopers survey of 3,000 international companies indicated the following impacts of leasing for several industries.

	Average Increase in Interest- Bearing Debt	Companies with over 25% Increase	Average Increase in Leverage
Retail and trade	213%	71%	64%
Other services	51	35	34
Transportation and			
warehousing	95	38	31
Professional services	158	52	19
Accommodation	101	41	18
All companies	58%	4%	13%

As indicated, the expected effects are significant, with all companies expecting a 58 percent increase in their debt levels and a 13 percent increase in leverage ratios. This is not a

pretty picture, but investors need to see it if they are to fully understand a company's lease obligations.

E. Ketz, "Operating Lease Obligations to Be Capitalized," Smartpros (August 2010), http://accounting.smartpros.com/x70304.xml.

Conceptual Nature of a Lease

If Air France—KLM (FRA) borrows €47 million on a 10-year note from UBS (CHE) to purchase an Airbus A330 jet plane, Air France should clearly report an asset and related liability at that amount on its statement of financial position. Similarly, if Air France purchases the A330 for €47 million directly from Airbus through an installment purchase over 10 years, it should obviously report an asset and related liability (i.e., it should "capitalize" the installment transaction).

However, what if Air France **leases** the Airbus A330 for 10 years from **International Lease Finance Corp. (ILFC)** (USA)—the world's largest lessor of airplanes—through a non-cancelable lease transaction with payments of the same amount as the installment purchase transaction? In that case, opinion differs over how to report this transaction. The various views on **capitalization of leases** are as follows.

- **1.** *Do not capitalize any leased assets.* This view considers capitalization inappropriate because Air France does not own the property. Furthermore, a lease is an "executory" contract requiring continuing performance by both parties. Because companies do not currently capitalize other executory contracts (such as purchase commitments and employment contracts), they should not capitalize leases either.
- **2.** Capitalize leases that are similar to installment purchases. This view holds that companies should report transactions in accordance with their economic substance. Therefore, if companies capitalize installment purchases, they should also capitalize leases that have similar characteristics. For example, Air France makes the same payments over a 10-year period for either a lease or an installment purchase. Lessees make rental payments, whereas owners make mortgage payments. Why should the financial statements not report these transactions in the same manner?

Underlying Concepts

The issue of how to report leases is the classic case of substance versus form. Although legal title does not technically pass in lease transactions, the benefits from the use of the property do transfer.

- **3.** Capitalize all long-term leases. This approach requires only the long-term right to use the property in order to capitalize. This property-rights approach capitalizes all long-term leases.
- **4.** Capitalize non-cancelable leases where the penalty for non-performance is substantial. A final approach advocates capitalizing only non-cancelable contractual rights and obligations. Non-cancelable means that it is unlikely to avoid performance under the lease without a severe penalty.²

In short, the various viewpoints range from no capitalization to capitalization of all leases. The IASB apparently agrees with the capitalization approach when the lease is similar to an installment purchase: It notes that Air France

should capitalize a lease that transfers substantially all of the benefits and risks of property ownership, provided the lease is non-cancelable.³ Non-cancelable means that Air France can cancel the lease contract only upon the outcome of some remote contingency, or that the cancellation provisions and penalties of the contract are so costly to Air France that cancellation probably will not occur.

²Capitalization of most leases (based on either a right of use or on non-cancelable rights and obligations) has the support of financial analysts. As discussed in the Evolving Issue box on pages 1093–1094, the joint IASB/FASB project on lease accounting is based on a right of use model, which will require expanded capitalization of lease assets and liabilities.

³Benefits may be represented by the expectation of profitable operations over the asset's economic life and from appreciation in residual value. Risks include the possibility of losses from idle capacity or technological obsolescence and variation in return because of changing economic conditions. [1]

This viewpoint leads to three basic conclusions. (1) Companies must identify the characteristics that indicate the transfer of substantially all of the benefits and risks of ownership. (2) The same characteristics should apply consistently to the lessee and the lessor. (3) Those leases that do **not** transfer substantially all the benefits and risks of ownership are operating leases. Companies should not capitalize operating leases. Instead, companies should account for them as rental payments and receipts.

ACCOUNTING BY THE LESSEE

If Air France (the lessee) **capitalizes** a lease, it records an asset and a liability generally equal to the present value of the rental payments. ILFC (the lessor), having transferred substantially all the benefits and risks of ownership, recognizes a sale by removing the asset from the statement of financial position and replacing it with a receivable. The typical journal entries for Air France and ILFC, assuming leased and capitalized equipment, appear as shown in Illustration 21-2.

2 LEARNING OBJECTIVE

Describe the accounting criteria and procedures for capitalizing leases by the lessee.

Air Fran (Lesse			ILF((Less	=	
Leased Equipment Lease Liability	XXX	xxx	Lease Receivable Equipment	XXX	XXX

ILLUSTRATION 21-2Journal Entries for
Capitalized Lease

Having capitalized the asset, Air France records depreciation on the leased asset. Both ILFC and Air France treat the lease rental payments as consisting of interest and principal.

If Air France does not capitalize the lease, it does not record an asset, nor does ILFC remove one from its books. When Air France makes a lease payment, it records rental expense; ILFC recognizes rental revenue.

A lease is classified as a **finance lease** if it transfers substantially all the risks and rewards incidental to ownership. In order to record a lease as a finance lease, the lease must be non-cancelable. The IASB identifies the four criteria listed in Illustration 21-3 for assessing whether the risks and rewards have been transferred in the lease arrangement.

Capitalization Criteria (Lessee)

- 1. The lease transfers ownership of the property to the lessee.
- 2. The lease contains a bargain-purchase option.⁴
- 3. The lease term is for the major part of the economic life of the asset.
- 4. The present value of the minimum lease payments amounts to substantially all of the fair value of the leased asset. [2]

ILLUSTRATION 21-3 Capitalization Criteria for Lessee

Air France classifies and accounts for leases that **do not meet any of the four criteria** as **operating leases**. Illustration 21-4 (on page 1066) shows that a lease meeting any one of the four criteria results in the lessee having a finance lease.⁵

⁴We define a bargain-purchase option in the next section.

⁵A fifth criterion applies to the relatively less common setting in which the leased asset is of such a specialized nature that only the lessee can use it without major modifications. If a lease involves an asset with these characteristics, then the risks and rewards of ownership are likely to transfer. In addition to the determinative criteria, lessees and lessors should also consider the following indicators of situations that individually or in combination could also lead to a lease being classified as a finance lease: (1) the lessee can cancel the lease, and the lessor's losses associated with the cancellation are borne by the lessee; (2) gains or losses from the fluctuation in the fair value of the residual accrue to the lessee (e.g., in the form of a rent rebate equaling most of the sales proceeds at the end of the lease); and (3) the lessee has the ability to continue the lease for a secondary period at a rent that is substantially lower than market rent. [3]

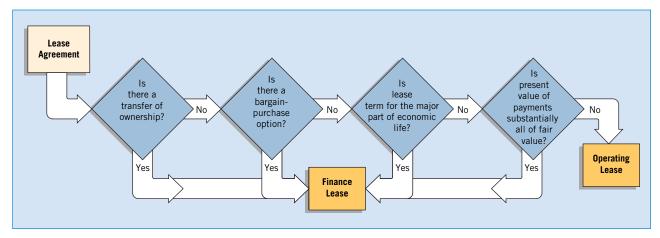

ILLUSTRATION 21-4

Diagram of Lessee's Criteria for Lease Classification

Thus, the proper classification of a lease is determined based on the substance of the lease transaction, rather than on its mere form. This determination often requires the use of professional judgment of whether the risks and rewards of ownership are transferred.

Capitalization Criteria

Three of the four **capitalization criteria** that apply to lessees are controversial and can be difficult to apply in practice. We discuss each of the criteria in detail on the following pages.

Transfer of Ownership Test

If the lease transfers ownership of the asset to the lessee, it is a finance lease. This criterion is not controversial and easily implemented in practice.

Bargain-Purchase Option Test

A bargain-purchase option allows the lessee to purchase the leased property for a price that is **significantly lower** than the property's expected fair value at the date the option becomes exercisable. At the inception of the lease, the difference between the option price and the expected fair value must be large enough to make exercise of the option reasonably assured.

For example, assume that Brett's Delivery Service was to lease a Honda Accord for \$599 per month for 40 months, with an option to purchase for \$100 at the end of the 40-month period. If the estimated fair value of the Honda Accord is \$3,000 at the end of the 40 months, the \$100 option to purchase is clearly a bargain. Therefore, Brett must capitalize the lease. In other cases, the criterion may not be as easy to apply, and determining *now* that a certain *future* price is a bargain can be difficult.

Economic Life Test

If the lease period is for a major part of the asset's economic life, the lessor transfers most of the risks and rewards of ownership to the lessee. Capitalization is therefore appropriate. However, determining the lease term and what constitutes the major part of the economic life of the asset can be troublesome.

The IASB has not defined what is meant by the "major part" of an asset's economic life. In practice, following the IASB hierarchy, it has been customary to look to U.S. GAAP, which has a 75 percent of economic life threshold for evaluating the economic life test. While the 75 percent guideline may be a useful reference point, it does not represent an automatic cutoff point. Rather, lessees and lessors should consider all

relevant factors when assessing whether substantially all the risks and rewards of ownership have been transferred in the lease.⁶ For purposes of homework, assume a 75 percent threshold for the economic life test, unless otherwise stated.

The **lease term** is generally considered to be the fixed, non-cancelable term of the lease. However, a bargain-renewal option, if provided in the lease agreement, can extend this period. A **bargain-renewal option** allows the lessee to renew the lease for a rental that is lower than the expected fair rental at the date the option becomes exercisable. At the inception of the lease, the difference between the renewal rental and the expected fair rental must be great enough to make exercise of the option to renew reasonably assured. **[4]**

For example, assume that Carrefour (FRA) leases Lenovo (CHN) PCs for two years at a rental of €100 per month per computer and subsequently can lease them for €10 per month per computer for another two years. The lease clearly offers a bargain-renewal option; the lease term is considered to be four years. However, with bargain-renewal options, as with bargain-purchase options, it is sometimes difficult to determine what is a bargain.

Determining estimated economic life can also pose problems, especially if the leased item is a specialized item or has been used for a significant period of time. For example, determining the economic life of a nuclear core is extremely difficult. It is subject to much more than normal "wear and tear."

Recovery of Investment Test

If the present value of the minimum lease payments equals or exceeds substantially all of the fair value of the asset, then a lessee like Air France should capitalize the leased asset. Why? If the present value of the minimum lease payments is reasonably close to the fair value of the aircraft, Air France is effectively purchasing the asset.

As with the economic life test, the IASB has not defined what is meant by "substantially all" of an asset's fair value. In practice, it has been customary to look to U.S. GAAP, which has a 90 percent of fair value threshold for assessing the recovery of investment test. Again, rather than focusing on any single element of the lease classification indicators, lessees and lessors should consider all relevant factors when evaluating lease classification criteria. For purposes of homework, assume a 90 percent threshold for the recovery of investment test.

Determining the present value of the minimum lease payments involves three important concepts: (1) minimum lease payments, (2) executory costs, and (3) discount rate.

Minimum Lease Payments. Air France is obligated to make, or expected to make, minimum lease payments in connection with the leased property. These payments include the following. [5]

1. *Minimum rental payments.* Minimum rental payments are those that Air France must make to ILFC under the lease agreement. In some cases, the minimum rental payments may equal the minimum lease payments. However, the minimum lease payments may also include a guaranteed residual value (if any), penalty for failure to renew, or a bargain-purchase option (if any), as we note below.

⁶The International Financial Reporting Group of Ernst and Young, *International GAAP*, 2013 (John Wiley and Sons: New York, 2013), p. 1669.

⁷*lbid.* The 75 percent of useful life and 90 percent of fair value "bright-line" cutoffs in U.S. GAAP have been criticized. Many believe that lessees structure leases so as to just miss the 75 and 90 percent cutoffs, avoiding classifying leases as finance leases, thereby keeping leased assets and the related liabilities off the statement of financial position.

- **2.** *Guaranteed residual value*. The residual value is the estimated fair value of the leased property at the end of the lease term. ILFC may transfer the risk of loss to Air France or to a third party by obtaining a guarantee of the estimated residual value. The **guaranteed residual value** is either (1) the certain or determinable amount that Air France will pay ILFC at the end of the lease to purchase the aircraft at the end of the lease, or (2) the amount Air France guarantees that ILFC will realize if the aircraft is returned. If not guaranteed in full, the **unguaranteed residual value** is the estimated residual value exclusive of any portion guaranteed.⁸
- **3.** *Penalty for failure to renew or extend the lease.* The amount Air France must pay if the agreement specifies that it must extend or renew the lease, and it fails to do so.
- **4.** *Bargain-purchase option.* As we indicated earlier (in item 1), an option given to Air France to purchase the aircraft at the end of the lease term at a price that is fixed sufficiently below the expected fair value, so that, at the inception of the lease, purchase is reasonably assured.

Air France excludes executory costs (defined below) from its computation of the present value of the minimum lease payments.

Executory Costs. Like most assets, leased tangible assets incur insurance, maintenance, and tax expenses—called **executory costs**—during their economic life. If ILFC retains responsibility for the payment of these "ownership-type costs," **it should exclude**, in computing the present value of the minimum lease payments, the portion of each lease payment that represents executory costs. Executory costs do not represent payment on or reduction of the obligation.

Many lease agreements specify that the lessee directly pays executory costs to the appropriate third parties. In these cases, the lessor can use the rental payment **without adjustment** in the present value computation.

Discount Rate. A lessee, like Air France, computes the present value of the minimum lease payments using the **implicit interest rate**. [7] This rate is defined as the discount rate that, at the inception of the lease, causes the aggregate present value of the minimum lease payments and the unguaranteed residual value to be equal to the fair value of the leased asset. [8]

While Air France may argue that it cannot determine the implicit rate of the lessor, in most cases Air France can approximate the implicit rate used by ILFC. In the event that it is impracticable to determine the implicit rate, Air France should use its incremental borrowing rate. The **incremental borrowing rate** is the rate of interest the lessee would have to pay on a similar lease or the rate that, at the inception of the lease, the lessee would incur to borrow over a similar term the funds necessary to purchase the asset.

If known or practicable to estimate, use of the implicit rate is preferred. This is because **the implicit rate of ILFC is generally a more realistic rate** to use in determining the amount (if any) to report as the asset and related liability for Air France. In addition, use of the implicit rate avoids use of **an artificially high incremental borrowing rate**

⁸If the residual value is guaranteed by a third party, it is not included in the minimum lease payments. (Third-party guarantors are, in essence, insurers who for a fee assume the risk of deficiencies in leased asset residual value.) A lease provision requiring the lessee to make up a residual value deficiency that is attributable to damage, extraordinary wear and tear, or excessive usage is not included in the minimum lease payments. Lessees recognize such costs as period costs when incurred. As noted earlier, such a provision could be an indicator that a lease should be classified as a finance lease. [6]

that would cause the present value of the minimum lease payments to be lower, supporting an argument that the lease does not meet the recovery of investment test. Use of such a rate would thus make it more likely that the lessee avoids capitalization of the leased asset and related liability.

The determination of whether or not a reasonable estimate of the implicit rate could be made will require judgment, particularly where the result from using the incremental borrowing rate comes close to meeting the fair value test. Because Air France **may not capitalize the leased property at more than its fair value** (as we discuss later), it cannot use an excessively low discount rate.

Asset and Liability Accounted for Differently

In a finance lease transaction, Air France uses the lease as a source of financing. ILFC finances the transaction (provides the investment capital) through the leased asset. Air France makes rent payments, which actually are installment payments. Therefore, over the life of the aircraft rented, the rental payments to ILFC constitute a payment of principal plus interest.

Asset and Liability Recorded

Under the finance lease method, Air France treats the lease transaction as if it purchases the aircraft in a financing transaction. That is, Air France acquires the aircraft and creates an obligation. Therefore, it records a finance lease as an asset and a liability at the lower of (1) the present value of the minimum lease payments (excluding executory costs) or (2) the fair value of the leased asset at the inception of the lease. The rationale for this approach is that companies should not record a leased asset for more than its fair value.

Depreciation Period

One troublesome aspect of accounting for the depreciation of the capitalized leased asset relates to the period of depreciation. If the lease agreement transfers ownership of the asset to Air France (criterion 1) or contains a bargain-purchase option (criterion 2), Air France depreciates the aircraft consistent with its normal depreciation policy for other aircraft, using the economic life of the asset.

On the other hand, if the lease does not transfer ownership or does not contain a bargain-purchase option, then Air France depreciates it over the **term of the lease**. In this case, the aircraft reverts to ILFC after a certain period of time.

Effective-Interest Method

Throughout the term of the lease, Air France uses the **effective-interest method** to allocate each lease payment between principal and interest. This method produces a periodic interest expense equal to a constant percentage of the carrying value of the lease obligation. When applying the effective-interest method to finance leases, Air France must use the same discount rate that determines the present value of the minimum lease payments.

Depreciation Concept

Although Air France computes the amounts initially capitalized as an asset and recorded as an obligation at the same present value, the **depreciation of the aircraft and the discharge of the obligation are independent accounting processes** during the term of the lease. It should depreciate the leased asset by applying conventional depreciation methods: straight-line, sum-of-the-years' digits, declining-balance, units of production, etc.

Finance Lease Method (Lessee)

To illustrate a finance lease, assume that **CNH Capital** (NLD) (a subsidiary of CNH Global) and **Ivanhoe Mines Ltd.** (CAN) sign a lease agreement dated January 1, 2015, that calls for CNH to lease a front-end loader to Ivanhoe beginning January 1, 2015. The terms and provisions of the lease agreement and other pertinent data are as follows.

- The term of the lease is five years. The lease agreement is non-cancelable, requiring equal rental payments of \$25,981.62 at the beginning of each year (annuity-due basis).
- The loader has a fair value at the inception of the lease of \$100,000, an estimated economic life of five years, and no residual value.
- Ivanhoe pays all of the executory costs directly to third parties except for the property taxes of \$2,000 per year, which is included as part of its annual payments to CNH.
- The lease contains no renewal options. The loader reverts to CNH at the termination of the lease.
- Ivanhoe's incremental borrowing rate is 11 percent per year.
- Ivanhoe depreciates similar equipment that it owns on a straight-line basis.
- CNH sets the annual rental to earn a rate of return on its investment of 10 percent per year; Ivanhoe knows this fact.

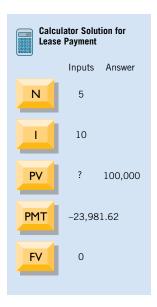

The lease meets the criteria for classification as a finance lease for the following reasons.

- **1.** The lease term of five years, being equal to the equipment's estimated economic life of five years, satisfies the economic life test.
- **2.** The present value of the minimum lease payments (\$100,000 as computed below) equals the fair value of the loader (\$100,000).

The minimum lease payments are \$119,908.10 ($$23,981.62 \times 5$). Ivanhoe computes the amount capitalized as leased assets as the present value of the minimum lease payments (excluding executory costs—property taxes of \$2,000) as shown in Illustration 21-5.

ILLUSTRATION 21-5

Computation of Capitalized Lease Payments

```
Capitalized amount = (\$25,981.62 - \$2,000) \times Present value of an annuity due of 1 for 5 periods at 10% (Table 6-5) = \$23,981.62 \times 4.16986 = \$100,000
```

Ivanhoe uses CNH's implicit interest rate of 10 percent instead of its incremental borrowing rate of 11 percent because it knows about it. Ivanhoe records the finance lease on its books on January 1, 2015, as follows.

Note that the entry records the obligation at the net amount of \$100,000 (the present value of the future rental payments) rather than at the gross amount of \$119,908.10 ($$23,981.62 \times 5$).

Ivanhoe records the first lease payment on January 1, 2015, as follows.

Property Tax Expense	2,000.00	
Lease Liability	23,981.62	
Cash		25.981.62

 9 If it is impracticable for Ivanhoe to determine the implicit rate and it has an incremental borrowing rate of, say, 9 percent (lower than the 10 percent rate used by CNH), the present value computation would yield a capitalized amount of \$101,675.35 (\$23,981.62 \times 4.23972). Thus, use of an unrealistically low discount rate could lead to a lessee recording a leased asset at an amount exceeding the fair value of the equipment, which is generally prohibited in IFRS. This explains why the implicit rate should be used to capitalize the minimum lease payments.

Each lease payment of \$25,981.62 consists of three elements: (1) a reduction in the lease liability, (2) a financing cost (interest expense), and (3) executory costs (property taxes). The total financing cost (interest expense) over the term of the lease is \$19,908.10. This amount is the difference between the present value of the lease payments (\$100,000) and the actual cash disbursed, net of executory costs (\$119,908.10). The annual interest expense, applying the effective-interest method, is a function of the outstanding liability, as Illustration 21-6 shows.

IVANHOE MINES LEASE AMORTIZATION SCHEDULE ANNUITY-DUE BASIS Annual Reduction Lease Executory Interest (10%) of Lease Lease Payment Liability Liability Date Costs on Liability (b) (a) (c) (d) (e) \$100,000.00 1/1/15 1/1/15 \$ 25,981.62 \$ 2,000 -0-\$ 23,981.62 76,018.38 1/1/16 25,981.62 7,601.84 59,638.60 2,000 16,379.78 1/1/17 25,981.62 2,000 5,963.86 18,017.76 41,620.84 1/1/18 25,981.62 2,000 4,162.08 19,819.54 21,801.30 25,981.62 2,180.32* 21,801.30 -0-1/1/19 2,000 \$129,908.10 \$10,000 \$19,908.10 \$100,000.00

Lease Amortization Schedule for Lessee— Annuity-Due Basis

- (a) Lease payment as required by lease.
- (b) Executory costs included in rental payment.
- (c) Ten percent of the preceding balance of (e) except for 1/1/15; since this is an annuity due, no time has elapsed at the date of the first payment and no interest has accrued.
- (d) (a) minus (b) and (c).
- (e) Preceding balance minus (d).

*Rounded by 19 cents.

At the end of its fiscal year, December 31, 2015, Ivanhoe records **accrued interest** as follows.

Interest Expense 7,601.84
Interest Payable 7,601.84

Depreciation of the leased equipment over its five-year lease term, applying Ivanhoe's normal depreciation policy (straight-line method), results in the following entry on December 31, 2015.

Depreciation Expense 20,000

Accumulated Depreciation—Leased Equipment 20,000
(\$100,000 ÷ 5 years)

At December 31, 2015, Ivanhoe separately identifies the assets recorded under finance leases on its statement of financial position. Similarly, it separately identifies the related obligations. Ivanhoe classifies the portion due within one year or the operating cycle, whichever is longer, with current liabilities, and the rest with non-current liabilities. For example, the current portion of the December 31, 2015, total obligation of \$76,018.38 in Ivanhoe's amortization schedule is the amount of the reduction in the obligation in 2016, or \$16,379.78. Illustration 21-7 shows the liabilities section as it relates to lease transactions at December 31, 2015.

Non-current liabilities Lease liability (\$76,018.38 - \$16,379.78)	\$59,638.60	
Current liabilities		
Interest payable	\$ 7,601.84	
Lease liability	16,379.78	

ILLUSTRATION 21-7

Reporting Current and Non-Current Lease Liabilities

Ivanhoe records the lease payment of January 1, 2016, as follows.

Property Tax Expense 2,000.00 Interest Payable 7,601.84 Lease Liability 16,379.78

Cash 25,981.62

Entries through 2017 would follow the pattern above. Ivanhoe records its other executory costs (insurance and maintenance) in a manner similar to how it records any other operating costs incurred on assets it owns.

Upon expiration of the lease, Ivanhoe has fully depreciated the amount capitalized as leased equipment. It also has fully discharged its lease obligation. If Ivanhoe does not purchase the loader, it returns the equipment to CNH. Ivanhoe then removes the leased equipment and related accumulated depreciation accounts from its books.

If Ivanhoe purchases the equipment at termination of the lease, at a price of \$5,000 and the estimated life of the equipment changes from five to seven years, it makes the following entry.

Equipment (\$100,000 + \$5,000) 105,000

Accumulated Depreciation—Leased Equipment 100,000

Leased Equipment 100,000

Accumulated Depreciation—Equipment 100,000

Cash 5,000

Operating Method (Lessee)

Under the **operating method**, rent expense (and the associated liability) accrues day by day to the lessee as it uses the property. **The lessee assigns rent to the periods benefiting from the use of the asset and ignores, in the accounting, any commitments to make future payments.** The lessee makes appropriate accruals or deferrals if the accounting period ends between cash payment dates.

For example, assume that the finance lease illustrated in the previous section did not qualify as a finance lease. Ivanhoe therefore accounts for it as an operating lease. The first-year charge to operations is now \$25,981.62, the amount of the rental payment. Ivanhoe records this payment on January 1, 2015, as follows.

Rent Expense 25,981.62
Cash 25,981.62

Ivanhoe does not report the front-end loader, as well as any long-term liability for future rental payments, on the statement of financial position. Ivanhoe reports rent expense on the income statement. And, as discussed later in the chapter, **Ivanhoe must** disclose all operating leases that have non-cancelable lease terms in excess of one year.

Comparison of Finance Lease with Operating Lease

LEARNING OBJECTIVE 3

Contrast the operating and capitalization methods of recording leases.

As we indicated above for Ivanhoe, if accounting for the lease as an operating lease, the first-year charge to operations is \$25,981.62, the amount of the rental payment. Treating the transaction as a finance lease, however, results in a first-year charge of \$29,601.84: depreciation of \$20,000 (assuming straight-line), interest expense of \$7,601.84 (per Illustration 21-6 on page 1071), and executory costs

of \$2,000. Illustration 21-8 shows that while the total charges to operations are the same over the lease term whether accounting for the lease as a finance lease or as an operating lease, under the finance lease treatment the charges are higher in the earlier years and lower in the later years.¹⁰

¹⁰The higher charges in the early years is one reason lessees are reluctant to adopt the finance lease accounting method. Lessees (especially those of real estate) claim that it is really no more costly to operate the leased asset in the early years than in the later years. Thus, they advocate an even charge similar to that provided by the operating method.

	IVANHOE MINES SCHEDULE OF CHARGES TO OPERATIONS FINANCE LEASE VERSUS OPERATING LEASE					
		Financ	e Lease		Operating	
		Executory		Total	Lease	
Year	Depreciation	Costs	Interest	Charge	Charge	Difference
2015	\$ 20,000	\$ 2,000	\$ 7,601.84	\$ 29,601.84	\$ 25,981.62	\$3,620.22
2016	20,000	2,000	5,963.86	27,963.86	25,981.62	1,982.24
2017	20,000	2,000	4,162.08	26,162.08	25,981.62	180.46

ILLUSTRATION 21-8

Comparison of Charges to Operations—Finance vs. Operating Leases

If using an accelerated method of depreciation, the differences between the amounts charged to operations under the two methods would be even larger in the earlier and later years.

In addition, using the finance lease approach results in an asset and related liability of \$100,000 initially reported on the statement of financial position. The lessee would not report any asset or liability under the operating method. Therefore, the following differences occur if using a finance lease instead of an operating lease:

- **1.** An increase in the amount of reported debt (both short-term and long-term).
- **2.** An increase in the amount of total assets (specifically long-lived assets).
- **3.** A lower income early in the life of the lease and, therefore, lower retained earnings.

Thus, many companies believe that finance leases negatively impact their financial position: Their debt to total equity ratio increases, and their rate of return on total assets decreases. As a result, the business community resists capitalizing leases.

Whether this resistance is well founded is debatable. From a cash flow point of view, the company is in the same position whether accounting for the lease as an operating or a finance lease. Managers often argue against capitalization because it can more easily lead to **violation of loan covenants**. Capitalization also can affect the **amount of compensation received by managers** (for example, a share compensation plan tied to earnings). Finally, capitalization can **lower rates of return** and **increase debt to equity relationships**, making the company less attractive to present and potential investors.¹¹

ACCOUNTING BY THE LESSOR

Earlier in this chapter, we discussed leasing's advantages to the lessee. Three important benefits are available to the lessor:

1. *Interest revenue.* Leasing is a form of financing. Banks, captives, and independent leasing companies find leasing attractive because it provides competitive interest margins.

LEARNING OBJECTIVE

Explain the advantages and economics of leasing to lessors and identify the classifications of leases for the lessor.

¹¹One study indicates that management's behavior did change as a result of lease accounting rules. For example, many companies restructure their leases to avoid capitalization. Others increase their purchases of assets instead of leasing. Still others, faced with capitalization, postpone their debt offerings or issue shares instead. However, note that the study found no significant effect on share or bond prices as a result of capitalization of leases. See A. Rashad Abdel-khalik, "The Economic Effects on Lessees of *FASB Statement No. 13*, Accounting for Leases," Research Report (Stamford, Conn.: FASB, 1981).

- **2.** *Tax incentives*. In many cases, companies that lease cannot use the tax benefit of the asset, but leasing allows them to transfer such tax benefits to another party (the lessor) in return for a lower rental rate on the leased asset. To illustrate, **Airbus** (FRA) might sell one of its Airbus 330 jet planes to a wealthy investor who needed only the tax benefit. The investor then leased the plane to a foreign airline, for whom the tax benefit was of no use. Everyone gained. Airbus sold its airplane, the investor received the tax benefit, and the foreign airline cheaply acquired a 330.¹²
- **3.** Residual value profits. Another advantage to the lessor is the return of the property at the end of the lease term. Residual values can produce very large profits. Citigroup (USA) at one time assumed that the commercial aircraft it was leasing to the airline industry would have a residual value of 5 percent of their purchase price. It turned out that they were worth 150 percent of their cost—a handsome profit. At the same time, if residual values decline, lessors can suffer losses when less valuable leased assets are returned at the conclusion of the lease. At one time, automaker Ford (USA) took a \$2.1 billion write-down on its lease portfolio when rising gas prices spurred dramatic declines in the resale values of leased trucks and SUVs.

Economics of Leasing

A lessor, such as CNH Capital in our earlier example, determines the amount of the rental, basing it on the rate of return—the implicit rate—needed to justify leasing the front-end loader. In establishing the rate of return, CNH considers the credit standing of Ivanhoe, the length of the lease, and the status of the residual value (guaranteed versus unguaranteed).

In the CNH/Ivanhoe example on pages 1070–1072, CNH's implicit rate was 10 percent, the cost of the equipment to CNH was \$100,000 (also fair value), and the estimated residual value was zero. CNH determines the amount of the lease payment as follows.

ILLUSTRATION 21-9 Computation of Lease Payments

Fair value of leased equipment Less: Present value of the residual value	\$100,000.00
Amount to be recovered by lessor through lease payments Five beginning-of-the-year lease payments to yield a 10% return	\$100,000.00 =======
(\$100,000 ÷ 4.16986 ^a)	\$ 23,981.62
^a PV of an annuity due of 1 for 5 years at 10% (Table 6-5).	

If a residual value is involved (whether guaranteed or not), CNH would not have to recover as much from the lease payments. Therefore, the lease payments would be less. (Illustration 21-16, on page 1080, shows this situation.)

Classification of Leases by the Lessor

For accounting purposes, the **lessor** also classifies leases as operating or finance leases. Finance leases may be further subdivided into direct-financing and sales-type leases.

As with lessee accounting, if the lease transfers substantially all the risks and rewards incidental to ownership, the lessor shall classify and account for the arrangement as a finance lease. Lessors evaluate the same criteria shown in Illustration 21-3 (on page 1065) to make this determination.

The distinction for the lessor between a direct-financing lease and a sales-type lease is the presence or absence of a manufacturer's or dealer's profit (or loss). A sales-type lease involves a manufacturer's or dealer's profit, and a direct-financing lease does

¹²Some would argue that there is a loser—the tax authorities. The tax benefits enable the profitable investor to reduce or eliminate taxable income.

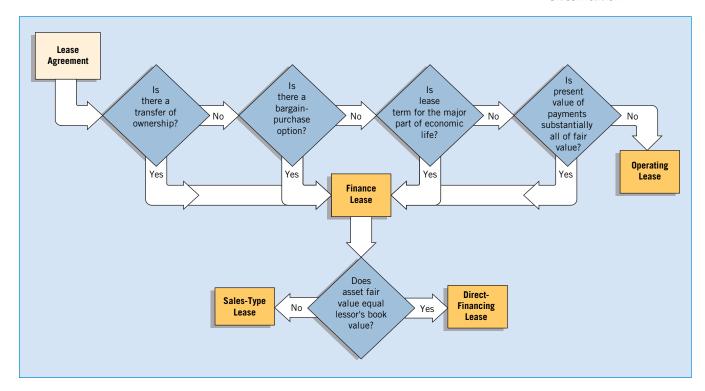

not. The profit (or loss) to the lessor is evidenced by the difference between the fair value of the leased property at the inception of the lease and the lessor's cost or carrying amount (book value).

Normally, sales-type leases arise when manufacturers or dealers use leasing as a means of marketing their products. For example, a computer manufacturer will lease its computer equipment (possibly through a captive) to businesses and institutions. Direct-financing leases generally result from arrangements with lessors that are primarily engaged in financing operations (e.g., banks).

Lessors classify and account for all leases that do not qualify as direct-financing or sales-type leases as operating leases. Illustration 21-10 shows the circumstances under which a lessor classifies a lease as operating, direct-financing, or sales-type.

ILLUSTRATION 21-10

Diagram of Lessor's Criteria for Lease Classification

For purposes of comparison with the lessee's accounting, we will illustrate only the operating and direct-financing leases in the following section. We will discuss the more complex sales-type lease later in the chapter.

Direct-Financing Method (Lessor)

Direct-financing leases are in substance the financing of an asset purchase by the lessee. In this type of lease, the lessor records a lease receivable instead of a leased asset. The lease receivable is the present value of the minimum lease payments plus the present value of the unguaranteed residual value. Remember that "minimum lease payments" include (1) rental payments (excluding executory costs), (2) bargain-purchase option (if any), (3) guaranteed residual value (if any), and (4) penalty for failure to renew (if any).

Thus, the lessor records the residual value, whether guaranteed or not. Also, recall that if the lessor pays any executory costs, then it should reduce the rental payment by that amount in computing minimum lease payments.

LEARNING OBJECTIVEDescribe the lessor's accounting

for direct-financing leases.

The following presentation, using the data from the preceding CNH/Ivanhoe example on pages 1070–1072, illustrates the accounting treatment for a direct-financing lease. We repeat here the information relevant to CNH in accounting for this lease transaction.

- **1.** The term of the lease is five years beginning January 1, 2015, non-cancelable, and requires equal rental payments of \$25,981.62 at the beginning of each year. Payments include \$2,000 of executory costs (property taxes).
- **2.** The equipment (front-end loader) has a cost of \$100,000 to CNH, a fair value at the inception of the lease of \$100,000, an estimated economic life of five years, and no residual value.
- **3.** CNH incurred no initial direct costs in negotiating and closing the lease transaction.
- **4.** The lease contains no renewal options. The equipment reverts to CNH at the termination of the lease.
- **5.** CNH sets the annual lease payments to ensure a rate of return of 10 percent (implicit rate) on its investment, as shown in Illustration 21-11.

ILLUSTRATION 21-11 Computation of Lease Payments

Fair value of leased equipment Less: Present value of residual value	\$100,000.00 -0-
Amount to be recovered by lessor through lease payments	\$100,000.00
Five beginning-of-the-year lease payments to yield a	
10% return (\$100,000 ÷ 4.16986 ^a)	\$ 23,981.62
^a PV of an annuity due of 1 for 5 years at 10% (Table 6-5).	

As shown in the earlier analysis, the lease meets the criteria for classification as a direct-financing lease for two reasons: (1) the lease term equals the equipment's estimated economic life, and (2) the present value of the minimum lease payments equals the equipment's fair value. It is not a sales-type lease because there is no difference between the fair value (\$100,000) of the loader and CNH's cost (\$100,000).

The lease receivable is the present value of the minimum lease payments (excluding executory costs which are property taxes of \$2,000). CNH computes it as follows.

ILLUSTRATION 21-12

Computation of Lease Receivable

```
Lease receivable = (\$25,981.62 - \$2,000) \times \text{Present value of an annuity due of 1 for 5}

periods at 10% (Table 6-5)

= \$23,981.62 \times 4.16986

= \$100,000
```

CNH records the lease of the asset and the resulting receivable on January 1, 2015 (the inception of the lease), as follows.

Lease Receivable 100,000
Equipment 100,000

Companies often **report** the lease receivable in the statement of financial position as "Net investment in finance leases." Companies classify it either as current or noncurrent, depending on when they recover the net investment.¹³

¹³In the notes to the financial statements (see Illustration 21-31, page 1091), the lease receivable is reported at its gross amount (minimum lease payments plus the unguaranteed residual value). In addition, the lessor also reports total unearned interest related to the lease. As a result, some lessors record lease receivable on a gross basis and record the unearned interest in a separate account. We illustrate the net approach here because it is consistent with the accounting for the lessee.

CNH replaces its investment (the leased front-end loader, a cost of \$100,000) with a lease receivable. In a manner similar to Ivanhoe's treatment of interest, CNH applies the effective-interest method and recognizes interest revenue as a function of the lease receivable balance, as Illustration 21-13 shows.

CNH CAPITAL LEASE AMORTIZATION SCHEDULE ANNUITY-DUE BASIS Annual Interest Lease Lease Executory (10%) on Receivable Lease Date Payment Costs Lease Receivable Recovery Receivable (a) (b) (c) (d) (e) 1/1/15 \$100,000.00 \$ 25,981.62 \$ 2,000.00 \$ 23,981.62 76,018.38 1/1/15 -0-59,638.60 1/1/16 25,981.62 2,000.00 7,601.84 16,379.78 25,981.62 2,000.00 5,963.86 18,017.76 41,620.84 1/1/17 1/1/18 25,981.62 2,000.00 4,162.08 19,819.54 21,801.30 25,981.62 21,801.30 1/1/19 2,000.00 2,180.32* -0-\$129,908.10 \$10,000.00 \$19,908.10 \$100,000.00

ILLUSTRATION 21-13

Lease Amortization Schedule for Lessor— **Annuity-Due Basis**

- (b) Executory costs included in rental payment.
- (c) Ten percent of the preceding balance of (e) except for 1/1/15.
- (d) (a) minus (b) and (c).
- (e) Preceding balance minus (d).

*Rounded by 19 cents.

On January 1, 2015, CNH records receipt of the first year's lease payment as follows.

25,981.62

Lease Receivable 23.981.62 Property Tax Expense/Property Taxes Payable 2,000.00

On December 31, 2015, CNH recognizes the interest revenue earned during the first year through the following entry.

> Interest Receivable 7,601.84 Interest Revenue 7.601.84

At December 31, 2015, CNH reports the lease receivable in its statement of financial position among current assets or non-current assets, or both. It classifies the portion due within one year or the operating cycle, whichever is longer, as a current asset, and the rest with non-current assets.

Illustration 21-14 shows the assets section as it relates to lease transactions at December 31, 2015.

Non-current assets (investments)	
Lease receivable (\$76,018.38 - \$16,379.78)	\$59,638.60
Current assets	
Interest receivable	\$ 7,601.84
Lease receivable	16,379.78

ILLUSTRATION 21-14

Reporting Lease Transactions by Lessor

The following entries record receipt of the second year's lease payment and recognition of the interest earned.

January 1, 2016

05 004 00

Cash	25,981.62	
Lease Receivable		16,379.78
Interest Receivable		7,601.84
Property Tax Expense/Property Taxes Payable		2,000.00

December 31, 2016

Interest Receivable
Interest Revenue

5,963.86

5,963.86

Journal entries through 2019 follow the same pattern except that CNH records no entry in 2019 (the last year) for interest revenue. Because the company fully collects the receivable by January 1, 2019, no balance (investment) is outstanding during 2019. If Ivanhoe buys the loader for \$5,000 upon expiration of the lease, CNH recognizes disposition of the equipment as follows.

Cash 5,000

Gain on Disposal of Equipment

5,000

25.981.62

Operating Method (Lessor)

Under the **operating method**, the lessor records each rental receipt as rental revenue. It **depreciates the leased asset in the normal manner**, with the depreciation expense of the period matched against the rental revenue. The amount of revenue recognized in each accounting period is a level amount (straight-line basis) regardless of the lease provisions, unless another systematic and rational basis better represents the time pattern in which the lessor derives benefit from the leased asset.

In addition to the depreciation charge, the lessor expenses maintenance costs and the cost of any other services performed under the provisions of the lease that pertain to the current accounting period. The lessor **amortizes over the life of the lease** any costs paid to independent third parties, such as appraisal fees, finder's fees, and costs of credit checks, usually on a straight-line basis.

To illustrate the operating method, assume that the direct-financing lease illustrated in the previous section does not qualify as a finance lease. Therefore, CNH accounts for it as an operating lease. It records the cash rental receipt as follows.

Cash 25,981.62

Rent Revenue

CNH records depreciation as follows (assuming a straight-line method, a cost basis of \$100,000, and a five-year life).

Depreciation Expense 20,000

Accumulated Depreciation – Equipment 20,000

If CNH pays property taxes, insurance, maintenance, and other operating costs during the year, it records them as expenses chargeable against the gross rental revenues.

If CNH owns plant assets that it uses in addition to those leased to others, the company **separately classifies the leased equipment and accompanying accumulated depreciation** as Equipment Leased to Others or Investment in Leased Property. If significant in amount or in terms of activity, CNH separates the rental revenues and accompanying expenses in the income statement from sales revenue and cost of goods sold.

SPECIAL ACCOUNTING PROBLEMS

LEARNING OBJECTIVE 6

Identify special features of lease arrangements that cause unique accounting problems.

The features of lease arrangements that cause unique accounting problems are:

1. Residual values.

4. Initial direct costs.

2. Sales-type leases (lessor).

5. Current versus non-current classification.

3. Bargain-purchase options.

6. Disclosure.

We discuss each of these features on the following pages.

Residual Values

Up to this point, in order to develop the basic accounting issues related to lessee and lessor accounting, we have generally ignored residual values. Accounting for residual values is complex and will probably provide you with the greatest challenge in understanding lease accounting.

T LEARNING OBJECTIVEDescribe the effect of residual values, guaranteed and unguaranteed, on lease accounting.

Meaning of Residual Value

The **residual value** is the estimated fair value of the leased asset at the end of the lease term. Frequently, a significant residual value exists at the end of the lease term, especially when the economic life of the leased asset exceeds the lease term. If title does not pass automatically to the lessee (criterion 1) and a bargain-purchase option does not exist (criterion 2), the lessee returns physical custody of the asset to the lessor at the end of the lease term.

Guaranteed versus Unguaranteed

The residual value may be unguaranteed or guaranteed by the lessee. Sometimes, the lessee agrees to make up any deficiency below a stated amount that the lessor realizes in residual value at the end of the lease term. In such a case, that stated amount is the guaranteed residual value.

The parties to a lease use guaranteed residual value in lease arrangements for two reasons. The first is a business reason: It protects the lessor against any loss in estimated residual value, thereby ensuring the lessor of the desired rate of return on investment. The second reason is an accounting benefit that we will discuss at the end of this chapter.

Lease Payments

A guaranteed residual value—by definition—has more assurance of realization than does an unguaranteed residual value. As a result, the lessor may adjust lease payments because of the increased certainty of recovery. After the lessor establishes the payments, it makes no difference from an accounting point of view whether the residual value is guaranteed or unguaranteed. The net investment that the lessor records (once the payments are set) will be the same.

Assume the same data as in the CNH/Ivanhoe illustrations except that CNH estimates a residual value of \$5,000 at the end of the five-year lease term. In addition, CNH assumes a 10 percent return on investment (ROI), ¹⁴ whether the residual value is guaranteed or unguaranteed. CNH would compute the amount of the lease payments as follows.

CNH'S COMPUTATION OF LEASE PAYMENTS (10% ROI) GUARANTEED OR UNGUARANTEED RESIDUAL VALUE ANNUITY-DUE BASIS, INCLUDING RESIDUAL VALUE	
Fair value of leased asset to lessor Less: Present value of residual value ($\$5,000 \times .62092$, Table 6-2)	\$100,000.00 3,104.60
Amount to be recovered by lessor through lease payments	\$ 96,895.40
Five periodic lease payments (\$96,895.40 ÷ 4.16986, Table 6-5)	\$ 23,237.09

ILLUSTRATION 21-15 Lessor's Computation of Lease Payments

Contrast the foregoing lease payment amount to the lease payments of \$23,981.62 as computed in Illustration 21-9 (on page 1074), where no residual value existed. In the

¹⁴Technically, the rate of return CNH demands would differ depending upon whether the residual value was guaranteed or unguaranteed. To simplify the illustrations, we are ignoring this difference in subsequent sections.

second example, the payments are less because the present value of the residual value reduces CNH's total recoverable amount from \$100,000 to \$96,895.40.

Lessee Accounting for Residual Value

Whether the estimated residual value is guaranteed or unguaranteed has both economic and accounting consequence to the lessee. We saw the economic consequence—lower lease payments—in the preceding example. The accounting consequence is that the **minimum lease payments**, the basis for capitalization, include the guaranteed residual value but exclude the unguaranteed residual value.

Guaranteed Residual Value (Lessee Accounting). A guaranteed residual value affects the lessee's computation of minimum lease payments. Therefore, it also affects the amounts capitalized as a leased asset and a lease obligation. In effect, the guaranteed residual value is an additional lease payment that the lessee will pay in property or cash, or both, at the end of the lease term.

Using the rental payments as computed by the lessor in Illustration 21-15, the minimum lease payments are \$121,185.45 ([$$23,237.09 \times 5] + $5,000$). Illustration 21-16 shows the capitalized present value of the minimum lease payments (excluding executory costs) for Ivanhoe.

ILLUSTRATION 21-16

- (d) (a) minus (b) and (c).
- (e) Preceding balance minus (d).

- *Represents the guaranteed residual value.
- **Rounded by 24 cents.

Ivanhoe records the leased asset (front-end loader) and liability, depreciation, interest, property tax, and lease payments on the basis of a guaranteed residual value. (These journal entries are shown in Illustration 21-22, on page 1083.) The format of these entries is the same as illustrated earlier although the amounts are different because of the guaranteed residual value. Ivanhoe records the loader at \$100,000 and depreciates it over five years. To compute depreciation, it subtracts the guaranteed residual value from the cost of the loader. Assuming that Ivanhoe uses the straight-line method, the depreciation expense each year is $$19,000 ([\$100,000 - \$5,000] \div 5 \text{ years})$.

At the end of the lease term, before the lessee transfers the asset to CNH, the lease asset and liability accounts have the following balances.

Leased equipment (under capital leases) Less: Accumulated depreciation—	\$100,000.00	Interest payable Lease liability	\$ 454.76 4,545.24
leased equipment	95,000.00 \$ 5,000.00		\$5,000.00

ILLUSTRATION 21-18

Account Balances on Lessee's Books at End of Lease Term—Guaranteed Residual Value

If, at the end of the lease, the fair value of the residual value is less than \$5,000, Ivanhoe will have to record a loss. Assume that Ivanhoe depreciated the leased asset down to its residual value of \$5,000 but that the fair value of the residual value at December 31, 2019, was \$3,000. In this case, Ivanhoe would have to report a loss of \$2,000. Assuming that it pays cash to make up the residual value deficiency, Ivanhoe would make the following journal entry.

Loss on Disposal of Equipment	2,000.00	
Interest Expense (or Interest Payable)	454.76	
Lease Liability	4,545.24	
Accumulated Depreciation - Leased Equipment	95,000.00	
Leased Equipment		100,000.00
Cash		2.000.00

If the fair value *exceeds* \$5,000, a gain may be recognized. CNH and Ivanhoe may apportion gains on guaranteed residual values in whatever ratio the parties initially agree.

When there is a guaranteed residual value, the lessee must be careful not to depreciate the total cost of the asset. For example, if Ivanhoe mistakenly depreciated the total cost of the loader (\$100,000), a misstatement would occur. That is, the carrying amount of the asset at the end of the lease term would be zero, but Ivanhoe would show the liability under the finance lease at \$5,000. In that case, if the asset was worth \$5,000, Ivanhoe would end up reporting a gain of \$5,000 when it transferred the asset back to CNH. As a result, Ivanhoe would overstate depreciation and would understate net income in 2015–2018; in the last year (2019), net income would be overstated.

Unguaranteed Residual Value (Lessee Accounting). From the lessee's viewpoint, an unguaranteed residual value is the same as no residual value in terms of its effect upon the lessee's method of computing the minimum lease payments and the capitalization of the leased asset and the lease liability.

Assume the same facts as those above except that the \$5,000 residual value is **unguaranteed** instead of guaranteed. The amount of the annual lease payments would be the same—\$23,237.09. Whether the residual value is guaranteed or unguaranteed, CNH will recover the same amount through lease rentals—that is, \$96,895.40. The minimum lease payments are \$116,185.45 (\$23,237.09 \times 5). Ivanhoe would capitalize the amount shown in Illustration 21-19 (on page 1082).

Ivanhoe records the leased asset and liability, depreciation, interest, property tax, and lease payments on the basis of an unguaranteed residual value. (These journal entries are shown in Illustration 21-22, on page 1083.) The format of these finance lease entries is the same as illustrated earlier. Note that Ivanhoe records the leased asset at \$96,895.40 and depreciates it over five years. Assuming that the company uses the straight-line method, the depreciation expense each year is \$19,379.08 (\$96,895.40 \div 5 years). At the end of the lease term, before Ivanhoe transfers the asset to CNH, the lease asset and liability accounts have the following balances.

ILLUSTRATION 21-21

Account Balances on Lessee's Books at End of Lease Term— Unguaranteed Residual Value

Leased equipment	\$96,895	Lease liability	\$-0-	
Less: Accumulated depreciation— leased equipment	96,895 \$ -0-			

Assuming that Ivanhoe has fully depreciated the leased asset and has fully amortized the lease liability, no entry is required at the end of the lease term except to remove the asset from the books.

If Ivanhoe depreciated the asset down to its unguaranteed residual value, a misstatement would occur. That is, the carrying amount of the leased asset would be \$5,000

at the end of the lease, but the liability under the finance lease would be stated at zero before the transfer of the asset. Thus, Ivanhoe would end up reporting a loss of \$5,000 when it transferred the asset back to CNH. Ivanhoe would understate depreciation and would overstate net income in 2015–2018; in the last year (2019), net income would be understated because of the recorded loss.

Lessee Entries Involving Residual Values. Illustration 21-22 shows, in comparative form, Ivanhoe's entries for both a guaranteed and an unguaranteed residual value.

Lessor Accounting for Residual Value

As we indicated earlier, the lessor will recover the same net investment whether the residual value is guaranteed or unguaranteed. That is, the lessor works on the assumption that it will realize **the residual value at the end of the lease term whether guaranteed or unguaranteed**. The lease payments required in order for the company to earn a certain return on investment are the same (e.g., \$23,237.09 in our example) whether the residual value is guaranteed or unguaranteed.

To illustrate, we again use the CNH/Ivanhoe data and assume classification of the lease as a direct-financing lease. With a residual value (either guaranteed or unguaranteed) of \$5,000, CNH determines the payments as follows.

Fair value of leased equipment
Less: Present value of residual value (\$5,000 × .62092, Table 6-2)

Amount to be recovered by lessor through lease payments

Sales-Type Leases (Lessor)

Describe the lessor's accounting for sales-type leases.

As already indicated, the primary difference between a direct-financing lease and a **sales-type lease** is the manufacturer's or dealer's gross profit (or loss). The diagram in Illustration 21-26 presents the distinctions between direct-financing and sales-type leases.

In a sales-type lease, the lessor records the sales price of the asset, the cost of goods sold and related inventory reduction, and the lease receivable. The information necessary to record the sales-type lease is as follows.

ILLUSTRATION 21-26

Direct-Financing versus Sales-Type Leases

SALES-TYPE LEASE TERMS

LEASE RECEIVABLE (also referred to as **NET INVESTMENT**). The present value of the minimum lease payments plus the present value of any unguaranteed residual value. The lease receivable therefore includes the present value of the residual value, whether guaranteed or not.

SALES PRICE OF THE ASSET. The present value of the minimum lease payments. **COST OF GOODS SOLD.** The cost of the asset to the lessor, less the present value of any unguaranteed residual value.

When recording sales revenue and cost of goods sold, there is a difference in the accounting for guaranteed and unguaranteed residual values. The guaranteed residual value can be considered part of sales revenue because the lessor knows that the entire asset has been sold. But, there is less certainty that the unguaranteed residual portion of the asset has been "sold" (i.e., will be realized). Therefore, the lessor recognizes sales and cost of goods sold only for the portion of the asset for which realization is assured. However, the gross profit amount on the sale of the asset is the same whether a guaranteed or unguaranteed residual value is involved.

To illustrate a sales-type lease with a guaranteed residual value and with an unguaranteed residual value, assume the same facts as in the preceding direct-financing lease situation (pages 1080–1081). The estimated residual value is \$5,000 (the present value of which is \$3,104.60), and the leased equipment has an \$85,000 cost to the dealer (CNH). Assume that the fair value of the residual value is \$3,000 at the end of the lease term.

Illustration 21-27 (on page 1086) shows the computation of the amounts relevant to a sales-type lease.

ILLUSTRATION 21-27

Computation of Lease Amounts by CNH Capital—Sales-Type Lease

	Sales-Type Leas	se
	Guaranteed Residual Value	Unguaranteed Residual Value
Lease receivable	\$100,000 [\$23,237.09 × 4.16986 (Table 6-5) + \$5,000 ×.62092 (Table 6-2)]	Same
Sales price of the asset	\$100,000	\$96,895.40 (\$100,000 - \$3,104.60)
Cost of goods sold	\$85,000	\$81,895.40 (\$85,000 — \$3,104.60)
Gross profit	\$15,000 (\$100,000 – \$85,000)	\$15,000 (\$96,895.40 — \$81,895.40)

CNH records the same profit (\$15,000) at the point of sale whether the residual value is guaranteed or unguaranteed. The difference between the two is that **the sales** revenue and cost of goods sold amounts are different.

In making this computation, we deduct the present value of the unguaranteed residual value from sales revenue and cost of goods sold. The reason—the revenue recognition criteria have not been met **because of the uncertainty surrounding the realization of the unguaranteed residual value**. That is, the gross profit recognized is the same as the amount recognized in an outright sale. [9]¹⁵

CNH makes the entries shown in Illustration 21-28 to record this transaction on January 1, 2015, and the receipt of the residual value at the end of the lease term.

¹⁵Thus, in accounting for sales-type leases, lessors must also look to IFRS to apply revenue recognition guidelines. Recall (in Chapter 18) that revenue is recognized when a performance obligation is satisfied.

Companies must periodically review the **estimated unguaranteed residual value** in a sales-type lease. If the estimate of the unguaranteed residual value declines, the company must revise the accounting for the transaction using the changed estimate. The decline represents a reduction in the lessor's lease receivable (net investment). The lessor recognizes the decline as a loss in the period in which it reduces the residual estimate. Companies do not recognize upward adjustments in estimated residual value.

Bargain-Purchase Option (Lessee)

As stated earlier, a bargain-purchase option allows the lessee to purchase the leased property for a future price that is substantially lower than the property's expected future fair value. The price is so favorable at the lease's inception that the future exercise of the option appears to be reasonably assured. If a bargain-purchase option exists, the lessee must increase the present value of the minimum lease payments by the present value of the option price.

For example, assume that Ivanhoe Mines in Illustration 21-17 (on page 1080) had an option to buy the leased equipment for \$5,000 at the end of the five-year lease term. At that point, Ivanhoe and CNH expect the fair value to be \$18,000. The significant difference between the option price and the fair value creates a bargain-purchase option, and the exercise of that option is reasonably assured.

A bargain-purchase option affects the accounting for leases in essentially the same way as a guaranteed residual value. In other words, with a guaranteed residual value, the lessee must pay the residual value at the end of the lease. Similarly, a purchase option that is a bargain will almost certainly be paid by the lessee. Therefore, the computations, amortization schedule, and entries that would be prepared for this \$5,000 bargain-purchase option are identical to those shown for the \$5,000 guaranteed residual value (see Illustrations 21-15, 21-16, and 21-17 on pages 1079 and 1080).

The only difference between the accounting treatment for a bargain-purchase option and a guaranteed residual value of identical amounts and circumstances is in the **computation of the annual depreciation**. In the case of a guaranteed residual value, Ivanhoe depreciates the asset over the lease term; in the case of a bargain-purchase option, it uses the **economic life** of the asset.

Initial Direct Costs (Lessor)

Initial direct costs are of two types: incremental and internal. **Incremental direct costs** are paid to independent third parties for originating a lease arrangement. Examples include the cost of independent appraisal of collateral used to secure a lease, the cost of an outside credit check of the lessee, or a broker's fee for finding the lessee.

Internal direct costs are directly related to specified activities performed **by the lessor** on a given lease. Examples are evaluating the prospective lessee's financial condition; evaluating and recording guarantees, collateral, and other security arrangements; negotiating lease terms and preparing and processing lease documents; and closing the transaction. The costs directly related to an employee's time spent on a specific lease transaction are also considered initial direct costs.

However, initial direct costs should **not** include **internal indirect costs**. Such costs are related to activities the lessor performs for advertising, servicing existing leases, and establishing and monitoring credit policies. Nor should the lessor include the costs for supervision and administration or for expenses such as rent and depreciation.

The accounting for initial direct costs depends on the type of lease: [10]

- For **operating leases**, the lessor should defer initial direct costs and **allocate them over the lease term** in proportion to the recognition of rental revenue. ¹⁶
- For **sales-type leases**, the lessor expenses the initial direct costs **in the period** in which it recognizes the profit on the sale.
- For a **direct-financing lease**, the lessor adds initial direct costs to the net investment in the lease and **amortizes them over the life of the lease as a yield adjustment**.

In a direct-financing lease, the lessor must disclose the unamortized deferred initial direct costs that are part of its investment in the direct-financing lease. For example, if the carrying value of the asset in the lease is \$4,000,000 and the lessor incurs initial direct costs of \$35,000, then the lease receivable (net investment in the lease) would be \$4,035,000. The yield would be lower than the initial rate of return, and the lessor would adjust the yield to ensure proper amortization of the amount over the life of the lease.

Current versus Non-Current

Earlier in the chapter, we presented the classification of the lease liability/receivable in an annuity-due situation. Illustration 21-7 (on page 1071) indicated that Ivanhoe's current liability is the payment of \$23,981.62 (excluding \$2,000 of executory costs) to be made on January 1 of the next year. Similarly, as shown in Illustration 21-14 (on page 1077), CNH's current asset is the \$23,981.62 (excluding \$2,000 of executory costs) it will collect on January 1 of the next year. In these annuity-due instances, the statement of financial position date is December 31 and the due date of the lease payment is January 1 (less than one year), so the present value (\$23,981.62) of the payment due the following January 1 is the same as the rental payment (\$23,981.62).

What happens if the situation is an ordinary annuity rather than an annuity due? For example, assume that the rent is due at the **end of the year** (December 31) rather than at the beginning (January 1). Lease liabilities should be classified into current and non-current amounts. [11] However, IFRS does not indicate how to measure the current and non-current amounts. A common method of measuring the current liability portion in ordinary annuity leases is the change-in-the-present-value method.

To illustrate the change-in-the-present-value method, assume an ordinary-annuity situation with the same facts as the CNH/Ivanhoe case, excluding the \$2,000 of executory costs. Because Ivanhoe pays the rents at the end of the period instead of at the beginning, CNH sets the five rents at \$26,379.73, to have an effective-interest

¹⁶Technically, initial direct costs for operating leases are reported as an addition to the carrying amount of the leased asset. Because the deferred costs may be amortized on a different basis that used for depreciation expense, it is common for lessors to present these amounts as follows (assumed amounts).

Leased assets	€100,000
Less: Accumulated depreciation—leased assets	20,000
	80,000
Deferred initial direct costs	10,000
	€ 90,000

rate of 10 percent. Illustration 21-29 shows the ordinary-annuity amortization schedule.

LEASE AMORTIZATION SCHEDULE ORDINARY-ANNUITY BASIS							
Annual Reduction							
Lease Interest of Lease Balance of Lease							
Date	Payment	10%	Liability/Receivable	Liability/Receivable			
1/1/15				\$100,000.00			
12/31/15	\$ 26,379.73	\$10,000.00	\$ 16,379.73	83,620.27			
12/31/16	26,379.73	8,362.03	18,017.70	65,602.57			
12/31/17	26,379.73	6,560.26	19,819.47	45,783.10			
12/31/18	26,379.73	4,578.31	21,801.42	23,981.68			
12/31/19	26,379.73	2,398.05*	23,981.68	-0-			
	\$131,898.65	\$31,898.65	\$100,000.00				

ILLUSTRATION 21-29 Lease Amortization Schedule—Ordinary-Annuity Basis

The current portion of the lease liability/receivable under the **change-in-the-present-value method** as of December 31, 2015, would be \$18,017.70 (\$83,620.27 – \$65,602.57). As of December 31, 2016, the current portion would be \$19,819.47 (\$65,602.57 – \$45,783.10). At December 31, 2015, CNH classifies \$65,602.57 of the receivable as non-current.

Thus, both the annuity-due and the ordinary-annuity situations report the reduction of principal for the next period as a current liability/current asset. In the annuity-due situation, CNH accrues interest during the year but is not paid until the next period. As a result, a current asset arises for the receivable reduction and for the interest that was earned in the preceding period.

In the ordinary-annuity situation, the interest accrued during the period is also paid in the same period. Consequently, the lessor shows as a current asset only the principal reduction due in the next period.

Disclosing Lease Data

In addition to the amounts reported in the financial statements related to lease assets and liabilities, the IASB requires **lessees** and **lessors** to disclose certain information about leases. These requirements vary based upon the type of lease (finance or operating) and whether the issuer is the lessor or lessee. These disclosure requirements provide investors with the following information:

For lessees: [12]

- A general description of material leasing arrangements.
- A reconciliation between the total of future minimum lease payments at the end of the reporting period and their present value.
- The total of future minimum lease payments at the end of the reporting period, and their present value for periods (1) not later than one year, (2) later than one year and not later than five years, and (3) later than five years.

For lessors: [13]

• A general description of material leasing arrangements.

- A reconciliation between the gross investment in the lease at the end of the reporting period, and the present value of minimum lease payments receivable at the end of the reporting period.
- Unearned finance income.
- The gross investment in the lease and the present value of minimum lease payments receivable at the end of the reporting period for periods (1) not later than one year, (2) later than one year and not later than five years, and (3) later than five years.

Illustration 21-30 presents financial statement excerpts from the 2012 annual report of Delhaize Group (BEL). These excerpts represent the statement and note disclosures typical of a lessee having both finance leases and operating leases.

ILLUSTRATION 21-30

Disclosure of Leases by Lessee

Delhaize Group

(in millions)

2012 Non-Current Liabilities Long-term obligations under finance leases, less current portion €612 **Current Liabilities** Current obligations under finance leases €62

18.3 Leases

Delhaize Group operates a significant number of its stores under finance and operating lease arrangements. Various properties leased are (partially or fully) subleased to third parties, where the Group is therefore acting as a lessor (see further below). Lease terms (including reasonably certain renewal options) generally range from 1 to 45 years with renewal options ranging from 3 to 30 years.

The schedule below provides the future minimum lease payments, which were not reduced by expected minimum sublease income of €35 million, due over the term of non-cancellable subleases, as of December 31, 2012:

General description

Reconciliation, timing, and amounts of cash outflows

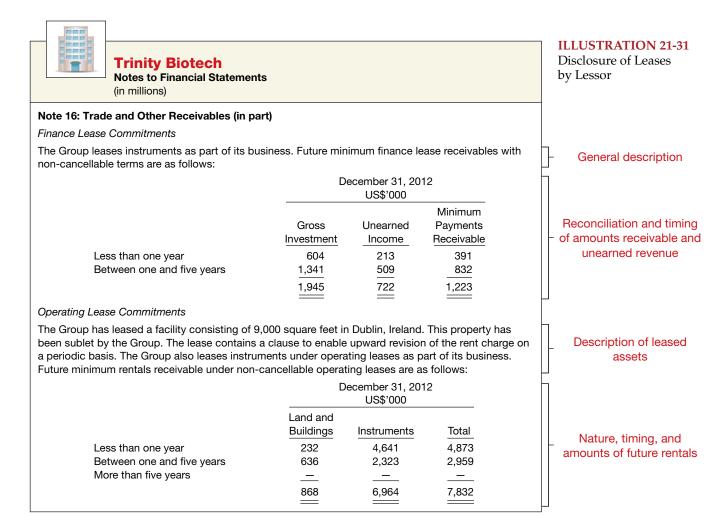

Additional information

(in millions of €)	2013	2014	2015	2016	2017	Thereafter	Total
Finance leases							
Future minimum lease payments	129	115	111	101	90	772	1,318
Less amount representing interest	(67)	(64)	(59)	(54)	(48)	(352)	(644)
Present value of minimum							
lease payments	62	51	52	47	42	420	674
Of which related to closed store							
lease obligations	6	5	5	5	4	33	58
Operating leases							
Future minimum lease payments							
(for non-cancellable leases)	312	260	231	195	164	754	1,916
Of which related to closed store							
lease obligations	21	18	15	14	12	49	129

The average effective interest rate for finance leases was 11.6% at December 31, 2012. The fair value of the Group's finance lease obligations using an average market rate of 5.1% at December 31, 2012 was €842 million.

Rent payments, including scheduled rent increases, are recognized on a straight-line basis over the minimum lease term. Total rent expense under operating leases was €300 million in 2012, being included predominately in "Selling, general and administrative expenses."

Illustration 21-31 presents the lease note disclosure from the 2012 annual report of Trinity Biotech plc (IRL). The disclosure highlights required lessor disclosures.

Unresolved Lease Accounting Problems

As we indicated at the beginning of this chapter, lease accounting is subject to abuse. Companies make strenuous efforts to circumvent IFRS in this area. In practice, the strong desires of lessees to resist capitalization have rendered the accounting rules for capitalizing leases partially ineffective. Leasing generally involves large monetary amounts that, when capitalized, materially increase reported liabilities and adversely affect the debt to equity ratio. Lessees also resist lease capitalization because charges to expense made in the early years of the lease term are higher under the finance lease method than under the operating method, frequently without tax benefit. As a consequence, "let's beat the lease standard" is one of the most popular games in town.

To avoid leased asset capitalization, companies design, write, and interpret lease agreements to prevent satisfying any of the four finance lease criteria. Companies can easily devise lease agreements in such a way, by meeting the following specifications.

- **1.** Ensure that the lease does not specify the transfer of title of the property to the lessee.
- **2.** Do not write in a bargain-purchase option.
- **3.** Set the lease term sufficiently below the estimated economic life of the leased property such that the economic life test is not met.
- **4.** Arrange for the present value of the minimum lease payments to be sufficiently less than the fair value of the leased property.

The real challenge lies in disqualifying the lease as a finance lease to the lessee, while having the same lease qualify as a finance (sales or financing) lease to the lessor. Unlike lessees, lessors try to avoid having lease arrangements classified as operating leases.¹⁷

Avoiding the first three criteria is relatively simple, but it takes a little ingenuity to avoid the recovery of investment test for the lessee while satisfying it for the lessor. Two of the factors involved in this effort are (1) the use of the incremental borrowing rate by the lessee when it is higher than the implicit interest rate of the lessor, by making information about the implicit rate unavailable to the lessee; and (2) residual value guarantees.

The lessee's use of the higher interest rate is probably the more popular subterfuge. Lessees are knowledgeable about the fair value of the leased property and, of course, the rental payments. However, they generally are unaware of the estimated residual value used by the lessor. Therefore, the lessee who does not know exactly the lessor's implicit interest rate might use a different (higher) incremental borrowing rate.

The residual value guarantee is the other unique, yet popular, device used by lessees and lessors. In fact, a whole new industry has emerged to circumvent symmetry between the lessee and the lessor in accounting for leases. The residual value guarantee has spawned numerous companies whose principal, or even sole, function is to guarantee the residual value of leased assets.

Because the minimum lease payments include the guaranteed residual value for the lessor, this satisfies the recovery of investment test. The lease is a non-operating lease to the lessor. But because a third-party guarantees the residual value, the minimum lease payments of the lessee exclude the guarantee. Thus, by merely transferring some of the risk to a third party, lessees can alter substantially the accounting treatment by converting what would otherwise be finance leases to operating leases.¹⁸

The nature of the criteria encourages much of this circumvention, stemming from weaknesses in the basic objective of the lease accounting guidelines to determine whether the lease qualifies as an operating or finance lease. This is often a very blurry line. The IASB has recognized that the existing lease accounting does not meet investors' needs and has proposed new rules to improve lease accounting.

Based on a right of use model, the proposed rules require that all leases, regardless of their terms, be accounted for in a manner similar to how finance leases are treated today. That is, the notion of an operating lease will be eliminated. In addition, the rules call for including not only the contractual amounts due over the lease term but also the lessee's best estimate of contingent rents due over that period. The lease term is not just the term of the initial lease but includes renewal periods that are more likely than not to occur.

Some believe that a more workable solution is to require capitalization of all leases that have non-cancelable payment terms in excess of one year. Under this approach, the lessee acquires an asset (a property right) and a corresponding liability, rather than on the basis that the lease transfers substantially all the risks and rewards of ownership.

¹⁷The reason is that most lessors are banks, which are not permitted to hold these assets on their statements of financial position except for relatively short periods of time. Furthermore, the finance lease transaction from the lessor's standpoint provides higher income flows in the earlier periods of the lease life.

¹⁸As an aside, third-party guarantors have experienced some difficulty. **Lloyd's of London** (GBR) at one time insured the fast-growing U.S. computer-leasing industry in the amount of \$2 billion against revenue losses, and losses in residual value, for canceled leases. Because of "overnight" technological improvements and the successive introductions of more efficient and less expensive computers, lessees in abundance canceled their leases. As the market for second-hand computers became flooded, residual values plummeted, and third-party guarantor Lloyd's of London projected a loss of \$400 million. The lessees' and lessors' desire to circumvent accounting rules stimulated much of the third-party guarantee business.

Evolving Issue

LEASE ACCOUNTING-IF IT QUACKS LIKE A DUCK

Many believe that if the lease accounting rules were to be reconsidered, they would support a property right approach in which all leases are included as "rights to use property" and as "lease obligations" in the lessee's statement of financial position. The IASB (with the FASB) has issued a proposal on lease accounting to address off-balance-sheet reporting of leases. As summarized

in the table below, early analysis of the potential impact of the proposed leasing rules indicates significant impacts.

As indicated, over \$1.3 trillion of operating leases will come on-balance-sheet if the rules are adopted. In addition, there will be a significant negative impact on lessee income statements in the early years of leases.

A quick look at the current leasing market, and some possible effects of the proposed rules:

- \$600 billion. Annual volume of leased equipment.
- 70%. Volume of real estate leases as a percentage of all leases held by public companies.
- \$1.3 trillion. Amount of operating lease payments that public companies will bring back on-balance-sheet as capital leases under the proposed rule.
- 7%. Potential first-year average increase in lease expense for a 3-year lease.
- 21%. Potential first-year average increase in lease expense for a 10-year lease.

Source: Equipment Leasing and Finance Association, 2009; PricewaterhouseCoopers and Rotterdam School of Management, 2009.

As shown below, the frontloading of lease expenses will be felt by lessees in several industry sectors.

Lease Expense Impacts by Industry Sector			
		First-Year	Cumulative
	Typical	% Increase	% Increase
	Lease Term	Prompted by	Through
Sector	(Years)	New Rules*	Peak Year*
Airline	17	26%	128%/yr. 9
Automotive fleet	3	4	N/A
Banking	10	21	64%/yr. 5
Copier/office equipment	3	7	7%/yr. 3
Equipment manufacturers	5	11	17%/yr. 2
Healthcare equipment	5	11	17%/yr. 2
Information technology	3	7	7%/yr. 2
Rail	22	26	200%/yr. 12
Real estate	10	21	64%/yr. 5
Trucking	7	16	33%/yr. 4

*As compared with the straight-line method of accounting. Source: Equipment Leasing and Finance Association, 2009

Given these effects—increased reported debt and lower income—as a consequence of these proposed rules, it is not surprising that the IASB (and FASB) is receiving numerous comments opposing changes in lease accounting rules. For example, a recent survey of analysts indicates fairly strong support for bringing operating leases

out of the notes and onto the statement of financial position. At the same time, an analysis of the new rules and how they might impact the advantages of leasing (presented in the following table) suggests that many of the advantages of leases will remain after implementation of the new rules.

Reason for Leasing	Details	Status After Proposed New Rules Implemented
Funding source	Additional capital source, 100% financing, fixed rate, level payments, longer terms.	Still a major benefit versus a purchase—money loan financing, fixed rate, level payments— especially for smaller companies with limited sources of capital.
Low-cost capital	Low payments/rate due to tax benefits, residual and lessor's comparatively low cost of funds.	Still a benefit versus a loan.
Tax benefits	Lessee cannot use tax benefits and lease versus buy shows lease option offers lowest after tax cost.	Still a benefit.
Manage need for assets/ residual risk transfer	Lessee has flexibility to return asset.	Still a benefit.
Convenience	Quick and convenient financing process often available at point-of-sale.	Still a benefit.
Regulatory	Can help in meeting capital requirements.	Still a partial benefit if the capitalized amount is less than the cost of the asset as it is in many leases due to residuals assumed and tax benefits.
Accounting	Asset and liability off-balance-sheet.	Still a partial benefit if the capitalized amount is less than the cost of the asset as it is in many leases due to residuals assumed and tax benefits.

So while concerns about changes in lease accounting may be valid, accounting standard-setters are resolved to address lease accounting deficiencies. As the chairperson of the IASB remarked, "... a financing, in the form of a loan to purchase an asset, then it would be recorded. Call it a lease and miraculously it does not show up in your books. In my book, if it looks like a duck, swims like a duck, and quacks like a duck, then it probably is a duck. So is the case with debt—leasing or otherwise."

We hope that new accounting rules can be developed so that financial statements provide relevant and representationally faithful information about leasing arrangements.

CFO Magazine (December 1, 2010); and Hans Hoogervorst, "Harmonisation and Global Economic Consequences," public lecture at the London School of Economics (November 6, 2012). Survey results from Lease Accounting Survey Report, CFA Institute (October 2013).

GLOBAL ACCOUNTING INSIGHTS

LEASE ACCOUNTING

Leasing is a global business. Lessors and lessees enter into arrangements with one another without regard to national boundaries. Although U.S. GAAP and IFRS for leasing are similar, both the FASB and the IASB have decided

that the existing accounting does not provide the most useful, transparent, and complete information about leasing transactions that should be provided in the financial statements.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to the accounting for leases.

Similarities

 Both U.S. GAAP and IFRS share the same objective of recording leases by lessees and lessors according to their economic substance, that is, according to the definitions of assets and liabilities.

- Much of the terminology for lease accounting in U.S. GAAP and IFRS is the same.
- Under U.S. GAAP and IFRS, lessees and lessors use the same general lease capitalization criteria to determine if the risks and rewards of ownership have been transferred in the lease.

Differences

- One difference in lease terminology is that finance leases are referred to as capital leases in U.S. GAAP.
- U.S. GAAP for leases uses bright-line criteria to determine
 if a lease arrangement transfers the risks and rewards of
 ownership; IFRS is more general in its provisions.
- U.S. GAAP has additional lessor criteria: payments are collectible, and there are no additional costs associated with a lease.
- U.S. GAAP requires use of the incremental rate unless the implicit rate is known by the lessee and the implicit

- rate is lower than the incremental rate. IFRS requires that lessees use the implicit rate to record a lease unless it is impractical to determine the lessor's implicit rate.
- Under U.S. GAAP, extensive disclosure of future noncancelable lease payments is required for each of the next five years and the years thereafter. IFRS does not require it although some companies (e.g., **Nokia** (FIN)) provide a year-by-year breakout of payments due in years 1 through 5.
- The FASB standard for leases was originally issued in 1976. The standard (*SFAS No. 13*) has been the subject of more than 30 interpretations since its issuance. The IFRS leasing standard is *IAS 17*, first issued in 1982. This standard is the subject of only three interpretations. One reason for this small number of interpretations is that IFRS does not specifically address a number of leasing transactions that are covered by U.S. GAAP. Examples include lease agreements for natural resources, sale-leasebacks, real estate leases, and leveraged leases.

About the Numbers

Under U.S. GAAP, extensive disclosure of future noncancelable lease payments is required for each of the next five years and the years thereafter, as shown in disclosure below by Wal-Mart Stores, Inc. (USA).

Note 12: Commitments

The Company and certain of its subsidiaries have long-term leases for stores and equipment. Aggregate minimum annual rentals at January 31, 2012, under non-cancelable leases are as follows (amounts in millions):

Tollows (arricante in millions).	Operating Leases	Capital Leases
2013	\$1,644	\$ 608
2014	1,590	580
2015	1,525	532
2016	1,428	497
2017	1,312	457
Thereafter	8,916	3,261
Total minimum rentals		\$5,935
Less estimated executory costs		50
Net minimum lease payments		\$5,885
Less imputed interest		2,550
Present value of minimum lease payments		\$3,335
Rental expense was approximately \$2.4 bill	ion in 2012 and \$2 billion	==== n in 2011.

On the Horizon

Lease accounting is one of the areas identified in the IASB/FASB Memorandum of Understanding. The Boards have issued proposed rules based on "right of use," which requires that all leases, regardless of their terms, be accounted for in a manner similar to how finance leases are treated today. That is, the notion of an operating lease

will be eliminated, which will address the concerns under current rules in which no asset or liability is recorded for many operating leases. A final standard is expected in 2015. You can follow the lease project at the IASB website (http://www.iasb.org).

KEY TERMS

bargain-purchase option, 1066 bargain-renewal option, 1067 capitalization criteria, 1066 capitalization of leases, 1064 direct-financing lease, 1075 effective-interest method, 1069 executory costs, 1068 finance lease, 1065 guaranteed residual value, 1068, 1079 implicit interest rate, 1068 incremental borrowing rate, 1068 initial direct costs, 1087 lease, 1060 lease receivable, 1075 lease term, 1062, 1067 lessee, 1060 lessor, 1060 manufacturer's or dealer's profit (or loss), 1074 minimum lease payments, 1067 non-cancelable, 1064 off-balance-sheet financing, 1062 operating lease, 1065 residual value, 1079 sales-type lease, 1084 third-party guarantors, 1068 (n) unguaranteed residual value, 1081

SUMMARY OF LEARNING OBJECTIVES

- **Explain the nature, economic substance, and advantages of lease transactions.** A lease is a contractual agreement between a lessor and a lessee that conveys to the lessee the right to use specific property (real or personal), owned by the lessor, for a specified period of time. In return, the lessee periodically pays cash (rent) to the lessor. The advantages of lease transactions are (1) 100 percent financing, (2) protection against obsolescence, (3) flexibility, (4) less costly financing, (5) possible tax advantages, and (6) off-balance-sheet financing.
- Describe the accounting criteria and procedures for capitalizing leases by the lessee. A lease is a finance lease if it meets one or more of the following criteria. (1) The lease transfers ownership of the property to the lessee. (2) The lease contains a bargain-purchase option. (3) The lease term is for a major part of the estimated economic life of the leased property. (4) The present value of the minimum lease payments (excluding executory costs) amounts to subtantially all of the fair value of the leased property. For a finance lease, the lessee records an asset and a liability at the present value of the minimum lease payments at the inception of the lease.
- Contrast the operating and capitalization methods of recording leases. The total charges to operations are the same over the lease term whether accounting for the lease as a finance lease or as an operating lease. Under the finance lease treatment, the charges are higher in the earlier years and lower in the later years. If using an accelerated method of depreciation, the differences between the amounts charged to operations under the two methods would be even larger in the earlier and later years. If using a finance lease instead of an operating lease, the following occurs: (1) an increase in the amount of reported debt (both short-term and long-term), (2) an increase in the amount of total assets (specifically long-lived assets), and (3) lower income early in the life of the lease and, therefore, lower retained earnings.
- Explain the advantages and economics of leasing to lessors and identify the classifications of leases for the lessor. Three important benefits available to the lessor are (1) interest revenue, (2) tax incentives, and (3) residual value profits. Lessors are essentially renting or selling assets, and in many cases are providing financing for the purchase of the asset. The lessor determines the amount of the rental, basing it on the rate of return—the implicit rate—needed to justify leasing the asset, taking into account the credit standing of the lessee, the length of the lease, and the status of the residual value (guaranteed versus unguaranteed).

A lessor may classify leases for accounting purposes as follows: (1) operating leases, (2) direct-financing leases, and (3) sales-type leases. The lessor should classify and account for an arrangement as a direct-financing lease or a sales-type lease if, at the date of the lease agreement, the lease meets one or more of the lease capitalization criteria (as shown in learning objective 2 for lessees). The lessor classifies and accounts for all leases that fail to meet the criteria as operating leases.

Describe the lessor's accounting for direct-financing leases. Leases that are in substance the financing of an asset purchase by a lessee require the lessor to substitute a "lease receivable" for the leased asset. "Lease receivable" is the present value of the minimum lease payments plus the present value of the unguaranteed residual value. Therefore, lessors include the residual value, whether guaranteed or unguaranteed, as part of lease receivable.

- Identify special features of lease arrangements that cause unique accounting problems. The features of lease arrangements that cause unique accounting problems are (1) residual values, (2) sales-type leases (lessor), (3) bargain-purchase options, (4) initial direct costs, (5) current versus non-current, and (6) disclosure.
- Describe the effect of residual values, guaranteed and unguaranteed, on lease accounting. Whether the estimated residual value is guaranteed or unguaranteed is of both economic and accounting consequence to the lessee. The accounting consequence is that the minimum lease payments, the basis for capitalization, include the guaranteed residual value but exclude the unguaranteed residual value. A guaranteed residual value affects the lessee's computation of minimum lease payments and the amounts capitalized as a leased asset and a lease obligation. In effect, the guaranteed residual value is an additional lease payment that the lessee will pay in property or cash, or both, at the end of the lease term. An unguaranteed residual value from the lessee's viewpoint is the same as no residual value in terms of its effect upon the lessee's method of computing the minimum lease payments and the capitalization of the leased asset and the lease liability.
- Describe the lessor's accounting for sales-type leases. A sales-type lease recognizes interest revenue like a direct-financing lease. It also recognizes a manufacturer's or dealer's profit. In a sales-type lease, the lessor records at the inception of the lease the sales price of the asset, the cost of goods sold and related inventory reduction, and the lease receivable. Sales-type leases differ from direct-financing leases in terms of the cost and fair value of the leased asset, which results in gross profit. Lease receivable and interest revenue are the same whether a guaranteed or an unguaranteed residual value is involved. The accounting for guaranteed and for unguaranteed residual values requires recording sales revenue and cost of goods sold differently. The guaranteed residual value can be considered part of sales revenue because the lessor knows that the entire asset has been sold. There is less certainty that the unguaranteed residual portion of the asset has been "sold"; therefore, lessors recognize sales and cost of goods sold only for the portion of the asset for which realization is assured. However, the gross profit amount on the sale of the asset is the same whether a guaranteed or unguaranteed residual value is involved.
- List the disclosure requirements for leases. The disclosure requirements for lessees and lessors vary based upon the type of lease (finance or operating) and whether the issuer is the lessor or lessee. These disclosure requirements provide investors with the following information: (1) general description of the nature of leasing arrangements; (2) the nature, timing, and amount of cash inflows and outflows associated with leases, including payments to be paid or received in the next year, in years 2–5, and years thereafter; and (3) amounts receivable and unearned revenues under lease agreements.

APPENDIX **21A**

EXAMPLES OF LEASE ARRANGEMENTS

To illustrate concepts discussed in this chapter, assume that Morgan Bakeries is involved in four different lease situations. Each of these leases is non-cancelable, and in no case does Morgan receive title to the properties leased during or at the end of the lease term. All leases start on January 1, 2015, with the first rental due at the beginning of the year. The additional information is shown in Illustration 21A-1 (on page 1098).

10 LEARNING OBJECTIVE

Understand and apply lease accounting concepts to various lease arrangements

	Harmon, Inc.	Arden's Oven Co.	Mendota Truck Co.	Appleland Computer
Type of property	Cabinets	Oven	Truck	Computer
Yearly rental	€6,000	€15,000	€5,582.62	€3,557.25
Lease term	20 years	10 years	3 years	3 years
Estimated economic life	30 years	25 years	7 years	5 years
Purchase option	None	€75,000 at end of 10 years €4,000 at end of 15 years	None	€3,000 at end of 3 years, which approximates fair value
Renewal option	None	5-year renewal option at €15,000 per year	None	1 year at €1,500; no penalty for non-renewal; standard renewal clause
Fair value at inception				
of lease	€70,000	€120,000	€20,000	€10,000
Cost of asset to lessor	€70,000	€120,000	€15,000	€10,000
Residual value	-0-	-0-	€ 7,000	-0-
Guaranteed/Unguaranteed	€ 5,000	-0-	-0-	€ 3,000
Incremental borrowing rate	4004	4004	4004	4004
of lessee	12%	12%	12%	12%
Executory costs paid by	Lessee €300 per year	Lessee €1,000 per year	Lessee €500 per year	Lessor Estimated to be €500 per year
Present value of minimum lease payments				
Using incremental borrowing rate	650 404 00	C445 450 05	coo ooo	CO 004 40
of lessee	€50,194.68	€115,153.35	€20,000	€8,224.16
Using implicit rate of lessor	Impracticable to determine	Impracticable to determine	Known by lessee, €20,000	Known by lessee, €8,027.45
Estimated fair value at end of lease	€5,000	€80,000 at end of 10 years €60,000 at end of 15 years	Not available	€3,000

ILLUSTRATION 21A-1

Illustrative Lease Situations, Lessors

EXAMPLE 1: HARMON, INC.

The following is an analysis of the Harmon, Inc. lease.

- 1. Transfer of title? No.
- **2.** Bargain-purchase option? No.
- **3.** Economic life test: The lease term is 20 years and the estimated economic life is 30 years. Thus, it **does not** meet the economic life test.
- 4. Recovery of investment test:

Rental payments € 6,000 PV of annuity due for 20 years at 12% \times 8.36578 PV of rental payments €50,194.68

Because the present value of the minimum lease payments is just 72 percent (\leq 50,195 \div \leq 70,000) of the fair value of the asset, it does not appear that this is a substantial part of the fair value of the asset. Thus, the lease does not meet the recovery of investment test.

Both Morgan and Harmon should account for this lease as an operating lease, as indicated by the January 1, 2015, entries shown in Illustration 21A-2.

	Morgan Bakeries (Lessee)			Harmon, Inc. (Lessor)		
Rent E	•	6,000	6,000	Cash Rent Revenue	6,000	6,000

ILLUSTRATION 21A-2 Comparative Entries for Operating Lease

EXAMPLE 2: ARDEN'S OVEN CO.

The following is an analysis of the Arden's Oven Co. lease.

- 1. Transfer of title? No.
- **2. Bargain-purchase option?** The €75,000 option at the end of 10 years does not appear to be sufficiently lower than the expected fair value of €80,000 to make it reasonably assured that it will be exercised. However, the €4,000 at the end of 15 years when the fair value is €60,000 does appear to be a bargain. From the information given, criterion 2 is therefore met. Note that both the guaranteed and the unguaranteed residual values are assigned zero values because the lessor does not expect to repossess the leased asset.
- **3. Economic life test:** Given that a bargain-purchase option exists, the lease term is the initial lease period of 10 years plus the five-year renewal option since it precedes a bargain-purchase option. Even though the lease term is now considered to be 15 years, this test is still not met because the term of the lease is just 60 percent (15 years ÷ 25 years).
- 4. Recovery of investment test:

Rental payments	€ 15,000.00
PV of annuity due for 15 years at 12%	× 7.62817
PV of rental payments	€114,422.55
PV of bargain-purchase option = ${\in}4,000 \times (PVF_{15,12\%}) =$	€4,000 × .18270 = €730.80
PV of rental payments	€114,422.55
PV of bargain-purchase option	730.80
PV of minimum lease payments	€115,153.35

The present value of the minimum lease payments is 96 percent (€115,153 ÷ €120,000) of the fair value of the asset. Thus, the recovery of investment test appears to be met since substantially all of the fair value of the asset will be recovered in the lease payments. Note that the incremental borrowing rate is used here because it is impracticable to determine the implicit rate of the lessor.

Morgan Bakeries should account for this as a finance lease because the lease meets both criteria 2 and 4. Assuming that Arden's implicit rate is less than Morgan's incremental borrowing rate, the following entries are made on January 1, 2015.

Morgan Bakeries (Lessee)			Arden's Oven Co. (Lessor)		
Leased Equipment Lease Liability	115,153.35	115,153.35	Lease Receivable Asset (oven)	120,000	120,000

ILLUSTRATION 21A-3

Comparative Entries for Finance Lease—Bargain-Purchase Option

Morgan Bakeries would depreciate the leased asset over its economic life of 25 years, given the bargain-purchase option. Arden's Oven Co. does not use sales-type accounting because the fair value and the cost of the asset are the same at the inception of the lease.

EXAMPLE 3: MENDOTA TRUCK CO.

The following is an analysis of the Mendota Truck Co. lease.

- 1. Transfer of title? No.
- 2. Bargain-purchase option? No.
- **3. Economic life test:** The lease term is three years and is just 43 percent of the estimated economic life of seven years. Thus, it **does not** meet the economic life test.
- 4. Recovery of investment test:

Rental payments € 5,582.62PV of annuity due for 3 years at 12% × 2.69005PV of rental payments € 15,017.54

(Note: Adjusted for €0.01 due to rounding)

PV of guaranteed residual value = $\[\in \]$ 7,000 \times (PVF_{3,12%}) = $\[\in \]$ 7,000 \times .71178 = $\[\in \]$ 4,982.46

PV of rental payments €15,017.54
PV of guaranteed residual value 4,982.46
PV of minimum lease payments €20,000.00

The present value of the minimum lease payments is equal to the fair value; therefore, the lease meets the recovery of investment.

Assuming that Mendota's implicit rate is the same as Morgan's incremental borrowing rate, the following entries are made on January 1, 2015.

ILLUSTRATION 21A-4

Comparative Entries for Finance Lease

Morgan Bakeries (Lessee)			Mendota (Les		
Leased Equipment Lease Liability	20,000	20,000	Lease Receivable Cost of Goods Sold Inventory (truck) Sales Revenue	20,000 15,000	15,000 20,000

Morgan depreciates the leased asset over three years to its guaranteed residual value.

EXAMPLE 4: APPLELAND COMPUTER

The following is an analysis of the Appleland Computer lease.

- 1. Transfer of title? No.
- **2. Bargain-purchase option?** No. The option to purchase at the end of three years at approximate fair value is clearly not a bargain.
- **3. Economic life test:** The lease term is three years, which is just 60 percent (3 years ÷ 5 years) of the economic life of the asset, and no bargain-renewal period exists. Therefore, the economic life test **is not** met.
- 4. Recovery of investment test:

Rental payments	€3,557.25
Less executory costs	500.00
	3,057.25
PV of annuity-due factor for	
3 years at 12%	× 2.69005
PV of minimum lease payments	
using incremental borrowing rate	€8,224.16

The present value of the minimum lease payments using the incremental borrowing rate is $\[\le 8,224.16 \]$ (see Illustration 21A-1 on page 1098). However, the higher implicit rate used by the lessor is known by Morgan. Given this situation, the lessee uses the implicit rate, which results in a present value of $\[\le 8,027.45 \]$. Because the present value of the minimum lease payments is just 80 percent ($\[\le 8,027 \]$ $\[\ge 10,000 \]$) of the fair value, the lease does **not** meet the recovery of investment test.

The following entries are made on January 1, 2015, indicating an operating lease.

Morgan Bakeries (Lessee)		Appleland Computer (Lessor)			
Rent Expense Cash	3,557.25	3,557.25	Cash Rent Revenue	3,557.25	3,557.25

ILLUSTRATION 21A-5Comparative Entries for Operating Lease

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 21A

Understand and apply lease accounting concepts to various lease arrangements. The classification of leases by lessees and lessors is based on criteria that assess whether the lessor has transferred to the lessee substantially all of the risks and benefits of ownership of the asset. Lessees capitalize leases that meet any of the criteria, recording a lease asset and related lease liability. For leases that are in substance a financing of an asset purchase, lessors substitute a lease receivable for the leased asset. In a sales-type lease, the fair value of the leased asset is greater than the cost, and lessors record gross profit. Leases that do not meet capitalization criteria are classified as operating leases, on which rent expense (revenue) is recognized by lessees (lessors) for lease payments.

APPENDIX **21B**

SALE-LEASEBACKS

The term sale-leaseback describes a transaction in which the owner of the property (seller-lessee) sells the property to another and simultaneously leases it back from the new owner. The use of the property is generally continued without interruption.

LEARNING OBJECTIVE
Describe the lessee's accounting for sale-leaseback transactions.

Sale-leasebacks are common. Financial institutions (e.g., HSBC (GBR) and BBVA (ESP)) have used this technique for their administrative offices, retailers (Liberty (GBR)) for their stores, and hospitals (Healthscope (AUS)) for their facilities. The advantages of a sale-leaseback from the seller's viewpoint usually involve two primary considerations:

- Financing. If the purchase of equipment has already been financed, a sale-leaseback
 can allow the seller to refinance at lower rates, assuming rates have dropped. In addition, a sale-leaseback can provide another source of working capital, particularly
 when liquidity is tight.
- **2.** *Taxes*. At the time a company purchased equipment, it may not have known that it would be subject to certain tax laws and that ownership might increase its minimum tax liability. By selling the property, the seller-lessee may deduct the entire lease payment, which is not subject to these tax considerations.

DETERMINING ASSET USE

Underlying Concepts

A sale-leaseback is similar in substance to the parking of inventories (discussed in Chapter 8). The ultimate economic benefits remain under the control of the "seller," thus satisfying the definition of an asset.

To the extent the **seller-lessee continues to use** the asset after the sale, the sale-leaseback is really a form of financing. Therefore, the lessor **should not recognize a gain or loss** on the transaction. In short, the seller-lessee is simply borrowing funds.

On the other hand, if the **seller-lessee gives up the right to the use** of the asset, the transaction is in substance a sale. In that case, **gain or loss recognition** is appropriate. Trying to ascertain when the lessee has given up the use of the asset is difficult, however, and the IASB has formulated complex rules to identify this situation.¹⁹ To understand the profession's position in this area, we discuss the basic accounting for the lessee and lessor below.

Lessee

If the lease meets one of the four criteria for treatment as a finance lease (see Illustration 21-3 on page 1065), the **seller-lessee accounts for the transaction as a sale and the lease as a finance lease**. The seller-lessee should defer any profit or loss it experiences from the sale of the assets that are leased back under a finance lease; it should **amortize that profit over the lease term** (or the economic life if either criterion 1 or 2 is satisfied) in proportion to the depreciation of the leased assets.

For example, assume **Stora Enso** (FIN) sells equipment having a book value of €580,000 and a fair value of €623,110 to **Deutsche Bank** (DEU) for €623,110 and leases the equipment back for €50,000 a year for 20 years. Assuming the lease meets one of the criteria for capitalization, Stora Enso should amortize the profit of €43,110 over the 20-year period at the same rate that it depreciates the €623,110. **[14]** It credits the €43,110 (€623,110 - €580,000) to **Unearned Profit on Sale-Leaseback**.

If none of the finance lease criteria are satisfied, **the seller-lessee accounts for the transaction as a sale and the lease as an operating lease**. Under an operating lease, as long as the sale-leaseback transaction is established at fair value, any gain or loss is recognized immediately.²⁰

Lessor

If the lease meets one of the lease capitalization criteria, the **purchaser-lessor** records the transaction as a purchase and a direct-financing lease. If the lease does not meet the criteria, the purchaser-lessor records the transaction as a purchase and an operating lease.

SALE-LEASEBACK EXAMPLE

To illustrate the accounting treatment accorded a sale-leaseback transaction, assume that **Japan Airlines (JAL)** (JPN) on January 1, 2015, sells a used Boeing 757 having a carrying amount on its books of \$75,500,000 to **CitiCapital** (USA) for \$80,000,000. JAL immediately leases the aircraft back under the following conditions:

1. The term of the lease is 15 years, non-cancelable, and requires equal rental payments of \$10,487,443 at the beginning of each year.

¹⁹Sales and leasebacks of real estate are often accounted for differently. A discussion of the issues related to these transactions is beyond the scope of this textbook.

²⁰If the sales price is not at fair value and the loss is compensated for by reduced future lease payments (below market rates), the loss shall be deferred and amortized in proportion to the lease payments over the period for which the asset is expected to be used. If the sales price is above fair value, the excess over fair value shall be deferred and amortized over the period for which the asset is expected to be used. [15]

- **2.** The aircraft has a fair value of \$80,000,000 on January 1, 2015, and an estimated economic life of 15 years.
- **3.** JAL pays all executory costs.
- **4.** JAL depreciates similar aircraft that it owns on a straight-line basis over 15 years.
- **5.** The annual payments assure the lessor a 12 percent return.
- **6.** JAL knows the implicit rate.

This lease is a finance lease to JAL because the lease term is equal to the estimated life of the aircraft and because the present value of the lease payments is equal to the fair value of the aircraft to CitiCapital. CitiCapital should classify this lease as a direct-financing lease.

Illustration 21B-1 presents the typical journal entries to record the sale-leaseback transactions for JAL and CitiCapital for the first year.

KEY TERMS

sale-leaseback, 1101

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 21B

Describe the lessee's accounting for sale-leaseback transactions.

If the lease meets one of the criteria for treatment as a finance lease, the seller-lessee accounts for the transaction as a sale and the lease as a finance lease. The seller-lessee defers any profit it experiences from the sale of the assets that are leased back under a finance lease. The seller-lessee amortizes any profit over the lease term (or the economic life if either criterion 1 or 2 is satisfied) in proportion to the amortization of the leased assets. If the lease satisfies none of the finance lease criteria, the seller-lessee accounts for the transaction as a sale and the lease as an operating lease. Under an operating lease, the lessee recognizes any gain or loss immediately if the sale-leaseback is at fair value.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

QUESTIONS

- 1. What are the major lessor groups? What advantage does a captive have in a leasing arrangement?
- 2. Bradley Co. is expanding its operations and is in the process of selecting the method of financing this program. After some investigation, the company determines that it may (1) issue bonds and with the proceeds purchase the needed assets or (2) lease the assets on a long-term basis. Without knowing the comparative costs involved, answer these questions:
 - (a) What might be the advantages of leasing the assets instead of owning them?
 - **(b)** What might be the disadvantages of leasing the assets instead of owning them?
 - (c) In what way will the statement of financial position be differently affected by leasing the assets as opposed to issuing bonds and purchasing the assets?
- 3. Identify the two recognized lease-accounting methods for lessees and distinguish between them.
- 4. Ballard Company rents a warehouse on a month-to-month basis for the storage of its excess inventory. The company periodically must rent space whenever its production greatly exceeds actual sales. For several years, the company officials have discussed building their own storage facility, but this enthusiasm wavers when sales increase sufficiently to absorb the excess inventory. What is the nature of this type of lease arrangement, and what accounting treatment should be accorded it?
- 5. Distinguish between minimum rental payments and minimum lease payments, and indicate what is included in minimum lease payments.
- 6. Explain the distinction between a direct-financing lease and a sales-type lease for a lessor.
- 7. Outline the accounting procedures involved in applying the operating method by a lessee.
- 8. Outline the accounting procedures involved in applying the finance lease method by a lessee.
- 9. Identify the lease classifications for lessors and the criteria that must be met for each classification.
- 10. Outline the accounting procedures involved in applying the direct-financing method.
- 11. Outline the accounting procedures involved in applying the operating method by a lessor.
- 12. Walker Company is a manufacturer and lessor of computer equipment. What should be the nature of its lease

- arrangements with lessees if the company wishes to account for its lease transactions as sales-type leases?
- 13. Metheny Corporation's lease arrangements qualify as sales-type leases at the time of entering into the transactions. How should the corporation recognize revenues
- 14. Dr. Alice Foyle (lessee) has a non-cancelable 20-year lease with Brownback Realty, Inc. (lessor) for the use of a medical building. Taxes, insurance, and maintenance are paid by the lessee in addition to the fixed annual payments, of which the present value is equal to the fair value of the leased property. At the end of the lease period, title becomes the lessee's at a nominal price. Considering the terms of the lease described above, comment on the nature of the lease transaction and the accounting treatment that should be accorded it by the lessee.
- 15. The residual value is the estimated fair value of the leased property at the end of the lease term.
 - (a) Of what significance is (1) an unguaranteed and (2) a guaranteed residual value in the lessee's accounting for a finance lease transaction?
 - **(b)** Of what significance is (1) an unguaranteed and (2) a guaranteed residual value in the lessor's accounting for a direct-financing lease transaction?
- 16. How should changes in the estimated unguaranteed residual value be handled by the lessor?
- 17. Describe the effect of a "bargain-purchase option" on accounting for a finance lease transaction by a lessee.
- 18. What are "initial direct costs" and how are they accounted
- 19. What disclosures should be made by lessees and lessors related to future lease payments?
- 20. Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for leases.
- 21. Both U.S. GAAP and IFRS require footnote disclosure of operating lease payments. Are there any differences in the information provided to statement readers in these disclosures? Explain.
- 22. Briefly discuss the IASB and FASB's efforts to converge their accounting guidelines for leases.
- *23. What is the nature of a "sale-leaseback" transaction?

and costs in these situations?

BRIEF EXERCISES

- **BE21-1** Mizuno Corp. (JPN) leases telecommunication equipment. Assume the following data for equipment leased from Photon Company. The lease term is 5 years and requires equal rental payments of ¥3,100,000 at the beginning of each year. The equipment has a fair value at the inception of the lease of ¥13,800,000, an estimated useful life of 8 years, and no residual value. Mizuno pays all executory costs directly to third parties. Photon set the annual rental to earn a rate of return of 10%, and this fact is known to Mizuno. The lease does not transfer title or contain a bargain-purchase option. How should Mizuno classify this lease?
- **BE21-2** Waterworld Company leased equipment from Costner Company. The lease term is 4 years and requires equal rental payments of \$43,019 at the beginning of each year. The equipment has a fair value at the inception of the lease of \$150,000, an estimated useful life of 4 years, and no residual value. Waterworld pays all executory costs directly to third parties. The appropriate interest rate is 10%. Prepare Waterworld's January 1, 2015, journal entries at the inception of the lease.
- **BE21-3** Rick Kleckner Corporation recorded a finance lease at €300,000 on January 1, 2015. The interest rate is 12%. Kleckner Corporation made the first lease payment of €53,920 on January 1, 2015. The lease requires eight annual payments. The equipment has a useful life of 8 years with no residual value. Prepare Kleckner Corporation's December 31, 2015, adjusting entries.
- **BE21-4** Use the information for Rick Kleckner Corporation from BE21-3. Assume that at December 31, 2015, Kleckner made an adjusting entry to accrue interest expense of €29,530 on the lease. Prepare Kleckner's January 1, 2016, journal entry to record the second lease payment of €53,920.
- **BE21-5** Jana Kingston Corporation enters into a lease on January 1, 2015, that does not transfer ownership or contain a bargain-purchase option. It covers 3 years of the equipment's 8-year useful life, and the present value of the minimum lease payments is less than 80% of the fair value of the asset leased. Prepare Jana Kingston's journal entry to record its January 1, 2015, annual lease payment of €35,000.
- **BE21-6** Assume that Lenovo (CHN) leased equipment that was carried at a cost of ¥150,000,000 to Sharon Swander Company. The term of the lease is 6 years beginning January 1, 2015, with equal rental payments of ¥30,044,000 at the beginning of each year. All executory costs are paid by Swander directly to third parties. The fair value of the equipment at the inception of the lease is ¥150,000,000. The equipment has a useful life of 6 years with no residual value. The lease has an implicit interest rate of 8%, no bargain-purchase option, and no transfer of title. Prepare Lenovo's January 1, 2015, journal entries at the inception of the lease.
- **BE21-7** Use the information for Lenovo from BE21-6. Assume the direct-financing lease was recorded at a present value of ¥150,000,000. Prepare Lenovo's December 31, 2015, entry to record interest.
 - **BE21-8** Jennifer Brent Corporation owns equipment that cost €80,000 and has a useful life of 8 years with no residual value. On January 1, 2015, Jennifer Brent leases the equipment to Lopez Inc. for one year with one rental payment of €15,000 on January 1. Prepare Jennifer Brent Corporation's 2015 journal entries.
- **BE21-9** Cortez Corporation enters into a 6-year lease of equipment on January 1, 2015, which requires 6 annual payments of R\$40,000 each, beginning January 1, 2015. In addition, Cortez guarantees the lessor a residual value of R\$20,000 at lease-end. The equipment has a useful life of 6 years. Prepare Cortez's January 1, 2015, journal entries assuming an interest rate of 10%.
- **BE21-10** Use the information for Cortez Corporation from BE21-9. Assume that for Lost Ark Company, the lessor, the carrying amount of the equipment is R\$202,921. Prepare Lost Ark's January 1, 2015, journal entries.
 - **BE21-11** Buzz Lightyear Corporation manufactures replicators. On January 1, 2015, it leased to BoPeep Company a replicator that had cost £110,000 to manufacture. The lease agreement covers the 5-year useful life of the replicator and requires 5 equal annual rentals of £40,800 payable each January 1, beginning January 1, 2015. An interest rate of 12% is implicit in the lease agreement. Prepare Lightyear's January 1, 2015, journal entries.
 - *BE21-12 On January 1, 2015, Iniesta Animation sold a truck to Robben Finance for €33,000 and immediately leased it back. The truck was carried on Iniesta's books at €28,000. The term of the lease is 5 years, and title transfers to Iniesta at lease-end. The lease requires five equal rental payments of €8,705 at the end of each year. The appropriate rate of interest is 10%, and the truck has a useful life of 5 years with no residual value. Prepare Iniesta's 2015 journal entries.

EXERCISES

E21-1 (Lessee Entries, Finance Lease with Unguaranteed Residual Value) On January 1, 2015, Adams Corporation signed a 5-year, non-cancelable lease for a machine. The terms of the lease called for Adams to make annual payments of \$9,968 at the beginning of each year, starting January 1, 2015. The machine has an estimated useful life of 6 years and a \$5,000 unguaranteed residual value. The machine reverts back to the lessor at the end of the lease term. Adams uses the straight-line method of depreciation for all of its plant assets. Adams's incremental borrowing rate is 10%, and the lessor's implicit rate is unknown (it is impracticable to determine).

Instructions

- (a) What type of lease is this? Explain.
- **(b)** Compute the present value of the minimum lease payments.
- (c) Prepare all necessary journal entries for Adams for this lease through January 1, 2016.
- **E21-2** (Lessee Computations and Entries, Finance Lease with Guaranteed Residual Value) Brecker Company leases an automobile with a fair value of €10,906 from Emporia Motors, Inc., on the following terms:
 - 1. Non-cancelable term of 50 months.
 - **2.** Rental of €250 per month (at end of each month). (The present value at 1% per month is €9,800.)
 - **3.** Estimated residual value after 50 months is €1,180. (The present value at 1% per month is €715.) Brecker Company guarantees the residual value of €1,180.
 - 4. Estimated economic life of the automobile is 60 months.
 - **5.** Brecker Company's incremental borrowing rate is 12% a year (1% a month). It is impracticable to determine Emporia's implicit rate.

Instructions

- (a) What is the nature of this lease to Brecker Company?
- **(b)** What is the present value of the minimum lease payments?
- (c) Record the lease on Brecker Company's books at the date of inception.
- (d) Record the first month's depreciation on Brecker Company's books (assume straight-line).
- (e) Record the first month's lease payment.
- **E21-3** (Lessee Entries, Finance Lease with Executory Costs and Unguaranteed Residual Value) Assume that on January 1, 2015, Stora Enso (FIN) signs a 10-year, non-cancelable lease agreement to lease a storage building from Balesteros Storage Company. The following information pertains to this lease agreement.
 - 1. The agreement requires equal rental payments of €90,000 beginning on January 1, 2015.
 - 2. The fair value of the building on January 1, 2015, is €550,000.
 - **3.** The building has an estimated economic life of 12 years, with an unguaranteed residual value of €10,000. Stora Enso depreciates similar buildings on the straight-line method.
 - 4. The lease is non-renewable. At the termination of the lease, the building reverts to the lessor.
 - **5.** Stora Enso's incremental borrowing rate is 12% per year. It is impracticable to determine the lessor's implicit rate.
 - **6.** The yearly rental payment includes €3,088.14 of executory costs related to taxes on the property.

Instructions

Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2015 and 2016. Stora Enso's corporate year-end is December 31.

- **E21-4** (Lessor Entries, Direct-Financing Lease with Option to Purchase) Krauss Leasing Company signs a lease agreement on January 1, 2015, to lease electronic equipment to Stewart Company. The term of the non-cancelable lease is 2 years, and payments are required at the end of each year. The following information relates to this agreement.
 - 1. Stewart has the option to purchase the equipment for £16,000 upon termination of the lease.
 - **2.** The equipment has a cost and fair value of £240,000 to Krauss Leasing Company. The useful economic life is 2 years, with a residual value of £16,000.
 - **3.** Stewart Company is required to pay £7,000 each year to the lessor for executory costs.
 - **4.** Krauss Leasing Company desires to earn a return of 10% on its investment.

Instructions

- (a) Prepare the journal entries on the books of Krauss Leasing to reflect the payments received under the lease and to recognize income for the years 2015 and 2016.
- **(b)** Assuming that Stewart Company exercises its option to purchase the equipment on December 31, 2016, prepare the journal entry to reflect the sale on Krauss's books.
- 2 3 E21-5 (Type of Lease, Amortization Schedule) Jacobsen Leasing Company leases a new machine that has a cost and fair value of ₩75,000,000 to K. J. Choi Corporation on a 3-year, non-cancelable contract. K. J. Choi Corporation agrees to assume all risks of normal ownership, including costs such as insurance, taxes, and maintenance. The machine has a 3-year useful life and no residual value. The lease was signed on January 1, 2015. Jacobsen Leasing Company expects to earn a 9% return on its investment. The annual rentals are payable on each December 31.

Instructions

- (a) Discuss the nature of the lease arrangement and the accounting method that each party to the lease should apply.
- (b) Prepare an amortization schedule that would be suitable for both the lessor and the lessee and that covers all the years involved.
- **E21-6 (Lessor Entries, Sales-Type Lease)** Wadkins Company, a machinery dealer, leased a machine to Aoki Corporation on January 1, 2015. The lease is for an 8-year period and requires equal annual payments of ¥38,514,000 at the beginning of each year. The first payment is received on January 1, 2015. Wadkins had purchased the machine during 2014 for ¥170,000,000. Wadkins set the annual rental to ensure an 11% rate of return. The machine has an economic life of 8 years with no residual value and reverts to Wadkins at the termination of the lease.

Instructions

- (a) Compute the amount of the lease receivable.
- (b) Prepare all necessary journal entries for Wadkins for 2015.
- **E21-7** (Lessee-Lessor Entries, Sales-Type Lease) On January 1, 2015, Palmer Company leased equipment to Immelman Corporation. The following information pertains to this lease.
 - **1.** The term of the non-cancelable lease is 6 years, with no renewal option. The equipment reverts to the lessor at the termination of the lease.
 - **2.** Equal rental payments are due on January 1 of each year, beginning in 2015.
 - **3.** The fair value of the equipment on January 1, 2015, is \$200,000, and its cost is \$150,000.
 - **4.** The equipment has an economic life of 8 years, with an unguaranteed residual value of \$10,000. Immelman depreciates all of its equipment on a straight-line basis.
 - **5.** Palmer sets the annual rental to ensure an 11% rate of return. Immelman's incremental borrowing rate is 12%, and it is impracticable for Immelman to determine the implicit rate.

Instructions

(Both the lessor and the lessee's accounting period ends on December 31.)

- (a) Discuss the nature of this lease to Palmer and Immelman.
- **(b)** Calculate the amount of the annual rental payment.
- (c) Prepare all the necessary journal entries for Immelman for 2015.
- (d) Prepare all the necessary journal entries for Palmer for 2015.
- **E21-8 (Lessee Entries with Bargain-Purchase Option)** The following facts pertain to a non-cancelable lease agreement between Lennox Leasing Company and Gill Company, a lessee.

Inception date:	May 1, 2015
Annual lease payment due at the beginning of	
each year, beginning with May 1, 2015	€18,829.49
Bargain-purchase option price at end of lease term	€ 4,000.00
Lease term	5 years
Economic life of leased equipment	10 years
Lessor's cost	€65,000.00
Fair value of asset at May 1, 2015	€81,000.00
Lessor's implicit rate	10%
Lessee's incremental borrowing rate	10%

The lessee assumes responsibility for all executory costs.

Instructions

(Round all numbers to the nearest cent.)

- (a) Discuss the nature of this lease to Gill Company.
- **(b)** Discuss the nature of this lease to Lennox Company.

- (c) Prepare a lease amortization schedule for Gill Company for the 5-year lease term.
- (d) Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2015 and 2016. Gill's annual accounting period ends on December 31. Reversing entries are used by Gill.
- **E21-9 (Lessor Entries with Bargain-Purchase Option)** A lease agreement between Lennox Leasing Company and Gill Company is described in E21-8.

Instructions

Refer to the data in E21-8 and do the following for the lessor. (Round all numbers to the nearest cent.)

- (a) Compute the amount of the lease receivable at the inception of the lease.
- (b) Prepare a lease amortization schedule for Lennox Leasing Company for the 5-year lease term.
- (c) Prepare the journal entries to reflect the signing of the lease agreement and to record the receipts and income related to this lease for the years 2015, 2016, and 2017. The lessor's accounting period ends on December 31. Reversing entries are not used by Lennox.
- **E21-10 (Computation of Rental, Journal Entries for Lessor)** Fieval Leasing Company signs an agreement on January 1, 2015, to lease equipment to Reid Company. The following information relates to this agreement.
 - **1.** The term of the non-cancelable lease is 6 years with no renewal option. The equipment has an estimated economic life of 6 years.
 - 2. The cost and fair value of the asset at January 1, 2015, is £343,000.
 - **3.** The asset will revert to the lessor at the end of the lease term, at which time the asset is expected to have a residual value of £61,071, none of which is guaranteed.
 - 4. Reid Company assumes direct responsibility for all executory costs.
 - 5. The agreement requires equal annual rental payments, beginning on January 1, 2015.

Instructions

(Round all numbers to the nearest pound.)

- (a) Assuming the lessor desires a 10% rate of return on its investment, calculate the amount of the annual rental payment required. (Round to the nearest pound.)
- (b) Prepare an amortization schedule that would be suitable for the lessor for the lease term.
- **(c)** Prepare all of the journal entries for the lessor for 2015 and 2016 to record the lease agreement, the receipt of lease payments, and the recognition of income. Assume the lessor's annual accounting period ends on December 31.
- **E21-11** (Amortization Schedule and Journal Entries for Lessee) Demir Leasing Company signs an agreement on January 1, 2015, to lease equipment to Azure Company. The following information relates to this agreement.
 - 1. The term of the non-cancelable lease is 5 years with no renewal option. The equipment has an estimated economic life of 5 years.
 - **2.** The fair value of the asset at January 1, 2015, is \$90,000.
 - **3.** The asset will revert to the lessor at the end of the lease term, at which time the asset is expected to have a residual value of \$7,000, none of which is guaranteed.
 - **4.** Azure Company assumes direct responsibility for all executory costs, which include the following annual amounts: (1) \$900 to Frontier Insurance Company for insurance and (2) \$1,600 for property taxes.
 - **5.** The agreement requires equal annual rental payments of \$20,541.11 to the lessor, beginning on January 1, 2015.
 - **6.** The lessee's incremental borrowing rate is 12%. The lessor's implicit rate is 10% and is known to the lessee.
 - **7.** Azure Company uses the straight-line depreciation method for all equipment.
 - 8. Azure uses reversing entries when appropriate.

Instructions

(Round all numbers to two decimal places.)

- (a) Prepare an amortization schedule that would be suitable for the lessee for the lease term.
- **(b)** Prepare all of the journal entries for the lessee for 2015 and 2016 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31.
- **3 4 E21-12 (Accounting for an Operating Lease)** On January 1, 2015, Secada Co. leased a building to Ryker Inc. The relevant information related to the lease is as follows.
 - **1.** The lease arrangement is for 10 years.
 - **2.** The leased building cost €3,600,000 and was purchased for cash on January 1, 2015.

- **3.** The building is depreciated on a straight-line basis. Its estimated economic life is 50 years with no residual value.
- **4.** Lease payments are €220,000 per year and are made at the end of the year.
- 5. Property tax expense of €85,000 and insurance expense of €10,000 on the building were incurred by Secada in the first year. Payment on these two items was made at the end of the year.
- 6. Both the lessor and the lessee are on a calendar-year basis.

Instructions

- (a) Prepare the journal entries that Secada Co. should make in 2015.
- **(b)** Prepare the journal entries that Ryker Inc. should make in 2015.
- (c) If Secada paid €30,000 to a real estate broker on January 1, 2015, as a fee for finding the lessee, how much should be reported as an expense for this item in 2015 by Secada Co.?
- **E21-13** (Accounting for an Operating Lease) On January 1, 2015, a machine was purchased for \$900,000 by Floyd Co. The machine is expected to have an 8-year life with no residual value. It is to be depreciated on a straight-line basis. The machine was leased to Crampton Inc. on January 1, 2015, at an annual rental of \$180,000. Other relevant information is as follows.
 - **1.** The lease term is for 3 years.
 - 2. Floyd Co. incurred maintenance and other executory costs of \$25,000 in 2015 related to this lease.
 - **3.** The machine could have been sold by Floyd Co. for \$940,000 instead of leasing it.
 - 4. Crampton is required to pay a rent security deposit of \$35,000 and to prepay the last month's rent of \$15,000.

Instructions

- (a) How much should Floyd Co. report as income before income tax on this lease for 2015?
- (b) What amount should Crampton Inc. report for rent expense for 2015 on this lease?
- E21-14 (Operating Lease for Lessee and Lessor) On February 20, 2015, Marcos Group purchased a machine for R\$1,200,000 for the purpose of leasing it. The machine is expected to have a 10-year life, no residual value, and will be depreciated on the straight-line basis. The machine was leased to Sage Company on March 1, 2015, for a 4-year period at a monthly rental of R\$15,600. There is no provision for the renewal of the lease or purchase of the machine by the lessee at the expiration of the lease term. Marcos paid R\$30,000 of commissions associated with negotiating the lease in February 2015.

Instructions

- (a) What expense should Sage Company record as a result of the facts above for the year ended December 31, 2015? Show supporting computations in good form.
- **(b)** What income or loss before income taxes should Marcos record as a result of the facts above for the year ended December 31, 2015? (*Hint:* Amortize commissions over the life of the lease.)
- **111** *E21-15 (Sale-Leaseback) Assume that on January 1, 2015, Peking Duck Co. sells a computer system to Liquidity Finance Co. for ¥510,000 and immediately leases the computer system back. The relevant information is as follows.
 - **1.** The computer system was carried on Peking's books at a value of ¥450,000.
 - **2.** The term of the non-cancelable lease is 10 years; title will transfer to Peking.
 - 3. The lease agreement requires equal rental payments of ¥83,000.11 at the end of each year.
 - **4.** The incremental borrowing rate for Peking is 12%. Peking is aware that Liquidity Finance Co. set the annual rental to ensure a rate of return of 10%.
 - **5.** The computer system has a fair value of ¥510,000 on January 1, 2015, and an estimated economic life of 10 years.
 - **6.** Peking pays executory costs of ¥9,000 per year.

Instructions

Prepare the journal entries for both the lessee and the lessor for 2015 to reflect the sale-leaseback agreement.

- *E21-16 (Lessee-Lessor, Sale-Leaseback) Presented below and on page 1111 are four independent situations.
 - (a) On December 31, 2015, Beard Inc. sold computer equipment to Barber Co. and immediately leased it back for 10 years. The sales price of the equipment was \$560,000, its carrying amount is \$400,000, and its estimated remaining economic life is 12 years. Determine the amount of deferred revenue to be reported from the sale of the computer equipment on December 31, 2015.
 - (b) On December 31, 2015, Mikkelson Co. sold a machine to Ozaki Co. and simultaneously leased it back for one year. The sales price of the machine was \$480,000, the carrying amount is \$420,000,

- and it had an estimated remaining useful life of 14 years. The present value of the rental payments for the one year is \$35,000. At December 31, 2015, how much should Mikkelson report as deferred revenue from the sale of the machine? Assume that the sale was at fair value.
- (c) On January 1, 2015, Barone Corp. sold an airplane with an estimated useful life of 10 years. At the same time, Barone leased back the plane for 10 years. The sales price of the airplane was \$500,000, the carrying amount \$401,000, and the annual rental \$73,975.22. Barone Corp. intends to depreciate the leased asset using the sum-of-the-years'-digits depreciation method. Discuss how the gain on the sale should be reported at the end of 2015 in the financial statements.
- (d) On January 1, 2015, Durocher Co. sold equipment with an estimated useful life of 5 years. At the same time, Durocher leased back the equipment for 2 years under a lease classified as an operating lease. The sales price (fair value) of the equipment was \$212,700, the carrying amount is \$300,000, the monthly rental under the lease is \$6,000, and the present value of the rental payments is \$115,753. For the year ended December 31, 2015, determine which items would be reported on its income statement for the sale-leaseback transaction.

PROBLEMS

- 2 8 P21-1 (Lessee-Lessor Entries, Sales-Type Lease) Glaus Leasing Company agrees to lease machinery to Jensen Corporation on January 1, 2015. The following information relates to the lease agreement.
 - 1. The term of the lease is 7 years with no renewal option, and the machinery has an estimated economic life of 9 years.
 - 2. The cost of the machinery is €525,000, and the fair value of the asset on January 1, 2015, is €700,000.
 - 3. At the end of the lease term, the asset reverts to the lessor. At the end of the lease term, the asset has a guaranteed residual value of €100,000. Jensen depreciates all of its equipment on a straight-line basis.
 - 4. The lease agreement requires equal annual rental payments, beginning on January 1, 2015.
 - 5. Glaus desires a 10% rate of return on its investments. Jensen's incremental borrowing rate is 11%, and it is impracticable to determine the lessor's implicit rate.

Instructions

(Assume the accounting period ends on December 31.)

- (a) Discuss the nature of this lease for both the lessee and the lessor.
- (b) Calculate the amount of the annual rental payment required.
- (c) Compute the present value of the minimum lease payments.
- (d) Prepare the journal entries Jensen would make in 2015 and 2016 related to the lease arrangement.
- (e) Prepare the journal entries Glaus would make in 2015 and 2016.

3 4 P21-2 (Lessee-Lessor Entries, Operating Lease) Cancun Inc. leased a new crane to Abriendo Construction under a 5-year, non-cancelable contract starting January 1, 2015. Terms of the lease require payments of R\$33,000 each January 1, starting January 1, 2015. Cancun will pay insurance, taxes, and maintenance charges on the crane, which has an estimated life of 12 years, a fair value of R\$240,000, and a cost to Cancun of R\$240,000. The estimated fair value of the crane is expected to be R\$45,000 at the end of the lease term. No bargain-purchase or -renewal options are included in the contract. Both Cancun and Abriendo adjust and close books annually at December 31. Abriendo's incremental borrowing rate is 10%, and Cancun's implicit interest rate of 9% is known to Abriendo.

Instructions

- (a) Identify the type of lease involved and give reasons for your classification. Discuss the accounting treatment that should be applied by both the lessee and the lessor.
- (b) Prepare all the entries related to the lease contract and leased asset for the year 2015 for the lessee and lessor, assuming the following amounts.
 - (1) Insurance R\$500.
 - (2) Taxes R\$2,000.
 - (3) Maintenance R\$650.
 - (4) Straight-line depreciation and residual value R\$15,000.
- (c) Discuss what should be presented in the statement of financial position, the income statement, and the related notes of both the lessee and the lessor at December 31, 2015.

9

2 8 P21-3 (Lessee-Lessor Entries, Financial Statement Presentation, Sales-Type Lease) Labron Industries and Ewing Inc. enter into an agreement that requires Ewing Inc. to build three diesel-electric engines to Labron's specifications. Upon completion of the engines, Labron has agreed to lease them for a period of 10 years and to assume all costs and risks of ownership. The lease is non-cancelable, becomes effective on January 1, 2015, and requires annual rental payments of \$413,971 each January 1, starting January 1, 2015.

Labron's incremental borrowing rate is 10%. The implicit interest rate used by Ewing Inc. and known to Labron is 8%. The total cost of building the three engines is \$2,600,000. The economic life of the engines is estimated to be 10 years, with residual value set at zero. Labron depreciates similar equipment on a straight-line basis. At the end of the lease, Labron assumes title to the engines.

Instructions

(Round all numbers to the nearest dollar.)

- (a) Discuss the nature of this lease transaction from the viewpoints of both lessee and lessor.
- (b) Prepare the journal entry or entries to record the transaction on January 1, 2015, on the books of Labron Industries.
- (c) Prepare the journal entry or entries to record the transaction on January 1, 2015, on the books of Ewing Inc.
- (d) Prepare the journal entries for both the lessee and lessor to record the first rental payment on January 1, 2015.
- (e) Prepare the journal entries for both the lessee and lessor to record interest expense (revenue) at December 31, 2015. (Prepare a lease amortization schedule for 2 years.)
- (f) Show the items and amounts that would be reported on the statement of financial position (not notes) at December 31, 2015, for both the lessee and the lessor.
- 2 6 P21-4 (Statement of Financial Position and Income Statement Disclosure—Lessee) The following facts pertain to a non-cancelable lease agreement between Alschuler Leasing Company and McKee Electronics, 9 a lessee, for a computer system.

Inception date	October 1, 2015
Lease term	6 years
Economic life of leased equipment	6 years
Fair value of asset at October 1, 2015	£300,383
Residual value at end of lease term	-0-
Lessor's implicit rate	10%
Lessee's incremental borrowing rate	10%
Annual lease payment due at the beginning of	
each year, beginning with October 1, 2015	£62,700

The lessee assumes responsibility for all executory costs, which amount to £5,500 per year and are to be paid each October 1, beginning October 1, 2015. (This £5,500 is not included in the rental payment of £62,700.) The asset will revert to the lessor at the end of the lease term. The straight-line depreciation method is used for all equipment.

The following amortization schedule has been prepared correctly for use by both the lessor and the lessee in accounting for this lease. The lease is to be accounted for properly as a finance lease by the lessee and as a direct-financing lease by the lessor.

Date	Annual Lease Payment/ Receipt	Interest (10%) on Unpaid Liability/Receivable	Reduction of Lease Liability/Receivable	Balance of Lease Liability/Receivable
Date	neceipt	Liability/ neceivable	Liability/ neceivable	Liability/ neceivable
10/01/15				£300,383
10/01/15	£ 62,700		£ 62,700	237,683
10/01/16	62,700	£23,768	38,932	198,751
10/01/17	62,700	19,875	42,825	155,926
10/01/18	62,700	15,593	47,107	108,819
10/01/19	62,700	10,822	51,818	57,001
10/01/20	62,700	5,699*	_ 57,001	-0-
	£376,200	£75,817	£300,383	

*Rounding error is £1.

Instructions

(Round all numbers to the nearest pound.)

(a) Assuming the lessee's accounting period ends on September 30, answer the following questions with respect to this lease agreement.

- (1) What items and amounts will appear on the lessee's income statement for the year ending September 30, 2016?
- **(2)** What items and amounts will appear on the lessee's statement of financial position at September 30, 2016?
- **(3)** What items and amounts will appear on the lessee's income statement for the year ending September 30, 2017?
- **(4)** What items and amounts will appear on the lessee's statement of financial position at September 30, 2017?
- **(b)** Assuming the lessee's accounting period ends on December 31, answer the following questions with respect to this lease agreement.
 - (1) What items and amounts will appear on the lessee's income statement for the year ending December 31, 2015?
 - **(2)** What items and amounts will appear on the lessee's statement of financial position at December 31, 2015?
 - (3) What items and amounts will appear on the lessee's income statement for the year ending December 31, 2016?
 - **(4)** What items and amounts will appear on the lessee's statement of financial position at December 31, 2016?
- **9 P21-5** (Statement of Financial Position and Income Statement Disclosure—Lessor) Assume the same information as in P21-4.

Instructions

(Round all numbers to the nearest pound.)

- **(a)** Assuming the lessor's accounting period ends on September 30, answer the following questions with respect to this lease agreement.
 - (1) What items and amounts will appear on the lessor's income statement for the year ending September 30, 2016?
 - **(2)** What items and amounts will appear on the lessor's statement of financial position at September 30, 2016?
 - **(3)** What items and amounts will appear on the lessor's income statement for the year ending September 30, 2017?
 - **(4)** What items and amounts will appear on the lessor's statement of financial position at September 30, 2017?
- **(b)** Assuming the lessor's accounting period ends on December 31, answer the following questions with respect to this lease agreement.
 - (1) What items and amounts will appear on the lessor's income statement for the year ending December 31, 2015?
 - **(2)** What items and amounts will appear on the lessor's statement of financial position at December 31, 2015?
 - **(3)** What items and amounts will appear on the lessor's income statement for the year ending December 31, 2016?
 - **(4)** What items and amounts will appear on the lessor's statement of financial position at December 31, 2016?
- **P21-6** (Lessee Entries with Residual Value) The following facts pertain to a non-cancelable lease agreement between Faldo Leasing Company and Shigeki Company, a lessee.

Inception date	January 1, 2015
Annual lease payment due at the beginning of each year, beginning with January 1, 2015 Residual value of equipment at end of lease term,	€124,798
guaranteed by the lessee	€50,000
Lease term	6 years
Economic life of leased equipment	6 years
Fair value of asset at January 1, 2015	€600,000
Lessor's implicit rate	12%
Lessee's incremental borrowing rate	12%

The lessee assumes responsibility for all executory costs, which are expected to amount to €5,000 per year. The asset will revert to the lessor at the end of the lease term. The lessee has guaranteed the lessor a residual value of €50,000. The lessee uses the straight-line depreciation method for all equipment.

(Round all numbers to the nearest euro.)

- (a) Prepare an amortization schedule that would be suitable for the lessee for the lease term.
- (b) Prepare all of the journal entries for the lessee for 2015 and 2016 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31 and reversing entries are used when appropriate.

2 9 P21-7 (Lessee Entries and Statement of Financial Position Presentation, Finance Lease) Ludwick Steel Company as lessee signed a lease agreement for equipment for 5 years, beginning December 31, 2015. Annual rental payments of \$40,000 are to be made at the beginning of each lease year (December 31). The taxes, insurance, and the maintenance costs are the obligation of the lessee. The interest rate used by the lessor in setting the payment schedule is 9%; Ludwick's incremental borrowing rate is 10%. It is impracticable for Ludwick to determine the rate being used by the lessor. At the end of the lease, Ludwick has the option to buy the equipment for \$1, considerably below its estimated fair value at that time. The equipment has an estimated useful life of 7 years, with no residual value. Ludwick uses the straight-line method of depreciation on similar owned equipment.

Instructions

(Round all numbers to the nearest dollar.)

- (a) Prepare the journal entry or entries, with explanations, that should be recorded on December 31, 2015, by Ludwick.
- **(b)** Prepare the journal entry or entries, with explanations, that should be recorded on December 31, 2016, by Ludwick. (Prepare the lease amortization schedule for all five payments.)
- (c) Prepare the journal entry or entries, with explanations, that should be recorded on December 31, 2017, by Ludwick.
- (d) What amounts would appear on Ludwick's December 31, 2017, statement of financial position relative to the lease arrangement?
- 2 9 P21-8 (Lessee Entries and Statement of Financial Position Presentation, Finance Lease) On January 1, 2015, Singh Company contracts to lease equipment for 5 years, agreeing to make a payment of ₹137,899 (including the executory costs of ₹6,000) at the beginning of each year, starting January 1, 2015. The taxes, the insurance, and the maintenance, estimated at ₹6,000 a year, are the obligations of the lessee. The leased equipment is to be capitalized at ₹550,000. The asset is to be depreciated on a double-declining-balance basis, and the obligation is to be reduced on an effective-interest basis. Singh's incremental borrowing rate is 12%, and the implicit rate in the lease is 10%, which is known by Singh. Title to the equipment transfers to Singh when the lease expires. The asset has an estimated useful life of 5 years and no residual value.

Instructions

(Round all numbers to the nearest rupee.)

- (a) Explain the probable relationship of the ₹550,000 amount to the lease arrangement.
- (b) Prepare the journal entry or entries that should be recorded on January 1, 2015, by Singh Company.
- (c) Prepare the journal entry to record depreciation of the leased asset for the year 2015.
- (d) Prepare the journal entry to record the interest expense for the year 2015.
- (e) Prepare the journal entry to record the lease payment of January 1, 2016, assuming reversing entries are not made.
- (f) What amounts will appear on the lessee's December 31, 2015, statement of financial position relative to the lease contract?
- **2 6 P21-9** (Lessee Entries, Finance Lease with Monthly Payments) Shapiro Inc. was incorporated in 2015 to operate as a computer software service firm with an accounting fiscal year ending August 31. Shapiro's primary product is a sophisticated online inventory-control system; its customers pay a fixed fee plus a usage charge for using the system.

Shapiro has leased a large, Alpha-3 computer system from the manufacturer. The lease calls for a monthly rental of €40,000 for the 144 months (12 years) of the lease term. The estimated useful life of the computer is 15 years.

Each scheduled monthly rental payment includes €3,000 for full-service maintenance on the computer to be performed by the manufacturer. All rentals are payable on the first day of the month beginning with August 1, 2016, the date the computer was installed and the lease agreement was signed. The lease is noncancelable for its 12-year term, and it is secured only by the manufacturer's chattel lien on the Alpha-3 system.

This lease is to be accounted for as a finance lease by Shapiro, and it will be depreciated by the straight-line method with no expected residual value. Borrowed funds for this type of transaction would cost Shapiro 12% per year (1% per month). Following is a schedule of the present value of €1 for selected periods discounted at 1% per period when payments are made at the beginning of each period.

Periods (months)	Present Value of €1 per Period Discounted at 1% per Period
1	1.000
2	1.990
3	2.970
143	76.658
144	76.899

Instructions

Prepare, in general journal form, all entries Shapiro should have made in its accounting records during August 2016 relating to this lease. Give full explanations and show supporting computations for each entry. Remember, August 31, 2016, is the end of Shapiro's fiscal accounting period and it will be preparing financial statements on that date. Do not prepare closing entries.

7 P21-10 (Lessor Computations and Entries, Sales-Type Lease with Unguaranteed Residual Value) Moonstruck Company manufactures a reservation system with an estimated economic life of 12 years and leases it to National Airlines for a period of 10 years. The normal selling price of the equipment is £278,072, and its unguaranteed residual value at the end of the lease term is estimated to be £20,000. National will pay annual payments of £40,000 at the beginning of each year and all maintenance, insurance, and taxes. Moonstruck incurred costs of £180,000 in manufacturing the equipment and £4,000 in negotiating and closing the lease. Moonstruck has determined that the implicit interest rate is 10%.

Instructions

(Round all numbers to the nearest pound.)

- (a) Discuss the nature of this lease in relation to the lessor and compute the amount of each of the following items.
 - (1) Lease receivable.
 - (2) Sales price.
 - (3) Cost of sales.
- **(b)** Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessor's journal entries for the first year.

P21-11 (Lessee Computations and Entries, Finance Lease with Unguaranteed Residual Value) Assume the same data as in P21-10 with National Airlines having an incremental borrowing rate of 10%.

Instructions

(Round all numbers to the nearest pound.)

- (a) Discuss the nature of this lease in relation to the lessee, and compute the amount of the initial obligation under finance leases.
- **(b)** Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessee's journal entries for the first year.
- 2 6 P21-12 (Basic Lessee Accounting with Difficult PV Calculation) In 2014, Grishell Shipping Company negotiated and closed a long-term lease contract for newly constructed truck terminals and freight storage facilities. The buildings were erected to the company's specifications on land owned by the company. On January 1, 2015, Grishell Shipping Company took possession of the lease properties. On January 1, 2015 and 2016, the company made cash payments of £948,000 that were recorded as rental expenses.

Although the terminals have a composite useful life of 40 years, the non-cancelable lease runs for 20 years from January 1, 2015, with a bargain-purchase option available upon expiration of the lease.

The 20-year lease is effective for the period January 1, 2015, through December 31, 2034. Advance rental payments of £800,000 are payable to the lessor on January 1 of each of the first 10 years of the lease term. Advance rental payments of £320,000 are due on January 1 for each of the last 10 years of the lease. The company has an option to purchase all of these leased facilities for £1 on December 31, 2034. It also must make annual payments to the lessor of £125,000 for property taxes and £23,000 for insurance. The lease was negotiated to assure the lessor a 6% rate of return.

Instructions

(Round all numbers to the nearest pound.)

- (a) Prepare a schedule to compute for Grishell Shipping Company the discounted present value of the terminal facilities and related obligation at January 1, 2015.
- (b) Assuming that the discounted present value of terminal facilities and related obligation at January 1, 2015, was £7,600,000, prepare journal entries for Grishell Shipping Company to record the:
 - (1) Cash payment to the lessor on January 1, 2017.
 - (2) Amortization of the cost of the leased properties for 2017 using the straight-line method and assuming a zero residual value.
 - (3) Accrual of interest expense at December 31, 2017.

Selected present value factors are as follows.

	For an Ordinary	
Periods	Annuity of £1 at 6%	For £1 at 6%
1	.943396	.943396
2	1.833393	.889996
8	6.209794	.627412
9	6.801692	.591898
10	7.360087	.558395
19	11.158117	.330513
20	11.469921	.311805

4 P21-13 (Lessor Computations and Entries, Sales-Type Lease with Guaranteed Residual Value) Amirante Inc. manufactures an X-ray machine with an estimated life of 12 years and leases it to Chambers Medical Center for a period of 10 years. The normal selling price of the machine is \$411,324, and its guaranteed residual value at the end of the non-cancelable lease term is estimated to be \$15,000. The hospital will pay rents of \$60,000 at the beginning of each year and all maintenance, insurance, and taxes. Amirante Inc. incurred costs of \$250,000 in manufacturing the machine and \$14,000 in negotiating and closing the lease.

Instructions

(Round all numbers to the nearest dollar.)

- (a) Discuss the nature of this lease in relation to the lessor and compute the amount of each of the following items.
 - (1) Lease receivable at inception

(2) Sales price.

of the lease.

- (3) Cost of sales.
- **(b)** Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessor's journal entries for the first year.

Amirante Inc. has determined that the implicit interest rate is 10%.

7 P21-14 (Lessee Computations and Entries, Finance Lease with Guaranteed Residual Value) Assume the same data as in P21-13 and that Chambers Medical Center has an incremental borrowing rate of 10%.

Instructions

(Round all numbers to the nearest dollar.)

- (a) Discuss the nature of this lease in relation to the lessee, and compute the amount of the initial obligation under finance leases.
- **(b)** Prepare a 10-year lease amortization schedule.
- **(c)** Prepare all of the lessee's journal entries for the first year.

2 3 P21-15 (Operating Lease vs. Finance Lease) You are auditing the December 31, 2015, financial statements of Hockney, Inc., manufacturer of novelties and party favors. During your inspection of the company garage, you discovered that a 2015 Shirk automobile not listed in the equipment subsidiary ledger is parked in the company garage. You ask Stacy Reeder, plant manager, about the vehicle, and she tells you that the company did not list the automobile because the company was only leasing it. The lease agreement was entered into on January 1, 2015, with Crown New and Used Cars.

You decide to review the lease agreement to ensure that the lease should be afforded operating lease treatment, and you discover the following lease terms.

- **1.** Non-cancelable term of 4 years.
- **2.** Rental of £3,240 per year (at the end of each year). (The present value at 8% per year is £10,731.)

- **3.** Estimated residual value after 4 years is £1,100. (The present value at 8% per year is £809.) Hockney guarantees the residual value of £1,100.
- **4.** Estimated economic life of the automobile is 5 years.
- **5.** The implicit rate and Hockney's incremental borrowing rate is 8% per year.

Instructions

You are a senior auditor writing a memo to your supervisor, the audit partner in charge of this audit, to discuss the above situation. Be sure to include (a) why you inspected the lease agreement, (b) what you determined about the lease, and (c) how you advised your client to account for this lease. Explain every journal entry that you believe is necessary to record this lease properly on the client's books. (It is also necessary to include the fact that you communicated this information to your client.)

P21-16 (Lessee-Lessor Accounting for Residual Values) Goring Dairy leases its milking equipment from King Finance Company under the following lease terms.

- 1. The lease term is 10 years, non-cancelable, and requires equal rental payments of €30,300 due at the beginning of each year starting January 1, 2015.
- **2.** The equipment has a fair value and cost at the inception of the lease (January 1, 2015) of €220,404, an estimated economic life of 10 years, and a residual value (which is guaranteed by Goring Dairy) of €20,000.
- **3.** The lease contains no renewable options, and the equipment reverts to King Finance Company upon termination of the lease.
- 4. Goring Dairy's incremental borrowing rate is 9% per year. The implicit rate is also 9%.
- **5.** Goring Dairy depreciates similar equipment that it owns on a straight-line basis.

Instructions

- (a) Evaluate the criteria for classification of the lease, and describe the nature of the lease. In general, discuss how the lessee and lessor should account for the lease transaction.
- **(b)** Prepare the journal entries for the lessee and lessor at January 1, 2015, and December 31, 2015 (the lessee's and lessor's year-end). Assume no reversing entries.
- (c) What would have been the amount capitalized by the lessee upon the inception of the lease if:
 - (1) The residual value of €20,000 had been guaranteed by a third party, not the lessee?
 - (2) The residual value of €20,000 had not been guaranteed at all?
- (d) On the lessor's books, what would be the amount recorded as the Net Investment (Lease Receivable) at the inception of the lease, assuming:
 - (1) The residual value of €20,000 had been guaranteed by a third party?
 - (2) The residual value of €20,000 had not been guaranteed at all?
- **(e)** Suppose the useful life of the milking equipment is 20 years. How large would the residual value have to be at the end of 10 years in order for the lessee to qualify for the operating method? (Assume that the residual value would be guaranteed by a third party.) (*Hint*: The lessee's annual payments will be appropriately reduced as the residual value increases.)

CONCEPTS FOR ANALYSIS

CA21-1 (Lessee Accounting and Reporting) On January 1, 2015, Evans Company entered into a non-cancelable lease for a machine to be used in its manufacturing operations. The lease transfers ownership of the machine to Evans by the end of the lease term. The term of the lease is 8 years. The minimum lease payment made by Evans on January 1, 2015, was one of eight equal annual payments. At the inception of the lease, the criteria established for classification as a finance lease by the lessee were met.

Instructions

- (a) What is the theoretical basis for the accounting standard that requires certain long-term leases to be capitalized by the lessee? Do not discuss the specific criteria for classifying a specific lease as a finance lease.
- **(b)** How should Evans account for this lease at its inception and determine the amount to be recorded?

- (c) What expenses related to this lease will Evans incur during the first year of the lease, and how will they be determined?
- (d) How should Evans report the lease transaction on its December 31, 2015, statement of financial position?

CA21-2 (Lessor and Lessee Accounting and Disclosure) Sylvan Inc. entered into a non-cancelable lease arrangement with Breton Leasing Corporation for a certain machine. Breton's primary business is leasing; it is not a manufacturer or dealer. Sylvan will lease the machine for a period of 3 years, which is 50% of the machine's economic life. Breton will take possession of the machine at the end of the initial 3-year lease and lease it to another, smaller company that does not need the most current version of the machine. Sylvan does not guarantee any residual value for the machine and will not purchase the machine at the end of the lease term.

Sylvan's incremental borrowing rate is 10%, and the implicit rate in the lease is 9%. Sylvan has no practicable way to determine the implicit rate used by Breton. Using either rate, the present value of the minimum lease payments is between 90% and 100% of the fair value of the machine at the date of the lease agreement.

Sylvan has agreed to pay all executory costs directly, and no allowance for these costs is included in the lease payments.

Assume that no indirect costs are involved.

Instructions

- (a) With respect to Sylvan (the lessee), answer the following.
 - (1) What type of lease has been entered into? Explain the reason for your answer.
 - (2) How should Sylvan compute the appropriate amount to be recorded for the lease or asset acquired?
 - (3) What accounts will be created or affected by this transaction, and how will the lease or asset and other costs related to the transaction be recorded in earnings?
 - (4) What disclosures must Sylvan make regarding this leased asset?
- **(b)** With respect to Breton (the lessor), answer the following.
 - (1) What type of leasing arrangement has been entered into? Explain the reason for your answer.
 - (2) How should this lease be recorded by Breton, and how are the appropriate amounts determined?
 - (3) How should Breton determine the appropriate amount of earnings to be recognized from each lease payment?
 - (4) What disclosures must Breton make regarding this lease?

CA21-3 (Lessee Capitalization Criteria) On January 1, Santiago Company, a lessee, entered into three non-cancelable leases for brand-new equipment, Lease L, Lease M, and Lease N. None of the three leases transfers ownership of the equipment to Santiago at the end of the lease term. For each of the three leases, the present value at the beginning of the lease term of the minimum lease payments, excluding that portion of the payments representing executory costs such as insurance, maintenance, and taxes to be paid by the lessor, is 75% of the fair value of the equipment.

The following information is peculiar to each lease.

- 1. Lease L does not contain a bargain-purchase option. The lease term is equal to 85% of the estimated economic life of the equipment.
- **2.** Lease M contains a bargain-purchase option. The lease term is equal to 50% of the estimated economic life of the equipment.
- **3.** Lease N does not contain a bargain-purchase option. The lease term is equal to 50% of the estimated economic life of the equipment.

Instructions

- **(a)** How should Santiago Company classify each of the three leases above, and why? Discuss the rationale for your answer.
- **(b)** What amount, if any, should Santiago record as a liability at the inception of the lease for each of the three leases above?
- (c) Assuming that the minimum lease payments are made on a straight-line basis, how should Santiago record each minimum lease payment for each of the three leases above?

CA21-4 (Comparison of Different Types of Accounting by Lessee and Lessor)

Part 1: Finance leases and operating leases are the two classifications of leases described in IFRS from the standpoint of the **lessee**.

Instructions

- (a) Describe how a finance lease would be accounted for by the lessee both at the inception of the lease and during the first year of the lease, assuming the lease transfers ownership of the property to the lessee by the end of the lease.
- **(b)** Describe how an operating lease would be accounted for by the lessee both at the inception of the lease and during the first year of the lease, assuming equal monthly payments are made by the lessee at the beginning of each month of the lease.

Do **not** discuss the criteria for distinguishing between finance leases and operating leases.

Part 2: Sales-type leases and direct-financing leases are two of the classifications of leases described in IFRS from the standpoint of the **lessor**.

Instructions

Compare and contrast a sales-type lease with a direct-financing lease as follows.

- (a) Lease receivable.
- **(b)** Recognition of interest revenue.
- (c) Manufacturer's or dealer's profit.

Do not discuss the criteria for distinguishing between the leases described above and operating leases.

CA21-5 (Lessee Capitalization of Bargain-Purchase Option) Albertsen Corporation is a diversified company with nationwide interests in commercial real estate developments, banking, copper mining, and metal fabrication. The company has offices and operating locations in major cities throughout the United Kingdom. Corporate headquarters for Albertsen Corporation is located in a metropolitan area of The Lake District, and executives connected with various phases of company operations travel extensively. Corporate management is currently evaluating the feasibility of acquiring a business aircraft that can be used by company executives to expedite business travel to areas not adequately served by commercial airlines. Proposals for either leasing or purchasing a suitable aircraft have been analyzed, and the leasing proposal was considered to be more desirable.

The proposed lease agreement involves a twin-engine turboprop Viking that has a fair value of £1,000,000. This plane would be leased for a period of 10 years beginning January 1, 2015. The lease agreement is cancelable only upon accidental destruction of the plane. An annual lease payment of £141,780 is due on January 1 of each year; the first payment is to be made on January 1, 2015. Maintenance operations are strictly scheduled by the lessor, and Albertsen Corporation will pay for these services as they are performed. Estimated annual maintenance costs are £6,900. The lessor will pay all insurance premiums and local property taxes, which amount to a combined total of £4,000 annually and are included in the annual lease payment of £141,780. Upon expiration of the 10-year lease, Albertsen Corporation can purchase the Viking for £44,440. The estimated useful life of the plane is 15 years, and its residual value in the used plane market is estimated to be £100,000 after 10 years. The residual value probably will never be less than £75,000 if the engines are overhauled and maintained as prescribed by the manufacturer. If the purchase option is not exercised, possession of the plane will revert to the lessor, and there is no provision for renewing the lease agreement beyond its termination on December 31, 2024.

Albertsen Corporation can borrow £1,000,000 under a 10-year term loan agreement at an annual interest rate of 12%. The lessor's implicit interest rate is not expressly stated in the lease agreement, but this rate appears to be approximately 8% based on 10 net rental payments of £137,780 per year and the initial fair value of £1,000,000 for the plane. On January 1, 2015, the present value of all net rental payments and the purchase option of £44,440 is £888,890 using the 12% interest rate. The present value of all net rental payments and the £44,440 purchase option on January 1, 2015, is £1,022,226 using the 8% interest rate implicit in the lease agreement. The financial vice president of Albertsen Corporation has established that this lease agreement is a finance lease as defined in IFRS.

Instructions

- **(a)** What is the appropriate amount that Albertsen Corporation should recognize for the leased aircraft on its statement of financial position after the lease is signed?
- (b) Disregarding your answer in part (a), assume that the annual lease payment is £141,780 as stated in the case, that the appropriate capitalized amount for the leased aircraft is £1,000,000 on January 1, 2015, and that the interest rate is 9%. How will the lease be reported in the December 31, 2015, statement of financial position and related income statement? (Ignore any tax implications.)

CA21-6 (Lease Capitalization, Bargain-Purchase Option) Baden Corporation entered into a lease agreement for 10 photocopy machines for its corporate headquarters. The lease agreement qualifies as an operating lease in all terms except there is a bargain-purchase option. After the 5-year lease term, the corporation can purchase each copier for $\[\le 1,000 \]$, when the anticipated fair value is $\[\le 2,500 \]$.

Jerry Suffolk, the financial vice president, thinks the financial statements must recognize the lease agreement as a finance lease because of the bargain-purchase agreement. The controller, Diane Buchanan,

disagrees: "Although I don't know much about the copiers themselves, there is a way to avoid recording the lease liability." She argues that the corporation might claim that copier technology advances rapidly and that by the end of the lease term the machines will most likely not be worth the €1,000 bargain price.

Instructions

Answer the following questions.

- (a) What ethical issue is at stake?
- **(b)** Should the controller's argument be accepted if she does not really know much about copier technology? Would it make a difference if the controller were knowledgeable about the pace of change in copier technology?
- (c) What should Suffolk do?
- *CA21-7 (Sale-Leaseback) On January 1, 2015, Perriman Company sold equipment for cash and leased it back. As seller-lessee, Perriman retained the right to substantially all of the remaining use of the equipment.

The term of the lease is 8 years. There is a gain on the sale portion of the transaction. The lease portion of the transaction is classified appropriately as a finance lease.

Instructions

- (a) What is the theoretical basis for requiring lessees to capitalize certain long-term leases? **Do not** discuss the specific criteria for classifying a lease as a finance lease.
- **(b) (1)** How should Perriman account for the sale portion of the sale-leaseback transaction at January 1, 2015?
 - (2) How should Perriman account for the leaseback portion of the sale-leaseback transaction at January 1, 2015?
- **(c)** How should Perriman account for the gain on the sale portion of the sale-leaseback transaction during the first year of the lease? Why?
- *CA21-8 (Sale-Leaseback) On December 31, 2015, Shellhammer Co. sold 6-month-old equipment at fair value and leased it back. There was a loss on the sale. Shellhammer pays all insurance, maintenance, and taxes on the equipment. The lease provides for 8 equal annual payments, beginning December 31, 2016, with a present value equal to 80% of the equipment's fair value and sales price. The lease's term is 85% of the equipment's useful life. There is no provision for Shellhammer to reacquire ownership of the equipment at the end of the lease term.

Instructions

- (a) (1) Why is it important to compare an equipment's fair value to its lease payments' present value and its useful life to the lease term?
 - **(2)** Evaluate Shellhammer's leaseback of the equipment in terms of each of the four criteria for determination of a finance lease.
- **(b)** How should Shellhammer account for the sale portion of the sale-leaseback transaction at December 31, 2015?
- **(c)** How should Shellhammer report the leaseback portion of the sale-leaseback transaction on its December 31, 2016, statement of financial position?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What types of leases are used by M&S?
- (b) What amount of finance leases was reported by M&S in total and for less than one year?
- (c) What minimum annual rental commitments under all non-cancelable leases at year-end 2013 did M&S disclose?

Comparative Analysis Case

British Airways and Air France-KLM

Instructions

Go to the **British Airways** (GBR) and **Air France—KLM** (FRA) (Air France) company websites and use information found there to answer the following questions related to these airlines.

- (a) What types of leases are used by Air France and on what assets are these leases primarily used?
- **(b)** How long-term are some of Air France's leases? What are some of the characteristics or provisions of Air France's (as lessee) leases?
- (c) What did Air France report in 2012 as its future minimum annual rental commitments under noncancelable leases for aircraft and flight equipment?
- (d) At year-end 2012, what was the present value of the minimum rental payments under Air France's finance leases in part (c)? How much imputed interest was deducted from the future minimum annual rental commitments to arrive at the present value?
- (e) What were the amounts and details reported by Air France for rental expense in 2012 and 2011?
- (f) How does British Airways' use of leases compare with Air France's?

Financial Statement Analysis Case

Delhaize Group

Presented in Illustration 21-30 (page 1090) are the financial statement disclosures from the 2012 annual report of Delhaize Group (BEL).

Instructions

Answer the following questions related to these disclosures.

- (a) What is the total obligation under finance leases at year-end 2012 for Delhaize?
- **(b)** What is the total rental expense reported for leasing activity for the year ended December 31, 2012, for Delhaize?
- (c) Estimate the off-balance-sheet liability due to Delhaize operating leases at fiscal year-end 2012.

Accounting, Analysis, and Principles

Salaur Company is evaluating a lease arrangement being offered by TSP Company for use of a computer system. The lease is non-cancelable, and in no case does Salaur receive title to the computers during or at the end of the lease term. The lease starts on January 1, 2015, with the first rental due at the beginning of the year. Additional information related to the lease is as follows.

Yearly rental \$3,557.25 Lease term 3 years Estimated economic life 5 years

Purchase option \$3,000 at end of 3 years, which approximates fair value Renewal option 1 year at \$1,500; no penalty for non-renewal; standard

renewal clause

Fair value at inception of lease \$10,000 Cost of asset to lessor \$10,000

Residual value

Guaranteed -0-Unguaranteed \$3,000 Lessor's implicit rate (known by lessee) 12%

Executory costs paid by: Lessee; estimated to be \$500 per year, included in

payments

Estimated fair value at end of lease \$3,000

Accounting

Analyze the lease capitalization criteria for this lease for Salaur Company. Prepare the journal entry for Salaur on January 1, 2015.

Analysis

Briefly discuss the impact of the accounting for this lease for two common ratios: return on assets and debt to assets.

Principles

What fundamental quality of the conceptual framework is being addressed when a company like Salaur evaluates lease capitalization criteria?

BRIDGE TO THE PROFESSION

Professional Research

Daniel Hardware Co. is considering alternative financing arrangements for equipment used in its ware-houses. Besides purchasing the equipment outright, Daniel is also considering a lease. Accounting for the outright purchase is fairly straightforward, but because Daniel has not used equipment leases in the past, the accounting staff is less informed about the specific accounting rules for leases.

The staff is aware of some general lease rules related to "risks and rewards," but they are unsure about the meanings of these terms in lease accounting. Daniel has asked you to conduct some research on these items related to lease capitalization criteria.

Instructions

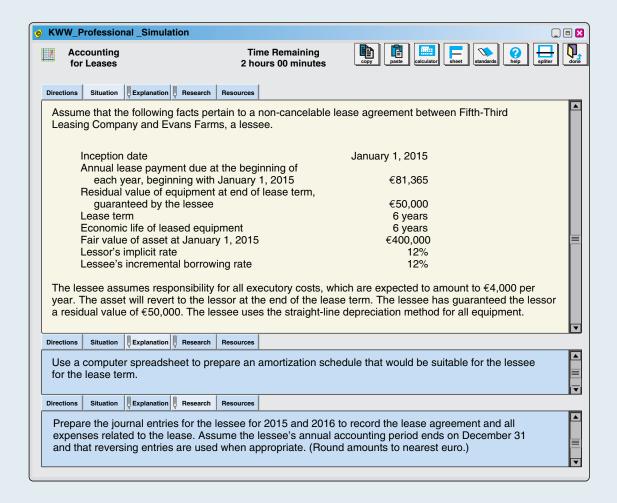

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free elFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) What is the objective of lease classification criteria?
- **(b)** An important element of evaluating leases is determining whether substantially all of the risks and rewards of ownership are transferred in the lease. How is "substantially all" defined in the authoritative literature?
- (c) Besides the non-cancelable term of the lease, name at least three other considerations in determining the "lease term."

Professional Simulations

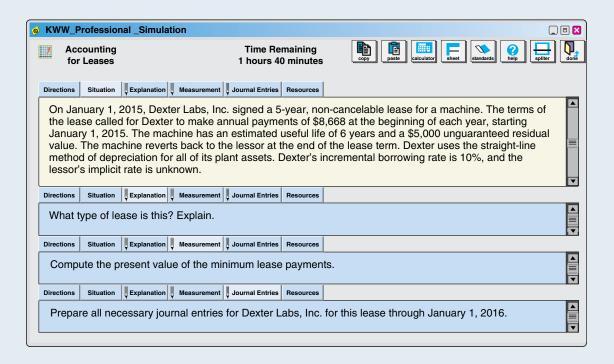

Simulation 1

In this simulation, you are asked to address questions related to the accounting for leases. Prepare responses to all parts.

Simulation 2

In this simulation, you are asked to address questions related to the accounting for leases. Prepare responses to all parts.

Remember to check the book's companion website, at www.wiley.com/college/kieso, to find additional resources for this chapter.

22

Accounting Changes and Error Analysis

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Identify the two types of accounting changes.
- 2 Describe the accounting for changes in accounting policies.
- **3** Understand how to account for retrospective accounting changes.
- **4** Understand how to account for impracticable changes.

- **5** Describe the accounting for changes in estimates.
- **6** Describe the accounting for correction of errors.
- **7** Identify economic motives for changing accounting policies.
- 8 Analyze the effect of errors.

Needed: Valid Comparisons

The IASB's Conceptual Framework describes comparability (including consistency) as one of the qualitative characteristics that contribute to the usefulness of accounting information. Unfortunately, companies are finding it difficult to maintain comparability and consistency due to the numerous changes in accounting policies mandated by the IASB.

Presented below is a condensed version of the change in accounting policy note of **United Business Media (UBM)** (IRL) in a recent annual report.

Changes in accounting policies (in part)

The accounting policies adopted are consistent with those of the previous financial year except as follows:

IAS 1—Presentation of Financial Statements (revised) The Group adopted this revised standard. The revision separates owner and nonowner changes in equity. The statement of changes in equity includes only details of transactions with owners, with non-owner changes in equity presented as a single line. In addition, the standard introduces the statement of comprehensive income to be presented either as a single statement, or as two linked statements. The Group has elected to present two statements.

IAS 36—Impairment of Assets When discounted cash flows are used to estimate "fair value less costs to sell," additional disclosure is required about the discount rate, consistent with disclosures required when discounted cash flows are used to estimate "value in use." For those cash-generating units where the Group is required to compute the recoverable amount, fair value less costs to sell is used on an earnings multiples approach. Additional disclosures will be included in the future where applicable.

IFRS 7—Financial Instruments Disclosures: The Group adopted this amendment which requires increased disclosures about fair value measurements and liquidity risk. Fair value measurements related to items recorded at fair value are to be disclosed by source of inputs using a three-level fair value hierarchy, by class, for all financial instruments recognized at fair value.

IFRS 8—Operating Segments The Group adopted IFRS 8, which requires disclosure of information about the Group's operating segments and replaces the requirement to determine primary (business) and secondary (geographical) reporting segments of the Group. Adoption of this Standard did not have any effect on the financial position or performance of the Group. The Group determined that the four operating and reportable segments are Events, Data, Services and Online, Print—Magazines and Targeting, Distribution and Monitoring. Additional disclosures about each of these segments are shown in Note 3.

What these excerpts indicate is that the IASB is constantly attempting to improve financial reporting as conditions change in the financial world.

In addition, a number of companies have faced restatements due to errors in their financial statements. Presented on the next page is a chart that shows the total restatements per year since 2004. There is much good news in the chart. In 2007, restatements declined by 31.5 percent (from 1,771 to 1,213). In 2008, restatements declined another 24 percent (from 1,213 to 922). Although the

declining trend continued in 2009, from 2010–2012, restatements seem to have stabilized. The overall decline is attributed to improved reliability of internal controls, but some observers suspect that the drop may also be due to relaxed enforcement by market regulators.

The trend in restatements is a positive development. However, when restatements and accounting changes arise, financial statement users still need high-quality accounting information to make valid comparisons of financial performance to periods before the accounting change or restatement.

Source: 2009 Financial Restatements: A Nine Year Comparison, Audit Analytics (March 2013), p. 3.

PREVIEW OF CHAPTER

22

As our opening story indicates, changes in accounting policies and errors in financial information are significant. When these changes occur, companies must follow specific accounting and reporting

requirements. In addition, to ensure comparability among companies, the IASB has standardized reporting of accounting changes, changes in accounting estimates, error corrections, and related earnings per share information. In this chapter, we discuss these reporting standards, which help investors better understand a company's financial condition. The content and organization of the chapter are as follows.

Accounting Changes and Error Analysis Changes in Estimates Error Analysis Accounting Changes Changes in Policy Accounting Errors Retrospective Prospective Example · Statement of **Direct and indirect** Disclosure financial position Summary errors effects Motivations Income statement Impracticability errors · Statement of financial position and income statement errors Comprehensive example Preparation of statements with error corrections

ACCOUNTING CHANGES

LEARNING OBJECTIVE 1

Identify the two types of accounting changes.

See the Authoritative Literature section (page 1158). Accounting alternatives diminish the comparability of financial information between periods and between companies; they also obscure useful historical trend data. For example, if **Toyota** (JPN) revises its estimates for equipment useful lives, depreciation expense for the current year will not be comparable to depreciation expense reported by Toyota in prior years. Similarly, if **Tesco** (GBR)

changes to FIFO inventory pricing while Marks and Spencer plc (GBR) uses the retail method, it will be difficult to compare these companies' reported results. A reporting framework helps preserve comparability when there is an accounting change.

The IASB has established a reporting framework that involves two types of accounting changes. [1] The two types of accounting changes are:

- **1.** Change in accounting policy. A change from one accepted accounting policy to another one. For example, Alcatel-Lucent (FRA) changed its method of accounting for actuarial gains and losses from using the corridor approach to immediate recognition.
- 2. Change in accounting estimate. A change that occurs as the result of new information or additional experience. As an example, Daimler AG (DEU) revised its estimates of the useful lives of its depreciable property recently due to modifications in its productive processes.

A third category necessitates changes in accounting, though it is not classified as an accounting change.

3. *Errors in financial statements*. Errors result from mathematical mistakes, mistakes in applying accounting policies, or oversight or misuse of facts that existed when preparing the financial statements. For example, a company may incorrectly apply the retail inventory method for determining its final inventory value.

The IASB classifies changes in these categories because each category involves different methods of recognizing changes in the financial statements. In this chapter, we discuss these classifications. We also explain how to report each item in the accounts and how to disclose the information in comparative statements.

CHANGES IN ACCOUNTING POLICY

LEARNING OBJECTIVE 2

Describe the accounting for changes in accounting policies.

By definition, a **change in accounting policy involves a change from one accepted accounting policy to another**. For example, a company might change the basis of inventory pricing from average-cost to FIFO. Or, it might change its method of revenue recognition for long-term construction contracts from the cost-recovery to the percentage-of-completion method.

Companies must carefully examine each circumstance to ensure that a change in policy has actually occurred. **Adoption of a new policy** in recognition of events that have occurred for the first time or that were previously immaterial is not a change in accounting policy. For example, a change in accounting policy has not occurred when a company adopts an inventory method (e.g., FIFO) for **newly** acquired items of inventory, even if FIFO differs from that used for **previously recorded** inventory. Another example is certain marketing expenditures that were previously immaterial and expensed in the period incurred. It would not be considered a change in accounting policy if they become material and so may be acceptably deferred and amortized.

Finally, what if a company previously followed an accounting policy that was not acceptable? Or, what if the company applied a policy incorrectly? In such cases, this type of change is **a correction of an error**. For example, a switch from the cash (income tax) basis of accounting to the accrual basis is a correction of an error. Or, if a company deducted residual value when computing double-declining depreciation on plant assets and later recomputed depreciation without deducting estimated residual value, it has corrected an error.

There are three possible approaches for reporting changes in accounting policies:

Report changes currently. In this approach, companies report the cumulative effect
of the change in the current year's income statement. The cumulative effect is the
difference in prior years' income between the newly adopted and prior accounting
policy. Under this approach, the effect of the change on prior years' income appears
only in the current-year income statement. The company does not change prioryear financial statements.

Advocates of this position argue that changing prior years' financial statements results in a loss of confidence in financial reports. How do investors react when told that the earnings computed three years ago are now entirely different? Changing prior periods, if permitted, also might upset contractual arrangements based on the old figures. For example, profit-sharing arrangements computed on the old basis might have to be recomputed and completely new distributions made, creating numerous legal problems. Many practical difficulties also exist: The cost of changing prior period financial statements may be excessive, or determining the amount of the prior period effect may be impossible on the basis of available data.

• Report changes retrospectively. Retrospective application refers to the application of a different accounting policy to recast previously issued financial statements—as if the new policy had always been used. In other words, the company "goes back" and adjusts prior years' statements on a basis consistent with the newly adopted policy. The company shows any cumulative effect of the change as an adjustment to beginning retained earnings of the earliest year presented.

Advocates of this position argue that retrospective application ensures comparability. Think for a moment what happens if this approach is not used: The year previous to the change will be on the old method; the year of the change will report the entire cumulative adjustment; and the following year will present financial statements on the new basis without the cumulative effect of the change. Such lack of consistency fails to provide meaningful earnings-trend data and other financial relationships necessary to evaluate the business.

• Report changes prospectively (in the future). In this approach, previously reported results remain. As a result, companies do not adjust opening balances to reflect the change in policy. Advocates of this position argue that once management presents financial statements based on acceptable accounting policies, they are final; management cannot change prior periods by adopting a new policy. According to this line of reasoning, the current-period cumulative adjustment is not appropriate because that approach includes amounts that have little or no relationship to the current year's income or economic events.

Given these three possible approaches, which does the accounting profession prefer? The IASB **requires that companies use the retrospective approach**. Why? Because it provides financial statement users with more useful information than the cumulative-effect or prospective approaches. [2] The rationale is that changing the prior statements to be on the same basis as the newly adopted policy results in greater consistency across accounting periods. Users can then better compare results from one period to the next.

Underlying Concepts

Use of the retrospective approach contributes to the enhancing characteristic of consistency.

What do the numbers mean?

COMPARISON CHALLENGES—SQUARED

As discussed in the opening story, accounting changes create comparability challenges when evaluating a company over time. This explains the importance of accounting rules that ensure investors have the information to understand accounting reports prepared under different sets of rules across

time. However, the comparability challenges can be compounded by both the number of required accounting changes as well as the variation in implementation dates. The table below provides a summary of recent accounting standards and their effective dates.

Big Standards June 30, 2013 Presentation of Items of Other Comprehensive Income (Amendments to IAS 1) Disclosures: Offsetting Financial Assets and Financial Liabilities (Amendments to IFRS 7) December 31, 2013 IFRS 13 Fair Value Measurement IAS 19 Employee Benefits December 31, 2014 Recoverable Amount Disclosures for Non-Financial Assets (Amendments to IAS 36)

Given the range of new standards coming online (the list above is a sampling of 18 new standards that became effective in 2013–2014), it is easy to understand why financial statement users would find it difficult to compare accounting results, to the extent that companies are differentially affected by these new standards. Furthermore, implementation guidance

for some standards allows companies to adopt early if they wish. This is the case for the changes in rules for offsetting and recoverable amounts disclosure in the table above. This early-adoption option further magnifies the comparability challenges in the wake of new standards.

Source: "IFRS: New Standards—Are You Prepared?" In the Headlines (Issue 2014/4), KPMG (March 2014).

Retrospective Accounting Change Approach

LEARNING OBJECTIVE [3]

Understand how to account for retrospective accounting changes.

A presumption exists that once a company adopts an accounting policy, it should not change. That presumption is understandable, given the idea that consistent use of an accounting policy enhances the usefulness of financial statements. [3] However, the environment continually changes, and companies change in response. Recent standards, such as borrowing costs and operating segments, and

proposed standards on revenue recognition and financial instruments indicate that changes in accounting policies will continue to exist.

As a consequence, the IASB permits companies to change an accounting policy if:

- **1.** It is required by IFRS (e.g., the new IFRS on financial instruments will be subject to the proper accounting for changes in accounting policy); or
- **2.** It results in the financial statements providing more reliable and relevant information about a company's financial position, financial performance, and cash flows. For example, a company may determine that changing from the average-cost method of inventory valuation to the FIFO method provides more reliable and relevant information on the current value of its inventory.¹

¹In some cases, a particular transaction is not specifically addressed by IFRS. In this situation, *IAS 8* sets out a hierarchy of guidance to be considered in the selection of an accounting policy. The primary requirement is that management must use judgment to develop information that is relevant and reliable. In making that judgment, it should use the following sources in descending order: (1) the requirements and guidance in IFRS dealing with similar and related issues; (2) the definitions, recognition criteria, and measurement concepts for the elements in the Conceptual Framework; and (3) other materials such as standards from other countries that use a similar conceptual framework. [4]

When a company changes an accounting policy, it should report the change using retrospective application. In general terms, here is what the company must do:

- **1.** Adjust (recast) its financial statements for each prior period presented. Thus, financial statement information about prior periods is on the same basis as the new accounting policy.
- **2.** Adjust the carrying amounts of assets and liabilities as of the beginning of the first year presented. By doing so, these accounts reflect the cumulative effect on periods prior to those presented of the change to the new accounting policy. The company also makes an offsetting adjustment to the opening balance of retained earnings or other appropriate component of equity or net assets as of the beginning of the first year presented.

For example, assume that Carrefour (FRA) decides to change its inventory valuation method in 2015 from FIFO to average-cost. It provides comparative information for 2013 and 2014 based on the new method. Carrefour would adjust its assets, liabilities, and retained earnings for periods prior to 2013 and report these amounts in the 2013 financial statements, when it prepares comparative financial statements.

Retrospective Accounting Change: Long-Term Contracts

To illustrate the retrospective approach, assume that Denson Company has accounted for its income from long-term construction contracts using the cost-recovery (zero-profit) method. In 2015, the company changed to the percentage-of-completion method. Management believes this approach provides a more appropriate measure of the income earned. For tax purposes, the company uses the cost-recovery method and plans to continue doing so in the future. (We assume a 40 percent enacted tax rate.)

Illustration 22-1 shows portions of three income statements for 2013–2015—for both the cost-recovery and percentage-of-completion methods. (There were no differences in income between the old and new accounting methods before 2013.)

E Incom	RECOVERY ME DENSON COMPAN E STATEMENT (PA YEAR ENDED DEC	Y ARTIAL)	
Income before income tax	2013 €400,000	2014 €160,000	2015 €190,000
Income tax (40%)	160,000	64,000	76,000
Net income	<u>€240,000</u>	<u>€ 96,000</u>	<u>€114,000</u>
PERCENTAGE-OF-COMPLETION METHOD DENSON COMPANY INCOME STATEMENT (PARTIAL) FOR THE YEAR ENDED DECEMBER 31			
	2013	2014	2015
Income before income tax	€600,000	€180,000	€200,000
Income tax (40%)	240,000	72,000	80,000
Net income	<u>€360,000</u>	<u>€108,000</u>	<u>€120,000</u>

ILLUSTRATION 22-1

Comparative Income Statements for Cost-Recovery versus Percentage-of-Completion Methods

To record a change from the cost-recovery to the percentage-of-completion method, we analyze the various effects, as Illustration 22-2 (on page 1130) shows.

1130 Chapter 22 Accounting Changes and Error Analysis

ILLUSTRATION 22-2

Data for Retrospective Change Example

	Pretax Inco	me from	D	ifference in In	come
Year	Percentage-of- Completion	Cost- Recovery	Difference	Tax Effect 40%	Income Effect (net of tax)
Prior to 2014 In 2014	€600,000 180,000	€400,000 160,000	€200,000 20,000	€80,000 8,000	€120,000 12,000
Total at beginning of 2015 Total in 2015	€780,000 €200,000	€560,000 €190,000	€220,000 € 10,000	€88,000 € 4,000	€132,000 € 6,000

The entry to record the change at the beginning of 2015 would be:

Construction in Process	220,000
Deferred Tax Liability	88,000
Retained Earnings	132,000

The Construction in Process account increases by €220,000 (as indicated in the first column under "Difference in Income" in Illustration 22-2). The credit to Retained Earnings of €132,000 reflects the cumulative income effects prior to 2015 (third column under "Difference in Income" in Illustration 22-2). The company credits Retained Earnings because prior years' income is closed to this account each year. The credit to Deferred Tax Liability represents the adjustment to prior years' tax expense. The company now recognizes that amount, €88,000, as a tax liability for future taxable amounts. That is, in future periods, taxable income will be higher than book income as a result of current temporary differences. Therefore, Denson must report a deferred tax liability in the current year.

Reporting a Change in Policy. The disclosure of changes in accounting policies is particularly important. Financial statement users want consistent information from one period to the next. Such consistency ensures the usefulness of financial statements. The major disclosure requirements are as follows.

- **1.** The nature of the change in accounting policy;
- **2.** The reasons why applying the new accounting policy provides reliable and more relevant information;
- **3.** For the current period and each prior period presented, to the extent practicable, the amount of the adjustment:
 - (a) For each financial statement line item affected; and
 - **(b)** Basic and diluted earnings per share.
- **4.** The amount of the adjustment relating to periods before those presented, to the extent practicable.²

The disclosure here relates to a voluntary change in accounting policy, such as a change from the average-cost to FIFO method of inventory measurement. The requirements for disclosure are slightly different if the change is mandated by the issuance of a new IFRS. In that case, transitional adjustments are also considered, as required by the standard.

To illustrate, Denson will prepare comparative financial statements for 2014 and 2015 using the percentage-of-completion method (the new-construction accounting method). Illustration 22-3 indicates how Denson presents this information.

As Illustration 22-3 shows, Denson Company reports net income under the newly adopted percentage-of-completion method for both 2014 and 2015. The company retrospectively adjusted the 2014 income statement to report the information on a percentage-of-completion basis. Also, the note to the financial statements indicates the nature of the change, why the company made the change, and the years affected.

²Financial statements of subsequent periods need not repeat these disclosures. [5]

Completion)

ILLUSTRATION 22-3

Related to Accounting

Change (Percentage-of-

Comparative Information

Note A: Change in Method of Accounting for Long-Term Contracts. The company has accounted for revenue and costs for long-term construction contracts by the percentage-of-completion method in 2015, whereas in all prior years revenue and costs were determined by the cost-recovery method. The new method of accounting for long-term contracts was adopted to recognize . . . [state justification for change in accounting policy] . . . , and financial statements of prior years have been restated to apply the new method retrospectively. For income tax purposes, the cost-recovery method has been continued. The effect of the accounting change on income of 2015 was an increase of €6,000 net of related taxes and on income of 2014 as previously reported was an increase of €12,000 net of related taxes. The balances of retained earnings for 2014 and 2015 have been adjusted for the effect of applying retrospectively the new method of accounting. As a result of the accounting change, retained earnings as of January 1, 2014, increased by €120,000 compared to that reported using the cost-recovery method.

In addition, companies are required to provide data on important differences between the amounts reported under percentage-of-completion versus cost-recovery. When identifying the significant differences, some companies show the *entire* financial statements and line-by-line differences between percentage-of-completion and cost-recovery. However, most companies will show only line-by-line differences. For example, Denson would show the differences in construction in process, retained earnings, gross profit, and net income for 2014 and 2015 under the cost-recovery and percentage-of-completion methods.

Retained Earnings Adjustment. As indicated earlier, one of the disclosure requirements is to show the cumulative effect of the change on retained earnings as of the beginning of the earliest period presented. For Denson Company, that date is January 1, 2014. Denson disclosed that information by means of a narrative description (see Note A in Illustration 22-3). Denson also would disclose this information in its retained earnings statement. Assuming a retained earnings balance of €1,360,000 at the beginning of 2013, Illustration 22-4 shows Denson's retained earnings statement under the cost-recovery method—that is, before giving effect to the change in accounting policy. (The income information comes from Illustration 22-1 on page 1129.)

DENSON COMPANY RETAINED EARNINGS STATEMENT FOR THE YEAR ENDED				
	2015	2014	2013	
Retained earnings, January 1	€1,696,000	€1,600,000	€1,360,000	
Net income	114,000	96,000	240,000	
Retained earnings, December 31	<u>€1,810,000</u>	<u>€1,696,000</u>	<u>€1,600,000</u>	

If Denson presents comparative statements for 2014 and 2015 under percentage-of-completion, then it must change the beginning balance of retained earnings at January 1, 2014. The difference between the retained earnings balances under cost-recovery and percentage-of-completion is computed as follows.

Retained earnings, January 1, 2014 (percentage-of-completion)	€1,720,000
Retained earnings, January 1, 2014 (cost-recovery)	1,600,000
Cumulative-effect difference	€ 120,000

ILLUSTRATION 22-4
Retained Earnings
Statement before
Retrospective Change

The €120,000 difference is the cumulative effect. Illustration 22-5 shows a comparative retained earnings statement for 2014 and 2015, giving effect to the change in accounting policy to percentage-of-completion.

ILLUSTRATION 22-5

Retained Earnings Statement after Retrospective Application

DENSON COMPANY RETAINED EARNINGS STATEMENT FOR THE YEAR ENDED		
	2015	2014
Retained earnings, January 1, as reported Add: Adjustment for the cumulative effect on prior years of applying retrospectively the new method of accounting for		€1,600,000
construction contracts		120,000
Retained earnings, January 1, as adjusted Net income	€1,828,000 120,000	1,720,000 108,000
Retained earnings, December 31	€1,948,000	€1,828,000

Denson adjusted the beginning balance of retained earnings on January 1, 2014, for the excess of percentage-of-completion net income over cost-recovery net income in 2013. This comparative presentation indicates the type of adjustment that a company needs to make. It follows that this adjustment would be much larger if a number of prior periods were involved.

Retrospective Accounting Change: Inventory Methods

As a second illustration of the retrospective approach, assume that Lancer Company has accounted for its inventory using the average-cost method. In 2015, the company changes to the FIFO method because management believes this approach provides a more appropriate measure of its inventory costs. Illustration 22-6 provides additional information related to Lancer Company.

ILLUSTRATION 22-6

Lancer Company Information

- 1. Lancer Company started its operations on January 1, 2013. At that time, shareholders invested \$100,000 in the business in exchange for ordinary shares.
- 2. All sales, purchases, and operating expenses for the period 2013–2015 are cash transactions. Lancer's cash flows over this period are as follows.

	2013	2014	2015
Sales	\$300,000	\$300,000	\$300,000
Purchases	90,000	110,000	125,000
Operating expenses	100,000	100,000	100,000
Cash flow from operations	\$110,000	\$ 90,000	\$ 75,000

- 3. Lancer has used the average-cost method for financial reporting since its inception.
- 4. Inventory determined under average-cost and FIFO for the period 2013–2015 is as follows.

	Average-Cost Method	FIFO Method	Difference
January 1, 2013	\$ 0	\$ 0	\$ 0
December 31, 2013	10,000	12,000	2,000
December 31, 2014	20,000	25,000	5,000
December 31, 2015	32,000	39,000	7,000

5. Cost of goods sold under average-cost and FIFO for the period 2013–2015 is as follows.

	Cost of God	as Sola	
	Average-Cost	FIFO	Difference
2013	\$ 80,000	\$ 78,000	\$2,000
2014	100,000	97,000	3,000
2015	113,000	111,000	2,000

0--1-10--1-0-1-1

- 6. Earnings per share information is not required on the income statement.
- 7. All tax effects for this illustration should be ignored.

Given the information about Lancer Company, Illustration 22-7 shows its income statement, retained earnings statement, statement of financial position, and statement of cash flows for 2013–2015 under average-cost.

LANCER COMPANY INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31 2015 2013 2014 Sales \$300,000 \$300,000 \$300,000 Cost of goods sold (average-cost) 80,000 100,000 113,000 Operating expenses 100.000 100,000 100,000 \$120,000 \$100,000 Net income \$ 87,000 LANCER COMPANY RETAINED EARNINGS STATEMENT FOR THE YEAR ENDED DECEMBER 31 2014 2015 2013 Retained earnings (beginning) 0 \$120,000 \$220,000 Add: Net income 120,000 100,000 87,000 Retained earnings (ending) \$120,000 \$220,000 \$307,000 LANCER COMPANY STATEMENT OF FINANCIAL POSITION AT DECEMBER 31 2013 2014 2015 \$ 10,000 \$ 20,000 \$ 32,000 Inventory (average-cost) 210,000 300,000 375,000 Cash Total assets \$220,000 \$320,000 \$407,000 Share capital \$100,000 \$100,000 \$100,000 Retained earnings 120,000 220,000 307,000 \$320,000 \$407,000 Total equity \$220,000 LANCER COMPANY STATEMENT OF CASH FLOWS FOR THE YEAR ENDED DECEMBER 31 2013 2014 2015 Cash flows from operating activities \$300,000 \$300,000 \$300,000 Sales **Purchases** 90,000 110,000 125,000 Operating expenses 100,000 100,000 100,000 Net cash provided by operating activities 110,000 90,000 75,000 Cash flows from financing activities Issuance of ordinary shares 100,000 Net increase in cash 210,000 90,000 75,000 Cash at beginning of year 300,000 0 210,000 Cash at end of year \$210,000 \$300,000 \$375,000

ILLUSTRATION 22-7 Lancer Financial Statements (Average-Cost)

As Illustration 22-7 indicates, under average-cost Lancer Company reports \$120,000 net income in 2013, \$100,000 net income in 2014, and \$87,000 net income in 2015. The amount of inventory reported on Lancer's statement of financial position reflects average-cost inventory accounting.

Illustration 22-8 (page 1134) shows Lancer's income statement, retained earnings statement, statement of financial position, and statement of cash flows for 2013–2015

under FIFO. You can see that the cash flow statement under FIFO is the same as under average-cost. Although the net incomes are different in each period, there is no cash flow effect from these differences in net income. (If we considered income taxes, a cash flow effect would result.)

Compare the financial statements reported in Illustration 22-7 and Illustration 22-8. You can see that, under retrospective application, the change to FIFO inventory valuation affects reported inventories, cost of goods sold, net income, and retained earnings. In the following sections, we discuss the accounting and reporting of Lancer's accounting change from average-cost to FIFO.

Given the information provided in Illustrations 22-6, 22-7, and 22-8, we now are ready to account for and report on the accounting change.

Our first step is to adjust the financial records for the change from average-cost to FIFO. To do so, we perform the analysis in Illustration 22-9.

	Net Inco	ome	Difference in Income
Year	Average-Cost	FIFO	
2013	\$120,000	\$122,000	\$2,000
2014	100,000	103,000	3,000
Total at beginning of 2015	\$220,000	\$225,000	\$5,000
Total in 2015	\$ 87,000	\$ 89,000	<u>\$2,000</u>

ILLUSTRATION 22-9

Data for Recording Change in Accounting Policy

The entry to record the change to the FIFO method at the beginning of 2015 is as follows.

Inventory 5,000
Retained Earnings 5,000

The change increases the inventory account by \$5,000. This amount represents the difference between the ending inventory at December 31, 2014, under average-cost (\$20,000) and the ending inventory under FIFO (\$25,000). The credit to Retained Earnings indicates the amount needed to change prior-year's income, assuming that Lancer had used FIFO in previous periods.

Reporting a Change in Policy. Lancer Company will prepare comparative financial statements for 2014 and 2015 using FIFO (the new inventory method). Illustration 22-10 indicates how Lancer might present this information.

For	r 31	
	2015	2014
		As adjusted (Note A)
Sales	\$300,000	\$300,000
Cost of goods sold	111,000	97,000
Operating expenses	100,000	100,000
Net income	\$ 89,000	\$103,000

ILLUSTRATION 22-10

Comparative Information Related to Accounting Change (FIFO)

Note A: Change in Method of Accounting for Inventory Valuation. On January 1, 2015, Lancer Company elected to change its method of valuing its inventory to the FIFO method; in all prior years inventory was valued using the average-cost method. The Company adopted the new method of accounting for inventory to better report cost of goods sold in the year incurred. Comparative financial statements of prior years have been adjusted to apply the new method retrospectively. The following financial statement line items for years 2015 and 2014 were affected by the change in accounting policy.

		2015			2014	
Statement of Financial Position	Average- Cost	FIFO	Difference	Average- Cost	FIFO	Difference
Inventory Retained earnings	\$ 32,000 307,000	\$ 39,000 314,000	\$7,000 7,000	\$ 20,000 220,000	\$ 25,000 225,000	\$5,000 5,000
Income Statement						
Cost of goods sold Net income	\$113,000 87,000	\$111,000 89,000	\$2,000 2,000	\$100,000 100,000	\$ 97,000 103,000	\$3,000 3,000
Ctatamant of Cash El						

Statement of Cash Flows

(no effect)

As a result of the accounting change, retained earnings as of January 1, 2014, increased from \$120,000, as originally reported using the average-cost method, to \$122,000 using the FIFO method.

Nature and reason for change and description of prior period information adjusted

Effect of change on each financial statement affected

Cumulative effect on retained earnings

As Illustration 22-10 shows, Lancer Company reports net income under the newly adopted FIFO method for both 2014 and 2015. The company retrospectively adjusted the 2014 income statement to report the information on a FIFO basis. In addition, the note to the financial statements indicates the nature of the change, why the company made the change, and the years affected. The note also provides data on important differences between the amounts reported under average-cost versus FIFO. (When identifying the significant differences, some companies show the *entire* financial statements and line-by-line differences between average-cost and FIFO.)

Retained Earnings Adjustment. As indicated earlier, one of the disclosure requirements is to show the cumulative effect of the change on retained earnings as of the beginning of the earliest period presented. For Lancer Company, that date is January 1, 2014. Lancer disclosed that information by means of a narrative description (see Note A in Illustration 22-10). Lancer also would disclose this information in its retained earnings statement. Illustration 22-11 shows Lancer's retained earnings statement under average-cost—that is, before giving effect to the change in accounting policy. (This information comes from Illustration 22-7 on page 1133.)

ILLUSTRATION 22-11

Retained Earnings Statements (Average-Cost)

Retained earnings, January 1	2015 \$220,000	2014 \$120,000	<u>2013</u> \$ 0
Net income	87,000	100,000	120,000
Retained earnings, December 31	\$307,000	\$220,000	<u>\$120,000</u>

If Lancer presents comparative statements for 2014 and 2015 under FIFO, then it must change the beginning balance of retained earnings at January 1, 2014. The difference between the retained earnings balances under average-cost and FIFO is computed as follows.

Retained earnings, January 1, 2014 (FIFO)	\$122,000
Retained earnings, January 1, 2014 (average-cost)	120,000
Cumulative effect difference	\$ 2,000

The \$2,000 difference is the cumulative effect. Illustration 22-12 shows a comparative retained earnings statement for 2014 and 2015, giving effect to the change in accounting policy to FIFO.

ILLUSTRATION 22-12

Retained Earnings Statements after Retrospective Application

Retained earnings, January 1, as reported	2015	2014 \$120,000	
Add: Adjustment for the cumulative effect on prior years of applying retrospectively the new method of accounting for inventory		2,000	
Retained earnings, January 1, as adjusted Net income Retained earnings, December 31	\$225,000 89,000 \$314,000	122,000 103,000 \$225,000	

Lancer adjusted the beginning balance of retained earnings on January 1, 2014, for the excess of FIFO net income over average-cost net income in 2013. This comparative presentation indicates the type of adjustment that a company needs to make. It follows that the amount of this adjustment would be much larger if a number of prior periods were involved.

Direct and Indirect Effects of Changes

Are there other effects that a company should report when it makes a change in accounting policy? For example, what happens when a company like Lancer has a bonus plan based on net income and the prior year's net income changes when FIFO is retrospectively applied? Should Lancer also change the reported amount of bonus expense? Or, what happens if we had not ignored income taxes in the Lancer example? Should Lancer adjust net income, given that taxes will be different under average-cost and FIFO in prior periods? The answers depend on whether the effects are direct or indirect.

Direct Effects

The IASB takes the position that companies should retrospectively apply the **direct effects of a change in accounting policy**. An example of a **direct effect** is an adjustment to an inventory balance as a result of a change in the inventory valuation method. For example, Lancer Company should change the inventory amounts in prior periods to indicate the change to the FIFO method of inventory valuation. Another inventory-related example would be an impairment adjustment resulting from applying the lower-of-cost-or-net realizable value test to the adjusted inventory balance. Related changes, such as deferred income tax effects of the impairment adjustment, are also considered direct effects. This entry was illustrated in the Denson example, in which the change to percentage-of-completion accounting resulted in recording a deferred tax liability.

Indirect Effects

In addition to direct effects, companies can have **indirect effects related to a change in accounting policy**. An **indirect effect** is any change to current or future cash flows of a company that result from making a change in accounting policy that is applied retrospectively. An example of an indirect effect is a change in profit-sharing or royalty payment that is based on a reported amount such as revenue or net income. The IASB is silent on what to do in this situation. U.S. GAAP (likely because its standard in this area was issued after *IAS 8*) requires that indirect effects do not change prior period amounts.

For example, let's assume that Lancer has an employee profit-sharing plan based on net income. As Illustration 22-9 (on page 1135) showed, Lancer would report higher income in 2014 and 2015 if it used the FIFO method. In addition, let's assume that the profit-sharing plan requires that Lancer pay the incremental amount due based on the FIFO income amounts. In this situation, Lancer reports this additional expense **in the current period**; it would not change prior periods for this expense. If the company prepares comparative financial statements, it follows that it does not recast the prior periods for this additional expense.³

If the terms of the profit-sharing plan indicate that *no payment is necessary* in the current period due to this change, then the company need not recognize additional profit-sharing expense in the current period. Neither does it change amounts reported for prior periods.

When a company recognizes the indirect effects of a change in accounting policy, it includes in the financial statements a description of the indirect effects. In doing so, it discloses the amounts recognized in the current period and related per share information.

³The rationale for this approach is that companies should recognize, in the period the adoption occurs (not the prior period), the effect on the cash flows that is caused by the adoption of the new accounting policy. That is, the accounting change is a necessary "past event" in the definition of an asset or liability that gives rise to the accounting recognition of the indirect effect in the current period.

Impracticability

Understand how to account for impracticable changes.

It is not always possible for companies to determine how they would have reported prior periods' financial information under retrospective application of an accounting policy change. Retrospective application is considered impracticable if a company cannot determine the prior period effects using every reasonable effort to do so.

Companies should not use retrospective application if one of the following conditions exists:

- **1.** The company cannot determine the effects of the retrospective application.
- 2. Retrospective application requires assumptions about management's intent in a prior period.
- **3.** Retrospective application requires significant estimates for a prior period, and the company cannot objectively verify the necessary information to develop these estimates.

If any of the above conditions exists, it is deemed impracticable to apply the retrospective approach. In this case, the company prospectively applies the new accounting policy as of the earliest date it is practicable to do so. [6]

For example, assume that Williams Company changed its accounting policy for depreciable assets so as to more fully apply component depreciation under revaluation accounting. Unfortunately, the company does not have detailed accounting records to establish a basis for the components of these assets. As a result, Williams determines it is not practicable to account for the change to full component depreciation using the retrospective application approach. It therefore applies the policy prospectively, starting at the beginning of the current year.

Williams must disclose only the effect of the change on the results of operations in the period of change. Also, the company should explain the reasons for omitting the computations of the cumulative effect for prior years. Finally, it should disclose the justification for the change to component depreciation. [7]

CHANGES IN ACCOUNTING ESTIMATES

LEARNING OBJECTIVE 5

Describe the accounting for changes in estimates.

To prepare financial statements, companies must estimate the effects of future conditions and events. For example, the following items require estimates.

- 1. Bad debts.
- **2.** Inventory obsolescence.
- **3.** Useful lives and residual values of assets.
- **4.** Periods benefited by deferred costs.
- **5.** Liabilities for warranty costs and income taxes.
- Recoverable mineral reserves.
- **7.** Change in depreciation estimates.
- **8.** Fair value of financial assets or financial liabilities.

A company cannot perceive future conditions and events and their effects with certainty. Therefore, estimating requires the exercise of judgment. Accounting estimates will change as new events occur, as a company acquires more experience, or as it obtains additional information.

Prospective Reporting

Companies report prospectively changes in accounting estimates. That is, companies should not adjust previously reported results for changes in estimates. Instead, they account for the effects of all changes in estimates in (1) the period of change if the change affects that period only (e.g., a change in the estimate of the amount of bad debts affects only the current period's income), or (2) the period of change and future periods if the change affects both (e.g., a change in the estimated useful life of a depreciable asset affects depreciation expense in the current and future periods). [8] The IASB views changes in estimates as normal recurring corrections and adjustments, the natural result of the accounting process. It prohibits retrospective treatment.

The circumstances related to a change in estimate differ from those for a change in accounting policy. If companies reported changes in estimates retrospectively, continual adjustments of prior years' income would occur. It seems proper to accept the view that, because new conditions or circumstances exist, the revision fits the new situation (not the old one). Companies should therefore handle such a revision in the current and future periods.

To illustrate, Lao Labs Inc. purchased for \(\frac{\frac{3}}{3},000,000\) a building that it originally estimated to have a useful life of 15 years and no residual value. It recorded depreciation for 5 years on a straight-line basis. On January 1, 2015, Lao Labs revises the estimate of the useful life. It now considers the asset to have a total life of 25 years. (Assume that the useful life for financial reporting and tax purposes and depreciation method are the same.) Illustration 22-13 shows the accounts at the beginning of the sixth year.

Buildings \$43,000,000\$Less: Accumulated depreciation—buildings (5 \times \$200,000) 1,000,000Book value of building $$\frac{1}{2,000,000}$$

ILLUSTRATION 22-13
Book Value after Five
Years' Depreciation

Lao Labs records depreciation for the year 2015 as follows.

Depreciation Expense 100,000
Accumulated Depreciation—Building 100,000

The company computes the ¥100,000 depreciation charge as shown in Illustration 22-14.

 $\frac{\textbf{Depreciation Charge}}{\textbf{Remaining Service Life}} = \frac{\$2,000,000}{25 \text{ years} - 5 \text{ years}} = \$100,000$

ILLUSTRATION 22-14
Depreciation after
Change in Estimate

Companies sometime find it difficult to differentiate between a change in estimate and a change in accounting policy. Is it a change in policy or a change in estimate when a company changes from deferring and amortizing marketing costs to expensing them as incurred because future benefits of these costs have become doubtful? If it is impossible to determine whether a change in policy or a change in estimate has occurred, the rule is this: Consider the change as a change in estimate.

Another example is a change in depreciation (as well as amortization or depletion) methods. Because companies change depreciation methods based on changes in estimates about future benefits from long-lived assets, it is not possible to separate the effect of the accounting policy change from that of the estimates. **As a result, companies account for a change in depreciation methods as a change in estimate.**

A similar problem occurs in differentiating between a change in estimate and a correction of an error, although here the answer is more clear-cut. How does a company determine whether it overlooked the information in earlier periods (an error) or whether it obtained new information (a change in estimate)? Proper classification is important

because the accounting treatment differs for corrections of errors versus changes in estimates. The general rule is this: **Companies should consider careful estimates that later prove to be incorrect as changes in estimate.** Only when a company obviously computed the estimate incorrectly because of lack of expertise or in bad faith should it consider the adjustment an error. There is no clear demarcation line here. Companies must use good judgment in light of all the circumstances.

Disclosures

A company should disclose the nature and amount of a change in an accounting estimate that has an effect in the current period or is expected to have an effect in future periods (unless it is impracticable to estimate that effect). [9] Illustration 22-15 shows disclosure of a change in estimated useful lives, which appeared in a recent annual report of Portugal Telecom, SGPS, S.A. (PRT).

ILLUSTRATION 22-15

Disclosure of Change in Estimated Useful Lives

Portugal Telecom, SGPS, S.A.

Note 4 (in Part): Changes in Accounting Policies and Estimates

The change in estimate of the useful life of the UMTS license was effective as at 30 June. According to IAS 8 this change should be applicable on a prospective basis and, on an annual basis, the impact of this change will be a reduction in depreciation and amortisation costs by €26 million.

For the most part, companies need not disclose changes in accounting estimate made as part of normal operations, such as bad debt allowances or inventory obsolescence, unless such changes are material.

ACCOUNTING ERRORS

LEARNING OBJECTIVE [6]

Describe the accounting for correction of errors.

No business, large or small, is immune from errors. As the opening story discussed, the number of accounting errors that lead to restatement has stabilized. However, without accounting and disclosure guidelines for the reporting of errors, investors can be left in the dark about the effects of errors.

Certain errors, such as misclassifications of balances within a financial statement, are not as significant to investors as other errors. Significant errors would be those resulting in overstating assets or income, for example. However, investors should know the potential impact of all errors. Even "harmless" misclassifications can affect important ratios. Also, some errors could signal important weaknesses in internal controls that could lead to more significant errors.

In general, accounting errors include the following types:

- **1.** A change from an accounting policy that is **not** generally accepted to an accounting policy that is acceptable. The rationale is that the company incorrectly presented prior periods because of the application of an improper accounting policy. For example, a company may change from the cash (income tax) basis of accounting to the accrual basis.
- **2.** Mathematical mistakes, such as incorrectly totaling the inventory count sheets when computing the inventory value.
- **3.** Changes in estimates that occur because a company did not prepare the estimates in good faith. For example, a company may have adopted a clearly unrealistic depreciation rate.

- **4.** An oversight, such as the failure to accrue or defer certain expenses and revenues at the end of the period.
- **5.** A misuse of facts, such as the failure to use residual value in computing the depreciation base for the straight-line approach.
- **6.** The incorrect classification of a cost as an expense instead of an asset, and vice versa.

Accounting errors occur for a variety of reasons. Illustration 22-16 indicates 11 major categories of accounting errors that drive restatements.

Accounting Category	Type of Restatement
Expense recognition	Recording expenses in the incorrect period or for an incorrect amount.
Revenue recognition	Improper revenue accounting, including instances in which revenue was improperly recognized, questionable revenues were recognized, or any other number of related errors that led to misreported revenue.
Misclassification	Misclassifying significant accounting items on the statement of financial position, income statement, or statement of cash flows. These include restatements due to misclassification of current or non-current accounts or those that impact cash flows from operations.
Equity-other	Improper accounting for EPS, restricted shares, warrants, and other equity instruments.
Reserves/Contingencies	Errors involving accounts receivables' bad debts, inventory reserves, income tax allowances, and loss contingencies.
Long-lived assets	Asset impairments of property, plant, and equipment; goodwill; or other related items.
Taxes	Errors involving correction of tax provision, improper treatment of tax liabilities, and other tax-related items.
Equity—other comprehensive income	Improper accounting for comprehensive income equity transactions including foreign currency items, revaluations of plant assets, unrealized gains and losses on certain investments in debt, equity securities, and derivatives.
Inventory	Inventory costing valuations, quantity issues, and cost of sales adjustments.
Equity-share options	Improper accounting for employee share options.
Other	Any restatement not covered by the listed categories, including those related to improper accounting for acquisitions or mergers.
0	estatements - Traversing Chalay Cround " Trand Mart Class Lawis & Co. (June 2, 2005), p. 9; and "2012 Financial

Sources: T. Baldwin and D. Yoo, "Restatements—Traversing Shaky Ground," *Trend Alert*, Glass Lewis & Co. (June 2, 2005), p. 8; and "2012 Financial Restatements," *Audit Analytics* (March 2013).

As soon as a company discovers an error, it must correct the error. Companies record **corrections of errors** from prior periods as an adjustment to the beginning balance of retained earnings in the current period. Such corrections are called **prior period adjustments**.

If it presents comparative statements, a company should restate the prior statements affected, to correct for the error.⁴ The company need not repeat the disclosures in the financial statements of subsequent periods.

Example of Error Correction

To illustrate, in 2016 the bookkeeper for Selectro Company discovered an error: In 2015, the company failed to record £20,000 of depreciation expense on a newly constructed building. This building is the only depreciable asset Selectro owns. The company correctly included the depreciation expense in its tax return and correctly reported its income taxes payable. Illustration 22-17 (on page 1142) presents Selectro's income statement for 2015 (starting with income before depreciation expense) with and without the error.

ILLUSTRATION 22-16

Accounting-Error Types

⁴The term **retrospective restatement** is used for the process of revising previously issued financial statements to reflect a correction of an error. This term distinguishes an error correction from a change in accounting policy, referred to as retrospective application.

ILLUSTRATION 22-17

Error Correction Comparison

	SELECTRO CO INCOME STAT YEAR ENDED, D							
Without Error With Error								
Income before depreciation expense		£100,000		£100,000				
Depreciation expense		20,000		0				
Income before income tax	Income before income tax 80,000 100,000							
Current								
Deferred	-0-	32,000	8,000	40,000				
Net income		£ 48,000		£ 60,000				

Illustration 22-18 shows the entries that Selectro should have made and did make for recording depreciation expense and income taxes.

ILLUSTRATION 22-18

Error Entries

Entries Company Shoul (Without Erro		ide	Entries Company D (With Error		
Depreciation Expense Accumulated Depreciation—Buildings	20,000	20,000	No entry made for depreciation		
Income Tax Expense Income Taxes Payable	32,000	32,000	Income Tax Expense Deferred Tax Liability Income Taxes Payable	40,000	8,000 32,000

As Illustration 22-18 indicates, the £20,000 omission error in 2015 results in the following effects.

Income Statement Effects

Depreciation expense (2015) is understated £20,000. Income tax expense (2015) is overstated £8,000 (£20,000 \times 40%). Net income (2015) is overstated £12,000 (£20,000 - £8,000).

Statement of Financial Position Effects

Accumulated depreciation—buildings is understated £20,000. Deferred tax liability is overstated £8,000 (£20,000 \times 40%).

To make the proper correcting entry in 2016, Selectro should recognize that net income in 2015 is overstated by £12,000, the Deferred Tax Liability is overstated by £8,000, and Accumulated Depreciation—Buildings is understated by £20,000. The entry to correct this error in 2016 is as follows.

Retained Earnings 12,000

Deferred Tax Liability 8,000

Accumulated Depreciation—Buildings 20,000

The debit to Retained Earnings results because net income for 2015 is overstated. The debit to the Deferred Tax Liability is made to remove this account, which was caused by the error. The credit to Accumulated Depreciation—Buildings reduces the book value of the building to its proper amount. Selectro will make the same journal entry to record the correction of the error in 2016 whether it prepares single-period (noncomparative) or comparative financial statements.

Single-Period Statements

To demonstrate how to show this information in a single-period statement, assume that Selectro Company has a beginning retained earnings balance at January 1, 2016, of £350,000. The company reports net income of £400,000 in 2016. Illustration 22-19 shows Selectro's retained earnings statement for 2016.

SELECTRO COMPANY RETAINED EARNINGS STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2016									
Retained earnings, January 1, as reported Correction of an error (depreciation) Less: Applicable income tax reduction	£20,000 8,000	£350,000 _ (12,000)							
Retained earnings, January 1, as adjusted Add: Net income		338,000 400,000							
Retained earnings, December 31		£738,000							

ILLUSTRATION 22-19

Reporting an Error— Single-Period Financial Statement

The statement of financial position in 2016 would not have any deferred tax liability related to the building, and Accumulated Depreciation—Buildings is now restated at a higher amount. The income statement would not be affected.

Comparative Statements

If preparing comparative financial statements, a company should make adjustments to correct the amounts for all affected accounts reported in the statements for **all periods** reported. The company should restate the data to the correct basis for each year presented. It should **show any catch-up adjustment as a prior period adjustment to retained earnings for the earliest period it reported**. These requirements are essentially the same as those for reporting a change in accounting policy.

For example, in the case of Selectro, the error of omitting the depreciation of £20,000 in 2015, discovered in 2016, results in the restatement of the 2015 financial statements. Illustration 22-20 shows the accounts that Selectro restates in the 2015 financial statements.

In the statement of financial position:	
Accumulated depreciation—buildings Deferred tax liability Retained earnings, ending balance	£20,000 increase £ 8,000 decrease £12,000 decrease
In the income statement:	
Depreciation expense—buildings Income tax expense Net income	£20,000 increase £ 8,000 decrease £12,000 decrease
In the retained earnings statement:	
Retained earnings, ending balance (due to lower net income for the period)	£12,000 decrease

ILLUSTRATION 22-20

Reporting an Error— Comparative Financial Statements

Selectro prepares the 2016 financial statements in comparative form with those of 2015 **as if the error had not occurred**. In addition, Selectro must disclose that it has restated its previously issued financial statements, and it describes the nature of the error. Selectro also must disclose the following:

1. The effect of the correction on each financial statement line item and any per share amounts affected for each prior period presented.

2. The cumulative effect of the change on retained earnings or other appropriate components of equity or net assets in the statement of financial position, as of the beginning of the earliest period presented.

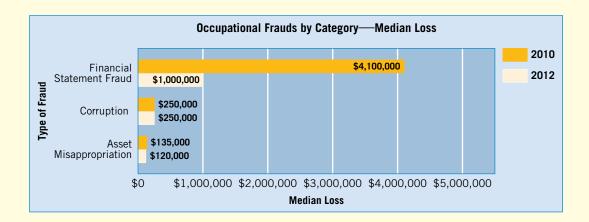

As indicated earlier, it is sometimes impracticable to adjust comparative information for one or more prior periods for changes in accounting policies. It is also sometimes impracticable to correct a prior period error through retrospective restatement. For example, the company may have made errors in computing fringe-benefit amounts in prior years but is unable to now reconstruct this information fully. As a result, any adjustment is made at the beginning of the earliest period for which retrospective application is applicable.

What do the numbers mean?

GUARD THE FINANCIAL STATEMENTS!

Restatements sometimes occur because of financial fraud. Financial frauds involve the intentional misstatement or omission of material information in the organization's financial reports. Common methods of financial fraud manipulation include recording fictitious revenues, concealing liabilities or expenses, and artificially inflating reported assets. Financial

frauds made up around 8 percent of the frauds in a recent study on occupational fraud but caused a median loss of more than \$1 million in 2012 (\$4 million in 2010)—by far the most costly category of fraud. The following chart compares loss amounts for 2012 versus 2010 for financial statement fraud, corruption, and asset misappropriation.

While the trend in the dollar amount of losses is going in the right direction, another study indicates that the number of fraud reports at 1,400 companies in the "Quarterly Corporate Fraud Index" is on the climb—with 2,348 reported frauds in the second quarter of 2005 to over 7,800 in the second quarter of 2012. While there is some debate about whether

the reporting of fraud has increased with regulation that provides whistleblower protections (i.e., the incidence of fraud is not increasing as much as the reporting of fraud), companies must increase their efforts to protect their statements from the negative effects of fraud.

Summary of Accounting Changes and Correction of Errors

Having guidelines for reporting accounting changes and corrections has helped resolve several significant and long-standing accounting problems. Yet, because of diversity in situations and characteristics of the items encountered in practice, use of professional judgment is of paramount importance. In applying these guidelines, the primary objective is to serve the users of the financial statements. Achieving this objective requires accuracy, full disclosure, and an absence of misleading inferences.

Illustration 22-21 summarizes the main distinctions and treatments presented in the discussion in this chapter.

Changes in accounting policy

Employ the retrospective approach by:

- a. Changing the financial statements of all prior periods presented.
- **b.** Disclosing in the year of the change the effect on net income and earnings per share for all prior periods presented.
- c. Reporting an adjustment to the beginning retained earnings balance in the statement of retained earnings in the earliest year presented.

If impracticable to determine the prior period effect:

- a. Do not change prior years' income.
- **b.** Use opening asset balance in the year the method is adopted as the base-year balance for all subsequent computations.
- c. Disclose the effect of the change on the current year, and the reasons for omitting the computation of the cumulative effect and amounts for prior years.

Changes in accounting estimate

Employ the current and prospective approach by:

- a. Reporting current and future financial statements on the new basis.
- **b.** Presenting prior period financial statements as previously reported.
- c. Making no adjustments to current-period opening balances for the effects in prior periods.

Changes due to error

Employ the restatement approach by:

- a. Correcting all prior period statements presented.
- **b.** Restating the beginning balance of retained earnings for the first period presented when the error effects occur in a period prior to the first period presented.

Changes in accounting policy are appropriate **only** when a company demonstrates that the newly adopted generally accepted accounting policy is more reliable and relevant than the existing one. Companies and accountants determine reliability and relevance on the basis of whether the new policy constitutes an **improvement in financial reporting**, not on the basis of the income tax effect alone.

But, it is not always easy to determine an improvement in financial reporting. **How does one measure preferability or improvement?** For example, a change from average-cost to FIFO because the accounting system is now computerized and has scanning capabilities seems justifiable. However, a change from immediate recognition of actuarial gains and losses (which is the method preferred by the IASB) to the corridor approach does not appear to be an improvement. Determining an improved method requires some "standard" or "objective." Because no universal standard or objective is generally accepted, the problem of determining improvement continues to be difficult and requires good judgment.

Motivations for Change of Accounting Policy

Difficult as it is to determine which accounting standards have the strongest conceptual support, other complications make the process even more complex. These complications stem from the fact that managers have self-interest in how the financial statements make the company look. They naturally wish to show their financial performance in the best light. A **favorable profit picture** can influence investors, and a strong liquidity position can influence creditors. **Too favorable a profit picture**, however, can provide union negotiators and government regulators with ammunition during bargaining talks. Hence, managers might have varying motives for reporting income numbers.

ILLUSTRATION 22-21

Summary of Guidelines for Accounting Changes and Errors

T LEARNING OBJECTIVE Identify economic motives for changing

Research has provided additional insight into why companies may prefer certain accounting policies.⁵ Some of these reasons are as follows.

- **1.** *Political costs.* As companies become larger and more politically visible, politicians and regulators devote more attention to them. The larger the firm, the more likely it is to become subject to regulation, such as antitrust, and the more likely it is to be required to pay higher taxes. Therefore, companies that are politically visible may seek to report low income numbers, to avoid the scrutiny of regulators. In addition, other constituents, such as labor unions, may be less willing to ask for wage increases if reported income is low. Researchers have found that the larger the company, the more likely it is to adopt income-decreasing approaches in selecting accounting policies.
- **2.** *Capital structure.* A number of studies have indicated that the capital structure of the company can affect the selection of accounting policies. For example, a company with a high debt to equity ratio is more likely to be constrained by debt covenants. The debt covenant may indicate that the company cannot pay dividends if retained earnings fall below a certain level. As a result, such a company is more likely to select accounting policies that will increase net income.
- **3.** *Bonus payments*. Studies have found that if compensation plans tie managers' bonus payments to income, management will select accounting policies that maximize their bonus payments.
- **4.** Smooth earnings. Substantial earnings increases attract the attention of politicians, regulators, and competitors. In addition, large increases in income are difficult to achieve in following years. Further, executive compensation plans would use these higher numbers as a baseline and make it difficult for managers to earn bonuses in

subsequent years. Conversely, investors and competitors might view large decreases in earnings as a signal that the company is in financial trouble. Also, substantial decreases in income raise concerns on the part of shareholders, lenders, and other interested parties about the competency of management. For all these reasons, companies have an incentive to "manage" or "smooth" earnings. In general, management tends to believe that a steady 10 percent growth a year is much better than a 30 percent growth one year and a 10 percent decline the next. In other words, managers usually prefer a gradually increasing income report and sometimes change accounting policies to ensure such a result.

report and sometimes change accounting policies to ensure such a result.

Management pays careful attention to the accounting it follows and often changes accounting policies, not for conceptual reasons, but for economic reasons. As indicated throughout this textbook, such arguments have come to be known as economic consequences arguments. These arguments focus on the supposed impact of the accounting policy on the behavior of investors, creditors, competitors, governments, or managers of

⁵See Ross L. Watts and Jerold L. Zimmerman, "Positive Accounting Theory: A Ten-Year Perspective," *The Accounting Review* (January 1990) for an excellent review of research findings related to management incentives in selecting accounting policies.

the reporting companies themselves.⁷

⁶O. Douglas Moses, "Income Smoothing and Incentives: Empirical Tests Using Accounting Changes," *The Accounting Review* (April 1987). The findings provide evidence that earnings smoothing is associated with firm size, the existence of bonus plans, and the divergence of actual earnings from expectations.

⁷Lobbyists use economic consequences arguments—and there are many of them—to put pressure on standard-setters. We have seen examples of these arguments in the oil and gas industry about successful-efforts versus full-cost, and in the technology area with the issue of mandatory expensing of research costs and share options.

Underlying Concepts

When accounting changes are motivated by reasons other than providing more useful information to investors and creditors, this can detract from both relevance and faithful representation.

To counter these pressures, the IASB has declared, as part of its Conceptual Framework, that it will assess the merits of proposed standards from a position of **neutrality**. That is, the IASB evaluates the soundness of standards on the basis of conceptual soundness, not on the grounds of possible impact on behavior. It is not the IASB's place to choose standards according to the kinds of behavior it wishes to promote and the kinds it wishes to discourage. At the same time, it must be admitted that some standards often **will have** the effect of influencing behavior. Yet, their justification should be conceptual and not viewed in terms of their economic impact.

ERROR ANALYSIS

In this section, we show some additional types of accounting errors. Companies generally do not correct for errors that do not have a significant effect on the presentation of the financial statements. For example, should a company with a total annual payroll of \$1,750,000 and net income of \$940,000 correct its financial statements if it finds it failed to record accrued wages of \$500? No—it would not consider this error significant.

Obviously, defining materiality is difficult, and managers and auditors must use experience and judgment to determine whether adjustment is necessary for a given error. We assume **all errors discussed in this section to be material and to require adjustment**. (Also, we ignore all tax effects in this section.)

Companies must answer three questions in error analysis:

- **1.** What type of error is involved?
- **2.** What entries are needed to correct for the error?
- **3.** After discovery of the error, how are financial statements to be restated?

As indicated earlier, companies treat errors as prior period adjustments and report them in the current year as adjustments to the beginning balance of Retained Earnings. If a company presents comparative statements, it restates the prior affected statements to correct for the error.

Statement of Financial Position Errors

Statement of financial position errors affect only the presentation of an asset, liability, or equity account. Examples are the classification of a short-term receivable as part of the investment section, the classification of a note payable as an account payable, and the classification of plant assets as inventory.

When the error is discovered, the company reclassifies the item to its proper position. If the company prepares comparative statements that include the error year, it should correctly restate the statement of financial position for the error year.

Income Statement Errors

Income statement errors involve the improper classification of revenues or expenses. Examples include recording interest revenue as part of sales, purchases as bad debt expense, and depreciation expense as interest expense. An income statement classification error has no effect on the statement of financial position and **no effect on net income**.

A company must make a reclassification entry when it discovers the error if it makes the discovery in the same year in which the error occurs. If the error occurred in prior periods, the company does not need to make a reclassification entry at the date of discovery because the accounts for the current year are correctly stated. (Remember that the company has closed the income statement accounts from the prior period to retained earnings.) If the company prepares comparative statements that include the error year, it restates the income statement for the error year.

Statement of Financial Position and Income Statement Errors

The third type of error involves both the statement of financial position and income statement. For example, assume that the bookkeeper overlooked accrued wages payable at the end of the accounting period. The effect of this error is to understate expenses, understate liabilities, and overstate net income for that period of time. This type of error affects both the statement of financial position and the income statement. We classify this type of error in one of two ways—counterbalancing or non-counterbalancing.

Counterbalancing errors are those that will be offset or corrected over two periods. For example, the failure to record accrued wages is a counterbalancing error because over a two-year period the error will no longer be present. In other words, the failure to record accrued wages in the previous period means (1) net income for the first period is overstated, (2) accrued wages payable (a liability) is understated, and (3) wages expense is understated. In the next period, net income is understated, accrued wages payable (a liability) is correctly stated, and wages expense is overstated. For the two years combined (1) net income is correct, (2) wages expense is correct, and (3) accrued wages payable at the end of the second year is correct. Most errors in accounting that affect both the statement of financial position and income statement are counterbalancing errors.

Non-counterbalancing errors are those that are not offset in the next accounting period. An example would be the failure to capitalize equipment that has a useful life of five years. If we expense this asset immediately, expenses will be overstated in the first period but understated in the next four periods. At the end of the second period, the effect of the error is not fully offset. Net income is correct in the aggregate only at the end of five years because the asset is fully depreciated at this point. Thus, non-counterbalancing errors are those that take longer than two periods to correct themselves.

Only in rare instances is an error never reversed. An example would be if a company initially expenses land. Because land is not depreciable, theoretically the error is never offset, unless the land is sold.

Counterbalancing Errors

We illustrate the usual types of counterbalancing errors on the following pages. In studying these illustrations, keep in mind a couple of points, discussed below.

First, determine whether the company has closed the books for the period in which the error is found:

1. If the company has closed the books in the current year:

- (a) If the error is already counterbalanced, no entry is necessary.
- (b) If the error is not yet counterbalanced, make an entry to adjust the present balance of retained earnings.

2. If the company has not closed the books in the current year:

- (a) If the error is already counterbalanced, make an entry to correct the error in the current period and to adjust the beginning balance of Retained Earnings.
- **(b)** If the error is not yet counterbalanced, make an entry to adjust the beginning balance of Retained Earnings.

Second, if the company presents comparative statements, it must restate the amounts for comparative purposes. **Restatement is necessary even if a correcting journal entry is not required**.

To illustrate, assume that Sanford's Cement Co. failed to accrue revenue in 2013 when it fulfilled its performance obligation but recorded the revenue in 2014 when it received payment. The company discovered the error in 2016. It does not need to make an entry to correct for this error because the effects have been counterbalanced by the time Sanford discovered the error in 2016. However, if Sanford presents comparative financial statements for 2013 through 2016, it must **restate the accounts and related amounts for the years 2013 and 2014 for financial reporting purposes**.

The examples that follow demonstrate the accounting for the usual types of counterbalancing errors.

FAILURE TO RECORD ACCRUED WAGES

Facts: On December 31, 2015, Hurley Enterprises did not accrue wages in the amount of \$1,500.

Question: What is the entry on December 31, 2016, to correct this error, assuming Hurley has not closed the books?

Solution: The entry to correct this error is as follows.

Retained Earnings

Salaries and Wages Expense

1,500

1,500

The rationale for this entry is:

- When Hurley pays the 2015 accrued wages in 2016, it makes an additional debit of \$1,500 to 2016 Salaries and Wages Expense.
- 2. Salaries and Wages Expense in 2016 is overstated by \$1,500.
- 3. Because the company did not record 2015 accrued wages as Salaries and Wages Expense in 2015, the net income for 2015 is overstated by \$1,500.
- 4. Because 2015 net income is overstated by \$1,500, the Retained Earnings account is overstated by \$1,500 (because net income is closed to Retained Earnings).

ILLUSTRATION 22-22 Errors—Accrued Wages

If Hurley has closed the books for 2016, it makes no entry because the error is counterbalanced.

FAILURE TO RECORD PREPAID EXPENSES

Facts: In January 2015, Hurley Enterprises purchased a 2-year insurance policy costing \$1,000. It debited Insurance Expense and credited Cash. The company made no adjusting entries at the end of 2015.

Question: What is the entry on December 31, 2016, to correct this error, assuming Hurley has not closed the books for 2016?

Solution: The entry to correct this error on December 31, 2016, is as follows.

Insurance Expense

500

Retained Earnings

Errors—Prepaid Expenses

ILLUSTRATION 22-23

500

If Hurley has closed the books for 2016, it makes no entry because the error is counterbalanced.

ILLUSTRATION 22-24

Errors—Unearned Revenues

UNDERSTATEMENT OF UNEARNED REVENUE

Facts: On December 31, 2015, Hurley Enterprises received \$50,000 as a prepayment for renting certain office space for the following year. At the time of receipt of the rent payment, the company recorded a debit to Cash and a credit to Rent Revenue. It made no adjusting entry as of December 31, 2015.

Question: What is the entry on December 31, 2016, to correct this error, assuming Hurley has not closed the books for 2016?

Solution: The entry to correct this error on December 31, 2016, is as follows.

Retained Earnings

Rent Revenue 50,000

50,000

If Hurley has closed the books for 2016, it makes no entry because the error is counterbalanced.

ILLUSTRATION 22-25

Errors—Accrued Revenue

OVERSTATEMENT OF ACCRUED REVENUE

Facts: On December 31, 2015, Hurley Enterprises accrued as interest revenue \$8,000 that applied to 2016. On that date, the company recorded a debit to Interest Receivable and a credit to Interest Revenue.

Question: What is the entry on December 31, 2016, to correct this error, assuming Hurley has not closed the books for 2016?

Solution: The entry to correct this error on December 31, 2016, is as follows.

Retained Earnings 8,000

Interest Revenue 8,000

If Hurley has closed the books for 2016, it makes no entry because the error is counterbalanced.

ILLUSTRATION 22-26

Errors—Purchases

OVERSTATEMENT OF PURCHASES

Facts: Hurley's accountant recorded a purchase of merchandise for \$9,000 in 2015 that applied to 2016. The physical inventory for 2015 was correctly stated. The company uses the periodic inventory method.

Question: What is the entry on December 31, 2016, to correct this error, assuming Hurley has not closed the books for 2016?

Solution: The entry to correct this error on December 31, 2016, is as follows.

Purchases 9,000

Retained Earnings 9,000

If Hurley has closed the books for 2016, it makes no entry because the error is counterbalanced.

Non-Counterbalancing Errors

The entries for non-counterbalancing errors are more complex. Companies must make correcting entries, even if they have closed the books.

FAILURE TO RECORD DEPRECIATION

Facts: Assume that on January 1, 2015, Hurley Enterprises purchased a machine for \$10,000 that had an estimated useful life of 5 years. The accountant incorrectly expensed this machine in 2015 but discovered the error in 2016.

Question: What is the entry on December 31, 2016, to correct this error, assuming Hurley has not closed the books for 2016?

Solution: If we assume that Hurley uses straight-line depreciation on this asset, the entry to correct this error on December 31, 2016, is as follows.

Equipment 10,000 Depreciation Expense 2,000

Retained Earnings $8,000^*$ Accumulated Depreciation—Equipment ($20\% \times \$10,000 \times 2$) 4,000

*Computations:

Retained Earnings

 $\begin{array}{lll} \text{Overstatement of expense in 2015} & \$10,000 \\ \text{Proper depreciation for 2015 (20\% \times \$10,000)} & \underline{(2,000)} \\ \text{Retained earnings understated as of Dec. 31, 2015} & \$8,000 \\ \end{array}$

If Hurley has closed the books for 2016, the entry is:

Equipment 10,000

Retained Earnings 6,000*
Accumulated Depreciation—Equipment 4,000

*Computations:

Retained Earnings

Retained earnings understated as of Dec. 31, 2015 \$8,000 Proper depreciation for 2016 (20% \times \$10,000) (2,000) Retained earnings understated as of Dec. 31, 2016 \$6,000

FAILURE TO ADJUST FOR BAD DEBTS

Facts: Companies sometimes use a specific charge-off method in accounting for bad debt expense when a percentage-of-sales method is more appropriate. They then make adjustments to change from the specific write-off to some type of allowance method. For example, assume that Hurley Enterprises has recognized bad debt expense when it has the following uncollectible debts.

 2015
 2016

 From 2015 sales
 \$550
 \$690

 From 2016 sales
 700

Hurley estimates that it will charge off an additional \$1,400 in 2017, of which \$300 is applicable to 2015 sales and \$1,100 to 2016 sales.

Question: What is the entry on December 31, 2016, to correct this error, assuming Hurley has not closed the books for 2016?

Solution: The entry to correct this error on December 31, 2016, is as follows.

Bad Debt Expense 410
Retained Earnings 990

Allowance for Doubtful Accounts 1.400

Allowance for doubtful accounts: Additional \$300 for 2015 sales and \$1,100 for 2016 sales. Bad debts and retained earnings balance:

	2015	2016
Bad debts charged for	\$1,240*	\$ 700
Additional bad debts anticipated in 2017	300	1,100
Proper bad debt expense	1,540	1,800
Charges currently made to each period	(550)	(1,390)
Bad debt adjustment	\$ 990	\$ 410
*\$550 + \$690 = \$1,240		

ILLUSTRATION 22-27

Non-Counterbalancing Errors—Depreciation

ILLUSTRATION 22-28

Non-Counterbalancing Errors—Bad Debts

If Hurley has closed the books for 2016, the entry is:

Retained Earnings 1,400
Allowance for Doubtful Accounts 1,400

Comprehensive Example: Numerous Errors

In some circumstances, a combination of errors occurs. The company therefore prepares a worksheet to facilitate the analysis. The following problem demonstrates use of the worksheet. The mechanics of its preparation should be obvious from the solution format. The income statements of Hudson Company for the years ended December 31, 2014, 2015, and 2016, indicate the following net incomes.

2014 €17,400 2015 20,200 2016 11,300

An examination of the accounting records for these years indicates that Hudson Company made several errors in arriving at the net income amounts reported:

1. The company consistently omitted from the records wages earned by workers but not paid at December 31. The amounts omitted were:

December 31, 2014 €1,000 December 31, 2015 €1,400 December 31, 2016 €1,600

When paid in the year following that in which they were earned, Hudson recorded these amounts as expenses.

- **2.** The company overstated merchandise inventory on December 31, 2014, by €1,900 as the result of errors made in the footings and extensions on the inventory sheets.
- **3.** On December 31, 2015, Hudson expensed unexpired insurance of €1,200, applicable to 2016.
- **4.** The company did not record on December 31, 2015, interest receivable in the amount of €240.
- **5.** On January 2, 2015, Hudson sold for €1,800 a piece of equipment costing €3,900. At the date of sale, the equipment had accumulated depreciation of €2,400. The company recorded the cash received as Miscellaneous Income in 2015. In addition, the company continued to record depreciation for this equipment in both 2015 and 2016 at the rate of 10 percent of cost.

The first step in preparing the worksheet is to prepare a schedule showing the corrected net income amounts for the years ended December 31, 2014, 2015, and 2016. Each correction of the amount originally reported is clearly labeled. The next step is to indicate the statement of financial position accounts affected as of December 31, 2016. Illustration 22-29 shows the completed worksheet for Hudson Company.

Assuming that Hudson Company **has not closed the books**, correcting entries on December 31, 2016, are:

Retained Earnings
Salaries and Wages Expense
(To correct improper charge to Salaries and Wages
Expense for 2016)

1,400

Salaries and Wages Expense	1,600	
Salaries and Wages Payable		1,600
(To record proper wages expense for 2016)		
Insurance Expense	1,200	
Retained Earnings (To record proper insurance expense for 2016)		1,200
Interest Revenue	240	
Retained Earnings		240
(To correct improper credit to Interest Revenue in 2016)		
Retained Earnings	1,500	
Accumulated Depreciation - Equipment	2,400	
Equipment		3,900
(To record write-off of equipment in 2015 and adjustment of Retained Earnings)		
Accumulated Depreciation - Equipment	780	
Depreciation Expense		390
Retained Earnings		390
(To correct improper charge for depreciation expense in 2015 and 2016)

Salaries and Wages Payable (To record proper wages expense for 2016)		1,600
Retained Earnings	1,500	
Accumulated Depreciation - Equipment	2,400	
Equipment (To record write-off of equipment in 2015 and adjustment of Retained Earnings)		3,900
Accumulated Depreciation—Equipment Retained Earnings (To correct improper charge for depreciation expense in 2015 and 2016)	780	780

Preparation of Financial Statements with Error Corrections

Up to now, our discussion of error analysis has focused on identifying the type of error involved and accounting for its correction in the records. We have noted that companies must present the correction of the error on comparative financial statements.

The following example illustrates how a company would restate a typical year's financial statements, given many different errors.

Dick & Wally's Outlet is a small retail outlet in the town of Holiday. Lacking expertise in accounting, the company does not keep adequate records, and numerous errors occurred in recording accounting information.

- **1.** The bookkeeper inadvertently failed to record a cash receipt of \$1,000 on the sale of merchandise in 2016.
- **2.** Accrued wages expense at the end of 2015 was \$2,500; at the end of 2016, \$3,200. The company does not accrue for wages; all wages are charged to Administrative Expenses.
- **3.** The company had not set up an allowance for estimated uncollectible receivables. Dick and Wally decided to set up such an allowance for the estimated probable losses, as of December 31, 2016, for 2015 accounts of \$700, and for 2016 accounts of \$1,500. They also decided to correct the charge against each year so that it shows the losses (actual and estimated) relating to that year's sales. The company has written off accounts to bad debt expense (selling expense) as follows.

	In 2015	In 2016
2015 accounts	\$400	\$2,000
2016 accounts		1,600

- **4.** Unexpired insurance not recorded at the end of 2015 was \$600, and at the end of 2016, \$400. All insurance is charged to Administrative Expenses.
- **5.** An account payable of \$6,000 should have been a note payable.
- **6.** During 2015, the company sold for \$7,000 an asset that cost \$10,000 and had a book value of \$4,000. At the time of sale, Cash was debited and Miscellaneous Income was credited for \$7,000.
- **7.** As a result of the last transaction, the company overstated depreciation expense (an administrative expense) in 2015 by \$800 and in 2016 by \$1,200.

Illustration 22-30 presents a worksheet that begins with the unadjusted trial balance of Dick & Wally's Outlet. You can determine the correcting entries and their effect on the financial statements by examining the worksheet.

ILLUSTRATION 22-30 Worksheet to Analyze Effect of Errors in Financial Statements

GLOBAL ACCOUNTING INSIGHTS

ACCOUNTING CHANGES AND ERRORS

The FASB has issued guidance on changes in accounting policies, changes in estimates, and corrections of errors, which essentially converges U.S. GAAP to *IAS 8*.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to the accounting for accounting changes.

Similarities

- The accounting for changes in estimates is similar between U.S. GAAP and IFRS.
- Under U.S. GAAP and IFRS, if determining the effect of a change in accounting policy is considered impracticable, then a company should report the effect of the change in the period in which it believes it practicable to do so, which may be the current period.

Differences

 One area in which U.S. GAAP and IFRS differ is the reporting of error corrections in previously issued financial

- statements. While both sets of standards require restatement, U.S. GAAP is an absolute standard—there is no exception to this rule.
- Under U.S. GAAP, the impracticality exception applies only to changes in accounting principle. Under IFRS, this exception applies both to changes in accounting principles and to the correction of errors.
- U.S. GAAP has detailed guidance on the accounting and reporting of indirect effects. As indicated in the chapter, IFRS (*IAS 8*) does not specifically address the accounting and reporting for indirect effects of changes in accounting principles.

About the Numbers

An interesting sidelight to our discussion of accounting changes involves how companies that follow IFRS report financial information related to the equity method of accounting. Under the equity method of accounting, the investor increases its investment for the pro-rata share of the net income of the investee (often referred to as an associated company under IFRS). On the other hand, the investor reduces its investment for any dividends received from the investee. Both IFRS and U.S. GAAP follow this accounting approach.

However, there is a subtle difference between IFRS and U.S. GAAP related to how the investor evaluates the accounting policies of the investee. To illustrate, assume that Kirkland Company (the investor company) uses the FIFO

inventory method, and Margo Company (the investee company) uses average-cost for its inventory valuation. If Kirkland follows IFRS, Kirkland must conform the accounting policies of Margo to its own accounting policies. Therefore, Kirkland adjusts the net income of Margo so its net income is reported on the FIFO basis.

This procedure is not used under U.S. GAAP. Under U.S. GAAP, Kirkland ignores the fact that Margo uses a different method of inventory valuation. Kirkland records its pro-rata share of the net income of Margo without adjusting for the fact that Margo uses a different inventory valuation method. As a result, there is a lack of comparability in the inventory methods used to report net income for Kirkland Company under U.S. GAAP.

On the Horizon

For the most part, U.S. GAAP and IFRS are similar in the area of accounting changes and reporting the effects of errors. Thus, there is no active project in this area. A related development involves the presentation of comparative data. U.S. GAAP requires comparative information for a

three-year period. Under IFRS, when a company prepares financial statements on a new basis, two years of comparative data are reported. Use of the shorter comparative data period must be addressed before U.S. companies can adopt IFRS.

SUMMARY OF LEARNING OBJECTIVES

- **Identify the two types of accounting changes.** The two different types of accounting changes are as follows. (1) *Change in accounting policy:* a change from one accepted accounting policy to another accepted accounting policy. (2) *Change in accounting estimate:* a change that occurs as the result of new information or as additional experience is acquired.
- **Describe the accounting for changes in accounting policies.** A change in accounting policy involves a change from one accepted accounting policy to another. A change in accounting policy is not considered to result from the adoption of a new policy in recognition of events that have occurred for the first time or that were previously immaterial. If the accounting policy previously followed was not acceptable or if the policy was applied incorrectly, a change to an accepted accounting policy is considered a correction of an error.
- Understand how to account for retrospective accounting changes. The general requirement for changes in accounting policy is retrospective application. Under retrospective application, companies change prior years' financial statements on a basis consistent with the newly adopted policy. They treat any part of the effect attributable to years prior to those presented as an adjustment of the earliest retained earnings presented.
- Understand how to account for impracticable changes. Retrospective application is impracticable if the prior period effect cannot be determined using every reasonable effort to do so. For example, in changing to average-cost, the base-year inventory for all subsequent average-cost calculations may be the opening inventory in the year the company adopts the method. There is no restatement of prior years' income because it is often too impractical to do so.
- **Describe the accounting for changes in estimates.** Companies report changes in estimates prospectively. That is, companies should make no changes in previously reported results. They do not adjust opening balances nor change financial statements of prior periods.
- **Describe the accounting for correction of errors.** Companies must correct errors as soon as they discover them, by proper entries in the accounts, and report them in the financial statements. The profession requires that a company treat corrections of errors as prior period adjustments, record them in the year in which it discovered the errors, and report them in the financial statements in the proper periods. If presenting comparative statements, a company should restate the prior statements affected to correct for the errors. The company need not repeat the disclosures in the financial statements of subsequent periods.
- Identify economic motives for changing accounting policies. Managers might have varying motives for income reporting, depending on economic times and whom they seek to impress. Some of the reasons for changing accounting policies are (1) political costs, (2) capital structure, (3) bonus payments, and (4) smoothing of earnings.
- Analyze the effect of errors. Three types of errors can occur. (1) Statement of financial position errors, which affect only the presentation of an asset, liability, or equity account. (2) Income statement errors, which affect only the presentation of revenue, expense, gain, or loss accounts in the income statement. (3) Statement of financial position and income statement errors, which involve both the statement of financial position and income statement. Errors are classified into two types. (1) Counterbalancing errors are offset or corrected over two periods. (2) Non-counterbalancing errors are not offset in the next accounting period and take longer than two periods to correct themselves.

KEY TERMS

change in accounting estimate, 1126, 1139 change in accounting policy, 1126 correction of an error, 1141 counterbalancing errors, 1148 cumulative effect, 1127 direct effects of a change in accounting policy, 1137 economic consequences, 1146 impracticable, 1138 indirect effects related to a change in accounting policy, 1137 non-counterbalancing errors, 1148 prior period adjustments, prospectively, 1127 retrospective application, 1127

retrospective restatement,

1141 (n)

KEY TERMS RELATED TO ACCOUNTING CHANGES

ACCOUNTING POLICIES. The specific principles, bases, conventions, rules, and practices applied by an entity in preparing and presenting financial statements.

CHANGE IN ACCOUNTING ESTIMATE. An adjustment of the carrying amount of an asset or a liability, or the amount of the periodic consumption of an asset, that results from the assessment of the present status of, and expected future benefits and obligations associated with, assets and liabilities. Changes in accounting estimates result from new information or new developments and, accordingly, are not corrections of errors.

DIRECT EFFECTS OF A CHANGE IN ACCOUNTING POLICY. Those recognized changes in assets or liabilities necessary to effect a change in accounting policy.

ERRORS. Omissions from, and misstatements in, the entity's financial statements for one or more prior periods arising from a failure to use, or misuse of, reliable information that (1) was available when financial statements for those periods were authorized for issue, and (2) could reasonably be expected to have been obtained and taken into account in the preparation and presentation of those financial statements. Such errors include the effects of mathematical mistakes, mistakes in applying accounting policies, oversights or misinter-pretations of facts, and fraud.

IMPRACTICABLE. Applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so. For a particular prior period, it is impracticable to apply a change in an accounting policy retrospectively or to make a retrospective restatement to correct an error if (1) the effects of the retrospective application or retrospective restatement are not determinable, (2) the retrospective application or retrospective restatement requires assumptions about what management's intent would have been in that period, or (3) the retrospective application or retrospective restatement requires significant estimates of amounts and it is impossible to distinguish objectively information about those estimates.

INDIRECT EFFECTS OF A CHANGE IN ACCOUNTING POLICY. Any changes to current or future cash flows of an entity that result from making a change in accounting policy that is applied retrospectively.

PROSPECTIVE APPLICATION. Change in accounting policy requires (1) applying the new accounting policy to transactions, other events, and conditions occurring after the date as at which the policy is changed; and (2) recognizing the effect of the change in the accounting estimate in the current and future periods affected by the change.

RETROSPECTIVE APPLICATION. Applying a new accounting policy to transactions, other events, and conditions as if that policy had always been applied.

RETROSPECTIVE RESTATEMENT. Correcting the recognition, measurement, and disclosure of amounts of elements of financial statements as if a prior period error had never occurred.

QUESTIONS

- 1. In recent years, the financial press has indicated that many companies have changed their accounting policies. What are the major reasons why companies change accounting policies?
- State how each of the following items is reflected in the financial statements.
 - **(a)** Change from FIFO to average-cost method for inventory valuation purposes.
 - **(b)** Charge for failure to record depreciation in a previous period.
 - (c) Litigation won in current year, related to prior period.
 - **(d)** Change in the realizability of certain receivables.
 - (e) Write-off of receivables.
 - **(f)** Change from the percentage-of-completion to the cost-recovery method for reporting net income.
- **3.** Discuss briefly the three approaches that have been suggested for reporting changes in accounting policies.
- **4.** Identify and describe the approach the IASB requires for reporting changes in accounting policies.
- **5.** What is the indirect effect of a change in accounting policy? Briefly describe the approach to reporting the indirect effects of a change in accounting policy.
- **6.** Define a change in estimate and provide an illustration.
- 7. Lenexa State Bank has followed the practice of capitalizing certain marketing costs and amortizing these costs over their expected life. In the current year, the bank determined that the future benefits from these costs were doubtful. Consequently, the bank adopted the policy of expensing these costs as incurred. How should the bank report this accounting change in the comparative financial statements?
- **8.** Indicate how the following items are recorded in the accounting records in the current year of Coronet Co.
 - (a) Impairment of goodwill.
 - **(b)** A change in depreciating plant assets from accelerated to the straight-line method.

- (c) Large write-off of inventories because of obsolescence.
- (d) Change from the cash basis to accrual basis of accounting.
- **(e)** Change from average-cost to FIFO method for inventory valuation purposes.
- (f) Change in the estimate of service lives for plant assets.
- 9. Whittier Construction Co. had followed the practice of expensing all materials assigned to a construction job without recognizing any residual inventory. On December 31, 2015, it was determined that residual inventory should be valued at CHF52,000. Of this amount, CHF29,000 arose during the current year. How does this information affect the financial statements to be prepared at the end of 2015?
- 10. Parsons Inc. wishes to change from the cost-recovery to the percentage-of-completion method for financial reporting purposes. The auditor indicates that a change would be permitted only if it is to a preferable method. What difficulties develop in assessing preferability?
- **11.** Discuss how a change in accounting policy is handled when it is impracticable to determine previous amounts.
- **12.** What relevance do political costs have to accounting changes?
- **13.** What are some of the key motivations that managers might have to change accounting policies?
- **14.** Distinguish between counterbalancing and non-counterbalancing errors. Give an example of each.
- **15.** Discuss and illustrate how a correction of an error in previously issued financial statements should be handled.
- 16. Prior to 2015, Heberling Inc. excluded manufacturing overhead costs from work in process and finished goods inventory. These costs have been expensed as incurred. In 2015, the company decided to change its accounting methods for manufacturing inventories to full costing by including these costs as product costs. Assuming that these costs are material, how should this change be reflected in the financial statements for 2014 and 2015?

- **17.** Elliott Corp. failed to record accrued salaries for 2013, €2,000; 2014, €2,100; and 2015, €3,900. What is the amount of the overstatement or understatement of Retained Earnings at December 31, 2016?
- 18. In January 2014, installation costs of £6,000 on new equipment were charged to Maintenance and Repairs Expense. Other costs of this equipment of £30,000 were correctly recorded and have been depreciated using the straight-line method with an estimated life of 10 years and no residual value. At December 31, 2015, it is decided that the equipment has a remaining useful life of 20 years, starting with January 1, 2015. What entry(ies) should be made in 2015 to correctly record transactions related to equipment, assuming the equipment has no residual value? The books have not been closed for 2015 and depreciation expense has not yet been recorded for 2015.
- **19.** An entry to record Purchases and related Accounts Payable of ¥130,000 for merchandise purchased on December 23, 2015, was recorded in January 2016. This merchandise was not included in inventory at December 31, 2015. What

- effect does this error have on reported net income for 2015? What entry should be made to correct for this error, assuming that the books are not closed for 2015?
- **20.** Equipment was purchased on January 2, 2015, for \$24,000, but no portion of the cost has been charged to depreciation. The corporation wishes to use the straight-line method for these assets, which have been estimated to have a life of 10 years and no residual value. What effect does this error have on net income in 2015? What entry is necessary to correct for this error, assuming that the books are not closed for 2015?
- 21. What is the major difference in accounting for errors under IFRS versus U.S. GAAP?

23. What is the difference in approach between U.S. GAAP and IFRS in regards to the equity method of accounting for the investor?

BRIEF EXERCISES

- **BE22-1** Wertz Construction Company decided at the beginning of 2015 to change from the cost-recovery method to the percentage-of-completion method for financial reporting purposes. The company will continue to use the cost-recovery method for tax purposes. For years prior to 2015, pretax income under the two methods was as follows: percentage-of-completion \$120,000, and cost-recovery \$80,000. The tax rate is 35%. Prepare Wertz's 2015 journal entry to record the change in accounting policy.
- **BE22-2** Refer to the accounting change by Wertz Construction Company in BE22-1. Wertz has a profit-sharing plan, which pays all employees a bonus at year-end based on 1% of pretax income. Compute the indirect effect of Wertz's change in accounting policy that will be reported in the 2015 income statement, assuming that the profit-sharing contract explicitly requires adjustment for changes in income numbers.
- **3 BE22-3** Shannon, Inc., changed from the average-cost to the FIFO cost flow assumption in 2015. The increase in the prior year's income before taxes is €1,200,000. The tax rate is 40%. Prepare Shannon's 2015 journal entry to record the change in accounting policy.
- **BE22-4** Tedesco Company changed depreciation methods in 2015 from double-declining-balance to straight-line. Depreciation prior to 2015 under double-declining-balance was \$90,000, whereas straight-line depreciation prior to 2015 would have been \$50,000. Tedesco's depreciable assets had a cost of \$250,000 with a \$40,000 residual value, and an 8-year remaining useful life at the beginning of 2015. Prepare the 2015 journal entry, if necessary, related to Tedesco's depreciable assets.
- **BE22-5** Sesame Company purchased a computer system for £74,000 on January 1, 2013. It was depreciated based on a 7-year life and an £18,000 residual value. On January 1, 2015, Sesame revised these estimates to a total useful life of 4 years and a residual value of £10,000. Prepare Sesame's entry to record 2015 depreciation expense.
- **BE22-6** In 2015, Bailey Corporation discovered that equipment purchased on January 1, 2013, for €50,000 was expensed at that time. The equipment should have been depreciated over 5 years, with no residual value. The effective tax rate is 30%. Prepare Bailey's 2015 journal entry to correct the error.
- **BE22-7** At January 1, 2015, Cheng Company reported retained earnings of \(\frac{\text{\ti}\text{\texi{\text{\texi{\text{\texict{\text{\texi{\texi{\texi{\texi{\text{\texi{\text{\text{\texi{\ti
- **BE22-8** Indicate the effect—Understate, **O**verstate, **N**o Effect—that each of the following errors has on 2014 net income and 2015 net income.

		2014	2015
a)	Equipment purchased in 2013 was expensed.		
b)	Wages payable were not recorded at 12/31/14.		
c)	Equipment purchased in 2014 was expensed.		
d)	2014 ending inventory was overstated.		
e)	Patent amortization was not recorded in 2015.		

- **3 5 BE22-9** Roundtree Manufacturing Co. is preparing its year-end financial statements and is considering the accounting for the following items.
 - 1. The vice president of sales had indicated that one product line has lost its customer appeal and will be phased out over the next 3 years. Therefore, a decision has been made to lower the estimated lives on related production equipment from the remaining 5 years to 3 years.
 - **2.** The Hightone Building was converted from a sales office to offices for the Accounting Department at the beginning of this year. Therefore, the expense related to this building will now appear as an administrative expense rather than a selling expense on the current year's income statement.
 - **3.** Estimating the lives of new products in the Leisure Products Division has become very difficult because of the highly competitive conditions in this market. Therefore, the practice of deferring and amortizing preproduction costs has been abandoned in favor of expensing such costs as they are incurred.

Identify and explain whether each of the above items is a change in policy, a change in estimate, or an error.

- **3 6 BE22-10** Palmer Co. is evaluating the appropriate accounting for the following items.
 - 1. Management has decided to switch from the FIFO inventory valuation method to the average-cost inventory valuation method for all inventories.
 - **2.** When the year-end physical inventory adjustment was made for the current year, the controller discovered that the prior year's physical inventory sheets for an entire warehouse were mislaid and excluded from last year's count.
 - **3.** Palmer's Custom Division manufactures large-scale, custom-designed machinery on a contract basis. Management decided to switch from the cost-recovery method to the percentage-of-completion method of accounting for long-term contracts.

Identify and explain whether each of the above items is a change in accounting policy, a change in estimate, or an error.

EXERCISES

E22-1 (Change in Policy—Long-Term Contracts) Cherokee Construction Company changed from the cost-recovery to the percentage-of-completion method of accounting for long-term construction contracts during 2015. For tax purposes, the company employs the cost-recovery method and will continue this approach in the future. (*Hint:* Adjust all tax consequences through the Deferred Tax Liability account.) The appropriate information related to this change is as follows.

	Pretax Income from		
	Percentage-of-Completion	Cost-Recovery	Difference
2014	\$780,000	\$610,000	\$170,000
2015	700,000	480,000	220,000

- (a) Assuming that the tax rate is 35%, what is the amount of net income that would be reported in 2015?
- **(b)** What entry(ies) is necessary to adjust the accounting records for the change in accounting policy?
- **E22-2 (Change in Policy—Inventory Methods)** Whitman Company began operations on January 1, 2012, and uses the average-cost method of pricing inventory. Management is contemplating a change in inventory methods for 2015. The following information is available for the years 2012–2014.

	Net Income Computed Using	
Average-Cost Method FIFO I		FIFO Method
2012	€16,000	€19,000
2013	18,000	21,000
2014	20,000	25,000

Instructions

(Ignore all tax effects.)

- (a) Prepare the journal entry necessary to record a change from the average-cost method to the FIFO method in 2015.
- **(b)** Determine net income to be reported for 2012, 2013, and 2014, after giving effect to the change in accounting policy.
- E22-3 (Accounting Change) Ramirez Co. decides at the beginning of 2015 to adopt the FIFO method of inventory valuation. Ramirez had used the average-cost method for financial reporting since its inception on January 1, 2013, and had maintained records adequate to apply the FIFO method retrospectively. Ramirez concluded that FIFO is the preferable inventory method because it reflects the current cost of inventory on the statement of financial position. The following table presents the effects of the change in accounting policy on inventory and cost of goods sold.

	Inventory Determined by		Cost of Goods So	ld Determined by
Date	Average-Cost Method	FIFO Method	Average-Cost Method	FIFO Method
January 1, 2013	\$ 0	\$ 0	\$ 0	\$ 0
December 31, 2013	100	80	800	820
December 31, 2014	200	240	1,000	940
December 31, 2015	320	390	1,130	1,100

Retained earnings reported under average-cost are as follows.

	Retained Earnings Balance
December 31, 2013	\$2,200
December 31, 2014	4,200
December 31, 2015	6,070

Other information:

- 1. For each year presented, sales are \$4,000 and operating expenses are \$1,000.
- 2. Ramirez provides two years of financial statements. Earnings per share information is not required.

Instructions

- (a) Prepare income statements under average-cost and FIFO for 2013, 2014, and 2015.
- **(b)** Prepare income statements reflecting the retrospective application of the accounting change from the average-cost method to the FIFO method for 2015 and 2014.
- (c) Prepare the note to the financial statements describing the change in method of inventory valuation. In the note, indicate the income statement line items for 2015 and 2014 that were affected by the change in accounting policy.
- (d) Prepare comparative retained earnings statements for 2014 and 2015 under FIFO.
- **E22-4** (Accounting Change) Linden Company started operations on January 1, 2010, and has used the FIFO method of inventory valuation since its inception. In 2015, it decides to switch to the average-cost method. You are provided with the following information.

	Net Income		Retained Earnings (ending balance)	
	Under FIFO	Under Average-Cost	Under FIFO	
2010	£100,000	£ 92,000	£100,000	
2011	70,000	65,000	160,000	
2012	90,000	80,000	235,000	
2013	120,000	130,000	340,000	
2014	300,000	293,000	590,000	
2015	305,000	310,000	780,000	

- (a) What is the beginning retained earnings balance at January 1, 2012, if Linden prepares comparative financial statements starting in 2012?
- **(b)** What is the beginning retained earnings balance at January 1, 2015, if Linden prepares comparative financial statements starting in 2015?

- (c) What is the beginning retained earnings balance at January 1, 2016, if Linden prepares single-period financial statements for 2016?
- (d) What is the net income reported by Linden in the 2015 income statement if it prepares comparative financial statements starting with 2013?
- **E22-5** (Accounting Change) Presented below are income statements prepared on an average-cost and FIFO basis for Carlton Company, which started operations on January 1, 2014. The company presently uses the average-cost method of pricing its inventory and has decided to switch to the FIFO method in 2015. The FIFO income statement is computed in accordance with IFRS. Carlton's profit-sharing agreement with its employees indicates that the company will pay employees 5% of income before profit sharing. Income taxes are ignored.

	Average-Cost Basis		FIFO Basis	
	2015	2014	2015	2014
Sales	€3,000	€3,000	€3,000	€3,000
Cost of goods sold	1,130	1,000	1,100	940
Operating expenses	1,000	1,000	1,000	1,000
Income before profit sharing	870	1,000	900	1,060
Profit-sharing expense	44	50	45	53
Net income	€ 826	€ 950	€ 855	€1,007

Instructions

Answer the following questions.

- (a) If comparative income statements are prepared, what net income should Carlton report in 2014 and 2015?
- (b) Explain why, under the FIFO basis, Carlton reports €50 in 2014 and €48 in 2015 for its profitsharing expense.
- (c) Assume that Carlton has a beginning balance of retained earnings at January 1, 2015, of €8,000 using the average-cost method. The company declared and paid dividends of €2,500 in 2015. Prepare the retained earnings statement for 2015, assuming that Carlton has switched to the FIFO method.
- **E22-6 (Accounting Changes—Depreciation)** Robillard Inc. acquired the following assets in January 2012.

Equipment, estimated service life, 5 years; residual value, €15,000 €465,000 Building, estimated service life, 30 years; no residual value €780,000

The equipment has been depreciated using the sum-of-the-years'-digits method for the first 3 years for financial reporting purposes. In 2015, the company decided to change the method of computing depreciation to the straight-line method for the equipment, but no change was made in the estimated service life or residual value. It was also decided to change the total estimated service life of the building from 30 years to 40 years, with no change in the estimated residual value. The building is depreciated on the straight-line method.

- (a) Prepare the journal entry to record depreciation expense for the equipment in 2015.
- (b) Prepare the journal entry to record depreciation expense for the building in 2015. (Round to nearest euro.)
- **E22-7 (Change in Estimate and Error; Financial Statements)** Presented below are the comparative income statements for Pannebecker Inc. for the years 2014 and 2015.

	2015	2014
Sales	\$340,000	\$270,000
Cost of sales	200,000	142,000
Gross profit	140,000	128,000
Expenses	88,000	50,000
Net income	\$ 52,000	\$ 78,000
Retained earnings (Jan. 1)	\$125,000	\$ 72,000
Net income	52,000	78,000
Dividends	(30,000)	(25,000)
Retained earnings (Dec. 31)	\$147,000	\$125,000

The following additional information is provided.

- 1. In 2015, Pannebecker Inc. decided to switch its depreciation method from sum-of-the-years'-digits to the straight-line method. The assets were purchased at the beginning of 2014 for \$90,000 with an estimated useful life of 4 years and no residual value. (The 2015 income statement contains depreciation expense of \$27,000 on the assets purchased at the beginning of 2014.)
- 2. In 2015, the company discovered that the ending inventory for 2014 was overstated by \$20,000; ending inventory for 2015 is correctly stated.

Instructions

Prepare the revised retained earnings statement for 2014 and 2015, assuming comparative statements. (Ignore income taxes.)

•	(Accounting for Accounting Changes and Errors) Listed below are various types of accounting es and errors.
_	
	_ 1. Change from FIFO to average-cost inventory method.
	_ 2. Change due to overstatement of inventory.
	_ 3. Change from an accelerated to straight-line method of depreciation.
	_ 4. Change from average-cost to FIFO inventory method.
	_ 5. Change in the rate used to compute warranty costs.
	_ 6. Change from an unacceptable accounting policy to an acceptable accounting policy.
	_7. Change in a patent's amortization period.
	_ 8. Change from cost-recovery to percentage-of-completion method on construction contracts.
	_ 9. Change in a plant asset's residual value.

For each change or error, indicate how it would be accounted for using the following code letters:

- (a) Accounted for prospectively.
- **(b)** Accounted for retrospectively.
- (c) Neither of the above.
- **5 6 E22-9** (Error and Change in Estimate—Depreciation) Yoon Co. purchased a machine on January 1, 2012, for \#44,000,000. At that time, it was estimated that the machine would have a 10-year life and no residual value. On December 31, 2015, the firm's accountant found that the entry for depreciation expense had been omitted in 2013. In addition, management has informed the accountant that the company plans to switch to straight-line depreciation, starting with the year 2015. At present, the company uses the sum-of-the-years'digits method for depreciating equipment.

Instructions

Prepare the general journal entries that should be made at December 31, 2015, to record these events. (Ignore tax effects.)

5 E22-10 (Depreciation Changes) On January 1, 2011, McElroy Company purchased a building and equipment that have the following useful lives, residual values, and costs.

> Building, 40-year estimated useful life, £50,000 residual value, £1,200,000 cost Equipment, 12-year estimated useful life, £10,000 residual value, £130,000 cost

The building has been depreciated under the double-declining-balance method through 2014. In 2015, the company decided to switch to the straight-line method of depreciation. McElroy also decided to change the total useful life of the equipment to 9 years, with a residual value of £5,000 at the end of that time. The equipment is depreciated using the straight-line method.

- (a) Prepare the journal entry(ies) necessary to record the depreciation expense on the building in 2015.
- **(b)** Compute depreciation expense on the equipment for 2015.
- **5** E22-11 (Change in Estimate—Depreciation) Thurber Co. purchased equipment for \$710,000 which was estimated to have a useful life of 10 years with a residual value of \$10,000 at the end of that time. Depreciation has been entered for 7 years on a straight-line basis. In 2015, it is determined that the total estimated life should be 15 years with a residual value of \$4,000 at the end of that time.

Instructions

- (a) Prepare the entry (if any) to correct the prior years' depreciation.
- **(b)** Prepare the entry to record depreciation for 2015.
- **E22-12 (Change in Estimate—Depreciation)** Frederick Industries changed from the double-declining-balance to the straight-line method in 2015 on all its plant assets. There was no change in the assets' residual values or useful lives. Plant assets, acquired on January 2, 2012, had an original cost of €2,400,000, with a €100,000 residual value and an 8-year estimated useful life. Income before depreciation expense was €370,000 in 2014 and €300,000 in 2015.

Instructions

- (a) Prepare the journal entry(ies) to reflect the change in depreciation method in 2015.
- **(b)** Starting with income before depreciation expense, prepare the remaining portion of the income statement for 2014 and 2015.
- **E22-13 (Change in Policy—Long-Term Contracts)** Bryant Construction Company changed from the cost-recovery to the percentage-of-completion method of accounting for long-term construction contracts during 2015. For tax purposes, the company employs the cost-recovery method and will continue this approach in the future. The information related to this change is as follows.

	Pretax Income		
	Percentage-of-Completion	Cost-Recovery	Difference
2014	\$980,000	\$730,000	\$250,000
2015	900,000	480,000	420,000

Instructions

- (a) Assuming that the tax rate is 40%, what is the amount of net income that would be reported in 2015?
- **(b)** What entry(ies) are necessary to adjust the accounting records for the change in accounting policy?
- **E22-14 (Various Changes in Policy—Inventory Methods)** Below is the net income of Benchley Instrument Co., a private corporation, computed under the two inventory methods using a periodic system.

	FIFO	Average-Cost
2012	€26,000	€23,000
2013	30,000	25,000
2014	29,000	27,000
2015	34,000	30,000

Instructions

(Ignore tax considerations.)

- (a) Assume that in 2015 Benchley decided to change from the FIFO method to the average-cost method of pricing inventories. Prepare the journal entry necessary for the change that took place during 2015, and show net income reported for 2012, 2013, 2014, and 2015.
- **(b)** Assume that in 2015 Benchley, which had been using the average-cost method since incorporation in 2012, changed to the FIFO method of pricing inventories. Prepare the journal entry necessary to record the change in 2015, and show net income reported for 2012, 2013, 2014, and 2015.
- **E22-15 (Error Correction Entries)** The first audit of the books of Fenimore Company was made for the year ended December 31, 2015. In examining the books, the auditor found that certain items had been overlooked or incorrectly handled in the last 3 years. These items are:
 - **1.** At the beginning of 2013, the company purchased a machine for \$510,000 (residual value of \$51,000) that had a useful life of 5 years. The bookkeeper used straight-line depreciation but failed to deduct the residual value in computing the depreciation base for the 3 years.
 - **2.** At the end of 2014, the company failed to accrue sales salaries of \$45,000.
 - **3.** A tax lawsuit that involved the year 2013 was settled late in 2015. It was determined that the company owed an additional \$85,000 in taxes related to 2013. The company did not record a liability in 2013 or 2014 because the possibility of loss was considered remote, and debited the \$85,000 to a loss account in 2015 and credited Cash for the same amount.

- **4.** Fenimore Company purchased a copyright from another company early in 2013 for \$50,000. Fenimore had not amortized the copyright because its value had not diminished. The copyright has a useful life at purchase of 20 years.
- **5.** In 2015, the company wrote off \$87,000 of inventory considered to be obsolete; this loss was charged directly to Retained Earnings and credited to Inventory.

Instructions

Prepare the journal entries necessary in 2015 to correct the books, assuming that the books have not been closed. Disregard effects of corrections on income tax.

- **E22-16 (Error Analysis and Correcting Entry)** You have been engaged to review the financial statements of Longfellow Corporation. In the course of your examination, you conclude that the book-keeper hired during the current year is not doing a good job. You notice a number of irregularities, as follows.
 - 1. Year-end salaries and wages payable of €3,400 were not recorded because the bookkeeper thought that "they were immaterial."
 - 2. Accrued vacation pay for the year of €31,100 was not recorded because the bookkeeper "never heard that you had to do it."
 - **3.** Insurance for a 12-month period purchased on November 1 of this year was charged to insurance expense in the amount of €3,300 because "the amount of the check is about the same every year."
 - **4.** Reported sales revenue for the year is €1,908,000. This includes all sales taxes collected for the year. The sales tax rate is 6%. Because the sales tax is forwarded to the Department of Revenue, the Sales Tax Expense account is debited. The bookkeeper thought that "the sales tax is a selling expense." At the end of the current year, the balance in the Sales Tax Expense account is €103,400.

Instructions

Prepare the necessary correcting entries, assuming that Longfellow uses a calendar-year basis.

- **E22-17 (Error Analysis and Correcting Entry)** The reported net incomes for the first 2 years of Sinclair Products, Inc., were as follows: 2014, \$147,000; 2015, \$185,000. Early in 2016, the following errors were discovered.
 - 1. Depreciation of equipment for 2014 was overstated \$19,000.
 - 2. Depreciation of equipment for 2015 was understated \$38,500.
 - **3.** December 31, 2014, inventory was understated \$50,000.
 - 4. December 31, 2015, inventory was overstated \$14,200.

Instructions

Prepare the correcting entry necessary when these errors are discovered. Assume that the books for 2015 are closed. (Ignore income tax considerations.)

6) 8) E22-18 (Error Analysis) Emerson Tool Company's December 31 year-end financial statements contained the following errors.

An insurance premium of £60,000 was prepaid in 2014 covering the years 2014, 2015, and 2016. The entire amount was charged to expense in 2014. In addition, on December 31, 2015, fully depreciated machinery was sold for £15,000 cash, but the entry was not recorded until 2016. There were no other errors during 2014 or 2015, and no corrections have been made for any of the errors. (Ignore income tax considerations.)

- (a) Compute the total effect of the errors on 2015 net income.
- (b) Compute the total effect of the errors on the amount of Emerson's working capital at December 31, 2015.
- (c) Compute the total effect of the errors on the balance of Emerson's retained earnings at December 31, 2015.

6 8 E22-19 (Error Analysis and Correcting Entries) A partial trial balance of Dickinson Corporation is as follows on December 31, 2015.

	Dr.	Cr.
Supplies	R 2,500	
Salaries and wages payable		R 1,500
Interest receivable	5,100	
Prepaid insurance	90,000	
Unearned rent		-0-
Accrued interest payable		15,000

Additional adjusting data:

- 1. A physical count of supplies on hand on December 31, 2015, totaled R1,100.
- **2.** Through oversight, the Salaries and Wages Payable account was not changed during 2015. Accrued salaries and wages on December 31, 2015, amounted to R4,400.
- **3.** The Interest Receivable account was also left unchanged during 2015. Accrued interest on investments amounts to R4,350 on December 31, 2015.
- 4. The unexpired portions of the insurance policies totaled R65,000 as of December 31, 2015.
- **5.** R24,000 was received on January 1, 2015, for the rent of a building for both 2015 and 2016. The entire amount was credited to rental income.
- **6.** Depreciation for the year on equipment was erroneously recorded as R5,000 rather than the correct figure of R50,000.
- **7.** A further review of depreciation calculations of prior years revealed that depreciation of R7,200 was not recorded. It was decided that this oversight should be corrected by a prior period adjustment.

Instructions

- (a) Assuming that the books have not been closed, what are the adjusting entries necessary at December 31, 2015? (Ignore income tax considerations.)
- **(b)** Assuming that the books have been closed, what are the adjusting entries necessary at December 31, 2015? (Ignore income tax considerations.)
- **E22-20 (Error Analysis)** The before-tax income for Fitzgerald Co. for 2014 was \$101,000, and for 2015 was \$77,400. However, the accountant noted that the following errors had been made.
 - **1.** Sales for 2014 included amounts of \$38,200 which had been received in cash during 2014, but for which the related products were delivered in 2015. Title did not pass to the purchaser until 2015.
 - **2.** The inventory on December 31, 2014, was understated by \$8,640.
 - **3.** The bookkeeper in recording interest expense for both 2014 and 2015 on bonds payable made the following entry on an annual basis.

Interest Expense 15,000
Cash 15,000

The bonds have a face value of \$250,000 and pay a stated interest rate of 6%. They were issued at a discount of \$10,000 on January 1, 2014, to yield an effective-interest rate of 7%. (Assume that the effective-interest method should be used.)

4. Ordinary repairs to equipment had been erroneously charged to the Equipment account during 2014 and 2015. Repairs in the amount of \$8,000 in 2014 and \$9,400 in 2015 were so charged. The company applies a rate of 10% to the balance in the Equipment account at the end of the year in its determination of depreciation charges.

Instructions

Prepare a schedule showing the determination of corrected income before taxes for 2014 and 2015.

6 8 E22-21 (Error Analysis) When the records of Aoki Corporation were reviewed at the close of 2015, the errors listed on page 1168 were discovered. For each item, indicate by a check mark in the appropriate column whether the error resulted in an overstatement, an understatement, or had no effect on net income for the years 2014 and 2015.

1168 Chapter 22 Accounting Changes and Error Analysis

	2014		2015			
Item	Over- statement	Under- statement	No Effect	Over- statement	Under- statement	No Effect
Failure to reflect supplies on hand on statement of financial position at end of 2014.						
Failure to record the correct amount of ending 2014 inventory. The amount was understated because of an error in calculation.						
3. Failure to record, until 2015, merchandise purchased in 2014. Merchandise was also omitted from ending inventory in 2014 but was not yet sold.						
4. Failure to record accrued interest on notes payable in 2014; that amount was recorded when paid in 2015.						
5. Failure to record amortization of patent in 2015.						

PROBLEMS

- **1.** Holtzman purchased equipment on January 2, 2012, for \$85,000. At that time, the equipment had an estimated useful life of 10 years with a \$5,000 residual value. The equipment is depreciated on a straight-line basis. On January 2, 2015, as a result of additional information, the company determined that the equipment has a remaining useful life of 4 years with a \$3,000 residual value.
- **2.** During 2015, Holtzman changed from the double-declining-balance method for its building to the straight-line method. The building originally cost \$300,000. It had a useful life of 10 years and a residual value of \$30,000. The following computations present depreciation on both bases for 2013 and 2014.

	2014	2013
Straight-line	\$27,000	\$27,000
Declining-balance	48,000	60,000

3. Holtzman purchased a machine on July 1, 2013, at a cost of \$120,000. The machine has a residual value of \$16,000 and a useful life of 8 years. Holtzman's bookkeeper recorded straight-line depreciation in 2013 and 2014 but failed to consider the residual value.

Instructions

- (a) Prepare the journal entries to record depreciation expense for 2015 and correct any errors made to date related to the information provided.
- **(b)** Show comparative net income for 2014 and 2015. Income before depreciation expense was \$300,000 in 2015, and was \$310,000 in 2014. (Ignore taxes.)

5 P22-2 (Comprehensive Accounting Change and Error Analysis Problem) Botticelli Inc. was organized in late 2012 to manufacture and sell hosiery. At the end of its fourth year of operation, the company has been fairly successful, as indicated by the following reported net incomes.

2012	€140,000 ^a	2014	€205,000
2013	160,000	2015	276,000

^aIncludes a €10,000 increase because of change in bad debt experience rate.

The company has decided to expand operations and has applied for a sizable bank loan. The bank officer has indicated that the records should be audited and presented in comparative statements to facilitate analysis by the bank. Botticelli Inc. therefore hired the auditing firm of Check & Doublecheck Co. and has provided the following additional information.

- 1. In early 2013, Botticelli Inc. changed its estimate from 2% to 1% on the amount of bad debt expense to be charged to operations. Bad debt expense for 2012, if a 1% rate had been used, would have been €10,000. The company therefore restated its net income for 2012.
- 2. In 2015, the auditor discovered that the company had changed its method of inventory pricing from average-cost to FIFO. The effect on the income statements for the previous years is as follows.

	2012	2013	2014	2015
Net income unadjusted—average-cost basis	€140,000	€160,000	€205,000	€276,000
Net income unadjusted - FIFO basis	155,000	165,000	215,000	260,000
	€ 15,000	€ 5,000	€ 10,000	(€ 16,000)

- **3.** In 2015, the auditor discovered that:
 - **a.** The company incorrectly overstated the ending inventory by €14,000 in 2014.
 - b. A dispute developed in 2013 with the tax authorities over the deductibility of entertainment expenses. In 2012, the company was not permitted these deductions, but a tax settlement was reached in 2015 that allowed these expenses. As a result of the court's finding, tax expenses in 2015 were reduced by €60,000.

Instructions

- (a) Indicate how each of these changes or corrections should be handled in the accounting records. (Ignore income tax considerations.)
- (b) Present comparative net income numbers for the years 2012 to 2015. (Ignore income tax considerations.)
- 3 5 P22-3 (Error Corrections and Accounting Changes) Chen Company is in the process of adjusting and correcting its books at the end of 2015. In reviewing its records, the following information is compiled.
 - 1. Chen has failed to accrue sales commissions payable at the end of each of the last 2 years, as follows.

¥3,500,000 December 31, 2014 December 31, 2015 ¥2,500,000

2. In reviewing the December 31, 2015, inventory, Chen discovered errors in its inventory-taking procedures that have caused inventories for the last 3 years to be incorrect, as follows.

December 31, 2013	Understated	¥16,000,000
December 31, 2014	Understated	¥19,000,000
December 31, 2015	Overstated	¥ 6,700,000

Chen has already made an entry that established the incorrect December 31, 2015, inventory amount.

- 3. At December 31, 2015, Chen decided to change the depreciation method on its office equipment from double-declining-balance to straight-line. The equipment had an original cost of ¥100,000,000 when purchased on January 1, 2013. It has a 10-year useful life and no residual value. Depreciation expense recorded prior to 2015 under the double-declining-balance method was \(\frac{4}{36}\),000,000. Chen has already recorded 2015 depreciation expense of ¥12,800,000 using the double-declining-balance method.
- 4. Before 2015, Chen accounted for its income from long-term construction contracts on the cost-recovery basis. Early in 2015, Chen changed to the percentage-of-completion basis for accounting purposes. It continues to use the cost-recovery method for tax purposes. Income for 2015 has been recorded using the percentage-of-completion method. The information on page 1170 is available.

1170 Chapter 22 Accounting Changes and Error Analysis

	Pretax Income fro	m
	Percentage-of-Completion	Cost-Recovery
Prior to 2015	¥150,000,000	¥105,000,000
2015	60,000,000	20,000,000

Instructions

Prepare the journal entries necessary at December 31, 2015, to record the above corrections and changes. The books are still open for 2015. The income tax rate is 40%. Chen has not yet recorded its 2015 income tax expense and payable amounts so current-year tax effects may be ignored. Prior-year tax effects must be considered in item 4.

B P22-4 (Accounting Changes) Aston Corporation performs year-end planning in November of each year before its calendar year ends in December. The preliminary estimated net income is £3 million. The CFO, Rita Warren, meets with the company president, J. B. Aston, to review the projected numbers. She presents the following projected information.

ASTON CORPORATION PROJECTED INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2015

Sales		£29,000,000	
Cost of goods sold	£14,000,000		
Depreciation	2,600,000		
Operating expenses	6,400,000	23,000,000	
Income before income tax		6,000,000	
Income tax		3,000,000	
Net income		£ 3,000,000	

ASTON CORPORATION SELECTED STATEMENT OF FINANCIAL POSITION INFORMATION AT DECEMBER 31, 2015

Estimated cash balance	£ 5,000,000	
Debt investments (held-for-collection)	10,000,000	
Security fair value adjustment account (1/1/15)	200,000	
Security fair value adjustment account (1/1/15)	200,000	

Estimated fair value at December 31, 2015:

Investment	Cost	Estimated Fair Value
Α	£ 2,000,000	£ 2,200,000
В	4,000,000	3,900,000
С	3,000,000	3,000,000
D	1,000,000	1,800,000
Total	£10.000.000	£10.900.000

Other information at December 31, 2015:

Equipment	£3,000,000
Accumulated depreciation (5-year SL)	1,200,000
New robotic equipment (purchased 1/1/15)	5,000,000
Accumulated depreciation (5-year DDB)	2,000,000

The corporation has never used robotic equipment before, and Warren assumed an accelerated method because of the rapidly changing technology in robotic equipment. The company normally uses straightline depreciation for production equipment.

Aston explains to Warren that it is important for the corporation to show a £7,000,000 income before taxes because Aston receives a £1,000,000 bonus if the income before taxes and bonus reaches £7,000,000. Aston also does not want the company to pay more than £3,000,000 in income taxes to the government.

Instructions

- (a) What can Warren do within IFRS to accommodate the president's wishes to achieve £7,000,000 in income before taxes and bonus? Present the revised income statement based on your decision.
- (b) Are the actions ethical? Who are the stakeholders in this decision, and what effect do Warren's actions have on their interests?
- 3 P22-5 (Change in Policy—Inventory—Periodic) The management of Utrillo Instrument Company had concluded, with the concurrence of its independent auditors, that results of operations would be more fairly presented if Utrillo changed its method of pricing inventory from FIFO to average-cost in 2015. Given below is the 5-year summary of income under FIFO and a schedule of what the inventories would be if stated on the average-cost method (amounts in millions, except earnings per share).

UTRILLO INSTRUMENT COMPANY STATEMENT OF INCOME AND RETAINED EARNINGS FOR THE YEARS ENDED MAY 31					
	2011	2012	2013	2014	2015
Sales-net	¥13,964	¥15,506	¥16,673	¥18,221	¥18,898
Cost of goods sold					
Beginning inventory	1,000	1,100	1,000	1,115	1,237
Purchases	13,000	13,900	15,000	15,900	17,100
Ending inventory	(1,100)	(1,000)	(1,115)	(1,237)	(1,369)
Total	12,900	14,000	14,885	15,778	16,968
Gross profit	1,064	1,506	1,788	2,443	1,930
Administrative expenses	700	763	832	907	989
Income before taxes	364	743	956	1,536	941
Income taxes (50%)	182	372	478	768	471
Net income	182	371	478	768	470
Retained earnings—beginning	1,206	1,388	1,759	2,237	3,005
Retained earnings—ending	¥ 1,388	¥ 1,759	¥ 2,237	¥ 3,005	¥ 3,475
Earnings per share	¥1.82	¥3.71	¥4.78	¥7.68	¥4.70

SCHEDULE OF INVENTORY BALANCES USING AVERAGE-COST METHOD FOR THE YEAR ENDED MAY 31

2010	2011	2012	2013	2014	2015
¥1,010	¥1,124	¥1,101	¥1,270	¥1,500	¥1,720

Prepare comparative statements for the 5 years, assuming that Utrillo changed its method of inventory pricing to average-cost. Indicate the effects on net income and earnings per share for the years involved. Utrillo Instruments started business in 2010. (All amounts except EPS are rounded up to the nearest yen.)

- **5 6 P22-6** (Accounting Change and Error Analysis) On December 31, 2015, before the books were closed, the management and accountants of Madrasa Inc. made the following determinations about three depreciable assets.
 - 1. Depreciable asset A was purchased January 2, 2012. It originally cost €540,000 and, for depreciation purposes, the straight-line method was originally chosen. The asset was originally expected to be useful for 10 years and have a zero residual value. In 2015, the decision was made to change the depreciation method from straight-line to sum-of-the-years'-digits, and the estimates relating to useful life and residual value remained unchanged.
 - 2. Depreciable asset B was purchased January 3, 2011. It originally cost €180,000 and, for depreciation purposes, the straight-line method was chosen. The asset was originally expected to be useful for 15 years and have a zero residual value. In 2015, the decision was made to shorten the total life of this asset to 9 years and to estimate the residual value at €3,000.
 - 3. Depreciable asset C was purchased January 5, 2011. The asset's original cost was €160,000, and this amount was entirely expensed in 2011. This particular asset has a 10-year useful life and no residual value. The straight-line method was chosen for depreciation purposes.

1172 Chapter 22 Accounting Changes and Error Analysis

Additional data:

- 1. Income in 2015 before depreciation expense amounted to €400,000.
- **2.** Depreciation expense on assets other than A, B, and C totaled €55,000 in 2015.
- **3.** Income in 2014 was reported at €370,000.
- **4.** Ignore all income tax effects.
- **5.** 100,000 ordinary shares were outstanding in 2014 and 2015.

Instructions

- (a) Prepare all necessary entries in 2015 to record these determinations.
- (b) Prepare comparative retained earnings statements for Madrasa Inc. for 2014 and 2015. The company had retained earnings of €200,000 at December 31, 2013.

6 8 P22-7 (Error Corrections) You have been assigned to examine the financial statements of Zarle Company for the year ended December 31, 2015. You discover the following situations.

- 2. The physical inventory count on December 31, 2014, improperly excluded merchandise costing \$19,000 that had been temporarily stored in a public warehouse. Zarle uses a periodic inventory system.
- 3. A collection of \$5,600 on account from a customer received on December 31, 2015, was not recorded until January 2, 2016.
- 4. In 2015, the company sold for \$3,700 fully depreciated equipment that originally cost \$25,000. The company credited the proceeds from the sale to the Equipment account.
- 5. During November 2015, a competitor company filed a patent-infringement suit against Zarle claiming damages of \$220,000. The company's legal counsel has indicated that an unfavorable verdict is probable and a reasonable estimate of the court's award to the competitor is \$125,000. The company has not reflected or disclosed this situation in the financial statements.
- 6. Zarle has a portfolio of investments that it manages to profit from short-term price changes. No entry has been made to adjust to fair value. Information on cost and fair value is as follows.

	Cost	Fair Value
December 31, 2014	\$95,000	\$95,000
December 31, 2015	\$84,000	\$82,000

- 7. At December 31, 2015, an analysis of payroll information shows salaries and wages of \$12,200. The Salaries and Wages Payable account had a balance of \$16,000 at December 31, 2015, which was unchanged from its balance at December 31, 2014.
- 8. A large piece of equipment was purchased on January 3, 2015, for \$40,000 and was charged to Maintenance and Repairs Expense. The equipment is estimated to have a service life of 8 years and no residual value. Zarle normally uses the straight-line depreciation method for this type of equipment.
- 9. A \$12,000 insurance premium paid on July 1, 2014, for a policy that expires on June 30, 2017, was charged to insurance expense.
- 10. A trademark was acquired at the beginning of 2014 for \$50,000. No amortization has been recorded since its acquisition. The maximum allowable amortization period is 10 years.

Instructions

Assume the trial balance has been prepared but the books have not been closed for 2015. Assuming all amounts are material, prepare journal entries showing the adjustments that are required. (Ignore income tax considerations.)

6 B P22-8 (Comprehensive Error Analysis) On March 5, 2016, you were hired by Hemingway Inc., a closely held company, as a staff member of its newly created internal auditing department. While reviewing the company's records for 2014 and 2015, you discover that no adjustments have yet been made for the items listed below.

Items

- 1. Interest income of £14,100 was not accrued at the end of 2014. It was recorded when received in February 2015.
- 2. A computer costing £4,000 was expensed when purchased on July 1, 2014. It is expected to have a 4-year life with no residual value. The company typically uses straight-line depreciation for all fixed assets.
- 3. Research costs of £33,000 were incurred early in 2014. They were capitalized and were to be amortized over a 3-year period. Amortization of £11,000 was recorded for 2014 and £11,000 for 2015.

4. On January 2, 2014, Hemingway leased a building for 5 years at a monthly rental of £8,000. On that date, the company paid the following amounts, which were expensed when paid.

Security deposit	£20,000
First month's rent	8,000
Last month's rent	8,000
	£36,000

- **5.** The company received £36,000 from a customer at the beginning of 2014 for services that it is to perform evenly over a 3-year period beginning in 2014. None of the amount received was reported as unearned revenue at the end of 2014.
- **6.** Merchandise inventory costing £18,200 was in the warehouse at December 31, 2014, but was incorrectly omitted from the physical count at that date. The company uses the periodic inventory method.

Instructions

Indicate the effect of any errors on the net income figure reported on the income statement for the year ending December 31, 2014, and the retained earnings figure reported on the statement of financial position at December 31, 2015. Assume all amounts are material and ignore income tax effects. Using the following format, enter the appropriate dollar amounts in the appropriate columns. Consider each item independent of the other items. It is not necessary to total the columns on the grid.

	Net Income for 2014		Retained Earr	nings at 12/31/15
Item	Understated	Overstated	Understated	Overstated

- **P22-9 (Error Analysis)** Lowell Corporation has used the accrual basis of accounting for several years. A review of the records, however, indicates that some expenses and revenues have been handled on a cash basis because of errors made by an inexperienced bookkeeper. Income statements prepared by the bookkeeper reported €29,000 net income for 2014 and €37,000 net income for 2015. Further examination of the records reveals that the following items were handled improperly.
 - 1. Rent was received from a tenant in December 2014. The amount, €1,000, was recorded as income at that time even though the rental pertained to 2015.
 - **2.** Salaries and wages payable on December 31 have been consistently omitted from the records of that date and have been entered as expenses when paid in the following year. The amounts of the accruals recorded in this manner were:

December 31, 2013	€1,100
December 31, 2014	1,200
December 31, 2015	940

3. Invoices for office supplies purchased have been charged to expense accounts when received. Inventories of supplies on hand at the end of each year have been ignored, and no entry has been made for them.

December 31, 2013	€1,300
December 31, 2014	940
December 31, 2015	1,420

Instructions

Prepare a schedule that will show the corrected net income for the years 2014 and 2015. All items listed should be labeled clearly. (Ignore income tax considerations.)

- P22-10 (Error Analysis and Correcting Entries) You have been asked by a client to review the records of Roberts Company, a small manufacturer of precision tools and machines. Your client is interested in buying the business, and arrangements have been made for you to review the accounting records. Your examination reveals the following information.
 - 1. Roberts Company commenced business on April 1, 2012, and has been reporting on a fiscal year ending March 31. The company has never been audited, but the annual statements prepared by the bookkeeper reflect the following income before closing and before deducting income taxes.

Year Ended March 31	Income Before Taxes
2013	\$ 71,600
2014	111,400
2015	103,580

1174 Chapter 22 Accounting Changes and Error Analysis

2. A relatively small number of machines have been shipped on consignment. These transactions have been recorded as ordinary sales and billed as such. On March 31 of each year, machines billed and in the hands of consignees amounted to:

2013	\$6,500
2014	none
2015	5.590

Sales price was determined by adding 25% to cost. Assume that the consigned machines are sold the following year.

- **3.** On March 30, 2014, two machines were shipped to a customer on a C.O.D. basis. The sale was not entered until April 5, 2014, when cash was received for \$6,100. The machines were not included in the inventory at March 31, 2014. (Title passed on March 30, 2014.)
- **4.** All machines are sold subject to a 5-year warranty. It is estimated that the expense ultimately to be incurred in connection with the warranty will amount to ½ of 1% of sales. The company has charged an expense account for warranty costs incurred.

Sales per books and warranty costs were as follows.

Year Ended			for Sales	•	
March 31	Sales	2013	2014	2015	Total
2013	\$ 940,000	\$760			\$ 760
2014	1,010,000	360	\$1,310		1,670
2015	1,795,000	320	1,620	\$1,910	3,850

5. Bad debts have been recorded on a direct write-off basis. Experience of similar enterprises indicates that losses will approximate ¼ of 1% of sales. Bad debts written off were:

	Bad Debt	Bad Debts Incurred on Sales Made in		
	2013	2014	2015	Total
2013	\$750			\$ 750
2014	800	\$ 520		1,320
2015	350	1,800	\$1,700	3,850

6. The bank deducts 6% on all contracts financed. Of this amount, ½% is placed in a reserve to the credit of Roberts Company, which is refunded to Roberts as finance contracts are paid in full. The reserve established by the bank has not been reflected in the books of Roberts. The excess of credits over debits (net increase) to the Dealer Fund Reserve account with Roberts on the books of the bank for each fiscal year were as follows.

	\$12,000
2015	5,100
2014	3,900
2013	\$ 3,000

7. Commissions on sales have been entered when paid. Commissions payable on March 31 of each year were as follows.

2013	\$1,400
2014	900
2015	1,120

8. A review of the corporate minutes reveals the manager is entitled to a bonus of 1% of the income before deducting income taxes and the bonus. The bonuses have never been recorded or paid. (Use Salaries and Wages accounts.)

Instructions

- (a) Present a schedule showing the revised income before income taxes for each of the years ended March 31, 2013, 2014, and 2015. (Make computations to the nearest whole dollar.)
- (b) Prepare the journal entry or entries you would give the bookkeeper to correct the books. Assume the books have not yet been closed for the fiscal year ended March 31, 2015. Disregard correction of income taxes.

CONCEPTS FOR ANALYSIS

CA22-1 (Analysis of Various Accounting Changes and Errors) Joblonsky Inc. has recently hired a new independent auditor, Karen Ogleby, who says she wants "to get everything straightened out." Consequently, she has proposed the following accounting changes in connection with Joblonsky Inc.'s 2015 financial statements.

- 1. At December 31, 2014, the client had a receivable of €820,000 from Hendricks Inc. on its statement of financial position. Hendricks Inc. has gone bankrupt, and no recovery is expected. The client proposes to write off the receivable as a prior period item.
- 2. The client proposes the following changes in depreciation policies.
 - (a) For office furniture and fixtures, it proposes to change from a 10-year useful life to an 8-year life. If this change had been made in prior years, retained earnings at December 31, 2014, would have been €250,000 less. The effect of the change on 2015 income alone is a reduction of €60,000.
 - (b) For its equipment in the leasing division, the client proposes to adopt the sum-of-the-years'-digits depreciation method. The client had never used SYD before. The first year the client operated a leasing division was 2015. If straight-line depreciation were used, 2015 income would be €110,000 greater.
- 3. In preparing its 2014 statements, one of the client's bookkeepers overstated ending inventory by €235,000 because of a mathematical error. The client proposes to treat this item as a prior period adjustment.
- 4. In the past, the client has spread preproduction costs in its furniture division over 5 years. Because its latest furniture is of the "fad" type, it appears that the largest volume of sales will occur during the first 2 years after introduction. Consequently, the client proposes to amortize preproduction costs on a perunit basis, which will result in expensing most of such costs during the first 2 years after the furniture's introduction. If the new accounting method had been used prior to 2015, retained earnings at December 31, 2014, would have been €375,000 less.
- 5. For the nursery division, the client proposes to switch from FIFO to average-cost inventories because it believes that average-cost will provide a better matching of current costs with revenues. The effect of making this change on 2015 earnings will be an increase of €320,000. The client says that the effect of the change on December 31, 2014, retained earnings cannot be determined.
- 6. To achieve a better matching of revenues and expenses in its building construction division, the client proposes to switch from the cost-recovery method of accounting to the percentage-of-completion method. Had the percentage-of-completion method been employed in all prior years, retained earnings at December 31, 2014, would have been €1,075,000 greater.

Instructions

- (a) For each of the changes described above, decide whether:
 - (1) The change involves an accounting policy, accounting estimate, or correction of an error.
 - (2) Restatement of opening retained earnings is required.
- **(b)** What would be the proper adjustment to the December 31, 2014, retained earnings?

CA22-2 (Analysis of Various Accounting Changes and Errors) Various types of accounting changes can affect the financial statements of a business differently. Assume that the following list describes changes that have a material effect on the financial statements for the current year of your business.

- 1. A change from the cost-recovery method to the percentage-of-completion method of accounting for long-term construction-type contracts.
- A change in the estimated useful life of previously recorded fixed assets as a result of newly acquired information.
- 3. A change from deferring and amortizing preproduction costs to recording such costs as an expense when incurred because future benefits of the costs have become doubtful. The new accounting method was adopted in recognition of the change in estimated future benefits.
- **4.** A change from including the employer share of taxes with payroll tax expenses to including it with "Retirement benefits" on the income statement.
- **5.** Correction of a mathematical error in inventory pricing made in a prior period.
- **6.** A change in the method of accounting for leases for tax purposes to conform with the financial accounting method. As a result, both deferred and current taxes payable changed substantially.
- 7. A change from the FIFO method of inventory pricing to the average-cost method of inventory pricing.

1176 Chapter 22 Accounting Changes and Error Analysis

Instructions

Identify the type of change that is described in each item above and indicate whether the prior year's financial statements should be retrospectively adjusted or restated when presented in comparative form with the current year's financial statements.

CA22-3 (Analysis of Three Accounting Changes and Errors) Listed below are three independent, unrelated sets of facts relating to accounting changes.

Situation 1: Sanford Company is in the process of having its first audit. The company has used the cash basis of accounting for revenue recognition. Sanford president, B. J. Jimenez, is willing to change to the accrual method of revenue recognition.

Situation 2: Hopkins Co. decides in January 2015 to change from FIFO to weighted-average pricing for its inventories.

Situation 3: Marshall Co. determined that the depreciable lives of its fixed assets are too long at present to fairly match the cost of the fixed assets with the revenue produced. The company decided at the beginning of the current year to reduce the depreciable lives of all of its existing fixed assets by 5 years.

Instructions

For each of the situations described, provide the information indicated below.

- (a) Type of accounting change.
- **(b)** Manner of reporting the change under IFRS, including a discussion, where applicable, of how amounts are computed.
- (c) Effect of the change on the statement of financial position and income statement.

CA22-4 (Analysis of Various Accounting Changes and Errors) Katherine Irving, controller of Lotan Corp., is aware that a pronouncement on accounting changes has been issued. After reading the pronouncement, she is confused about what action should be taken on the following items related to Lotan Corp. for the year 2015.

- 1. In 2015, Lotan decided to change its policy on accounting for certain marketing costs. Previously, the company had chosen to defer and amortize all marketing costs over at least 5 years because Lotan believed that a return on these expenditures did not occur immediately. Recently, however, the time differential has considerably shortened, and Lotan is now expensing the marketing costs as incurred.
- **2.** In 2015, the company examined its entire policy relating to the depreciation of plant equipment. Plant equipment had normally been depreciated over a 15-year period, but recent experience has indicated that the company was using too short a period in its estimates and that the assets should be depreciated over a 20-year period.
- **3.** One division of Lotan Corp., Hawthorne Co., has consistently shown an increasing net income from period to period. On closer examination of its operating statement, it is noted that bad debt expense and inventory obsolescence charges are much lower than in other divisions. In discussing this with the controller of this division, it has been learned that the controller has increased his net income each period by knowingly making low estimates related to the write-off of receivables and inventory.
- 4. In 2015, the company purchased new machinery that should increase production dramatically. The company has decided to depreciate this machinery on an accelerated basis even though other machinery is depreciated on a straight-line basis.
- **5.** All equipment sold by Lotan is subject to a 3-year warranty. It has been estimated that the expense ultimately to be incurred on these machines is 1% of sales. In 2015, because of a production breakthrough, it is now estimated that ½ of 1% of sales is sufficient. In 2013 and 2014, warranty expense was computed as \$64,000 and \$70,000, respectively. The company now believes that these warranty costs should be reduced by 50%.
- **6.** In 2015, the company decided to change its method of inventory pricing from average-cost to the FIFO method. The effect of this change on prior years is to increase 2013 income by \$65,000 and increase 2014 income by \$20,000.

Instructions

Katherine Irving has come to you, as her accountant, for advice about the situations above. Prepare a report, indicating the appropriate accounting treatment that should be given each of these situations.

CA22-5 (Changes in Estimate) As a public accountant, you have been contacted by Joe Davison, CEO of Sports-Pro Athletics, Inc., a manufacturer of a variety of athletic equipment. He has asked you how to account for the following changes.

- 1. Sports-Pro appropriately changed its depreciation method for its production machinery from the double-declining-balance method to the production method effective January 1, 2015.
- 2. Effective January 1, 2015, Sports-Pro appropriately changed the residual values used in computing depreciation for its office equipment.

Instructions

Write a 1–1.5 page letter to Joe Davison, explaining how each of the above changes should be presented in the December 31, 2015, financial statements.

CA22-6 (Change in Estimate) Mike Crane, audit senior of a large public accounting firm, has just been assigned to the Frost Corporation's annual audit engagement. Frost has been a client of Crane's firm for many years. Frost is a fast-growing business in the commercial construction industry. In reviewing the fixed asset ledger, Crane discovered a series of unusual accounting changes, in which the useful lives of assets, depreciated using the straight-line method, were substantially lowered near the midpoint of the original estimate. For example, the useful life of one dump truck was changed from 10 to 6 years during its fifth year of service. Upon further investigation, Mike was told by Kevin James, Frost's accounting manager, "I don't really see your problem. After all, it's perfectly legal to change an accounting estimate. Besides, our CEO likes to see big earnings!"

Instructions

Answer the following questions.

- (a) What are the ethical issues concerning Frost's practice of changing the useful lives of fixed assets?
- **(b)** Who could be harmed by Frost's unusual accounting changes?
- (c) What should Crane do in this situation?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) Were there changes in accounting policies reported by M&S during the two years covered by its income statements (2012–2013)? If so, describe the nature of the change and the year of change.
- **(b)** What types of estimates did M&S discuss in 2013?

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- (a) Identify the changes in accounting policies reported by Puma during the 2 years covered by its income statements (2011–2012). Describe the nature of the change and the year of change.
- **(b)** Identify the changes in accounting policies reported by adidas during the 2 years covered by its income statements (2011–2012). Describe the nature of the change and the year of change.
- **(c)** For each change in accounting policy by adidas and Puma, identify, if possible, the cumulative effect of each change on prior years and the effect on operating results in the year of change.

1178 Chapter 22 Accounting Changes and Error Analysis

Accounting, Analysis, and Principles

In preparation for significant international operations, ABC Co. has adopted a plan to gradually shift to the same accounting policies as used by its international competitors. Part of this plan includes a switch from average-cost inventory accounting to FIFO. ABC decides to make the switch to FIFO at January 1, 2015. The following data pertains to ABC's 2015 financial statements.

Sales	\$550
Inventory purchases	350
12/31/15 inventory (using FIFO)	580
Compensation expense	17

All sales and purchases were with cash as were all of 2015's compensation expense (ignore taxes). ABC's plant, property, and equipment cost \$400 and has an estimated useful life of 10 years with no residual value.

ABC Co. reported the following for fiscal 2014 (amounts are in millions).

ABC CO. STATEMENT OF FINANCIAL POSITION AT DECEMBER 31, 2014					
	2014	2013		2014	2013
Plant, property, and equipment	\$ 400	\$ 400	Retained earnings	\$ 685	\$ 540
Accumulated depreciation	(80)	(40)	Share capital	500	500
Inventory	500	480			
Cash	365	200			
Total assets	\$1,185	\$1,040	Total equity	\$1,185 =====	\$1,040
		ABC CO. COME STATEME R ENDED DECEM	= = =		
			2014		
	Sales		\$ 500		
	Cost of go	ods sold	(300)		
	_	on expense	(40)		
	Compensa	tion expense	(15)		
	Net income \$145				
Summary of Significant Accounting Policies					

Accounting

than those reported in the statement of financial position.

Prepare ABC's December 31, 2015, statement of financial position and an income statement for the year ended December 31, 2015. In columns beside 2015's numbers, include 2014's numbers as they would appear in the 2015 financial statements for comparative purposes.

Inventory: The company accounts for inventory by the average-cost method. The current cost of the company's inventory, which approximates FIFO, was \$60 and \$50 higher at the end of fiscal 2014 and 2013, respectively,

Analysis

Compute ABC's inventory turnover for 2014 under both average-cost and FIFO. Assume averages are equal to year-end balances. What causes the differences in this ratio between average-cost and FIFO?

Principles

Briefly explain, in terms of the policies discussed in Chapter 22, why IFRS requires that companies that change accounting policies present restated prior year's financial statement data.

BRIDGE TO THE PROFESSION

Professional Research

As part of the year-end accounting process and review of operating policies, Cullen Co. is considering a change in the accounting for its equipment from the straight-line method to an accelerated method. Your supervisor wonders how the company will report this change in accounting. It has been a few years since he took intermediate accounting, and he cannot remember whether this change would be treated in a retrospective or prospective manner. Your supervisor wants you to research the authoritative guidance on a change in accounting policy related to depreciation methods.

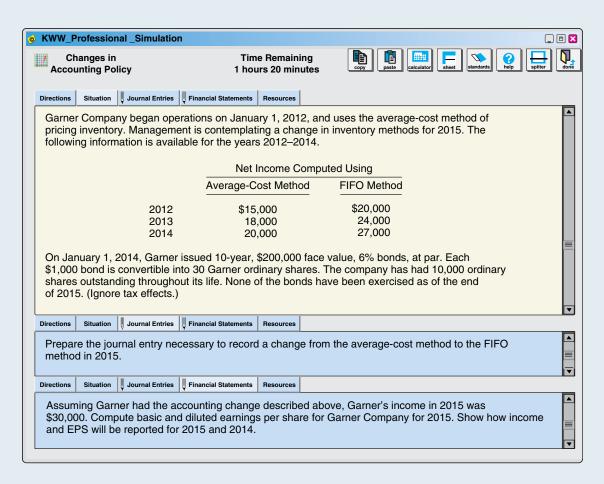

Instructions

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free eIFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) What are the accounting and reporting guidelines for a change in accounting related to depreciation methods?
- (b) What are the conditions that justify a change in depreciation method, as contemplated by Cullen Co.?

Professional Simulation

In this simulation, you are asked questions about changes in accounting policy. Prepare responses to all parts.

Remember to check the book's companion website, at www.wiley.com/college/kieso, to find additional resources for this chapter.

Statement of Cash Flows

LEARNING OBJECTIVES

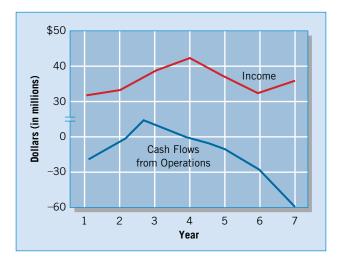

After studying this chapter, you should be able to:

- **1** Describe the purpose of the statement of cash flows.
- 2 Identify the major classifications of cash flows.
- 3 Prepare a statement of cash flows.
- 4 Differentiate between net income and net cash flow from operating activities.
- **5** Determine net cash flows from investing and financing activities.

- **6** Identify sources of information for a statement of cash flows.
- **7** Contrast the direct and indirect methods of calculating net cash flow from operating activities.
- 8 Discuss special problems in preparing a statement of cash flows.
- **9** Explain the use of a worksheet in preparing a statement of cash flows.

Show Me the Money!

Investors usually look to net income as a key indicator of a company's financial health and future prospects. The following graph shows the net income of one company over a seven-year period.

The company showed a pattern of consistent profitability and even some periods of income growth. Between years 1 and 4, net income for this company grew by 32 percent, from \$31 million to \$41 million. Would you expect its profitability to continue? The company had consistently paid dividends and interest. Would you expect it to continue to do so? Investors answered these questions by buying the company's shares. Eighteen months later, this company—**W. T. Grant** (USA)—filed for bankruptcy, in what was then the largest bankruptcy filing in the United States.

How could this happen? As indicated by the bottom line in the graph, the company had experienced several years of negative cash flows from its operations even though it reported profits. How can a company have negative cash flows while reporting profits? The answer lays partly in the fact that W. T. Grant was having trouble collecting the receivables from its credit sales, causing cash flow to be less than net income. Investors who analyzed the cash flows would have been likely to find an early warning signal of W. T. Grant's operating problems.

Investors can also look to cash flow information to sniff out companies that can be good buys. As one analyst stated when it comes to valuing shares: "Show me the money!" Here's the thinking behind that statement. Start with the "cash flows from operations" reported in the statement of cash flows, which (as you will learn in this chapter) consists of net income with noncash charges (like depreciation and deferred taxes) added back and cash-draining events (like an inventory pile-up) taken out. Now subtract capital expenditures and dividends. What you're left with is free cash flow (as discussed in Chapter 5).

Many analysts like companies trading at low multiples of their free cash flow—low, that is, in relation to rivals today or the

same company in past years. Why? They know that reported earnings can be misleading. Case in point: Computer-game firm Activision Blizzard (USA) reported net income of \$113 million in a recent year. But it did better than that. It took in an additional \$300 million, mostly for subscriptions to online multiplayer games. It gets the cash now but records the revenue only over time, as the subscriptions run out. A couple of investment houses put these shares on their buy list on the strength of its cash flows. So watch cash flow—to get an indicator of companies headed for trouble, as well as companies that may be undervalued.

> See the **Underlying Concepts** on pages 1182 and 1210.

> Read the **Evolving Issue** on page 1203 for a discussion of the direct versus indirect method.

INTERNATIONAL FOCUS

> Read the **Global Accounting Insights** on pages 1220–1221 for a discussion of non-IFRS requirements for the statement of cash flows.

PREVIEW OF CHAPTER

23

As the opening story indicates, examination of W. T. Grant's cash flows from operations would have shown the financial inflexibility that eventually caused the company's bankruptcy. This chapter

explains the main components of a statement of cash flows and the types of information it provides. The content and organization of the chapter are as follows.

Statement of Cash Flows

Preparation of the Statement Usefulness of statement

- Classification of cash flows
- Cash and cash equivalents
- **Format of statement**
- Steps in preparation

Illustrations—Tax **Consultants Inc.**

- · Change in cash
- Operating cash flows
- Cash flows from investing and financing
- Statement of cash flows—2015
- Illustrations-2016 and 2017
- **Sources of information**
- **Direct method**

Special Problems in Statement Preparation

- · Adjustments to net income
- Accounts receivable (net)
- Other working capital changes
- **Net losses**
- **Disclosures**

Use of a Worksheet

- Preparation of worksheet
- · Analysis of transactions
- Preparation of final statement

PREPARATION OF THE STATEMENT OF CASH FLOWS

LEARNING OBJECTIVE 1

Describe the purpose of the statement of cash flows.

See the Authoritative Literature section (page 1223).

The primary purpose of the statement of cash flows is to provide information about a company's cash receipts and cash payments during a period. A secondary objective is to provide cash-basis information about the company's operating, investing, and financing activities. [1] The statement of cash flows therefore reports cash receipts, cash payments, and net change in cash resulting from a

company's operating, investing, and financing activities during a period. Its format reconciles the beginning and ending cash balances for the period.

Usefulness of the Statement of Cash Flows

The statement of cash flows provides information to help investors, creditors, and others assess the following:

1. The entity's ability to generate future cash flows. A primary objective of financial reporting is to provide information with which to predict the amounts, timing, and uncertainty of future cash flows. By examining relationships between items such as sales and net cash flow from operating activities, or net cash flow from operating activities and increases or decreases in cash, it is possible to better predict the future cash flows than is possible using accrual-basis data alone.

Underlying Concepts

Reporting information in the statement of cash flows contributes to meeting the objective of financial reporting.

- **2.** The entity's ability to pay dividends and meet obligations. Simply put, cash is essential. Without adequate cash, a company cannot pay employees, settle debts, pay out dividends, or acquire equipment. A statement of cash flows indicates where the company's cash comes from and how the company uses its cash. Employees, creditors, shareholders, and customers should be particularly interested in this statement because it alone shows the flows of cash in a business.
- **3.** The reasons for the difference between net income and net cash flow from operating activities. The net income number is important: It provides information on the performance of a company from one period to another. But some people are critical of accrual-basis net income because companies must make estimates to arrive at it. Such is not the case with cash. Thus, as the opening story showed, financial statement readers can benefit from knowing why a company's net income and net cash flow from operating activities differ and can assess for themselves the reliability of the income number.
- 4. The cash and non-cash investing and financing transactions during the period. Besides operating activities, companies undertake investing and financing transactions. Investing activities include the purchase and sale of assets other than a company's products or services. Financing activities include borrowings and repayments of borrowings, investments by owners, and distributions to owners. By examining a company's investing and financing activities, a financial statement reader can better understand why assets and liabilities increased or decreased during the period. For example, by reading the statement of cash flows, the reader might find answers to following questions:
 - Why did cash decrease for Aixtron Aktiengesellschaft (DEU) when it reported net income for the year?
 - How much did Telefónica, S.A. (ESP) spend on property, plant, and equipment, and intangible assets last year?

of cash flows.

- Did dividends paid by BP plc (GBR) increase last year?
- How much money did Coca-Cola (USA) borrow last year?
- How much cash did **Delhaize Group** (BEL) use to repurchase ordinary shares?

Classification of Cash Flows

The statement of cash flows classifies cash receipts and cash payments by operating, investing, and financing activities. Transactions and other events characteristic of each kind of activity are as follows. [2]

LEARNING OBJECTIVE Identify the major classifications

- **1.** Operating activities involve the cash effects of transactions that enter into the determination of net income, such as cash receipts from sales of goods and services, and cash payments to suppliers and employees for acquisitions of inventory and expenses. The amount of cash flows arising from operating activities is a key indicator of the extent to which the operations of the entity have generated sufficient cash flows to repay loans, maintain the operating capability of the entity, pay dividends, and make new investments without recourse to external sources of financing.
- **2. Investing activities** generally involve non-current assets and include (a) making and collecting loans, and (b) acquiring and disposing of investments and productive long-lived assets. The separate disclosure of cash flows arising from investing activities is important because the cash flows represent the extent to which expenditures have been made for resources intended to generate future income and cash flows.
- **3. Financing activities** involve liability and equity items and include (a) obtaining cash from creditors and repaying the amounts borrowed, and (b) obtaining capital from owners and providing them with a return on, and a return of, their investment. The separate disclosure of cash flows arising from financing activities is important because it is useful in predicting claims on future cash flows by providers of capital to a company.

Illustration 23-1 (page 1184) classifies the typical cash receipts and payments of a company according to operating, investing, and financing activities. The operating activities category is the most important. It shows the cash provided by company operations. This source of cash is generally considered to be the best measure of a company's ability to generate enough cash to continue as a going concern.

Note the following general guidelines about the classification of cash flows.

- **1.** Operating activities involve income statement items.
- **2.** Investing activities involve cash flows resulting from changes in investments and other non-current asset items.
- **3.** Financing activities involve cash flows resulting from changes in equity and non-current liability items.

IFRS allows some flexibility regarding the classification of certain items. Interest and dividends paid can be classified as either operating or financing, depending on what treatment the company thinks is most appropriate. Similarly, interest and dividends received can be classified as either operating or investing. Taxes paid are classified as operating except in circumstances where they can be identified with specific investing or financing activities. In order to limit the complexity of our presentation and to avoid ambiguity in assignment material, in Illustration 23-1 we have identified specific

ILLUSTRATION 23-1

Classification of Typical Cash Inflows and Outflows

Operating Cash inflows From sales of goods or services. From returns on loans (interest) and on equity securities (dividends). Income Cash outflows Statement To suppliers for inventory. Items To employees for services. To government for taxes. To lenders for interest. To others for expenses. Investing Cash inflows From sale of property, plant, and equipment. From sale of debt or equity securities of other entities. Generally From collection of principal on loans to other entities. Long-Term Cash outflows **Asset Items** To purchase property, plant, and equipment. To purchase debt or equity securities of other entities. To make loans to other entities. **Financing** Cash inflows Generally From sale of equity securities. Long-Term From issuance of debt (bonds and notes). Liability Cash outflows and Equity To shareholders as dividends. **Items** To redeem long-term debt or reacquire share capital.

treatment for each of these items rather than allowing choices. *All assignment material is based on this treatment.*¹

Also, companies classify some cash flows relating to operating activities as investing or financing activities. For example, a company classifies the total cash received from the sale of property, plant, and equipment as an investing activity. Therefore, sales of those assets are not considered operating activities. Because of this (as is discussed more fully later in the chapter), companies must eliminate any gains or losses arising from the disposal of these assets to arrive at net cash flow from operating activities. Likewise, the payment to extinguish debt is a financing cash flow and should be classified as such. Any gain or loss related to the extinguishment is eliminated from net cash provided by operating activities.

Cash and Cash Equivalents

The basis recommended by the IASB for the statement of cash flows is actually "cash and cash equivalents." **Cash equivalents** are short-term, highly liquid investments that are both:

- Readily convertible to known amounts of cash, and
- So near their maturity that they present insignificant risk of changes in value (e.g., due to changes in interest rates).

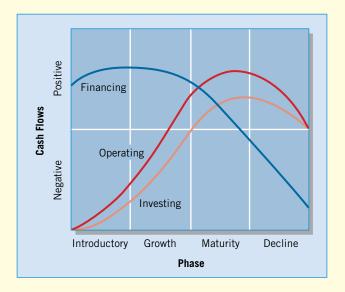

Generally, only investments with original maturities of three months or less qualify under this definition. Examples of cash equivalents are Treasury bills, commercial paper, and money market funds purchased with cash that is in excess of immediate needs.

¹IFRS Accounting Trends and Techniques—2012–2013 indicates that most companies surveyed report income taxes paid or received, interest received and paid, and dividends received as operating activities. However, most companies show dividends paid as a financing activity. These results are consistent with how this information is reported in Illustration 23-1.

Equity investments are excluded from cash equivalents unless they are, in substance, cash equivalents. Although we use the term "cash" throughout our discussion and illustrations, we mean cash and cash equivalents when reporting the cash flows and the net increase or decrease in cash. [3]

What do the numbers mean? HOW'S MY CASH FLOW?

To evaluate overall cash flows, it is useful to understand where in the product life cycle a company is. Generally, companies move through several stages of development, which have implications for cash flows. As the graph below shows, the pattern of cash flows from operating, financing, and investing activities will vary depending on the stage of the product life cycle.

In the introductory phase, the product is likely not generating much revenue (net operating cash flow is negative). Because the company is making heavy investments to get a product off the ground, cash flow from investment is negative, and financing cash flows are positive.

As the product moves to the growth and maturity phases, these cash flow relationships reverse. The product

generates more cash flows from operations, which can be used to cover investments needed to support the product, and less cash is needed from financing. So are negative operating cash flows bad? Not always. It depends on the product life cycle.

Source: Adapted from Paul D. Kimmel, Jerry J. Weygandt, and Donald E. Kieso, Financial Accounting: Tools for Business Decision Making, 7th ed. (New York: John Wiley & Sons, 2013), p. 631.

Format of the Statement of Cash Flows

The three activities we discussed above constitute the general format of the statement of cash flows. The operating activities section always appears first. It is followed by the investing activities section and then the financing activities section.

A company reports the individual inflows and outflows from investing and financing activities separately. That is, a company reports them gross, not netted against one another. Thus, a cash outflow from the purchase of property is reported separately from the cash inflow from the sale of property. Similarly, a cash inflow from the issuance of debt is reported separately from the cash outflow from its retirement.

The net increase or decrease in cash reported during the period should reconcile the beginning and ending cash balances as reported in the comparative statements of financial position. The general format of the statement of cash flows presents the

results of the three activities discussed previously—operating, investing, and financing. Illustration 23-2 shows a widely used form of the statement of cash flows.

Cash at end of period		XXX

Steps in Preparation

Companies prepare the statement of cash flows differently from the three other basic financial statements. For one thing, it is not prepared from an adjusted trial balance. The cash flow statement requires detailed information concerning the changes in account balances that occurred between two points in time. An adjusted trial balance will not provide the necessary data. Second, the statement of cash flows deals with cash receipts and payments. As a result, the company must adjust the effects of the use of accrual accounting to determine cash flows. The information to prepare this statement usually comes from three sources:

- **1. Comparative statements of financial position** provide the amount of the changes in assets, liabilities, and equities from the beginning to the end of the period.
- **2. Current income statement** data help determine the amount of net cash provided by or used by operations during the period.
- **3. Selected transaction data** from the general ledger provide additional detailed information needed to determine how the company provided or used cash during the period.

Preparing the statement of cash flows from the data sources above involves three major steps:

- **Step 1.** *Determine the change in cash.* This procedure is straightforward. A company can easily compute the difference between the beginning and the ending cash balance from examining its comparative statements of financial position.
- **Step 2.** Determine the net cash flow from operating activities. This procedure is complex. It involves analyzing not only the current year's income statement but also comparative statements of financial position as well as selected transaction data.
- **Step 3.** *Determine net cash flows from investing and financing activities.* A company must analyze all other changes in the statement of financial position accounts to determine their effects on cash.

On the following pages, we work through these three steps in the process of preparing the statement of cash flows for Tax Consultants Inc. over several years.

ILLUSTRATIONS—TAX CONSULTANTS INC.

We show the steps in preparing the statement of cash flows using data for Tax Consultants Inc. To begin, we use the **first year of operations** for Tax Consultants Inc. The company started on January 1, 2015, when it issued 60,000 ordinary shares of \$1 par value for \$60,000 cash. The company rented its office space,

3 LEARNING OBJECTIVEPrepare a statement of cash flows.

furniture, and equipment, and performed tax consulting services throughout the first year. The comparative statements of financial position at the beginning and end of the year 2015 appear in Illustration 23-3.

Net income	\$ 34,000
	Revenues Operating expenses Income before income taxes Income tax expense

ILLUSTRATION 23-4 Income Statement, Tax Consultants Inc., Year 1

Step 1: Determine the Change in Cash

To prepare a statement of cash flows, the first step is to **determine the change in cash**. This is a simple computation. Tax Consultants had no cash on hand at the beginning of the year 2015. It had \$49,000 on hand at the end of 2015. Thus, cash changed (increased) in 2015 by \$49,000.

Step 2: Determine Net Cash Flow from Operating Activities

LEARNING OBJECTIVE [4]

Differentiate between net income and net cash flow from operating activities.

To determine net cash flow from operating activities,² companies adjust net income in numerous ways. A useful starting point is to understand why net income must be converted to net cash provided by operating activities.

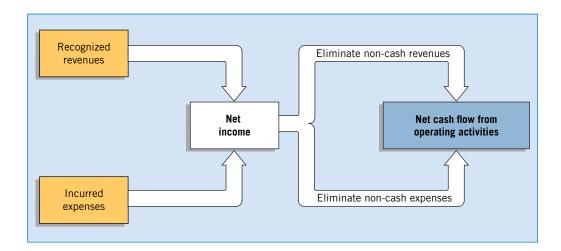

Under IFRS, most companies use the accrual basis of accounting. As you have learned, this basis requires that companies record revenue when they satisfy performance obligations and record expenses when incurred. Revenues

may include credit sales for which the company has not yet collected cash. Expenses incurred may include some items that the company has not yet paid in cash. Thus, under the accrual basis of accounting, net income is not the same as net cash flow from operating activities.

To arrive at net cash flow from operating activities, a company must determine revenues and expenses on a **cash basis**. It does this by eliminating the effects of income statement transactions that do not result in an increase or decrease in cash. Illustration 23-5 shows the relationship between net income and net cash flow from operating activities.

ILLUSTRATION 23-5

Net Income versus Net Cash Flow from Operating Activities

In this chapter, we use the term net income to refer to accrual-based net income. A company may convert net income to net cash flow from operating activities through either a direct method or an indirect method. Due to its widespread use in practice, in the following sections we illustrate use of the indirect method. Later in the chapter, we describe the direct method and discuss the advantages and disadvantages of the two methods.

The indirect method (or reconciliation method) starts with net income and converts it to net cash flow from operating activities. In other words, the indirect method adjusts net income for items that affected reported net income but did not affect cash. To compute net cash flow from operating activities, a company adds back non-cash charges in the income statement to net income and deducts non-cash credits. We explain the two adjustments to net income for Tax Consultants, namely, the increases in accounts receivable and accounts payable, as follows.

Increase in Accounts Receivable - Indirect Method

Tax Consultants' accounts receivable increased by \$36,000 (from \$0 to \$36,000) during the year. For Tax Consultants, this means that cash receipts were \$36,000 lower than

²"Net cash flow from operating activities" is a generic phrase, replaced in the statement of cash flows with either "Net cash provided by operating activities" if operations increase cash, or "Net cash used by operating activities" if operations decrease cash.

revenues. The Accounts Receivable account in Illustration 23-6 shows that Tax Consultants had \$125,000 in revenues (as reported on the income statement), but it collected only \$89,000 in cash.

Accounts Receivable				
1/1/15	Balance	-0-	Receipts from customer	89,000
	Revenues	125,000		
12/31/15	Balance	36,000		

ILLUSTRATION 23-6 Analysis of Accounts Receivable

As shown in Illustration 23-7, to adjust net income to net cash provided by operating activities, Tax Consultants must deduct the increase of \$36,000 in accounts receivable from net income. When the Accounts Receivable balance *decreases*, cash receipts are higher than revenue recognized under the accrual basis. Therefore, the company adds to net income the amount of the decrease in accounts receivable to arrive at net cash provided by operating activities.

Increase in Accounts Payable - Indirect Method

When accounts payable increase during the year, expenses on an accrual basis exceed those on a cash basis. Why? Because Tax Consultants incurred expenses, but some of the expenses are not yet paid. To convert net income to net cash flow from operating activities, Tax Consultants must add back the increase of \$5,000 in accounts payable to net income.

As a result of the accounts receivable and accounts payable adjustments, Tax Consultants determines net cash provided by operating activities is \$3,000 for the year 2015. Illustration 23-7 shows this computation.

Net income

\$ 34,000

(31,000)

\$ 3,000

ILLUSTRATION 23-7Computation of Net

Computation of Net Cash Flow from Operating Activities, Year 1—Indirect Method

Step 3: Determine Net Cash Flows from Investing and Financing Activities

After Tax Consultants has computed the net cash provided by operating activities, the next step is to determine whether any other changes in the statement of financial position accounts caused an increase or decrease in cash.

For example, an examination of the remaining statement of financial position accounts for Tax Consultants shows increases in both ordinary shares and retained earnings. The Share Capital—Ordinary increase of \$60,000 resulted from the issuance of ordinary shares for cash. The issuance of ordinary shares is reported in the statement of cash flows as a receipt of cash from a financing activity.

Two items caused the retained earnings increase of \$20,000:

- **1.** Net income of \$34,000 increased retained earnings.
- 2. Declaration of \$14,000 of dividends decreased retained earnings.

5 LEARNING OBJECTIVE

Determine net cash flows from investing and financing activities.

Tax Consultants has converted net income into net cash flow from operating activities, as explained earlier. The additional data indicate that it paid the dividend. Thus, the company reports the dividend payment as a cash outflow, classified as a financing activity.

Statement of Cash Flows - 2015

We are now ready to prepare the statement of cash flows. The statement starts with the operating activities section. Tax Consultants may use either the direct or indirect method to report net cash flow from operating activities.

The IASB **encourages** the use of the direct method over the indirect method. **[4]** If a company uses the indirect method, it can either report the reconciliation within the statement of cash flows or can provide it in a separate schedule, with the statement of cash flows reporting only the **net** cash flow from operating activities. Throughout this chapter, we use the indirect method, which is also used more extensively in practice.³

Illustration 23-8 shows the statement of cash flows for Tax Consultants Inc., for year 1 (2015).

ILLUSTRATION 23-8

Statement of Cash Flows, Tax Consultants Inc., Year 1

TAX CONSULTANTS INC. STATEMENT OF CASH FLOWS FOR THE YEAR ENDED DECEMBER 31, 2015 INCREASE (DECREASE) IN CASH			
Cash flows from operating activities Net income Adjustments to reconcile net income to net cash provided by operating activities: Increase in accounts receivable	\$(36,000)	\$ 34,000	
Increase in accounts payable Net cash provided by operating activities Cash flows from financing activities Issuance of ordinary shares Payment of cash dividends	5,000 60,000 (14,000)	<u>(31,000)</u> <u>3,000</u>	
Net cash provided by financing activities Net increase in cash Cash, January 1, 2015		46,000 49,000 -0-	
Cash, December 31, 2015		\$ 49,000	

As indicated, the \$60,000 increase in ordinary shares results in a financing-activity cash inflow. The payment of \$14,000 in cash dividends is a financing-activity outflow of cash. The \$49,000 increase in cash reported in the statement of cash flows agrees with the increase of \$49,000 shown in the comparative statements of financial position (in Illustration 23-3 on page 1187) as the change in the Cash account.

Illustration - 2016

Tax Consultants Inc. continued to grow and prosper in its second year of operations. The company purchased land, building, and equipment, and revenues and net income increased substantially over the first year. Illustrations 23-9 and 23-10 present information related to the second year of operations for Tax Consultants Inc.

³IFRS Accounting Trends and Techniques—2012–2013 reports that out of its 175 surveyed companies, 151 used the indirect method and 23 used the direct method. One company did not provide a statement of cash flows. In doing homework assignments, you should follow instructions for use of either the direct or indirect method.

ILLUSTRATION 23-10 Income Statement, Tax Consultants Inc., Year 2

Additional Information

- (a) The company declared and paid an \$18,000 cash dividend.
- (b) The company obtained \$150,000 cash through the issuance of long-term bonds.
- (c) Land, building, and equipment were acquired for cash.

Step 1: Determine the Change in Cash

To prepare a statement of cash flows from the available information, the first step is to determine the change in cash. As indicated from the information presented, cash decreased \$12,000 (\$49,000 - \$37,000).

Step 2: Determine Net Cash Flow from Operating Activities—Indirect Method

Using the indirect method, we adjust net income of \$134,000 on an accrual basis to arrive at net cash flow from operating activities. Explanations for the adjustments to net income follow.

Decrease in Accounts Receivable. Accounts receivable decreased during the period because cash receipts (cash-basis revenues) are higher than revenues reported on an accrual basis. To convert net income to net cash flow from operating activities, the decrease of \$10,000 in accounts receivable must be added to net income.

Increase in Prepaid Expenses. When prepaid expenses (assets) increase during a period, expenses on an accrual-basis income statement are lower than they are on a cash-basis

income statement. The reason: Tax Consultants has made cash payments in the current period, but expenses (as charges to the income statement) have been deferred to future periods. To convert net income to net cash flow from operating activities, the company must deduct from net income the increase of \$6,000 in prepaid expenses. An increase in prepaid expenses results in a decrease in cash during the period.

Increase in Accounts Payable. Like the increase in 2015, Tax Consultants must add the 2016 increase of \$35,000 in accounts payable to net income, to convert to net cash flow from operating activities. The company incurred a greater amount of expense than the amount of cash it disbursed.

Depreciation Expense (Increase in Accumulated Depreciation). The purchase of depreciable assets is a use of cash, shown in the investing section in the year of acquisition. Tax Consultants' depreciation expense of \$21,000 (also represented by the increase in accumulated depreciation) is a non-cash charge; the company adds it back to net income, to arrive at net cash flow from operating activities. The \$21,000 is the sum of the \$11,000 depreciation on the building plus the \$10,000 depreciation on the equipment.

Certain other periodic charges to expense do not require the use of cash. Examples are the amortization of intangible assets and depletion expense. Such charges are treated in the same manner as depreciation. Companies frequently list depreciation and similar non-cash charges as the first adjustments to net income in the statement of cash flows.

As a result of the foregoing items, net cash provided by operating activities is \$194,000, as shown in Illustration 23-11.

ILLUSTRATION 23-11

Computation of Net Cash Flow from Operating Activities, Year 2—Indirect Method

Net income		\$134,000	
Adjustments to reconcile net income to			
net cash provided by operating activities:			
Depreciation expense	\$21,000		
Decrease in accounts receivable	10,000		
Increase in prepaid expenses	(6,000)		
Increase in accounts payable	35,000	60,000	
Net cash provided by operating activities		<u>\$194,000</u>	

Step 3: Determine Net Cash Flows from Investing and Financing Activities

After you have determined the items affecting net cash provided by operating activities, the next step involves analyzing the remaining changes in the statement of financial position accounts. Tax Consultants Inc. analyzed the following accounts.

Increase in Land. As indicated from the change in the Land account, the company purchased land of \$70,000 during the period. This transaction is an investing activity, reported as a use of cash.

Increase in Buildings and Related Accumulated Depreciation. As indicated in the additional data, and from the change in the Buildings account, Tax Consultants acquired an office building using \$200,000 cash. This transaction is a cash outflow, reported in the investing section. The \$11,000 increase in accumulated depreciation results from recording depreciation expense on the building. As indicated earlier, the reported depreciation expense has no effect on the amount of cash.

Increase in Equipment and Related Accumulated Depreciation. An increase in equipment of \$68,000 resulted because the company used cash to purchase equipment. This transaction is an outflow of cash from an investing activity. The depreciation expense entry for the period explains the increase in Accumulated Depreciation—Equipment.

Increase in Bonds Payable. The Bonds Payable account increased \$150,000. Cash received from the issuance of these bonds represents an inflow of cash from a financing activity.

Increase in Retained Earnings. Retained earnings increased \$116,000 during the year. Two factors explain this increase: (1) net income of \$134,000 increased retained earnings, and (2) dividends of \$18,000 decreased retained earnings. As indicated earlier, the company adjusts net income to net cash provided by operating activities in the operating activities section. Payment of the dividends is a financing activity that involves a cash outflow.

Statement of Cash Flows - 2016

Combining the foregoing items, we get a statement of cash flows for 2016 for Tax Consultants Inc., using the indirect method to compute net cash flow from operating activities.

TAX CONSULTANTS INC. STATEMENT OF CASH FLOWS FOR THE YEAR ENDED DECEMBER 31, 2016 INCREASE (DECREASE) IN CASH Cash flows from operating activities Net income \$ 134,000 Adjustments to reconcile net income to net cash provided by operating activities: Depreciation expense \$ 21,000 Decrease in accounts receivable 10,000 Increase in prepaid expenses (6,000)Increase in accounts payable 35,000 60,000 194,000 Net cash provided by operating activities Cash flows from investing activities Purchase of land (70,000)Purchase of building (200,000)Purchase of equipment (68,000)Net cash used by investing activities (338,000)Cash flows from financing activities Issuance of bonds 150,000 Payment of cash dividends (18,000)Net cash provided by financing activities 132,000 Net decrease in cash (12,000)49,000 Cash, January 1, 2016 Cash, December 31, 2016 \$ 37,000

ILLUSTRATION 23-12

Statement of Cash Flows, Tax Consultants Inc., Year 2

Illustration - 2017

Our third example, covering the 2017 operations of Tax Consultants Inc., is more complex. It again uses the indirect method to compute and present net cash flow from operating activities.

Tax Consultants Inc. experienced continued success in 2017 and expanded its operations to include the sale of computer software used in tax-return preparation and tax planning. Thus, inventory is a new asset appearing in the company's December 31, 2017, statement of financial position. Illustrations 23-13 and 23-14 (on page 1194) show the comparative statements of financial position, income statements, and selected data for 2017.

Step 1: Determine the Change in Cash

The first step in the preparation of the statement of cash flows is to determine the change in cash. As the comparative statements of financial position show, cash increased \$17,000 in 2017.

ILLUSTRATION 23-13

Comparative Statements of Financial Position, Tax Consultants Inc., Year 3

TAX CONSULTANTS INC. Income Statement, Tax Consultants Inc., Year 3

	ILTANTS INC. STATEMENT D DECEMBER 31, 2	017	
Revenues		\$890,000	
Cost of goods sold	\$465,000		
Operating expenses	221,000		
Interest expense	12,000		
Loss on sale of equipment	2,000	700,000	
Income from operations		190,000	
Income tax expense		65,000	
Net income		\$125,000	

Additional Information

- (a) Operating expenses include depreciation expense of \$33,000 and expiration of prepaid expenses of \$2,000.
- (b) Land was sold at its book value for cash.
- (c) Cash dividends of \$55,000 were declared and paid.
- (d) Interest expense of \$12,000 was paid in cash.
- (e) Equipment with a cost of \$166,000 was purchased for cash. Equipment with a cost of \$41,000 and a book value of \$36,000 was sold for \$34,000 cash.
- (f) Bonds were redeemed at their book value for cash.
- (g) Ordinary shares (\$1 par) were issued for cash.

Step 2: Determine Net Cash Flow from Operating Activities—Indirect Method

We explain the adjustments to net income of \$125,000 as follows.

Increase in Accounts Receivable. The increase in accounts receivable of \$42,000 represents recorded accrual-basis revenues in excess of cash collections in 2017. The company deducts this increase from net income to convert from the accrual basis to the cash basis.

Increase in Inventories. The \$54,000 increase in inventories represents an operating use of cash, not an expense. Tax Consultants therefore deducts this amount from net income, to arrive at net cash flow from operations. In other words, when inventory purchased exceeds inventory sold during a period, cost of goods sold on an accrual basis is lower than on a cash basis.

Decrease in Prepaid Expenses. The \$2,000 decrease in prepaid expenses represents a charge to the income statement for which Tax Consultants made no cash payment in the current period. The company adds back the decrease to net income, to arrive at net cash flow from operating activities.

Decrease in Accounts Payable. When accounts payable decrease during the year, cost of goods sold and expenses on a cash basis are higher than they are on an accrual basis. To convert net income to net cash flow from operating activities, the company must deduct the \$7,000 in accounts payable from net income.

Depreciation Expense (Increase in Accumulated Depreciation). Accumulated Depreciation—Buildings increased \$10,000 (\$21,000 - \$11,000). The Buildings account did not change during the period, which means that Tax Consultants recorded depreciation expense of \$10,000 in 2017.

Accumulated Depreciation—Equipment increased by \$18,000 (\$28,000 - \$10,000) during the year. But Accumulated Depreciation—Equipment decreased by \$5,000 as a result of the sale during the year. Thus, depreciation for the year was \$23,000. The company reconciled Accumulated Depreciation—Equipment as follows.

\$10,000
23,000
33,000
5,000
\$28,000

The company must add back to net income the total depreciation of \$33,000 (\$10,000 + \$23,000) charged to the income statement, to determine net cash flow from operating activities.

Loss on Sale of Equipment. Tax Consultants sold for \$34,000 equipment that cost \$41,000 and had a book value of \$36,000. As a result, the company reported a loss of \$2,000 on its sale. To arrive at net cash flow from operating activities, it must add back to net income the loss on the sale of the equipment. The reason is that the loss is a non-cash charge to the income statement. The loss did not reduce cash, but it did reduce net income.

From the foregoing items, the company prepares the operating activities section of the statement of cash flows, as shown in Illustration 23-15.

Cash flows from operating activities		
Net income		\$125,000
Adjustments to reconcile net income to		
net cash provided by operating activities:		
Depreciation expense	\$ 33,000	
Loss on sale of equipment	2,000	
Increase in accounts receivable	(42,000)	
Increase in inventories	(54,000)	
Decrease in prepaid expenses	2,000	
Decrease in accounts payable	(7,000)	(66,000)
Net cash provided by operating activities		59.000

Operating Activities

Operating Activities Section of Cash Flow Statement

Step 3: Determine Net Cash Flows from Investing and Financing Activities

By analyzing the remaining changes in the statement of financial position accounts, Tax Consultants identifies cash flows from investing and financing activities.

Land. Land decreased \$25,000 during the period. As indicated from the information presented, the company sold land for cash at its book value. This transaction is an investing activity, reported as a \$25,000 source of cash.

Equipment. An analysis of the Equipment account indicates the following.

Beginning balance	\$ 68,000
Purchase of equipment	166,000
	234,000
Sale of equipment	41,000
Ending balance	\$193,000

The company used cash to purchase equipment with a fair value of \$166,000—an investing transaction reported as a cash outflow. The sale of the equipment for \$34,000 is also an investing activity, but one that generates a cash inflow.

Bonds Payable. Bonds payable decreased \$40,000 during the year. As indicated from the additional information, the company redeemed the bonds at their book value. This financing transaction used \$40,000 of cash.

Share Capital—Ordinary. The Share Capital—Ordinary account increased \$160,000 during the year. As indicated from the additional information, Tax Consultants issued ordinary shares of \$160,000 at par. This financing transaction provided cash of \$160,000.

Retained Earnings. Retained earnings changed \$70,000 (\$206,000 – \$136,000) during the year. The \$70,000 change in retained earnings results from net income of \$125,000 from operations and the financing activity of paying cash dividends of \$55,000.

Statement of Cash Flows - 2017

Tax Consultants Inc. combines the foregoing items to prepare the statement of cash flows shown in Illustration 23-16.

Sources of Information for the Statement of Cash Flows

Important points to remember in the preparation of the statement of cash flows are these:

6 LEARNING OBJECTIVE Identify sources of information for a

statement of cash flows.

- **1.** Comparative statements of financial position provide the basic information from which to prepare the report. Additional information obtained from analyses of specific accounts is also included.
- **2.** An analysis of the Retained Earnings account is necessary. The net increase or decrease in Retained Earnings without any explanation is a meaningless amount in the statement. Without explanation, it might represent the effect of net income, dividends declared, or prior period adjustments.
- **3.** The statement includes all changes that have passed through cash or have resulted in an increase or decrease in cash.
- **4.** Write-downs, amortization charges, and similar "book" entries, such as depreciation of plant assets, represent neither inflows nor outflows of cash because they have no effect on cash. To the extent that they have entered into the determination of net income, however, the company must add them back to or subtract them from net income, to arrive at net cash provided (used) by operating activities.

Indirect Method - Additional Adjustments

For consistency and comparability and because it is the most widely used method in practice, we used the indirect method in the Tax Consultants' illustrations. We determined net cash flow from operating activities by adding back to or deducting from net income those items that had no effect on cash. Illustration 23-17 presents a more complete set of common types of adjustments that companies make to net income to arrive at net cash flow from operating activities.

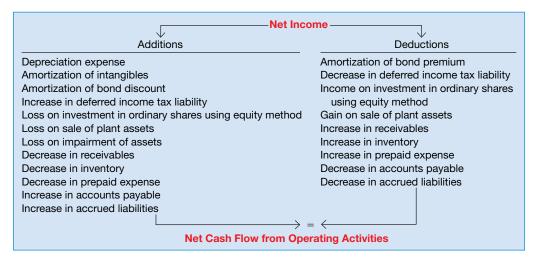

ILLUSTRATION 23-17

Adjustments Needed to Determine Net Cash Flow from Operating Activities—Indirect Method

The additions and deductions in Illustration 23-17 reconcile net income to net cash flow from operating activities, illustrating why the indirect method is also called the reconciliation method.

Net Cash Flow from Operating Activities - Direct Method

Two different methods are available to adjust income from operations on an accrual basis to net cash flow from operating activities. We showed the indirect method in the Tax Consultants' illustrations in the prior sections.

Contrast the direct and indirect methods of calculating net cash flow from operating activities.

The **direct method** reports cash receipts and cash disbursements from operating activities. The difference between these two amounts is the net cash flow from operating activities. In other words, the direct method deducts operating cash disbursements from operating cash receipts. The direct method results in the presentation of a condensed cash receipts and cash disbursements statement.

As indicated from the accrual-based income statement (see Illustration 23-4 on page 1187), Tax Consultants reported revenues of \$125,000. However, because the company's accounts receivable increased during 2015 by \$36,000, the company collected only \$89,000 (\$125,000 - \$36,000) in cash from these revenues. Similarly, Tax Consultants reported operating expenses of \$85,000. However, accounts payable increased during the period by \$5,000. Assuming that these payables relate to operating expenses, cash operating expenses were \$80,000 (\$85,000 - \$5,000). Because no taxes payable exist at the end of the year, the company must have paid \$6,000 income tax expense for 2015 in cash during the year. Tax Consultants computes net cash flow from operating activities as shown in Illustration 23-18.

ILLUSTRATION 23-18

Computation of Net Cash Flow from Operating Activities, Year 1—Direct Method

Cash collected from revenues Cash payments for expenses	\$89,000 _80,000	
Income before income taxes Cash payments for income taxes Net cash provided by operating activities	9,000 6,000 \$ 3,000	

"Net cash provided by operating activities" is the equivalent of cash basis net income. ("Net cash used by operating activities" is equivalent to cash basis net loss.)

The IASB encourages use of the direct method and permits use of the indirect method. Yet, if the direct method is used, the Board requires that companies provide in a separate schedule a reconciliation of net income to net cash flow from operating activities. Therefore, under either method, companies must prepare and report information from the indirect (reconciliation) method.

Direct Method—An Example

Under the direct method, the statement of cash flows reports net cash flow from operating activities as major classes of *operating cash receipts* (e.g., cash collected from customers and cash received from interest and dividends) and *cash disbursements* (e.g., cash paid to suppliers for goods, to employees for services, to creditors for interest, and to government authorities for taxes).

We illustrate the direct method here in more detail to help you understand the difference between accrual-based income and net cash flow from operating activities. This example also illustrates the data needed to apply the direct method. Drogba Company, which began business on January 1, 2015, has the following selected statement of financial position information.

ILLUSTRATION 23-19

Statement of Financial Position Accounts, Drogba Co.

	December 31, 2015	January 1, 2015
Property, plant, and equipment (net)	€ 90,000	€-0-
Inventory	160,000	-0-
Accounts payable	60,000	-0-
Accrued expenses payable	20,000	-0-
Accounts receivable	15,000	-0-
Prepaid expenses	8,000	-0-
Cash	159,000	-0-

Drogba's December 31, 2015, income statement and additional information are as follows.

Sales revenue		€780,000	
Cost of goods sold		450,000	
Gross profit		330,000	
Operating expenses	€160,000		
Depreciation	10,000	170,000	
Income before income taxes		160,000	
Income tax expense		48,000	
Net income		€112,000	

ILLUSTRATION 23-20

Income Statement, Drogba Co.

Additional Information

- (a) Dividends of €70,000 were declared and paid in cash.
- (b) The accounts payable increase resulted from the purchase of merchandise.
- (c) Prepaid expenses and accrued expenses payable relate to operating expenses.

Under the **direct method**, companies compute net cash provided by operating activities by **adjusting each item in the income statement** from the accrual basis to the cash basis. To simplify and condense the operating activities section, only major classes of operating cash receipts and cash payments are reported. As Illustration 23-21 shows, the difference between these major classes of cash receipts and cash payments is the net cash provided by operating activities.

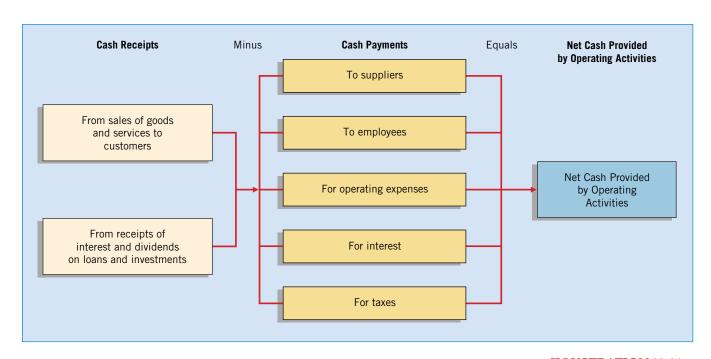

ILLUSTRATION 23-21

Major Classes of Cash Receipts and Payments

An efficient way to apply the direct method is to analyze the revenues and expenses reported in the income statement in the order in which they are listed. The company then determines cash receipts and cash payments related to these revenues and expenses. In the following sections, we present the direct method adjustments for Drogba Company in 2016, to determine net cash provided by operating activities.

Cash Receipts from Customers. The income statement for Drogba Company reported revenues from customers of €780,000. To determine cash receipts from customers, the company considers the change in accounts receivable during the year.

When accounts receivable increase during the year, revenues on an accrual basis are higher than cash receipts from customers. In other words, operations led to increased revenues, but not all of these revenues resulted in cash receipts. To determine the amount of cash receipts, deduct the amount of the increase in accounts receivable from the total sales revenues. Conversely, a decrease in accounts receivable is added to sales revenues because cash receipts from customers then exceed sales revenues.

For Drogba, accounts receivable increased €15,000. Thus, cash receipts from customers were €765,000, computed as follows.

Sales revenue €780,000Deduct: Increase in accounts receivable 15,000Cash receipts from customers €765,000

Drogba could also determine cash receipts from customers by analyzing the Accounts Receivable account, as shown below.

	Accounts Receivable					
1/1/16	Balance	-0-	Receipts from customers	765,000		
	Sales revenue	780,000				
12/31/16	Balance	15,000				

Illustration 23-22 shows the relationships between cash receipts from customers, revenues from sales, and changes in accounts receivable.

ILLUSTRATION 23-22

Formula to Compute Cash Receipts from Customers

Cash Payments to Suppliers. Drogba Company reported cost of goods sold on its income statement of €450,000. To determine cash payments to suppliers, the company first finds purchases for the year, by adjusting cost of goods sold for the change in inventory. When inventory increases during the year, purchases this year exceed cost of goods sold. As a result, the company adds the increase in inventory to cost of goods sold, to arrive at purchases.

In 2016, Drogba Company's inventory increased €160,000. The company computes purchases as follows.

 Cost of goods sold
 €450,000

 Add: Increase in inventory
 160,000

 Purchases
 €610,000

After computing purchases, Drogba determines cash payments to suppliers by adjusting purchases for the change in accounts payable. When accounts payable increase during the year, purchases on an accrual basis are higher than they are on a cash basis. As a result, it deducts from purchases the increase in accounts payable to arrive at cash payments to suppliers. Conversely, if cash payments to suppliers exceed purchases, Drogba adds to purchases the decrease in accounts payable. Cash payments to suppliers were €550,000, computed as follows.

Purchases €610,000

Deduct: Increase in accounts payable 60,000

Cash payments to suppliers €550,000

Drogba also can determine cash payments to suppliers by analyzing Accounts Payable, as shown below.

Accounts Payable					
Payments to suppliers	550,000	1/1/16	Balance	-0-	
			Purchases	610,000	
		12/31/16	Balance	60,000	

Illustration 23-23 shows the relationships between cash payments to suppliers, cost of goods sold, changes in inventory, and changes in accounts payable.

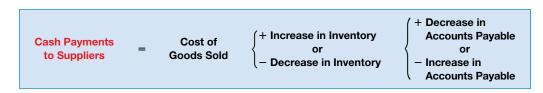

ILLUSTRATION 23-23 Formula to Compute Cash Payments to Suppliers

Cash Payments for Operating Expenses. Drogba reported operating expenses of €160,000 on its income statement. To determine the cash paid for operating expenses, it must adjust this amount for any changes in prepaid expenses and accrued expenses payable.

For example, when prepaid expenses increased €8,000 during the year, cash paid for operating expenses was €8,000 higher than operating expenses reported on the income statement. To convert operating expenses to cash payments for operating expenses, the company adds to operating expenses the increase of €8,000. Conversely, if prepaid expenses decrease during the year, Drogba deducts from operating expenses the amount of the decrease.

Drogba also must adjust operating expenses for changes in accrued expenses payable. When accrued expenses payable increase during the year, operating expenses on an accrual basis are higher than they are on a cash basis. As a result, the company deducts from operating expenses an increase in accrued expenses payable, to arrive at cash payments for operating expenses. Conversely, it adds to operating expenses a decrease in accrued expenses payable because cash payments exceed operating expenses.

Drogba's cash payments for operating expenses were €148,000, computed as follows.

Operating expenses	€160,000
Add: Increase in prepaid expenses	8,000
Deduct: Increase in accrued expenses payable	20,000
Cash payments for operating expenses	€148,000

The relationships among cash payments for operating expenses, changes in prepaid expenses, and changes in accrued expenses payable are shown in Illustration 23-24.

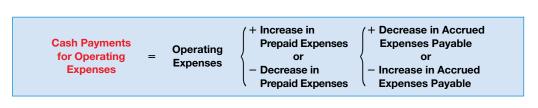

ILLUSTRATION 23-24
Formula to Compute
Cash Payments for
Operating Expenses

Note that the company did not consider depreciation expense because it is a noncash charge.

Cash Payments for Income Taxes. The income statement for Drogba shows income tax expense of €48,000. This amount equals the cash paid. How do we know that? Because the comparative statement of financial position indicated no income taxes payable at either the beginning or end of the year.

Summary of Net Cash Flow from Operating Activities – Direct Method

The following schedule summarizes the computations illustrated above.

ILLUSTRATION 23-25

Accrual Basis to Cash Basis

Accrual Basis	S		Adjustment	Add (Subtract)	Cash Basis
Sales revenue	€780,000	-	Increase in accounts receivable	€ (15,000)	€765,000
Cost of goods sold	450,000	+	Increase in inventory Increase in accounts payable	160,000 (60,000)	550,000
Operating expenses	160,000	+	Increase in prepaid expenses Increase in accrued	8,000	
Depreciation expense Income tax expense	10,000 48,000	-	expenses payable Depreciation expense	(20,000) (10,000)	148,000 -0- 48,000
Total expense	668,000				746,000
Net income	<u>€112,000</u>		Net cash provided by operating	g activities	<u>€ 19,000</u>

Illustration 23-26 shows the presentation of the direct method for reporting net cash flow from operating activities for the Drogba Company example.

ILLUSTRATION 23-26

Operating Activities Section—Direct Method, 2016

DROGBA COMPANY STATEMENT OF CASH FLOWS (PARTIAL)					
Cash flows from operating activities					
Cash received from customers		€765,000			
Cash payments:					
To suppliers	€550,000				
For operating expenses	148,000				
For income taxes	48,000	746,000			
Net cash provided by operating activities		€ 19,000			

If Drogba uses the direct method to present the net cash flow from operating activities, it is required to provide in a separate schedule the reconciliation of net income to net cash provided by operating activities. The reconciliation assumes the identical form and content of the indirect method of presentation, as shown below.

Net cash provided by operating activities		€ 19,000			

Evolving Issue

DIRECT VERSUS INDIRECT

A contentious decision that the IASB faced related to cash flow reporting was choosing between the direct method and the indirect method of determining net cash flow from operating activities. Companies lobbied *against* the direct method, urging adoption of the indirect method. Commercial lending officers expressed to the IASB a strong preference in favor of the direct method. What are the arguments in favor of each of the methods?

In Favor of the Direct Method

The principal advantage of the direct method is that it shows operating cash receipts and payments. Thus, it is more consistent with the objective of a statement of cash flows—to provide information about cash receipts and cash payments—than the indirect method, which does not report operating cash receipts and payments.

Supporters of the direct method contend that knowledge of the specific sources of operating cash receipts and the purposes for which operating cash payments were made in past periods is useful in estimating future operating cash flows. Furthermore, information about amounts of major classes of operating cash receipts and payments is more useful than information only about their arithmetic sum (the net cash flow from operating activities). Such information is more revealing of a company's ability (1) to generate sufficient cash from operating activities to pay its debts, (2) to reinvest in its operations, and (3) to make distributions to its owners.

Many companies indicate that they do not currently collect information in a manner that allows them to determine amounts such as cash received from customers or cash paid to suppliers directly from their accounting systems. But supporters of the direct method contend that the incremental cost of determining operating cash receipts and payments is not significant.

In Favor of the Indirect Method

The principal advantage of the indirect method is that it focuses on the differences between net income and net cash flow from operating activities. That is, it provides a useful link between the statement of cash flows and the income statement and statement of financial position.

Many companies contend that it is less costly to adjust net income to net cash flow from operating activities (indirect) than it is to report gross operating cash receipts and payments (direct). Supporters of the indirect method also state that the direct method, which effectively reports income statement information on a cash rather than an accrual basis, may erroneously suggest that net cash flow from operating activities is as good as, or better than, net income as a measure of performance.

In their joint financial statement presentation project, the IASB and the FASB have proposed to allow only the direct method. However, there has been significant pushback on this proposal, which suggests that the choice of either the direct or indirect method will continue to be available.

Source: See http://www.fasb.org; click on Projects and then on Inactive Joint FASB/IASB Projects.

SPECIAL PROBLEMS IN STATEMENT PREPARATION

We discussed some of the special problems related to preparing the statement of cash flows in connection with the preceding illustrations. Other problems that arise with some frequency in the preparation of this statement include the following.

18 LEARNING OBJECTIVE

Discuss special problems in preparing a statement of cash flows.

- **1.** Adjustments to net income.
- **2.** Accounts receivable (net).
- **3.** Other working capital changes.
- 4. Net loss.
- 5. Disclosures.

Adjustments to Net Income

Depreciation and Amortization

Depreciation expense is the most common adjustment to net income that companies make to arrive at net cash flow from operating activities. But there are numerous other

non-cash expense or revenue items. Examples of expense items that companies must add back to net income are the **amortization of limited-life intangible assets**, such as patents, and **depletion of mineral resources**. These charges to expense involve expenditures made in prior periods that a company amortizes currently. These charges reduce net income without affecting cash in the current period.

Also, **amortization of bond discount or premium** on long-term bonds payable affects the amount of interest expense. However, neither changes cash. As a result, a company should add back discount amortization and subtract premium amortization from net income to arrive at net cash flow from operating activities.

Postretirement Benefit Costs

If a company has postretirement costs such as an employee pension plan, chances are that the pension expense recorded during a period will either be higher or lower than the cash funded. It will be higher when there is an unfunded liability and will be lower when there is a prepaid pension cost. When the expense is higher or lower than the cash paid, the company must adjust net income by the difference between cash paid and the expense reported in computing net cash flow from operating activities.

Change in Deferred Income Taxes

Changes in deferred income taxes affect net income but have no effect on cash. For example, Baytex Energy Corp. (CAN) reported an increase in its liability for deferred taxes of approximately \$107,598,000. This change in the liability increased tax expense and decreased net income, but did not affect cash. Therefore, Baytex added back \$107,598,000 to net income on its statement of cash flows.

Equity Method of Accounting

Another common adjustment to net income is a change related to an investment in ordinary shares when recording income or loss under the equity method. Recall that under the equity method, the investor (1) debits the investment account and credits revenue for its share of the investee's net income, and (2) credits dividends received to the investment account. Therefore, the net increase in the investment account does not affect cash flows. A company must deduct the net increase from net income to arrive at net cash flow from operating activities.

Assume that Victor Co. owns 40 percent of Milo Inc. During the year, Milo reports net income of \$100,000 and pays a cash dividend of \$30,000. Victor reports this in its statement of cash flows as a deduction from net income in the following manner—Equity in earnings of Milo, net of dividends, $$28,000 [($100,000 - $30,000) \times 40\%]$.

Losses and Gains

Realized Losses and Gains. In the illustration for Tax Consultants, the company experienced a loss of \$2,000 from the sale of equipment. The company added this loss to net income to compute net cash flow from operating activities because **the loss is a non-cash charge in the income statement**.

If Tax Consultants experiences a **gain** from a sale of equipment, it too requires an adjustment to net income. Because a company reports the gain in the statement of cash flows as part of the cash proceeds from the sale of equipment under investing activities, **it deducts the gain from net income to avoid double-counting**—once as part of net income and again as part of the cash proceeds from the sale.

To illustrate, assume that Tax Consultants had land with a carrying value of \$200,000, which was condemned by the provincial government for a highway project. The condemnation proceeds received were \$205,000, resulting in a gain of \$5,000. In the statement of cash flows (indirect method), the company would deduct the \$5,000 gain from net income in the operating activities section. It would report the \$205,000 cash inflow from the condemnation as an investing activity, as follows.

Cash flows from investing activities Condemnation of land

\$205,000

Unrealized Losses and Gains. Unrealized losses and gains generally occur for debt investments not held for collection and for equity investments. For example, assume that **AB InBev** (BEL) purchases the following two security investments on January 10, 2015.

- **1.** Debt investment for €1 million that is classified as trading. During 2015, the debt investment has an unrealized holding gain of €110,000 (recorded in net income).
- **2.** Equity investment for €600,000 that is non-trading in nature. During 2015, the non-trading equity investment has an unrealized holding loss of €50,000 (recorded in other comprehensive income).

For AB InBev, the unrealized holding gain of €110,000 on the debt investment increases net income but does not increase net cash flow from operating activities. As a result, the unrealized holding gain of €110,000 is deducted from net income to compute net cash flow from operating activities.

On the other hand, the unrealized holding loss of €50,000 that AB InBev incurs on the non-trading equity investment does not affect net income or cash flows—this loss is reported in the other comprehensive income section. As a result, no adjustment to net income is necessary in computing net cash flow from operating activities.

Thus, the general rule is that unrealized holding gains or losses that affect net income must be adjusted to determine net cash flow from operating activities. Conversely, unrealized holding gains or losses that do not affect net income are not adjusted to determine net cash flow from operating activities.⁴

Share-Based Compensation

Recall for share-based compensation plans that companies are required to use the fair value method to determine total compensation cost. The compensation cost is then recognized as an expense in the periods in which the employee provides services. When Compensation Expense is debited, Share Premium—Options is often credited. Cash is not affected by recording the expense. Therefore, the company must increase net income by the amount of compensation expense from share options in computing net cash flow from operating activities.

To illustrate how this information should be reported on a statement of cash flows, assume that First Wave Inc. grants 5,000 options to its CEO, Ann Johnson. Each option entitles Johnson to purchase one share of First Wave's £1 par value ordinary shares at

⁴Other unrealized holding gains or losses, such as revaluations on property, plant, and equipment, or intangible assets, are also reported as part of other comprehensive income. As a result, net income is not adjusted in computing cash flows from operating activities for any type of unrealized holding gains or losses that are reported in other comprehensive income.

£50 per share at any time in the next two years (the service period). The fair value of the options is £200,000. First Wave records compensation expense in the first year as follows.

Compensation Expense (£200,000 \div 2) 100,000 Share Premium—Options 100,000

In addition, if we assume that First Wave has a 35 percent tax rate, it would recognize a deferred tax asset of £35,000 (£100,000 \times 35%) in the first year, as follows.

Deferred Tax Asset 35,000
Income Tax Expense 35,000

Therefore, on the statement of cash flows for the first year, First Wave reports the following (assuming a net income of £600,000).

Net income	£600,000
Adjustments to reconcile net income to net cash provided by operating activities:	
Share-based compensation expense	100,000
Increase in deferred tax asset	(35,000)

As shown in First Wave's statement of cash flows, it adds the share-based compensation expense to net income because it is a non-cash expense. The increase in the deferred tax asset and the related reduction in income tax expense increase net income. Although the negative income tax expense increases net income, it does not increase cash. Therefore, it should be deducted. Subsequently, if Ann Johnson exercises her options, Third Wave reports "Cash provided by exercise of share options" in the financing section of the statement of cash flows.⁵

Accounts Receivable (Net)

Up to this point, we assumed no allowance for doubtful accounts—a contra account—to offset accounts receivable. However, if a company needs an allowance for doubtful accounts, how does that allowance affect the company's determination of net cash flow from operating activities? For example, assume that Redmark Co. reports net income of €40,000. It has the accounts receivable balances, as shown in Illustration 23-28.

ILLUSTRATION 23-28

Accounts Receivable Balances, Redmark Co.

	2015	2014	Change Increase/Decrease
Accounts receivable	€105,000	€90,000	€15,000 Increase
Allowance for doubtful accounts	(10,000)	(4,000)	6,000 Increase
Accounts receivable (net)	€ 95,000	€86,000	9,000 Increase

Indirect Method

Because an increase in Allowance for Doubtful Accounts results from a charge to bad debt expense, a company should add back an increase in Allowance for Doubtful Accounts to

⁵In some countries, companies receive a tax deduction related to share-based compensation plans at the time employees exercise their options. The amount of the deduction is equal to the difference between the market price of the share and the exercise price at the date the employee purchases the shares, which in most cases is much larger than the total compensation expense recorded. When the tax deduction exceeds the total compensation recorded, this provides an additional cash inflow to the company. Under IFRS, this tax-related cash inflow should be reported in the financing section of the statement of cash flows. [5]

net income to arrive at net cash flow from operating activities. Illustration 23-29 shows one method for presenting this information in a statement of cash flows.

REDMARK CO. STATEMENT OF CASH FLOWS (PARTIAL) FOR THE YEAR 2015 Cash flows from operating activities Net income €40,000 Adjustments to reconcile net income to net cash provided by operating activities: Increase in accounts receivable €(15,000) Increase in allowance for doubtful accounts 6,000 (9,000) €31,000

ILLUSTRATION 23-29

Presentation of Allowance for Doubtful Accounts—Indirect Method

As we indicated, the increase in the Allowance for Doubtful Accounts balance results from a charge to bad debt expense for the year. Because bad debt expense is a non-cash charge, a company must add it back to net income in arriving at net cash flow from operating activities.

Instead of separately analyzing the allowance account, a short-cut approach is to net the allowance balance against the receivable balance and compare the change in accounts receivable on a net basis. Illustration 23-30 shows this presentation.

REDMARK CO. STATEMENT OF CASH FLOWS (PARTIAL) FOR THE YEAR 2015	
Cash flows from operating activities	
Net income	€40,000
Adjustments to reconcile net income to	
net cash provided by operating activities:	
Increase in accounts receivable (net)	_ (9,000)
	
	=======================================

ILLUSTRATION 23-30

Net Approach to Allowance for Doubtful Accounts—Indirect Method

This short-cut procedure works also if the change in the allowance account results from a write-off of accounts receivable. This reduces both Accounts Receivable and Allowance for Doubtful Accounts. No effect on cash flows occurs. Because of its simplicity, use the net approach for your homework assignments.

Direct Method

If using the direct method, a company **should not net** Allowance for Doubtful Accounts against Accounts Receivable. To illustrate, assume that Redmark Co.'s net income of €40,000 consisted of the following items.

Inco	EDMARK CO. OME STATEMENT THE YEAR 2015		
Sales revenue		€100,000	
Expenses			
Salaries	€46,000		
Utilities	8,000		
Bad debts	6,000	60,000	
Net income		€ 40,000	

ILLUSTRATION 23-31

Income Statement, Redmark Co.

If Redmark deducts the €9,000 increase in accounts receivable (net) from sales for the year, it would report cash sales at €91,000 (€100,000 - €9,000) and cash payments for operating expenses at €60,000. Both items would be misstated: Cash sales should be reported at €85,000 (€100,000 - €15,000), and total cash payments for operating expenses should be reported at €54,000 (€60,000 - €6,000). Illustration 23-32 shows the proper presentation.

ILLUSTRATION 23-32

Bad Debts—Direct Method

REDMARK (STATEMENT OF CASH FL FOR THE YEAR	OWS (PARTIAL)	
Cash flows from operating activities		
Cash received from customers		€85,000
Salaries paid	€46,000	
Utilities paid	8,000	54,000
Net cash provided by operating activities		€31,000

An added complication develops when a company writes off accounts receivable. Simply adjusting sales for the change in accounts receivable will not provide the proper amount of cash sales. The reason is that the write-off of the accounts receivable is not a cash collection. Thus, an additional adjustment is necessary.

Other Working Capital Changes

Up to this point, we showed how companies handled all of the changes in working capital items (current asset and current liability items) as adjustments to net income in determining net cash flow from operating activities. You must be careful, however, because **some changes in working capital**, **although they affect cash**, **do not affect net income**. Generally, these are investing or financing activities of a current nature.

One activity is the purchase of **short-term non-trading equity investments**. For example, the purchase of short-term non-trading equity investments for ¥5,000,000 cash has no effect on net income, but it does cause a ¥5,000,000 decrease in cash. A company reports this transaction as a cash flow from investing activities as follows.

Cash flows from investing activities

Purchase of short-term non-trading equity investments

¥5,000,000

Another example is the issuance of a **short-term non-trade note payable** for cash. This change in a working capital item has no effect on income from operations, but it increases cash by the amount of the note payable. For example, a company reports the issuance of a ¥10,000,000 short-term, non-trade note payable for cash in the statement of cash flows as follows.

Cash flows from financing activities

Issuance of short-term note \$\text{\tinite\text{\texi}\text{\text{\text{\text{\text{\text{\texi}\text{\text{\text{\texi}\text{\text{\text{\text{\texicl{\texi{\texi{\texi{\texi}\tex{\texi{\texi{\texi}\text{\texit{\texit{\texi{\texit{\texi{\texi{

Another change in a working capital item that has no effect on income from operations or on cash is a **cash dividend payable**. Although a company will report the cash dividends when paid as a financing activity, it does not report the declared but unpaid dividend on the statement of cash flows.

Net Losses

If a company reports a net loss instead of a net income, it must adjust the net loss for those items that do not result in a cash inflow or outflow. The net loss, after adjusting for the charges or credits not affecting cash, may result in a negative or a positive cash flow from operating activities.

For example, if the net loss is £50,000 and the total amount of charges to add back is £60,000, then net cash provided by operating activities is £10,000. Illustration 23-33 shows this computation.

Net income (loss)		£(50,000)
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation of plant assets	£55.000	
Amortization of patents	5,000	60,000
Net cash provided by operating activities		£ 10,000
		

ILLUSTRATION 23-33

Computation of Net Cash Flow from Operating Activities— Cash Inflow

If the company experiences a net loss of £80,000 and the total amount of the charges to add back is £25,000, the presentation appears as follows.

Net income (loss) Adjustments to reconcile net income to net cash used by operating activities:	£(80,000)
Depreciation of plant assets	25,000
Net cash used by operating activities	£(55,000)

ILLUSTRATION 23-34

Computation of Net Cash Flow from Operating Activities— Cash Outflow

Although not illustrated in this chapter, a negative cash flow may result even if the company reports a net income.

Disclosures

Significant Non-Cash Transactions

Because the statement of cash flows reports only the effects of operating, investing, and financing activities in terms of cash flows, it omits some **significant non-cash transactions** and other events that are investing or financing activities. Among the more common of these non-cash transactions that a company should report or disclose in some manner are the following.

- **1.** Acquisition of assets by assuming liabilities (including finance lease obligations) or by issuing equity securities.
- **2.** Exchanges of non-monetary assets.
- **3.** Refinancing of long-term debt.
- **4.** Conversion of debt or preference shares to ordinary shares.
- **5.** Issuance of equity securities to retire debt.

Investing and financing transactions that do not require the use of cash are excluded from the statement of cash flows. **[6]** If material in amount, these disclosures may be either narrative or summarized in a separate schedule. This schedule may appear in a separate note or supplementary schedule to the financial statements. Illustration 23-35 (on page 1210) shows the presentation of these significant non-cash transactions or other events in a separate schedule in the notes to the financial statements.

⁶Some non-cash investing and financing activities are part cash and part non-cash. Companies should report only the cash portion on the statement of cash flows. The non-cash component should be reported in a separate note.

ILLUSTRATION 23-35

Note Presentation of Non-Cash Investing and Financing Activities **Note G: Significant non-cash transactions.** During the year, the company engaged in the following significant non-cash investing and financing transactions:

Issued 250,000 ordinary shares to purchase land and building€1,750,000Exchanged land in New York, New York, for land in Berlin, Germany€2,000,000Converted 12% bonds to 50,000 ordinary shares€ 500,000

Companies do not generally report certain other significant non-cash transactions or other events in conjunction with the statement of cash flows. Examples of these types of transactions are **share dividends**, **share splits**, **and restrictions on retained earnings**. Companies generally report these items, neither financing nor investing activities, in conjunction with the statement of changes in equity or schedules and notes pertaining to changes in equity accounts.

Special Disclosures

Underlying Concepts

Additional requirements for disclosures of interest, dividends, and taxes reflect application of the full disclosure principle. *IAS* 7 indicates that cash flows related to interest received and paid, and dividends received and paid, should be separately disclosed in the statement of cash flows. [7] Each item should be classified in a consistent manner from period to period as operating, investing, or financing cash flows. As indicated earlier, for homework purposes classify interest received and paid and dividends received as part of cash flows from operating activities and dividends paid as cash flows from financing activities. The justification for reporting the first three items in cash flows from operating activities is that each item affects net income. Dividends paid, how-

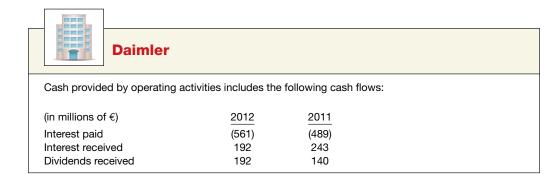

ever, do not affect net income and are often considered a cost of financing.

Companies should also disclose income taxes paid separately in the cash flows from operating activities unless they can be separately identified as part of investing or financing activities. While tax expense may be readily identifiable with investing or financing activities, the related tax cash flows are often impracticable to identify and may arise in a different period from the cash flows of the underlying transaction. Therefore, taxes paid are usually classified as cash flows from operating activities. IFRS requires that the cash paid for taxes, as well as cash flows from interest and dividends received and paid, be disclosed. The category (operating, investing, or financing) in which each item was included must be disclosed as well.

An example of such a disclosure from the notes to **Daimler**'s (DEU) financial statement is provided in Illustration 23-36.

ILLUSTRATION 23-36

Note Disclosure of Interest, Taxes, and Dividends

Other companies choose to report these items directly in the statement of cash flows. In many cases, companies start with income before income taxes and then show income

taxes paid as a separate item. In addition, they often add back interest expense on an accrual basis and then subtract interest paid. Reporting these items in the operating activites section is shown for Wáng Company in Illustration 23-37.

WÁNG COMPANY STATEMENT OF CASH FLOWS (IN MILLIONS) (OPERATING ACTIVITIES SECTION ONLY)

Increase in trade receivables	(310)	1,590	
Cash generated from operations		5,590	
Interest paid	(300)		
Income taxes paid	(760)	(1,060)	
Net cash provided by operating activities		¥4,530	

ILLUSTRATION 23-37 Reporting of Interest, Taxes, and Dividends in the Operating Section

Companies often provide a separate section to identify interest and income taxes paid.

What do the numbers mean?

BETTER THAN ROA?

As you have learned in your study of accounting, both accounting income (measured under accrual-accounting principles) and cash flow from operations can provide useful information. However, both measures are sometimes criticized. Accounting income is sometimes faulted for the multitude of judgments required to determine revenues and expenses. In addition, many companies can boost an earnings-based metric, return on equity, by piling on debt which also makes the company riskier, not better. On the other hand, cash flow performance metrics are criticized because they do not follow the revenue and expense recognition principles.

So what's a better way to measure how profitable companies really are? Or, adopting master investor Warren Buffett's view of investing: How do you find companies that consistently generate big returns on invested capital? Recently, a new measure of profitability, "COROA"—for cash operating return on assets—has been proposed to provide a better performance metric. The idea is to measure management's ability to generate pure cash returns, not cash expected in the future, on every dollar invested in property, plant, and equipment; R&D centers; inventories; and all other assets.

Specifically, COROA is computed by starting with the cash flow from operations amount and then adding back cash taxes and cash interest to calculate pure operating cash flows. That's the dollar amount that the company actually

puts in its coffers during the year—and which could be used to pay dividends, make "investments" by purchasing companies or divisions, and fund capital expenditures, especially those that propel growth. That's the numerator. Adjustments for taxes and interest are fundamental to this COROA measure. This is because falling taxes can create the illusion of ongoing progress. Interest is added back because it primarily reflects the level of leverage but has nothing to do with how well management is managing their assets.

The denominator consists of every dollar spent on the assets that produce those operating cash flows. To calculate that figure, take "total assets" from the statement of financial position and add "accumulated depreciation" to account for operating assets that are still being used to make cars, semiconductors, or other products that, for accounting purposes, are fully expensed.

Thus, COROA—adjusted cash flow from operations as a percentage of total assets—is the ratio to keep an eye on. It's the best measure of pure profitability. If the number has been high for a while and is either staying high or improving, evidence is strong that the company is generating strong returns from its new investments. That's the quality that Buffett looks for. And according to accounting guru Jack Ciesielski, it's all about cash. "What's more important in the world than cash?" he asks. "Why, it's more cash, of course."

USE OF A WORKSHEET

Explain the use of a worksheet in preparing a statement of cash flows.

When numerous adjustments are necessary or other complicating factors are present, companies often use a worksheet to assemble and classify the data that will appear on the statement of cash flows. The worksheet is merely a device that aids in the preparation of the statement. Its use is optional. Illustration 23-38 shows the skeleton format of the worksheet for preparation of the statement of

cash flows using the indirect method.

ILLUSTRATION 23-38

Format of Worksheet for Preparation of Statement of Cash Flows

	Home Insert Page Layout Formulas Data Review View					
	P18 • fx					
	Α	В	С	D	E	
	Statem	XYZ CO ent of Cash Flov	MPANY vs for the Year	Ended

2	Debit balance accounts	XX	XX	XX	XX	
3		XX	XX	XX	XX	
4	Totals	XXX			XXX	
5	Credit balance accounts	XX	XX	XX	XX	
6		XX	XX	XX	XX	
7	Totals	XXX			XXX	
8	Statement of Cash Flows Effects					
9	Operating activities					
10	Net income		XX			
11	Adjustments		XX	XX		
12	Investing activities					
13	Receipts and payments		XX	XX		
14	Financing activities					
15	Receipts and payments		XX	XX		
16	Totals		XXX	XXX		
17	Increase (decrease) in cash		(XX)	XX		
18	Totals		XXX	XXX		

The following guidelines are important in using a worksheet.

1. In the statement of financial position accounts section, list accounts with debit balances separately from those with credit balances. This means, for example, that Accumulated Depreciation is listed under credit balances and not as a contra account under debit balances. Enter the beginning and ending balances of each account in the appropriate columns. Then, enter the transactions that caused the change in the account balance during the year as reconciling items in the two middle columns.

After all reconciling items have been entered, each line pertaining to a statement of financial position account should foot across. That is, the beginning balance plus or minus the reconciling item(s) must equal the ending balance. When this agreement exists for all statement of financial position accounts, all changes in account balances have been reconciled.

2. The bottom portion of the worksheet consists of the operating, investing, and financing activities sections. Accordingly, it provides the information necessary to prepare the formal statement of cash flows. Enter inflows of cash as debits in the reconciling columns, and outflows of cash as credits in the reconciling columns. Thus, in this section, a company would enter the sale of equipment for cash at book value as a debit under inflows of cash from investing activities. Similarly, it would enter the purchase of land for cash as a credit under outflows of cash from investing activities.

3. Do not enter in any journal or post to any account the reconciling items shown in the worksheet. These items do not represent either adjustments or corrections of the statement of financial position accounts. They are used only to facilitate the preparation of the statement of cash flows.

Preparation of the Worksheet

The preparation of a worksheet involves the following steps.

- **Step 1.** Enter the statement of financial position accounts and their beginning and ending balances in the statement of financial position accounts section.
- **Step 2.** Enter the data that explain the changes in the statement of financial position accounts (other than cash) and their effects on the statement of cash flows in the reconciling columns of the worksheet.
- **Step 3.** Enter the increase or decrease in cash on the cash line and at the bottom of the worksheet. This entry should enable the totals of the reconciling columns to be in agreement.

To illustrate the preparation and use of a worksheet and to illustrate the reporting of some of the special problems discussed in the prior section, we present a comprehensive example for Satellite Corporation. Again, the indirect method serves as the basis for the computation of net cash provided by operating activities. Illustrations 23-39 and 23-40 (on pages 1214 and 1215) present the statement of financial position, combined statement of income and retained earnings, and additional information for Satellite Corporation. The discussion that follows these financial statements provides additional explanations related to the preparation of the worksheet.

Analysis of Transactions

The following discussion explains the individual adjustments that appear on the worksheet in Illustration 23-41 (page 1219). Because cash is the basis for the analysis, Satellite reconciles the cash account last. Because income is the first item that appears on the statement of cash flows, it is handled first.

Change in Retained Earnings

Net income for the period is HK\$117,000. The entry for it on the worksheet is as follows.

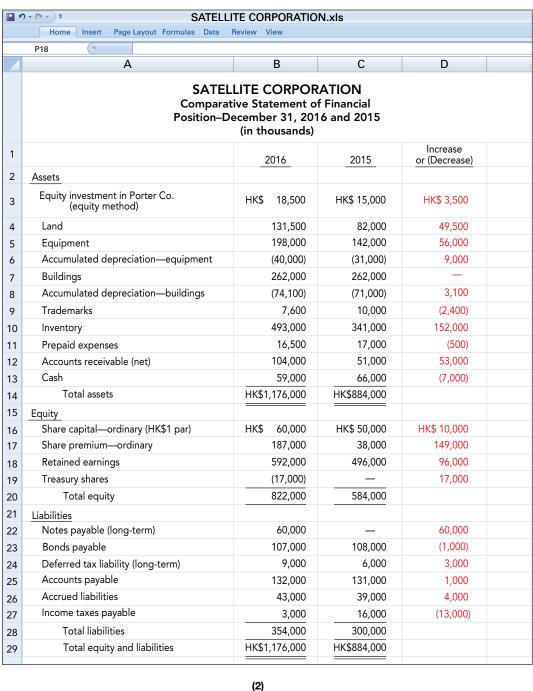

Operating—Net Income 117,000
Retained Earnings 117,000

Satellite reports net income on the bottom section of the worksheet. This is the starting point for preparation of the statement of cash flows (under the indirect method).

A share dividend and a cash dividend also affected retained earnings. The retained earnings statement reports a share dividend of HK\$15,000. The worksheet entry for this transaction is as follows.

ILLUSTRATION 23-39

Comparative Statement of Financial Position, Satellite Corporation

Retained Earnings 15,000
Share Capital—Ordinary 1,000
Share Premium—Ordinary 14,000

The issuance of share dividends is not a cash operating, investing, or financing item. Therefore, although the company enters this transaction on the worksheet for reconciling purposes, it does not report it in the statement of cash flows.

The HK\$6,000 cash dividend paid represents a financing activity cash outflow. Satellite makes the following worksheet entry:

(3)

Retained Earnings			
(2)	15,000	Bal.	496,000
(3)	6,000	(1)	117,000
		Bal.	592,000

Retained Earnings Financing—Cash Dividends

6,000

6,000

The company reconciles the beginning and ending balances of retained earnings by entry of the three items above.

SATELLITE CORPORATION COMBINED STATEMENT OF INCOME AND RETAINED EARNINGS FOR THE YEAR ENDED DECEMBER 31, 2016 (IN THOUSANDS) Net sales HK\$526,500 Other revenue 3,500 530,000 Total revenues Expense 310,000 Cost of goods sold Selling and administrative expenses 47.000 Other income and expense 4,000 361,000 Total expenses Income before income tax 169,000 Income tax HK\$49,000 Current Deferred 3,000 52,000 117,000 Net income Retained earnings, January 1 496,000 Less: Cash dividends 6,000 Share dividend 15,000 21,000 Retained earnings, December 31 HK\$592,000 Per share: Net income HK\$2.13

Additional Information

- (a) Other income of HK\$3,500 represents Satellite's equity share in the net income of Porter Co., an equity investee. Satellite owns 22% of Porter Co.
- (b) An analysis of the Equipment account and related Accumulated Depreciation—Equipment account indicates the following.

Balance at end of 2015	Equipment	Accum. Dep. Dr./(Cr.) HK\$(31,000)	Gain or (Loss)
		пкф(31,000)	
Purchases of equipment	53,000		
Sale of equipment	(8,000)	2,500	HK\$(1,500)
Depreciation for the period		(11,500)	
Major repair charged to equipment	11,000		
Balance at end of 2016	HK\$198,000	HK\$(40,000)	

- (c) Land in the amount of HK\$60,000 was purchased through the issuance of a long-term note; in addition, certain parcels of land costing HK\$10,500 were condemned. The government paid Satellite HK\$18,500, resulting in an HK\$8,000 gain.
- (d) The change in the Accumulated Depreciation—Buildings, Trademarks, and Bonds Payable accounts resulted from depreciation and amortization entries.
- (e) An analysis of the share capital and premium accounts in equity discloses the following:

	Share Capital— Ordinary	Share Premium— Ordinary
Balance at end of 2015	HK\$50,000	HK\$ 38,000
Issuance of 2% share dividend	1,000	14,000
Sale of shares for cash	9,000	135,000
Balance at end of 2016	HK\$60,000	HK\$187,000

(f) Interest paid is HK\$9,000; income taxes paid is HK\$62,000.

ILLUSTRATION 23-40

Income and Retained Earnings Statements, Satellite Corporation

Accounts Receivable (Net)

The increase in accounts receivable (net) of HK\$53,000 represents adjustments that did not result in cash inflows during 2016. As a result, the company would deduct from net income the increase of HK\$53,000. Satellite makes the following worksheet entry.

(4)

53,000

Accounts Receivable (net) 53,000

Operating – Increase in Accounts Receivable (net)

Inventory

The increase in inventory of HK\$152,000 represents an operating use of cash. The incremental investment in inventory during the year reduces cash without increasing the cost of goods sold. Satellite makes the following worksheet entry.

(5)

Inventory 152,000

Operating—Increase in Inventory 152,000

Prepaid Expense

The decrease in prepaid expenses of HK\$500 represents a charge in the income statement for which there was no cash outflow in the current period. Satellite should add that amount back to net income through the following entry.

(6)

Operating—Decrease in Prepaid Expenses 500

Prepaid Expenses 500

Equity Investment in Porter Co. (Equity Method)

Satellite's investment in the shares of Porter Co. increased HK\$3,500. This amount reflects Satellite's share of net income earned by Porter (its equity investee) during the current year. Although Satellite's revenue, and therefore its net income, increased HK\$3,500 by recording Satellite's share of Porter Co.'s net income, no cash (dividend) was provided. Satellite makes the following worksheet entry.

(7)

Equity Investment in Porter Co. 3,500

Operating—Equity in Earnings of Porter Co. 3,500

Land

Satellite purchased land in the amount of HK\$60,000 through the issuance of a long-term note payable. This transaction did not affect cash. It is a significant non-cash investing/financing transaction that the company would disclose in the accompanying notes. Satellite makes the following entry to reconcile the worksheet.

(8)

Land 60,000

Notes Payable 60,000

In addition to the non-cash transaction involving the issuance of a note to purchase land, the Land account was decreased by the condemnation proceedings. The following worksheet entry records the receipt of HK\$18,500 for land having a book value of HK\$10,500.

Land			
Bal.	82,000	(9)	10,500
(8)	60,000		
Bal.	131.500		

(3)		
Investing—Proceeds from Condemnation of Land	18,500	
Land		10,500
Operating—Gain on Condemnation of Land		8,000

In reconciling net income to net cash flow from operating activities, Satellite deducts from net income the gain of HK\$8,000. The reason is that the transaction that gave rise to the gain is an item whose cash effect is already classified as an investing cash inflow. The Land account is now reconciled.

Equipment and Accumulated Depreciation—Equipment

An analysis of Equipment and Accumulated Depreciation—Equipment shows that a number of transactions have affected these accounts. The company purchased equipment in the amount of HK\$53,000 during the year. Satellite records this transaction on the worksheet as follows.

(10)

Equipment 53,000

Investing-Purchase of Equipment 53.000

In addition, Satellite sold at a loss of HK\$1,500 equipment with a book value of HK\$5,500. It records this transaction as follows.

(11)

Investing-Sale of Equipment 4,000 Operating-Loss on Sale of Equipment 1,500 Accumulated Depreciation-Equipment 2,500

8,000 Equipment

The proceeds from the sale of the equipment provided cash of HK\$4,000. In addition, the loss on the sale of the equipment has reduced net income but did not affect cash. Therefore, the company adds back to net income the amount of the loss, in order to accurately report cash provided by operating activities.

Satellite reported depreciation on the equipment at HK\$11,500 and recorded it on the worksheet as follows.

(12)Operating - Depreciation Expense - Equipment 11.500

Accumulated Depreciation-Equipment

The company adds depreciation expense back to net income because that expense reduced income but did not affect cash.

Finally, the company made a major repair to the equipment. It charged this expenditure, in the amount of HK\$11,000, to the Equipment account. This expenditure required cash, and so Satellite makes the following worksheet entry.

(13)

Equipment 11.000

Investing-Major Repairs of Equipment 11,000

After adjusting for the foregoing items, Satellite has reconciled the balances in the Equipment and related Accumulated Depreciation—Equipment accounts.

Building Depreciation and Amortization of Trademarks

Depreciation expense on the buildings of HK\$3,100 and amortization of trademarks of HK\$2,400 are both expenses in the income statement that reduced net income but did not require cash outflows in the current period. Satellite makes the following worksheet entry.

Operating - Depreciation Expense - Buildings 3,100 Operating-Amortization of Trademarks 2.400

Accumulated Depreciation-Buildings 3,100 2,400 **Trademarks**

Equipment			
Bal.	142,000	(11)	8,000
(10)	53,000		
(13)	11,000		
Bal.	198,000		

Accumulated Depreciation—				
Equipment				
(11)	2,500	Bal.	31,000	
		(12)	11,500	
		Bal.	40,000	

Other Non-Cash Charges or Credits

Analysis of the remaining accounts indicates that changes in the Accounts Payable, Accrued Liabilities, Income Taxes Payable, Bonds Payable, and Deferred Tax Liability balances resulted from charges or credits to net income that did not affect cash. The company should individually analyze each of these items and enter them in the worksheet. The following compound entry summarizes these non-cash, income-related items.

(15)		
Income Taxes Payable	13,000	
Bonds Payable	1,000	
Operating - Increase in Accounts Payable	1,000	
Operating – Increase in Accrued Liabilities	4,000	
Operating - Increase in Deferred Tax Liability	3,000	
Operating - Decrease in Income Taxes Payable		13,000
Operating—Amortization of Bond Premium		1,000
Accounts Payable		1,000
Accrued Liabilities		4,000
Deferred Tax Liability		3,000

Share Capital - Ordinary and Related Accounts

Comparison of the Share Capital—Ordinary and the Share Premium—Ordinary balances shows that transactions during the year affected these accounts. First, Satellite issues a share dividend of 2 percent to shareholders. As the discussion of worksheet entry (2) indicated, no cash was provided or used by the share dividend transaction. In addition to the shares issued via the share dividend, Satellite sold ordinary shares at HK\$16 per share. The company records this transaction as follows.

Share Cap	Share Capital—Ordinary	
	Bal.	50,000
	(2)	1,000
	(16)	9,000
	Bal.	60,000
Share Prem	nium—(Ordinary
Share Prem	nium—(Bal.	Ordinary 38,000
Share Prem		
Share Prem	Bal.	38,000

Share Capital - Ordinary

(16)	
Financing—Sale of Ordinary Shares	144,000
Share Capital - Ordinary	9,000
Share Premium—Ordinary	135,000

Also, the company purchased its ordinary shares in the amount of HK\$17,000. It records this transaction on the worksheet as follows.

(17)		
Treasury Shares	17,000	
Financing—Purchase of Treasury Shares		17,000

Final Reconciling Entry

The final entry to reconcile the change in cash and to balance the worksheet is shown below. The HK\$7,000 amount is the difference between the beginning and ending cash balance.

Once the company has determined that the differences between the beginning and ending balances per the worksheet columns have been accounted for, it can total the reconciling transactions columns, and they should balance. Satellite can prepare the statement of cash flows entirely from the items and amounts that appear at the bottom of the worksheet under "Statement of Cash Flows Effects," as shown in Illustration 23-41.

GLOBAL ACCOUNTING INSIGHTS

STATEMENT OF CASH FLOWS

As in IFRS, the statement of cash flows is a required statement for U.S. GAAP. In addition, the content and presentation of a U.S. GAAP statement of cash flows is similar to one

used for IFRS. However, the disclosure requirements related to the statement of cash flows are more extensive under U.S. GAAP.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to the statement of cash flows.

Similarities

- Both U.S. GAAP and IFRS require that companies prepare a statement of cash flows.
- Both U.S. GAAP and IFRS require that the statement of cash flows should have three major sections—operating, investing, and financing-along with changes in cash and cash equivalents.
- Similar to U.S. GAAP, the cash flow statement can be prepared using either the indirect or direct method under IFRS. For both U.S. GAAP and IFRS, most companies use the indirect method for reporting net cash flow from operating activities.
- The definition of cash equivalents used in U.S. GAAP is similar to that used in IFRS.

Differences

• Under U.S. GAAP, bank overdrafts are classified as financing activities. A major difference in the definition of cash and cash equivalents is that in certain situations, bank overdrafts are considered part of cash and cash equivalents under IFRS.

- Under U.S. GAAP, companies may present non-cash investing and financing activities in the cash flow statement. IFRS requires that non-cash investing and financing activities be excluded from the statement of cash flows. As indicated in the chapter, these non-cash activities should be reported elsewhere. This requirement is interpreted to mean that non-cash investing and financing activities should be disclosed in the notes to the financial statements instead of in the financial statements.
- · One area where there can be substantive differences between U.S. GAAP and IFRS relates to the classification of interest, dividends, and taxes. U.S. GAAP requires that except for dividends paid (which are classified as a financing activity), these items are all reported as operating activities. IFRS provides more alternatives for disclosing these items

About the Numbers

One area where there can be substantive differences between U.S. GAAP and IFRS relates to the classification of interest, dividends, and taxes. The following table indicates the differences between the two approaches.

Item	IFRS	U.S. GAAP		
Interest paid Interest received Dividends paid Dividends received Taxes paid	Operating or financing Operating or investing Operating or financing Operating or investing Operating—unless specific identification with financing or investing	Operating Operating Financing Operating Operating Operating ^{1, 2}		
¹ U.S. GAAP has additional disclosure rules.				

²U.S. GAAP has specific rules regarding the classification of the benefit associated with share-based compensation arrangements and the classification of derivatives that contain a financing element.

Source: PricewaterhouseCoopers, Similarities and Difference-A Comparison of IFRS and U.S. GAAP (October 2013).

As indicated, the major difference is that IFRS provides more alternatives for disclosing certain items.

On the Horizon

Presently, the IASB and the FASB are involved in a joint project on the presentation and organization of information in the financial statements. With respect to the cash flow statement specifically, the notion of cash equivalents will probably not be retained. The definition of cash in the existing

literature would be retained, and the statement of cash flows would present information on changes in cash only. In addition, the IASB and FASB favor presentation of operating cash flows using the direct method only.

KEY TERMS

cash equivalents, 1184 direct method, 1198 financing activities, 1183 indirect method, 1188 investing activities, 1183 operating activities, 1183 significant non-cash transactions, 1209 statement of cash flows, 1182

SUMMARY OF LEARNING OBJECTIVES

- **Describe the purpose of the statement of cash flows.** The primary purpose of the statement of cash flows is to provide information about cash receipts and cash payments of an entity during a period. A secondary objective is to report the entity's operating, investing, and financing activities during the period.
- **Identify the major classifications of cash flows.** Companies classify cash flows as follows. (1) *Operating activities*—transactions that result in the revenues, expenses, gains, and losses that determine net income. (2) *Investing activities*—lending money and collecting on those loans, and acquiring and disposing of investments, plant assets, and intangible assets. (3) *Financing activities*—obtaining cash from creditors and repaying loans, issuing and reacquiring share capital, and paying cash dividends.
- Prepare a statement of cash flows. Preparing the statement involves three major steps. (1) *Determine the change in cash*. This is the difference between the beginning and the ending cash balance shown on the comparative statements of financial position. (2) *Determine the net cash flow from operating activities*. This procedure is complex; it involves analyzing not only the current year's income statement but also the comparative statements of financial position and the selected transaction data. (3) *Determine cash flows from investing and financing activities*. Analyze all other changes in the statement of financial position accounts to determine the effects on cash.
- Differentiate between net income and net cash flow from operating activities. Companies must adjust net income on an accrual basis to determine net cash flow from operating activities because some expenses and losses do not cause cash outflows, and some revenues and gains do not provide cash inflows.
- Determine net cash flows from investing and financing activities. Once a company has computed the net cash flow from operating activities, the next step is to determine whether any other changes in statement of financial position accounts caused an increase or decrease in cash. Net cash flows from investing and financing activities can be determined by examining the changes in non-current statement of financial position accounts.
- Identify sources of information for a statement of cash flows. The information to prepare the statement usually comes from three sources. (1) *Comparative statements of financial position*. Information in these statements indicates the amount of the changes in assets, liabilities, and equities during the period. (2) *Current income statement*. Information in this statement is used in determining the cash provided by operations during the period. (3) *Selected transaction data*. These data from the general ledger provide additional detailed information needed to determine how cash was provided or used during the period.
- Contrast the direct and indirect methods of calculating net cash flow from operating activities. Under the direct approach, companies calculate the major classes of operating cash receipts and cash disbursements. Presentation of the direct approach of reporting net cash flow from operating activities takes the form of a condensed cash-basis income statement. The indirect method adds back to net income the non-cash expenses and losses and subtracts the non-cash revenues and gains.
- **Discuss special problems in preparing a statement of cash flows.** These special problems are (1) adjustments to net income, (2) accounts receivable (net), (3) other working capital changes, (4) net loss, and (5) disclosures.

Explain the use of a worksheet in preparing a statement of cash flows.

When numerous adjustments are necessary or other complicating factors are present, companies often use a worksheet to assemble and classify the data that will appear on the statement of cash flows. The worksheet is merely a device that aids in the preparation of the statement. Its use is optional.

QUESTIONS

- **1.** What is the purpose of the statement of cash flows? What information does it provide?
- 2. Of what use is the statement of cash flows?
- Differentiate between investing activities, financing activities, and operating activities.
- **4.** What are the major sources of cash (inflows) in a statement of cash flows? What are the major uses (outflows) of cash?
- 5. Identify and explain the major steps involved in preparing the statement of cash flows.
- **6.** Identify the following items as (1) operating, (2) investing, or (3) financing activities: purchase of land, payment of dividends, cash sales, and purchase of treasury shares.
- 7. Unlike the other major financial statements, the statement of cash flows is not prepared from the adjusted trial balance. From what sources does the information to prepare this statement come, and what information does each source provide?
- **8.** Why is it necessary to convert accrual-based net income to a cash basis when preparing a statement of cash flows?
- **9.** Differentiate between the direct method and the indirect method by discussing each method.
- **10.** Broussard Company reported net income of \$3.5 million in 2015. Depreciation for the year was \$520,000, accounts

- receivable increased \$500,000, and accounts payable increased \$300,000. Compute net cash flow from operating activities using the indirect method.
- **11.** Collinsworth Co. reported sales on an accrual basis of £100,000. If accounts receivable increased £30,000 and the allowance for doubtful accounts increased £9,000 after a write-off of £2,000, compute cash sales.
- 12. Your roommate is puzzled. During the last year, the company in which she is a shareholder reported a net loss of \$675,000, yet its cash increased \$321,000 during the same period of time. Explain to your roommate how this situation could occur.
- **13.** The board of directors of Gifford Corp. declared cash dividends of £260,000 during the current year. If dividends payable was £85,000 at the beginning of the year and £90,000 at the end of the year, how much cash was paid in dividends during the year?
- **14.** Explain how the amount of cash payments to suppliers is computed under the direct method.
- **15.** The net income for Letterman Company for 2015 was €320,000. During 2015, depreciation on plant assets was €124,000, amortization of patent was €40,000, and the company incurred a loss on sale of plant assets of €21,000. Compute net cash flow from operating activities.

- **16.** Each of the following items must be considered in preparing a statement of cash flows for Blackwell Inc. for the year ended December 31, 2015. Indicate how each item is to be shown in the statement, if at all.
 - (a) Plant assets that had cost \$18,000 6½ years before and were being depreciated on a straight-line basis over 10 years with no estimated residual value were sold for \$4,000.
 - **(b)** During the year, 10,000 ordinary shares with a stated value of \$20 a share were issued for \$41 a share.
 - (c) Uncollectible accounts receivable in the amount of \$22,000 were written off against Allowance for Doubtful Accounts.
 - (d) The company sustained a net loss for the year of \$50,000. Depreciation amounted to \$22,000, and a gain of \$9,000 was realized on the sale of non-trading equity investments for \$38,000 cash.
- 17. Classify the following items as (1) operating, (2) investing, (3) financing, or (4) significant non-cash investing and financing activities, using the direct method.
 - (a) Cash payments to employees.
 - **(b)** Redemption of bonds payable.
 - (c) Sale of building at book value.
 - (d) Cash payments to suppliers.
 - (e) Exchange of equipment for furniture.
 - (f) Issuance of preference shares.
 - (g) Cash received from customers.
 - (h) Purchase of treasury shares.

- (i) Issuance of bonds for land.
- (j) Payment of dividends.
- (k) Purchase of equipment.
- (l) Cash payments for operating expenses.
- 18. Silva Rojas and Hans Jensen were discussing the statement of cash flows of Liu Co. In the notes to the statement of cash flows was a schedule entitled "Non-cash investing and financing activities." Give three examples of significant non-cash transactions that would be reported in this schedule.
- **19.** During 2015, Simms Company redeemed ¥2,000,000 of bonds payable for ¥1,880,000 cash. Indicate how this transaction would be reported on a statement of cash flows, if at all.
- **20.** What are some of the arguments in favor of using the indirect (reconciliation) method as opposed to the direct method for reporting a statement of cash flows?
- **21.** Why is it desirable to use a worksheet when preparing a statement of cash flows? Is a worksheet required to prepare a statement of cash flows?
- **22.** Briefly describe some of the similarities and differences between IFRS and U.S. GAAP with respect to cash flow reporting.

23. Explain how the accounting for interest received and paid in a statement of cash flows may differ between IFRS and U.S. GAAP

24. What are some of the key obstacles for the IASB and FASB in their convergence project for the statement of cash flows?

BRIEF EXERCISES

- **5 BE23-1** Wainwright Corporation had the following activities in 2015.
 - 1. Sale of land \$180,000.
 - 2. Purchase of inventory \$845,000.
 - **3.** Purchase of treasury shares \$72,000.
- **4.** Purchase of equipment \$415,000.
- **5.** Issuance of ordinary shares \$320,000.
- **6.** Purchase of investments—equity \$59,000.

Compute the amount Wainwright should report as net cash provided (used) by investing activities in its statement of cash flows.

- **5 BE23-2** Stansfield Corporation had the following activities in 2015.
 - **1.** Payment of accounts payable €770,000.
 - 2. Issuance of ordinary shares €250,000.
 - **3.** Payment of dividends €350,000.
- **4.** Collection of note receivable €100,000.
- **5.** Issuance of bonds payable €510,000.
- **6.** Purchase of treasury shares €46,000.

Compute the amount Stansfield should report as net cash provided (used) by financing activities in its 2015 statement of cash flows.

BE23-3 Novak Corporation is preparing its 2015 statement of cash flows, using the indirect method. The following is a list of items that may affect the statement. Using the code letters provided, indicate how each item will affect Novak's 2015 statement of cash flows.

Code Letter	Effect	
A	Added to net income in the operating section	
D	Deducted from net income in the operating section	
R-I	Cash receipt in investing section	
P-I	Cash payment in investing section	
R-F	Cash receipt in financing section	
P-F	Cash payment in financing section	
N	Non-cash investing and/or financing activity in notes	

1	1	_	n	n	c

(a)	Purchase of land and building.	(j)	Increase in accounts payable.
(b)	Decrease in accounts receivable.	(k)	Decrease in accounts payable.
(c)	Issuance of shares.		Loan from bank by signing note.
(d)	Depreciation expense.	(m)	Purchase of equipment using a note.
(e)	Sale of land at book value.	(n)	Increase in inventory.
(f)	Sale of land at a gain.	(o)	Issuance of bonds.
	Payment of dividends.		Retirement of bonds payable.
(h)	Increase in accounts receivable.		Sale of equipment at a loss.
(i)	Purchase of an equity investment.	(r)	Purchase of treasury shares.

4 7 BE23-4 Bloom Corporation had the following 2015 income statement.

Sales revenue	€200,000
Cost of goods sold	120,000
Gross profit	80,000
Operating expenses (includes depreciation	
of €21,000)	50,000
Net income	€ 30,000

The following accounts increased during 2015: accounts receivable €12,000, inventory €11,000, and accounts payable €13,000. Prepare the cash flows from operating activities section of Bloom's 2015 statement of cash flows using the direct method.

- **BE23-5** Use the information from BE23-4 for Bloom Corporation. Prepare the cash flows from operating activities section of Bloom's 2015 statement of cash flows using the indirect method.
 - **BE23-6** At January 1, 2015, Eikenberry Inc. had accounts receivable of \$72,000. At December 31, 2015, accounts receivable is \$54,000. Sales for 2015 total \$420,000. Compute Eikenberry's 2015 cash receipts from customers.
 - **BE23-7** Moxley Corporation had January 1 and December 31 balances as follows.

	1/1/15	12/31/15
Inventory	€95,000	€113,000
Accounts payable	61,000	69,000

For 2015, cost of goods sold was €500,000. Compute Moxley's 2015 cash payments to suppliers.

- **3 BE23-8** In 2015, Elbert Corporation had net cash provided by operating activities of £531,000, net cash used by investing activities of £963,000, and net cash provided by financing activities of £585,000. At January 1, 2015, the cash balance was £333,000. Compute December 31, 2015, cash.
- 4 7 BE23-9 Loveless Corporation had the following 2015 income statement.

Revenues	\$100,000
Expenses	60,000
	\$ 40,000

In 2015, Loveless had the following activity in selected accounts.

	Accounts Receivable Doubtful Accounts						
1/1/15 Revenues	20,000 100,000	1,000 90,000	Write-offs Collections	Write-offs	1,000	1,200 1,840	1/1/15 Bad debt expense
12/31/15	29,000					2,040	12/31/15

Prepare Loveless's cash flows from operating activities section of the statement of cash flows using (a) the direct method and (b) the indirect method.

www.downloadslide.com

1226 Chapter 23 Statement of Cash Flows

BE23-10 Hendrickson Corporation reported net income of \$50,000 in 2015. Depreciation expense was \$17,000. The following working capital accounts changed.

Accounts receivable \$11,000 increase
Non-trading equity investment 16,000 increase
Inventory 7,400 increase
Non-trade notes payable 15,000 decrease
Accounts payable 12,300 increase

Compute net cash provided by operating activities.

- **BE23-11** In 2015, Shaw Corporation reported a net loss of €70,000. Shaw's only net income adjustments were depreciation expense €81,000, and increase in accounts receivable €8,100. Compute Shaw's net cash provided (used) by operating activities.
- BE23-12 In 2015, Leppard Inc. issued 1,000 ordinary shares of \$10 par value for land worth \$40,000.
 - (a) Prepare Leppard's journal entry to record the transaction.
 - **(b)** Indicate the effect the transaction has on cash.
 - (c) Indicate how the transaction is reported on the statement of cash flows.
- **9 BE23-13** Indicate in general journal form how the items below would be entered in a worksheet for the preparation of the statement of cash flows.
 - (a) Net income is ¥317,000,000.
 - (b) Cash dividends declared and paid totaled ¥120,000,000.
 - (c) Equipment was purchased for ¥114,000,000.
 - (d) Equipment that originally cost ¥40,000,000 and had accumulated depreciation of ¥32,000,000 was sold for ¥10,000,000.

EXERCISES

- **E23-1 (Classification of Transactions)** Springsteen Co. had the following activity in its most recent year of operations.
 - (a) Pension expense exceeds amount funded.
 - **(b)** Redemption of bonds payable.
 - (c) Sale of building at book value.
 - (d) Depreciation.
 - (e) Exchange of equipment for furniture.
 - (f) Issuance of ordinary shares.

- (g) Amortization of intangible assets.
- **(h)** Purchase of treasury shares.
- (i) Issuance of bonds for land.
- (i) Payment of dividends.
- (k) Increase in interest receivable on notes receivable.
- (1) Purchase of equipment.

Instructions

Classify the items as (1) operating—add to net income, (2) operating—deduct from net income, (3) investing, (4) financing, or (5) significant non-cash investing and financing activities. Use the indirect method.

- **E23-2 (Statement Presentation of Transactions—Indirect Method)** Each of the following items must be considered in preparing a statement of cash flows (indirect method) for Granderson Inc. for the year ended December 31, 2015.
 - (a) Plant assets that had cost €25,000 6 years before and were being depreciated on a straight-line basis over 10 years with no estimated residual value were sold at the beginning of the year for €5,300.
 - **(b)** During the year, 10,000 ordinary shares with a stated value of €10 a share were issued for €33 a share.
 - (c) Uncollectible accounts receivable in the amount of €27,000 were written off against Allowance for Doubtful Accounts.
 - (d) The company sustained a net loss for the year of €50,000. Depreciation amounted to €22,000, and a gain of €9,000 was realized on the sale of land for €39,000 cash.
 - (e) A 3-month certificate of deposit was purchased for €100,000. The company uses a cash and cash-equivalent basis for its cash flow statement.
 - (f) Patent amortization for the year was €20,000.
 - (g) The company exchanged ordinary shares for a 70% interest in Plumlee Co. for €900,000.
 - **(h)** During the year, treasury shares costing €47,000 were purchased.
 - (i) The company recognized an unrealized holding gain on a debt investment not held for collection.

Instructions

State where each item is to be shown in the statement of cash flows, if at all.

E23-3 (Preparation of Operating Activities Section—Indirect Method, Periodic Inventory) The income statement of Rodriquez Company is shown below.

RODRIQUEZ COMPANY INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2015					
Sales revenue Cost of goods sold Beginning inventory Purchases	R\$1,900,000 4,400,000	R\$6,900,000			
Goods available for sale Ending inventory	6,300,000 1,600,000				
Cost of goods sold		4,700,000			
Gross profit Operating expenses Selling expenses	450,000	2,200,000			
Administrative expenses	700,000	1,150,000			
Net income		R\$1,050,000			

Additional information:

- **1.** Accounts receivable decreased R\$310,000 during the year.
- **2.** Prepaid expenses increased R\$170,000 during the year.
- **3.** Accounts payable to suppliers of merchandise decreased R\$275,000 during the year.
- **4.** Accrued expenses payable decreased R\$120,000 during the year.
- **5.** Administrative expenses include depreciation expense of R\$60,000.

Instructions

Prepare the operating activities section of the statement of cash flows for the year ended December 31, 2015, for Rodriquez Company, using the indirect method.

E23-4 (Preparation of Operating Activities Section—Direct Method) Data for the Rodriquez Company are presented in E23-3.

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

E23-5 (Preparation of Operating Activities Section—Direct Method) Norman Company's income statement for the year ended December 31, 2015, contained the following condensed information.

Service revenue		€840,000
Operating expenses (excluding depreciation)	€624,000	
Depreciation expense	60,000	
Loss on sale of equipment	26,000	710,000
Income before income taxes		130,000
Income tax expense		40,000
Net income		€ 90,000

Norman's statement of financial position contained the following comparative data at December 31.

	2015	2014
Accounts receivable	€37,000	€59,000
Accounts payable	46,000	31,000
Income taxes payable	4,000	8,500

(Accounts payable pertains to operating expenses.)

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

E23-6 (Preparation of Operating Activities Section—Indirect Method) Data for Norman Company are presented in E23-5.

Instructions

Prepare the operating activities section of the statement of cash flows using the indirect method.

E23-7 (Computation of Operating Activities—Direct Method) Presented below are two independent situations.

Situation A: Chenowith Co. reports revenues of €200,000 and operating expenses of €110,000 in its first year of operations, 2015. Accounts receivable and accounts payable at year-end were €71,000 and €39,000, respectively. Assume that the accounts payable related to operating expenses. (Ignore income taxes.)

Instructions

Using the direct method, compute net cash provided (used) by operating activities.

Situation B: The income statement for Edgebrook Company shows cost of goods sold €310,000 and operating expenses (exclusive of depreciation) €230,000. The comparative statements of financial position for the year show that inventory increased €21,000, prepaid expenses decreased €8,000, accounts payable (related to merchandise) decreased €17,000, and accrued expenses payable increased €11,000.

Instructions

Compute (a) cash payments to suppliers and (b) cash payments for operating expenses.

- **E23-8 (Schedule of Net Cash Flow from Operating Activities—Indirect Method)** Messner Co. reported €145,000 of net income for 2015. The accountant, in preparing the statement of cash flows, noted several items occurring during 2015 that might affect cash flows from operating activities. These items are listed below.
 - 1. Messner purchased 100 treasury shares at a cost of €20 per share. These shares were then resold at €25 per share.
 - **2.** Messner sold 100 ordinary shares of Nokia at €200 per share. The acquisition cost of these shares was €165 per share. This investment was shown on Messner's December 31, 2014, statement of financial position as a non-trading equity investment.
 - **3.** Messner revised its estimate for bad debts. Before 2015, Messner's bad debt expense was 1% of its net sales. In 2015, this percentage was increased to 2%. Net sales for 2015 were €500,000, and net accounts receivable decreased by €12,000 during 2015.
 - **4.** Messner issued 500 ordinary shares with a €10 par value for a patent. The fair value of the shares on the date of the transaction was €23 per share.
 - **5.** Depreciation expense is €39,000.
 - **6.** Messner Co. holds 30% of the Sanchez Company's ordinary shares as a long-term investment. Sanchez Company reported €27,000 of net income for 2015.
 - **7.** Sanchez Company paid a total of €2,000 of cash dividends to all investees in 2015.
 - **8.** Messner declared a 10% share dividend. One thousand ordinary shares with a €10 par value were distributed. The market price at date of issuance was €20 per share.

Instructions

Prepare a schedule that shows the net cash flow from operating activities using the indirect method. Assume no items other than those listed above affected the computation of 2015 net cash flow from operating activities.

E23-9 (SCF—Direct Method) Costa Corp. uses the direct method to prepare its statement of cash flows. Costa's trial balances at December 31, 2015 and 2014, are as follows.

	December 31		
	2015	2014	
Debits			
Cash	R\$ 35,000	R\$ 32,000	
Accounts receivable	33,000	30,000	
Inventory	31,000	47,000	
Property, plant, and equipment	100,000	95,000	
Cost of goods sold	250,000	380,000	
Selling expenses	141,500	172,000	
General and administrative expenses	137,000	151,300	
Interest expense	4,300	2,600	
Income tax expense	20,400	61,200	
	R\$752,200	R\$971,100	
Credits			
Allowance for doubtful accounts	R\$ 1,300	R\$ 1,100	
Accumulated depreciation	16,500	13,500	
Accounts payable	25,000	17,000	
Income taxes payable	21,000	29,100	
Deferred income taxes	5,300	4,600	
8% callable bonds payable	40,500	15,000	
Share capital—ordinary	50,000	40,000	
Share premium—ordinary	9,100	7,500	
Retained earnings	44,700	64,600	
Sales revenue	538,800	778,700	
	R\$752,200	R\$971,100	

Additional information:

- 1. Costa purchased R\$5,000 in equipment during 2015.
- 2. Costa allocated one-third of its depreciation expense to selling expenses and the remainder to general and administrative expenses.
- 3. Bad debt expense for 2015 was R\$5,000, and write-offs of uncollectible accounts totaled R\$3,800.
- 4. Interest expense includes R\$500 of discount amortization.

Instructions

Determine what amounts Costa should report in its statement of cash flows for the year ended December 31, 2015, for the following items.

- (a) Cash collected from customers.
- (d) Cash paid for income taxes.

December 31

(b) Cash paid to suppliers.

(e) Cash paid for selling expenses.

- (c) Cash paid for interest.

2 8 E23-10 (Classification of Transactions) Following are selected statement of financial position accounts of Sander Bros. Corp. at December 31, 2015 and 2014, and the increases or decreases in each account from 2014 to 2015. Also presented is selected income statement information for the year ended December 31, 2015, and additional information.

Selected statement of financial position accounts	2015	2014	Increase (Decrease)
Assets			
Property, plant, and equipment	\$ 277,000	\$247,000	\$ 30,000
Accumulated depreciation	(178,000)	(167,000)	(11,000)
Accounts receivable	34,000	24,000	10,000
Equity and liabilities			
Share capital-ordinary, \$1 par	\$ 22,000	\$ 19,000	\$ 3,000
Share premium—ordinary	9,000	3,000	6,000
Retained earnings	104,000	91,000	13,000
Bonds payable	49,000	46,000	3,000
Dividends payable	8,000	5,000	3,000

Selected income statement information for the year ended December 31, 2015

Sales revenue	\$ 155,000
Depreciation	38,000
Gain on sale of equipment	14,500
Net income	31,000

Additional information:

- **1.** During 2015, equipment costing \$45,000 was sold for cash.
- 2. Accounts receivable relate to sales of merchandise.
- **3.** During 2015, \$25,000 of bonds payable were issued in exchange for property, plant, and equipment. There was no amortization of bond discount or premium.

Instructions

Determine the category (operating, investing, or financing) and the amount that should be reported in the statement of cash flows for the following items.

- (a) Payments for purchase of property, plant, and equipment.
- **(b)** Proceeds from the sale of equipment.
- (c) Cash dividends paid.
- (d) Redemption of bonds payable.
- **3 E23-11 (SCF—Indirect Method)** Condensed financial data of Fairchild Company for 2015 and 2014 are presented below.

FAIRCHILD COMPANY COMPARATIVE STATEMENTS OF FINANCIAL POSITION AS OF DECEMBER 31, 2015 AND 2014

	2015	2014	
Debt investments (held-for-collection)	€1,300	€ 1,470	
Plant assets	1,900	1,700	
Accumulated depreciation	(1,200)	(1,170)	
Inventory	1,600	1,900	
Accounts receivable	1,750	1,300	
Cash	1,800	1,100	
	€7,150	€6,300	
Share capital - ordinary	€1,900	€1,700	
Retained earnings	2,450	1,900	
Bonds payable	1,400	1,650	
Accounts payable	1,200	800	
Accrued liabilities	200	250	
	<u>€7,150</u>	€6,300	

FAIRCHILD COMPANY INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2015

Sales revenue Cost of goods sold	€6,900 4,700
Gross margin	2,200
Selling and administrative expense	930
Income from operations Other income and expense	1,270
Gain on sale of investments	80
Income before tax	1,350
Income tax expense	540
Net income	€ 810

Additional information:

During the year, €70 of ordinary shares were issued in exchange for plant assets. No plant assets were sold in 2015. Cash dividends were €260.

Instructions

Prepare a statement of cash flows using the indirect method.

3 7 E23-12 (**SCF—Direct Method**) Data for Fairchild Company are presented in E23-11.

Instructions

Prepare a statement of cash flows using the direct method.

3 7 E23-13 (SCF—Direct Method) Andrews Inc., a greeting card company, had the following statements prepared as of December 31, 2015.

ANDREWS INC. COMPARATIVE STATEMENT OF FINANCIAL POSITION AS OF DECEMBER 31, 2015 AND 2014			
	12/31/15	12/31/14	
Equipment	€154,000	€130,000	
Accumulated depr.—equipment	(35,000)	(25,000)	
Copyrights	46,000	50,000	
Inventory	40,000	60,000	
Prepaid rent	5,000	4,000	
Accounts receivable	62,000	49,000	
Short-term investments (trading)	35,000	18,000

Total equity and liabilities	€313,000	€295,000	

ANDREWS INC. INCOME STATEMENT FOR THE YEAR ENDING DECEMBER 31, 2015		
Sales revenue Cost of goods sold		€338,150 175,000
Gross margin Operating expenses		163,150 120,000
Operating income Interest expense	€11,400 2,000	43,150
Gain on sale of equipment Income before tax Income tax expense		9,400 33,750 6,750
Net income		€ 27,000

Additional information:

- **1.** Dividends in the amount of €6,000 were declared and paid during 2015.
- **2.** Depreciation expense and amortization expense are included in operating expenses.
- 3. No unrealized gains or losses have occurred on the investments during the year.
- **4.** Equipment that had a cost of €30,000 and was 70% depreciated was sold during 2015.

Instructions

Prepare a statement of cash flows using the direct method.

3 E23-14 (**SCF—Indirect Method**) Data for Andrews Inc. are presented in E23-13.

Instructions

Prepare a statement of cash flows using the indirect method.

3 E23-15 (SCF—Indirect Method) The following are data taken from the records of Durand Company.

	December 31, 2015	December 31, 2014
Cash	€ 15,000	€ 10,000
Current assets other than cash	85,000	58,000
Long-term investments	10,000	53,000
Plant assets	335,000	215,000
	€445,000	€336,000
Accumulated depreciation	€ 20,000	€ 40,000
Current liabilities	40,000	22,000
Bonds payable	75,000	-0-
Share capital - ordinary	254,000	254,000
Retained earnings	56,000	20,000
	€445,000	€336,000

Additional information:

- **1.** Held-for-collection investments carried at a cost of €43,000 on December 31, 2014, were sold in 2015 for €34,000. The loss was incorrectly charged directly to Retained Earnings.
- 2. Plant assets that cost €60,000 and were 80% depreciated were sold during 2015 for €8,000. The loss was incorrectly charged directly to Retained Earnings.
- **3.** Net income as reported on the income statement for the year was €59,000.
- **4.** Dividends paid amounted to €10,000.
- **5.** Depreciation charged for the year was €28,000.

Instructions

Prepare a statement of cash flows for the year 2015 using the indirect method.

E23-16 (Cash Provided by Operating, Investing, and Financing Activities) The statement of financial position data of Yang Company at the end of 2015 and 2014 follow (amounts in thousands).

	2015	2014
Equipment	¥ 90,000	¥ 75,000
Accumulated depreciation—equipment	(18,000)	(8,000)
Land	70,000	40,000
Inventory	65,000	45,000
Accounts receivable (net)	55,000	45,000
Prepaid expenses	15,000	25,000
Cash	30,000	35,000
	¥307,000	¥257,000
Share capital-ordinary, \$10 par	¥189,000	¥159,000
Retained earnings	8,000	5,000
Notes payable - bank, long-term	-0-	23,000
Bonds payable	30,000	-0-
Accounts payable	65,000	52,000
Accrued expenses	15,000	18,000
	¥307,000	¥257,000

Land was acquired for ¥30,000 in exchange for ordinary shares, par ¥30,000, during the year; all equipment purchased was for cash. Equipment costing ¥13,000 was sold for ¥3,000; book value of the equipment was ¥6,000. Cash dividends of ¥9,000 were declared and paid during the year.

Instructions

Compute net cash provided (used) by:

- (a) Operating activities (indirect).
- (b) Investing activities.
- (c) Financing activities.

3 E23-17 (SCF—Indirect Method and Statement of Financial Position) Ochoa Inc., had the following condensed statement of financial position at the end of operations for 2014 (¥ in thousands).

OCHOA INC. STATEMENT OF FINANCIAL POSITION DECEMBER 31, 2014			
Investments	¥ 20,000	Share capital - ordinary	¥ 75,000
Land	40,000	Retained earnings	24,500
Plant assets (net)	67,500	Long-term notes payable	25,500
Current assets other than cash	29,000	Bonds payable	25,000
Cash	8,500	Current liabilities	15,000
	¥165,000		¥165,000

During 2015, the following occurred.

- **1.** A tract of land was purchased for ¥11,000.
- **2.** Bonds payable in the amount of ¥20,000 were retired at par.
- **3.** An additional ¥10,000 in ordinary shares were issued at par.
- **4.** Dividends totaling ¥9,375 were paid to shareholders.
- **5.** Net income was ¥30,250 after deducting depreciation of ¥13,500.
- **6.** Land was purchased through the issuance of ¥22,500 in bonds.
- 7. Ochoa Inc. sold part of its investment portfolio for ¥12,875. This transaction resulted in a gain of ¥2,000 for the company. The company classifies them as non-trading equity investments.
- 8. Both current assets (other than cash) and current liabilities remained at the same amount.

Instructions

- (a) Prepare a statement of cash flows for 2015 using the indirect method.
- **(b)** Prepare the condensed statement of financial position for Ochoa Inc. as it would appear at December 31, 2015.
- 3 8 E23-18 (Partial SCF—Indirect Method) The accounts below appear in the ledger of Popovich Company.

	Retained Earnings	Dr	Cr.	Bal.
Jan. 1, 2015	Credit Balance			€ 42,000
Aug. 15	Dividends (cash)	€15,000		27,000
Dec. 31	Net Income for 2015		€50,000	77,000
	Equipment	Dr.	Cr.	Bal.
Jan. 1, 2015	Debit Balance			€140,000
Apr. 8	Major Repairs	€21,000		161,000
Aug. 3	Purchase of Equipment	62,000		223,000
Sept. 10	Cost of Equipment Constructed	48,000		271,000
Nov. 15	Equipment Sold		€66,000	205,000
	Accumulated Depreciation –			
	Equipment	Dr.	Cr.	Bal.
Jan. 1, 2015	Credit Balance			€ 84,000
Nov. 15	Accum. Depreciation on			
	Equipment Sold	€25,200		58,800
Dec. 31	Depreciation for 2015		€16,800	75,600

Instructions

From the postings in the accounts above, indicate how the information is reported on a statement of cash flows by preparing a partial statement of cash flows using the indirect method. The loss on sale of equipment (November 15) was €5,800.

9 E23-19 (Worksheet Analysis of Selected Accounts) Data for Popovich Company are presented in E23-18.

Instructions

Prepare entries in journal form for all adjustments that should be made on a worksheet for a statement of cash flows.

- **9 E23-20 (Worksheet Analysis of Selected Transactions)** The transactions below took place during the year 2015.
 - 1. Convertible bonds payable with a par value of \$300,000 were exchanged for unissued ordinary shares with a par value of \$300,000. The market price of both types of securities was par.
 - **2.** The net income for the year was \$360,000.
 - **3.** Depreciation expense for the building was \$90,000.
 - **4.** Some old equipment was traded in on the purchase of some newer equipment and the following entry was made. (The exchange has commercial substance.)

Equipment	45,000	
Accum. Depreciation - Equipment	30,000	
Equipment		40,000
Cash		34,000
Gain on Disposal of Plant Assets		1 000

The Gain on Disposal of Plant Assets was credited to current operations as ordinary income.

5. Dividends in the amount of \$123,000 were declared. They are payable in January of next year.

Instructions

Show by journal entries the adjustments that would be made on a worksheet for a statement of cash flows.

9 E23-21 (Worksheet Preparation) Below are the comparative statements of financial position for Lowenstein Corporation.

	Dec. 31,	Dec. 31,
	2015	2014
Land	\$ 50,000	\$ 50,000
Buildings	125,000	78,500
Accumulated depreciation—buildings	(30,000)	(23,000)
Equipment	53,000	46,000
Accumulated depreciation—equipment	(19,000)	(15,500)
Delivery equipment	39,000	39,000
Accumulated depreciation—delivery equipment	(22,000)	(20,500)
Patents	15,000	-0-
Inventory	81,500	57,000
Prepaid expenses	4,200	2,500
Accounts receivable	43,000	45,000
Allowance for doubtful accounts	(1,800)	(2,000)
Equity investments	25,000	19,000
Cash	16,500	24,000
	\$379,400	\$300,000
Share capital—ordinary	\$140,000	\$102,000
Share premium—ordinary	10,000	4,000
Retained earnings	73,400	51,500
Mortgage payable	73,000	53,400
Bonds payable	50,000	62,500
Accounts payable	26,000	16,000
Short-term notes payable (trade)	4,000	6,000
Accrued payables	3,000	4,600
	\$379,400	\$300,000

Dividends in the amount of \$10,000 were declared and paid in 2015.

Instructions

From this information, prepare a worksheet for a statement of cash flows. Make reasonable assumptions as appropriate. The equity investments are considered trading, and no unrealized gains or losses have occurred on these securities.

PROBLEMS

3 4 P23-1 (SCF—Indirect Method) The following is Sullivan Corp.'s comparative statement of financial posi-**8** tion accounts at December 31, 2015 and 2014, with a column showing the increase (decrease) from 2014 to

COMPARATIVE STATEMENTS OF FINANCIAL POSITION			
	2015	2014	Increase (Decrease)

Additional information:

- 1. On December 31, 2013, Sullivan acquired 25% of Myers Co.'s ordinary shares for \$275,000. On that date, the carrying value of Myers' assets and liabilities, which approximated their fair values, was \$1,100,000. Myers reported income of \$140,000 for the year ended December 31, 2015. No dividend was paid on Myers' ordinary shares during the year.
- 2. During 2015, Sullivan loaned \$300,000 to TLC Co., an unrelated company. TLC made the first semiannual principal repayment of \$50,000, plus interest at 10%, on December 31, 2015.
- 3. On January 2, 2015, Sullivan sold equipment costing \$60,000, with a carrying amount of \$38,000, for \$40,000 cash.
- 4. On December 31, 2015, Sullivan entered into a finance lease for an office building. The present value of the annual rental payments is \$400,000, which equals the fair value of the building. Sullivan made the first rental payment of \$60,000 when due on January 2, 2016.
- **5.** Net income for 2015 was \$370,000.
- **6.** Sullivan declared and paid cash dividends for 2015 and 2014 as shown below.

	2015	2014
Declared	December 15, 2015	December 15, 2014
Paid	February 28, 2016	February 28, 2015
Amount	\$80,000	\$100,000

Instructions

Prepare a statement of cash flows for Sullivan Corp. for the year ended December 31, 2015, using the indirect method.

4 P23-2 (SCF—Indirect Method) The comparative statements of financial position for Hinckley Corporation include the information shown on page 1236.

- **5.** All income taxes incurred during the year were paid during the year.
- **6.** In order to supplement its cash, Chapman issued 2,000 ordinary shares at par value.
- **7.** There were no penalties assessed for the retirement of bonds.
- 8. Cash dividends of \$105,000 were declared and paid at the end of the fiscal year.

Instructions

- (a) Compare and contrast the direct method and the indirect method for reporting cash flows from operating activities.
- (b) Prepare a statement of cash flows for Chapman Company for the year ended May 31, 2015, using the direct method. Be sure to support the statement with appropriate calculations.
- (c) Using the indirect method, calculate only the net cash flow from operating activities for Chapman Company for the year ended May 31, 2015.

6 P23-7 (SCF—Direct and Indirect Methods) Comparative statement of financial position accounts of Shi Group are presented below.

SHI GROUP COMPARATIVE STATEMENT OF FINANCIAL POSITION ACCOUNTS As of December 31 (IN THOUSANDS)

Debit Balances	2015	2014
Cash	HK\$ 70,000	HK\$ 51,000
Accounts Receivable	155,000	130,000
Inventory	75,000	61,000
Equity Investments (non-trading)	55,000	85,000
Equipment	70,000	48,000
Buildings	145,000	145,000
Land	40,000	25,000
Totals	HK\$610,000	HK\$545,000
Credit Balances		
Allowance for Doubtful Accounts	HK\$ 10,000	HK\$ 8,000
Accumulated Depreciation-Equipment	21,000	14,000
Accumulated Depreciation—Buildings	37,000	28,000
Accounts Payable	66,000	60,000
Income Taxes Payable	12,000	10,000
Long-Term Notes Payable	62,000	70,000
Share Capital — Ordinary	310,000	260,000
Retained Earnings	92,000	95,000
Totals	HK\$610,000	HK\$545,000

Additional data:

- 1. Equipment that cost HK\$10,000 and was 60% depreciated was sold in 2015.
- **2.** Cash dividends were declared and paid during the year.
- **3.** Ordinary shares were issued in exchange for land.
- **4.** Equity investments that cost HK\$35,000 were sold during the year.
- **5.** There were no write-offs of uncollectible accounts during the year.

Shi's 2015 income statement is as follows.

Sales revenue Less: Cost of goods sold		HK\$950,000 600,000
Gross profit Less: Operating expenses (includes depreciation expense and bad debt expense)		350,000 250,000
Income from operations Other income and expense Gain on sale of investments Loss on sale of equipment	HK\$15,000 (3,000)	100,000
Income before taxes Income taxes		112,000 45,000
Net income		HK\$ 67,000

Instructions

- (a) Compute net cash provided by operating activities under the direct method.
- **(b)** Prepare a statement of cash flows using the indirect method.

3 6 P23-8 (Indirect SCF) Greco Corporation has contracted with you to prepare a statement of cash flows. The controller has provided the following trial balance information.

	December 31	
	2015	2014
Cash	\$ 38,500	\$13,000
Accounts receivable	12,250	10,000
Inventory	12,000	10,000
Equity investments (non-trading)	-0-	3,000
Buildings	-0-	29,750
Equipment	40,000	20,000
Copyright	5,000	5,250
Totals	\$107,750	\$91,000
Allowance for doubtful accounts	\$ 3,000	\$ 4,500
Accumulated depreciation - equipment	2,000	4,500
Accumulated depreciation—buildings	-0-	6,000
Accounts payable	5,000	4,000
Dividends payable	-0-	5,000
Notes payable, short-term (non-trade)	3,000	4,000
Long-term notes payable	36,000	25,000
Share capital—ordinary	38,000	33,000
Retained earnings	20,750	5,000
	\$107,750	\$91,000

Additional data related to 2015 are as follows.

- 1. Equipment that had cost \$11,000 and was 30% depreciated at time of disposal was sold for \$2,500.
- **2.** \$5,000 of the long-term note payable was paid by issuing ordinary shares.
- **3.** Cash dividends paid were \$5,000.
- 4. On January 1, 2015, the building was completely destroyed by a flood. Insurance proceeds on the building were \$33,000 (net of \$4,000 taxes).
- 5. Equity investments (non-trading) were sold at \$1,500 above their cost. The company has made similar sales and investments in the past.

1242 Chapter 23 Statement of Cash Flows

- **6.** Cash and a long-term note for \$16,000 were given for the acquisition of equipment.
- 7. Interest of \$2,000 and income taxes of \$5,000 were paid in cash.

Instructions

- (a) Use the indirect method to analyze the above information and prepare a statement of cash flows for Greco.
- **(b)** What would you expect to observe in the operating, investing, and financing sections of a statement of cash flows of:
 - (1) A severely financially troubled firm?
 - (2) A recently formed firm that is experiencing rapid growth?

CONCEPTS FOR ANALYSIS

CA23-1 (Analysis of Improper SCF) The following statement was prepared by Maloney Corporation's accountant.

MALONEY CORPORATION STATEMENT OF SOURCES AND USES OF CASH FOR THE YEAR ENDED SEPTEMBER 30, 2015	
Sources of cash	
Net income	\$111,000
Depreciation and depletion	70,000
Increase in long-term debt	179,000
Changes in current receivables and inventories, less current	
liabilities (excluding current maturities of long-term debt)	14,000
	\$374,000
Application of cash	
Cash dividends	\$ 60,000
Expenditure for property, plant, and equipment	214,000
Investments and other uses	20,000
Change in cash	80,000
	\$374,000
	<u> </u>

The following additional information relating to Maloney Corporation is available for the year ended September 30, 2015.

1. Salaries and wages expense attributable to share-option plans was \$25,000 for the year.

2. Expenditures for property, plant, and equipment \$250,000
Proceeds from retirements of property, plant, and equipment 36,000
Net expenditures \$214,000

- **3.** A share dividend of 10,000 Maloney Corporation ordinary shares was distributed to ordinary shareholders on April 1, 2015, when the per share market price was \$7 and par value was \$1.
- **4.** On July 1, 2015, when its market price was \$6 per share, 16,000 of Maloney Corporation ordinary shares were issued in exchange for 4,000 preference shares.

5.	Depreciation expense	\$ 65,000
	Depletion expense	5,000
		\$ 70,000
6.	Increase in long-term debt	\$620,000
	Retirement of debt	441,000
	Net increase	\$179,000

Instructions

- (a) In general, what are the objectives of a statement of the type shown above for Maloney Corporation? Explain.
- **(b)** Identify the weaknesses in the form and format of Maloney Corporation's statement of cash flows without reference to the additional information. (Assume adoption of the indirect method.)
- (c) For each of the six items of additional information for the statement of cash flows, indicate the preferable treatment and explain why the suggested treatment is preferable.

CA23-2 (SCF Theory and Analysis of Improper SCF) Teresa Ramirez and Lenny Traylor are examining the following statement of cash flows for Panaka Clothing Store's first year of operations.

PANAKA CLOTHING STORE
STATEMENT OF CASH FLOWS
FOR THE YEAR ENDED JANUARY 31, 2015

Sources of cash		
From sales of merchandise	€ 382,000	
From sale of ordinary shares	380,000	
From sale of debt investment	120,000	
From depreciation	80,000	
From issuance of note for truck	30,000	
From interest on investments	8,000	
Total sources of cash	1,000,000	
Uses of cash		
For purchase of fixtures and equipment	330,000	
For merchandise purchased for resale	253,000	
For operating expenses (including depreciation)	170,000	
For purchase of debt investment	95,000	
For purchase of truck by issuance of note	30,000	
For purchase of treasury shares	10,000	
For interest on note	3,000	
Total uses of cash	891,000	
Net increase in cash	€ 109,000	

Teresa claims that Panaka's statement of cash flows is an excellent portrayal of a superb first year, with cash increasing €109,000. Lenny replies that it was not a superb first year—that the year was an operating failure, the statement was incorrectly presented, and €109,000 is not the actual increase in cash.

Instructions

- (a) With whom do you agree, Teresa or Lenny? Explain your position.
- **(b)** Using the data provided, prepare a statement of cash flows in proper indirect method form. The only non-cash items in income are depreciation and the gain from the sale of the investment (purchase and sale are related).

CA23-3 (SCF Theory and Analysis of Transactions) Ashley Company is a young and growing producer of electronic measuring instruments and technical equipment. You have been retained by Ashley to advise it in the preparation of a statement of cash flows using the indirect method. For the fiscal year ended October 31, 2015, you have obtained the following information concerning certain events and transactions of Ashley.

- 1. The amount of reported earnings for the fiscal year was \$700,000, which included a deduction for a loss of \$110,000 (see item 5 below).
- 2. Depreciation expense of \$315,000 was included in the income statement.
- 3. Uncollectible accounts receivable of \$40,000 were written off against the allowance for doubtful accounts. Also, \$51,000 of bad debt expense was included in determining income for the fiscal year, and the same amount was added to the allowance for doubtful accounts.
- **4.** A gain of \$6,000 was realized on the sale of a machine. It originally cost \$75,000, of which \$30,000 was undepreciated on the date of sale.
- 5. On April 1, 2015, lightning caused an uninsured building loss of \$110,000 (\$180,000 loss, less reduction in income taxes of \$70,000). This loss was included in determining income as indicated in item 1 above.

1244 Chapter 23 Statement of Cash Flows

- 6. On July 3, 2015, building and land were purchased for \$700,000. Ashley gave in payment \$75,000 cash, \$200,000 fair value of its unissued ordinary shares, and signed a \$425,000 mortgage note payable.
- 7. On August 3, 2015, \$800,000 face value of Ashley's 10% convertible preference shares was converted into \$150,000 par value of its ordinary shares.

Instructions

Explain whether each of the seven numbered items above is a source or use of cash, and explain how each should be disclosed in Ashley's statement of cash flows for the fiscal year ended October 31, 2015. If any item is neither a source nor a use of cash, explain why it is not, and indicate the disclosure, if any, that should be made of the item for the fiscal year ended October 31, 2015.

CA23-4 (Analysis of Transactions' Effect on SCF) Each of the following items must be considered in preparing a statement of cash flows for Boer Fashions Inc. for the year ended December 31, 2015.

- 1. Fixed assets that had cost R20,000 6½ years before and were being depreciated on a 10-year basis, with no estimated residual value, were sold for R4,750.
- 2. During the year, goodwill of R15,000 was considered impaired and was completely written off to expense.
- 3. During the year, 500 ordinary shares with a stated value of R25 a share were issued for R32 a share.
- **4.** The company sustained a net loss for the year of R2,100. Depreciation amounted to R2,000 and patent amortization was R400.
- 5. Uncollectible accounts receivable in the amount of R2,000 were written off against Allowance for Doubtful Accounts.
- Equity investments (non-trading) that cost R12,000 when purchased 4 years earlier were sold for R10,600.
- 7. Bonds payable with a par value of R24,000 on which there was an unamortized bond premium of R2,000 were redeemed at 101.

Instructions

For each item, state where it is to be shown in the statement and then how you would present the necessary information, including the amount. Consider each item to be independent of the others. Assume that correct entries were made for all transactions as they took place.

CA23-5 (**Purpose and Elements of SCF**) IFRS requires the statement of cash flows be presented when financial statements are prepared.

Instructions

- (a) Explain the purposes of the statement of cash flows.
- **(b)** List and describe the three categories of activities that must be reported in the statement of cash flows
- (c) Identify and describe the two methods that are allowed for reporting cash flows from operations.
- (d) Describe the presentation of non-cash investing and financing transactions. Include in your description an example of a non-cash investing and financing transaction.

CA23-6 (Cash Flow Reporting) Brockman Guitar Company is in the business of manufacturing top-quality, steel-string folk guitars. In recent years, the company has experienced working capital problems resulting from the procurement of factory equipment, the unanticipated buildup of receivables and inventories, and the payoff of a balloon mortgage on a new manufacturing facility. The founder and president of the company, Barbara Brockman, has attempted to raise cash from various financial institutions, but to no avail because of the company's poor performance in recent years. In particular, the company's lead bank, First Financial, is especially concerned about Brockman's inability to maintain a positive cash position. The commercial loan officer from First Financial told Barbara, "I can't even consider your request for capital financing unless I see that your company is able to generate positive cash flows from operations."

Thinking about the banker's comment, Barbara came up with what she believes is a good plan: With a more attractive statement of cash flows, the bank might be willing to provide long-term financing. To "window dress" cash flows, the company can sell its accounts receivables to factors and liquidate its raw materials inventories. These rather costly transactions would generate lots of cash. As the chief accountant for Brockman Guitar, it is your job to tell Barbara what you think of her plan.

Instructions

Answer the following questions.

- (a) What are the ethical issues related to Barbara Brockman's idea?
- (b) What would you tell Barbara Brockman?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of M&S (GBR) are presented in Appendix A. The complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) Which method of computing net cash provided by operating activities does M&S use? What were the amounts of net cash provided by operating activities for the years 2012 and 2013? What were the two most significant items in the cash generated from operations in 2013?
- **(b)** What was the most significant item in the cash flows used for investing activities section in 2013? What was the most significant item in the cash flows used for financing activities section in 2013?
- (c) Where is "deferred income taxes" reported in M&S's statement of cash flows? Why does it appear in that section of the statement of cash flows?
- **(d)** Where is depreciation reported in M&S's statement of cash flows? Why is depreciation added to net income in the statement of cash flows?

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- (a) What method of computing net cash provided by operating activities does adidas use? What method does Puma use? What were the amounts of cash provided by operating activities reported by adidas and Puma in 2012?
- **(b)** What was the most significant item reported by adidas and Puma in 2012 in their investing activities sections? What is the most significant item reported by adidas and Puma in 2012 in their financing activities sections?
- **(c)** What were these two companies' trends in net cash provided by operating activities over the period 2010 to 2012?
- (d) Where is "depreciation and amortization" reported by adidas and Puma in their statements of cash flows? What is the amount and why does it appear in that section of the statement of cash flows?
- **(e)** Based on the information contained in adidas's and Puma's financial statements, compute the following 2012 ratios for each company. These ratios require the use of statement of cash flows data. (These ratios were covered in Chapter 5.)
 - (1) Current cash debt coverage.
 - (2) Cash debt coverage.
- (f) What conclusions concerning the management of cash can be drawn from the ratios computed in (e)?

Financial Statement Analysis Case

The consolidated statement of cash flows for **Telefónica**, **S.A.** (ESP) for the year ended December 31, 2011 and 2012, is presented on page 1246.

1246 Chapter 23 Statement of Cash Flows

(millions of euros)	2012	2011
Cash flows from operating activities		
Cash received from customers	75,962	77,222
Cash paid to suppliers and employees	(55,858)	(55,769)
Dividends received	85	82
Net interest and other financial expenses paid	(2,952)	(2,093)
Taxes paid	(2,024)	(1959)
·		
Net cash from operating activities	15,213	17,483
Cash flows from investing activities		
Proceeds on disposals of property, plant and equipment		
and intangible assets	939	811
Payments on investments in property, plant and equipment

·		
Cash and cash equivalents at December 31	9,847	4,135

Instructions

- (a) What method does Telefónica use to prepare the operating cash flows section of its statement of cash flows? Briefly discuss how you can determine this.
- (b) Telefónica reported net income of €4,403 in 2012 and €6,187 in 2011 (in millions). Briefly discuss some of the adjustments that would explain such a difference in its income and operating cash flows.
- (c) IFRS requires disclosure of interest, taxes, and dividends. Briefly describe how Telefónica has complied with these requirements. What other approach could a company take to comply with the reporting requirement?

International Reporting Case

Vermont Teddy Bear Co.

Founded in the early 1980s, the Vermont Teddy Bear Co. (USA) designs and manufactures American-made teddy bears and markets them primarily as gifts called Bear-Grams or Teddy Bear-Grams. Bear-Grams are personalized teddy bears delivered directly to the recipient for special occasions such as birthdays and anniversaries. The Shelburne, Vermont, company's primary markets are New York, Boston, and Chicago. Sales have jumped dramatically in recent years. Such dramatic growth has significant implications for cash flows. Provided below are the cash flow statements for two recent years for the company.

	Current Year	Prior Year
Cash flows from operating activities:		
Net income	\$ 17,523	\$ 838,955
Adjustments to reconcile net income to net		
cash provided by operating activities		
Deferred income taxes	(69,524)	(146,590)
Depreciation and amortization	316,416	181,348
Changes in assets and liabilities:		
Accounts receivable, trade	(38,267)	(25,947)
Inventories	(1,599,014)	(1,289,293)
Prepaid and other current assets	(444,794)	(113,205)
Deposits and other assets	(24,240)	(83,044)
Accounts payable	2,017,059	(284,567)
Accrued expenses	61,321	170,755
Accrued interest payable, debentures	-	(58,219)
Other	_	(8,960)
Income taxes payable		117,810
Net cash provided by (used for)		
operating activities	236,480	(700,957)
Net cash used for investing activities	(2,102,892)	(4,422,953)
Net cash (used for) provided by financing		
activities	(315,353)	9,685,435
Net change in cash and cash equivalents	(2,181,765)	4,561,525
Other information:		
Current liabilities	\$ 4,055,465	\$ 1,995,600
Total liabilities	4,620,085	2,184,386
Net sales	20,560,566	17,025,856

Instructions

- (a) Briefly describe any similarities or differences in Vermont's U.S. GAAP-based statement of cash flows compared to the requirements of IFRS.
- **(b)** Note that net income in the current year was only \$17,523 compared to prior-year income of \$838,955, but cash flows from operations was \$236,480 in the current year and a negative \$700,957 in the prior year. Explain the causes of this apparent paradox.
- (c) Evaluate Vermont Teddy Bear's liquidity, solvency, and profitability for the current year using cash flow-based ratios (as covered in Chapter 5).

Accounting, Analysis, and Principles

The income statement for the year ended December 31, 2015, for Laskowski Manufacturing Company contains the following condensed information.

LASKOWSKI CO Income Statemen		
Revenues Operating expenses (excluding depreciation) Depreciation expense	€4,920,000 880,000	€6,583,000 5,800,000
Income before income tax Income tax expense Net income		783,000 353,000 € 430,000

Included in operating expenses is a €24,000 loss resulting from the sale of machinery for €270,000 cash. The company purchased machinery at a cost of €750,000.

1248 Chapter 23 Statement of Cash Flows

Laskowski reports the following balances on its comparative statements of financial position at December 31.

LASKOWSKI CO. COMPARATIVE STATEMENTS OF FINANCIAL POSITION (PARTIAL)				
	2015	2014		
Inventories	€834,000	€867,000		
Accounts receivable	775,000	610,000		
Cash	672,000	130,000		
Accounts payable	521,000	501,000		

Income tax expense of €353,000 represents the amount paid in 2015. Dividends declared and paid in 2015 totaled €200,000.

Accounting

Prepare the statement of cash flows using the indirect method.

Analysis

Laskowski has an aggressive growth plan, which will require significant investments in plant and equipment over the next several years. Preliminary plans call for an investment of over €500,000 in the next year. Compute Laskowski's free cash flow and use it to evaluate the investment plans with the use of only internally generated funds.

Principles

How does the statement of cash flows contribute to achieving the objective of financial reporting?

Professional Research

As part of the year-end accounting process for your company, you are preparing the statement of cash flows according to IFRS. One of your team, a finance major, believes the statement should be prepared to report the change in working capital because analysts many times use working capital in ratio analysis. Your supervisor would like research conducted to verify the basis for preparing the statement of cash flows.

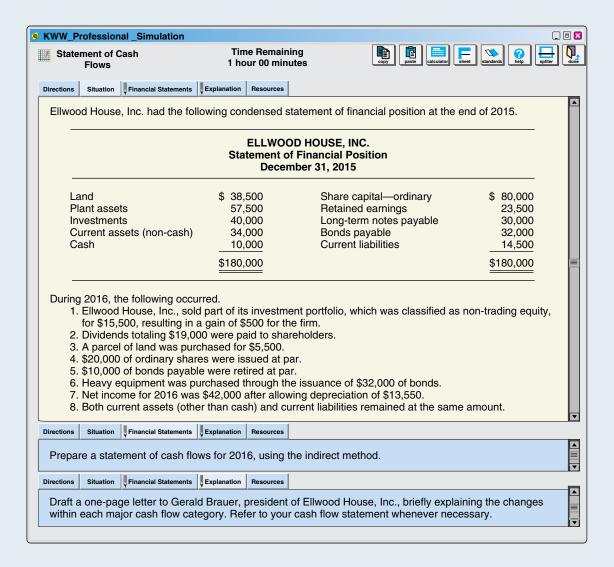

Instructions

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free eIFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) What is the primary objective for the statement of cash flows? Is working capital the basis for meeting this objective?
- **(b)** What information is provided in a statement of cash flows?
- (c) List some of the typical cash inflows and outflows from operations.

Professional Simulation

The professional simulation for this chapter asks you to address questions related to the accounting for the statement of cash flows.

Remember to check the book's companion website, at www.wiley.com/college/kieso, to find additional resources for this chapter.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

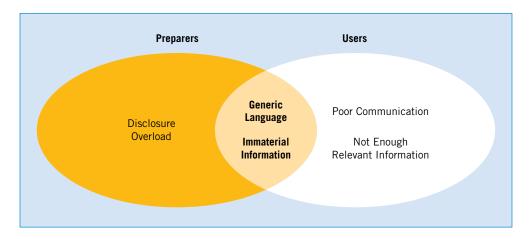

- **1** Review the full disclosure principle and describe implementation problems.
- **2** Explain the use of notes in financial statement preparation.
- 3 Discuss the disclosure requirements for related-party transactions, subsequent events, and major business segments.
- 4 Describe the accounting problems associated with interim reporting.

- **5** Identify the major disclosures in the auditor's report.
- 6 Understand management's responsibilities for financials.
- **7** Identify issues related to financial forecasts and projections.
- 8 Describe the profession's response to fraudulent financial reporting.

We Need Better, Not More

As you have learned in your study of this textbook, financial statements contain a wealth of useful information to help investors and creditors assess the amounts, timing, and uncertainty of future cash flows. In addition, the usefulness of accounting reports is enhanced when companies provide note disclosures to help statement readers understand how IFRS was applied to transactions. These additional disclosures help readers understand both the judgments that management made and how those judgments affected the amount reported in the financial statements. Some users, however, feel we need to go even further.

The IASB has heard these demands for improved financial reporting and disclosure and is responding. It organized a Discussion Forum as well as conducted a survey of preparers and users to get input on the effectiveness of reporting and disclosure in financial statements. The survey asked several questions about whether there is a disclosure problem and where in the annual report the problem arises. The survey focused on three potential areas: (1) not enough relevant information, (2) too much irrelevant information, and (3) poor communication of disclosures. The following graphic summarizes the feedback.

As indicated, preparers viewed the disclosure problem as primarily one of information overload; that is, they are being required to provide too much data. Users, on the other hand, complained that some of the information they get is poorly communicated and not that relevant. The message that emerged from the Discussion Forum was similar. Specifically, increases in the volume of financial disclosures has resulted in a perceived reduction in their quality and usefulness. More importantly, there was broad consensus that collective action was required in order for improvements to be made.

As a result, the IASB is taking action in three main areas:

- **1. Amendments to IAS 1.** The IASB will make amendments to IAS 1 ("Presentation of Financial Statements") to address perceived impediments to preparers exercising their judgment in presenting their financial reports.
- **2.** *Materiality.* The IASB will seek to develop educational material on materiality with input from an advisory group.
- **3. Separate project on disclosure.** The IASB will consider as part of its research agenda the broader challenges associated with disclosure effectiveness.

Hans Hoogervorst, chairman of the IASB, summarized the IASB's response as follows: "It is undoubtedly true that we and

> See the **Underlying Concepts** on pages 1252, 1253, 1260, 1261, 1265, 1266, 1275, 1283, 1288, and 1290.

> Read the Evolving Issue on page 1283 for a discussion of IFRS and U.S. GAAP convergence.

INTERNATIONAL FOCUS

> Read the Global Accounting Insights on pages 1284–1286 for a discussion of non-IFRS disclosure requirements.

others can improve our [disclosure] requirements. However, material improvements will require behavioural change to ensure that financial statements are regarded as tools of communication rather than compliance. That means addressing the root causes of why preparers may err on the side of caution and 'kitchen-sink' their disclosures." The bottom line: We need better, not necessarily more, disclosure.

PREVIEW OF CHAPTER

24

As the opening story indicates, investors and other interested parties are concerned about the quality of information for all aspects of financial reporting—the financial statements, the notes, the president's

letter, and management commentary. In this chapter, we cover the full disclosure principle in more detail and examine disclosures that must accompany financial statements so that they are not misleading. The content and organization of this chapter are as follows.

Presentation and Disclosure in Financial Reporting

Full Disclosure Principle	Notes to Financial Statements	Disclosure Issues	Auditor's and Management's Reports	Current Reporting Issues
 Increase in reporting requirements Differential disclosure 	 Accounting policies Common notes 	 Special transactions or events Events after the reporting period Diversified companies Interim reports 	 Auditor's report Management's reports 	 Reporting on forecasts and projections Internet financial reporting Fraudulent financial reporting Criteria for accounting and reporting choices

FULL DISCLOSURE PRINCIPLE

LEARNING OBJECTIVE 1

Review the full disclosure principle and describe implementation problems.

> See the Authoritative Literature section (pages 1301-1302).

The IASB Conceptual Framework notes that while some useful information is best provided in the financial statements, some is best provided by other means. For example, net income and cash flows are readily available in financial statements, but investors might do better to look at comparisons to other companies in the same industry, found in news articles or brokerage house reports.

IASB rules directly affect financial statements, notes to the financial statements, and supplementary information. These accounting standards provide guidance on recognition and measurement of amounts reported in the financial statements. However, due to the many judgments involved in applying IFRS, note disclosures provide important information about the application of IFRS. Supplementary information includes items such as disclosures about the risks and uncertainties, resources and obligations not recognized in the statement of financial position (such as mineral reserves), and information about geographical and industry segments. Other types of information found in the annual report, such as management commentary and the letters to shareholders, are not subject to IASB rules. [1] Illustration 24-1 indicates the various types of financial information.

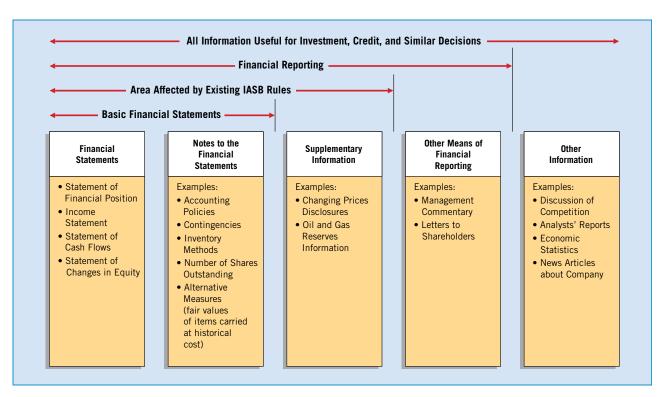

ILLUSTRATION 24-1

Types of Financial Information

Here is a good example of the trade-off between cost considerations and the benefits of full disclosure.

As Chapter 2 indicated, the profession has adopted a full disclosure principle. The full disclosure principle calls for financial reporting of any financial facts significant enough to influence the judgment of an informed reader. In some situations, the

benefits of disclosure may be apparent but the costs uncertain. In other instances, the costs may be certain but the benefits of disclosure not as apparent.

For example, the IASB requires companies to provide expanded disclosures about their contractual obligations. In light of the accounting frauds at companies like Parmalat (ITA), the benefits of these expanded disclosures seem fairly obvious to the investing public. While no one has documented the exact costs of disclosure in these situations, they would appear to be relatively small.

On the other hand, the cost of disclosure can be substantial in some cases and the benefits difficult to assess. For example, at one time the financial press reported that if segment reporting were adopted, a company like **Fruehauf** (USA) would have had to increase its accounting staff 50 percent, from 300 to 450 individuals. In this case, the cost of disclosure can be measured, but the benefits are less well defined.

Some even argue that the reporting requirements are so detailed and substantial that users have a difficult time absorbing the information. These critics charge the profession with engaging in **information overload**.

Financial disasters at Mahindra Satyam (IND) and Société Générale (FRA) highlight the difficulty of implementing the full disclosure principle. They raise the issue of why investors were not aware of potential problems: Was the information these companies presented not comprehensible? Was it buried? Was it too technical? Was it properly presented and fully disclosed as of the financial statement date, but the situation later deteriorated? Or was it simply not there? In the following sections, we describe the elements of high-quality disclosure that will enable companies to avoid these disclosure pitfalls.

Increase in Reporting Requirements

Disclosure requirements have increased substantially. One survey showed that the size of many companies' annual reports is growing in response to demands for increased transparency. For example, annual report page counts ranged from 92 pages for Wm Morrison Supermarkets plc (GBR) up to a whopping 268 pages in Telefónica's (ESP) annual report. This result is not surprising; as illustrated throughout this textbook, the IASB has issued many pronouncements in the last 10 years that have substantial disclosure provisions.

The reasons for this increase in disclosure requirements are varied. Some of them are:

- Complexity of the business environment. The increasing complexity of business operations magnifies the difficulty of distilling economic events into summarized reports. Areas such as derivatives, leasing, business combinations, pensions, financing arrangements, revenue recognition, and deferred taxes are complex. As a result, companies extensively use notes to the financial statements to explain these transactions and their future effects.
- *Necessity for timely information*. Today, more than ever before, users are demanding information that is current and predictive. For example, users want more complete **interim data**.
- Accounting as a control and monitoring device. Regulators have recently sought public disclosure of such phenomena as management compensation, off-balance-sheet financing arrangements, and related-party transactions. Many of these newer disclosure requirements enlist accountants and auditors as the agents to assist in controlling and monitoring these concerns.

Underlying Concepts

Surveys indicate that to meet users' changing needs, business reporting must (1) provide more forward-looking information; (2) focus more on the factors that create longer-term value, including non-financial measures; and (3) better align information reported externally with the information reported internally.

Differential Disclosure

A trend toward **differential disclosure** is also occurring. The IASB has developed IFRS for small- and medium-sized entities (SMEs). SMEs are entities that publish general-purpose financial statements for external users but do not issue shares or other securities

¹The IASB is evaluating disclosure issues such as those related to management commentary. However, as noted by one standard-setter, the usefulness of expanded required disclosure also depends on users' ability to distinguish between disclosed versus recognized items in financial statements. Research to date is inconclusive on this matter. See Katherine Schipper, "Required Disclosures in Financial Reports," Presidential Address to the American Accounting Association Annual Meeting (San Francisco, Calif.: August 2005).

in a public market. SMEs are estimated to account for over 95 percent of all companies around the world. Many believe a simplified set of standards makes sense for these companies because they do not have the resources to implement full IFRS.

Simplified IFRS for SMEs is designed to meet their needs and capabilities. Compared with full IFRS (and many national accounting standards), simplified IFRS for SMEs is less complex in a number of ways:

- Topics not relevant for SMEs are omitted. Examples are earnings per share, interim financial reporting, and segment reporting.
- Simplified IFRS for SMEs allows fewer accounting policy choices. For example, there is no option to revalue property, equipment, or intangibles.
- Many principles for recognizing and measuring assets, liabilities, revenue, and expenses are simplified. For example, goodwill is amortized (as a result, there is no annual impairment test) and all borrowing and R&D costs are expensed.
- Significantly fewer disclosures are required (roughly 300 versus 3,000).
- To further reduce standard overload, revisions to the IFRS for SMEs will be limited to once every three years.

Thus, the option of using simplified IFRS helps SMEs meet the needs of their financial statement users while balancing the costs and benefits from a preparer perspective. [2]

NOTES TO THE FINANCIAL STATEMENTS

LEARNING OBJECTIVE [2]

Explain the use of notes in financial statement preparation.

As you know from your study of this textbook, notes are an integral part of the financial statements of a business enterprise. However, readers of financial statements often overlook them because they are highly technical and often appear in small print. **Notes are the means of amplifying or explaining the items presented in the main body of the statements.** They can explain in qualitative terms infor-

mation pertinent to specific financial statement items. In addition, they can provide supplementary data of a quantitative nature to expand the information in the financial statements. Notes also can explain restrictions imposed by financial arrangements or basic contractual agreements. Although notes may be technical and difficult to understand, they provide meaningful information for the user of the financial statements.

Accounting Policies

Accounting policies are the specific principles, bases, conventions, rules, and practices applied by a company in preparing and presenting financial statements. IFRS states that information about the accounting policies adopted by a reporting entity is essential for financial statement users in making economic decisions. It recommends that companies should present as an integral part of the financial statements a statement identifying the accounting policies adopted and followed by the reporting entity. Companies should present the disclosure as the first note or in a separate Summary of Significant Accounting Policies section preceding the notes to the financial statements.

The Summary of Significant Accounting Policies answers such questions as: What method of depreciation is used on plant assets? What valuation method is employed on inventories? What amortization policy is followed in regard to intangible assets? How are marketing costs handled for financial reporting purposes? You can see a good example of note disclosure for Marks and Spencer plc (GBR) (which accompany the financial statements presented in Appendix A) at the company's website, www. marksandspencer.com.

Analysts examine carefully the summary of accounting policies to determine whether a company is taking a conservative or a liberal approach to accounting practices. For example, depreciating plant assets over an unusually long period of time is considered liberal. Using weighted-average inventory valuation in a period of inflation is generally viewed as conservative.

In addition to disclosure of significant accounting policies, companies must:

- **1.** Identify the judgments that management made in the process of applying the accounting policies and that have the most significant effect on the amounts recognized in the financial statements, and
- **2.** Disclose information about the assumptions they make about the future, and other major sources of estimation uncertainty at the end of the reporting period, that have a significant risk of resulting in a material adjustment to the carrying amounts of assets and liabilities within the next financial year. In respect of those assets and liabilities, the notes shall include details of (a) their nature and (b) their carrying amount as of the end of the reporting period.

These disclosures are many times presented with the accounting policy note or may be provided in a specific policy note. The disclosures should identify the estimates that require management's most difficult, subjective, or complex judgments. [3] An example of this disclosure is presented in Illustration 24-2 for British Airways (GBR).

ILLUSTRATION 24-2 Accounting Estimate and Judgment Disclosure

British Airways

Key accounting estimates and judgements (in part)

The preparation of financial statements requires management to make judgements, estimates and assumptions that affect the application of policies and reported amounts of assets and liabilities, income and expenses. These estimates and associated assumptions are based on historical experience and various other factors believed to be reasonable under the circumstances. Actual results could differ from these estimates. These underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if these are also affected. The estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year are discussed below.

a Impairment of non-financial assets

The Group assesses whether there are any indicators of impairment for all non-financial assets at each reporting date. Goodwill and intangible assets with indefinite economic lives are tested for impairment annually and at other times when such indicators exist. The recoverable amounts of cash-generating units have been

determined based on value-in-use calculations. These calculations require the use of estimates as disclosed in note 16.

Other non-financial assets are tested for impairment when there are indicators that the carrying amounts may not be recoverable.

d Passenger revenue recognition

Passenger revenue is recognised when the transportation is provided. Ticket sales that are not expected to be used for transportation (unused tickets) are recognised as revenue using estimates regarding the timing of recognition based on the terms and conditions of the ticket and historical trends.

e Frequent flver revenue

The amount deferred as a liability is measured based on the fair value of the awarded Avios. The fair value is measured by reference to the amount that the award credit could have been sold for separately. The amount deferred is recognised as revenue on redemption of the points including a portion of the points that the Group does not expect to be redeemed by the customers ('breakage'). Both fair value and breakage used are estimates that management exercises judgement on.

Collectively, these disclosures help statement readers evaluate the quality of a company's accounting policies in providing information in the financial statements for assessing future cash flows. Companies that fail to adopt high-quality reporting policies may be heavily penalized by the market. For example, when <code>Isoft</code> (GBR) disclosed that it would restate prior-year results due to use of aggressive revenue recognition policies, its share price dropped over 39 percent in one day. Investors viewed Isoft's quality of earnings as low.

Common Notes

We have discussed many of the **notes to the financial statements** throughout this text-book and will discuss others more fully in this chapter. The more common are as follows.

MAJOR DISCLOSURES

INVENTORY. Companies should report the basis upon which inventory amounts are stated (lower-of-cost-or-net realizable value) and the method used in determining cost (FIFO, average-cost, etc.). Manufacturers should report, either in the statement of financial position or in a separate schedule in the notes, the inventory composition (finished goods, work in process, raw materials). Unusual or significant financing arrangements relating to inventories that may require disclosure include transactions with related parties, product financing arrangements, firm purchase commitments, and pledging of inventories as collateral. Chapter 9 (pages 418–420) illustrates these disclosures.

PROPERTY, PLANT, AND EQUIPMENT. Companies should state the basis of valuation for property, plant, and equipment (e.g., revaluation or historical cost). It is usually historical cost. Companies also should disclose pledges, liens, and other commitments related to these assets. In the presentation of depreciation, companies should disclose the following in the financial statements or in the notes: (1) depreciation expense for the period; (2) balances of major classes of depreciable assets, by nature and function, at the statement date; (3) accumulated depreciation, either by major classes of depreciable assets or in total, at the statement date; and (4) a general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets. Finally, companies should explain any major impairments. Chapter 11 (pages 515–517) illustrates these disclosures.

CREDITOR CLAIMS. Investors normally find it extremely useful to understand the nature and cost of creditor claims. However, the liabilities section in the statement of financial position can provide the major types of liabilities only in the aggregate. Note schedules regarding such obligations provide additional information about how a company is financing its operations, the costs that it will bear in future periods, and the timing of future cash outflows. Financial statements must disclose for each of the five years following the date of the statements the aggregate amount of maturities and sinking fund requirements for all long-term borrowings. Chapter 14 (pages 679–680) illustrates these disclosures.

EQUITYHOLDERS' CLAIMS. Many companies present in the body of the statement of financial position information about equity securities: the number of shares authorized, issued, and outstanding and the par value for each type of security. Or, companies may present such data in a note. Beyond that, a common equity note disclosure relates to contracts and senior securities outstanding that might affect the various claims of the residual equityholders. An example would be the existence of outstanding share options, outstanding convertible debt, redeemable preference shares, and convertible preference shares. In addition, it is necessary to disclose certain types of restrictions currently in force. Generally, these types of restrictions involve the amount of earnings available for dividend distribution. Examples of these types of disclosures are illustrated in Chapter 15 (pages 726–727) and Chapter 16 (page 769).

CONTINGENCIES AND COMMITMENTS. A company may have gain or loss contingencies that are not disclosed in the body of the financial statements. These contingencies include litigation, debt and other guarantees, possible tax assessments, renegotiation of government contracts, and sales of receivables with recourse. In addition, companies should disclose in the notes commitments that relate to dividend restrictions, purchase agreements (through-put and take-or-pay), hedge contracts, and employment contracts. Disclosures of such items are illustrated in Chapter 7 (pages 320–321), Chapter 9 (pages 418–420), and Chapter 13 (pages 623, 625–626).

FAIR VALUES. Companies that have assets or liabilities measured at fair value generally disclose both the cost and the fair value in the notes to the financial statements. Fair value measurements may be used for many financial assets and liabilities; investments; revaluations for property, plant, and equipment; impairments of long-lived assets; and some contingencies. Companies also provide disclosure of information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value measurement. This fair value hierarchy identifies three broad levels related to the measurement of fair values (Levels 1, 2, and 3). The levels indicate the reliability of the measurement of fair value information. Chapter 17 (pages 857–860) discusses in detail fair value disclosures.

DEFERRED TAXES, PENSIONS, AND LEASES. The IASB also requires extensive disclosure in the areas of deferred taxes, pensions, and leases. Chapter 19 (pages 975–978), Chapter 20 (pages 1033–1034), and Chapter 21 (pages 1089–1091) discuss in detail each of these disclosures. Users of financial statements should carefully read notes to the financial statements for information about off-balance-sheet commitments, future financing needs, and the quality of a company's earnings.

CHANGES IN ACCOUNTING POLICIES. The profession defines various types of accounting changes and establishes guides for reporting each type. Companies discuss, either in the summary of significant accounting policies or in the other notes, changes in accounting policies (as well as material changes in estimates and corrections of errors). See Chapter 22 (pages 1135 and 1040).

In earlier chapters, we discussed the disclosures listed above. The following sections of this chapter illustrate four additional disclosures of significance—special transactions or events, subsequent events, segment reporting, and interim reporting.

What do the numbers mean?

FOOTNOTE SECRETS

Often, note disclosures are needed to give a complete picture of a company's financial position. A good example is the required disclosure of collateral arrangements in repurchase agreements. Such arrangements gained front-page coverage when it was revealed that Lehman Brothers (USA)—and many other U.S. and European financial institutions—employed specialized repurchase agreements, referred to as Repo 105 (or Repo 108 in Europe), to "window-dress" their statements of financial positions. Here's how it works.

A repurchase agreement amounts to a short-term loan, exchanging collateral for cash upfront and then unwinding the trade as soon as overnight. The Repo 105 that Lehman employed used a variety of holdings as the collateral. Lehman made the exchanges with major global financial institutions, such as **Barclays** (GBR), **UBS** (CHE), **Mitsubishi UFJ Financial Group** (JPN), and **KBC Bank** (BEL). What was special about the Repo 105/108 is that the value of the securities that Lehman pledged in the transactions were worth 105 percent of the cash it received. That is, the firm was taking a

haircut on the transactions. And when Lehman eventually repaid the cash it received from its counterparties, it did so with interest, making this a rather expensive technique. Under accounting guidance at that time, Lehman could book the transactions as a "sale" rather than a "financing," as most repos are regarded. That meant that for a few days, Lehman could shuffle off tens of billions of dollars in assets to appear more financially healthy than it really was.

How can you get better informed about note disclosures that may contain important information related to your investments, like Repo 105? Beyond your study in this class, a good online resource for understanding the contents of note disclosures is http://www.footnoted.org/. This site highlights "the things companies bury" in their annual reports. It notes that company reports are more complete of late, but only the largest companies are preparing documents that are readable. As the editor of the site noted, "[some companies] are being dragged kicking and screaming into plain English."

Sources: Gretchen Morgenson, "Annual Reports: More Pages, but Better?" The New York Times (March 17, 2002); D. Stead, "The Secrets in SEC Filings," BusinessWeek (August 25, 2008), p. 12; and M. de la Merced and J. Werdigier, "The Origins of Lehman's 'Repo 105'," The New York Times (March 12, 2010).

DISCLOSURE ISSUES

Disclosure of Special Transactions or Events

LEARNING OBJECTIVE [3]

Discuss the disclosure requirements for related-party transactions, subsequent events, and major business segments.

Related-party transactions, errors, and fraud pose especially sensitive and difficult problems. The accountant/auditor who has responsibility for reporting on these types of transactions must take care to properly balance the rights of the reporting company and the needs of financial statement users.

Related-party transactions arise when a company engages in transactions in which one of the parties has the ability to significantly influence the policies of the other. They may also occur when a non-transacting party has the ability to influence the policies of the two transacting parties.² Competitive, free-market dealings may not exist in related-party transactions, and so an "arm's-length" basis cannot be assumed. Transactions such as borrowing or lending money at abnormally low or high interest rates, real estate sales at amounts that differ significantly from appraised value, exchanges of non-monetary assets, and transactions involving companies that have no economic substance ("shell corporations") suggest that related parties may be involved.

In order to make adequate disclosure, companies should report the economic substance, rather than the legal form, of these transactions. IFRS requires the following minimum disclosures of material related-party transactions. [5]

- **1.** The nature of the related-party relationship;
- 2. The amount of the transactions and the amount of outstanding balances, including commitments, the nature of consideration, and details of any guarantees given or received;
- 3. Provisions for doubtful debts related to the amount of outstanding balances; and
- **4.** The expense recognized during the period in respect of bad or doubtful debts due from related parties.

Illustration 24-3, from the annual report of Volvo Group (SWE), shows disclosure of related-party transactions.

ILLUSTRATION 24-3

Disclosure of Related-Party Transactions

Volvo Group

Note 25. Transactions with related parties (in part)

The Volvo Group engages in transactions with some of its associated companies. The transactions consist mainly of sales of vehicles to dealers and purchases of engines.

	2012	2011
Sales to associated companies	1,670	1,296
Purchases from associated companies	702	60
Receivables from associated companies, Dec. 31	242	186
Liabilities to associated companies, Dec. 31	632	129

The increase in purchases and liabilities is explained by Deutz AG, which is an associated company from September 2012. Commercial terms and market prices apply for the supply of goods and services to/from associated companies.

Until December 2012 Renault s.a.s was a related party to the Volvo Group due to its holding in AB Volvo. In December 2012 Renault s.a.s. sold their Volvo shares. Sales to and purchases from Renault s.a.s. and its subsidiaries amounted to 29 (53) and 1,719 (2,321). Receivables from and liabilities to Renault s.a.s. is not included for 2012 and totalled 11 and 372, respectively, as of December 31, 2011. Sales were mainly from Renault Trucks to Renault s.a.s. and comprised components and spare parts. Purchases were mainly made by Renault Trucks from Renault s.a.s. and primarily comprised light trucks. Renault Trucks has a license from Renault s.a.s. for the use of the trademark Renault.

²Examples of related-party transactions include transactions between (a) a parent company and its subsidiaries, (b) subsidiaries of a common parent, (c) a company and trusts for the benefit of employees (controlled or managed by the enterprise), and (d) a company and its principal owners, management, or members of immediate families, and affiliates. [4]

Many companies are involved in related-party transactions. However, another type of special event, errors and fraud (sometimes referred to as irregularities), is the exception rather than the rule. Accounting errors are unintentional mistakes, whereas fraud (misappropriation of assets and fraudulent financial reporting) involves intentional distortions of financial statements.³ As indicated earlier, companies should correct the financial statements when they discover errors. The same treatment should be given fraud. The discovery of fraud, however, gives rise to a different set of procedures and responsibilities for the accountant/auditor.

Disclosure plays a very important role in these types of transactions because the events are many times more qualitative than quantitative and involve more subjective than objective evaluation. Users of the financial statements need some indication of the existence and nature of these transactions, through disclosures, modifications in the auditor's report, or reports of changes in auditors.

Events after the Reporting Period (Subsequent Events)

Notes to the financial statements should explain any significant financial events that took place after the formal statement of financial position date, but before the statements are authorized for issuance (hereafter referred to as the authorization date). These events are referred to as **events after the reporting date** or **subsequent events**. Illustration 24-4 shows a time diagram of the subsequent events period.

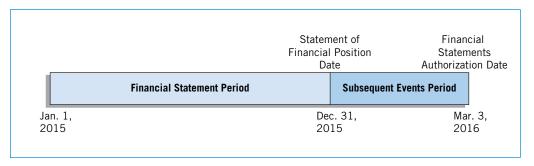

ILLUSTRATION 24-4
Time Periods for
Subsequent Events

A period of several weeks or sometimes months may elapse after the end of the fiscal year but before the management or the board of directors authorizes issuance of the financial statements.⁴ Various activities involved in closing the books for the period and issuing the statements all take time: taking and pricing the inventory, reconciling subsidiary ledgers with controlling accounts, preparing necessary adjusting entries, ensuring that all transactions for the period have been entered, obtaining an audit of the financial statements by independent certified public accountants, and printing the annual report. During the period between the statement of financial position date and

³International Standard on Auditing 240, "The Auditor's Responsibilities Related to Fraud in an Audit of Financial Statements," *Handbook of International Quality Control, Auditing, Review, Other Assurance, and Other Related Services Pronouncements* (New York: International Federation of Accountants (IFAC), April 2010). We have an expanded discussion of fraud later in this chapter. Requirements for company audits vary according to the jurisdiction and market listing. Most public international companies outside the United States comply with the international auditing standards issued by the International Auditing and Assurance Standards Board (IAASB).

⁴In many jurisdictions, management is required to issue its financial statements to a supervisory board (made up solely of non-executives) for approval. In such cases, the financial statements are authorized for issue—the end of the subsequent events period—when the management authorizes them for issue to the supervisory board. In other jurisdictions, companies are required to submit the financial statements to their shareholders for approval after the financial statements have been made public. In such cases, the subsequent events period ends on the date of issue, not the date when shareholders approve the financial statements. [6]

its authorization date, important transactions or other events may occur that materially affect the company's financial position or operating situation.

Many who read a statement of financial position believe the financial condition is constant, and they project it into the future. However, readers must be told if the company has experienced a significant change—e.g., sold one of its plants, acquired a subsidiary, suffered unusual losses, settled significant litigation, or experienced any other important event in the post-statement of financial position period. Without an explanation in a note, the reader might be misled and draw inappropriate conclusions.

Two types of events or transactions occurring after the statement of financial position date may have a material effect on the financial statements or may need disclosure so that readers interpret these statements accurately:

1. Events that provide additional evidence about conditions that existed at the statement of financial position date, including the estimates inherent in the process of preparing financial statements. These events are referred to as adjusted subsequent events and require adjustments to the financial statements. All information available prior to the authorization date of the financial statements helps investors and creditors evaluate estimates previously made. To ignore these subsequent events is to pass up an opportunity to improve the accuracy of the financial statements. This first type of event encompasses information that an accountant would have recorded in the accounts had the information been known at the statement of financial position date.

For example, if a loss on an account receivable results from a customer's bankruptcy subsequent to the statement of financial position date, the company adjusts the financial statements before their issuance. The bankruptcy stems from the customer's poor financial health existing at the statement of financial position date.

The same criterion applies to settlements of litigation. The company must adjust the financial statements if the events that gave rise to the litigation, such as personal injury or patent infringement, took place prior to the statement of financial position date.

2. Events that provide evidence about conditions that **did not exist** at the statement of financial position date but arise subsequent to that date. These events are referred as **non-adjusted subsequent events** and do not require adjustment of the financial statements. To illustrate, a loss resulting from a customer's fire or flood *after* the statement of financial position date does not reflect conditions existing at that date. Thus, adjustment of the financial statements is not necessary. A company should not recognize subsequent events that provide evidence about conditions that did not exist at the date of the statement of financial position but that arose after the statement of financial position date.

The following are examples of non-adjusted subsequent events:

- A major business combination after the reporting period or disposing of a major subsidiary.
- Announcing a plan to discontinue an operation or commencing the implementation of a major restructuring.
- Major purchases of assets, other disposals of assets, or expropriation of major assets by government.
- The destruction of a major production plant or inventories by a fire or natural disaster after the reporting period.
- Major ordinary share transactions and potential ordinary share transactions after the reporting period.

Underlying Concepts

The periodicity or time period assumption implies that economic activities of an enterprise can be divided into artificial time periods for purpose of analysis.

- Abnormally large changes after the reporting period in asset prices, foreign exchange rates, or taxes.
- Entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees after the statement date. [7]⁵

Some non-adjusted subsequent events may have to be disclosed to keep the financial statements from being misleading. For such events, a company discloses the nature of the event and an estimate of its financial effect.

Illustration 24-5 presents an example of subsequent events disclosure, excerpted from the annual report of **Tieto** (FIN).

Underlying Concepts

A company also should consider supplementing the historical financial statements with pro forma financial data.

Occasionally, a non-adjusted subsequent event may be so significant that disclosure can best be made by means of pro forma financial data.

Tieto

Note 32. Events After the Balance Sheet Date

In February, Tieto agreed to sell the majority of its operations in Germany and Netherlands to the German industrial group Aurelius. Closing is expected to take place during the second quarter of 2013. Net sales of the divested business amounted to over EUR 110 million in 2012. German businesses were loss-making in 2012 and the divestment will improve Tieto's operating margin of underlying business by some 0.5 percentage points based on 2012 performance. Tieto booked about EUR 30 million in impairment in the fourth-quarter 2012. The divested business operations, including around 900 employees in total, will be transferred to the new owner at the time of closing. The divestment excludes Tieto's global businesses and customers, i.e. the forest industry business in Germany, the energy industry business in Netherlands, Product Engineering resources for global customers and selective other global roles.

Between 7 December and 31 December 2012, a total of 111,846 Tieto Corporation new shares have been subscribed for with the company's stock options 2006C, and a total of 3,500 shares with stock options 2009A. As a result of the subscriptions, the number of Tieto shares increased to 72,492,559 and the share capital to EUR 76,064,020.00. The shares subscribed for under the stock options were registered in the Trade Register on 18 January 2013.

Events

ILLUSTRATION 24-5Disclosure of Subsequent

Many subsequent events or developments do not require adjustment of or disclosure in the financial statements. Typically, these are non-accounting events or conditions that management normally communicates by other means. These events include legislation, product changes, management changes, strikes, unionization, marketing agreements, and loss of important customers.

Reporting for Diversified (Conglomerate) Companies

In certain business climates, companies have a tendency to diversify their operations. Take the case of **Siemens AG** (DEU), whose products include energy technologies, consumer products, and financial services. When businesses are so diversified, investors and investment analysts want more information about the details behind conglomerate financial statements. Particularly, they want income statement, statement of financial position, and cash flow information on the **individual segments** that compose the total income figure.

⁵The effects from natural disasters, like the eruption of the Icelandic volcano, which occurred after the year-end for companies with March fiscal years, require disclosure in order to keep the statements from being misleading. Some companies may have to consider whether these disasters affect their ability to continue as going concerns.

Much information is hidden in the aggregated totals. With only the consolidated figures, the analyst cannot tell the extent to which the differing product lines **contribute to the company's profitability**, **risk**, **and growth potential**. For example, in Illustration 24-6, the office equipment segment looks like a risky venture. Segmented reporting would provide useful information about the two business segments and would be useful for making an informed investment decision regarding the whole company.

ILLUSTRATION 24-6 Segmented Income Statement

OFFICE EQUIPMENT AND AUTO PARTS COMPANY INCOME STATEMENT DATA (IN MILLIONS)						
	Consolidated	Office Equipment	Auto Parts			
Net sales	\$78.8	\$18.0	\$60.8			
Manufacturing costs						
Inventories, beginning	12.3	4.0	8.3			
Materials and services	38.9	10.8	28.1			
Wages	12.9	3.8	9.1			
Inventories, ending	(13.3)	(3.9)	(9.4)			
	50.8	14.7	36.1			
Selling and administrative expenses	12.1	1.6	10.5			
Total operating expenses	62.9	16.3	46.6			
Income before taxes	15.9	1.7	14.2			
Income taxes	(9.3)	(1.0)	(8.3)			
Net income	\$ 6.6	\$ 0.7	\$ 5.9			

A classic situation that demonstrates the need for segmented data involved Caterpillar, Inc. (USA). Market regulators cited Caterpillar because it failed to tell investors that nearly a quarter of its income in one year came from a Brazilian unit and was non-recurring in nature. The company knew that different economic policies in the next year would probably greatly affect earnings of the Brazilian unit. But Caterpillar presented its financial results on a consolidated basis, not disclosing the Brazilian operations. Caterpillar's failure to include information about Brazil left investors with an incomplete picture of the company's financial results and denied investors the opportunity to see the company "through the eyes of management."

Companies have always been somewhat hesitant to disclose segmented data for various reasons:

- 1. Without a thorough knowledge of the business and an understanding of such important factors as the competitive environment and capital investment requirements, the investor may find the segmented information meaningless or may even draw improper conclusions about the reported earnings of the segments.
- **2.** Additional disclosure may be helpful to competitors, labor unions, suppliers, and certain government regulatory agencies, and thus harm the reporting company.
- **3.** Additional disclosure may discourage management from taking intelligent business risks because segments reporting losses or unsatisfactory earnings may cause shareholder dissatisfaction with management.
- **4.** The wide variation among companies in the choice of segments, cost allocation, and other accounting problems limits the usefulness of segmented information.
- **5.** The investor is investing in the company as a whole and not in the particular segments, and it should not matter how any single segment is performing if the overall performance is satisfactory.
- **6.** Certain technical problems, such as classification of segments and allocation of segment revenues and costs (especially "common costs"), are formidable.

On the other hand, the advocates of segmented disclosures offer these reasons in support of the practice:

- **1.** Investors need segmented information to make an intelligent investment decision regarding a diversified company.
 - (a) Sales and earnings of individual segments enable investors to evaluate the differences between segments in growth rate, risk, and profitability, and to forecast consolidated profits.
 - **(b)** Segmented reports help investors evaluate the company's investment worth by disclosing the nature of a company's businesses and the relative size of the components.
- **2.** The absence of segmented reporting by a diversified company may put its unsegmented, single product-line competitors at a competitive disadvantage because the conglomerate may obscure information that its competitors must disclose.

The advocates of segmented disclosures appear to have a much stronger case. Many users indicate that segmented data are the most useful financial information provided, aside from the basic financial statements. As a result, the IASB has issued extensive reporting guidelines in this area.

Objective of Reporting Segmented Information

The objective of reporting segmented financial data is to provide information about the **different types of business activities** in which an enterprise engages and the **different economic environments** in which it operates. Meeting this objective will help users of financial statements do the following.

- (a) Better understand the enterprise's performance.
- **(b)** Better assess its prospects for future net cash flows.
- (c) Make more informed judgments about the enterprise as a whole.

Basic Principles

Financial statements can be disaggregated in several ways. For example, they can be disaggregated by products or services, by geography, by legal entity, or by type of customer. However, it is not feasible to provide all of that information in every set of financial statements. IFRS requires that general-purpose financial statements include selected information on a single basis of segmentation. Thus, a company can meet the segmented reporting objective by providing financial statements segmented based on how the company's operations are managed. The method chosen is referred to as the management approach. [8] The management approach reflects how management segments the company for making operating decisions. The segments are evident from the components of the company's organization structure. These components are called operating segments.

Identifying Operating Segments

An operating segment is a component of an enterprise:

- (a) That engages in business activities from which it earns revenues and incurs expenses.
- **(b)** Whose operating results are regularly reviewed by the company's chief operating decision-maker to assess segment performance and allocate resources to the segment.
- **(c)** For which discrete financial information is available that is generated by or based on the internal financial reporting system.

Companies may aggregate information about two or more operating segments only if the segments have the same basic characteristics in each of the following areas.

- (a) The nature of the products and services provided.
- **(b)** The nature of the production process.
- **(c)** The type or class of customer.
- (d) The methods of product or service distribution.
- **(e)** If applicable, the nature of the regulatory environment.

After the company decides on the possible segments for disclosure, it makes a quantitative materiality test. This test determines whether the segment is significant enough to warrant actual disclosure. An operating segment is deemed significant and therefore a reportable segment if it satisfies **one or more** of the following quantitative thresholds.

- **1.** Its **revenue** (including both sales to external customers and intersegment sales or transfers) is 10 percent or more of the combined revenue of all the company's operating segments.
- **2.** The absolute amount of its **profit or loss** is 10 percent or more of the greater, in absolute amount, of **(a)** the combined operating profit of all operating segments that did not incur a loss, or **(b)** the combined loss of all operating segments that did report a loss.
- **3.** Its **identifiable assets** are 10 percent or more of the combined assets of all operating segments.

In applying these tests, the company must consider two additional factors. First, segment data must explain a significant portion of the company's business. Specifically, the segmented results must equal or exceed 75 percent of the combined sales to unaffiliated customers for the entire company. This test prevents a company from providing limited information on only a few segments and lumping all the rest into one category.

Second, the profession recognizes that reporting too many segments may overwhelm users with detailed information. The IASB decided that 10 is a reasonable upper limit for the number of segments that a company must disclose. [9]

To illustrate these requirements, assume a company has identified six possible reporting segments, as shown in Illustration 24-7 (euros in thousands).

ILLUSTRATION 24-7

Data for Different Possible Reporting Segments

Segments	Total Revenue (Unaffiliated)	Operating Profit (Loss)	Identifiable Assets
——————————————————————————————————————	 100		€ 60
В	50	2	30
С	700	40	390
D	300	20	160
E	900	18	280
F	100	(5)	50
	€2,150	€85	€970
	====	=	===

The company would apply the respective tests as follows.

Revenue test: 10% × €2,150 = €215; C, D, and E meet this test.

Operating profit (loss) test: $10\% \times €90 = €9$ (note that the €5 loss is ignored, because the test is based on non-loss segments); A, C, D, and E meet this test.

Identifiable assets tests: $10\% \times €970 = €97$; C, D, and E meet this test.

The reporting segments are therefore A, C, D, and E, assuming that these four segments have enough sales to meet the 75 percent of combined sales test. The 75 percent test is computed as follows.

75% of combined sales test: 75% × €2,150 = €1,612.50. The sales of A, C, D, and E total €2,000 (€100 + €700 + €300 + €900); therefore, the 75 percent test is met.

Measurement Principles

The accounting principles that companies use for segment disclosure need not be the same as the principles they use to prepare the consolidated statements. This flexibility may at first appear inconsistent. But, preparing segment information in accordance with IFRS would be difficult because some IFRS are not expected to apply at a segment level. Examples are accounting for the cost of company-wide employee benefit plans and accounting for income taxes in a company that files a consolidated tax return with segments in different tax jurisdictions.

The IASB does not require allocations of joint, common, or company-wide costs solely for external reporting purposes. Common costs are those incurred for the benefit of more than one segment and whose interrelated nature prevents a completely objective division of costs among segments. For example, the company president's salary is difficult to allocate to various segments. Allocations of common costs are inherently arbitrary and may not be meaningful. There is a presumption that if companies allocate common costs to segments, these allocations are either directly attributable or reasonably allocable to the segments.

Segmented Information Reported

The IASB requires that an enterprise report the following.

- **1.** *General information about its operating segments.* This includes factors that management considers most significant in determining the company's operating segments and the types of products and services from which each operating segment derives its revenues.
- **2.** Segment profit and loss and related information. Specifically, companies must report the following information about each operating segment if the amounts are included in determining segment profit or loss.
 - (a) Revenues from transactions with external customers.
 - **(b)** Revenues from transactions with other operating segments of the same enterprise.
 - (c) Interest revenue.
 - (d) Interest expense.
 - (e) Depreciation and amortization expense.
 - **(f)** Unusual items.
 - (g) Equity in the net income of investees accounted for by the equity method.
 - (h) Income tax expense or benefit.
 - (i) Significant non-cash items other than depreciation, depletion, and amortization expense.
- **3.** *Segment assets and liabilities.* A company must report each operating segment's total assets and liabilities.
- **4.** *Reconciliations.* A company must provide a reconciliation of the total of the segments' revenues to total revenues, a reconciliation of the total of the operating segments' profits and losses to its income before income taxes, and a reconciliation of the total of the operating segments' assets and liabilities to total assets and liabilities.

Underlying Concepts

Users of financial statements indicate that multi-segment companies operate diverse businesses that are subject to different opportunities and risks. Segment information provides additional insight about the opportunities and risks of investments and sharpens predictions. Because of its predictive value, providing segment information is of the highest priority.

- **5.** *Information about products and services and geographic areas.* For each operating segment not based on geography, the company must report (unless it is impracticable): (1) revenues from external customers, (2) long-lived assets, and (3) expenditures during the period for long-lived assets. This information, if material, must be reported (a) in the enterprise's country of domicile and (b) in each other country.
- **6.** *Major customers.* If 10 percent or more of company revenue is derived from a single customer, the company must disclose the total amount of revenue from each such customer by segment.

Segment Disclosure

Illustration of Disaggregated Information

Illustration 24-8 shows the segment disclosure for **Statoil** (NOR).

Statoil

Note 5. Segments (in part)

Segment data for the year ended 31 December is presented below:

(in NOK million)	Exploration and Production Norway	International Exploration and Production	Natural Gas	Manufacturing and Marketing	Other	Eliminations	Total
Year ended 31 December					· 		
Revenues third party and Other income	4,153	12,301	96,973	348,941	1,287	0	463,655
Revenues inter-segment	154,431	28,459	1,241	2,014	2,295	(188,440)	0
Net income from associated companies	79	1,075	399	280	(55)	0	1,778
Total revenues and other income	158,663	41,835	98,613	351,235	3,527	(188,440)	465,433
Net operating income	104,318	2,599	18,488	(541)	(1,146)	(2,078)	121,640
Significant non-cash items recognised in segment profit or loss							
- Depreciation and amortisation	25,653	16,231	1,778	2,390	687	0	46,739
- Impairment losses	0	873	1,001	5,369	74	0	7,317
- Inventory valuation	0	0	(24)	(5,171)	0	1,377	(3,818)
 Commodity based derivatives 	(1,781)	0	(2,814)	1,072	(122)	0	(3,645)
- Exploration expenditure written off	1,177	5,821	0	0	0	0	6,998
Investments in associated companies	214	4,962	2,829	917	1,134	0	10,056
Other segment non-current assets	175,998	152,678	34,797	28,587	3,028	0	395,088
Non-current assets, not allocated to segments*							41,312
Total non-current assets							446,456
Additions to PP&E and intangible assets**	34,875	39,354	2,528	7,618	1,340	0	85,715

^{*}Deferred tax assets, post employment benefit assets and non-current financial instruments are not allocated to segments.

Interim Reports

LEARNING OBJECTIVE [4]

Describe the accounting problems associated with interim reporting.

Underlying Concepts

For information to be relevant. it must be available to decisionmakers before it loses its capacity to influence their decisions (timeliness). Interim reporting is an excellent example of this concept.

Another source of information for the investor is interim reports. As noted earlier, interim reports cover periods of less than one year. The securities exchanges, market regulators, and the accounting profession have an active interest in the presentation of interim information.

Because of the short-term nature of the information in these reports, there is considerable controversy as to the general approach companies should employ. One group, which favors the discrete approach, believes that companies should treat each interim period as a separate accounting period. Using that treatment, companies would follow the principles for deferrals and accruals used for annual reports. In this view, companies should report accounting transactions as they occur, and expense recognition should not change with the period of time covered.

Another group, which favors the integral approach, believes that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year. In this

^{**}Excluding movements due to changes in abandonment and removal obligations.

approach, companies should assign estimated expenses to parts of a year on the basis of sales volume or some other activity base. In general, IFRS requires companies to follow the discrete approach. **[10]**

Interim Reporting Requirements

Generally, companies should use the same accounting policies for interim reports and for annual reports. They should recognize revenues in interim periods on the same basis as they are for annual periods. For example, if Cedars Corp. uses the percentage-of-completion method as the basis for recognizing revenue on an annual basis, then it should use the percentage-of-completion method for interim reports as well. Also, Cedars should treat costs directly associated with revenues (product costs, such as materials, labor and related fringe benefits, and manufacturing overhead) in the same manner for interim reports as for annual reports.

Companies should use the same inventory pricing methods (FIFO, average-cost, etc.) for interim reports and for annual reports. However, companies may use the gross profit method for interim inventory pricing. But, they must disclose the method and adjustments to reconcile with annual inventory.

Discrete Approach. Following the discrete approach, companies record in interim reports revenues and expenses according to the revenue and expense recognition principles. This includes costs and expenses other than product costs (often referred to as period costs). No accruals or deferrals in anticipation of future events during the year should be reported. For example, the cost of a planned major periodic maintenance or overhaul for a company like Airbus (FRA) or other seasonal expenditure that is expected to occur late in the year is not anticipated for interim reporting purposes. The mere intention or necessity to incur expenditure related to the future is not sufficient to give rise to an obligation.

Or, a company like **Carrefour** (FRA) may budget certain costs expected to be incurred irregularly during the financial year, such as advertising and employee training costs. Those costs generally are discretionary even though they are planned and tend to recur from year to year. However, recognizing an obligation at the end of an interim financial reporting period for such costs that have not yet been incurred generally is not consistent with the definition of a liability.

While year-to-date measurements may involve changes in estimates of amounts reported in prior interim periods of the current financial year, the principles for recognizing assets, liabilities, income, and expenses for interim periods are the same as in annual financial statements. For example, **Wm Morrison Supermarkets plc** (GBR) records losses from inventory write-downs, restructurings, or impairments in an interim period similar to how it would treat these items in the annual financial statements (when incurred). However, if an estimate from a prior interim period changes in a subsequent interim period of that year, the original estimate is adjusted in the subsequent interim period.

Interim Disclosures. IFRS does not require a complete set of financial statements at the interim reporting date. Rather, companies may comply with the requirements by providing condensed financial statements and selected explanatory notes. Because users of interim financial reports also have access to the most recent annual financial report, companies only need provide explanation of significant events and transactions since the end of the last annual reporting period. Companies should report the following interim data at a minimum.

1. Statement that the same accounting policies and methods of computation are followed in the interim financial statements as compared with the most recent annual financial statements or, if those policies or methods have been changed, a description of the nature and effect of the change.

- **2.** Explanatory comments about the seasonality or cyclicality of interim operations.
- **3.** The nature and amount of items affecting assets, liabilities, equity, net income, or cash flows that are unusual because of their nature, size, or incidence.
- **4.** The nature and amount of changes in accounting policies and estimates of amounts previously reported.
- **5.** Issuances, repurchases, and repayments of debt and equity securities.
- **6.** Dividends paid (aggregate or per share) separately for ordinary shares and other shares.
- 7. Segment information, as required by IFRS 8, "Operating Segments."
- **8.** Changes in contingent liabilities or contingent assets since the end of the last annual reporting period.
- **9.** Effect of changes in the composition of the company during the interim period, such as business combinations, obtaining or losing control of subsidiaries and long-term investments, restructurings, and discontinued operations.
- **10.** Other material events subsequent to the end of the interim period that have not been reflected in the financial statements for the interim period.

If a complete set of financial statements is provided in the interim report, companies comply with the provisions of *IAS 1*, "Presentation of Financial Statements."

Unique Problems of Interim Reporting

IFRS reflects a preference for the discrete approach. However, within this broad guideline, a number of unique reporting problems develop related to the following items.

Income Taxes. Not every dollar of corporate taxable income may be taxed at the same rate if the tax rate is progressive. This aspect of business income taxes poses a problem in preparing interim financial statements. Should the company use the **annualized approach**, which is to annualize income to date and accrue the proportionate income tax for the period to date? Or should it follow the **marginal principle approach**, which is to apply the lower rate of tax to the first amount of income earned? At one time, companies generally followed the latter approach and accrued the tax applicable to each additional dollar of income.

IFRS requires use of the annualized approach. Income tax expense is recognized in each interim period based on the best estimate of the weighted-average annual income tax rate expected for the full financial year. This approach is consistent with applying the same principles in interim reports as applied to annual report; that is, income taxes are assessed on an annual basis. However, amounts accrued for income tax expense in one interim period may have to be adjusted in a subsequent interim period of that financial year if the estimate of the annual income tax rate changes. [11]⁶

Seasonality. Seasonality occurs when most of a company's sales occur in one short period of the year, while certain costs are fairly evenly spread throughout the year. For example, the natural gas industry has its heavy sales in the winter months. In contrast, the beverage industry has its heavy sales in the summer months.

The problem of seasonality is related to the expense recognition principle in accounting. Generally, expenses are associated with the revenues they create. In a seasonal business, wide fluctuations in profits occur because off-season sales do not absorb the company's fixed costs (for example, manufacturing, selling, and administrative costs that tend to remain fairly constant regardless of sales or production).

⁶The estimated annual effective tax rate should reflect anticipated tax credits, foreign tax rates, percentage depletion, capital gains rates, and other available tax-planning alternatives.

To illustrate why seasonality is a problem, assume the following information.

Selling price per unit

Annual sales for the period (projected and actual)

100,000 units @ \$1 \$100,000

Manufacturing costs

Variable \$10¢ per unit

Fixed \$20¢ per unit or \$20,000 for the year

Non-manufacturing costs

Variable \$10¢ per unit

\$100,000

ILLUSTRATION 24-9

Data for Seasonality Example

Sales for four quarters and the year (projected and actual) were as follows.

		Percent of Sales
1st Quarter	\$ 20,000	20%
2nd Quarter	5,000	5
3rd Quarter	10,000	10
4th Quarter	65,000	_65
Total for the year	\$100,000	100%

ILLUSTRATION 24-10

Sales Data for Seasonality Example

Under the present accounting framework, the income statements for the quarters might be as shown in Illustration 24-11.

Salaa	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	Year \$100,000
Sales	\$20,000	\$ 5,000	\$10,000	\$65,000	\$100,000
Manufacturing costs	(0.000)	(=00)	(4.000)	(0. =0.0)	(10.000)
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed ^a	(4,000)	_(1,000)	_(2,000)	(13,000)	(20,000)
	14,000	3,500	7,000	45,500	70,000
Non-manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed ^b	(7,500)	_(7,500)	(7,500)	_(7,500)	(30,000)
Net income	\$ 4,500	\$(4,500)	\$ (1,500)	\$31,500	\$ 30,000

ILLUSTRATION 24-11

Interim Net Income for Seasonal Business— Discrete Approach

An investor who uses the first quarter's results might be misled. If the first quarter's earnings are \$4,500, should this figure be multiplied by four to predict annual earnings of \$18,000? Or, if first-quarter sales of \$20,000 are 20 percent of the predicted sales for the year, would the net income for the year be $$22,500 ($4,500 \times 5)$? Both figures are obviously wrong. And, after the second quarter's results occur, the investor may become even more confused.

The problem with the conventional approach is that the fixed non-manufacturing costs are not charged in proportion to sales. Some enterprises have adopted a way of avoiding this problem by making all fixed non-manufacturing costs follow the sales pattern, as shown in Illustration 24-12.

	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	Year
Sales	\$20,000	\$ 5,000	\$10,000	\$65,000	\$100,000
Manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed	_(4,000)	_(1,000)	(2,000)	(13,000)	_(20,000)
	14,000	3,500	7,000	45,500	70,000
Non-manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed	(6,000)	(1,500)	(3,000)	(19,500)	(30,000)
Net income	\$ 6,000	\$ 1,500	\$ 3,000	\$19,500	\$ 30,000

ILLUSTRATION 24-12 Interim Net Income for

Interim Net Income for Seasonal Business— Integral Approach

^aThe fixed manufacturing costs are inventoried, so that equal amounts of fixed costs do not appear during each quarter. ^bThe fixed non-manufacturing costs are not inventoried, so equal amounts of fixed costs appear during each quarter.

This approach solves some of the problems of interim reporting: Sales in the first quarter are 20 percent of total sales for the year, and net income in the first quarter is 20 percent of total income. In this case, as in the previous example, the investor cannot rely on multiplying any given quarter by four but can use comparative data or rely on some estimate of sales in relation to income for a given period.

The greater the degree of seasonality experienced by a company, the greater the possibility of distortion. Because there are no definitive guidelines for handling such items as the fixed non-manufacturing costs, variability in income can be substantial. To alleviate this problem, IFRS requires companies subject to material seasonal variations to disclose the seasonal nature of their business and consider supplementing their interim reports with information for 12-month periods ended at the interim date for the current and preceding years.

The two illustrations highlight the difference between the **discrete** and **integral** approaches. Illustration 24-11 (page 1269) represents the discrete approach, in which the fixed non-manufacturing expenses are expensed as incurred. Illustration 24-12 (page 1269) shows the integral approach, in which expenses are charged to expense on the basis of some measure of activity.

Continuing Controversy. While IFRS has developed some rules for interim reporting, additional issues remain. For example, there is continuing debate on the independent auditor's involvement in interim reports. Many auditors are reluctant to express an opinion on interim financial information, arguing that the data are too tentative and subjective. On the other hand, more people are advocating some examination of interim reports. Generally, auditors perform a review of interim financial information. Such a review, which is much more limited in its procedures than the annual audit, provides some assurance that the interim information appears to be in accord with IFRS.⁷

Analysts and investors want financial information as soon as possible, before it is old news. We may not be far from a continuous database system in which corporate financial records can be accessed online. Investors might be able to access a company's financial records whenever they wish and put the information in the format they need. Thus, they could learn about sales slippage, cost increases, or earnings changes as they happen, rather than waiting until after the quarter has ended.

A steady stream of information from the company to the investor could be very positive because it might alleviate management's continual concern with short-run interim numbers. Today, many contend that management is too oriented to the short-term. The truth of this statement is echoed by the words of the president of a large company who decided to retire early: "I wanted to look forward to a year made up of four seasons rather than four quarters."

AUDITOR'S AND MANAGEMENT'S REPORTS

Auditor's Report

LEARNING OBJECTIVE 5

Identify the major disclosures in the auditor's report.

Another important source of information that is often overlooked is the **auditor's report**. An **auditor** is an accounting professional who conducts an independent examination of a company's accounting data.

⁷These are referred to as review engagements, which are less extensive than an audit. See International Standards on Review Engagements (ISRE) 2410, "Review of Interim Financial Information Performed by the Independent Auditor of the Entity," *Handbook of International Quality Control, Auditing, Review, Other Assurance, and Other Related Services Pronouncements* (April 2010).

If satisfied that the financial statements present the financial position, results of operations, and cash flows fairly in accordance with IFRS, the auditor expresses an **unmodified opinion**. An example is shown in Illustration 24-13.⁸

ILLUSTRATION 24-13 Auditor's Report

Wm Morrison Supermarkets plc

Independent auditors' report to the members of Wm Morrison Supermarkets plc

We have audited the financial statements of Wm Morrison Supermarkets plc for the 53 weeks ended 3 February 2013 set out on pages 60–108. The financial reporting framework that has been applied in the preparation of the Group financial statements is applicable law and International Financial Reporting Standards (IFRS) as adopted by the EU. The financial reporting framework that has been applied in the preparation of the Parent Company financial statements is applicable law and UK Accounting Standards (UK Generally Accepted Accounting Practice).

This report is made solely to the Company's members, as a body, in accordance with chapter 3 of part 16 of the Companies Act 2006. Our audit work has been undertaken so that we might state to the Company's members those matters we are required to state to them in an auditors' report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company and the Company's members, as a body, for our audit work, for this report, or for the opinions we have formed.

Respective responsibilities of directors and auditors

As explained more fully in the Directors' Responsibilities Statement set out on page 58, the Directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view. Our responsibility is to audit the financial statements in accordance with applicable law and International Standards on Auditing (UK and Ireland). Those standards require us to comply with the Auditing Practices Board's (APB) Ethical Standards for Auditors.

Scope of the audit of the financial statements

A description of the scope of an audit of financial statements is provided on the APB's website at www.frc.org.uk/apb/scope/UKP

Opinion on financial statements

In our opinion:

- The financial statements give a true and fair view of the state of the Group's and of the Parent Company's affairs as at 3 February 2013 and of the Group's profit for the year then ended;
- The Group financial statements have been properly prepared in accordance with IFRS as adopted by the EU;
- The Parent Company financial statements have been properly prepared in accordance with UK Generally Accepted Accounting Practice; and
- The financial statements have been prepared in accordance with the requirements of the Companies Act 2006; and, as regards the Group financial statements, Article 4 of the IAS Regulation.

Opinion on other matters prescribed by the companies Act 2006 In our opinion:

- The part of the Directors' remuneration report to be audited has been properly prepared in accordance with the Companies Act 2006; and
- The information given in the Directors' report for the financial year for which the financial statements are prepared is consistent with the financial statements.

Matters on which we are required to report by exception

We have nothing to report in respect of the following:

Under the Companies Act 2006 we are required to report to you if, in our opinion:

- Adequate accounting records have not been kept by the Parent Company, or returns adequate for our audit have not been received from branches not visited by us; or
- The Parent Company financial statements and the part of the Directors' remuneration report to be audited are not in agreement with the accounting records and returns; or
- Certain disclosures of Directors' remuneration specified by law are not made; or
- We have not received all the information and explanations we require for our audit.

Under the Listing Rules we are required to review:

- The Directors' statement, set out on page 56, in relation to going concern; and
- The part of the Corporate governance statement relating to the Company's compliance with the nine provisions of the June 2008 Combined Code specified for our review.
- Certain elements of the report to shareholders by the Board on directors' remuneration.

Adrian Stone

(Senior Statutory Auditor) for and on behalf of KPMG Audit Plc, Statutory Auditor

Chartered Accountants 1 The Embankment Neville Street Leeds L51 4DW 10 March 2013

⁸This auditor's report and the following discussion follow international auditing standards. See International Standard on Auditing 700, "Forming an Opinion and Reporting on Financial Statements" and International Standard on Auditing 705, "Modifications to the Opinion in the Independent Auditor's Report," *Handbook of International Quality Control, Auditing, Review, Other Assurance, and Other Related Services Pronouncements* (New York: International Federation of Accountants (IFAC), April 2010). They are also similar to the specifications for U.S. auditors contained in "Reports on Audited Financial Statements," *Statement on Auditing Standards No. 58* (New York: AICPA, 1988). U.S. standards differ due to the required audit opinion on the company's internal controls, as required by the U.S. SEC.

In preparing the report, the auditor follows these reporting standards.

- **1.** The report states whether the financial statements are in accordance with the financial reporting framework (IFRS) and describes the responsibilities of the directors and auditors with respect to the financial statements.
- **2.** The report identifies those circumstances in which the company has not consistently observed such policies in the current period in relation to the preceding period.
- **3.** Users are to regard the informative disclosures in the financial statements as reasonably adequate unless the report states otherwise.
- **4.** The report contains either an expression of opinion regarding the financial statements taken as a whole or an assertion to the effect that an opinion cannot be expressed. When the auditor cannot express an overall opinion, the report should state the reasons. In all cases where an auditor's name is associated with financial statements, the report should contain a clear-cut indication of the character of the auditor's examination, if any, and the degree of responsibility being taken.

In most cases, the auditor issues a standard unmodified or clean opinion, as shown in Illustration 24-13. That is, the auditor expresses the opinion that the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the entity in conformity with accepted accounting principles.

Certain circumstances, although they do not affect the auditor's unmodified opinion, may require the auditor to add an explanatory paragraph to the audit report. Some of the more important circumstances are as follows.

- **1.** *Going concern.* The auditor must evaluate whether there is substantial doubt about the entity's **ability to continue as a going concern** for a reasonable period of time, taking into consideration all available information about the future. (Generally, the future is at least, but not limited to, 12 months from the end of the reporting period.) If substantial doubt exists about the company continuing as a going concern, the auditor adds to the report an explanatory note describing the potential problem.
- **2.** Lack of consistency. If a company has changed accounting policies or the method of their application in a way that has a material effect on the comparability of its financial statements, the auditor should refer to the change in an explanatory paragraph of the report. Such an explanatory paragraph should identify the nature of the change and refer readers to the note in the financial statements that discusses the change in detail. The auditor's concurrence with a change is implicit unless the auditor takes exception to the change in expressing an opinion as to fair presentation in conformity with accepted accounting principles (IFRS).
- **3.** *Emphasis of a matter.* The auditor may wish to emphasize a matter regarding the financial statements but nevertheless intends to express an unqualified opinion. For example, the auditor may wish to emphasize that the entity is a component of a larger business enterprise or that it has had significant transactions with related parties. The auditor presents such explanatory information in a separate paragraph of the report.

In some situations, however, the auditor expresses a **modified opinion**. A modified opinion can be either (1) a **qualified** opinion, (2) an **adverse** opinion, or (3) a **disclaimed** opinion.

A **qualified opinion** contains an exception to the standard opinion. Ordinarily, the exception is not of sufficient magnitude to invalidate the statements as a whole; if it were, an adverse opinion would be rendered. The usual circumstances in which the auditor may deviate from the standard unqualified report on financial statements are as follows.

- **1.** The scope of the examination is limited or affected by conditions or restrictions.
- **2.** The statements do not fairly present financial position or results of operations because of:
 - (a) Lack of conformity with accepted accounting principles and standards.
 - (b) Inadequate disclosure.

If confronted with one of the situations noted above, the auditor must offer a qualified opinion. A qualified opinion states that, except for the effects of the matter to which the qualification relates, the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows in conformity with accepted accounting principles.

Illustration 24-14 shows an example of an auditor's report with a modified opinion—in this case, a qualified opinion of **Helio Company** (USA). The auditor modified the opinion because the company used an accounting policy at variance with accepted accounting principles.

Helio Company

Independent Auditor's Report

(Same first and second paragraphs as the standard report)

Helio Company has excluded, from property and debt in the accompanying balance sheets, certain lease obligations that, in our opinion, should be capitalized in order to conform with accepted accounting principles. If these lease obligations were capitalized, property would be increased by \$1,500,000 and \$1,300,000, long-term debt by \$1,400,000 and \$1,200,000, and retained earnings by \$100,000 and \$50,000 as of December 31, in the current and prior year, respectively. Additionally, net income would be decreased by \$40,000 and \$30,000 and earnings per share would be decreased by \$.06 and \$.04, respectively, for the years then ended.

In our opinion, except for the effects of not capitalizing certain lease obligations as discussed in the preceding paragraph, the financial statements referred to above present fairly, in all material respects, the financial position of Helio Company, and the results of its operations and its cash flows for the years then ended in conformity with accepted accounting principles.

An adverse opinion is required in any report in which the exceptions to fair presentation are so material that in the independent auditor's judgment, a qualified opinion is not justified. In such a case, the financial statements taken as a whole are not presented in accordance with IFRS. Adverse opinions are rare because most companies change their accounting to conform with IFRS. Market regulators will not permit a company listed on an exchange to have an adverse opinion.

A **disclaimer of an opinion** is appropriate when the auditor has gathered so little information on the financial statements that no opinion can be expressed.

The audit report should provide useful information to the investor. One investment banker noted, "Probably the first item to check is the auditor's opinion to see whether or not it is a clean one—'in conformity with accepted accounting principles'—or is qualified in regard to differences between the auditor and company management in the accounting treatment of some major item, or in the outcome of some major litigation."

ILLUSTRATION 24-14

Auditor's Report with Qualified Opinion

What do the numbers mean?

HEART OF THE MATTER

Financial disclosure is one of a number of institutional features that contribute to healthy security markets. In fact, a recent study of disclosure and other mechanisms (such as civil lawsuits and criminal sanctions) found that good disclosure is the most important contributor to a vibrant market. The study, which compared disclosure and other legal and regulatory elements across 49 countries, found that countries with the best disclosure laws have the biggest securities markets.

Countries with more successful market environments also tend to have regulations that make it relatively easy for private investors to sue corporations that provide bad information. That is, while criminal sanctions can be effective in some circumstances, disclosure and other legal and regulatory elements encouraging good disclosure are the most important determinants of highly liquid and deep securities markets.

These findings hold for nations in all stages of economic development, with particular importance for nations that are in the early stages of securities regulation. In addition, countries with fewer market protections likely will benefit the most from adoption of international standards for market regulation and disclosure. The lesson: Disclosure is good for your market.

Wysocki, "Global Accounting Convergence and the Potential Adoption of IFRS by the U.S. (Part I): Conceptual Underpinnings and Economic Analysis," Accounting Horizons (September 2010).

Management's Reports

Management Commentary

LEARNING OBJECTIVE 6

Management commentary helps in the interpretation of the financial position, financial performance, and cash flows of a company. For example, a company like Delhaize Group (BEL) may present, outside the financial statements, a financial review by management that describes and explains the main features of the company's financial performance and financial position, and the principal uncertainties it faces. Such a report may include a review of:

- The main factors and influences determining financial performance, including changes in the environment in which the entity operates, the entity's response to those changes and their effect, and the company's policy for investment to maintain and enhance financial performance, including its dividend policy;
- The company's sources of funding and its targeted ratio of liabilities to equity;
 and
- The company's resources not recognized in the statement of financial position in accordance with IFRS.

Such commentary also provides an opportunity to understand management's objectives and its strategies for achieving those objectives. Users of financial reports, in their capacity as capital providers, routinely use the type of information provided in management commentary as a tool for evaluating an entity's prospects and its general risks, as well as the success of management's strategies for achieving its stated objectives.

For many companies, management commentary is already an important element of their communication with the capital markets, supplementing as well as complementing the financial statements. Management commentary encompasses reporting that is described in various jurisdictions as management's discussion and analysis (MD&A), operating and financial review (OFR), or management's report.

Illustration 24-15 presents an excerpt from the MD&A section of Lectra's (FRA) annual report.

Lectra

Management Discussion and Analysis (in part)

4. RISK FACTORS-MANAGEMENT OF RISKS

This chapter describes the main risks facing the company having regard to the specific characteristics of its business, its structure and organization. It further describes how the company manages and prevents these risks, depending on their nature.

Identification of Risks

For internal controls to be effective, the company needs to identify and assess the risks to which it is subject. These risks are identified by means of a continuous process of analyzing the Group's external environment together with the organizational changes rendered necessary by the evolving nature of its markets. This process is overseen by the Finance department and the Legal Affairs department, with input from all Group operating and corporate departments. The key risks that could prevent the Group from achieving its objectives are described below.

The key factor protecting the Group against risks is its business model, which comprises two types of revenue streams:

- revenues from new systems sales (new software licenses and CAD/CAM equipment, and related services), the company's growth driver;
- recurring revenues, consisting partly of recurring contracts (e.g., software evolution, CAD/CAM equipment maintenance, and online support contracts), and partly of other statistically recurring revenues generated by the installed base (sales of spare parts and consumables, per-call maintenance and support interventions). These recurring revenues are a key factor in the company's stability, acting as a cushion in periods of slow overall economic growth.

The gross profit generated by recurring revenues alone covers more than 75% of annual fixed overhead costs. In addition, the business model is geared to generating free cash flow in excess of net income—assuming utilization or receipt of the annual research tax credit and tax credit for encouraging competitiveness and jobs applicable in France—enabling the Group to finance its future growth out of its own cash, with a practically zero working capital requirement.

Finally, uncompromising ethics in conducting business and respect for each individual are part of the company's core values.

4.1. Macroeconomic Environment Risks

The solutions marketed by the Group represent a sometimes sizable investment for its customers. Decisions depend in part on the general macroeconomic environment and on the state of the sectors of activity in which the customers operate. They could scale back or defer their investment decisions when global economic growth slows or when a particular sector suffers a downturn or is in crisis. The Group is consequently exposed to the global economic cycle.

4.2. Economic and Operational Risks Specific to the Company's Business

Lectra designs, produces, and markets full-line technological solutions—comprising software, CAD/CAM equipment, and associated services—specifically designed for industries that use large volumes of fabrics, leather, technical textiles, and composite materials.

It addresses a broad array of major global markets, including fashion (apparel, accessories, and footwear), automotive (car seats and interiors, airbags), furniture and a wide variety of other industries, such as the aeronautical and marine industries, wind power, etc.

4.3. Market Risks

Because of its international presence, foreign exchange risk is the principal market risk to which the Group is exposed.

There is little significant exposure to interest rate risk at present.

It is Group policy to manage these risks conservatively, refraining from any form of speculation, by means of hedging instruments.

4.4. Customer Dependency Risks

Each year, revenues from new systems, accounting for 42% of total revenues in 2012, are generated by around 2,000 customers, and comprise both sales to new customers and extensions to or the renewal of existing customers' installed bases. Revenues from recurring contracts, accounting for around 34% of total revenues, are generated on almost 5,000 of Lectra's customers. Finally, sales of spare parts and consumables, which account for 23% of total revenues, are generated on a large proportion of the installed CAD/CAM equipment.

There is no material risk of dependence on any particular customer or group of customers, as no individual customer represented more than 6% of consolidated revenues in 2012, as was the case in previous years, and the company's 10 largest customers represented less than 20% of revenues combined, and the top 20 customers less than 25%.

Management's Discussion and Analysis

Underlying Concepts

The IASB Conceptual
Framework notes that
management knows
more about the company
than users and therefore
can increase the usefulness of financial information by identifying
significant transactions
that affect the company
and by explaining their
financial impact.

Some companies use the management commentary section of the annual report to disclose company efforts in the area of sustainability. An excerpt from the annual report of Marks and Spencer plc (GBR) is presented in Illustration 24-16.

ILLUSTRATION 24-16Sustainability Reporting

Marks and Spencer plc

Plan A

We aim to become the world's most sustainable retailer and Plan A, our eco and ethical programme, is at the very heart of how we do business. More than five years since launch, we continue to extend the influence of Plan A – engaging our employees, suppliers and customers.

Total Plan A commitments	Commitments achieved	Commitments on plan	
180	139	31	

How we do business

The founders of M&S understood clearly the importance of 'doing the right thing' to create long-term value. We continue their tradition of responsible behavior through our comprehensive environmental and ethical programme, **Plan A**. To succeed over the long term businesses need to make connections with society and Plan A is our manifestation of that. It also makes sound economic, as well as moral sense.

How Plan A helps us respond

Plan A – our eco and ethical programme – sets us apart as a leader in the marketplace and helps us tackle the sustainability issues that face all major retailers. With key raw materials and natural resources under increasing pressure, we continued to develop a more sustainable supply chain, focusing on areas such as cotton and sustainable fishing. Our long-established strict sourcing standards meant M&S did not need to withdraw any products as a result of the supply chain issues.

In a challenging economic environment, Plan A also helps us to run a more efficient business, through reducing waste and energy use. We continued to share our experiences with suppliers – enabling them to reduce their own manufacturing costs and create a more sustainable future.

This year we launched new ways to engage our customers in Plan A, with exciting initiatives such as Shwopping and our Big Beach Clean-Up.

Additional reporting on sustainability is important because it indicates the company's social responsibility and can provide insights about potential obligations that are reported in the financial statements.

While there are no formal IFRS requirements for management commentary, the IASB has initiated a project that offers a non-binding framework and limited guidance on its application, which could be adapted to the legal and economic circumstances of individual jurisdictions. While the proposal is focused on publicly traded entities, to the extent that the framework is deemed applicable, it may be a useful tool for non-exchange traded entities, for example, privately held and state-owned enterprises.⁹

Management's Responsibilities for Financial Statements

Management is responsible for preparing the financial statements and establishing and maintaining an effective system of internal controls. The auditor provides an independent assessment of whether the financial statements are prepared in accordance with IFRS (see the audit opinion in Illustration 24-13 on page 1271). An example of the type of disclosure that public companies are now making is shown in Illustration 24-17.

⁹See http://www.ifrs.org/Current+Projects/IASB+Projects/Management+Commentary/Management+Commentary.htm. The proposal will not result in an IFRS. Accordingly, it would not be a requirement for an entity to comply with the framework for the preparation and presentation of management commentary as a condition for asserting compliance with IFRS.

Wm Morrison Supermarkets plc

Statement of Directors' responsibilities in respect of the Annual report and financial statements

The Directors are responsible for preparing the Annual report and the Group and Parent Company financial statements in accordance with applicable law and regulations.

Company law requires the Directors to prepare Group and Parent Company financial statements for each financial year. Under that law they are required to prepare the Group financial statements in accordance with IFRS as adopted by the EU and applicable law and have elected to prepare the Parent Company financial statements in accordance with UK Accounting Standards and applicable law (UK Generally Accepted Accounting Practice).

Under company law the Directors must not approve the financial statements unless they are satisfied that they give a true and fair view of the state of affairs of the Group and Parent Company and of their profit or loss for that period. In preparing each of the Group and Parent Company financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently:
- make judgements and estimates that are reasonable and prudent:
- for the Group financial statements, state whether they have been prepared in accordance with IFRS as adopted by the EU:
- for the Parent Company financial statements, state whether applicable UK Accounting Standards have been followed, subject to

- any material departures disclosed and explained in the Parent Company financial statements; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Group and the Parent Company will continue in business.

The Directors are responsible for keeping adequate accounting records that are sufficient to show and explain the Parent Company's transactions and disclose with reasonable accuracy at any time the financial positions of the Parent Company and enable them to ensure that its financial statements comply with the Companies Act 2006. They have general responsibility for taking such steps as are reasonably open to them to safeguard the assets of the Group and to prevent and detect fraud and other irregularities.

Under applicable law and regulations, the Directors are also responsible for preparing a Directors' report, Directors' remuneration report and Corporate governance statement that complies with that law and those regulations.

The Directors are responsible for the maintenance and integrity of the corporate and financial information included on the company's website. Legislation in the UK governing the preparation and dissemination of financial statements may differ from legislation in other jurisdictions.

Responsibility statement We confirm that to the best of our knowledge:

- the financial statements, prepared in accordance with the applicable set of accounting standards, give a true and fair review of the assets, liabilities, financial position and profit or loss of the Company and its subsidiaries included in the consolidation as a whole; and
- the Directors' report includes a fair review of the development of the business and the position of the Company and its

subsidiaries included in the consolidation taken as a whole, together with a description of the principal risks and uncertainties that they face.

By order of the Board 13 March 2013

ILLUSTRATION 24-17

Report on Management's Responsibilities

CURRENT REPORTING ISSUES

Reporting on Financial Forecasts and Projections

In recent years, the investing public's demand for more and better information has focused on disclosure of corporate expectations for the future. ¹⁰ These disclosures take one of two forms: ¹¹

T LEARNING OBJECTIVE Identify issues related to financial forecasts and projections.

• Financial forecasts. A financial forecast is a set of prospective financial statements that present, to the best of the responsible party's knowledge and belief, a company's expected financial position, results of operations, and cash flows. The

¹⁰Some areas in which companies are using financial information about the future are equipment lease-versus-buy analysis, analysis of a company's ability to successfully enter new markets, and examination of merger and acquisition opportunities. In addition, companies also prepare forecasts and projections for use by third parties in public offering documents (requiring financial forecasts), tax-oriented investments, and financial feasibility studies. Use of forward-looking data has been enhanced by the increased capability of computers to analyze, compare, and manipulate large quantities of data.

¹¹There is not a specific international standard in this area. In the United States, see "Financial Forecasts and Projections" and "Guide for Prospective Financial Information," *Codification of Statements on Standards for Attestation Engagements* (New York: AICPA 2006), paras. 3.04 and 3.05.

www.downloadslide.com

1278 Chapter 24 Presentation and Disclosure in Financial Reporting

responsible party bases a financial forecast on conditions it expects to exist and the course of action it expects to take.

• Financial projections. Financial projections are prospective financial statements that present, to the best of the responsible party's knowledge and belief, given one or more hypothetical assumptions, an entity's expected financial position, results of operations, and cash flows. The responsible party bases a financial projection on conditions it expects would exist and the course of action it expects would be taken, given one or more hypothetical assumptions.

The difference between a financial forecast and a financial projection is clear-cut: A forecast provides information on what is **expected** to happen, whereas a projection provides information on what **might** take place but is not necessarily expected to happen.

Whether companies should be required to provide financial forecasts is the subject of intensive discussion with journalists, corporate executives, market regulators, financial analysts, accountants, and others. Predictably, there are strong arguments on either side. Listed below are some of the arguments.

Arguments for requiring published forecasts:

- **1.** Investment decisions are based on future expectations. Therefore, information about the future facilitates better decisions.
- **2.** Companies already circulate forecasts informally. This situation should be regulated to ensure that the forecasts are available to all investors.
- Circumstances now change so rapidly that historical information is no longer adequate for prediction.

Arguments against requiring published forecasts:

- **1.** No one can foretell the future. Therefore, forecasts will inevitably be wrong. Worse, they may mislead if they convey an impression of precision about the future.
- **2.** Companies may strive only to meet their published forecasts, thereby failing to produce results that are in the shareholders' best interest.
- **3.** If forecasts prove inaccurate, there will be recriminations and probably legal actions. ¹²
- **4.** Disclosure of forecasts will be detrimental to organizations because forecasts will inform competitors (foreign and domestic), as well as investors.

Auditing standards establish guidelines for the preparation and presentation of financial forecasts and projections.¹³ They require accountants to provide (1) a summary of significant assumptions used in the forecast or projection and (2) guidelines for minimum presentation.

To encourage management to disclose prospective financial information, some market regulators have established a **safe harbor rule**. It provides protection to a company that presents an erroneous forecast, as long as the company prepared the forecast on a reasonable basis and disclosed it in good faith. ¹⁴ However, many companies note that the

¹²The issue is serious. Over a recent three-year period, 8 percent of the companies on the New York Stock Exchange (NYSE) were sued because of an alleged lack of financial disclosure. Companies complain that they are subject to lawsuits whenever the share price drops. And as one executive noted, "You can even be sued if the share price goes up—because you did not disclose the good news fast enough."

¹³Op cit., par. 1.02.

¹⁴For example, the U.S. SEC Issued "Safe-Harbor Rule for Projections," *Release No. 5993* (Washington: SEC, 1979). The U.S. Private Securities Litigation Reform Act of 1995 recognizes that some information that is useful to investors is inherently subject to less certainty or reliability than other information. By providing safe harbor for forward-looking statements, this should facilitate access to this information by investors.

safe harbor rule does not work in practice, since it does not cover oral statements, nor has it kept them from investor lawsuits.

What do the numbers mean?

GLOBAL FORECASTS

Great Britain permits financial forecasts, and the results have been fairly successful. Some significant differences do exist between the English and other business and legal environments. The British system, for example, does not permit litigation on forecasted information, and the solicitor (lawyer) is not permitted to work on a contingent-fee basis. A typical British forecast adapted from a construction company's report to support a public offering of shares is as follows.

Profits have grown substantially over the past 10 years and directors are confident of being able to continue this expansion. . . . While the rate of expansion will be dependent on the level of economic activity in Ireland and England, the group is well structured to avail itself of opportunities as they arise, particularly in the field of property development, which is expected to play an increasingly important role in the group's future expansion.

Profits before taxation for the half year ended 30th June were 402,000 pounds. On the basis of trading experiences since that date and the present level of sales and completions, the directors expect that in the absence of unforeseen circumstances, the group's profits before taxation for the year to 31st December will be not less than 960,000 pounds.

No dividends will be paid in respect of the current year. In a full financial year, on the basis of above forecasts (not including full year profits) it would be the intention of the board, assuming current rates of tax, to recommend dividends totaling 40% (of after-tax profits), which will be payable in the next two years.

A general narrative-type forecast might appear as follows.

On the basis of promotions planned by the company for the second half of the fiscal year, net earnings for that period are expected to be approximately the same as those for the first half of the fiscal year, with net earnings for the third quarter expected to make the predominant contribution to net earnings for the second half of the year.

As indicated, the general version is much less specific in its forecasted information.

conducive to quality forecasting. What do you think? As an investor, would you prefer the more specific forecast?

But such differences probably could be overcome if influential interests cooperated to produce an atmosphere

Source: See "A Case for Forecasting—The British Have Tried It and Find That It Works," World (New York: Peat, Marwick, Mitchell & Co., Autumn 1978), pp. 10–13. In a recent survey, U.K. companies remain stubbornly backward-looking. Just 5 percent of FTSE 100 companies address the future of the business in their discussion and analysis. See PricewaterhouseCoopers, "Guide to Forward-looking Information: Don't Fear the Future" (2006).

Questions of Liability

What happens if a company does not meet its forecasts? Can the company and the auditor be sued? If a company, for example, projects an earnings increase of 15 percent and achieves only 5 percent, should shareholders be permitted to have some judicial recourse against the company?

One court case involving Monsanto Chemical Corporation (USA) set a precedent. In this case, Monsanto predicted that sales would increase 8 to 9 percent and that earnings would rise 4 to 5 percent. In the last part of the year, the demand for Monsanto's products dropped as a result of a business turndown. Instead of increasing, the company's earnings declined. Investors sued the company because the projected earnings figure was erroneous, but a judge dismissed the suit because the forecasts were the best estimates of qualified people whose intents were honest.

As indicated earlier, safe harbor rules are intended to protect companies that provide good-faith projections. However, much concern exists as to how market regulators and the courts will interpret such terms as "good faith" and "reasonable assumptions" when erroneous forecasts mislead users of this information.

Internet Financial Reporting

Most companies now use the power and reach of the Internet to provide more useful information to financial statement readers. All large companies have Internet sites, and a large proportion of companies' websites contain links to their financial statements and other disclosures. The popularity of such reporting is not surprising as companies can reduce the costs of printing and disseminating paper reports with the use of Internet reporting.

Does Internet financial reporting improve the usefulness of a company's financial reports? Yes, in several ways. First, dissemination of reports via the Web allows firms to communicate more easily and quickly with users than do traditional paper reports. In addition, Internet reporting allows users to take advantage of tools such as search engines and hyperlinks to quickly find information about the firm and, sometimes, to download the information for analysis, perhaps in computer spreadsheets. Finally, Internet reporting can help make financial reports more relevant by allowing companies to report expanded disaggregated data and more timely data than is possible through paper-based reporting. For example, some companies voluntarily report weekly sales data and segment operating data on their websites.

Given the widespread use of the Internet by investors and creditors, it is not surprising that organizations are developing new technologies and standards to further enable Internet financial reporting. An example is the increasing use of Extensible Business Reporting Language (XBRL). XBRL is a computer language adapted from the code of the Internet. It "tags" accounting data to correspond to financial reporting items that are reported in the statement of financial position, income statement, and the cash flow statement. Once tagged, any company's XBRL data can be easily processed using spreadsheets and other computer programs. In fact, XBRL is a global language with common tags across countries. As more companies prepare their financial reports using XBRL, users will be able to easily search a company's reports, extract and analyze data, and perform financial comparisons within industries and across countries. 15

Fraudulent Financial Reporting

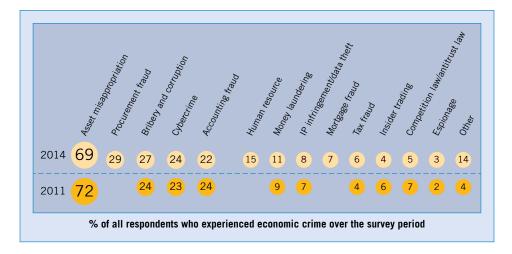

LEARNING OBJECTIVE 18

Describe the profession's response to fraudulent financial reporting

Economic crime is on the rise around the world. A recent global survey of over 3,000 executives from 54 countries documented the types of economic crimes, as shown in Illustration 24-18.¹⁶

ILLUSTRATION 24-18 Types of Economic Crime

¹⁵See www.sec.gov/rules/final/2009/33-9002.pdf and C. Twarowski, "Financial Data 'on Steroids'," Washington Post (August 19, 2008), p. D01. See also www.xbrl.org/us/us/BusinessCaseForXBRL.pdf for additional information on XBRL.

¹⁶PricewaterhouseCoopers, The Global Economic Crime Survey: Economic Crime in a Downturn (2014).

As indicated, a wide range of economic crimes are reported. Unfortunately, for the top three areas, the trend is not good. As shown in Illustration 24-19, there has been a steady upward trend of economic crime.

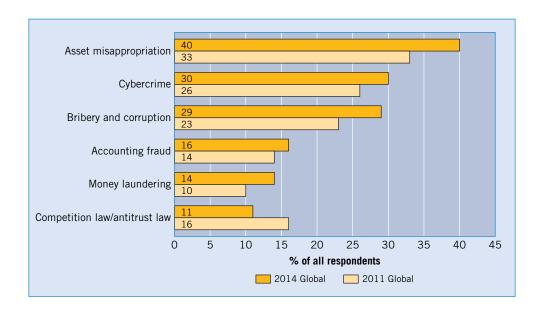

ILLUSTRATION 24-19 Trends in Reported Frauds

Important and troubling, note that accounting frauds have also increased since 2011.

Fraudulent financial reporting is defined as "intentional or reckless conduct, whether act or omission, that results in materially misleading financial statements." Fraudulent reporting can involve gross and deliberate distortion of corporate records (such as inventory count tags), or misapplication of accounting policies (failure to disclose material transactions). The frauds reported above and recent events involving such well-known companies as Parmalat (ITA), Mahindra Satyam (IND), and Société Générale (FRA) indicate that more must be done to address this issue.

Causes of Fraudulent Financial Reporting

Fraudulent financial reporting usually occurs because of conditions in a company's internal or external environment. Influences in the **internal environment** relate to poor internal control systems, management's poor attitude toward ethics, or perhaps a company's liquidity or profitability. Those in the **external environment** may relate to industry conditions, overall business environment, or legal and regulatory considerations.

General incentives for fraudulent financial reporting vary. Common ones are the desire to obtain a higher share price, avoid default on a loan covenant, or make a personal gain of some type (additional compensation, promotion). Situational pressures on the company or an individual manager also may lead to fraudulent financial reporting. Examples of these situational pressures include the following.

• Sudden decreases in revenue or market share for a single company or an entire industry.

¹⁷"Report of the National Commission on Fraudulent Financial Reporting" (Washington, D.C., 1987), p. 2. Unintentional errors as well as corporate improprieties (such as tax fraud, employee embezzlements, and so on) that do not cause the financial statements to be misleading are excluded from the definition of fraudulent financial reporting.

- Unrealistic budget pressures may occur when headquarters arbitrarily determines
 profit objectives (particularly for short-term results) and budgets without taking
 actual conditions into account.
- *Financial pressure resulting from bonus plans* that depend on short-term economic performance. This pressure is particularly acute when the bonus is a significant component of the individual's total compensation.

Opportunities for fraudulent financial reporting are present in circumstances when the fraud is easy to commit and when detection is difficult. Frequently, these opportunities arise from:

- **1.** *The absence of a board of directors or audit committee* that vigilantly oversees the financial reporting process.
- **2.** Weak or non-existent internal accounting controls. This situation can occur, for example, when a company's revenue system is overloaded as a result of a rapid expansion of sales, an acquisition of a new division, or the entry into a new, unfamiliar line of business.
- **3.** *Unusual or complex transactions* such as the consolidation of two companies, the divestiture or closing of a specific operation, and the purchase and sale of derivative instruments.
- **4.** Accounting estimates requiring significant subjective judgment by company management, such as the allowance for loan losses and the estimated liability for warranty expense.
- **5.** *Ineffective internal audit staffs* resulting from inadequate staff size and severely limited audit scope.

A weak corporate ethical climate contributes to these situations. Opportunities for fraudulent financial reporting also increase dramatically when the accounting policies followed in reporting transactions are non-existent, evolving, or subject to varying interpretations. ¹⁸

As discussed earlier, auditing regulators have issued numerous auditing standards in response to concerns of the accounting profession, the media, and the public.¹⁹ For example, the recent standard on fraudulent financial reporting "raises the bar" on the performance of financial statement audits by explicitly requiring auditors to assess the risk of material financial misstatement due to fraud.²⁰

Criteria for Making Accounting and Reporting Choices

Throughout this textbook, we have stressed the need to provide information that is useful to predict the amounts, timing, and uncertainty of future cash flows. To achieve

¹⁸The discussion in this section is based on "Report of the National Commission on Fraudulent Financial Reporting," (2004), pp. 23–24. See also "2012 Report to the Nation on Occupational Fraud and Abuse, Association of Certified Fraud Examiners," http://www.acfe.com/uploadedFiles/ACFE_Website/Content/rttn/2012-report-to-nations.pdf, for fraudulent financial reporting causes and consequences.

¹⁹Because the profession believes that the role of the auditor is not well understood outside the profession, much attention has been focused on the expectation gap. The expectation gap is the gap between (1) the expectation of financial statement users concerning the level of assurance they believe the independent auditor provides, and (2) the assurance that the independent auditor actually does provide under generally accepted auditing standards.

²⁰See International Standard on Auditing 240, "The Auditor's Responsibilities Relating to Fraud in an Audit of Financial Statements," *Handbook of International Quality Control, Auditing, Review, Other Assurance, and Other Related Services Pronouncements* (April 2010).

this objective, companies must make judicious choices between alternative accounting concepts, methods, and means of disclosure. You are probably surprised by the large number of choices that exist among acceptable alternatives.

You should recognize, however, as indicated in Chapter 1, that accounting is greatly influenced by its environment. It does not exist in a vacuum. Therefore, it is unrealistic to assume that the profession can entirely eliminate alternative presentations of certain transactions and events. Nevertheless, we are hopeful that the profession, by adhering to the Conceptual Framework, will be able to focus on the needs of financial statement users and eliminate diversity where appropriate. The IASB's focus on principles-based standards are directed at these very issues. It seeks to develop guidance that will result in accounting and financial reporting that reflects the economic substance of the transactions, not the desired financial result of management. The profession must continue its efforts to develop a sound foundation upon which to build financial standards and practice. As Aristotle said, "The correct beginning is more than half the whole."

Underlying Concepts

The IASB statements on the objective of financial reporting, elements of financial statements, and qualitative characteristics of accounting information are important steps in the right direction.

Evolving Issue

DISCLOSURE OVERLOAD?

As we discussed in Chapter 1 and throughout the textbook, IFRS is gaining popularity around the world. The U.S. Securities and Exchange Commission continues to evaluate whether U.S. publicly traded companies will be required or given the option to adopt IFRS. There is some debate on U.S. readiness to make the switch. For example, there are several areas in which the FASB and the IASB must iron out a number of technical accounting issues before they reach a substantially converged set of accounting standards. Here is a list of six important areas yet to be converged.

- **1.** *Error correction.* According to *IAS 8*, it is not always necessary to retrospectively restate financial results when a company corrects errors, especially if the adjustment is impractical or too costly. U.S. GAAP, on the other hand, requires restatements in many error-correction cases.
- **2.** *Death of LIFO*. Last-in, first-out (LIFO) inventory accounting is prohibited under *IAS 2*, so any U.S. company using the method will have to abandon it (and the tax benefits) and move to another methodology. Although LIFO is permitted under U.S. GAAP, the repeal of LIFO for tax purposes is an ongoing debate.
- **3.** Reversal of impairments. IAS 36 permits companies to reverse impairment losses up to the amount of the original impairment when the reason for the charge decreases or no longer exists. However, U.S. GAAP bans reversal.
- **4.** *PP&E valuation. IAS* 16 allows for the revaluation of property, plant, and equipment, but the entire asset class

- must be revalued. That means a company can choose to use the revaluation model if the asset class's fair value can be measured reliably. But, it must choose to use one model or the other; both cannot be used at the same time. U.S. GAAP does not allow revaluation.
- **5.** *Component depreciation.* Also under *IAS 16*, companies must recognize and depreciate equipment components separately if the components can be physically separated from the asset and have different useful life spans. In practical terms, that means controllers will have to rely on the operations side of the business to help assess equipment components. U.S. GAAP allows component depreciation, but it is not required.
- **6.** *Development costs.* Based on *IAS 38*, companies are permitted to capitalize development costs as long as they meet six criteria. However, research costs are still expensed. U.S. GAAP requires that all R&D costs be charged to expense when incurred.

Some are already debating what will happen if and when U.S. companies adopt these new standards. It is almost certain that expanded disclosure will be needed to help users navigate accounting reports upon adoption of IFRS. As one accounting analyst remarked, "get ready for an avalanche of footnotes." Since using IFRS requires more judgment than using U.S. GAAP, two to three times as many footnotes will be needed to explain the rationales for accounting approaches. So while principles-based standards should promote more comparability, they require investors to dig into the disclosures in the footnotes.

GLOBAL ACCOUNTING INSIGHTS

DISCLOSURE

U.S. GAAP and IFRS disclosure requirements are similar in many regards. The IFRS addressing various disclosure issues are *IAS 24* ("Related Party Disclosures"), disclosure and recognition of post-statement of financial position events in

IAS 10 ("Events after the Balance Sheet Date"), segment reporting IFRS provisions in *IFRS 8* ("Operating Segments"), and interim reporting requirements in *IAS 34* ("Interim Financial Reporting").

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to disclosures.

Similarities

- U.S. GAAP and IFRS have similar standards on poststatement of financial position (subsequent) events. That is, under both sets of standards, events that occurred after the statement of financial position date, and which provide additional evidence of conditions that existed at the statement of financial position date, are recognized in the financial statements.
- Like U.S. GAAP, IFRS requires that for transactions with related parties, companies disclose the amounts involved in a transaction; the amount, terms, and nature of the outstanding balances; and any doubtful amounts related to those outstanding balances for each major category of related parties.
- Following the recent issuance of IFRS 8, "Operating Segments," the requirements under U.S. GAAP and IFRS are very similar. That is, both standards use the management approach to identify reportable segments, and similar segment disclosures are required.
- Neither U.S. GAAP nor IFRS require interim reports. Rather, the U.S. SEC and securities exchanges outside the United States establish the rules. In the United States, interim reports generally are provided on a quarterly basis; outside the United States, six-month interim reports are common.

Differences

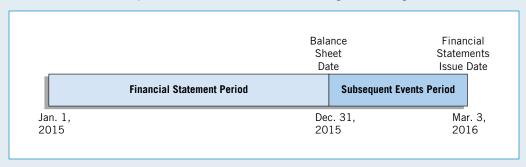

- Due to the narrower range of judgments allowed in more rules-based U.S. GAAP, note disclosures generally are less expansive under U.S. GAAP compared to IFRS.
- In the United States, there is a preference for one set of accepted accounting principles except in unusual situations.
 The FASB issues alternative guidance (within U.S. GAAP) for privately held companies with input from the Private Company Council. As indicated in the chapter, the IASB has developed a separate set of standards for small- and medium-sized entities (SMEs), which are designed to meet the needs of privately held companies.
- As indicated in the About the Numbers section below, U.S. GAAP uses the date when financial statements are "issued" when determining the reporting of subsequent events. Subsequent (or post-statement of financial position) events under IFRS are evaluated through the date that financial instruments are "authorized for issue." Also, for share dividends and splits in the subsequent period, U.S. GAAP adjusts but IFRS does not.
- U.S. GAAP has specific requirements to disclose the name of a related party; under IFRS, there is no specific requirement to disclose the name of the related party.
- Under U.S. GAAP, interim reports are prepared on an integral basis; IFRS generally follows the discrete approach.

About the Numbers

Post-Balance-Sheet Events (Subsequent Events)

Under U.S. GAAP (similar to IFRS), notes to the financial statements should explain any significant financial events that took place after the formal balance sheet (statement of financial

position) date, but before the statement is issued. These events are referred to as **post-balance-sheet events** or just plain **sub-sequent events**. The illustration below shows a time diagram of the subsequent events period under U.S. GAAP.

A period of several weeks and sometimes months may elapse after the end of the fiscal year but before the company issues financial statements. Various activities involved in closing the books for the period and issuing the statements all take time: taking and pricing the inventory, reconciling subsidiary ledgers with controlling accounts, preparing necessary adjusting entries, ensuring that all transactions for the period have been entered, obtaining an audit of the financial statements by independent public accountants, and printing the annual report. During the period between the balance sheet date and its distribution to shareholders and creditors, important transactions or other events may occur that materially affect the company's financial position or operating situation.

Many who read a balance sheet believe the balance sheet condition is constant, and they project it into the future. However, readers must be told if the company has experienced a significant change—e.g., sold one of its plants, acquired a subsidiary, suffered extraordinary losses, settled significant litigation, or experienced any other important event in the postbalance-sheet period. Without an explanation in a note, the reader might be misled and draw inappropriate conclusions.

Relative to IFRS, which defines the subsequent-event period to end on the date the statements are authorized, under U.S. GAAP, the subsequent-event period is longer. Therefore, financial statement users generally receive more information about subsequent events. However, U.S. GAAP and IFRS define recognized and non-recognized subsequent events similarly. The following illustration presents an example of subsequent events disclosure, excerpted from the annual report of Commercial Metals Company.

Commercial Metals Company

NOTE 22. SUBSEQUENT EVENTS (August 31 Fiscal Year End)

On October 7, 2011, The Company announced its decision to exit the business in CMCS by way of sale and/or closure. During 2011, the Company made operational improvements in the business but not to a level which would restore profitability for the long run. Additionally, delayed entry in the European Union, cyclical demand for tubular products, unsustainable losses and increased demand for capital resources resulted in the decision to exit the business. The operation will service any existing customer commitments and the Company expects to wind down operations and liquidate inventory over the next several months. In connection with this decision, the Company expects to incur severance and other closure costs between \$25 million and \$40 million in fiscal 2012.

Many subsequent events or developments do not require adjustment of or disclosure in the financial statements. Typically, these are non-accounting events or conditions that management normally communicates by other means. These events include legislation, product changes, management changes, strikes, unionization, marketing agreements, and loss of important customers.

Summary Observations

Because U.S. GAAP and IFRS are quite similar in their disclosure provisions, we provide some observations on the application of IFRS by foreign companies listing securities in the United States. Recently, the staff of the U.S. SEC reviewed the financial statements filed with the SEC by 100 foreign issuers, prepared for the first time using IFRS. The staff did not make any statements regarding the overall *quality* of the reports but did identify areas where additional questions might be asked. Here are some of the items that warranted staff comment:

 Revenue recognition, especially where a company provided generic policy disclosure but did not provide disclosure specific to its circumstances.

- **2.** Intangible assets and goodwill, including the factors that led a company to recognize them in a business combination.
- **3.** Companies' policies for identifying and evaluating impairment, the circumstances resulting in impairment recognition, or the circumstances surrounding impairment reversals of long-lived assets including goodwill.
- **4.** Leases, including their terms and the future minimum payments under operating and financial leases.
- **5.** Contingent liabilities, including their nature and estimated financial effects.
- **6.** The significant terms of financial instruments, including derivatives, their effects on future cash flow, and the recognition and measurement criteria the company applied in accounting for financial instruments.
- **7.** Additional issues related to income statement and cash flow statement formats and related notes.

On the Horizon

Hans Hoogervorst, chairman of the IASB, recently noted: "High quality financial information is the lifeblood of market-based economies. If the blood is of poor quality, then the body shuts down and the patient dies. It is the same with financial reporting. If investors cannot trust the numbers, then financial

markets stop working. For market-based economies, that is really bad news. It is an essential public good for market-based economies. . . . And in the past 10 years, most of the world's economies—developed and emerging—have embraced IFRSs." While the United States has yet to adopt IFRS,

there is no question that IFRS and U.S. GAAP are converging quickly.

We have provided expanded discussion in the *Global Accounting Insights* to help you understand the issues surrounding convergence as they relate to intermediate accounting. After reading these discussions, you should realize that IFRS and U.S. GAAP are very similar in many areas, with

differences in those areas revolving around some minor technical points. In other situations, the differences are major; for example, IFRS does not permit LIFO inventory accounting. Our hope is that the FASB and IASB can quickly complete their convergence efforts, resulting in a single set of high-quality accounting standards for use by companies around the world.

subsequent events, 1259 unmodified or clean

seasonality, 1268

opinion, 1272

XBRL, 1280

SUMMARY OF LEARNING OBJECTIVES

- Review the full disclosure principle and describe implementation problems. The full disclosure principle calls for financial reporting of any financial facts significant enough to influence the judgment of an informed reader. Implementing the full disclosure principle is difficult because the cost of disclosure can be substantial and the benefits difficult to assess. Disclosure requirements have increased because of (1) the growing complexity of the business environment, (2) the necessity for timely information, and (3) the use of accounting as a control and monitoring device.
- **Explain the use of notes in financial statement preparation.** Notes are the accountant's means of amplifying or explaining the items presented in the main body of the statements. Notes can explain in qualitative terms information pertinent to specific financial statement items and can provide supplementary data of a quantitative nature. Common note disclosures relate to such items as accounting policies; inventories; property, plant, and equipment; creditor claims; contingencies and commitments; and subsequent events.
- Discuss the disclosure requirements for related-party transactions, subsequent events, and major business segments. In related-party transactions, one party has the ability to significantly influence the actions of the other. As a result, IFRS requires disclosure of the relationship, a description of the transactions including amounts, provisions for doubtful debts, and expenses recognized. For events after the reporting date, a company should disclose any transactions that materially affect its financial position or operating situation. Finally, aggregated figures hide much information about the composition of these consolidated figures. There is no way to tell from the consolidated data the extent to which the differing product lines contribute to the company's profitability, risk, and growth potential. As a result, the profession requires segment information in certain situations.
- Describe the accounting problems associated with interim reporting. Interim reports cover periods of less than one year. Two viewpoints exist regarding interim reports. The discrete approach holds that each interim period should be treated as a separate accounting period. The integral approach is that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year. IFRS requires use of the discrete approach.

Companies should use the same accounting policies for interim reports that they use for annual reports. A number of unique reporting problems develop related to the following items: (1) income taxes and (2) seasonality.

15 Identify the major disclosures in the auditor's report. The auditor expresses an unmodified or clean opinion if satisfied that the financial statements present the financial position, results of operations, and cash flows fairly in accordance

with IFRS. A qualified opinion contains an exception to the standard opinion; ordinarily, the exception is not of sufficient magnitude to invalidate the statements as a whole.

An adverse opinion is required when the exceptions to fair presentation are so material that a qualified opinion is not justified. A disclaimer of an opinion is appropriate when the auditor has so little information on the financial statements that no opinion can be expressed.

- **Understand management's responsibilities for financials.** Management commentary complements information reported in the financial statements. This commentary frequently discusses financial aspects of an enterprise's business, such as liquidity, capital resources, results of operations, important risks, and sustainability. Management's responsibility for the financial statements is often indicated in a letter to shareholders in the annual report.
- Identify issues related to financial forecasts and projections. Companies are permitted (not required) to include profit forecasts in their reports. To encourage management to disclose such information, market regulators have issued a safe harbor rule. The rule provides protection to a company that presents an erroneous forecast, as long as it prepared the projection on a reasonable basis and disclosed it in good faith. However, the safe harbor rule has not worked well in practice.
- Describe the profession's response to fraudulent financial reporting. Fraudulent financial reporting is intentional or reckless conduct, whether through act or omission, that results in materially misleading financial statements. Fraudulent financial reporting usually occurs because of poor internal control, management's poor attitude toward ethics, poor performance, and so on.

APPENDIX 24A

BASIC FINANCIAL STATEMENT ANALYSIS

What would be important to you in studying a company's financial statements? The answer depends on your particular interest—whether you are a creditor, shareholder, potential investor, manager, government agency, or labor leader. For example, **short-term creditors** such as banks are primarily interested in the ability of the firm to pay its currently maturing obligations. In that case, you would examine the current assets and their relation to short-term liabilities to evaluate the short-run solvency of the firm.

Bondholders, on the other hand, look more to long-term indicators, such as the enterprise's capital structure, past and projected earnings, and changes in financial position. **Shareholders**, present or prospective, also are interested in many of the features considered by a long-term creditor. As a shareholder, you would focus on the earnings picture because changes in it greatly affect the market price of your investment. You also would be concerned with the financial position of the company because it affects indirectly the stability of earnings.

The managers of a company are concerned about the composition of its capital structure and about the changes and trends in earnings. This financial information has a direct influence on the type, amount, and cost of external financing that the company can obtain. In addition, the company managers find financial information useful on a day-to-day operating basis in such areas as capital budgeting, breakeven analysis, variance analysis, gross margin analysis, and for internal control purposes.

PERSPECTIVE ON FINANCIAL STATEMENT ANALYSIS

Readers of financial statements can gather information by examining relationships between items on the statements and identifying trends in these relationships. The relationships are expressed numerically in ratios and percentages, and trends are identified through comparative analysis.

A problem with learning how to analyze statements is that the means may become an end in itself. Analysts could identify and calculate thousands of possible relationships and trends. But knowing only how to calculate ratios and trends without understanding how such information can be used accomplishes little. Therefore, a logical approach to financial statement analysis is necessary, consisting of the following steps.

Underlying Concepts

Because financial statements report on the past, they emphasize the qualitative characteristic of feedback value. This feedback value is useful because it can be used to better achieve the qualitative characteristic of predictive value.

- **1.** Know the questions for which you want to find answers. As indicated earlier, various groups have different types of interest in a company.
- **2.** Know the questions that particular ratios and comparisons are able to help answer. These will be discussed in this appendix.
- **3.** *Match* **1** *and* **2** *above*. By such a matching, the statement analysis will have a logical direction and purpose.

Several caveats must be mentioned. Financial statements report on the past. Thus, analysis of these data is an examination of the past. When using such information in a decision-making (future-oriented) process, analysts assume that the past is a reasonable basis for predicting the future. This is usually a reasonable approach, but its limitations should be recognized.

Also, ratio and trend analyses will help identify a company's present strengths and weaknesses. They may serve as "red flags" indicating problem areas. In many cases, however, such analyses will not reveal why things are as they are. Finding answers about "why" usually requires an in-depth analysis and an awareness of many factors about a company that are not reported in the financial statements.

Another caveat is that a single ratio by itself is not likely to be very useful. For example, analysts may generally view a current ratio of 2 to 1 (current assets are twice current liabilities) as satisfactory. However, if the industry average is 3 to 1, such a conclusion may be invalid. Even given this industry average, you may conclude that the particular company is doing well if you know the previous year's ratio was 1.5 to 1. Consequently, to derive meaning from ratios, analysts need some standard against which to compare them. Such a standard may come from industry averages, past years' amounts, a particular competitor, or planned levels.

Finally, awareness of the limitations of accounting numbers used in an analysis is important. We will discuss some of these limitations and their consequences later in this appendix.

RATIO ANALYSIS

LEARNING OBJECTIVE 10

Identify major analytic ratios and describe their calculation.

In analyzing financial statement data, analysts use various devices to bring out the comparative and relative significance of the financial information presented. These devices include ratio analysis, comparative analysis, percentage analysis, and examination of related data. No one device is more useful than another. Every situation is different, and analysts often obtain the needed answers only upon

close examination of the interrelationships among all the data provided. Ratio analysis is the starting point. Ratios can be classified as follows.

MAJOR TYPES OF RATIOS

LIQUIDITY RATIOS. Measures of the company's short-run ability to pay its maturing obligations.

ACTIVITY RATIOS. Measures of how effectively the company is using the assets employed.

PROFITABILITY RATIOS. Measures of the degree of success or failure of a given company or division for a given period of time.

COVERAGE RATIOS. Measures of the degree of protection for long-term creditors and investors.²¹

We have integrated discussions and illustrations about the computation and use of these financial ratios throughout this textbook. Illustration 24A-1 summarizes all of the ratios presented in the textbook and identifies the specific chapters that presented that material.

SUMMARY OF RATIOS PRESENTED IN EARLIER CHAPTERS Ratio Reference Formula for Computation I. Liquidity Current assets 1. Current ratio Chapter 13, p. 626 Current liabilities Cash, short-term investments, 2. Quick or acid-test and net receivables Chapter 13, p. 627 ratio Current liabilities Net cash provided by 3. Current cash debt operating activities Chapter 5, p. 202 coverage Average current liabilities II. Activity Net sales 4. Accounts receivable Chapter 7, p. 322 turnover Average trade receivables (net) Cost of goods sold Chapter 9, p. 421 5. Inventory turnover Average inventory Net sales 6. Asset turnover Chapter 11, p. 518 Average total assets III. Profitability Net income 7. Profit margin Chapter 11, p. 518 on sales Net sales Net income 8. Return on Chapter 11, p. 518 assets Average total assets 9. Return on ordinary Net income minus preference dividends Chapter 15, p. 728 share capital-Average shareholders' equity-ordinary equity

ILLUSTRATION 24A-1 Summary of Financial Ratios

²¹Some analysts use other terms to categorize these ratios. For example, liquidity ratios are sometimes referred to as *solvency* ratios; activity ratios as *turnover* or *efficiency* ratios; and coverage ratios as *leverage* or *capital structure* ratios.

ILLUSTRATION 24A-1 (Continued)

Ratio	Formula for Computation	Reference
10. Earnings per share	Net income minus preference dividends Weighted-average number of	Chapter 16, p. 771
11. Payout ratio	shares outstanding Cash dividends Net income	Chapter 15, p. 728
IV. Coverage		
12. Debt to assets ratio	Total liabilities Total assets	Chapter 14, p. 681
13. Times interest earned	Income before interest expense and taxes	Chapter 14, p. 681
earneu	Interest expense	, ,,
14. Cash debt coverage	Net cash provided by operating activities	Chapter 5, p. 203
	Average total liabilities	,
15. Book value per share	Shareholders' equity—ordinary	Chapter 15, p. 729
per snare	Outstanding shares	

You can find additional coverage of these ratios, accompanied by assignment material, at the book's companion website, at **www.wiley.com/college/kieso**. This supplemental coverage takes the form of a comprehensive case adapted from the annual report of a large international chemical company that we have disguised under the name of Anetek Chemical Corporation.

Limitations of Ratio Analysis

LEARNING OBJECTIVE 11

Explain the limitations of ratio analysis.

The reader of financial statements must understand the basic limitations associated with ratio analysis. As analytical tools, ratios are attractive because they are simple and convenient. But too frequently decision-makers base their decisions on only these simple computations. The ratios are only as good as the data upon which they are based and the information with which they are compared.

One important limitation of ratios is that they generally are **based on historical cost**, **which can lead to distortions in measuring performance**. Inaccurate assessments of the enterprise's financial condition and performance can result from failing to incorporate fair value information.

Also, investors must remember that where estimated items (such as depreciation and amortization) are significant, income ratios lose some of their credibility. For example, income recognized before the termination of a company's life is an approximation. In analyzing the income statement, users should be aware of the uncertainty surrounding the computation of net income. As one analyst aptly noted, "The physicist has long since conceded that the location of an electron is best expressed by a probability curve. Surely an abstraction like earnings per share is even more subject to the rules of probability and risk." 22

Probably the greatest limitation of ratio analysis is the **difficult problem of achieving comparability among firms in a given industry**. Achieving comparability requires that the analyst (1) identify basic differences in companies' accounting policies and procedures, and (2) adjust the balances to achieve comparability. Basic differences in accounting usually involve one of the following areas.

Underlying Concepts

Consistency and comparability are important concepts for financial statement analysis. If the principles and assumptions used to prepare the financial statements are continually changing, accurate assessments of a company's progress become difficult.

- **1.** Inventory valuation (FIFO, average-cost).
- **2.** Depreciation methods, particularly the use of straight-line versus accelerated depreciation.
- **3.** Capitalization versus expensing of certain costs.
- **4.** Capitalization of leases versus non-capitalization.
- **5.** Investments in ordinary shares carried under the equity method versus fair value.
- **6.** Differing treatments of postretirement benefit costs.
- **7.** Questionable practices of defining discontinued operations, impairments, and unusual items.

The use of these different alternatives can make a significant difference in the ratios computed. For example, at one time **Anheuser-Busch** (now **AB InBev** (BEL)) (USA) noted that if it had used a different inventory method, inventories would have increased approximately \$33,000,000. Such an increase would have a substantive impact on the current ratio. Several studies have analyzed the impact of different accounting methods on financial statement analysis. The differences in income that can develop are staggering in some cases. Investors must be aware of the potential pitfalls if they are to be able to make the proper adjustments.²³

Finally, analysts should recognize that a **substantial amount of important information** is not included in a company's financial statements. Events such as industry changes, management changes, competitors' actions, technological developments, government actions, and union activities are often critical to a company's successful operation. These events occur continuously, and information about them must come from careful analysis of financial reports in the media and other sources. Indeed, many argue in what is known as the **efficient-market hypothesis** that financial statements contain "no surprises" to those engaged in market activities. They contend that the effect of these events is known in the marketplace—and the price of the company's shares adjusts accordingly—well before the issuance of such reports.

COMPARATIVE ANALYSIS

Comparative analysis presents the same information for two or more different dates or periods, so that like items may be compared. Ratio analysis provides only a single snapshot, for one given point or period in time. In a comparative analysis, an investment analyst can concentrate on a given item and determine whether it appears to be growing or diminishing year by year and the proportion of such change to related items. Generally, companies present comparative financial statements. They typically include two years of statement of financial position information and three years of income statement information.

In addition, many companies include in their annual reports five- or 10-year summaries of pertinent data that permit readers to examine and analyze trends. As indicated in IFRS, "the presentation of comparative financial statements in annual and other reports enhances the usefulness of such reports and brings out more clearly the nature and trends of current changes affecting the enterprise." Illustration 24A-2 (page 1292) presents a five-year condensed statement, with additional supporting data, of Anetek Chemical Corporation.

²³See for example, Eugene A. Imhoff, Jr., Robert C. Lipe, and David W. Wright, "Operating Leases: Impact of Constructive Capitalization," *Accounting Horizons* (March 1991).

Condensed Comparative Financial Information

PERCENTAGE (COMMON-SIZE) ANALYSIS

LEARNING OBJECTIVE 13

Describe techniques of percentage analysis.

Analysts also use percentage analysis to help them evaluate and compare companies. Percentage analysis consists of reducing a series of related amounts to a series of percentages of a given base. For example, analysts frequently express all items in an income statement as a percentage of sales or sometimes as a percent-

age of cost of goods sold. They may analyze a statement of financial position on the basis of total assets. Percentage analysis facilitates comparison and is helpful in evaluating the relative size of items or the relative change in items. A conversion of absolute dollar amounts to percentages may also facilitate comparison between companies of different size.

Illustration 24A-3 shows a comparative analysis of the expense section of Anetek Chemical for the last two years.

	K CHEMICAL CO ONTAL COMPARAT (IN MILLIONS	IVE ANALYSIS	I	
Cost of sales	2015 \$1,000.0	2014 \$850.0	Difference \$150.0	% Change Inc. (Dec.) 17.6%
Depreciation and amortization	150.0	150.0	0	0
Selling and administrative expenses	225.0	150.0	75.0	50.0
Interest expense	50.0	25.0	25.0	100.0
Income taxes	100.0	75.0	25.0	33.3

ILLUSTRATION 24A-3 Horizontal Percentage Analysis

This approach, normally called **horizontal analysis**, indicates the proportionate change over a period of time. It is especially useful in evaluating trends because absolute changes are often deceiving.

Another comparative approach, called **vertical analysis**, is the proportional expression of each financial statement item in a given period to a base figure. For example, Anetek Chemical's income statement using this approach appears in Illustration 24A-4.

ANETEK CHEMICA Income S (IN MIL	TATEMENT	
	Amount	Percentage of Total Revenue
Net sales	\$1,600.0	96%
Other revenue	75.0	4
Total revenue	1,675.0	100
Less:		
Cost of sales	1,000.0	60
Depreciation and amortization	150.0	9
Selling and administrative expenses	225.0	13
Interest expense	50.0	3
Income taxes	100.0	6
Total expenses	1,525.0	91
Net income	\$ 150.0	9%

ILLUSTRATION 24A-4 Vertical Percentage Analysis

Vertical analysis is frequently called **common-size analysis** because it reduces all of the statement items to a "common size." That is, all of the elements within each statement are expressed in percentages of some common number and always add up to 100 percent. Common-size (percentage) analysis reveals the composition of each of the financial statements.

In the analysis of the statement of financial position, common-size analysis answers such questions as: What percentage of the capital structure is equity, current liabilities, and long-term debt? What is the mix of assets (percentage-wise) with which the company has chosen to conduct business? What percentage of current assets is in inventory, receivables, and so forth?

Common-size analysis of the income statement typically relates each item to sales. It is instructive to know what proportion of each sales dollar is absorbed by various costs and expenses incurred by the enterprise.

Analysts may use common-size statements to compare one company's statements from different years, to detect trends not evident from comparing absolute amounts. Also, common-size statements provide intercompany comparisons regardless of size because they recast financial statements into a comparable common-size format.

KEY TERMS

accounts receivable turnover, 1289 acid-test ratio, 1289 activity ratios, 1289 asset turnover, 1289 book value per share, 1290 cash debt coverage, 1290 common-size analysis, 1293 comparative analysis, 1291 coverage ratios, 1289 current cash debt coverage, 1289 current ratio, 1289 debt to assets ratio, 1290 earnings per share, 1290 horizontal analysis, 1293 inventory turnover, 1289 liquidity ratios, 1289 payout ratio, 1290 percentage analysis, 1292 profitability ratios, 1289 profit margin on sales, 1289 quick ratio, 1289 return on assets, 1289 return on ordinary share capital—equity, 1289 times interest earned, 1290 vertical analysis, 1293

SUMMARY OF LEARNING OBJECTIVES FOR APPENDIX 24A

- **Understand the approach to financial statement analysis.** Basic financial statement analysis involves examining relationships between items on the statements (ratio and percentage analysis) and identifying trends in these relationships (comparative analysis). Analysis is used to predict the future, but ratio analysis is limited because the data are from the past. Also, ratio analysis identifies present strengths and weaknesses of a company, but it may not reveal *why* they are as they are. Although single ratios are helpful, they are not conclusive. For maximum usefulness, analysts must compare them with industry averages, past years, planned amounts, and the like.
- Identify major analytic ratios and describe their calculation. Ratios are classified as liquidity ratios, activity ratios, profitability ratios, and coverage ratios. (1) Liquidity ratio analysis measures the short-run ability of a company to pay its currently maturing obligations. (2) Activity ratio analysis measures how effectively a company is using its assets. (3) Profitability ratio analysis measures the degree of success or failure of a company to generate revenues adequate to cover its costs of operation and provide a return to the owners. (4) Coverage ratio analysis measures the degree of protection afforded long-term creditors and investors.
- **Explain the limitations of ratio analysis.** Ratios are based on historical cost, which can lead to distortions in measuring performance. Also, where estimated items are significant, income ratios lose some of their credibility. In addition, comparability problems exist because companies use different accounting policies and procedures. Finally, analysts must recognize that a substantial amount of important information is not included in a company's financial statements.
- **Describe techniques of comparative analysis.** Companies present comparative data, which generally includes two years of statement of financial position information and three years of income statement information. In addition, many companies include in their annual reports five- to 10-year summaries of pertinent data that permit the reader to analyze trends.
- **Describe techniques of percentage analysis.** Percentage analysis consists of reducing a series of related amounts to a series of percentages of a given base. Analysts use two approaches. *Horizontal analysis* indicates the proportionate change in financial statement items over a period of time; such analysis is most helpful in evaluating trends. *Vertical analysis* (common-size analysis) is a proportional expression of each item on the financial statements in a given period to a base amount. It analyzes the composition of each of the financial statements from different years (a) to detect trends not evident from the comparison of absolute amounts and (b) to make intercompany comparisons of different-sized enterprises.

APPENDIX **24B**

FIRST-TIME ADOPTION OF IFRS

LEARNING OBJECTIVE 14

Describe the guidelines for first-time adoption of IFRS.

As discussed in Chapter 1, IFRS is growing in acceptance around the world. For example, recent statistics indicate 40 percent of the Global Fortune 500 companies use IFRS. And the chair of the IASB predicts that IFRS adoption will grow from more than 115 countries to nearly 150 countries in the near future.

When countries accept IFRS for use as accepted accounting policies, companies need guidance to ensure that their first IFRS financial statements contain high-quality information. Specifically, *IFRS 1* requires that information in a company's first IFRS statements (1) be transparent, (2) provide a suitable starting point, and (3) have a cost that does not exceed the benefits. **[12]**

The overriding principle in converting from national GAAP (e.g., U.S., Chinese, or Russian) to IFRS (the conversion process) is full retrospective application of all IFRS. Retrospective application—recasting prior financial statements on the basis of IFRS—provides financial statement users with comparable information. However, the IASB recognizes that full retrospective application may be difficult in some situations, particularly when information related to past periods is not readily available. In response, the IASB has established guidelines to ensure that financial statement users have high-quality comparable information while balancing the costs and benefits of providing comparable data.

GENERAL GUIDELINES

The objective of the conversion process is to present a set of IFRS financial statements as if the company always reported on IFRS. To achieve this objective, a company must:

- **1.** Identify the timing for its first IFRS statements.
- **2.** Prepare an opening statement of financial position at the date of transition to IFRS.
- **3.** Select accounting policies that comply with IFRS and apply these policies retrospectively.
- **4.** Consider whether to apply any optional exemptions and apply mandatory exceptions.
- **5.** Make extensive disclosure to explain the transition to IFRS.

Relevant Dates

Once a company decides to convert to IFRS, it must decide on the transition date and the reporting date. The **transition date** is the beginning of the earliest period for which full comparative IFRS information is presented. The **reporting date** is the closing statement of financial position date for the first IFRS financial statements.

To illustrate, assume that FirstChoice Company plans to provide its first IFRS statements for the year ended December 31, 2016. FirstChoice decides to present comparative information for one year only. Therefore, its date of transition to IFRS is January 1, 2015, and its reporting date is December 31, 2016. The timeline for first-time adoption is presented in Illustration 24B-1.

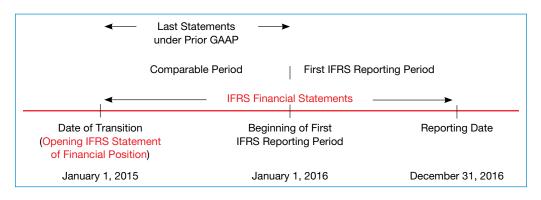

ILLUSTRATION 24B-1First-Time Adoption
Timeline

Illustration 24B-1 shows the following.

- 1. The opening IFRS statement of financial position for FirstChoice on January 1, 2015, serves as the starting point (date of transition) for the company's accounting under IFRS.
- 2. The first full IFRS statements are shown for FirstChoice for December 31, 2016. In other words, a minimum of two years of IFRS statements must be presented before a conversion to IFRS occurs. As a result, FirstChoice must prepare at least one year of comparative financial statements (for 2015) using IFRS.
- 3. FirstChoice presents financial statements in accordance with its national GAAP annually to December 31, 2015.

Following this conversion process, FirstChoice provides users of the financial statements with comparable IFRS statements for 2015 and 2016.

IMPLEMENTATION STEPS

Opening IFRS Statement of Financial Position

LEARNING OBJECTIVE 15

Describe the implementation steps for preparing the opening IFRS statement of financial position.

As indicated, to start the conversion process, companies first prepare an opening IFRS statement of financial position. This process involves the following steps.

- **1.** Include all assets and liabilities that IFRS requires.
- **2.** Exclude any assets and liabilities that IFRS does not permit.
- **3.** Classify all assets, liabilities, and equity in accordance with IFRS.
- **4.** Measure all assets and liabilities according to IFRS. [13]

Completing this process requires knowledge of both the prior GAAP used and IFRS (which you have obtained by your study of this textbook). To illustrate, the following facts for NewWorld Company are presented in Illustration 24B-2.

ILLUSTRATION 24B-2

Policy Changes— **Opening Statement** of Financial Position

OPENING STATEMENT OF FINANCIAL POSITION

Facts: NewWorld Company is preparing to adopt IFRS. It is preparing its opening statement of financial position on January 1, 2015. NewWorld identified the following accounting policy differences between IFRS and the national GAAP it currently uses. Under national GAAP, NewWorld:

- 1. Expenses development costs of €500,000 on a project that had met economic viability.
- 2. Does not make a provision for a warranty of €100,000 because the concept of a "constructive obligation" was not recognized.
- 3. Does not capitalize design fees of €150,000 into the cost of machinery that was put into service at the beginning of 2013 even though those costs were necessary to bring the asset to its working condition. The machinery has a 5-year life, no residual value, and NewWorld uses straight-line depreciation.

Question: How should NewWorld account for these items in its opening IFRS statement of financial position?

Solution:

- 1. IFRS allows the deferral of development costs in this case (see Chapter 12), and NewWorld should
- 2. IFRS requires recognition of a warranty provision (see Chapter 13), so a liability should be recorded.
- 3. Under IFRS, all costs incurred in bringing an asset to its place and condition for its intended use are capitalized into the cost of the asset.

Adjustments as a result of applying IFRS for the first time are generally recorded in retained earnings. NewWorld makes the following entries on January 1, 2015, to adjust the accounts to IFRS treatment.

Development Costs (or related intangible asset)	500,000	
Retained Earnings		500,000
(To capitalize development costs)		
Retained Earnings	100,000	
Warranty Liability		100,000
(To recognize warranty liability)		
Equipment	150,000	
Accumulated Depreciation - Equipment		60,000
Retained Earnings		90,000
(To recognize cost of machinery)		

In each of these situations, NewWorld adjusts retained earnings for the differences between IFRS and national GAAP to ensure that the opening statement of financial position is reported in accordance with IFRS.

After recording these adjustments, NewWorld prepares its opening IFRS statement of financial position. The January 1, 2015, statement of financial position is the starting point (the date of transition). Subsequently, in 2015 and 2016, NewWorld prepares IFRS financial statements internally. At December 31, 2016, it will formally adopt IFRS.²⁴

Exemptions from Retrospective Treatment

In some cases, adjustments relating to prior periods cannot be reasonably determined. In other cases, it is "impracticable" to provide comparable information because the cost of generating the information exceeds the benefits. The IASB therefore targeted exemptions from the general retrospective treatment where it appeared appropriate. Two types of exemptions are provided—required and elective.

16 LEARNING OBJECTIVE

Describe the exemptions to retrospective application in first-time adoption of IFRS.

Required Exemptions

The Board identified three areas in which companies are prohibited from retrospective application in first-time adoption of IFRS:

- 1. Estimates.
- Hedge accounting.
- **3.** Non-controlling interests.

These required exemptions are imposed because implementation of retrospective application in these areas generally requires companies to obtain information that may not be readily available. In these cases, companies may have to re-create information about past transactions with the benefit of hindsight. [15] For example, retrospective application with respect to non-controlling interests requires information about conditions and estimates made at the time of a business combination—an often difficult task. In addition, this exception provides relief for companies that otherwise might have to determine the allocation of transactions between owners and non-controlling interests in periods prior to the transition period.

²⁴To maintain comparisons in the transition year, companies may present comparative information in accordance with previous GAAP as well as the comparative information required by IFRS. Companies must (a) label the previous GAAP information prominently as not being prepared in accordance with IFRS, and (b) disclose the nature of the main adjustments that would make it comply with IFRS. Companies need not quantify those adjustments. [14]

www.downloadslide.com

1298 Chapter 24 Presentation and Disclosure in Financial Reporting

Elective Exemptions

In addition to the required exemptions for retrospective treatment, the **IASB identified specific additional areas in which companies may elect exemption from retrospective treatment.** These exemptions provide companies some relief from full retrospective application. This simplifies the preparation of the first-time IFRS statements. Areas addressed in the textbook are presented in Illustration 24B-3.²⁵

ILLUSTRATION 24B-3

Elective Exemption from Retrospective Treatment

Companies may elect an exemption from retrospective application for one or more of the following areas.

- (a) Share-based payment transactions.
- (b) Fair value or revaluation as deemed cost.
- (c) Leases.
- (d) Employee benefits.
- (e) Compound financial instruments.
- (f) Fair value measurement of financial assets or financial liabilities at initial recognition.
- (g) Decommissioning liabilities included in the cost of property, plant, and equipment.
- (h) Borrowing costs.

Optional exemption from retrospective treatment is understandable for certain situations. The accounting for the areas identified above generally requires a number of estimates and assumptions at initial recognition and in subsequent accounting. Depending on the accounting under previous GAAP, the information necessary for retrospective application may not be available, or may be obtained only at a high cost. We discuss two examples.²⁶

Exemption Example: Compound Securities. As discussed in Chapter 16, IFRS requires splitting the debt and equity components of convertible debt, using the "with and without" approach. The subsequent accounting for the debt element reflects effective-interest amortization on the estimated debt component. However, if the liability component is no longer outstanding at the date of first-time adoption, retrospective application involves separating two portions of equity. The first portion is in retained earnings and represents the cumulative interest accredited on the liability component. The other portion represents the original equity component. Since the company would not have records on the debt once it is no longer outstanding, it would be costly to re-create that information for retrospective application. As a result, a first-time adopter need not separate these two portions if the liability component is no longer outstanding at the date of transition to IFRS.

Exemption Example: Fair Value or Revaluation as Deemed Cost. Companies can elect to measure property, plant, and equipment at fair value at the transition date and use that fair value as their deemed cost in accounting for those assets subsequent to the adoption of IFRS. This exemption may also be applied to intangible assets in certain situations. By using the exemption, companies avoid re-creating depreciation records for property, plant, and equipment, which is a costly exercise for many companies. In fact, in providing this exemption, the IASB noted that reconstructed cost data might be less relevant to users, and less reliable, than current fair value data. The Board therefore

²⁵Other areas subject to the option are (1) business combinations; (2) insurance contracts; (3) investments in subsidiaries, jointly controlled entities, and associates; (4) designation of previously recognized financial instruments; (5) financial assets or intangible assets accounted for as Service Concession Arrangements; and (6) transfers of assets from customers. [16]

²⁶Specific implementation guidance for other areas is provided in *IFRS* 1. **[17]**

177 LEARNING OBJECTIVE

disclosure requirements for first-time

Describe the presentation and

adoption of IFRS.

concluded that it would allow companies to use fair value as deemed cost. A company that applies the fair value as deemed cost exemption is not required to revalue the assets subsequent to first-time adoption. [18]²⁷

Presentation and Disclosure

financial performance, and cash flows.

Upon first-time adoption of IFRS, a company must present at least one year of comparative information under IFRS. **[19]** To comply with *IAS 1*, an entity's first IFRS financial statements shall include at least three statements of financial position, two statements of comprehensive income, two separate income statements (if presented), two statements of cash flows, and two statements of changes in equity and related notes, including comparative information. Companies must explain how the transition from previous GAAP to IFRS affected its reported financial position,

A company's first IFRS financial statements shall include reconciliations of:

- Its equity reported in accordance with previous GAAP to its equity in accordance with IFRS at the transition date.
- Its total comprehensive income in accordance with IFRS to total comprehensive income in accordance with previous GAAP for the same period. The reconciliation should be prepared for latest period in the company's most recent annual financial statements under the previous GAAP. [20]

For example, Jones plc first adopted IFRS in 2016, with a date of transition to IFRS January 1, 2015. Its last financial statements in accordance with previous GAAP were for the year ended December 31, 2015. An example of Jones plc's reconciliations for first-time adoption is provided in Illustration 24B-4 for the non-current assets section of the statement of financial position.

Jones plc

(amounts in thousands)

The first IFRS financial statements include the reconciliations and related notes shown below.

Reconciliation of equity at January 1, 2015 (date of transition to IFRS)

			Effect of	
		Previous	Transition	
Note		GAAP	to IFRS	IFRS
1	Property, plant, and equipment	£ 8,299	£100	£ 8,399
2	Goodwill	1,220	150	1,370
2	Intangible assets	208	(150)	58
3	Financial assets	3,471	420	3,891
	Total non-current assets	£13,198	£520 ====	£13,718

ILLUSTRATION 24B-4 Reconciliation of Equity for 2015

²⁷In addition, IFRS does not restrict the use of fair value as deemed cost to an entire class of assets, as is done for revaluation accounting (see discussion in Chapter 11). For example, a company can use fair value for deemed cost for some buildings and not for others. However, if a company uses fair value as deemed cost for assets whose fair value is above cost, it cannot ignore indications that the recoverable amount of other assets may have fallen below their carrying amount. Thus, an impairment may need to be recorded.

ILLUSTRATION 24B-4 (Continued)

Notes to the reconciliation at January 1, 2015:

- 1. Depreciation was influenced by tax requirements in accordance with previous GAAP, but in accordance with IFRS reflects the useful life of the assets. The cumulative adjustment increased the carrying amount of property, plant, and equipment by £100.
- Intangible assets in accordance with previous GAAP included £150 for items that are transferred to goodwill because they do not qualify for recognition as intangible assets in accordance with IFRS.
- 3. Financial assets are all classified as non-trading equity investments in accordance with IFRS and are carried at their fair value of £3,891. They were carried at cost of £3,471 in accordance with previous GAAP. The resulting gains of £294 (£420, less related deferred tax of £126) are included in the accumulated other comprehensive income.

Through this reconciliation, statement users are provided information to evaluate the impact of the adoption of IFRS on the statement of financial position. In practice, it may be helpful to include cross-references to accounting policies and supporting analyses that give further explanation of the adjustments shown in the reconciliations.

The reconciliation for total comprehensive income for Jones with respect to the gross profit section of the income statement is presented in Illustration 24B-5.

ILLUSTRATION 24B-5

Reconciliation of Total Comprehensive Income for 2015

Jones (amounts	plc in thousands)			
Note		Previous GAAP	Effect of Transition to IFRS	IFRS
1 0 2	Revenue Cost of sales	£20,910	£ 0	£20,910
1, 2, 3	Gross profit	(15,283) £ 5,627	(97) <u>£(97)</u>	(15,380) £ 5,530
	aross pront	=====	===	=====

Notes to the reconciliation of total comprehensive income for 2015:

- A pension liability is recognized in accordance with IFRS but was not recognized in accordance with previous GAAP. The pension liability increased by £130 during 2015, which caused increases in cost of sales (£50), distribution costs (£30), and administrative expenses (£50).
- 2. Cost of sales is higher by £47 in accordance with IFRS because inventories include fixed and variable production overhead in accordance with IFRS but not in accordance with previous GAAP.
- 3. Depreciation was influenced by tax requirements in accordance with previous GAAP but reflects the useful life of the assets in accordance with IFRS. The effect on the profit for 2015 was not material.

Explanation of material adjustments to the statement of cash flows for 2015:

Income taxes of £133 paid during 2015 are classified as operating cash flows in accordance with IFRS but were included in a separate category of tax cash flows in accordance with previous GAAP. There are no other material differences between the statement of cash flows presented in accordance with IFRS and the statement of cash flows presented in accordance with previous GAAP.

SUMMARY

When companies adopt IFRS, they must ensure that financial statement users receive high-quality information in order to compare financial statements prepared under IFRS and previous GAAP. IFRS guidelines are designed to ensure that upon first-time adoption, financial statements are comparable and that the costs and benefits of first-time adoption are effectively managed.

SUMMARY OF LEARNING OBJECTIVES FOR APPENDIX 24B

- **Describe the guidelines for first-time adoption of IFRS.** Upon first-time adoption of IFRS, a company must prepare and present an opening IFRS statement of financial position at the date of transition to IFRS. This is the starting point for its accounting in accordance with IFRS. The general rule for first-time adoption of IFRS is retrospective application. That is, recast prior financial statements on the basis of IFRS and using the same accounting policies in its opening IFRS statement of financial position and throughout all periods presented in its first IFRS financial statements. Those accounting policies shall comply with each IFRS effective at the end of its first IFRS reporting period. Companies provide at least one year of comparative statements prepared in accordance with IFRS.
- **Describe the implementation steps for preparing the opening IFRS statement of financial position.** Companies must first prepare the opening IFRS statement of financial position by (1) including all assets and liabilities that IFRS requires; (2) excluding any assets and liabilities that IFRS does not permit; (3) classifying all assets, liabilities, and equity in accordance with IFRS; and (4) measuring all assets and liabilities according to IFRS. Companies must make entries through retrospective application. After recording these adjustments, an opening IFRS statement of financial position is prepared, which will reflect application of the same policies that will be applied in the first IFRS financial statements.
- Describe the exemptions to retrospective application in first-time adoption of IFRS. Given the range of changes that might be required for first-time adoption, the IASB considered the cost-benefit of retrospective application and developed targeted exemptions from retrospective treatment when the amount of the adjustment relating to prior periods cannot be reasonably determined and when it is "impracticable" to provide comparable information. These exemptions are classified as required (in which a company is prohibited from retrospective application) and optional.
- Describe the presentation and disclosure requirements for first-time adoption of IFRS. Upon first-time adoption of IFRS, a company presents at least one year of comparative information under IFRS. A company's first IFRS financial statements shall include at least three statements of financial position, two statements of comprehensive income, two separate income statements (if presented), two statements of cash flows, and two statements of changes in equity and related notes, including comparative information. Companies also must explain how the transition from previous GAAP to IFRS affected its reported financial position, financial performance, and cash flows. A company's first IFRS financial statements shall include reconciliations of its equity and total comprehensive income in accordance with previous GAAP to its equity and comprehensive income in accordance with IFRS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

QUESTIONS

- 1. What are the major advantages of notes to the financial statements? What types of items are usually reported in notes?
- **2.** What is the full disclosure principle in accounting? Why has disclosure increased substantially in the last 10 years?
- 3. The IASB requires a reconciliation between the effective tax rate and the government's statutory rate. Of what benefit is such a disclosure requirement?
- **4.** What type of disclosure or accounting do you believe is necessary for the following items?
 - (a) Because of a general increase in the number of labor disputes and strikes, both within and outside the industry, there is an increased likelihood that a company will suffer a costly strike in the near future.

- **(b)** A company reports a loss on a discontinued operation (net of tax) correctly on the income statement. No other mention is made of this item in the annual report.
- (c) A company expects to recover a substantial amount in connection with a pending refund claim for a prior year's taxes. Although the claim is being contested, counsel for the company has confirmed the client's expectation of recovery.
- **5.** The following information was described in a note of Canon Packing Co.

"During August, Holland Products Corporation purchased 311,003 ordinary shares of the Company, which constitutes approximately 35% of the shares outstanding. Holland has since obtained representation on the Board of Directors."

"An affiliate of Holland Products Corporation acts as a food broker for Canon Packing in the greater Amsterdam marketing area. The commissions for such services after August amounted to approximately €20,000." Why is this information disclosed?

- **6.** What are the major types of subsequent events? Indicate how each of the following "subsequent events" would be reported.
 - (a) Collection of a note written off in a prior period.
 - **(b)** Issuance of a large preference share offering.
 - **(c)** Acquisition of a company in a different industry.
 - (d) Destruction of a major plant in a flood.
 - **(e)** Death of the company's chief executive officer (CEO).
 - (f) Additional wage costs associated with settlement of a 4-week strike.
 - (g) Settlement of an income tax case at considerably more tax than anticipated at year-end.
 - (h) Change in the product mix from consumer goods to industrial goods.
- 7. What are diversified companies? What accounting problems are related to diversified companies?
- **8.** What quantitative materiality test is applied to determine whether a segment is significant enough to warrant separate disclosure?
- **9.** Identify the segment information that is required to be disclosed by IFRS.
- **10.** What is an operating segment, and when can information about two operating segments be aggregated?
- 11. The controller for Lafayette Inc. recently commented, "If I have to disclose our segments individually, the only people who will gain are our competitors and the only people that will lose are our present shareholders." Evaluate this comment.
- **12.** What are interim reports? Why is a complete set of financial statements often not provided with interim data?
- **13.** What are the accounting problems related to the presentation of interim data?
- **14.** Dierdorf Inc., a closely held corporation, has decided to go public. The controller, Ed Floyd, is concerned with presenting interim data when an inventory write-down is recorded. What problems are encountered with inventories when quarterly data are presented?
- **15.** What approaches have been suggested to overcome the seasonality problem related to interim reporting?
- **16.** An article in the financial press entitled "Important Information in Annual Reports This Year" noted that annual reports include a management commentary section. What would this section contain?
- 17. "The financial statements of a company are management's, not the accountant's." Discuss the implications of this statement.
- **18.** Olga Conrad, a financial writer, noted recently, "There are substantial arguments for including earnings projections in annual reports and the like. The most compelling is that it would give anyone interested something now available to only a relatively select few—like large shareholders,

- creditors, and attentive bartenders." Identify some arguments against providing earnings projections.
- 19. The following comment appeared in the financial press: "Inadequate financial disclosure, particularly with respect to how management views the future and its role in the marketplace, has always been a stone in the shoe. After all, if you don't know how a company views the future, how can you judge the worth of its corporate strategy?" What are some arguments for reporting earnings forecasts?
- **20.** What is the difference between an auditor's unmodified opinion or "clean" opinion and a modified one?
- 21. Jane Ellerby and Sam Callison are discussing the recent fraud that occurred at LowRental Leasing, Inc. The fraud involved the improper reporting of revenue to ensure that the company would have income in excess of \$1 million. What is fraudulent financial reporting, and how does it differ from an embezzlement of company funds?
- **22.** Briefly describe some of the similarities and differences between disclosure rules under U.S. GAAP and IFRS.

23. Bill Novak is working on an audit of a U.S. GAAP client. In his review of the client's interim reports, he notes that the reports are prepared on an integral basis. That is, each interim report is viewed as a part of the annual period. Is this acceptable under U.S. GAAP? If so, explain how that treatment could affect comparisons to an IFRS company.

- *24. "The significance of financial statement data is not in the amount alone." Discuss the meaning of this statement.
- *25. A close friend of yours, who is a history major and who has not had any college courses or any experience in business, is receiving the financial statements from companies in which he has minor investments (acquired for him by his now-deceased father). He asks you what he needs to know to interpret and to evaluate the financial statement data that he is receiving. What would you tell him?
- *26. Distinguish between ratio analysis and percentage analysis relative to the interpretation of financial statements. What is the value of these two types of analyses?
- *27. In calculating inventory turnover, why is cost of goods sold used as the numerator? As the inventory turnover increases, what increasing risk does the business assume?
- *28. What is the relationship of the asset turnover to the return on assets?
- *29. Explain the meaning of the following terms: (a) commonsize analysis, (b) vertical analysis, (c) horizontal analysis, and (d) percentage analysis.
- *30. Briefly explain the need for a standard on first-time adoption of IFRS.
- *31. How is the date of transition and the date of reporting determined in first-time adoption of IFRS?
- *32. What are the characteristics of high-quality information in a company's first IFRS financial statements?
- *33. What are the steps to be completed in preparing the opening IFRS statement of financial position?
- *34. What is the rationale for exemptions to retrospective application at first-time adoption of IFRS?

- *35. Briefly describe the required exemptions to retrospective application at first-time adoption of IFRS.
- *36. What are three elective exemptions to retrospective application at first-time adoption of IFRS?
- *37. Briefly describe the deemed cost exemption to retrospective application at first-time adoption of IFRS.
- *38. If a company elects the deemed cost exemption, must it continue to use revaluation accounting subsequent to first-time adoption? Explain.
- *39. Briefly describe the presentation and disclosure requirements for first-time adoption of IFRS.

BRIEF EXERCISES

- BE24-1 An annual report of Crestwood Industries states, "The company and its subsidiaries have long-term leases expiring on various dates after December 31, 2015. Amounts payable under such commitments, without reduction for related rental income, are expected to average approximately €5,711,000 annually for the next 3 years. Related rental income from certain subleases to others is estimated to average €3,094,000 annually for the next 3 years." What information is provided by this note?
- **BE24-2** An annual report of Barclays Company states, "Net income per share is computed based upon the average number of shares of all classes outstanding. Additional shares of ordinary shares may be issued or delivered in the future on conversion of outstanding convertible debentures, exercise of outstanding employee share options, and for payment of defined supplemental compensation. Had such additional shares been outstanding, net income per share would have been reduced by $10\mathfrak{e}$ in the current year and $3\mathfrak{e}$ in the previous year. . . . As a result of share transactions by the company during the current year (primarily the purchase of Class A shares from Barclays Foundation), net income per share was increased by $6\mathfrak{e}$." What information is provided by this note?
- **BE24-3** Morlan Corporation is preparing its December 31, 2015, financial statements. Two events that occurred between December 31, 2015, and March 10, 2016, when the statements were authorized for issue, are described below.
 - **1.** A liability, estimated at €160,000 at December 31, 2015, was settled on February 26, 2016, at €170,000.
 - **2.** A flood loss of €80,000 occurred on March 1, 2016.

What effect do these subsequent events have on 2015 net income?

- **BE24-4** Tina Bailey, an intermediate accounting student, was heard to remark after a class discussion on segment reporting, "All this is very confusing to me. First we are told that there is merit in presenting the consolidated results, and now we are told that it is better to show segmental results. I wish they would make up their minds." Evaluate this comment.
- **3 BE24-5** Foley Corporation has seven operating segments with total revenues as follows (in millions).

Penley	¥600	Cheng	¥225
Konami	650	Takuhi	200
KSC	250	Molina	700
Red Moon	275		

Based only on the revenues test, which operating segments are reportable?

BE24-6 Operating profits (losses) for the seven operating segments of Foley Corporation are as follows (in millions).

Penley	¥ 90	Cheng	¥ (20)
Konami	(40)	Takuhi	34
KSC	25	Molina	150
Red Moon	50		

Based only on the operating profit (loss) test, which industry segments are reportable?

3 BE24-7 Identifiable assets for the seven industry segments of Foley Corporation are as follows (in millions).

Penley	¥500	Cheng	¥200
Konami	550	Takuhi	150
KSC	250	Molina	475
Red Moon	400		

Based only on the identifiable assets test, which industry segments are reportable?

- *BE24-8 Answer each of the questions in the following unrelated situations.
 - (a) The current ratio of a company is 5:1 and its acid-test ratio is 1:1. If the inventories and prepaid items amount to \$500,000, what is the amount of current liabilities?
 - **(b)** A company had an average inventory last year of \$200,000 and its inventory turnover was 5. If sales volume and unit cost remain the same this year as last and inventory turnover is 8 this year, what will average inventory have to be during the current year?
 - (c) A company has current assets of \$90,000 (of which \$40,000 is inventory and prepaid items) and current liabilities of \$40,000. What is the current ratio? What is the acid-test ratio? If the company borrows \$15,000 cash from a bank on a 120-day loan, what will its current ratio be? What will the acid-test ratio be?
 - **(d)** A company has current assets of \$600,000 and current liabilities of \$240,000. The board of directors declares a cash dividend of \$180,000. What is the current ratio after the declaration but before payment? What is the current ratio after the payment of the dividend?
- ***BE24-9** Heartland Company's budgeted sales and budgeted cost of goods sold for the coming year are £144,000,000 and £99,000,000, respectively. Short-term interest rates are expected to average 10%. If Heartland can increase inventory turnover from its present level of 9 times a year to a level of 12 times per year, compute its expected cost savings for the coming year.
- ***BE24-10** Becker Ltd. is planning to adopt IFRS and prepare its first IFRS financial statements at December 31, 2016. What is the date of Becker's opening statement of financial position, assuming one year of comparative information? What periods will be covered in Becker's first IFRS financial statements?
- ***BE24-11** Bohmann Company is preparing its opening IFRS statement of financial position on January 1, 2015. Under its previous GAAP, Bohmann had capitalized all development costs of \$50,000. Under IFRS, only \$10,000 of the costs related to a patent were incurred after the project met economic viability thresholds. Prepare the entry (if any) needed to record this adjustment at the date of transition.
- *BE24-12 Stengel plc is preparing its opening IFRS statement of financial position on January 1, 2015. Under its previous GAAP, Stengel used the LIFO inventory method. Under LIFO, its inventory is reported at £250,000; under FIFO, which Stengel will use upon adoption of IFRS, the inventory is valued at £265,000. Prepare the entry (if any) needed to record this adjustment at the date of issuance.
- *BE24-13 Latta Inc. is preparing its opening IFRS statement of financial position on January 1, 2015. Under its previous GAAP, Latta had deferred certain advertising costs amounting to \$37,000. Prepare the entry (if any) needed to record this adjustment at the date of issuance.
- *BE24-14 Smitz Company is preparing its opening IFRS statement of financial position on January 1, 2015. Under its previous GAAP, Smitz did not record a provision for litigation in the amount of €85,000 that would be recognized under IFRS. Prepare the entry (if any) needed to record this adjustment at the date of issuance.
- **16** *BE24-15 Porter Company is evaluating the following assets to determine whether it can use fair value as deemed cost in first-time adoption of IFRS.
 - 1. Biological assets related to agricultural activity for which there is *no* active market.
 - **2.** Intangible assets for which there is *no* active market.
 - **3.** Any individual item of property, plant, and equipment.
 - **4.** Financial liabilities that are *not* held for trading.

For each asset type, indicate if the deemed cost exemption can be used.

EXERCISES

- **E24-1 (Subsequent Events)** Keystone Corporation issued its financial statements for the year ended December 31, 2015, on March 10, 2016. The following events took place before the statements were authorized for issue early in 2016.
 - (a) On January 10, 10,000 ordinary shares of \$5 par value were issued at \$66 per share.
 - **(b)** On March 1, Keystone determined after negotiations with the taxing authorities that income taxes payable for 2015 should be \$1,320,000. At December 31, 2015, income taxes payable were recorded at \$1,100,000.

Instructions

Discuss how the preceding subsequent events should be reflected in the 2015 financial statements.

www.downloadslide.com

1306 Chapter 24 Presentation and Disclosure in Financial Reporting

2	E24-2 (Subsequent Events) Consider the following subsequent events.
	1. Settlement of a tax case at a cost considerably in excess of the amount expected at year-end.
	2. Introduction of a new product line.
	3. Loss of assembly plant due to fire.
	4. Sale of a significant portion of the company's assets.
	5. Retirement of the company president.
	6. Issuance of a significant number of ordinary shares.
	7. Loss of a significant customer.
	8. Prolonged employee strike.
	9. Material loss on a year-end receivable because of a customer's bankruptcy.
	10. Hiring of a new president.
	11. Settlement of prior year's litigation against the company.
	12. Merger with another company of comparable size.

Instructions

For each event, indicate whether a company should (a) adjust the financial statements, (b) disclose in notes to the financial statements, or (c) neither adjust nor disclose.

E24-3 (Segmented Reporting) LaGreca Company is involved in four separate industries. The following information is available for each of the four segments.

Operating Segment	Total Revenue	Operating Profit (Loss)	Identifiable Assets
	€ 60,000	€15,000	€167,000
Χ	10,000	1,500	83,000
Υ	23,000	(2,000)	21,000
Z	9,000	1,000	19,000
	€102,000	€15,500	€290,000

Instructions

Determine which of the operating segments are reportable based on the:

- (a) Revenue test.
- **(b)** Operating profit (loss) test.
- (c) Identifiable assets test.
- *E24-4 (Ratio Computation and Analysis; Liquidity) As loan analyst for Murray Bank, you have been presented the following information.

	Plunkett Co.	Herring Co.	
Assets			
Other assets	£ 500,000	£ 612,000	
Current assets			
Inventories	570,000	518,000	
Receivables	220,000	302,000	
Cash	120,000	320,000	
Total current assets	910,000	1,140,000	
Total assets	£1,410,000	£1,752,000	
Equity and Liabilities			
Share capital and retained earnings	£ 710,000	£ 902,000	
Non-current liabilities	400,000	500,000	
Current liabilities	300,000	350,000	
Total equity and liabilities	£1,410,000	£1,752,000	
Annual sales	£ 930,000	£1,500,000	
Rate of gross profit on sales	30%	40%	

Each of these companies has requested a loan of £50,000 for 6 months with no collateral offered. Inasmuch as your bank has reached its quota for loans of this type, only one of these requests is to be granted.

Instructions

Which of the two companies, as judged by the information given above, would you recommend as the better risk and why? Assume that the ending account balances are representative of the entire year.

***E24-5 (Analysis of Given Ratios)** Robbins Company is a wholesale distributor of professional equipment and supplies. The company's sales have averaged about \$900,000 annually for the 3-year period 2013–2015. The firm's total assets at the end of 2015 amounted to \$850,000.

The president of Robbins Company has asked the controller to prepare a report that summarizes the financial aspects of the company's operations for the past 3 years. This report will be presented to the board of directors at their next meeting.

In addition to comparative financial statements, the controller has decided to present a number of relevant financial ratios which can assist in the identification and interpretation of trends. At the request of the controller, the accounting staff has calculated the following ratios for the 3-year period 2013–2015.

	2013	2014	2015
Current ratio	1.80	1.89	1.96
Acid-test (quick) ratio	1.04	0.99	0.87
Accounts receivable turnover	8.75	7.71	6.42
Inventory turnover	4.91	4.32	3.72
Debt to assets ratio	51.0%	46.0%	41.0%
Long-term debt to assets ratio	31.0%	27.0%	24.0%
Sales to fixed assets (fixed asset turnover)	1.58	1.69	1.79
Sales as a percent of 2013 sales	1.00	1.03	1.05
Gross margin percentage	36.0%	35.1%	34.6%
Net income to sales	6.9%	7.0%	7.2%
Return on assets	7.7%	7.7%	7.8%
Return on equity	13.6%	13.1%	12.7%

In preparation of the report, the controller has decided first to examine the financial ratios independent of any other data to determine if the ratios themselves reveal any significant trends over the 3-year period.

Instructions

- (a) The current ratio is increasing while the acid-test (quick) ratio is decreasing. Using the ratios provided, identify and explain the contributing factor(s) for this apparently divergent trend.
- **(b)** In terms of the ratios provided, what conclusion(s) can be drawn regarding the company's use of financial leverage during the 2013–2015 period?
- (c) Using the ratios provided, what conclusion(s) can be drawn regarding the company's net investment in plant and equipment?
- **10** *E24-6 (Ratio Analysis) Howser Inc. is a manufacturer of electronic components and accessories with total assets of £20,000,000. Selected financial ratios for Howser and the industry averages for firms of similar size are presented below.

Howser		
2014	2015	Average
2.27	2.51	2.24
1.12	1.19	1.22
2.18	2.02	3.50
2.80	2.95	2.85
0.15	0.17	0.11
1.37	1.44	0.95
	2014 2.27 1.12 2.18 2.80 0.15	2014 2015 2.27 2.51 1.12 1.19 2.18 2.02 2.80 2.95 0.15 0.17

Howser is being reviewed by several entities whose interests vary, and the company's financial ratios are a part of the data being considered. Each of the parties listed below must recommend an action based on its evaluation of Howser's financial position.

Citizens National Bank. The bank is processing Howser's application for a new 5-year term note. Citizens National has been Howser's banker for several years but must reevaluate the company's financial position for each major transaction.

Charleston Company. Charleston is a new supplier to Howser and must decide on the appropriate credit terms to extend to the company.

Shannon Financial. A brokerage firm specializing in the shares of electronics firms that are sold over-the-counter, Shannon Financial must decide if it will include Howser in a new fund being established for sale to Shannon Financial's clients.

Working Capital Management Committee. This is a committee of Howser's management personnel chaired by the chief operating officer. The committee is charged with the responsibility of periodically reviewing the company's working capital position, comparing actual data against budgets, and recommending changes in strategy as needed.

Instructions

- (a) Describe the analytical use of each of the six ratios presented above.
- **(b)** For each of the four entities described above, identify two financial ratios, from those ratios presented in Illustration 24A-1 (on pages 1289–1290), that would be most valuable as a basis for its decision regarding Howser.
- (c) Discuss what the financial ratios presented in the question reveal about Howser. Support your answer by citing specific ratio levels and trends as well as the interrelationships between these ratios.
- **15** *E24-7 (Opening Statement of Financial Position) Goodman Company is preparing to adopt IFRS. In preparing its opening statement of financial position on January 1, 2015, Goodman identified the following accounting policy differences between IFRS and its previous GAAP.
 - 1. Under its previous GAAP, Goodman classified proposed dividends of €45,000 as a current liability.
 - **2.** Goodman had deferred advertising costs of €500,000.

Instructions

- (a) Prepare the journal entries (if any) needed before preparation of Goodman's opening statement of financial position.
- (b) Determine the net change in equity from these adjustments.
- 15 16 *E24-8 (Opening Statement of Financial Position, Disclosure) Lombardo Group is preparing to adopt IFRS. It is preparing its opening statement of financial position on January 1, 2015. Lombardo identified the following accounting policy differences between IFRS and its previous GAAP.
 - 1. Lombardo had not made a provision for a warranty of €75,000 under previous GAAP because the concept of a "constructive obligation" was not recognized.
 - **2.** Under previous GAAP, €60,000 paid for certain architect fees was not capitalized into the cost of a building that was put into service at the beginning of 2014, even though those costs were necessary to bring the asset to its working condition. The building has a 40-year life, no residual value, and Lombardo uses straight-line depreciation.

Instructions

- (a) Prepare the journal entries (if any) needed before preparation of Lombardo's opening statement of financial position.
- **(b)** Determine the net change in equity from these adjustments.
- (c) Briefly describe the disclosures that Lombardo will make related to the adjustments in it first IFRS financial statements.

PROBLEMS

P24-1 (Subsequent Events) Your firm has been engaged to examine the financial statements of Almaden Corporation for the year 2015. The bookkeeper who maintains the financial records has prepared all the unaudited financial statements for the corporation since its organization on January 2, 2010. The client provides you with the following information.

ALMADEN CORPORATION STATEMENT OF FINANCIAL POSITION DECEMBER 31, 2015

	Assets		Liabilities		
			Equity	€4,650,600	
Other assets		€5,171,400	Non-current liabilities	1,439,500	
Current assets		1,881,100	Current liabilities	962,400	
		€7,052,500		€7,052,500	

Current assets include:	
Cash (restricted in the amount of €300,000 for plant expansion) Investments in land	€ 571,000 185,000
Accounts receivable less allowance of €30,000 Inventories (weighted-average)	480,000 645,100
inventories (weighted-average)	€1,881,100
	= 1,001,100
Other assets include:	
Prepaid expenses	€ 62,400
Plant and equipment less accumulated depreciation of €1,430,000	4,130,000
Notes receivable (short-term) Goodwill	162,300 252,000
Land	564,700
	€5,171,400
Current liabilities include:	
Accounts payable	€ 510,000
Notes payable (due 2018)	157,400
Estimated income taxes payable Share premium—ordinary	145,000 150,000
Share profitant. Stanlary	€ 962,400
	=======================================
Non-current liabilities include:	
Unearned revenue	€ 489,500
Dividends payable (cash)	200,000
8% bonds payable (due May 1, 2020)	750,000
	€1,439,500 =======
Equity includes:	
Retained earnings	€2,810,600
Share capital—ordinary, par value €10; authorized 200,000 shares, 184,000 shares issued	1,840,000
	€4,650,600

The supplementary information below is also provided.

- 1. On May 1, 2015, the corporation issued at par €750,000 of bonds to finance plant expansion. The long-term bond agreement provided for the annual payment of interest every May 1. The existing plant was pledged as security for the loan.
- **2.** The bookkeeper made the following mistakes.
 - (a) In 2013, the ending inventory was overstated by €183,000. The ending inventories for 2014 and 2015 were correctly computed.
 - (b) In 2015, accrued wages in the amount of €225,000 were omitted from the statement of financial position, and these expenses were not charged on the income statement.
 - (c) In 2015, a gain of €175,000 (net of tax) on the sale of certain plant assets was credited directly to retained earnings.
- **3.** A major competitor has introduced a line of products that will compete directly with Almaden's primary line, now being produced in a specially designed new plant. Because of manufacturing innovations, the competitor's line will be of comparable quality but priced 50% below Almaden's line. The competitor announced its new line on January 14, 2016. Almaden indicates that the company will meet the lower prices that are high enough to cover variable manufacturing and selling expenses, but permit recovery of only a portion of fixed costs.
- **4.** You learned on January 28, 2016, prior to completion of the audit, of heavy damage because of a recent fire to one of Almaden's two plants; the loss will not be reimbursed by insurance. The newspapers described the event in detail.

Instructions

Analyze the preceding information to prepare a corrected statement of financial position for Almaden in accordance with IFRS. Prepare a description of any notes that might need to be prepared. The books are closed, and adjustments to income are to be made through retained earnings.

1310 Chapter 24 Presentation and Disclosure in Financial Reporting

3 P24-2 (Segmented Reporting) Cineplex Corporation is a diversified company that operates in five different industries: A, B, C, D, and E. The following information relating to each segment is available for 2015.

	Α	В	С	D	E
Sales revenue	\$40,000	\$ 75,000	\$580,000	\$35,000	\$55,000
Cost of goods sold	19,000	50,000	270,000	19,000	30,000
Operating expenses	10,000	40,000	235,000	12,000	18,000
Total expenses	29,000	90,000	505,000	31,000	48,000
Operating profit (loss)	\$11,000	\$(15,000)	\$ 75,000	\$ 4,000	\$ 7,000
Identifiable assets	\$35,000	\$ 80,000	\$500,000	\$65,000	\$50,000

Sales of segments B and C included intersegment sales of \$20,000 and \$100,000, respectively.

Instructions

- (a) Determine which of the segments are reportable based on the:
 - (1) Revenue test.
 - (2) Operating profit (loss) test.
 - (3) Identifiable assets test.
- **(b)** Prepare the necessary disclosures required by IFRS.

10) 12) *P24-3 (Ratio Computations and Additional Analysis) Bradburn Corporation was formed 5 years ago through a public subscription of ordinary shares. Daniel Brown, who owns 15% of the ordinary shares, was one of the organizers of Bradburn and is its current president. The company has been successful but it currently is experiencing a shortage of funds. On June 10, Daniel Brown approached the Hibernia Bank, asking for a 24-month extension on two £35,000 notes, which are due on June 30, 2015, and September 30, 2015. Another note of £6,000 is due on March 31, 2016, but he expects no difficulty in paying this note on its due date. Brown explained that Bradburn's cash flow problems are due primarily to the company's desire to finance a £300,000 plant expansion over the next 2 fiscal years through internally generated funds.

The commercial loan officer of Hibernia Bank requested financial reports for the last 2 fiscal years. These reports are reproduced below.

BRADBURN CORPORATION STATEMENT OF FINANCIAL POSITION MARCH 31

Assets	2015	2014
Plant and equipment (net of depreciation)	£1,449,000	£1,420,500
Inventories (at cost)	105,000	50,000
Accounts receivable (net)	131,800	125,500
Notes receivable	148,000	132,000
Cash	18,200	12,500
Total assets	£1,852,000	£1,740,500
Equity and Liabilities		
Share capital—ordinary (130,000 shares, £10 par)	£1,300,000	£1,300,000
Retained earnings ^a	388,000	282,000
Accrued liabilities	9,000	6,000
Notes payable	76,000	61,500
Accounts payable	79,000	91,000
Total equity and liabilities	£1,852,000	£1,740,500

^aCash dividends were paid at the rate of £1 per share in fiscal year 2014 and £2 per share in fiscal year 2015.

BRADBURN CORPORATION INCOME STATEMENT FOR THE FISCAL YEARS ENDED MARCH 31

	2015	2014
Sales revenue	£3,000,000	£2,700,000
Cost of goods sold ^a	1,530,000	1,425,000
Gross margin	1,470,000	1,275,000
Operating expenses	860,000	780,000
Income before income taxes	610,000	495,000
Income taxes (40%)	244,000	198,000
Net income	£ 366,000	£ 297,000

^aDepreciation charges on the plant and equipment of £100,000 and £102,500 for fiscal years ended March 31, 2014 and 2015, respectively, are included in cost of goods sold.

Instructions

- (a) Compute the following items for Bradburn Corporation.
 - (1) Current ratio for fiscal years 2014 and 2015.
 - (2) Acid-test (quick) ratio for fiscal years 2014 and 2015.
 - (3) Inventory turnover for fiscal year 2015.
 - (4) Return on assets for fiscal years 2014 and 2015. (Assume total assets were £1,688,500 at 3/31/13.)
 - (5) Percentage change in sales, cost of goods sold, gross margin, and net income after taxes from fiscal year 2014 to 2015.
- **(b)** Identify and explain what other financial reports and/or financial analyses might be helpful to the commercial loan officer of Hibernia Bank in evaluating Daniel Brown's request for a time extension on Bradburn's notes.
- (c) Assume that the percentage changes experienced in fiscal year 2015 as compared with fiscal year 2014 for sales and cost of goods sold will be repeated in each of the next 2 years. Is Bradburn's desire to finance the plant expansion from internally generated funds realistic? Discuss.
- (d) Should Hibernia Bank grant the extension on Bradburn's notes considering Daniel Brown's statement about financing the plant expansion through internally generated funds? Discuss.
- **13** *P24-4 (Horizontal and Vertical Analysis) Presented below are comparative statements of financial position for the Ozturk Company.

OZTURK COMPANY COMPARATIVE STATEMENTS OF FINANCIAL POSITION AS OF DECEMBER 31, 2015 AND 2014

	December 31		
	2015	2014	
Assets			
Fixed assets	₺2,585,000	₺1,950,000	
Accumulated depreciation	(1,000,000)	(750,000)	
Prepaid expenses	25,000	25,000	
Inventories	1,060,000	980,000	
Accounts receivable (net)	220,000	155,000	
Short-term investments	270,000	150,000	
Cash	180,000	275,000	
	₹3,340,000	±2,785,000

Bonds payable	450,000	190,000	
Accrued expenses	170,000	200,000	
Accounts payable	50,000	75,000	
	₺3,340,000	老2,785,000	

1312 Chapter 24 Presentation and Disclosure in Financial Reporting

Instructions

(Round to two decimal places.)

- (a) Prepare a comparative statement of financial position of Ozturk Company showing the percent each item is of the total assets or total equity and liabilities.
- **(b)** Prepare a comparative statement of financial position of Ozturk Company showing the Turkish lira change and the percent change for each item.
- (c) Of what value is the additional information provided in part (a)?
- (d) Of what value is the additional information provided in part (b)?
- *P24-5 (Dividend Policy Analysis) Matheny Inc. went public 3 years ago. The board of directors will be meeting shortly after the end of the year to decide on a dividend policy. In the past, growth has been financed primarily through the retention of earnings. A share or a cash dividend has never been declared. Presented below is a brief financial summary of Matheny Inc. operations (euros in thousands).

	2015	2014	2013	2012	2011
Sales revenue	€20,000	€16,000	€14,000	€6,000	€4,000
Net income	2,400	1,400	800	700	250
Average total assets	22,000	19,000	11,500	4,200	3,000
Current assets	8,000	6,000	3,000	1,200	1,000
Working capital	3,600	3,200	1,200	500	400
Ordinary shares:					
Number of shares					
outstanding (in thousands)	2,000	2,000	2,000	20	20
Average market price	€9	€6	€4	_	_

Instructions

- (a) Suggest factors to be considered by the board of directors in establishing a dividend policy.
- **(b)** Compute the return on assets, profit margin on sales, earnings per share, price-earnings ratio, and current ratio for each of the 5 years for Matheny Inc.
- **(c)** Comment on the appropriateness of declaring a cash dividend at this time, using the ratios computed in part (b) as a major factor in your analysis.

CONCEPTS FOR ANALYSIS

CA24-1 (General Disclosures; Inventories; Property, Plant, and Equipment) Koch Corporation is in the process of preparing its annual financial statements for the fiscal year ended April 30, 2015. The company manufactures plastic, glass, and paper containers for sale to food and drink manufacturers and distributors.

Koch Corporation maintains separate control accounts for its raw materials, work in process, and finished goods inventories for each of the three types of containers. The inventories are valued at the lower-of-cost-or-net realizable value.

The company's property, plant, and equipment are classified in the following major categories: land, office buildings, furniture and fixtures, manufacturing facilities, manufacturing equipment, and leasehold improvements. All fixed assets are carried at cost. The depreciation methods employed depend on the type of asset (its classification) and when it was acquired.

Koch Corporation plans to present the inventory and fixed asset amounts in its April 30, 2015, statement of financial position as shown below.

Inventories	\$4,814,200
Property, plant, and equipment (net of depreciation)	6.310.000

Instructions

What information regarding inventories and property, plant, and equipment must be disclosed by Koch Corporation in the audited financial statements issued to shareholders, either in the body or the notes, for the 2014–2015 fiscal year?

CA24-2 (Disclosures Required in Various Situations) Ace Inc. produces electronic components for sale to manufacturers of radios, television sets, and digital sound systems. In connection with her examination of Ace's financial statements for the year ended December 31, 2015, Gloria Rodd completed field work 2 weeks ago. Ms. Rodd now is evaluating the significance of the following items prior to preparing her auditor's report. Except as noted, none of these items have been disclosed in the financial statements or notes.

Item 1: A 10-year loan agreement, which the company entered into 3 years ago, provides that dividend payments may not exceed net income earned after taxes subsequent to the date of the agreement. The balance of retained earnings at the date of the loan agreement was €420,000. From that date through December 31, 2015, net income after taxes has totaled €570,000 and cash dividends have totaled €320,000. On the basis of these data, the staff auditor assigned to this review concluded that there was no retained earnings restriction at December 31, 2015.

Item 2: Recently, Ace interrupted its policy of paying cash dividends quarterly to its shareholders. Dividends were paid regularly through 2014, discontinued for all of 2015 to finance purchase of equipment for the company's new plant, and resumed in the first quarter of 2016. In the annual report, dividend policy is to be discussed in the president's letter to shareholders.

Item 3: A major electronics firm has introduced a line of products that will compete directly with Ace's primary line, now being produced in the specially designed new plant. Because of manufacturing innovations, the competitor's line will be of comparable quality but priced 50% below Ace's line. The competitor announced its new line during the week following completion of field work (but before the financial statement authorization date). Ms. Rodd read the announcement in the newspaper and discussed the situation by telephone with Ace executives. Ace will meet the lower prices that are high enough to cover variable manufacturing and selling expenses but will permit recovery of only a portion of fixed costs.

Item 4: The company's new manufacturing plant building, which cost €2,400,000 and has an estimated life of 25 years, is leased from Wichita National Bank at an annual rental of €600,000. The company is obligated to pay property taxes, insurance, and maintenance. At the conclusion of its 10-year non-cancelable lease, the company has the option of purchasing the property for €1. In Ace's income statement, the rental payment is reported on a separate line.

Instructions

For each of the items, discuss any additional disclosures in the financial statements and notes that the auditor should recommend to her client. (The cumulative effect of the four items should not be considered.)

CA24-3 (Disclosures, Conditional and Contingent Liabilities) Presented below are three independent situations.

Situation 1: A company offers a one-year warranty for the product that it manufactures. A history of warranty claims has been compiled, and the probable amounts of claims related to sales for a given period can be determined.

Situation 2: Subsequent to the date of a set of financial statements but prior to the authorization of issuance of the financial statements, a company enters into a contract that will probably result in a significant loss to the company. The amount of the loss can be reasonably estimated.

Situation 3: A company has adopted a policy of recording self-insurance for any possible losses resulting from injury to others by the company's vehicles. The premium for an insurance policy for the same risk from an independent insurance company would have an annual cost of £4,000. During the period covered by the financial statements, there were no accidents involving the company's vehicles that resulted in injury to others.

Instructions

Discuss the accrual or type of disclosure necessary (if any) and the reason(s) why such disclosure is appropriate for each of the three independent sets of facts above.

CA24-4 (Subsequent Events) At December 31, 2014, Coburn Corp. has assets of £10,000,000, liabilities of £6,000,000, share capital of £2,000,000 (representing 2,000,000 ordinary shares at £1 par), and retained

1314 Chapter 24 Presentation and Disclosure in Financial Reporting

earnings of £2,000,000. Net sales for the year 2014 were £18,000,000, and net income was £800,000. You are making a review of subsequent events on February 13, 2015, and you find the following.

- 1. On February 3, 2015, one of Coburn's customers declared bankruptcy. At December 31, 2014, this company owed Coburn £300,000, of which £60,000 was paid in January 2015.
- **2.** On January 18, 2015, one of the three major plants of the client burned.
- **3.** On January 23, 2015, a strike was called at one of Coburn's largest plants, which halted 30% of its production. As of today (February 13), the strike has not been settled.
- 4. A major electronics enterprise has introduced a line of products that would compete directly with Coburn's primary line, now being produced in a specially designed new plant. Because of manufacturing innovations, the competitor has been able to achieve quality similar to that of Coburn's products but at a price 50% lower. Coburn officials say they will meet the lower prices, which are high enough to cover variable manufacturing and selling costs but which permit recovery of only a portion of fixed costs.
- 5. Merchandise traded in the open market is recorded in the company's records at £1.40 per unit on December 31, 2014. This price had prevailed for 2 weeks, after release of an official market report that predicted vastly enlarged supplies; however, no purchases were made at £1.40. The price throughout the preceding year had been about £2, which was the level experienced over several years. On January 18, 2015, the price returned to £2, after public disclosure of an error in the official calculations of the prior December, correction of which destroyed the expectations of excessive supplies. Inventory at December 31, 2014, was on a lower-of-cost-or-net realizable value basis.
- **6.** On February 1, 2015, the board of directors adopted a resolution accepting the offer of an investment banker to guarantee the marketing of £1,200,000 of preference shares.

Instructions

State in each case how the 2014 financial statements would be affected, if at all.

CA24-5 (Segment Reporting) You are compiling the consolidated financial statements for Winsor Corporation International (WCI). The corporation's accountant, Anthony Reese, has provided you with the segment information shown below.

Note 7: Major Segments of Business

WCI conducts funeral service and cemetery operations in the United States and Canada. Substantially all revenues of WCI's major segments of business are from unaffiliated customers. Segment information for fiscal 2015, 2014, and 2013 follows (amounts in thousands).

	Funeral	Floral	Cemetery	Real Estate	Dried Whey	Limousine	Consolidated
Revenues							
2015	\$302,000	\$10,000	\$ 73,000	\$ 2,000	\$7,000	\$12,000	\$406,000
2014	245,000	6,000	61,000	4,000	4,000	4,000	324,000
2013	208,000	3,000	42,000	3,000	1,000	3,000	260,000
Operating I	ncome						
2015	74,000	1,500	18,000	(36,000)	500	2,000	60,000
2014	64,000	200	12,000	(28,000)	200	400	48,800
2013	54,000	150	6,000	(21,000)	100	350	39,600
Capital Exp	enditures						
2015	26,000	1,000	9,000	400	300	1,000	37,700
2014	28,000	2,000	60,000	1,500	100	700	92,300
2013	14,000	25	8,000	600	25	50	22,700
Depreciation	on and Amortiz	zation					
2015	13,000	100	2,400	1,400	100	200	17,200
2014	10,000	50	1,400	700	50	100	12,300
2013	8,000	25	1,000	600	25	50	9,700
Identifiable	Assets						
2015	334,000	1,500	162,000	114,000	500	8,000	620,000
2014	322,000	1,000	144,000	52,000	1,000	6,000	526,000
2013	223,000	500	78,000	34,000	500	3,500	339,500

Instructions

Determine which of the segments must be reported separately and which can be combined under the category "Other." Then, write a one-page memo to the company's accountant, Anthony Reese, explaining the following.

- (a) What segments must be reported separately and what segments can be combined.
- **(b)** What criteria you used to determine reportable segments.
- (c) What major items for each must be disclosed.

CA24-6 (Interim Reporting) Sino Corporation, a publicly traded company, is preparing the interim financial data which it will issue to its shareholders at the end of the first quarter of the 2014–2015 fiscal year. Sino's financial accounting department has compiled the following summarized revenue and expense data for the first quarter of the year.

Sales revenue	¥60,000,000
Cost of goods sold	36,000,000
Variable selling expenses	1,000,000
Fixed selling expenses	3,000,000

Included in the fixed selling expenses was the single lump-sum payment of ¥2,000,000 for television advertisements for the entire year.

Instructions

- (a) Sino Corporation must issue its quarterly financial statements in accordance with IFRS regarding interim financial reporting.
 - (1) Explain whether Sino should report its operating results for the quarter as if the quarter were a separate reporting period in and of itself, or as if the quarter were an integral part of the annual reporting period.
 - (2) State how the sales revenue, cost of goods sold, and fixed selling expenses would be reflected in Sino Corporation's quarterly report prepared for the first quarter of the 2014–2015 fiscal year. Briefly justify your presentation.
- **(b)** What financial information, as a minimum, must Sino Corporation disclose to its shareholders in its quarterly reports?

CA24-7 (Treatment of Various Interim Reporting Situations) The following are six independent cases on how accounting facts might be reported on an individual company's interim financial reports.

Instructions

For each of these cases, state whether the method proposed to be used for interim reporting would be acceptable under IFRS applicable to interim financial data. Support each answer with a brief explanation.

- (a) J. D. Long Company takes a physical inventory at year-end for annual financial statement purposes. Inventory and cost of sales reported in the interim quarterly statements are based on estimated gross profit rates because a physical inventory would result in a cessation of operations. Long Company does have reliable perpetual inventory records.
- **(b)** Rockford Company is planning to report one-fourth of its pension expense each quarter.
- (c) Republic Company wrote inventory down to reflect lower-of-cost-or-net realizable value in the first quarter. At year-end, the net realizable value exceeds the original acquisition cost of this inventory. Consequently, management plans to write the inventory back up to its original cost as a year-end adjustment.
- (d) Gansner Company realized a large gain on the sale of investments at the beginning of the second quarter. The company wants to report one-third of the gain in each of the remaining quarters.
- **(e)** Fredonia Company has estimated its annual audit fee. It plans to pro rate this expense equally over all four quarters.
- (f) LaBrava Company was reasonably certain it would have an employee strike in the third quarter. As a result, it shipped heavily during the second quarter but plans to defer the recognition of the sales in excess of the normal sales volume. The deferred sales will be recognized as sales in the third quarter when the strike is in progress. LaBrava Company management thinks this is more representative of normal second- and third-quarter operations.

CA24-8 (Financial Forecasts) An article in *Barron's* noted the following.

Okay. Last fall, someone with a long memory and an even longer arm reached into that bureau drawer and came out with a moldy cheese sandwich and the equally moldy notion of corporate forecasts. However, the

1316 Chapter 24 Presentation and Disclosure in Financial Reporting

forecast proposal was dusted off, polished up and found quite serviceable. The U.S. SEC, indeed, lost no time in running it up the old flagpole—but no one was very eager to salute. Even after some of the more objectionable features—compulsory corrections and detailed explanations of why the estimates went awry—were peeled off the original proposal.

Seemingly, despite the Commission's smiles and sweet talk, those craven corporations were still afraid that an honest mistake would lead them down the primrose path to consent decrees and class action suits. To lay to rest such qualms, the Commission last week approved a "Safe Harbor" rule that, providing the forecasts were made on a reasonable basis and in good faith, protected corporations from litigation should the projections prove wide of the mark (as only about 99% are apt to do).

Instructions

- (a) What are the arguments for preparing profit forecasts?
- **(b)** What is the purpose of the "safe harbor" rule?
- **(c)** Why are corporations concerned about presenting profit forecasts?

CA24-9 (Disclosure of Estimates) Nancy Tercek, the financial vice president, and Margaret Lilly, the controller, of Romine Manufacturing Company are reviewing the financial ratios of the company for the years 2015 and 2016. The financial vice president notes that the profit margin on sales has increased from 6% to 12%, a hefty gain for the 2-year period. Tercek is in the process of issuing a media release that emphasizes the efficiency of Romine Manufacturing in controlling costs. Margaret Lilly knows that the difference in ratios is due primarily to an earlier company decision to reduce the estimates of warranty and bad debt expense for 2016. The controller, not sure of her supervisor's motives, hesitates to suggest to Tercek that the company's improvement is unrelated to efficiency in controlling costs. To complicate matters, the media release is scheduled in a few days.

Instructions

- (a) What, if any, is the ethical dilemma in this situation?
- **(b)** Should Lilly, the controller, remain silent? Give reasons.
- (c) What stakeholders might be affected by Tercek's media release?
- (d) Give your opinion on the following statement and cite reasons: "Because Tercek, the vice president, is most directly responsible for the media release, Lilly has no real responsibility in this matter."

CA24-10 (**Reporting of Subsequent Events**) In June 2015, the board of directors for McElroy Enterprises Inc. authorized the sale of £10,000,000 of corporate bonds. Jennifer Grayson, treasurer for McElroy Enterprises Inc., is concerned about the date when the bonds are issued. The company really needs the cash, but she is worried that if the bonds are issued before the company's year-end (December 31, 2015) the additional liability will have an adverse effect on a number of important ratios. In July, she explains to company president, William McElroy, that if they delay issuing the bonds until after December 31, the bonds will not affect the ratios until December 31, 2016. They will have to report the issuance as a subsequent event which requires only footnote disclosure. Grayson expects that with expected improved financial performance in 2016 ratios should be better.

Instructions

- (a) What are the ethical issues involved?
- **(b)** Should McElroy agree to the delay?

*CA24-11 (Effect of Transactions on Financial Statements and Ratios) The transactions listed on page 1317 relate to Wainwright Inc. You are to assume that on the date on which each of the transactions occurred, the corporation's accounts showed only ordinary shares (\$100 par) outstanding, a current ratio of 2.7:1, and a substantial net income for the year to date (before giving effect to the transaction concerned). On that date, the book value per share was \$151.53.

Each numbered transaction is to be considered completely independent of the others, and its related answer should be based on the effect(s) of that transaction alone. Assume that all numbered transactions occurred during 2015 and that the amount involved in each case is sufficiently material to distort reported net income if improperly included in the determination of net income. Assume further that each transaction was recorded in accordance with IFRS and, where applicable, in conformity with the all-inclusive concept of the income statement.

For each of the numbered transactions you are to decide whether it:

- (a) Increased the corporation's 2015 net income.
- **(b)** Decreased the corporation's 2015 net income.
- (c) Increased the corporation's total retained earnings directly (i.e., not via net income).
- (d) Decreased the corporation's total retained earnings directly.

- (e) Increased the corporation's current ratio.
- **(f)** Decreased the corporation's current ratio.
- (g) Increased each shareholder's proportionate share of total equity.
- (h) Decreased each shareholder's proportionate share of total equity.
- (i) Increased each shareholder's equity per share (book value).
- (j) Decreased each shareholder's equity per share (book value).
- (k) Had none of the foregoing effects.

Instructions

List the numbers 1 through 9. Select as many letters as you deem appropriate to reflect the effect(s) of each transaction as of the date of the transaction by printing beside the transaction number the letter(s) that identifies that transaction's effect(s).

Transactions

1.	In January, the board directed the write-off of certain patent rights that had suddenly and unexpectedly become worthless.
2.	The corporation sold at a profit land and a building that had been idle for some time. Under the terms of the sale, the corporation received a portion of the sales price in cash immediately, the balance maturing at 6-month intervals.
3.	Treasury shares originally repurchased and carried at \$127 per share was sold for cash at \$153 per share.
4.	The corporation wrote off all of the unamortized discount and issue expense applicable to bonds that it refinanced in 2015.
5.	The corporation called in all its outstanding ordinary shares and exchanged them for new shares on a 2-for-1 basis, reducing the par value at the same time to \$50 per share.
6.	The corporation paid a cash dividend that had been recorded in the accounts at time of declaration.
7.	Litigation involving Wainwright Inc. as defendant was settled in the corporation's favor, with the plaintiff paying all court costs and legal fees. In 2012, the corporation had appropriately established a special contingency for this court action. (Indicate the effect of reversing the contingency only.)
8.	The corporation received a check for the proceeds of an insurance policy from the company with which it is insured against theft of trucks. No entries concerning the theft had been made previously, and the proceeds reduce but do not cover completely the loss.
9.	Treasury shares, which had been repurchased at and carried at \$127 per share, were issued as a share dividend. In connection with this distribution, the board of directors of Wainwright Inc. had authorized a transfer from retained earnings to permanent share capital of an amount equal to the aggregate market price (\$153 per share) of the shares issued. No entries relating to this dividend had been made previously.

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

Marks and Spencer plc (M&S)

As stated in the chapter, notes to the financial statements are the means of explaining the items presented in the main body of the statements. Common note disclosures relate to such items as accounting policies, segmented information, and interim reporting. The financial statements of M&S (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

1318 Chapter 24 Presentation and Disclosure in Financial Reporting

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What specific items does M&S discuss in its **Note 1—Summary of Significant Accounting Policies**? (List the headings only.)
- (b) For what segments did M&S report segmented information? Which segment is the largest? Who is M&S's largest customer?
- (c) What interim information was reported by M&S?

Comparative Analysis Case

adidas and Puma

The financial statements of adidas (DEU) and Puma (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- (a) (1) What specific items does Puma discuss in its Note 2—Significant Consolidation, Accounting, and Valuation Principles? (Prepare a list of the headings only.)
 - (2) What specific items does adidas discuss in its **Note 2—Our Summary of Significant Accounting Policies**? (Prepare a list of the headings only.)
- (b) For what lines of business or segments do adidas and Puma present segmented information?
- (c) Note and comment on the similarities and differences between the auditors' reports submitted by the independent auditors of adidas and Puma for the year 2012.

*Financial Statement Analysis Case

RNA Inc. manufactures a variety of consumer products. The company's founders have run the company for 30 years and are now interested in retiring. Consequently, they are seeking a purchaser who will continue its operations, and a group of investors, Morgan Inc., is looking into the acquisition of RNA. To evaluate its financial stability and operating efficiency, RNA was requested to provide the latest financial statements and selected financial ratios. The following is summary information provided by RNA.

RNA INCOME STATEMENT FOR THE YEAR ENDED NOVEMBER 30 (IN THOUSANDS)), 2015	
Sales (net)	€30,500	
Interest income	500	
Total revenue	_31,000	
Costs and expenses		
Cost of goods sold	17,600	
Selling and administrative expenses	3,550	
Depreciation and amortization expense	1,890	
Interest expense	900	
Total costs and expenses	_23,940	
Income before taxes	7,060	
Income taxes	2,800	
Net income	€ 4,260	

RNA STATEMENT OF FINANCIAL POSITION AS OF NOVEMBER 30 (IN THOUSANDS)

	2015	2014
Property, plant, & equipment (net)	€ 7,100	€ 7,000
Inventory	6,000	5,400
Accounts receivable (net)	3,200	2,900
Marketable securities (at cost)	300	200
Cash	400	500
Total current assets	9,900	9,000
Total assets	€17,000 ==================================	€16,000
Share capital – ordinary (€1 par value)	€ 2,700	€ 2,700
Share premium—ordinary	1,000	1,000
Retained earnings	5,000	4,900
Total equity	8,700	8,600
Long-term debt	2,000	1,800
Accrued expenses	1,700	1,400
Income taxes payable	900	800
Accounts payable	3,700	3,400
Total current liabilities	6,300	5,600
Total equity and liabilities	€17,000 ======	€16,000 ======

SELECTED FINANCIAL RATIOS

	RN	IA	Current Industry	
	2014	2013	Average	
Current ratio	1.61	1.62	1.63	
Acid-test ratio	.64	.63	.68	
Times interest earned	8.55	8.50	8.45	
Profit margin on sales	13.2%	12.1%	13.0%	
Asset turnover	1.84	1.83	1.84	
Inventory turnover	3.17	3.21	3.18	

Instructions

- (a) Calculate a new set of ratios for fiscal year 2015 for RNA based on the financial statements presented.
- **(b)** Explain the analytical use of each of the six ratios presented, describing what the investors can learn about RNA's financial stability and operating efficiency.
- (c) Identify two limitations of ratio analysis.

Accounting, Analysis, and Principles

Savannah, Inc. is a manufacturing company that manufactures and sells a single product. Unit sales for each of the four quarters of 2015 are projected as follows.

Quarter	Units
First	80,000
Second	150,000
Third	550,000
Fourth	120,000
Annual Total	900,000

1320 Chapter 24 Presentation and Disclosure in Financial Reporting

Savannah incurs variable manufacturing costs of £0.40 per unit and variable non-manufacturing costs of £0.35 per unit. Savannah will incur fixed manufacturing costs of £720,000 and fixed non-manufacturing costs of £1,080,000. Savannah will sell its product for £4.00 per unit.

Accounting

Determine the amount of net income Savannah will report in each of the four quarters of 2015, assuming actual sales are as projected and employing (a) the integral approach to interim financial reporting and (b) the discrete approach to interim financial reporting. Ignore income taxes.

Analysis

Compute Savannah's profit margin on sales for each of the four quarters of 2015. What effect does employing the integral approach instead of the discrete approach have on the degree to which Savannah's profit margin on sales varies from quarter to quarter?

Principles

Should Savannah implement the integral or discrete approach under IFRS? Do you agree? That is, explain the conceptual rationale behind the integral approach to interim financial reporting.

BRIDGE TO THE PROFESSION

Professional Research

As part of the year-end audit, you are discussing the disclosure checklist with your client. The checklist identifies the items that must be disclosed in a set of IFRS financial statements. The client is surprised by the disclosure item related to accounting policies. Specifically, since the audit report will attest to the statements being prepared in accordance with IFRS, the client questions the accounting policy checklist item. The client has asked you to conduct some research to verify the accounting policy disclosures.

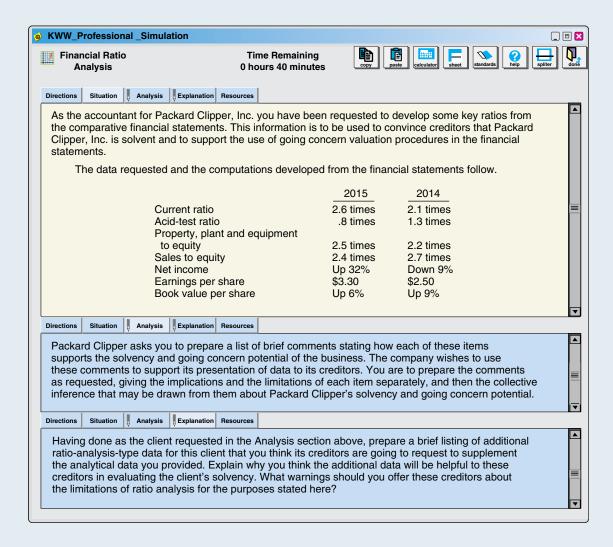

Instructions

Access the IFRS authoritative literature at the IASB website (http://eifrs.iasb.org/) (you may register for free eIFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) In general, what should disclosures of accounting policies encompass?
- **(b)** List some examples of the most commonly required disclosures.

*Professional Simulation

In this simulation, you are asked to evaluate a company's solvency and going concern potential by analyzing a set of ratios. You also are asked to indicate possible limitations of ratio analysis. Prepare responses to all parts.

^{1.} The 'Other reserve' was originally created as part of the capital restructuring that took place in 2002. It represents the difference between the nominal value of the shares issued prior to the capital reduction by the Company (being the carrying value of the investment in Marks and Spencer plc) and the share capital, share premium and capital redemption reserve of Marks and Spencer plc at the date of the transaction. Last year the reserve also included discretionary distributions to the Marks & Spencer UK Pension Scheme, which following the Group's payment of an interim dividend in relation to 2011/12 and the resultant recognition of the annual distribution of £71.9m as a financial liability was £427.9m. On 21 May 2012 the Group changed the terms of the Marks and Spencer Scottish Limited Partnership and the total equity instrument of £427.9m was derecognised and the fair value of the remaining distributions of £606.0m was recognised as a financial liability (see note 12).

^{2.} The 'Retained earnings reserve' includes a cumulative £14.5m gain (last year £5.1m gain) in the currency reserve.

^{3.} Amounts reclassified and reported in net profit have all been recorded in cost of sales.
